Maintain/Assure	<p>Execute Testing, Inspection and Maintenance Programs – On completion of SCE assurance tasks, results must be recorded with all relevant detail, assessed for conformance with the Performance Criteria and any follow-on correction work identified.</p> <p>Conduct Fitness for Service (FFS) Assessment – In some instances, an engineering FFS assessment may be required to determine whether equipment has failed its performance standard requirements, e.g. assessment of corrosion defects following inspection of piping. Detailed results of FFS assessment may be recorded out of CMMS.</p> <p>Response to SCE Failure – SCE failure (technical Performance Standard non-conformance) is a failure to achieve the given Performance Criteria. SCE failures must be managed in accordance with a structured review process. This process may require the application of the facility Manual of Permitted Operation (MOPO) which provides prescriptive guidelines to be followed in the event of a reduction in the performance of an SCE, or managed in accordance with the Operational Risk Assessment Procedure (Section 7.2.7).</p> <p>Internal Reporting – SCE failure/damage and SCE demands must be reported in accordance with the Health Safety and Environment Event Reporting and Investigation Procedure (Section 7.12.3).</p> <p>External Reporting – External notification obligations for SCE failure/damage must be understood (i.e. based on local regulatory requirements). External communications must be in accordance with the health safety and environment event reporting and investigation procedure (Section 7.12.4).</p> <p>Manage and Analyse Results – The results from assurance tasks must be accurately recorded to support data analysis. Analysis will enable appropriate action to be taken to minimise future failure recurrences and enable assessment of overall system performance and reliability to verify SCE effectiveness in revealing failures and to allow predictive maintenance.</p>
Verify/Optimise	<p>Review SCE Performance – SCE performance reviews must be conducted to ensure requirements for maintaining SCE performance are being met.</p> <p>Manage Change – Any change to the Performance Standards must be conducted in accordance with the Change Management Procedure (Section 7.2.7).</p>

SCE Technical Performance Standards are a statement of the performance required of an SCE (e.g. functionality, availability, reliability, survivability), which is used as the basis for establishing agreed assurance tasks and managing the hazard. An assurance task is an activity carried out by the operator to confirm that the SCE meets, or will meet, its SCE Technical Performance Standard. Examples of assurance tasks include inspection routines, maintenance activities, test routines, instrumentation calibration and reliability monitoring.

These assurance tasks are identified in the CMMS, flagged against their associated technical Performance Standard, and given the appropriate priority. Management systems are in place to manage the completion of maintenance including that required for Technical Integrity assurance.

Events where the SCC/SCE have not met their specified performance criteria must be managed in accordance with a structured review process. This process may require the application of the facility Manual of Permitted Operation (MOPO) which provides prescriptive guidelines to be followed in the event of a reduction in the performance of an SCE in specific defined circumstances; or, if the MOPO does not cover the event, according to procedures for the assessment and management of operational risk.

Internal notification of SCC failures must be made in accordance with maintenance management workflows. Failures to meet a Facility Performance Standard occur where SCC events lead to the functional objectives (goal and/or key requirement statements) of the facility Performance Standard for the SCE not being met (i.e. lost or unavailable), taking into account any redundancy inherent within the SCE. These events are reported in the Event Reporting Database as potential SCE Failure to Meet Facility Performance Standard Events.

These are internally reported as Hazard Events. Where ‘Failure to meet a Facility Performance Standard’ leads to a loss of hydrocarbon containment, or a release of energy, it is internally reported (and externally where relevant) as a Loss of Primary Containment or Environmental Spill event, depending on the nature of the release.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

There may also be planned changes/deviations from SCE Technical Performance Standards. These are managed via procedures for the assessment and management of operational risk and endorsed in accordance with the change management (Section 7.2.7). This management process ensures risks (including environment) are managed so that the planned change/deviation does not result in unacceptable impact or risk, remains ALARP and regulatory requirements are met.

An additional class of SCE exists to capture environment critical emissions monitoring and control equipment and is also managed under this process. The 'P31 technical Performance Standard – Environmental Emissions Monitoring and Controls' includes equipment required to comply with environmental legislation, regulations, approval conditions or requirements which apply to the facility although not specifically required under the MEE bowtie analysis and SCE groupings.

The scope of P31 includes equipment such as that to maintain and monitor flare ignition, flow metering, and discharge quality of PW. P31 sets out key performance requirements for applicable equipment to meet regulatory requirements as appropriate to the reporting methods (e.g. NGERs Determination and NPI), and the meet the functional intent of the system that the equipment supports (e.g. ensuring flare systems can be ignited, with monitoring in place to ensure the flare/pilots are lit). P31 also defines maintenance/assurance tasks for associated equipment (SCC), and is used to support change management, prioritisation and governance.

7.3 Woodside Decommissioning Framework

Decommissioning is a planned activity for the offshore oil and gas industry. Current best practice is for decommissioning to include:

- designing for decommissioning during the development phase of projects/facilities
- maintaining and removing property, equipment and infrastructure, such as a facility or a pipeline, and plugging wells associated with a petroleum activity
- assessing decommissioning options and opportunities during the operational life of the facility leading up to cessation of production
- selecting, developing and planning the selected decommissioning option
- executing decommissioning plans; and
- restoring the marine environment.

This assists with consideration of section 572(3) of the OPGGS Act, under which, a titleholder must remove from the title area all structures that are, and all equipment and other property that is, neither used nor to be used in connection with the operations. Under section 572(7) of the OPGGS Act, the property removal requirements under section 572(3) of the OPGGS Act have effect subject to any other provision of the OPGGS Act, the regulations, directions given by NOPSEMA or the responsible Commonwealth Minister, and any other law. Under section 270(3) of the OPGGS Act, before title surrender, all property brought into the surrender area must be removed to the satisfaction of NOPSEMA, or arrangements that are satisfactory to NOPSEMA must be made in relation to the property. Sections 572(7) and 270(3) of the OPGGS Act provide scope for in-situ decommissioning and other arrangements to be made where it can be demonstrated that the risks and impacts are ALARP and acceptable as well as comply with all other Acts and legislation.

7.3.1 Decommissioning in Operations

Asset specific decommissioning plans are typically developed prior to cessation of production. Planning includes redundant infrastructure as well as structures coming to the end of production and decommissioning critical systems to enable, as a base case, full removal.

7.3.2 Facility Decommissioning Planning

Decommissioning planning generally commences 2–10 years prior to Cessation of Production (CoP) (Figure 7-7). The timeframe selected for decommissioning planning depends on the complexity of the infrastructure requiring decommissioning.

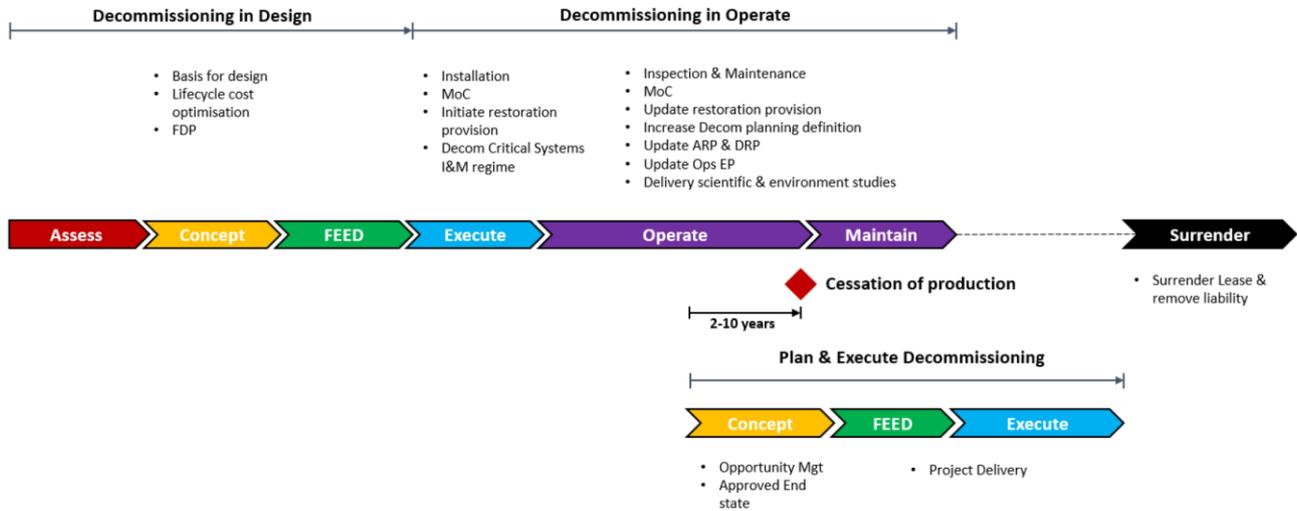

Figure 7-7: Woodside’s process for decommissioning planning

7.3.2.1 Scarborough Decommissioning Planning

In proactively planning for decommissioning, information has been collated within a Scarborough Decommissioning Strategy, for all major and ancillary infrastructure, specifically:

- specifications
- compositions
- decommissioning critical systems
- IMMR management plans
- feasibility of infrastructure removal options.

This information will be reviewed for accuracy and regulatory compliance prior to start-up, before being captured in Maintenance Builds/Plans and handed over to Production for continual management throughout field life. Ancillary equipment will be tracked and inventoried in the same way, and removal options will be subject to future decommissioning planning, as per Figure 7-7.

The identified decommissioning critical systems are asset systems that are designed to facilitate the flushing, cleaning and decommissioning of infrastructure. These systems were identified through consultation with package leads and will be appropriately maintained. The standard IMMR requirements will ensure that the systems remain in functional condition, in connection with operations until End of Field Life. These requirements will be integrated within suitable operational documents, ensuring the system, used in connection with operations, is appropriately maintained throughout field life.

7.3.2.2 Subsea Infrastructure Decommissioning

To satisfy future decommissioning obligations, including the requirements of the OPGGS Act, all equipment has been designed to be feasible to remove. More detailed preparation for decommissioning execution, including relevant plans and procedures, will be developed as per the

timeline in Figure 7-7, with due consideration of best environmental outcome and technological advances available at the time.

For example, for the production flowlines, the information contained within the Decommissioning Strategy is:

- flowline materials composition, expected contaminants at EOFL, expected embedment at EOFL
- IMMR plans
- Basis of Design functional and design requirements (e.g., “Subsea equipment must be able to be cleaned of hydrocarbons and contaminants, in situ, to a level based on ALARP assessment”)
- decommissioning critical systems (e.g., “Manual ROV valve operability is required to enable Flowline pigging for hydrocarbon removal to FPU and riser isolation”)
- typical sequence of events for subsea system decommissioning, including system preparation and subsea hardware recovery (e.g., Subject to Technical feasibility and Safety analysis, the most efficient method of flowline recovery could be via reverse installation to a dedicated Reel Lay Vessel (RLV).

All property has been designed and will be installed and operated so that it can be removed when it is neither used, nor to be used in connection with the operations, as per Section 572 of the OPGGS Act. Design features and maintenance plans for major infrastructure, which allow removal to occur at the end of field life, are detailed in Table 7-5. Decommissioning critical systems have also been identified; these are asset systems that will be required to facilitate the decommissioning of infrastructure. If no such system is identified, there are no specific features critical for the future removal of the infrastructure. It should be noted that in this case all infrastructure is critical to the operation of the facility, as well as the decommissioning, so will be maintained for full functionality and integrity so that it can be removed at EOFL.

Table 7-5: Design features and maintenance plans to enable removal of infrastructure at decommissioning

Infrastructure	Design and maintenance to enable removal
3 x flowlines 8 x flexible jumpers 6 x risers 1 x trunkline spool and support	Decommissioning critical systems: Operability of subsea control system, manual valves, and 32” RBM valve and 16” Upstream FLET valves Design: Cathodic protection for 25+ years; pad eyes on descent/recovery clamp for lifting Maintenance: Risk based inspections to monitor/maintain system integrity and operability Removal: Pigging/cleaning of system to remove hydrocarbons and contaminants; isolations as required; water jetting of sediment if embedded/buried; disconnect and recover to surface via re-reeling or cutting and recovering in sections; lift using pad eyes on descent/recovery clamp or use of alternate rigging
7 x umbilicals 1 x dynamic umbilicals	Decommissioning critical systems: None Design: Cathodic protection for 25+ years; pad eyes on descent/recovery clamp for lifting Maintenance: Risk based inspections to monitor system integrity and operability; no maintenance required to facilitate removal Removal: Local disconnections of equipment; water jetting of sediment if embedded/buried; recover to surface via re-reeling or cutting and recovering in sections; lift using pad eyes on descent/recovery clamp or use of alternate rigging
1 x riser base manifold (RBM) 8 x flowline sleepers	Decommissioning critical systems: None

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Infrastructure	Design and maintenance to enable removal
7 x in-line structures (in-line T) 6 x flowline end terminations (FLETS) 7 x umbilical termination assemblies Multiple flying leads 7 x umbilical termination heads 2 x subsea distribution units 1 x subsea distribution assembly 13 x mud mats 12 x mud mats (contingency)	Design: Cathodic protection for 25+ years; pad eyes for lifting Maintenance: Risk based inspections to monitor system integrity and operability; no maintenance expected to be required to facilitate removal Removal: Local disconnections of equipment; water jetting of sediment if embedded/buried; recovery using existing pad eyes or use of alternate rigging
1 x riser base manifold foundation (RBMF)	Decommissioning critical systems: None Design: Cathodic protection for 25+ years; trunnions for lifting Maintenance: Risk based inspections to monitor system integrity and operability; no maintenance required to facilitate removal Removal: Water jetting of sediment if embedded/buried; installation process is reversible for removal, via use of existing suction port to connect ROV mounted pressure pump, or use of intervention points on individually piles not requiring valve operability; lifting via existing trunnions or use of alternate rigging.
20 x mooring legs	Decommissioning critical systems: Fairleads Design: Cathodic protection for 25+ years Maintenance: Inspections based on class requirement; no maintenance required to facilitate removal Removal: Release of mooring legs from FPU via top of column pull-in equipment (temporary) and fairlead controls; Mooring systems to be removed from subsea/seabed using AHTs or similar
20 x suction piles	Decommissioning critical systems: None Design: Cathodic protection for 25+ years; suction/pressure ports existing and able to be retrofitted Maintenance: Inspections based on class requirement; no maintenance required to facilitate removal Removal: Installation process is reversible for removal, via use of existing suction ports to connect ROV mounted pressure pump, retro install of pressure ports, or relief of pressure by other means (e.g. drilling holes in the pile and connecting lift rigging to a vessel and slowly easing the pile out)
Up to 265 x concrete pads	Decommissioning critical systems: None Design: 50-year design life; elimination of corrosion sources Maintenance: Periodic inspections during gravimetry surveys to monitor condition; no maintenance required to facilitate removal Removal: Water jetting of sediment if embedded/buried; lifting with subsea grab to subsea basket for recovery to vessel deck
Up to 8 x production wells (Phase 1), including wellheads and xmas trees; Up to 5x production wells (Phase 2), including wellheads and xmas trees; Abandoned wells including wellheads.	Decommissioning critical systems: None Design: 25+ year design life, cathodic protection to limit corrosion. Maintenance: In accordance with the well lifecycle management procedure (Section 7.2.3.4). Removal: Typically removed by deploying a cutting device on drill pipe which then cuts through the conductor, allowing the wellhead to be retrieved to the surface. Another technique may use an ROV to activate the cutter. The conductor cutting equipment is usually reliable with a high success rate of cutting wellheads. Wellheads lifted to MODU.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.3.2.3 Scarborough Trunkline Decommissioning

To comply with future decommissioning obligations, including the requirements of the OPGGS Act, the following design and functional requirements of the export trunkline have been implemented:

- The export trunkline system has been designed to allow for sweeping with sea water or other environmentally acceptable fluid, with capability to return to hydrocarbon separation facilities on the FPU or onshore for treatment.
- Adequate isolations will be provided so that subsea system hydrocarbon removal operations can be performed in accordance with relevant safety procedures and engineering standards.
- The trunkline will be able to be cleaned of hydrocarbons and contaminants, in situ, to a level based on an ALARP assessment.
- The export trunkline is designed to be feasible to remove from the seabed. A technical decommissioning assessment was undertaken and a Decommissioning Plan developed. The plan may be used at the time of decommissioning, with due consideration of best environmental outcome and technological advances available at the time, noting detailed plans and justification will be subject of a future EP. It considers various removal options:
 - dredging/jetting and removal of rock cover to expose trunkline if sections are buried/embedded
 - pigging and cleaning techniques
 - removal by reverse S-lay and cutting into sections onboard a PLV
 - removal by cutting subsea and retrieval by crane in some shallower water sections
 - isolation and retrieval of structures by lifting.

Although the trunkline contains no decommissioning critical systems, essential for the feasibility of decommissioning, there are several items that de-risk the decommissioning activity. The standard Inspection, Maintenance, Monitoring and Repair are designed to ensure that the following items remain in functional condition for use in connection with the operations until EOFL. Although functionality of these items does not impact overall decommissioning feasibility, it is intended to minimise the complexity of future decommissioning activities for:

- PLET 32" connection system
- PLET 32" valve
- ILTA 16" connection system
- ILTA 16" valves (two of).

The Trunkline Decommissioning Plan will be integrated within suitable operational documents, ensuring the system, used in connection with operations, is appropriately maintained throughout field life. More detailed preparation for decommissioning execution, including relevant plans and procedures, will be developed as per the timeline in Figure 7-7.

7.3.2.4 Floating Production Unit Decommissioning

To comply with future decommissioning obligations, including the requirements of the OPGGS act, the following design and functional requirements of the FPU System have been implemented:

- The FPU will be capable of being towed to a point of ownership transfer or disposal at end of field life, and the condition will be maintained in a condition suitable for towage as accepted by Class Society.
- The FPU topsides will be cleaned to as hydrocarbon free as reasonably practicable.
- FPU systems that have been identified as decommissioning critical are:

- FPU Riser pull in platform needs to be maintained to accommodate the riser Pull in System for riser removal activities. Same loads as installation.
- FPU process system for pig receiving with liquid/contaminants removal and handling.
- Hull and Topside Systems required for Flag are defined in the Class and Flag Boundary Report. These systems are required to be functional for tow down and will be maintained as per the facility performance standards. Some equipment (i.e. telecom equipment) may be removed after start-up, but the FPU will be fitted to accommodate the equipment at the time of tow down.
- The ballast system will be maintained to facility performance standards and will be required for emergency response and intermittent operations.
- Tow points will be maintained in line with the Hull performance standards.

7.4 Frontline Offshore Seabird Management Plan

The FPU and all vessels will implement Woodside's Frontline Offshore Seabird Management Plan (SBMP), which aligns with recommendations in the National Light Pollution Guidelines for Wildlife (Commonwealth of Australia, 2023). When implemented, the SBMP addresses seabird interaction reporting and management for offshore/inshore activities within the NWMR, specifically where the activity is located within a nocturnal seabird species BIA.

The purpose of the SBMP is to manage interactions with seabirds offshore to ensure any impacts and risks are reduced to ALARP and an acceptable level. The plan also provides frontline workers with guidance to manage seabird interactions and potential impacts resulting from these interactions identified as occurring as a result of Woodside's activities.

The SBMP adaptive management framework has been established to manage the uncertainty of the potential impacts of artificial light at night on nocturnal seabirds. Where interactions¹²³ with nocturnal seabirds are identified, adaptive management controls under the SBMP may be triggered in a tiered approach.

This may include an initial assessment of:

- seabird species important habitat proximity, life cycle seasonality and periods of heightened sensitivity such as fledgling exodus
- overlap of seabird interactions and inclement weather (for example, post-cyclonic metocean conditions associated with reported seabird groundings)
- the possible consideration of controls and mitigation actions, for example:
- extinguish outdoor/deck lights not necessary for safety and navigation at night
- use block-out-blinds on portholes and windows not necessary for safety and/or navigation.

7.5 Woodside Corporate GHG Emission Targets

As described in Section 6.7.6 *Routine and Non-routine Greenhouse Gas Emissions*, Woodside has committed to voluntary Scope 1, and 3 GHG emission reduction targets. Scope 2 GHG emissions are also considered, however there are no Scope 2 emissions associated with the project.

7.5.1 Scope 1 GHG Emission Targets

Woodside is targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner. The net equity Scope 1 and 2

¹²³ Interaction is defined as a death, injury, entanglement or impact to seabird; or a grounding of a nocturnal seabird.

emissions reduction targets are relative to a starting base of 6.32 MtCO₂-e which is representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020¹²⁴.

There are obligations for Scope 1 emissions reductions regulated through measures such as the Federal SGM and State regulatory obligations that Woodside must meet related to onshore processing of Scarborough gas.

The relevance of these corporate level targets to the activity is described in Section 6.7.6, under subheading *Woodside Climate Targets*.

As described in Section 6.7.6 *Routine and Non-Routine Greenhouse Gas Emissions*, subheading *Management and Abatement*, Woodside's approach to decarbonisation includes:

- Avoiding emissions in the way we design facilities
- Reducing emissions in the way we operate
- Both buying and originating carbon credits to utilise as offsets for the remainder

Woodside's priority is to avoid and reduce emissions, however the use of offsets is expected to be required to meet both regulated and voluntary emissions abatement requirements.

Woodside does not set project specific reduction targets, but instead manages these on a global portfolio level. Abatement of these emissions may come from other facilities with more cost-effective or impactful abatement opportunities. Progress to date, against these corporate targets are reported annually in Woodside's [full year report]. For specific initiatives implemented during design of the Scarborough facilities, see Table 6-23.

7.5.2 Scope 3 GHG Emission Targets

Woodside's Scope 3 targets includes the introduction of new products and services into our portfolio, like hydrogen, ammonia, and carbon capture, utilisation and storage (CCUS). These products and services can help our customers avoid or reduce their Scope 1 or 2 emissions and therefore reduce the life cycle (Scopes 1, 2 and 3) emissions intensity of Woodside's portfolio.

Woodside's initial Scope 3 target was an investment target, to invest \$5 billion in new energy products and lower carbon services by 2030¹²⁵¹²⁶. In 2023, Woodside reviewed our approach to Scope 3 targets in response to investor feedback and supplemented the existing investment target with a new complementary emissions abatement target, to take final investment decisions on new energy products and lower carbon services by 2030, with total abatement capacity of 5 Mtpa CO₂-e¹²⁵¹²⁷.

The investment target tracks Woodside's work at a corporate level to develop these projects and bring them to market. The emissions abatement target will track the potential impact of these projects on customer emissions. The customers for these products and services may be the same as the customers of our oil and gas business, directly substituting their energy for new products or directly

¹²⁴ The starting base may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021. Net equity emissions include the utilisation of carbon credits as offsets.

¹²⁵ Scope 3 targets are subject to commercial arrangements, commercial feasibility, regulatory and Joint Venture approvals, and third party activities (which may or may not proceed). Individual investment decisions are subject to Woodside's investment targets. Not guidance. Potentially includes both organic and inorganic investment. Timing refers to financial investment decision, not start-up/operations.

¹²⁶ Includes pre-RFSU spend on new energy products and lower carbon services that can help our customers decarbonise by using these products and services. It is not used to fund reductions of Woodside's net equity Scope 1 and 2 emissions which are managed separately through asset decarbonisation plans.

¹²⁷ Includes binding and non-binding opportunities in the portfolio, subject to commercial arrangements, commercial feasibility, regulatory and Joint Venture approvals, and third party activities (which may or may not proceed). Individual investment decisions are subject to Woodside's investment targets. Not guidance.

abating the associated emissions. They may also be customers of the new products and services, without also being customers of oil and gas. Progress against these targets is reported annually in Woodsides annual disclosures. Targets are not set for individual projects, including Scarborough, but are assessed corporately.

7.6 Organisation Structure

The organisational structure described in the EP can be split into two separate areas depending on the phase of the activities. Activities including hook-up, commissioning and start-up are managed by the Scarborough Project Management Team, whilst ongoing Operation of the FPU is managed by Woodsides Australian Operations Division. Significant overlap will occur between these teams during transition from project activities to operational activities. This overlap ensures environmental performance is met throughout all phases of the activities described in this EP.

The following Woodside organisational structure provides leadership and direction for project activities and environmental performance:

- The Scarborough Project Manager reports to the Vice President (VP) Scarborough Project.
- The FPU Manager and Operations Readiness Manager report to the Scarborough Project Manager.
- Various scope specific Managers and Advisers report to the FPU Manager and Operations Readiness Manager.
- The Environment Manager Projects reports to the VP HSE Projects.
- A team of environmental professionals report to the Environment Manager Projects.
- The project activities are supported by a range of other Woodside functional teams including Subsea, Aviation and Marine.

The following Woodside organisational structure provides leadership and direction for operation of the FPU and environmental performance:

- The Executive Vice President Australian Operations (EVP) reports to the Chief Executive Officer.
- The Scarborough Vice President (VP) reports to the EVP Australian Operations.
- The VP HSE reports to the EVP Australian Operations.
- The Australian Operations Environment Manager reports to the VP HSE.
- The Asset Manager reports to the Scarborough VP.
- All Production facilities are supported by a team of environmental professionals who report to the Australian Operations Environment Manager.
- All facilities are supported by other Woodside functional teams including:
 - **HSE** – provides specific guidance and access to specialist HSE resources including assistance for governance and training, as well as guidance on Woodside HSE standards
 - **Operations Support/Subsea** – responsible for the installation and IMMR activities on subsea infrastructure including facility structures, flowlines, manifolds and subsea isolation valves to ensure integrity
 - **Aviation Group** – provides personnel transport, material transport, emergency evacuation and search and rescue capabilities.
 - **Marine Group** – responsible for chartering vessels to support Woodside's offshore production facilities including vessels to aid emergency response.

7.6.1 Roles and Responsibilities

Key roles and responsibilities for Woodside and contractor personnel relating to implementing, managing and reviewing this EP are described in Table 7-6. Individuals fulfilling these roles will differ between each activity. Roles and responsibilities for oil spill preparation and response are outlined in Appendix H and the *Woodside Oil Pollution Emergency Arrangements (Australia)*.

It is the responsibility of all Woodside employees and contractors to implement the Woodside *Environment and Biodiversity Policy* (Appendix A: Woodside Policies) and *Health and Safety Policy* in their areas of responsibility and that the personnel are suitably trained and competent in their respective roles.

Table 7-6: Roles and responsibilities

Title (role)	Environmental Responsibilities
All Personnel	
All offshore based personnel and onshore support personnel	<ul style="list-style-type: none"> • Understand the Woodside standards and procedures that apply to their area of work • Understand the environmental risks and control measures that apply to their area of work • Carry out assigned activities in accordance with approved procedures and the EP • Follow instructions from relevant supervisor with respect to environmental protection • Cease operations which are deemed to present an unacceptable risk to the environment • Participate in environmental assurance activities and inspections as required • Prompt reporting of environmental hazards/incidents to their supervisor and assist in event investigation.
Office-based Personnel	
Project Personnel	
Woodside Project Manager/s (or delegate/s)	<ul style="list-style-type: none"> • Monitor and manage the activity so it is undertaken as per the relevant standards and commitments in this EP. • Notify the Woodside Environment Adviser of any scope changes in a timely manner. • Liaise with regulatory authorities as required. • Review this EP as necessary and manage change requests. • Ensure all Project and Support Vessel crew members complete an HSE induction. • Verify that contractors meet environmental related contractual obligations. • Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's Health, Safety and Environment Reporting and Investigation Procedure. • Monitor and close out corrective actions identified during environmental monitoring or audits
Woodside Projects/Scarborough Environmental Adviser	<ul style="list-style-type: none"> • Verify relevant Environmental Approvals for the activities exist prior to commencing activity. • Track compliance with performance outcomes and performance standards as per the requirements of this EP. • Prepare environmental component of relevant Induction Package. • Assist with the review, investigation and reporting of environmental incidents. • Ensure environmental monitoring and inspections/audits are undertaken as per the requirements of this EP. • Liaise with relevant regulatory authorities as required. • Assist in preparation of external regulatory reports required, in line with environmental approval requirements and Woodside incident reporting procedures. • Monitor and close out corrective actions (Campaign Action Register (CAR)) identified during environmental monitoring or audits.

7.7 Heritage Management Committee Implementation

Following consultations with MAC it was requested that Woodside develop a mechanism to address the management of new heritage information. In particular it was requested that a formal mechanism be established to address any new ethnographic values identified through an additional ethnographic survey.

On 1 February 2022, Woodside proposed the establishment of a Heritage Management Committee (HMC) whose role would be “to consider the necessary mitigation measures required to address any new heritage information arising following certain milestones related to the Scarborough Project” and “advise Woodside where any additional mitigation measures are recommended and of any other actions MAC or Woodside should consider”. This proposal required recommendations of the HMC to be unanimous, without limiting MAC’s right to provide additional advice to Woodside.

In a letter signed 7 October 2022, MAC responded to Woodside’s proposal, specifying that membership of the HMC should include:

- MAC’s Circle of Elders
- MAC’s Board and/or executive
- MAC staff
- representatives from Woodside
- appropriately qualified heritage experts agreed between MAC and Woodside.

MAC’s letter also clarified the milestones which may trigger a meeting of the HMC are:

- finalisation of a report from a future ethnographic survey
- conclusion of any future heritage assessment activities agreed by Woodside and MAC to inform the management of heritage for the Scarborough Project
- any proposed changes to the methodology for construction of the Scarborough Project requiring an update to the Scarborough CHMP or the management of Cultural and Spiritual Values
- following the discovery or identification of new heritage values relevant to the construction or operation of the Scarborough Project
- following the discovery or identification that heritage values previously identified beyond the Scarborough Project are also relevant to the construction or operation of the Scarborough Project.

It is intended that recommendations of the HMC will be implemented where they (independently or in conjunction with other actions) lower the risk of impacts to heritage to a level that is as low as reasonably practicable (ALARP). Woodside will also comply with relevant regulations, legislation and principles and requirements of this EP.

The process for addressing new information, therefore, is as follows:

- Upon becoming aware of any matter that would trigger a meeting of the HMC, Woodside is to notify MAC and request a meeting of the HMC.
- Woodside and MAC are to agree on the appropriate heritage experts to be engaged. Timing of the meeting should be as soon as practicable, but it is acknowledged that flexibility will be required particularly during law time to account for the cultural obligations of elders.
- Relevant information must be made available to attendees prior to the meeting.
- The HMC is to meet to discuss the relevant information provided and develop recommendations to Woodside.
- Woodside must implement all ALARP recommendations of the HMC.

- Where the recommendations are not considered ALARP—for example due to implementation of the recommendation resulting in a risk to safety or violation of a regulation or legislation—Woodside must:
- notify the members of the HMC that it will not implement the recommendation, the reason for not implementing the recommendation, and any alternative actions being undertaken to align with ALARP
- take reasonable steps to receive timely responses from the HMC to the notifications in a), proportionate to the urgency of action to be undertaken
- implement any alternative actions committed to in a) with necessary modifications after consideration of the responses in b)
- respond to any subsequent correspondence from HMC members.

7.8 Unexpected Finds Procedure

In the event of the discovery of what appears to be Underwater Cultural Heritage (defined as ‘any trace of human existence that has a cultural, historical or archaeological character and is located under water’), the following Unexpected Finds Procedure will apply:

- All activities with the potential to impact the suspected Underwater Cultural Heritage must cease immediately. Retain all records of the potential Underwater Cultural Heritage including any imagery, description and location.
- Person who discovers the heritage object must inform the Activity Supervisor.
- Activity Supervisor must notify Woodside’s Manager Global Heritage (or delegate).
- Woodside will specify an appropriate buffer around the potential Underwater Cultural Heritage, taking into consideration the nature and scale of the potential Underwater Cultural Heritage and the activities to be managed.
- No seabed disturbance may occur within the buffer area around the potential Underwater Cultural Heritage until approved by Woodside’s Manager Global Heritage.
- Woodside’s Manager Global Heritage must notify a qualified maritime archaeologist and provide all available documentation of the potential Underwater Cultural Heritage.
- If the potential Underwater Cultural Heritage appears to be Aboriginal Underwater Cultural Heritage, Woodside’s Manager Underwater Cultural Heritage must notify the appropriate Traditional Custodians to determine whether it is a heritage site and if so, how the site should be managed.
- If the potential Underwater Cultural Heritage appears to be a shipwreck or aircraft that has been wrecked for more than 75 years, or is of heritage significance or is otherwise reportable under section 40 of the UCH Act, Woodside’s Manager Global Heritage must notify the Minister responsible for the UCH Act, the DCCEEW underwater archaeological section, the Australasian Underwater Cultural Heritage Database (administered by DCCEEW), and the Western Australian Museum.
- If the suspected heritage object includes human remains, Woodside’s Manager Global Heritage must also notify:
 - the Australian Federal Police (phone: 131 444) of the location of the remains, that the remains are likely to be historic or Aboriginal in origin, and that it may be appropriate that Traditional Custodians and a maritime archaeologist are present during any handling of the remains; and
 - the Office of the Federal Environment Minister in accordance with Section 20 of the ATSIHP Act.

Work must not recommence in the vicinity of the heritage object until Woodside’s Manager Global Heritage provides written approval. Woodside’s Manager Global Heritage must only provide written

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

approval once agreed management measures are implemented consistent with approvals and legislation or where the potential Underwater Cultural Heritage is confirmed to not be Underwater Cultural Heritage.

7.9 Training and Competency – Project and Vessel Activities

Woodside as part of its contracting process undertakes assessments of a proposed contractor's environmental management system to determine the level of compliance with the standard AS/NZS ISO 14001. This assessment is undertaken for the Petroleum Activities Program as part of the pre-mobilisation process. The assessment determines whether there is a clearly defined organisational structure that clearly defines the roles and responsibilities for key positions. The assessment also assesses whether there is an up-to-date training matrix that defines any corporate and site/activity-specific environmental training and competency requirements.

As a minimum, environmental awareness during inductions is required for all vessel personnel, detailing awareness and compliance with the Vessel contractor's environmental policy and environmental management system.

7.9.1 Inductions and Training

Inductions are provided to all relevant personnel (e.g. contractors and Woodside representatives) before mobilising to or on arrival at the activity location. The induction covers the HSE requirements and environmental information specific to the activity location. Attendance records will be maintained.

The induction may cover information about:

- description of the activity
- ecological and socio-economic values of the activity location (including Underwater Cultural Features and Heritage Values and pygmy blue whales)
- regulations relevant to the activity
- Woodside's Environmental Management System – Environment and Biodiversity Policy
- EP importance/structure/implementation/roles and responsibilities
- main environmental aspects/hazards and potential environmental impacts and related performance outcomes
- oil spill preparedness and response
- monitoring and reporting on performance outcomes and standards using MC
- incident reporting
- no recreational fishing from the vessels
- Unexpected Finds Procedure and reporting requirements.

Different levels of training are undertaken in relation to managing environmental risks and impacts for the production offshore facilities and associated support vessel-based IMMR activities, being:

- inductions for offshore facility workers and visitors
- operations competency framework training
- permit to work training (ISSoW)
- production environmental leadership training and environment awareness training
- emergency and hydrocarbon spill response training
- inductions for subsea IMMR (vessel based) personnel.

Records for Woodside operations personnel, in relation to the above listed training, are maintained in Woodside's learning management system. Contractor training records are also maintained.

Competence of operations personnel can be reviewed via online dashboards.

7.9.2 Activities Program Specific Environmental Awareness

Before petroleum activities begin, a pre-activity meeting will be held on-board Project Vessels with all relevant personnel. The pre-activity meeting provides an opportunity to reiterate specific environmental sensitivities or commitments associated with the activity. Relevant sections of the pre-activity meeting will also be communicated through to the Support Vessel personnel. Attendance lists are recorded and retained.

During operations, regular HSE meetings (which cover all crew) will be held on the FPU and Vessels. During these meetings, recent environmental incidents are regularly reviewed, and awareness material presented.

7.9.3 Inductions for Offshore Facility Workers and Visitors

A comprehensive induction process is in place for personnel working on or visiting Woodside's offshore production facilities. The induction process is designed to equip personnel with the HSE awareness and skills necessary for them to manage their own safety and environmental performance and contribute to others working around them. The induction process includes:

- **Common Production Induction** – All employees and contractors who have not accessed a production facility within twelve months are required to undertake this induction prior to mobilisation. It includes Woodside's values, HSEQ and Process Safety, continuous improvement, risk management and ISSoW.
- **Facility Specific Induction** – All employees and contractors that have not accessed the production facility within 12 months are required to undertake this induction prior to mobilisation. This induction covers the HSE and emergency response issues specific to each facility. For environment, this induction covers the Facility EP, prevention of spills, waste management, fauna interactions, hazard identification and risk assessment, and incident reporting.
- **Production Offshore Environmental Leadership Training** – Key operations leadership roles (as specified within the Operations Competency Framework) are required to complete this competency on commencement of the new role and three yearly thereafter. The training covers Woodside's policies and standards, environmental legislative requirements, the EP, key environmental risk and impacts, environmental reporting, environmental management tools (e.g. improvement planning, compliance reviews and audits), hydrocarbon spill response and environmental accountabilities.
- **Production Offshore Environmental Awareness Training** – All new offshore operational personnel are required to undertake this online training on commencement of the new role and two yearly thereafter. This training covers environmental legislative requirements, the facility EP, key environmental hazards and control measures (including waste management, spill prevention, chemical storage, wildlife interactions), environmental management tools, hazard and incident reporting, spill response, and environmental responsibilities.

7.9.4 Operations Competency Framework Training

The Operations Competency Guideline defines a framework to make sure all personnel on operating facilities are competent to perform their work and that competency is managed. By doing this, the potential for unplanned (accident/incident) type events that could result in environmental impact is minimised.

Operational Area Licence to Operate (LTO) roles are those roles related to oil and gas processing, equipment maintenance, marine regulations, emergency response and any other roles involved with safeguarding the facility integrity, including all roles where high-risk work licences are required.

Additionally, roles mandated by Woodside such as HSEC and helicopter landing officer are included in the LTO roles process.

The requisite competency and training for each LTO role has been defined. Competencies for these LTO roles are stipulated by the governance group for each respective position and are based on the applicable Australian or International standards. In cases where no Australian or International standards are available or applicable, training is based on the relevant Woodside Standard as determined by the respective governance group.

Contractors working on Woodside facilities are required to verify the competency of their personnel through the contractor's own verification systems. Additionally, contractor personnel working on Woodside facilities are required to be registered in Woodside's Contractor Verification Service (CVS) beforehand. Personnel registered in CVS have had their skills and qualifications independently verified on behalf of Woodside thereby confirming that contractor personnel hold the required competencies before mobilisation to the facility.

The LTO Roles Report (available online on the Woodside Competency Reporting Dashboard on the Production Academy Intranet page) provides the conformance status of the facility against the LTO roles requirements.

7.9.5 Permit to Work System Training

The ISSoW permit to work system is a key element in ensuring that all necessary steps are taken to ensure the safety of personnel, protection of the environment and technical integrity of the facility (Section 7.2.1). The ISSoW system takes a risk-based approach to all activities, thus tasks with higher levels of risk are subjected to greater scrutiny and control.

An overview of Woodside's hydrocarbon spill response training and competency requirements are provided in dashboards for key responder roles. The roles are consistent with Woodside's crisis and emergency management incident control structure (see Section 7.13). System is a key element in ensuring that all necessary steps are taken to ensure the safety of personnel, protection of the environment and technical integrity of the facility. The ISSoW system takes a risk-based approach to all activities, thus tasks with higher levels of risk are subjected to greater scrutiny and control.

All members of the workforce that are required to work with ISSoW (Section 7.2.1) receive training commensurate with the level of authority and responsibility they hold in ISSoW.

7.9.6 Emergency and Hydrocarbon Spill Response Training

All operations personnel involved in crisis and emergency management are required to commit to ongoing training, process improvement and participation in emergency and crisis response (both real and simulated), including emergency drills specific to potential incidents at the Scarborough facility.

Training includes task specific training and role-based training and 'on the job' experience Woodside Hydrocarbon Spill Preparedness Advisor(s) are responsible for maintaining hydrocarbon spill preparedness competency. This includes the identification and development of approved competency and non-competency-based courses, identification of relevant personnel required to undertake training and ensuring training records are maintained. Minimum Woodside capabilities will continue to be identified and documented.

7.9.7 Subsea Inspection, Monitoring, Maintenance and Repair Activity Environmental Awareness

At the beginning of, and during a new Subsea IMMR activity, the Support Vessel crew including contractor crew, Woodside representatives and other relevant personnel are required to undertake a vessel induction before commencing work. This induction covers HSE requirements for the vessel

and IMMR activities, and as required environmental information specific to the activity location. The induction may cover environmental information about:

- adherence to standards and procedures, and the use of Job Safety Analysis and permit to work hazard identification and management process
- spill management including prevention, response and clean-up, location of spill kits and reporting requirements
- waste management requirements and location of bins
- reporting of marine fauna, location of forms and charts
- chemical management requirements.

All personnel who undertake the project induction are required to sign an attendance sheet which is retained.

Regular HSE meetings are held on Support Vessels with crew. During these meetings, any environmental incidents are reviewed, and environmental awareness material presented.

7.9.8 Marine Fauna Observation Training

Relevant crew onboard AHT and LCVs will undertake Marine Fauna Observation (MFO) training before commencing project activities. MFOs will be implemented during FPU hook-up, which has an elevated underwater noise profile. Woodside and contractor personnel will be trained to deliver the MFO training ('train-the-trainer' model) by an external organisation specialising in marine environmental training, with expertise in marine fauna observations. Training materials will be developed by the external organisation in consultation with Woodside, to ensure activity specific information is incorporated. The bespoke training package will cover:

- an overview of Scarborough Project activities and the marine fauna that may be present during these activities
- an overview of the potential impacts and risks to marine megafauna, including PBW
- an overview of marine fauna that may be present during activities, including cetaceans and turtles.
- an overview of EP controls and management procedures relevant to marine fauna, including cetaceans (including PBW) presence and turtles identified in the EP.
- different types of cetaceans and turtle behaviours including PBW behaviours which includes the difference between foraging and migrating, and how to identify these based on the latest information on persistence in the area, dive time and swimming speed (Owen et al. 2016; AIMS unpublished data 2021; Thums & Ferreira 2021);
- precautionary approach to identification i.e. assume PBW if positive ID of different species type not possible
- the observation and reporting requirements.

When trained crew are undertaking observations, expectations are that:

- Observation equipment/tools are used as required (i.e. range-finding binoculars, marine megafauna ID prompts etc.).
- Escalation process carried out if cetaceans/PBW are identified to allow for implementation of adaptive management as required by controls throughout EP.
- Make and maintain records including the date, time and approximate distance from the vessel, and the action taken to comply with EPS.

Completion of PBW Observation Training (focusing on PBW) is a minimum requirement for those performing observations relevant to PBW mitigation/adaptive management measures in this EP

(such as C 4.4, C 4.5, C 4.6). Records will be maintained as evidence of the personnel who have completed PBW observation training.

For any trained crew who have not conducted PBW observations for greater than 12 months, refresher training is required prior to undertaking the role.

Training and competency is informed by a competency framework and tracked by a contractor MFO Coordinator who assures appropriate competency of trained vessel crew prior to them being allowed to perform MFO duties.

Bridge crew onboard crewed vessels (support vessels, ASV and LCV), transiting through the operational area that are undertaking FPU support/supply operations, IMMR or gravimetry activities will undertake marine fauna observations as part of their regular vessel observation duties. USVs will be remotely piloted from a remote operations centre and will undertake observations at all times using the built in cameras onboard the vessel. Controls relating to vessel separation from marine fauna (C.4.1, C 4.2, C 4.3) will be communicated to onboard crew and remote operations centre personnel through vessel inductions (Section 7.8.1).

7.9.9 Establishment of seabird handling capabilities

Woodside Environment Adviser(s) supporting activities that implement the Woodside Frontline Offshore Seabird Management Plan will be trained in its contents and use at least once every two years. Training will include at a minimum, a face-to-face information session with a Woodside Seabird Subject Matter Expert (SME) or similarly experienced Environment Adviser. Training for Woodside Environment Advisers will include:

- When to apply the Offshore Seabird Management Plan;
- When intervention with seabirds may be required;
- Safe handling of seabirds and short-term care; and
- Regulatory and other reporting of seabird encounters.

Training and awareness for relevant facility and vessel crew (i.e. Captain, First Officer and/or HSE Representative(s)) will involve delivery of a Woodside developed Presentation which outlines key elements of the Management Plan (as required by C3.3), including:

- Escalation protocol for seabird encounters to ensure approval and advice is obtained before handling seabirds;
- Handling of seabirds is considered a last resort and should only be undertaken if safe and critical to the safety of the bird or facility personnel;
- PPE and risk assessment requirements for safe bird handling;
- Short term care of seabirds and release methodologies.

7.9.10 Management of Training Requirements

All personnel on the FPU and Project Vessels are required to be competent to perform their assigned positions. This may be in the form of external or 'on the job' training. The vessel Safety Training Coordinator (or equivalent) is responsible for identifying training needs, keeping records of training performed and identifying minimum training requirements.

7.10 Monitoring, Auditing, Management of Non-conformance and Review

Regulation 22(5) of the Environment Regulations states that the implementation strategy is to provide for the monitoring, audit, management of non-conformance and review of operator's environmental performance and the implementation strategy itself.

This section of the EP outlines the measures undertaken by Woodside to regularly monitor the management of environmental risks and impacts of the Scarborough facility against the EPOs, EPSs and MCs, with a view to continuous improvement of environmental performance. The effectiveness of the implementation strategy is also reviewed periodically as part of the monitoring and assurance process.

7.10.1 Monitoring

Woodside and its contractors will perform a program of periodic monitoring during the Petroleum Activities Program – starting at mobilisation of each project activity and continuing through the duration of each activity-to-activity completion. This information will be collected using the tools and systems outlined below, developed based on the EPOs, controls, standards and MC in this EP. The tools and systems will collect, as a minimum, the data (evidence) referred to in the MC in Section 6.

The collection of this data (against the MC) will form part of the permanent record of compliance maintained by Woodside and will form the basis for demonstrating that the EPOs and standards are met, which will be summarised in a series of routine reporting documents.

7.10.1.1 Source-based Impacts and Risks

The tools and systems to monitor environmental performance, where relevant, will include:

- daily reports which include leading indicator compliance
- periodic review of waste management and recycling records
- use of contractor's risk identification program that requires recording and submitting safety and environment risk observation cards routinely (frequency varies with contractor)
- collection of evidence of compliance with the controls detailed in the EP relevant to offshore activities by the Woodside Offshore HSE Adviser (other compliance evidence is collected onshore)
- environmental discharge reports that record volumes of planned and unplanned discharges, to ocean and atmosphere
- internal auditing and assurance program as described in Section 7.10.2.

A summary of monitoring and quantitative records of emissions and discharges that will be kept and used to assess environmental performance is provided in Table 7-7.

Throughout this activity, Woodside will continuously identify new source-based risks and impacts through the Monitoring and Auditing systems and tools described above and in Section 7.10.1.2.

Other assurance tasks implemented through the EP include (as examples only):

- start of shift operator walk arounds
- permit to work hazard, risk management check list, area sign-on, and permit audits (ISSoW – Section 7.2.1)
- technical integrity SCE performance reviews (daily, weekly, monthly) (Section 7.2.8)
- ongoing maintenance performance assurance (e.g. conformance dashboard)
- management system performance audits reviews (e.g. MSPSs) (Section 7.10.1.2)
- data gathering and governance dashboard presentations (e.g. Woodside Integrated Risk and Compliance System).

Table 7-7: Summary of emissions and discharges monitoring for the Petroleum Activities Program

Category	Parameter to be Monitored/Reported	Monitoring Frequency	Monitoring Equipment/ Methodology	EP Reference
Planned Emissions				
Atmospheric emissions	Greenhouse, energy and criteria pollutants	Normally continuous process metering/annual reporting	NGERS and NPI reporting estimation methods (e.g. fuel/flare flowmeters, throughput meters, process estimation)	Section 6.7.6
	Fuel gas and flare intensity	Normally continuous process metering/monthly reviews	Fuel and flare flowmeters inform intensity profiles – tracked against optimisation targets	Section 6.7.6
Planned Discharges				
Discharge of subsea control fluids during valve actuations	Subsea control fluid consumption	Normally continuous process indication/monthly review	Subsea control fluid consumption surveillance. Process indication for gross leaks/ruptures	Section 6.7.12
Discharge of hydrocarbons and chemicals during subsea IMMR activities	Volumes of hydrocarbons and chemicals released subsea	As required, during IMMR activities (activity specific)	Estimates based on known volumes pumped and ROV observation	Section 6.7.12
Discharge of produced water	Volume discharged overboard	Normally continuous process indication/monthly review	PW flowmeter(s), process estimation	Section 6.7.11 / 7.2.5
	OIW concentration of discharged PW	Normally continuous process indication/monthly review	Normally continuous process metering/monthly review	
	Chemical characterisation	Annually	Characterisation of end of pipe sample	
	WET testing	Three yearly	PW ecotoxicity testing	
Waste recycling and disposal	Quantities of solid and liquid wastes disposed of onshore	Ongoing	Facility waste manifest	Section 6.8.8
Unplanned Emissions and Discharges				
Unplanned emissions and discharges	Nature of release	As required	HSEQ Event Reporting System (First Priority)	Section 6.7.13

7.10.1.2 Management of Newly Identified Impacts and Risks

New sources of receptor-based impacts and risks identified through monitoring and auditing and the Woodside Environment Knowledge Management System are assessed using the Change Management Process (Section 7.2.7).

7.10.1.3 Management of Knowledge

Review of knowledge relevant to the existing environment is undertaken in order to identify changes relating to the understanding of the environment or legislation that supports the risk and impact assessments for EPs (in-force and in-preparation).

The frequency and documentation of reviews, communication of relevant new knowledge and consideration of management of change are documented in the WMS Environment Plan Guideline. Relevant knowledge is defined as:

- environmental science supporting the description of the existing environment
- socio-economic environment and stakeholder information
- environmental legislation.

The frequency and documentation of reviews, communication of relevant new knowledge and consideration of management of change are documented in the WMS Environment Plan Guideline.

Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to the environmental baseline studies database is completed and documented. Periodic location-focused environmental studies and baseline data gap analyses are completed and documented. Any subsequent studies scoped and executed as a result of such gap analysis are managed by the Environment Science Team and tracked via the Corporate Environment Baseline Database.

7.10.2 Auditing

Environmental performance auditing will be performed to:

- identify potential new or changes to existing environmental impacts and risk, and methods for reducing those to ALARP
- confirm that mitigation measures detailed in this EP are effectively reducing environmental impacts and risk, that mitigation measures proposed are practicable and provide appropriate information to verify compliance
- confirm compliance with the Performance Outcomes, Controls and Standards detailed in this EP.

Internal auditing will be performed to cover each key project activity as summarised below.

7.10.2.1 Floating Production Unit Hook-up and Commissioning Activities

The following internal assurance will be performed during Hook-up and Commissioning:

- Pre-mobilisation inspection/audit report will be conducted by a relevant person (before commencing). The scope of the audits are risk-based and specific to the relevant activity, but will generally focus on aspects relating to ensuring appropriate understanding of environmental commitments and the operational readiness of the activity scope, including appropriate environmental controls in place. All LCVs associated with the above scopes will be audited by Woodside or a delegate. Project Vessels will be assessed on a risk-based approach but will be audited via the primary subsea installation contractor's process.
- Contractor-specific HSE audits will also be conducted of the associated Support Vessels. The audits will consider the implementation of HSE management, risk management, as well as pre-mobilisation and offshore readiness.
- Vessel based HSE inspections will be conducted fortnightly by vessel HSE personnel (or delegate). Each inspection will focus on a specific risk area relevant to the project activity and a formal report will be issued (for example, bunkering controls, chemical and discharge management, cetacean reporting, etc).

- Woodside will assure satisfactory completion of the FPU and its relative sub-components/systems through the completions management process. Each component has a test record (Inspection Test Record, Functional Test Record, Commissioning Test Procedure) requiring completion and validation. Collation of all records for a system are used to demonstrate system completion via a System Acceptance Certificate.
- The internal audits and reviews, combined with the ongoing monitoring described in Section 7.10.1, and collection of evidence for MC are used to assess EPOs and standards.

As part of Woodside's EMS and/or assurances processes, activities may also be periodically selected for environmental audits as per Woodside's internal auditing process. Audit, inspection and review findings relevant to continuous improvement of environmental performance are tracked through the Environmental Commitments and Actions Register.

This Environmental Commitments and Actions Register is used to track Support Vessel and subsea activity compliance with EP commitments, including any findings and corrective actions.

7.10.2.2 Operations Assurance

Assurance is performed as described in the Provide Assurance Procedure and the Provide Assurance Guideline to provide confidence, based on evidence commensurate with risk, that business objectives are met, business activities are performed, and risks are managed. The Guideline aims to explain how the Operations Division Assurance Team implement WMS Assurance requirements, while concurrently satisfying the Operations Division's specific objectives.

Operations Assurance Assignments are contained within the Operations Division Integrated Assurance Assignment Plan.

Environmental assurance activities are conducted on a regular basis to:

- verify environmental risks and potential impacts are being managed in accordance with the EPOs and EPSs detailed in this EP
- monitor, review and evaluate the effectiveness of the performance outcomes and standards detailed in this EP
- verify effectiveness of the EP implementation strategy
- identify potential non-conformances.

The outputs of the assurance process are corrective actions that feed the improvement process. Therefore, assurance is a key driver of continuous improvement.

7.10.2.3 Inspection and Audits – Operations

Environmental inspections of Support Vessels will be undertaken. This involves annual inspection of Woodside's long-term hire Support Vessels for compliance with both the EP and the approved contractor management system. Short-term hire vessels are inspected dependent on the nature of the activity the vessel is undertaking and its level of environment risk. Inspections are conducted in line with the contractor implementation package, however, may include additional requirements for project specific inspection items.

Vessel Inspection findings are captured within a closeout report. Actions arising from subsea Support Vessel environmental audits are tracked through the Environment Vessel Inspection Register and Woodside's action tracking system.

As part of Woodside's EMS and/or assurances processes, activities may also be periodically selected for environmental audits as per Woodside's internal auditing process. Audit, inspection and review findings relevant to continuous improvement of environmental performance are tracked through the Environmental Commitments and Actions Register.

This Environmental Commitments and Actions Register is used to track subsea Support Vessel and subsea activity compliance with EP commitments, including any findings and corrective actions.

Non-conformances identified will be reported and/or tracked in accordance with Section 7.10.3.

7.10.2.4 Annual Offshore Inspection/Desktop Review

An inspection/review of the FPU will be undertaken every calendar year by the Production Environment Team, via either an offshore inspection or desktop review. Selected risk areas/activities are inspected to review environmental performance against the EPOs and EPSs and verify that control measures are effective in reducing the environmental risks and impacts of the activity to an ALARP and acceptable level.

The inspection/review also includes review of conformance with selected aspects of the EP implementation strategy. All risk sources/activities applicable to the offshore facility will be reviewed over a three-year rolling period. Records of findings and records of close-out of any corrective or improvement actions are maintained (close-out is tracked in Woodside's action tracking system).

7.10.2.5 Marine Assurance

Woodside's marine assurance is managed in accordance with Woodside's Marine Offshore Vessel Assurance Procedure. The Woodside process is based on industry standards and consideration of guidelines and recommendations from recognised industry organisations such as Oil Companies International Marine Forum and International Maritime Contractors Association.

Woodside's Marine Offshore Assurance process is mandatory for all vessels (other than Tankers and Floating Production Storage and Offloading vessels) that are chartered directly by or on behalf of Woodside, including for short term hires (i.e. <3 months in duration). It defines applicable marine offshore assurance activities, ensuring all vessel operators operate seaworthy vessels that meet the requirements for a defined scope of work and are managed with a robust Safety Management System.

The process is multi-faceted and encompasses the marine assurance activities of:

- Safety Management System Assessment
- Dynamic Positioning (DP) System Verification
- Vessel Inspections
- project support for tender review, evaluation and pre/post contract award.

Vessel inspections are used to verify actual levels of compliance with the Woodside's Safety Management System, the overall condition of the vessel and the status of the planned maintenance system onboard. Woodside Marine Assurance Specialist will conduct a risk assessment on the vessel to determine the level of assurance applied and the type of vessel inspection required.

Methods of vessel inspection may include, and are not limited to:

- Woodside Marine Vessel Inspection
- OCIMF OVID Inspection
- IMCA CMID Inspection
- Marine Warranty Survey.

Upon completion of the marine assurance process, to confirm that identified concerns are addressed appropriately and conditions imposed are managed, the Woodside Marine Assurance Team will issue the vessel a statement of approval. Should a proposed vessel not meet the requirements of the Woodside Marine Offshore Vessel Assurance Process and be rejected, there does exist an opportunity to further scrutinise the proposed vessel.

Where a vessel inspection and/or OVMSA Verification Review is not available and all reasonable efforts based on time and resource availability to complete an vessel inspection and/or OVMSA Verification Review are performed (i.e. short term vessel hire), the Marine Assurance Specialist Offshore may approve the use of an alternate means of inspection, known as a risk assessment.

7.10.2.6 Risk Assessment

Woodside conducts a risk assessment of vessels where either an OVMSA Verification Review and/or vessel inspection cannot be completed. This is not a regular occurrence and is typically used when the requirements of the assurance process are unable to be met or the processes detailed are not applicable to a proposed vessel(s). The Marine Vessel Risk Assessment will be conducted by the Marine Assurance Specialist, where the vessel meets the short-term hire prerequisites.

The risk assessment is a semi-quantitative method of determining what further assurance process activity, if any, is required to assure a vessel for a particular task or role. The process compares the level of management control a vessel is subject to against the risk factors associated with the activity or role.

Several factors are assessed as part of a vessel risk assessment, including:

- management control factors:
 - Woodside audit score (i.e. management system)
 - vessel HSE incidents
 - vessel Port State Control deficiencies
 - instances of Port State Control vessel detainment
 - years since previous satisfactory vessel inspection
 - age of vessel
 - contractors' prior experience operating for Woodside
- activity risk factors:
 - people health and safety risks (a function of the nature of the work and the area of operation)
 - environmental risks (a function of environmental sensitivity, activity type and magnitude of potential environment damage (e.g. largest credible oil spill scenario))
 - value risk (likely time and cost consequence to Woodside if the vessel becomes unusable)
 - reputation risk
 - exposure (i.e. exposure to risk based on duration of project)
 - industrial relations risk.

The acceptability of the vessel or requirement for further vessel inspections or audits is based on the ratio of vessel score to activity risk. If the vessel management control is not deemed to appropriately manage activity risk, a satisfactory Woodside audit and/or vessel inspection may be required before awarding work.

The risk assessment is valid for the period a vessel is on hire and for the defined scope of work.

7.10.3 Management of Non-conformance

Woodside classifies non-conformances with EPOs and standards in this EP as environmental incidents. Woodside employees and contractors are required to report all environmental incidents, and these are managed as per Woodside's internal event recording, investigation and learning requirements.

An internal computerised database called First Priority is used to record and report these incidents. Details of the event, immediate action taken to control the situation, investigation outcomes and

corrective actions to prevent reoccurrence are all recorded. Corrective actions are monitored using First Priority and closed out in a timely manner.

Woodside uses a consequence matrix for classification of environmental incidents, with the significant categories being A, B and C (as detailed in Section 2.3). Detailed investigations are completed for all categories A, B, C and high potential environmental incidents.

7.10.4 Review

7.10.4.1 Management Review

Within Woodside's Environment Division, senior management regularly monitor and review environmental performance and the effectiveness of managing environmental risks and performance. Within each Business Unit Leadership Team (e.g. Operations), managers review environmental performance regularly, including through quarterly HSE review meetings.

Woodside's Environment Team will perform six-monthly reviews of the effectiveness of the implementation strategy and associated tools. This will involve reviewing the:

- activity environment KPIs (leading and lagging)
- tools and systems to monitor environmental performance (detailed in Section 7.10.1)
- lessons learned about implementation tools and throughout each campaign phase.

Reviews of oil spill arrangements and testing are performed in accordance with Section 7.13.7.

7.10.4.2 Learning and Knowledge Sharing

Learning and knowledge sharing occurs via a number of different methods including:

- event investigations
- event bulletins
- after action review conducted at the end of each well, including review of environmental incidents as relevant
- ongoing communication with Project Vessel and facility operators
- formal and informal industry benchmarking
- cross asset learnings
- engineering and technical authorities discipline communications and sharing.

7.10.4.3 Review of Impacts, Risks and Controls Across the Life of the Environment Plan

In the event that activities described in this EP do not occur continuously or sequentially, before recommencing activities after a cessation period greater than 12 months, impacts, risks and controls will be reviewed.

The process will identify or review impacts and risks associated with the newly-commencing activity, and will identify or review controls to ensure impacts and risks remain/are reduced to ALARP and acceptable levels. Information learned from previous activities conducted under this EP will be considered. Controls which have previously been excluded on the basis of proportionality will be reconsidered. Any required changes will be managed by the MOC process outlined below (Section 7.2.7).

7.10.4.4 Program of Ongoing Engagement with Traditional Custodians

Woodside will undertake an annual review of the Program of Ongoing Engagement with Traditional Custodians (Appendix G: Program of Ongoing Engagement with Traditional Custodians) to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Uncontrolled when printed. Refer to electronic version for most up to date information.

determine its effectiveness and adapt the program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.

7.10.5 Ongoing Consultation

Although consultation is complete for the purpose of Regulation 25 of the Environment Regulations, in accordance with Regulation 22(15) of the Environment Regulations, the implementation strategy must provide for appropriate consultation with relevant authorities of the Commonwealth, a State or Territory and other relevant interested persons or organisations.

Woodside proposes to undertake the engagements with directly impacted relevant persons or organisations listed in Section 5. Relevant new information identified during ongoing consultation will be assessed using the EP Management of Knowledge (refer to Section 7.10.1.2) and Management of Change Process (refer to Section 7.2.7).

Any significant changes on this activity will be communicated to relevant persons. Woodside hosts community forums at which members are updated on Woodside activities. These community and heritage meetings are held on a regular basis (for example, Karratha Community Liaison Group, Exmouth Community Liaison Group). Representatives are from community and industry and include Woodside, State Government (for instance relevant Regional Development Commissions), Local Government, Indigenous Groups, Industry representative bodies, Community and industry organisations.

Relevant persons and those who are interested in the activities, can remain up to date on this activity through subscribing to Woodside's website or by reading the publicly available version of the EP on NOPSEMA's website, where available.

Should consultation feedback be received following EP acceptance that identifies relevant new information or a measure or control that requires implementation or update to meet the intended outcome of consultation (see Section 5.2), Woodside will apply its EP Management of Knowledge process (refer to Section 7.10.1.2) and Management of Change Process (refer to Section 7.2.7), as appropriate.

Woodside has developed a Program of Ongoing Engagement with Traditional Custodians (Appendix G), which is compliant with Corporate Woodside Policies, Strategies and procedures and directly informed by feedback from Traditional Custodians. It provides a mechanism for ongoing dialogue so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the activity and in relation to caring for and managing country, including Sea Country. The Program will be tailored to each Traditional Custodian group and, as agreed with relevant Traditional Custodians, may include:

- social investment to support Indigenous ranger programs
- support for Indigenous oil spill response capabilities
- support for recording Sea Country values
- support to Traditional Custodian groups to build capabilities and capacity with respect to ability to engage with Woodside and the broader O&G industry on activities
- development of ongoing relationships with Traditional Custodian groups
- any other initiatives proposed for the purpose of protecting Country including cultural values.

At the time of EP submission, a number of specific activities as part of ongoing consultation regarding the activity are planned with Traditional Custodian Relevant Persons. These are described in Appendix G: Program of Ongoing Engagement with Traditional Custodians. Where Traditional Custodian relevant persons have requested information or further engagement considered as ongoing consultation, but have not requested a framework agreement, these

requests have been captured in Table 7-8. However, a framework agreement may still be initiated by these groups at any time.

Table 7-8: Ongoing consultation engagements

Report/ Information	Recipient	Purpose	Frequency	Content
Appendix G: Program of Ongoing Engagement with Traditional Custodians	Relevant cultural authorities	Identification, assessment and consideration of cultural values relevant to the Operational Area and EMBA	Ongoing	Assessment of cultural values. Any relevant new information on cultural values will be assessed using the EP Management Knowledge Process (Section 7.10.1.2) and Management of Change Process (refer to Section 7.2.7).
Emails/ Meetings	Relevant cultural authorities	Identification, assessment and consideration of cultural values relevant to the Operational Area and Consultation Area	Ongoing	Assessment of cultural values. Notification (email)	Other relevant persons	Notification of significant change	As appropriate	Notification of significant change
Emails/ meetings	Persons or organisations who provide feedback to Woodside post EP submission.	Identification, assessment and consideration of feedback, claims and/or objections	As appropriate	Assessment of claims and/or objections. Relevant new information will be assessed using the EP Management of Knowledge (refer to Section 7.10.1.2) and Management of Change Process (refer to Section 7.2.7).

7.11 Record Keeping

Compliance records (outlined in MC in Section 6) will be maintained.

Record keeping will be in accordance with Regulation 22(6) of the Environment Regulations, which addresses maintaining records of emissions and discharges.

7.12 Reporting

To meet the EPOs and EPSs outlined in this EP, Woodside reports at a number of levels, as outlined in the next sections.

7.12.1 Routine Reporting (Internal)

7.12.1.1 Daily Progress Reports and Meetings

The daily reports issued, containing environmental performance information, are:

- daily reports for project execution activities
- pan-Woodside Daily Production Report – the report includes facility performance information on production and a log of any HSE events

- Support Vessel Daily Progress Report(s) – during subsea IMMR activities, daily reports are issued by the Woodside Site Representative. The reports provide performance information on HSE events, diesel use, together with equipment information, current and planned work activities.

Daily reports for activities are prepared and issued to key support personnel and relevant persons, by relevant managers responsible for the well. The report provides performance information about installation activities, health, safety and environment, and current and planned work activities.

Meetings between key personnel are used to transfer information, discuss incidents, agree plans for future activities and develop plans and accountabilities for resolving issues.

7.12.1.2 Regular Health, Safety and Environment Meetings

Regular dedicated HSE meetings are held with the offshore and Perth-based management and advisers to address targeted HSE incidents and initiatives. Minutes of these meetings are produced and distributed as appropriate.

7.12.1.3 Performance Reporting

Monthly and quarterly performance reports are developed and reviewed by the Function and Business Unit Leadership Teams. These reports cover a number of subject matters, including:

- HSE incidents (including high potential incidents and those related to this EP) and recent activities
- corporate KPI targets, which include environmental metrics
- outstanding actions as a result of audits or incident investigations
- technical high and low lights.

7.12.2 Routine Reporting (External)

7.12.2.1 Start and End Notifications of the Petroleum Activities Program

Prior to hook-up, commissioning and start-up project activities, in accordance with Regulation 54, Woodside will notify NOPSEMA of the commencement of the Petroleum Activities Program at least ten days before the activity commences and will notify NOPSEMA within ten days of completing the activity. Once initial start-up of the facility has been completed, the FPU will remain in place and be supported by various vessels (Section 3.11), start and end of activity notifications will be undertaken as per controls in Section 6.7.1.

The EP will end when Woodside notifies NOPSEMA that the Petroleum Activities Program has ended, all of the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with Regulation 46 of the Environment Regulations.

7.12.2.2 Environmental Performance Review and Reporting

In accordance with applicable environmental legislation for the activity, Woodside is required to report information about environmental performance to the appropriate regulator. Regulatory reporting requirements are summarised in Table 7-9.

Table 7-9: Routine external reporting requirements

Report	Recipient	Frequency	Content
Monthly Recordable Incident Reports	NOPSEMA	Monthly, by the 15th of each month.	Details of recordable incidents that have occurred during the Petroleum Activities Program for previous month (if applicable).
Environmental Performance Report	NOPSEMA	Annually, with the first report submitted within 12 months of the commencement of the Petroleum Activities Program covered by this EP (as per the requirements of Regulation 22(7)).	Compliance with EPOs, controls and standards outlined in this EP, in accordance with the Environment Regulations.
National Pollutant Inventory (NPI) Report	DAWE	Annual, by 30 September each year	Summary of the emissions to land, air and water including those from the facility. Reporting period 1 July to 30 June each year.
National Greenhouse and Energy Reporting (NGERS)	Clean Energy Regulator	Annual, by 31 October each year	Summary of energy use and greenhouse gas emissions including those from the facility. Reporting period is 1 July to 30 June each year.

7.12.2.3 End of the Environment Plan

The EP will end when Woodside notifies NOPSEMA that the Petroleum Activities Program has ended and all of the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with Regulation 46 of the Environment Regulations.

7.12.3 Incident Reporting (Internal)

All Woodside employees and contractors are responsible for reporting environmental incidents in accordance with Woodside and regulatory reporting requirements as detailed in the Woodside HSE Event Reporting and Investigation Procedure and this section of this EP.

7.12.4 Incident Reporting (External) – Reportable and Recordable

7.12.4.1 Reportable Incidents

Definition

A reportable incident is defined under Regulation 5 of the Environment Regulations as:

“an incident relating to the activity that has caused, or has the potential to cause, moderate to significant environmental damage”.

A reportable incident for the Petroleum Activities Program is:

- an incident that has caused environmental damage with a Consequence Level of Moderate C+ or above (as defined under Woodside’s Risk Table (refer to Section 2.3.2)).
- an incident that has the potential to cause environmental damage with a Consequence Level of Moderate C+ or above (as defined under Woodside’s Risk Table (refer to Section 2.3.2)).

The environmental risk assessment for the Petroleum Activities Program (Section 6) identified one risk with a potential consequence level of C+ for environment, a vessel collision resulting in a hydrocarbon spill. All incidents with actual or potential environmental consequences will be investigated. Where an actual or potential environment consequence of C+ is identified this incident will still be classified as a reportable incident and appropriate notifications completed.

Any such incidents represent potential events which would be reportable incidents. Incident reporting is performed with consideration of NOPSEMA (2014) guidance stating, 'if in doubt, notify NOPSEMA', and assessed on a case-by-case basis to determine if they trigger a reportable incident as defined in this EP and by the Regulations.

Notification

NOPSEMA will be notified of all reportable incidents, according to the requirements of Regulations 47, 48 and 49 of the Environment Regulations. Woodside will:

- report all reportable incidents to the regulator (orally) ASAP, but within two hours of the incident or of its detection by Woodside
- provide a written record of the reported incident to NOPSEMA, the National Offshore Petroleum Titles Administrator (NOPTA) and the Department of the responsible State Minister (DEMIRS) ASAP after orally reporting the incident
- complete a written report for all reportable incidents using a format consistent with the NOPSEMA Form FM0831 – Reportable Environmental Incident which must be submitted to NOPSEMA ASAP, but within three days of the incident or of its detection by Woodside
- provide a copy of the written report to the NOPTA and DEMIRS, within seven days of the written report being provided to NOPSEMA.

AMSA will be notified of oil spill incidents ASAP after their occurrence, and DCCEEW notified if MNES are to be affected by the oil spill incident.

7.12.4.2 Recordable Incidents

Definition

A recordable incident as defined under Regulation 5 of the Environment Regulations is an incident arising from the activity that 'breaches an environmental performance outcome or environmental performance standard, in the EP that applies to the activity, that is not a reportable incident'.

Notification

NOPSEMA will be notified of all recordable incidents, according to the requirements of Regulation 50(2)(b) of the Environment Regulations, no later than 15 days after the end of the calendar month using the NOPSEMA Form – Recordable Environmental Incident Monthly Summary Report detailing:

- all recordable incidents that occurred during the calendar month
- all material facts and circumstances concerning the recordable incidents that the operator knows or is able, by reasonable search or enquiry, to find out
- any action taken to avoid or mitigate any adverse environment impacts of the recordable incidents
- the corrective action that has been taken, or is proposed to be taken, to prevent similar recordable incidents
- the action that has been taken, or is proposed to be taken, to prevent a similar incident occurring in the future.

7.12.4.3 Other External Incident Reporting Requirements

In addition to the notification and reporting of environmental incidents defined under the Environment Regulations and Woodside requirements, Table 7-10 describes the incident reporting requirements that also apply to the Petroleum Activities Program.

Table 7-10: External incident reporting requirements

Event	Responsibility	Notifiable party	Notification requirements	Contact	Contact detail
Any marine incidents during Petroleum Activities Program	Vessel Master	AMSA	Incident Alert Form 18 as soon as reasonably practicable* Within 72 hours after becoming aware of the incident, submit Incident Report Form 19	AMSA	
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA Rescue Coordination Centre (RCC)	As per Article 8 and Protocol I of MARPOL within two hours via the national emergency 24hour notification contacts and a written report within 24 hours of the request by AMSA	AMSA RCC Australia	If the ship is at sea, reports are to be made to: Free call: 1800 641 792 Phone: 08 9430 2100 (Fremantle)
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA	Without delay as per <i>Protection of the Sea Act</i> , part II, section 11(1), AMSA RCC notified verbally via the national emergency 24-hour notification contact of the hydrocarbon spill; follow up with a written Pollution Report ASAP after verbal notification	RCC Australia	Phone: 1800 641 792 or +61 2 6230 6811 AFTN: YSARYCYX
Any oil pollution incident which has the potential to enter a National Park or requires oil spill response activities to be conducted within a National Park	Vessel Master	DCCEEW	Reported verbally, ASAP	Director of National Parks	Phone: 02 6274 2220
Activity causes unintentional death of or injury to fauna species listed as Threatened or Migratory under the EPBC Act	Vessel Master	DCCEEW	Within seven days of becoming aware	Secretary of the DCCEEW	Phone: 1800 803 772 Email: protected.species@environment.gov.au

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Other activities that should also be reported to AMSA via RCC Australia by the Vessel Master are:

- loss of plastic material
- garbage disposed of in the sea within 12 nm of land (garbage includes food, paper, bottles, etc)
- any loss of hazardous materials.

For oil spill incidents, other agencies and organisations will be notified as appropriate to the nature and scale of the incident as per procedures and contact lists in the Oil Pollution Emergency Arrangements (Australia) and the Scarborough Project Offshore Facility and Trunkline (Operation) First Strike Plan (Appendix I: Oil Pollution First Strike Plan).

External incident reporting requirements under the *Offshore Petroleum and Greenhouse Gas Storage (Safety) Regulations 2009* (Cth), including under regulation 2.42, notices and reports of dangerous occurrences will be reported to NOPSEMA under the approved activity safety cases.

7.13 Emergency Preparedness and Response

7.13.1 Overview

Under Regulation 22(8) of the Environment Regulations, the implementation strategy must contain an Oil Pollution Emergency Plan (OPEP) and provide for updating the OPEP. Regulation 22(9) of the Environment Regulations outlines the requirements for the OPEP which must include adequate arrangements for responding to and monitoring oil pollution.

A summary of how this EP and supporting documents address the various requirements of Environment Regulations relating to oil pollution response arrangements is shown in Table 7-11.

Table 7-11: Oil pollution and preparedness and response overview

Content	Environment Regulations Reference	Document/Section Reference
Details of (oil pollution response) control measures that will be used to reduce the impacts and risks of the activity to ALARP and an acceptable level.	Regulation 22 (8), (9)	Appendix H: Oil Spill Preparedness and Response Mitigation Assessment
Describes the OPEP	Regulation 22(9)	EP: Woodside's oil pollution emergency plan has the following components: Woodside Oil Pollution Emergency Arrangements (Australia) Appendix I: Oil Pollution First Strike Plan Appendix H: Oil Spill Preparedness and Response Mitigation Assessment In accordance with Regulation 56 of the Environmental Regulations the Woodside Oil Pollution Emergency Arrangements (Australia) was provided with the Scarborough Drilling and Completions EP, accepted by NOPSEMA on 1 December 2023.
Details the arrangements for responding to and monitoring oil pollution (to inform response activities), including control measures	Regulation 22(10)	Appendix H: Oil Spill Preparedness and Response Mitigation Assessment Appendix I: Oil Pollution First Strike Plan
Details the arrangements for updating and testing the oil pollution response arrangements	Regulation 22(12), (13)	EP: Section 7.13.5 Appendix H: Oil Spill Preparedness and Response Mitigation Assessment

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or mechanical) without the written consent of Woodside. All rights are reserved.

Content	Environment Regulations Reference	Document/Section Reference
Details of provisions for monitoring impacts to the environment from oil pollution and response activities	Regulation 22(10)	Appendix H: Oil Spill Preparedness and Response Mitigation Assessment
Demonstrates that the oil pollution response arrangements are consistent with the national system for oil pollution preparedness and control	Regulation 22(11)	Oil Pollution Emergency Arrangements (Australia)

7.13.2 Emergency Response Training

Regulation 22(4) of the Environment Regulations requires that the implementation strategy includes measures to ensure that employees and contractors have the appropriate competencies and training. Woodside has conducted a risk-based training needs analysis on positions required for effective oil spill response. Following the mapping of training to Woodside identified competencies, training was then mapped to positions based on their required competencies (Table 7-12).

Table 7-12: Minimum levels of competency for key Incident Management Team positions

Position	Minimum Competency
Corporate Incident Management Team (CIMT) Incident Commander and Deputy Incident Commander	Incident and Crisis Leadership Development Program (ICLDP) IMO2 or equivalent spill response specialist level with an oil spill response organisation (OSRO) Participation in L2 oil spill skills (initial) Participation in L2 oil spill skills (refresher) ICS 100/200
Operations, Planning, Logistics and Finance Sections, and other rostered members of the CIMT	OSR Theory (e.g., Oil Spill Response Skills Enhancement Course (OSREC) CIMT Fundamentals Course (internal course). Participation in L2 oil spill skills (initial) Participation in L2 oil spill skills (refresher) ICS 100/200
Environment Unit Leader	CIMT Fundamentals. IMO2 or equivalent spill response Specialist level with an OSRO Participation in L2 oil spill skills (initial) Participation in L2 oil spill skills (refresher) ICS 100/200

Note on competency/equivalency

In 2018, Woodside undertook a review of incident and crisis systems, processes and tools to assess whether these were fit-for-purpose and has rolled out a change to the Incident and Crisis Management training and the Oil Spill Response training requirements for both CIMT and field-based roles.

The revised CIMT Fundamentals Training Program and Incident and Crisis Leaders Development Program (ICLDP) align with the performance requirements of the *PMAOMIR320 – Manage Incident Response Information* and *PMAOMOR418 – Coordinate Incident Response*.

Regarding training-specific equivalency:

ICLDP is mapped to *PMAOMOR418* (which is equivalent to IMO3 when combined with Woodside’s OSREC course) and ensures broader incident management principles aligned with Australasian Inter-service Incident Management System (AIIMS).

The revised CIMT Fundamentals Course is mapped to *PMAOMIR320* (which is equivalent to IMO2). The blended learning program offers modules aligned to IMO3, IMO2, IMO1 and Australian Marine Oil Spill Centre Core Group Training Oil Spill Response Organisation Specialist level training.

OSREC involves the completion of two online AMSA Modules (Introduction to National Plan and incident management, and Introduction to oil spills) as well as elements of IMO1 and IMO2 tailored to Woodside-specific oil spill response capabilities.

Woodside Learning Services (WLS) are responsible for collating and maintaining personnel training records. The Hydrocarbon Spill Preparedness Dashboard reflects the competencies required for each oil spill role (IMT/operational).

7.13.3 Emergency Response Preparation

The CIMT, based in Woodside's head office in Perth, is the onshore coordination point for an offshore emergency. The CIMT is staffed by a roster of appropriately skilled personnel available on call 24 hours a day. The CIMT, under the leadership of the CIMT Leader, supports the site-based Incident Management Team by providing additional support in areas such as operations, logistics, planning, people management and public information (corporate affairs). A description of Woodside's Incident Command Structure and arrangements is further detailed in the Woodside Oil Pollution Emergency Arrangements (Australia).

Woodside will have an Emergency Response Plan (ERP) in place relevant to the Petroleum Activities Program. The ERP provides procedural guidance specific to the asset and location of operations to control, coordinate and respond to an emergency or incident.

In addition, the Emergency Preparedness MSPS (M06) is in place to assure that in the event of an incident, the organisation is appropriately prepared for all necessary actions which may be required for the protection of People, Environment, Asset, Reputation and Livelihood.

For a vessel activity, the ERP will be a bridging document to the contracted vessel's emergency documentation. This document summarises the emergency command, control and communications processes for the integrated operation and management of an emergency. It is developed in collaboration with the contracted vessel and enables roles and responsibilities between the contracted vessel and Woodside personnel to be identified and understood. The ERPs will contain instructions for vessel emergency, medical emergency, search and rescue, reportable incidents, incident notification, contact information and activation of the contractor's emergency centre and Woodside Communication Centre (WCC).

7.13.3.1 Initial Response to Facility Incident

The FPU is equipped with emergency shutdown systems designed to protect personnel, the FPU and the environment from unsafe operating conditions and catastrophic situations.

Emergency shutdown systems are provided as a means of isolation in response to process upsets and FPU conditions (including associated flowlines and risers) that could result in loss of hydrocarbon inventories, or to reduce the potential impact from a hydrocarbon loss of containment event on the facility. Provision has been made for process and FPU alarm systems to provide early indication of any process upset conditions and potential hazardous events, including fire and gas alarms.

The key ERP relevant to the FPU and subsea infrastructure (excluding the export pipeline) is the Scarborough Emergency Response Plan. This plan covers health, safety, asset and environmental risks (including fire, structural integrity, sabotage, etc.) to the range of occupational, asset and environmental risk exposures from incidents have been considered and plans are in place for their management. The plan provides specific details on the initial response required during events with potential significant environmental consequences such as a hydrocarbon spill, subsea hydrocarbon leak or potential collision.

The Pipelines Emergency Response Plan covers key ERP relevant to the export pipeline, as well as other major pipelines on Woodside's NWS facilities. The Scarborough Operations Oil Pollution First Strike Plan provides immediate actions required to commence a response (Appendix I: Oil Pollution First Strike Plan). Vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from vessel activities. The Scarborough Operations Oil Pollution First Strike Plan is intended to work in conjunction with the SOPEPs, if hydrocarbons are released to the marine environment from a vessel.

Woodside has established EPOs, EPSs and MCs to be used for hydrocarbon spill response during the Petroleum Activities Program, as detailed in Appendix H: Oil Spill Preparedness and Response Mitigation Assessment

7.13.4 Oil and Other Hazardous Materials Spill

A significant hydrocarbon spill during the proposed Petroleum Activities Program is unlikely, but should such an event occur, it has the potential to result in a serious safety or environmental incident and cause asset and reputational damage if not managed properly. The Woodside Oil Pollution Emergency Arrangements (Australia) document, supported by the Oil Pollution First Strike Plan (Appendix I: Oil Pollution First Strike Plan) provides tactical response guidance to the activity/area and covers the spill response for this Petroleum Activities Program.

The Security and Emergency Management Function is responsible for managing Woodside's hydrocarbon spill response equipment and for maintaining oil spill preparedness and response documentation. In the event of a major spill, Woodside will request that AMSA (administrator of the National Plan) provides support to Woodside through advice and access to equipment, people and liaison. The interface and responsibilities, as defined under the National Plan, are described in the Woodside Oil Pollution Emergency Arrangements (Australia). AMSA and Woodside have a Memorandum of Understanding in place to support Woodside in the event of an oil spill.

The Oil Pollution First Strike Plan provides immediate actions required to commence a response (Appendix I: Oil Pollution First Strike Plan).

The Project Vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from vessel activities. The Oil Pollution First Strike Plan is intended to work in conjunction with the SOPEPs, if hydrocarbons are released to the marine environment from a vessel.

Woodside has established EPOs, performance standards and MC to be used for oil spill response during the Petroleum Activities Program, as detailed in Section 6.

7.13.5 Emergency and Spills Response

Woodside categorises incidents and emergencies in relation to response requirements as follows:

Level 1

Level 1 incidents are those that can be resolved using existing resources, equipment and personnel. A Level 1 incident is contained, controlled and resolved by site/regionally based teams using existing resources and functional support services.

Level 2

Level 2 incidents are characterised by a response that requires external operational support to manage the incident. It is triggered if the capabilities of the tactical level response are exceeded. This support is provided to the activity by activating all or part of the responsible CIMT.

Level 3

A Level 3 incident or crisis is identified as a critical event that seriously threatens the organisation's people, the environment, Woodside assets, reputation, or livelihood. At Woodside, the Crisis Management Team (CMT) manages the strategic impacts in order to respond to and recover from the threat to the Woodside (material impacts, litigation, legal and commercial, reputation etc.). The CIMT may also be activated as required to manage the operational incident response.

7.13.6 Emergency and Spill Response Drills and Exercises

Woodside's capability to respond to incidents will be tested periodically, in accordance with the *Crisis and Emergency Management Training Drill and Exercise Standard*. The scope, frequency and objective of these tests is described in Table 7-13

Emergency response testing is aligned to existing or developing risks associated with Woodside's operations and activities. Corporate hazards/risks outlined in the corporate risk register, respective Safety Cases or project Risk Registers, are reference points developing and scheduling emergency and crisis management exercises. External participants may be invited to attend exercises (e.g., government agencies, specialist service providers, oil spill response organisations, or industry members with which Woodside has mutual aid arrangements).

The overall objective of exercises is to test procedures, skills and the teamwork of the Emergency Response and Command Teams in their ability to respond to major accident/major environment events. After each exercise, the team holds a debriefing session, during which the exercise is reviewed. Any lessons learned or areas for improvement are identified and incorporated into revised procedures, where appropriate.

The Level 1-3 incident testing requirements for vessels and the FPU associated with the PAP are described in Table 7-13. Because the purpose of Level 2 drills is to exercise Woodside response capabilities (more so than vessel response), Level 2 exercises are not mandatory for PAP vessels and will instead involve project vessels opportunistically, if required by the Woodside Crisis Management Team. Level 2 exercises for the FPU align with Regulatory requirements (particularly Regulation 22 14 (e) which requires testing of response arrangements post operational status) and have been scheduled based on risk (i.e. once upon hookup infield, once upon introduction of hydrocarbons (gas) and initial post-operations test within 12 months of the last Level 2).

The testing arrangements in Figure 7-8 are commensurate with the level of hydrocarbon release risk for the PAP. As described in Section 6.8.4 the worst-case credible spill scenario for this PAP is a diesel release from Vessel(s) including the ASV or FPU Topsides of up to 470m³. There are no new or unaccounted for risks or increase in risks associated with activities such as hook-up, commissioning and startup that would introduce a need for additional testing arrangements.

Table 7-13: Testing of response capability

Response Category	Scope	Response Testing Frequency Hook-up, commissioning & start-up activities	Response Testing Frequency – Operations Phase (Post Final Facility Acceptance)	Response Testing Objective
Level 1 Response	Exercises are project-/activity-specific	FPU: One Level 1 ‘First Strike’ drill as per the First Strike Plan including contacting the WCC and testing of spill tracker buoy to be conducted within two weeks of commencing activity in the Operational Area.	FPU: Two comprehensive Level 1 ‘First Strike’ drills conducted per year. Additional drills can be carried out as required, based on risk and activities.	Comprehensive exercises test elements of the Oil Pollution First Strike Plan. Emergency drills are scheduled to test other aspects of the Emergency Response Plan.
		Vessels: One Level 1 ‘First Strike’ drill as per the First Strike Plan including contacting the WCC and testing of spill tracker buoy if on board, conducted within two weeks of commencing activity in the Operational Area for all vessels; and then at least once every 6-month hire period thereafter (i.e. if vessel moves activity / EP but stays on-hire to or working for Woodside, Level 1 does not need to be repeated if last drill was conducted within 6 months; unless WEL environment adviser stipulates another drill is required, due to change in risk profile between activities).	Vessels: One Level 1 ‘First Strike’ drill as per the First Strike Plan including contacting the WCC and testing of spill tracker buoy if on board, conducted within two weeks of commencing activity in the Operational Area for all vessels; and then at least once every 6-month hire period thereafter (i.e. if vessel moves activity / EP but stays on-hire to or working for Woodside, Level 1 does not need to be repeated if last drill was conducted within 6 months; unless WEL environment adviser stipulates another drill is required, due to change in risk profile between activities).	
Level 2 Response	Exercises are vessel/facility-specific	FPU: The first Level 2 exercise for the Scarborough FPU will be conducted within 3 months of hook-up. The second Level 2 exercise is required to be carried out within 3 months of RFSU (the introduction of gas to the FPU).	FPU: A minimum of one Emergency Management exercise is conducted biennially. The first Level 2 Exercise for the FPU in Operations phase (post Final Facility Acceptance) will be conducted within 12 months following the last Level 2 exercise (carried out post RFSU).	Testing both the facility IMT response and/or that of the CIMT following handover of incident control.
		Vessels: Level 2 exercises will be carried out in accordance with <i>Crisis and Emergency Management Training Drill and Exercise Standard</i> .	Vessels: Level 2 exercises will be carried out in accordance with <i>Crisis and Emergency Management Training Drill and Exercise Standard</i> .

		<p>The CEM team manage the CIMTs capability and competency requirements, and theme exercises, drills and training based on current and emerging risks per year.</p> <p>These Level 2 exercises may opportunistically involve vessels in the field carrying out the PAP.</p>	<p>The CEM team manage the CIMTs capability and competency requirements, and theme exercises, drills and training based on current and emerging risks per year.</p> <p>These Level 2 exercises may opportunistically involve vessels in the field carrying out the PAP.</p>	
Level 3 Response	Exercises are relevant to all Woodside assets	The number of CMT exercises conducted each year is determined by the Chief Executive Officer, in consultation with the Vice President of Security and Emergency Management.		Test Woodside's ability to respond to and manage a crisis level incident

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.13.7 Hydrocarbon Spill Response Testing of Arrangements

In the event of a spill, several arrangements underpin Woodside’s ability to implement a response across its petroleum activities. To adequately test these arrangements, the Capability Development Team within Security and Emergency Management confirms that tests are conducted in alignment with the Hydrocarbon Spill Testing of Arrangements Schedule.

Woodside’s arrangements for spill response are common across its Australian operating assets and activities to ensure the controls are consistent. The overall objective of testing these arrangements is to maintain Woodside’s ability to respond to a hydrocarbon spill, specifically to:

- confirm relevant responders, contractors and key personnel understand and practise their assigned roles and responsibilities
- test response arrangements and actions to validate response plans
- incorporate lessons learned are incorporated into Woodside’s processes and procedures and make improvements where required.

If new response arrangements are introduced, or existing arrangements significantly amended, additional testing is undertaken accordingly. Additional activities or activity locations are not anticipated to occur; however, if they do, testing of relevant response arrangements will be undertaken as soon as practicable.

In addition to the testing of response capability described in Table 7-13, up to eight formal exercises are planned annually, across Woodside, to specifically test arrangements for responding to a hydrocarbon spill to the marine environment.

7.13.7.1 Testing of Arrangements Schedule

Woodside’s Testing of Arrangements Schedule (Figure 7-8) aligns with international good practice for spill preparedness and response management; the testing is compatible with the IPIECA Good Practice Guide and the Australian Institute for Disaster Resilience (AIDR) Australian Emergency Management Arrangements Handbook. If a spill occurs, enacting these arrangements will underpin Woodside’s ability to implement a response across its petroleum activities.

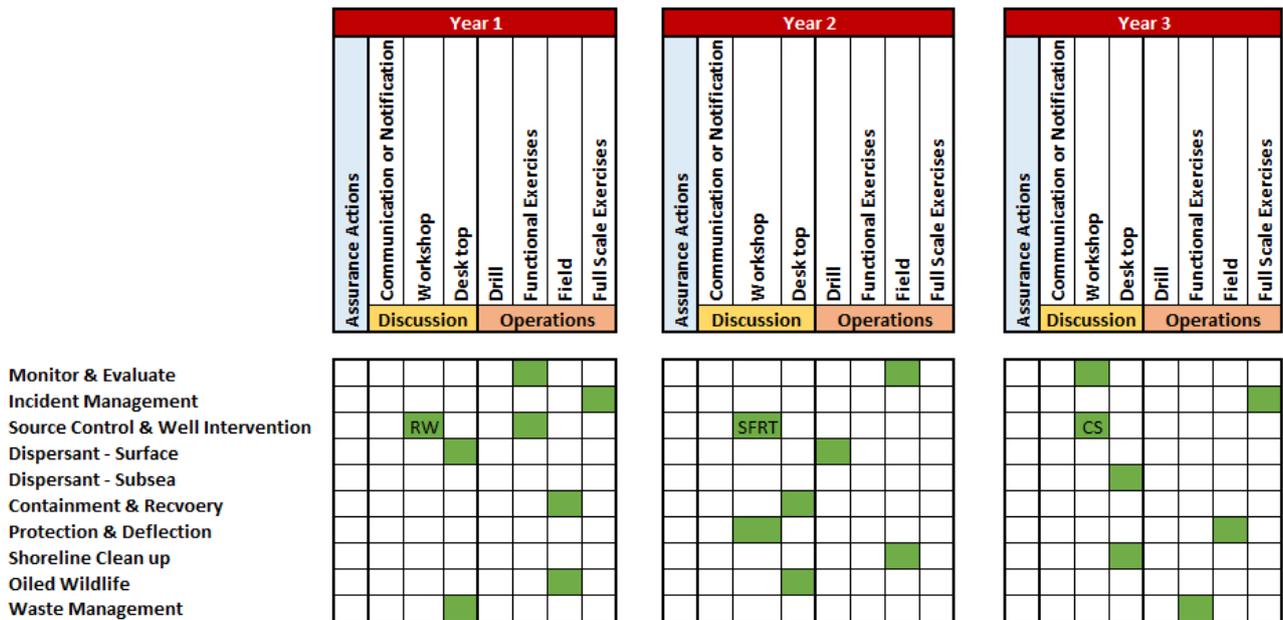

Figure 7-8: Indicative three-yearly testing of arrangements schedule

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The hydrocarbon spill arrangements shown in the rows of the schedule are tested against Woodside's regulatory commitments. Each arrangement has a support agency/company and an area to be tested (e.g., capability, equipment and personnel). For example, an arrangement could be to test Woodside's personnel capability for conducting scientific monitoring, or the ability of the Australian Marine Oil Spill Centre to provide response personnel and equipment.

The vertical columns relate to how hydrocarbon spill arrangements will be tested over the 3-year rolling schedule. The sub-heading for the column describes the standard method of testing likely to be undertaken (e.g., discussion exercise, desktop exercise), and the green cells indicate the arrangements that could be tested for each method.

Some arrangements may be tested across multiple exercises (e.g., critical arrangements) or via other 'additional assurance' methods outside the formal Testing of Arrangements Schedule that also constitute sufficient evidence of testing of arrangements (e.g., audits, no-notice drills, internal exercises, assurance drills).

7.13.8 Cyclone and Dangerous Weather Preparation

Tropical cyclones and other severe weather events are a potential risk to the safety and health of personnel and can potentially cause spills of hazardous materials into the environment from infrastructure and/or damaged vessels.

Facilities and relevant Support Vessels on hire to Woodside receive regular forecasts from Woodside Meteorologists, who liaise closely with the Bureau of Meteorology (BOM). If a cyclone or other severe weather event is forecasted, the path and its development is plotted and monitored using the BOM data. If there is the potential for the cyclone or other severe weather event to affect the Petroleum Activities Program, the asset Cyclone Contingency Plan and the vessel's Cyclone Contingency Plan will be actioned. If required, vessels can transit from the proposed track of the cyclone or other severe weather event.

9 GLOSSARY AND ABBREVIATIONS

9.1 Glossary

Term	Meaning
(the) Regulator	The Government Agency (State or Commonwealth) that is the decision maker for approvals and performs ongoing regulation of the approval once granted
4D seismic data	A set of numerous closely-spaced seismic lines that provide a high spatially sampled measure of subsurface reflectivity and 4D image
Acceptability	The EP must demonstrate that the environmental impacts and risks of an activity will be of an acceptable level as per Regulation 10A(c).
ALARP	A legal term in Australian safety legislation, it is taken here to mean that all contributory elements and stakeholdings have been considered by assessment of costs and benefits, and which identifies a preferred course of action
Ballast	Extra weight taken on to increase a ship's stability to prevent rolling and pitching. Most ships use seawater as ballast. Empty tank space is filled with inert (non-combustible) gas to prevent the possibility of fire or explosion.
Bathymetry	Related to water depth, a bathymetry map shows the depth of water at a given location on the map.
Benthos/Benthic	Relating to the seabed and includes organisms living in or on sediments/rocks on the seabed
Biodiversity	Relates to the level of biological diversity of the environment. The EPBC Act defines biodiversity as "the variability among living organisms from all sources (including terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part) and includes: (a) diversity within species and between species; and (b) diversity of ecosystems".
Biota	The animal and plant life of a particular region, habitat or geological period
Cetacean	Whale and dolphin species
Consequence	The worstcase credible outcome associated with the selected event, assuming some controls (prevention and mitigation) have failed. Where more than one impact applies (e.g. environmental and legal/compliance), the consequence level for the highest severity impact is selected.
Coral	Anthozoa that are characterised by stonelike, horny or leathery skeletons (external or internal). The skeletons of these animals are also called coral.
Coral Reef	A wave-resistant structure resulting from skeletal deposition and cementation of hermatypic corals, calcareous algae, and other calcium carbonate-secreting organisms
Crustacean	A large and variable group of mostly aquatic invertebrates that have a hard external skeleton (shell), segmented bodies, with a pair of often very modified appendages on each segment, and two pairs of antennae (e.g. crabs, crayfish, shrimps, wood lice, water fleas and barnacles)
Cyclone	A rapidly-rotating storm system characterised by a low-pressure centre, strong winds, and a spiral arrangement of thunderstorms that produce heavy rain
dB	Decibel, a measure of the overall noise level of sound across the audible spectrum with a frequency weighting (that is, 'A' weighting) to compensate for the varying sensitivity of the human ear to sound at different frequencies
dB re 1 μPa^2	Measure of underwater noise, in terms of sound pressure. Because the dB is a relative measure rather than an absolute measure, it must be referenced to a standard 'reference intensity', in this case 1 micro Pascal (1 mPa), which is the standard reference that is used. The dB is also measured over a specified frequency, which is usually either a one Hertz bandwidth (expressed as dB re 1 mPa^2/Hz), or over a broadband that has not been filtered. Where a frequency is not specified, it can be assumed that the measurement is a broadband measurement.
dB re 1 $\mu\text{Pa}^2\cdot\text{s}$	Normal unit for sound exposure level

Term	Meaning
Demersal	Living close to the floor of the sea (typically of fish)
Dynamic positioning	In reference to a marine vessel that uses satellite navigation and radio transponders in conjunction with thrusters to maintain its position
Echinoderms	Any of numerous radially symmetrical marine invertebrates of the phylum Echinodermata, which includes the starfishes, sea urchins and sea cucumbers, that have an internal calcareous skeleton and are often covered with spines
Endemic	A species that is native to or confined to a certain region
Environment	The surroundings in which an organisation operates, including air, water, land, natural resources, flora, fauna, humans and their interrelations (Source: ISO 14001)
Environment Regulations	OPGGS (Environment) Regulation 2023
Environmental approval	The action of approving something, which has the potential to have an adverse impact on the environment. Environmental impact assessment is generally required before environmental approval is granted.
Environmental impact	Any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organisation's activities, products or services (Source: HB 203:2006).
Environmental impact assessment	An orderly and systematic process for evaluating a proposal or scheme (including its alternatives), and its effects on the environment, and mitigation and management of those effects (Source: Western Australian <i>Environmental Impact Assessment Administrative Procedures 2010</i>)
EP	Prepared in accordance with the <i>OPGGS (Environment) Regulations 2023</i> , which must be assessed and accepted by the Designated Authority (NOPSEMA) before any petroleum-related activity can be performed
EPBC Act	<i>Environment Protection and Biodiversity Conservation Act 1999</i> . Commonwealth legislation designed to promote the conservation of biodiversity and protection of the environment.
Epifauna	Benthic animals that live on the surface of a substrate
Fauna	Collectively, the animal life of a particular region
Flora	Collectively, the plant life of a particular region
Infauna	Aquatic animals that live in the substrate of a body of water, especially in a soft sea bottom
ISO 14001	ISO 14001 is an international standard that specifies a process (called an EMS) for controlling and improving a company's environmental performance. An EMS provides a framework for managing environmental responsibilities so they become more efficient and more integrated into overall business operations.
Likelihood	The description that best fits the chance of the selected consequence actually occurring, assuming reasonable effectiveness of the prevention and mitigation controls
MARPOL (73/78)	The International Convention for the Prevention of Pollution from Ships 1973, as modified by the Protocol of 1978. MARPOL 73/78 is one of the most important international marine environmental conventions. It was designed to minimise pollution of the seas, including dumping, oil and exhaust pollution. Its stated objective is to preserve the marine environment through the complete elimination of pollution by oil and other harmful substances and the minimisation of accidental discharge of such substances.
Meteorology	The study of the physics, chemistry and dynamics of the earth's atmosphere, including the related effects at the air–earth boundary over both land and the oceans
Mitigation	Management measures that minimise and manage undesirable consequences
Ngarda-Ngarli	Ngarda-Ngarli is the collective term for the five Traditional Owner groups of Murujuga, being Ngarluma, Yindjibarndi, Yaburara, Mardudhunera and Wong-Goo-Tt-Oo. There are several spellings arising from transliteration into English including Ngurra-ra Ngarli. Woodside uses spellings that are contextually correct to the source material discussed.

Term	Meaning
pH	Measure of the acidity or basicity of an aqueous solution
Protected Species	Threatened, vulnerable or endangered species that are protected from extinction by preventive measures. Often governed by special Federal or State laws.
Putrescible	Refers to food scraps and other organic waste associated with food preparation that will be subject to decay and rot (putrefaction)
Risk	The combination of the consequences of an event and its associated likelihood. For guidance, see Environmental Guidance on Application of Risk Management Procedure.
Sessile	Organism that is fixed in one place; immobile
Stereo-BRUVS	Stereo-baited remote underwater video systems
Teleost	A fish belonging to the Teleostei or Teleostomi, a large group of fishes with bony skeletons, including most common fishes. The teleosts are distinct from the cartilaginous fishes such as sharks, rays, and skates.
Zooplankton	Plankton consisting of small animals and the immature stages of larger animals

9.2 Abbreviations

Abbreviation	Meaning
µm	Micrometre
350A	350 Australia
ABF	Australian Border Force
AFC	Antifouling Coating
AFMA	Australian Fisheries Management Authority
AHO	Australian Hydrographic Office
AHT	Anchor Handling Tugs
AIDR	Australian Institute for Disaster Resilience
AIIMS	Australasian Inter-service Incident Management System
AIMS	Australian Institute of Marine Science
AIS	Automatic Identification System
ALAN	Artificial Night At Night
ALARP	As Low As Reasonably Practicable
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
ANZECC	Australian and New Zealand Environment and Conservation Council
AEP	Australian Energy Producers
ARMCANZ	Agriculture and Resource Management Council of Australia and New Zealand
ASAP	As soon as practicable
ASV	Accommodation support vessel
ATSB	Australian Transport Safety Bureau
AusSAR	Australian Search and Rescue
AUV	Autonomous Underwater Vehicle
AWR	Air Weapons Range
BESS	Battery Energy Storage System

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
BIA	Biologically Important Area
BMSL	Below mean sea level
BOM	Bureau of Meteorology
BOP	Blowout Preventer
BSG	Black Start Generator
BTAC	Buurabalayii Thalanyii Aboriginal Corporation
BTEX	Benzene, Tolulene
CAES	Catch and Effort System
CCP	Cyclone Contingency Plan
CCWA	Conservation Council of Western Australia
CEFAS	Centre for Environment, Fisheries and Aquaculture Science
CFA	Commonwealth Fisheries Association
CH ₄	Methane
CHMP	Cultural Heritage Management Plan
CHP	Commonwealth Heritage Properties
CIMT	Corporate Incident Management Team
CMID	Common Marine Inspection Document
CMMS	Computerised Maintenance Management System
CMP	Conservation Management Plan
CMT	Crisis Management Team
CO	Carbon Monoxide
CO ₂	Carbon Dioxide
CO ₂ -e	Carbon Dioxide Equivalent
CoA	Commonwealth of Australia
CoP	Cessation of Production
CS	Cost/Sacrifice
CSIRO	Commonwealth Scientific and Industrial Research Organisation
Cth	Commonwealth
CVS	Contractor Verification Service
D&C	Drilling and Completions
DAA	Department of Aboriginal Affairs
DAFF	Department of Agriculture, Fisheries and Forestry
dB	Decibel
DBCA	Department of Biodiversity, Conservation and Attractions
DCCEEW	Department of Climate Change, Energy, the Environment and Water
DEA	Doctors for the Environment Australia
DEWHA	Department of Environment, Water, Heritage and the Arts
DGVs	Default guideline values
DISER	Department of Industry, Science, Energy and Resources

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
DLV	Derrick lay vessel
DMIRS	Department of Mines, Industry Regulation and Safety
DMP	Department of Mines and Petroleum
DNP	Director of National Parks
DoD	Department of Defence
DoT	Department of Transport
DP	Dynamically Positioned
DPIRD	Department of Primary Industries and Regional Development
EDG	Emergency Diesel Generator
EDU	Electrical Distribution Unit
EET	Emission Estimation Techniques
EFL	Electrical Flying Lead
EGC	Export Gas Compressors
EMBA	Environment that May Be Affected
EMS	Environmental Management System
ENVID	Environmental hazard Identification
EP	Environment Plan
EPA	Environmental Protection Authority
EPO	Environmental Performance Outcome
EPS	Environmental Performance Standard
ER95%	95 th Percentile Exposure Range
ERM	Environmental Resource Management
ERP	Emergency Response Plans
ERT	Emergency Response Team
ESD	Ecological Sustainable Development
EVP	Executive Vice President
F	Control Feasibility
FARA	Friends of Australian Rock Art
FCG	Flooded, cleaned and gauged
FEED	Front End Engineering and Design
FFS	Fitness for Service
FLETS	Flowline end terminations
FLIP	Flowline Induced Pulsation
FLNG	Floating Liquefied Natural Gas units
FPSO	Floating Production Storage Offload
FPU	Floating Production Unit
FRC	Fast Rescue Craft
FWP	Firewater Pump
g/m ²	Grams per square metre

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
GAP	Greenpeace Australia Pacific
GEP	Gas Export Pipeline
GHG	Greenhouse Gas
GP	Good Practice
GV	Guideline value
HF	High Frequency
HFC	Hydrofluorocarbons
HFO	Heavy Fuel Oil
HOCNF	Harmonised Offshore Chemical Notification Format
HP	High Pressure
HPU	Hydraulic Power Unit
HQ	Hazard Quotient
HSE	Health, Safety and Environment
HSEQ	Health, Safety and Environment Quality
HSP	Hydrocarbon Spill Preparedness
HVAC	Heating, Ventilation and Airconditioning
IAP	Incident Action Plan
IAPP	International Air Pollution Prevention
ICLDP	Incident and Crisis Leadership Development Program
ICOMOS	International Council on Monuments and Sites
IEA	International Energy Agency
IFO	Intermediate Fuel Oils
ILTs	In-Line Tees
ILUA	Indigenous Land Use Agreements
IMCA	International Marine Contractors Association
IMCRA	Integrated Marine and Coastal Regionalisation of Australia
IMMR	Inspection, Monitoring, Maintenance and Repair
IMO	International Marine Organisation
IMS	Invasive Marine Species
IMSMA	Invasive Marine Species Management Area
IMT	Incident Management Team
IPCC	Intergovernmental Panel on Climate Change
IPIECA	International Petroleum Industry Environmental Conservation Association
ISPP	International Sewage Pollution Prevention Certificate
ISSoW	Integrated Safe System of Work
ITF	Indonesian Through Flow
ITOPF	International Tankers Owners Pollution Federation
IUCN	International Union for Conservation of Nature
IHUC	Installation Hook Up and Commissioning

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
IUU	Illegal, Unregulated and Unreported
JRCC	Joint Rescue Coordination Centre
JSA	Job Safety Analysis
KEF	Key Ecological Feature
KGP	Karratha Gas Plant
kHz	Kilohertz
km	Kilometre
KO	Knock Out
KPI	Key Performance Indicator
L	Litres
LARS	Launch and Recovery System
LBL	Long Baseline
LCR	Local Control Room
LCS	Legislation, Codes and Standards
LCV	Light Construction Vessel
LF	Low Frequency
LGM	Last Glacial Minimum
LNG	Liquefied Natural Gas
LP	Low Pressure
LPMFV	Low Pressure MEG Flash Vessel
LTGA	Lock the Gate
LTO	Licence to Operate
LTS	Low Temperature Separator
LQ	Living Quarters
m	metre
MAC	Murujuga Aboriginal Corporation
MAE	Major Accident Events
MARPOL	International Convention for the Prevention of Pollution from Ships
MBES	Multibeam Echo Sounders
MC	Measurement Criteria
MDO	Marine Diesel Oil
MEG	Mono-ethylene Glycol
METL	Maintenance Engineering Team Leader
MFO	Marine Fauna Observers
MGO	Marine Gas Oil
MMSI	Maritime Mobile Service Identity
MNES	Matters of National Environmental Significance
MOC	Management of Change
MODU	Mobile Offshore Drilling Unit

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
MOPO	Manual of Permitted Operation
MPA	Marine Protected Area
MPG	Main Power Generators
MRU	MEG Recovery Unit
MSIN	Maritime Safety Information Notifications
MSL	Mean Sea Level
MSPS	Management System Performance Standards
MUZ	Multiple Use Zone
MWS	Marine Warranty Surveyor
N ₂ O	Nitrous Oxide
NAC	Ngarluma Aboriginal Corporation
NCOS	National Carbon Offset Scheme
NCVA	National Conservation Values Atlas
NDC	Nationally Determined Contribution
NGAF	National Greenhouse Account Factors
NGER	National Greenhouse and Energy Reporting
NHP	National Heritage Places
NIMS	Non-indigenous Marine Species
NLPG	National Light Pollution Guidelines
nm	Nautical mile (1,852 m) a unit of distance on the sea
NMFS	National Marine Fisheries Service
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NOPTA	National Offshore Petroleum Titles Administrator
NORM	Naturally Occurring Radioactive Material
NOx	Oxides of Nitrogen
NPI	National Pollutant Inventory
NRC	North Rankin Complex
NTGAC	Nghanhurra Thanardi Garrbu Aboriginal Corporation
NTM	Notice to Mariners
NWMR	North-west Marine Region
NWS	North-west Shelf
NWXA	North West Exercise Area
NZE	Net Zero Emissions
OCIMF	Oil Companies International Marine Forum
OCNS	Offshore Chemical Notification Scheme
OCV	Offshore Construction Vessel
OILMAP	Oil Spill Mapping and Analysis Program
OIW	Oil in Water

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
OMDAMP	Offshore Marine Discharges Adaptive Management Plan
OPEP	Oil Pollution Emergency Plan
OPGGS	Offshore Petroleum and Greenhouse Gas Storage
OPP	Offshore Project Proposal
OSREC	Oil Spill Response Skills Enhancement Course
OSRO	Oil Spill Response Organisation
OSV	Offshore Support Vessel
OVID	Offshore Vessel Inspection Database
OVMSA	Offshore Vessel Safety Management System assessment
PAA	Petroleum Activity Area
PAH	Polycyclic Aromatic Hydrocarbon

APPENDIX A: WOODSIDE POLICIES

Risk Management Policy: https://www.woodside.com/docs/default-source/about-us-documents/corporate-governance/woodside-policies-and-code-of-conduct/risk-management-policy.pdf?sfvrsn=61ec596b_19

Climate Policy: <https://www.woodside.com/docs/default-source/about-us-documents/corporate-governance/woodside-policies-and-code-of-conduct/climate-change-policy.pdf>

Please note that the Woodside Policies is reviewed regularly and is updated as required. The Environment and Biodiversity Policy, Risk Management Policy and Climate Policy is made available on our website, along with the other Board policies: <https://www.woodside.com/who-we-are/corporate-governance-and-policies>

Climate Policy.docx

BACKGROUND

The Intergovernmental Panel on Climate Change has stated that “it is unequivocal that human influence has warmed the atmosphere, ocean and land”. An objective of the Paris Agreement is to hold “the increase in the global average temperature to well below 2°C above pre-industrial levels” and to pursue “efforts to limit the temperature increase to 1.5°C”. Many countries have set targets to reduce greenhouse gas emissions, including by changing the way they produce and consume energy.

OBJECTIVE

Woodside’s objective is to thrive in this energy transition as a low cost, lower carbon energy provider.

PRINCIPLES

Woodside aims to achieve the objective by:

- Setting science-based¹ near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned² scenarios, covering equity scope 1 and 2 emissions, both operated and non-operated.³
- Developing and operating oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Investing in new energy products and lower carbon services to reduce customers’ emissions (part of Woodside’s Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publishing transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Aligning our advocacy to the principles of this Climate Policy.

¹ Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of “science-based” (published 2021) which states “targets are considered ‘science-based’ if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement—limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.” See <https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf> (Appendix A).

² Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of “Paris-aligned scenarios” (published 2021) which states “scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.” See <https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf> (Appendix A).

³ Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside’s ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside’s ownership interest.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venture participants engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2023.

Environment and Biodiversity Policy.docx

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new exploration or development of hydrocarbons within the boundaries of natural sites on the UNESCO World Heritage List (as specified at 1 December 2022). Existing activity may continue if compatible with maintenance of the listed outstanding universal values.
- Not undertaking new exploration or development of hydrocarbons within IUCN Protected Areas (as specified at 1 December 2022) unless compatible with management plans in place for the area. Existing activity may continue if compatible with management plans in place for the area.
- Achieving net zero deforestation¹ associated with new projects that take a Final Investment Decision (FID) after 1 December 2022.
- Developing Biodiversity Action Plans for all new major projects (CAPEX >USD\$2 billion) that take a FID after 1 December 2022.
- Supporting positive biodiversity outcomes in regions and areas in which we operate.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 01-May-2024

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	26
Listed Migratory Species:	42

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Sousa sahalensis as Sousa chinensis Australian Humpback Dolphin [87942]		Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus spirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribbioned Pipehorse, Ribbioned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Species or species habitat known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Congregation or aggregation known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Congregation or aggregation known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Congregation or aggregation known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Key Ecological Features [[Resource Information](#)]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west

Biologically Important Areas [[Resource Information](#)]

Scientific Name	Behaviour	Presence
Marine Turtles		
Caretta caretta		
Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Chelonia mydas		
Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardena pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevipinna Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevipinna Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	1
National Heritage Places:	2
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	51
Listed Migratory Species:	63

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	1
Listed Marine Species:	103
Whales and Other Cetaceans:	32
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	8
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	22
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	185
Key Ecological Features (Marine):	5
Biologically Important Areas:	36
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Commonwealth Marine Area [\[Resource Information \]](#)

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Listed Threatened Species [\[Resource Information \]](#)

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Malurus leucopterus edouardi White-winged Fairy-wren (Barrow Island), Barrow Island Black-and-white Fairy-wren [26194]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
FISH		
Milyeringa veritas Cape Range Cave Gudgeon, Blind Gudgeon [66676]	Vulnerable	Species or species habitat known to occur within area
Ophisternon candidum Blind Cave Eel [66678]	Vulnerable	Species or species habitat known to occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur Barrow and Boodie Islands subspecies Boodie, Burrowing Bettong (Barrow and Boodie Islands) [88021]	Vulnerable	Translocated population known to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat known to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isoodon auratus barrowensis Golden Bandicoot (Barrow Island) [66666]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes conspicillatus conspicillatus Spectacled Hare-wallaby (Barrow Island) [66661]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes hirsutus Central Australian subspecies Mala, Rufous Hare-Wallaby (Central Australia) [88019]	Endangered	Translocated population known to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Osphranter robustus isabellinus Barrow Island Wallaroo, Barrow Island Euro [89262]	Vulnerable	Species or species habitat likely to occur within area
Petrogale lateralis lateralis Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat known to occur within area
Rhinonicteris aurantia (Pilbara form) Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Ctenotus zasticus Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Liasis olivaceus barroni Pilbara Olive Python [66699]	Vulnerable	Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
SHARK		
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species [\[Resource Information \]](#)

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahalensis as Sousa chinensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area

Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribbioned Pipehorse, Ribbioned Seadragon [66226]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeb lukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowellii as Hydrophis mcdowellii MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans [[Resource Information](#)]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Ginkgo-toothed Beaked Whale, Ginkgo-toothed Whale, Ginkgo Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahalensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks [[Resource Information](#)]

Park Name	Zone & IUCN Categories
Dampier	Habitat Protection Zone (IUCN IV)
Gascoyne	Habitat Protection Zone (IUCN IV)
Dampier	Multiple Use Zone (IUCN VI)
Gascoyne	Multiple Use Zone (IUCN VI)
Montebello	Multiple Use Zone (IUCN VI)
Dampier	National Park Zone (IUCN II)
Gascoyne	National Park Zone (IUCN II)
Ningaloo	Recreational Use Zone (IUCN IV)

Habitat Critical to the Survival of Marine Turtles [[Resource Information](#)]

Scientific Name	Behaviour	Presence
-----------------	-----------	----------

Scientific Name	Behaviour	Presence
Aug - Sep		
Natator depressus		
Flatback Turtle [59257]	Nesting	Known to occur
Dec - Jan		
Chelonia mydas		
Green Turtle [1765]	Nesting	Known to occur
Nov-Feb		
Caretta caretta		
Loggerhead Turtle [1763]	Nesting	Known to occur
Nov - May		
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Nesting	Known to occur

Title of referral	Reference	Referral Outcome	Assessment Status
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
Gorgon Gas Development	2003/1294		Post-Approval
North West Shelf Project Extension, Carnarvon Basin, WA	2018/8335		Approval
Project Highclere Cable Lay and Operation	2022/09203		Completed
Action clearly unacceptable			
Highlands 3D Marine Seismic Survey	2012/6680	Action Clearly Unacceptable	Completed
Controlled action			
'Van Gogh' Petroleum Field Development	2007/3213	Controlled Action	Post-Approval
Anketell Point Iron Ore Processing & Export Port	2009/5120	Controlled Action	Post-Approval
Construct and operate LNG & domestic gas plant including onshore and offshore facilities - Wheatston	2008/4469	Controlled Action	Post-Approval
Develop Jansz-lo deepwater gas field in Permit Areas WA-18-R, WA-25-R and WA-26-	2005/2184	Controlled Action	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed
Development of Coniston/Novara fields within the Exmouth Sub-basin	2011/5995	Controlled Action	Post-Approval
Development of Stybarrow petroleum field incl drilling and facility installation	2004/1469	Controlled Action	Post-Approval
Echo-Yodel Production Wells	2000/11	Controlled Action	Post-Approval
Enfield full field development	2001/257	Controlled Action	Post-Approval
Equus Gas Fields Development Project, Carnarvon Basin	2012/6301	Controlled Action	Completed
Eramurra Industrial Salt Project	2021/9027	Controlled Action	Assessment Approach
Eramurra Industrial Salt Project, near Karratha, WA	2019/8448	Controlled Action	Completed
Gorgon Gas Development 4th Train Proposal	2011/5942	Controlled Action	Post-Approval
Gorgon Gas Revised Development	2008/4178	Controlled Action	Post-Approval
Greater Enfield (Vincent) Development	2005/2110	Controlled Action	Post-Approval
Greater Gorgon Development - Optical Fibre Cable, Mainland to Barrow Island	2005/2141	Controlled Action	Completed
Light Crude Oil Production	2001/365	Controlled Action	Post-Approval
Mardie Project, 80 km south west of Karratha, WA	2018/8236	Controlled Action	Post-Approval
Pluto Gas Project	2005/2258	Controlled Action	Completed
Pluto Gas Project Including Site B	2006/2968	Controlled Action	Post-Approval
Pyrenees Oil Fields Development	2005/2034	Controlled Action	Post-Approval
Simpson Development	2000/59	Controlled Action	Completed

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Simpson Oil Field Development	2001/227	Controlled Action	Post-Approval
The Scarborough Project - FLNG & assoc subsea infrastructure, Carnarvon Basin	2013/6811	Controlled Action	Post-Approval
Vincent Appraisal Well	2000/22	Controlled Action	Post-Approval
Not controlled action			
'Goodwyn A' Low Pressure Train Project	2003/914	Not Controlled Action	Completed
'Van Gogh' Oil Appraisal Drilling Program, Exploration Permit Area WA-155-P(1)	2006/3148	Not Controlled Action	Completed
Bollinger 2D Seismic Survey 200km North of North West Cape WA	2004/1868	Not Controlled Action	Completed
Bultaco-2, Laverda-2, Laverda-3 and Montesa-2 Appraisal Wells	2000/103	Not Controlled Action	Completed
Carnarvon 3D Marine Seismic Survey	2004/1890	Not Controlled Action	Completed
Cazadores 2D seismic survey	2004/1720	Not Controlled Action	Completed
Construction and operation of an unmanned sea platform and connecting pipeline to Varanus Island for	2004/1703	Not Controlled Action	Completed
Controlled Source Electromagnetic Survey	2007/3262	Not Controlled Action	Completed
Development of Halyard Field off the west coast of WA	2010/5611	Not Controlled Action	Completed
Development of iron ore facilities	2013/7013	Not Controlled Action	Completed
Drilling of an exploration well Gats-1 in Permit Area WA-261-P	2004/1701	Not Controlled Action	Completed
Eagle-1 Exploration Drilling, North West Shelf, WA	2019/8578	Not Controlled Action	Completed
Echo A Development WA-23-L, WA-24-L	2005/2042	Not Controlled Action	Completed
Exploration drilling well WA-155-P(1)	2003/971	Not Controlled Action	Completed

Key Ecological Features [[Resource Information](#)]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west

Biologically Important Areas [[Resource Information](#)]

Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon		
Dugong [28]	Breeding	Known to occur
Dugong dugon		
Dugong [28]	Calving	Known to occur
Dugong dugon		
Dugong [28]	Foraging (high density seagrass beds)	Known to occur
Dugong dugon		
Dugong [28]	Nursing	Known to occur

Marine Turtles

Caretta caretta		
Loggerhead Turtle [1763]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Caretta caretta Loggerhead Turtle [1763]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Aggregation	Known to occur
Chelonia mydas Green Turtle [1765]	Basking	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Mating	Known to occur
Chelonia mydas Green Turtle [1765]	Migration corridor	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Mating	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Migration corridor	Known to occur

Scientific Name	Behaviour	Presence
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Natator depressus Flatback Turtle [59257]	Aggregation	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Mating	Known to occur
Natator depressus Flatback Turtle [59257]	Migration corridor	Known to occur
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Seabirds		
Ardena pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Rhincodon typus Whale Shark [66680]	Foraging (high density)	Known to occur

Scientific Name	Behaviour (prey)	Presence
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via <https://achknowledge.dplh.wa.gov.au/ach-enquiry-form> and we will make every effort to rectify it as soon as possible.

List of Aboriginal Cultural Heritage (ACH) Lodged

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department.
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via <https://achknowledge.dplh.wa.gov.au/ach-enquiry-form>.
- **Culturally Sensitive Nature:**
 - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
 - **Men only:** Only *males* can view restricted information.
 - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972*.
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

CONSULTATION APPROACH

Consultation under Regulation 25 requires that, in the course of preparing an EP, a titleholder must consult each relevant person (Regulation 25(1)), must give each relevant person **sufficient information** to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person (Regulation 25(2)) and must allow a relevant person a **reasonable period** for the consultation (Regulation 25(3)).

A titleholder must also give a relevant person a **reasonable opportunity** to consult – this means that a titleholder will need to demonstrate that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant person (see Tipakalippa Full Court para 104).

The EP must contain a report on all consultations that contain an assessment of the merits of any objection or claim about the adverse impact of each activity to which the EP relates and a statement of the titleholder’s response, or proposed response, if any, to each objection or claim (Regulation 24(b)). The criteria for acceptance of an EP includes that the EP demonstrates that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate (Regulation 34(g)).

For the Scarborough Offshore Facility and Trunkline (Operations) EP (referred to as either the Operations EP or this EP), Woodside has taken a broad and proactive, tiered consultation approach over either a 30-day period or an extended period of at least four and a half months (often extended at the request of some relevant and non-relevant persons).

Consultation for this EP was advertised widely to raise public awareness of the consultation opportunity and enable self-identification. It included two social media campaigns and advertising in national, state, regional and Indigenous newspapers.

Consultation on the Operations EP has included a consideration of, assessment and proactive response to historical feedback received from stakeholders on the Scarborough Project Offshore Project Proposal (Scarborough OPP) and prior Scarborough Energy Project EPs, where that feedback relates to this Operations EP.

The tiered consultation approach is proactive, extended, has enabled self-identification, and has raised broad awareness of Woodside’s activities related to the Operations EP and the Scarborough Energy Project.

Consultation Tiered Approach

Regulation 25	Woodside’s consultation approach assessed and identified relevant persons, enabled two-way dialogue and engagement, and included email and phone call follow-up. The approach taken satisfies the requirements of Regulation 25: to give relevant persons sufficient information and allow a reasonable period of time for consultation (see Section 5).
Proactive	To raise awareness of the consultation process, and to enable broad capture and grass-roots consultation, Woodside undertook advertised regional consultation roadshows and facilitated consultation at regional community events. Woodside also reviewed, assessed and proactively wrote to numerous relevant and non-relevant persons based on their historical feedback to the Scarborough OPP, and/or four previous Scarborough Energy Project EPs.
Extended	A reasonable consultation period (in some instances at least four and a half months) was provided to enable relevant persons to make an informed assessment of possible consequences on their functions, interests or activities and enabled other communication activities. The consultation timeframe was also extended at the request of some relevant and non-relevant persons.

Self-Identification	Broad communication activities were undertaken to build awareness of consultation and enable self-identification, supported by targeted education materials.
Broad Understanding	Broad, proactive communication activities were undertaken with the public to raise awareness of Woodside's activities related to the Operations EP and the Scarborough Energy Project.

Building on the Existing Consultation Approach

For the Operations EP, Woodside has built on its consultation methodology and undertaken additional consultation activities throughout the extended consultation period so that it has allowed a reasonable period of time and given sufficient information to relevant persons so that they can make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

The approach for the Operations EP has included:

- Allowing a 30-day period for consultation for those who only required 30 days
- Allowing an extended consultation period of at least four and a half months for some relevant and non-relevant persons
- Undertaking proactive consultation activities to provide sufficient information to relevant persons
- Raising awareness of the consultation process and opportunity to provide feedback
- Encouraging participation in the consultation process
- Remaining open to receive feedback while the EP was being prepared, while it is under assessment and after it has been accepted.

An overview of this approach is shown below:

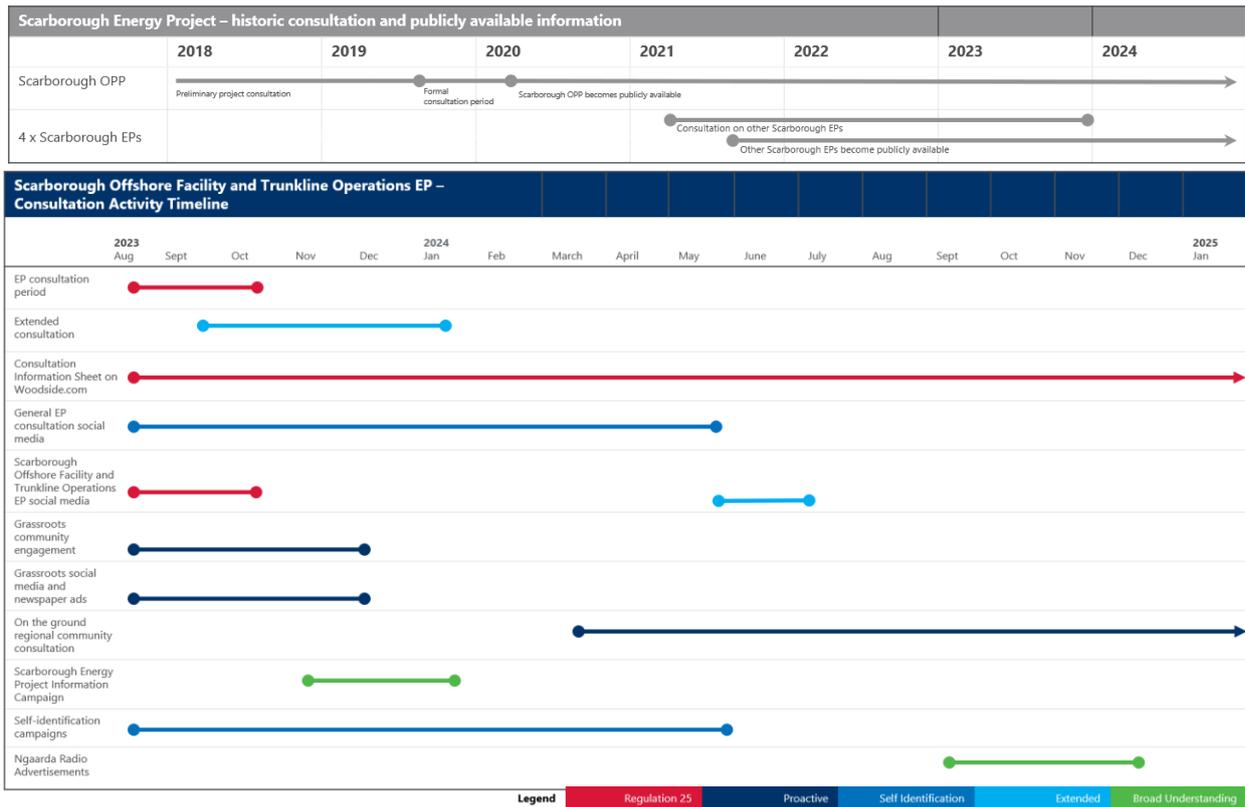

Figure 1: Scarborough Energy Project Consultation Activity

Historical Consultation

Woodside recognises that consultation for the Operations EP, separate from historical consultation and engagement, is required under Regulation 25 of the Environment Regulations. However, the historical consultation and engagement is relevant as it provides important background as to the state of knowledge of each of the parties involved in the consultation process, (the information available and already provided to relevant persons and awareness of the Scarborough Energy Project), the methods of consultation that a relevant person has previously engaged in or noted as a preference (emails or meetings) and length of time that Woodside has had a relationship with the relevant person in which engagement has occurred, especially where Woodside has addressed and responded to topics of interest on a number of previous occasions. This position is endorsed in *Newchurch v The Minister for Aboriginal Affairs and Reconciliation* [2011] SASC 29 at [157], cited with approval in *Tipakalippa* at [105]).

A number of relevant persons have been engaged in discourse about the Scarborough Energy Project and have had access to the Scarborough OPP from February 2020 (Record of Consultation, reference 4) and have continued to consult on the Scarborough Project EPs up to and including the end date of Woodside’s broad consultation approach for this EP, and thereafter pursuant to Woodside’s program of ongoing engagement (see Section 5.7). This is important context because the activities under this EP are included in the OPP as are assessments or risks and impacts and control measures relevant to the activity under this EP. The information has therefore been publicly available and accessible for persons being consulted since the OPP was published.

Initial consultation for the Scarborough OPP commenced in February 2018 with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside’s proposed activities.

Consultation on the Scarborough Energy Project also took place with a number of relevant persons during the development of three Scarborough EPs¹ between July 2021 and October 2023. Consultation was also undertaken regarding the Scarborough 4D Baseline Marine Seismic EP between May 2021 and October 2023. Consultation on these EPs is relevant because topics raised during that consultation were also raised during consultation for this EP (for example topics including greenhouse gas, climate change and assessment and controls for management of direct and indirect impacts and risks to the environment relevant to the Scarborough Project). In a number of instances, these topics have been raised and then reviewed, assessed and responded to by Woodside and have then been re-raised again by the same persons and organisations during consultation on this EP.

Additional information (full draft EPs) for the three Scarborough EPs² was available on NOPSEMA's website between November 2021 and January 2022, then after further consultation following the Prakalpa decision, available in early-December 2023. The Scarborough 4D Baseline Marine Seismic EP was made publicly available from October 2021.

A timeline of historical consultation is shown below:

Figure 2: Scarborough Energy Project Consultation Timeline

Scarborough Offshore Project Proposal (OPP) and Climate Impacts

The Scarborough OPP has been publicly available on the NOPSEMA website since 2020. Consultation on the OPP at that time included consultation with a number of NGOs.

As part of consultation for this EP, Woodside referred relevant persons to the OPP which amongst other things provides information on routine GHG emissions associated with the project lifecycle, inclusive of the activity under this EP. Examples of content in the OPP which is relevant to this EP includes:

- Description of the whole project and each component part (including a description of activities under this EP)
- Description of emission sources, including direct offshore emissions and indirect emissions associated with onshore processing and third party consumption
- Estimates of GHG emissions on an annual and life of project basis, with description of underpinning assumptions and estimation methodology
- Consideration of the role gas from the Scarborough project can play in the global energy system, energy mixes and climate related scenarios
- Management and mitigation measures for direct and indirect GHG emissions

¹ Scarborough Seabed Intervention and Trunkline Installation, Scarborough Drilling and Completions, and WA-61-L and WA-62-L Subsea Infrastructure Installation.

² See footnote 1 above.

- Assessment of the potential impacts of climate change, considering Australian and global receptors.

In addition to running a broader Scarborough Energy Project information campaign in 2023, Woodside referred relevant persons to the Woodside website which includes a dedicated page on the Scarborough Energy Project. This page provides a description of the Scarborough Project and includes a section on managing impacts including:

- Scarborough's role in the energy transition
- Managing emissions at Scarborough
- Environmental management
- Cultural heritage management.

Direct references are provided on the website to relevant sections of the OPP and links to reports such as the Pluto LNG Facility Greenhouse Gas Abatement Program.

Throughout historic consultation on the Scarborough Energy Project, and consultation specific to this EP, topics including those relating to GHG emissions and broader climate related information relating to the Scarborough Energy Project, have been made publicly available.

Traditional Custodian Consultation Approach

Woodside's aim is to have meaningful, long-term relationships with relevant Traditional Owners which support consultation and which are continuous and not confined to individual EPs. The relationships aim to enable consultation on Woodside's portfolio of EPs and also provide a forum for discussion of other issues that are relevant at the time of engagement.

To this end, consultation on Woodside's EPs, including the Operations EP, can occur before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the big picture and respecting and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians and is designed to respect Traditional Custodians' availability, cultural protocols and their preferred method of consultation. In the case of the Scarborough Energy Project, Woodside has been talking to a large number of relevant person Traditional Owners about the project including the whole project proposal (OPP) and specific activities under the four previous Scarborough EPs.³

From February 2024, when requested, Woodside began working with a limited number of nominated representative bodies to develop Consultation Agreements which aim to obtain input from those groups on how they would like to be consulted (eg what is sufficient information; what is a reasonable period for consultation) so as to enable each group to be consulted in a manner appropriately adapted to their interests. While the Consultation Agreements have been useful in prompting conversations with groups about how they wish to be consulted, there has been limited interest from groups in finalising the detail in the Consultation Agreements. Feedback is that groups have higher order priority matters to focus on. Consultation on this EP therefore progressed in parallel to discussion on the Consultation Agreements and Woodside will remain open to progressing Consultation Agreements should groups seek them.

NGO Consultation Approach

Woodside consults with environmental non-government organisations (NGOs) as part of its EP consultation process. In its methodology (Section 5.3.4, Table 5-2), NGOs are considered "Other non-government groups or organisations" and "Research institutes and local conservation groups or organisations". Relevant person identification for these categories is based on registered non-government groups or organisations with current, targeted, public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or

³ These being the three Scarborough EPs (as detailed in footnote 1 above), together with the Scarborough 4D Baseline Marine Seismic EP.

activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

As part of Woodside's methodology for example, Woodside consults with Greenpeace Australia Pacific (GAP), Australian Conservation Foundation (ACF) and Conservation Council of WA (CCWA). In addition to these NGOs, Woodside consults with various other NGOs when relevant and depending on the type of proposed activity or requests to be consulted.

Given the nature and scale of the Operations EP's planned activity, and current and past public interest in the project, including from a number of NGOs, Woodside has consulted widely and proactively and has extended the consultation timeframe where requested. In addition, Woodside has proactively considered historical consultation and topics of interest previously raised by NGOs so that past issues and topics they are interested in and which may be relevant to this EP, have been addressed.

This proactive approach enabled two-way consultation and encouraged relevant persons to engage with titleholders as early as possible. NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans: Information for the community*. That brochure states, "What constitutes sufficient information and a reasonable period of time depends on several factors including the nature of your functions, interests and activities. You should communicate as early as possible in consultation with titleholders about what information and how much time you may need so that they can consider, respond and address these in their planning". Woodside's initial consultation correspondence to all NGOs included a link to this brochure.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside undertook a series of varied and proactive consultation methods for these relevant persons:

- Consultation was extended to four and a half months (or longer if reasonably requested) and correspondence continued to be exchanged up to submission of the Operations EP
- Advertising of the consultation period (social and traditional media)
- Notice of when consultation was closing for the preparation of the EP
- Advising NGOs they had been given sufficient information and a reasonable period of time for consultation in preparation of the EP.

In addition to the Consultation Information Sheet, Woodside also made the following available to NGOs:

- Consultation correspondence addressing historical claims and objections, as well as responses to ongoing correspondence including where relevant persons raised new and repeated claims and objectives
- Offers of face-to-face briefings (none of which were taken up by NGOs)
- A roadshow to communities in the Pilbara, Gascoyne and Murchison which could be attended by NGOs including local groups (If NGOs attended these sessions, they did not identify themselves.)
- Provided links to the Scarborough OPP which provided a description of the whole project including risks, impacts and controls
- Provided links to the other relevant EPs,⁴ and in particular the Scarborough Seabed Intervention and Trunkline Installation EP, for which the activity is the installation of the trunkline that will be operated under the Operations EP.

NGO Response

For the Operations EP, Woodside identified ten NGOs as relevant and a further six as not relevant (but which Woodside nevertheless chose to contact). Of those assessed as not relevant, one engaged in a

⁴ See footnote 3 on page 5.

meaningful manner, but was still assessed as being not relevant as issues raised did not demonstrate their functions, interests or activities would be impacted by activities under the EP.

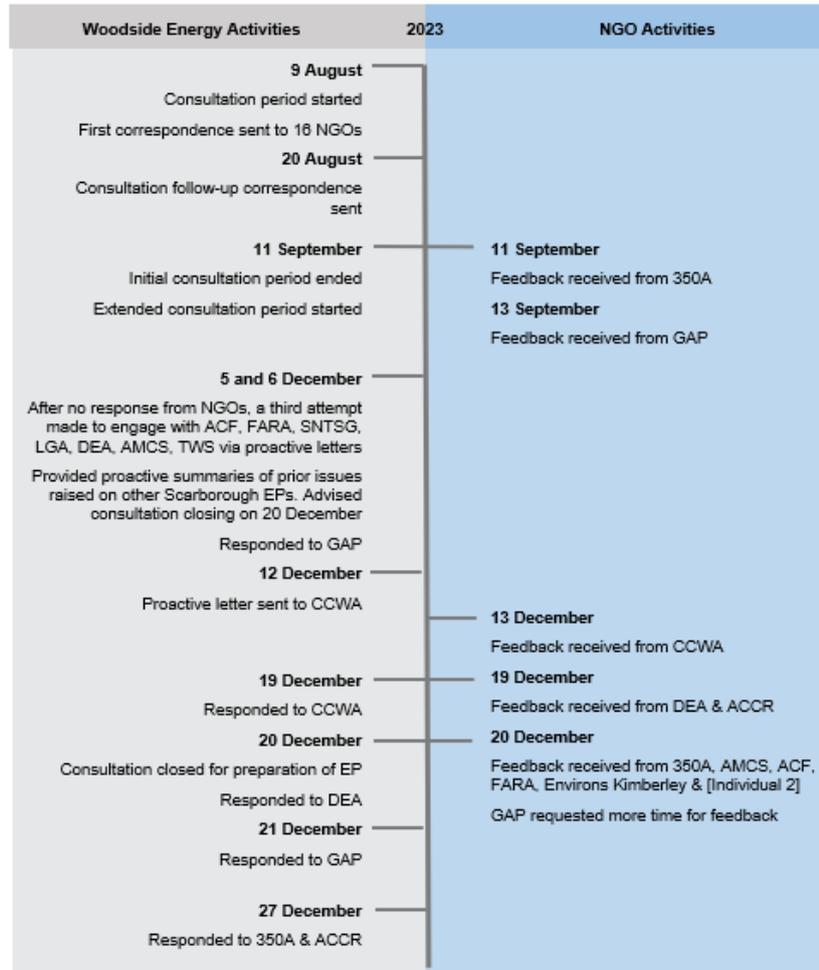

Two NGOs self-identified during the consultation process. One was assessed as relevant. The other was assessed as not relevant as the issues raised did not demonstrate their functions, interests or activities would be impacted by activities under the EP.

During the consultation process, Woodside observed a general pattern in NGO responses to Woodside emails and information which was along the following lines:

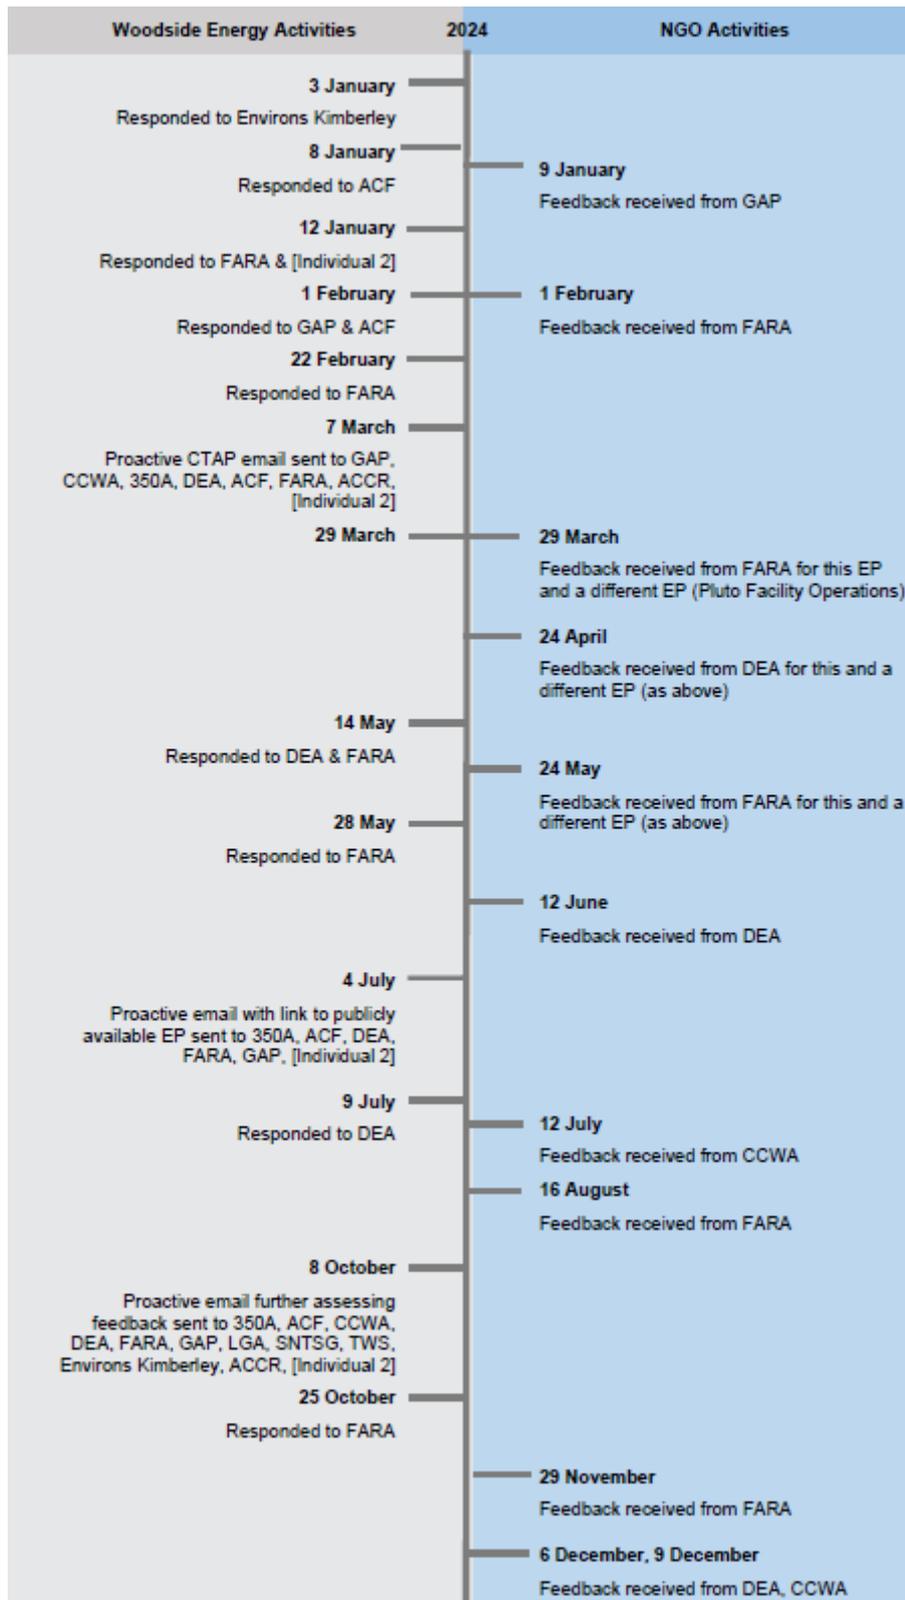

- No response or a delay in responses beyond consultation closure dates. These delayed responses followed an initial four-week consultation period which Woodside then extended to a four-and-a-half-month consultation period. The responses would invariably assert, that Woodside has not met regulatory requirements as it has not provided sufficient information or a reasonable period of time for consultation. The exception to this was Conservation Council of WA who provided responses within the initial consultation period.
- Correspondence continued to be sent to Woodside or NOPSEMA, irrespective of consultation deadlines and the fact that information had already been provided which addressed claims, feedback or objections or topics of interest.
- Once the extended consultation period had passed, Woodside continued to receive correspondence related to this EP from NGOs via feedback on other EPs, specifically the Pluto Facility Operations EP and the Scarborough Trunkline Operations (State Waters) EP.

In addition, of the NGOs consulted, nine have publicly stated via the media, social media, websites or their submission to the Federal Government's Future Gas Strategy that their functions, interests or activities included efforts to stop or phase out all fossil fuel use and development in Australia and specifically to block any new gas field development. These nine groups expressed what Woodside understands to be a fundamental objection to the Australian gas industry. In a number of instances, it was also clear that these groups hold views that are different to the views held by Woodside's on topics including the role of Scarborough LNG, the energy transition, greenhouse gas, climate change and risks and impacts to cultural values including Murujuga rock art. Given the differences in views, it became clear during consultation that the groups are unlikely to agree with Woodside's review, assessment and responses to their correspondence. This has been evident in continued correspondence received after consultation closed for this EP. Given the interest by these groups in this EP, it is anticipated that feedback of this nature will continue to be sent to Woodside during assessment of the EP and after it has been accepted. In accordance with Woodside's consultation approach, Woodside will continue to review, assess and respond to appropriate feedback, objections and claims about the adverse impact of the activity under this EP after it has been accepted and throughout the lift of the EP. Should a claim or objection be received following the acceptance of the EP that Woodside assesses to have identified a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Revision process as appropriate. Further information on the NGO consultation approach and response is in the Proactive Consultation section of Consultation Activities.

Given the historical consultation that has occurred, consultation that has occurred for this EP, and that several NGOs have a fundamental objection to the Australian gas industry, Woodside confirms it has made genuine and extensive efforts to consult and that not all NGOs have taken the opportunity to consult in way that is consistent with the purpose of consultation. In circumstances where NGOs who are relevant persons have been provided with sufficient information and a reasonable period to consult as well as a reasonable opportunity to do so, regulation 25 of the Environment Regulations has been discharged.

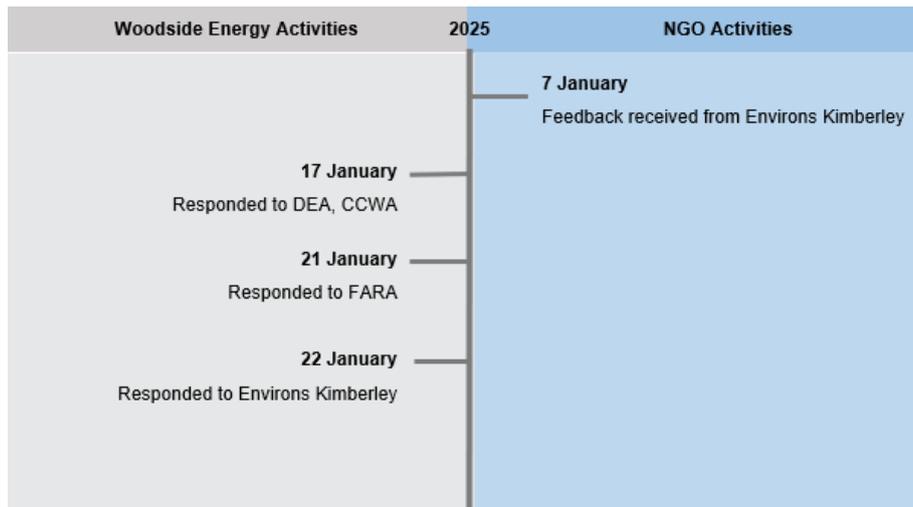

Figure 3: Scarborough Offshore Facility and Trunkline Operations EP NGO Consultation

RELEVANCY ASSESSMENT

Assessment of Relevant Persons for the Proposed Activity

The result of Woodside's assessment of relevant persons is outlined at Table 1 and Table 2.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion or who self-identified and Woodside assessed as not relevant in accordance with Section 5.3.4 are summarised below at Table 1 and Table 3.

Environment That May Be Affected (EMBA)

The Environment that May Be Affected (EMBA) is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible spill. The ecological impact thresholds used to delineate the EMBA are defined in Section 6.8.1.2. The EMBA also includes any areas that are predicted to experience shoreline contact with hydrocarbons above threshold concentrations. The worst-case credible spill scenarios for this EP are highly unlikely loss of marine diesel during a vessel collision:

- At the FPU location
- From a vessel conducting activities along the trunkline in the Montebello Multi Use Zone
- From a vessel conducting activities along the trunkline at the boundary between State and Commonwealth waters.

Results from each of these scenarios were overlaid to create a combined EMBA.

As per Woodside's methodology (Section 5), assessment of relevant persons is based on the EMBA. In the case of the Operations EP, the original EMBA (Figure 5) determined the extent of Woodside's consultation. After consultation had been completed, Woodside applied a revised, industry-wide agreed approach to oil spill modelling. This exercise led to a reduction in the size of the EMBA (Figure 4). The result is that Woodside's original approach to consultation applied an inclusive approach and involved a consultation which was broader than is defined in its methodology. This has meant that, because in the change of the EMBA, some stakeholders previously assessed as relevant are no longer relevant and are now included in Table 3 as "chose to contact". For the sake of clarity, consultation with those persons was, in any event, undertaken and is complete.

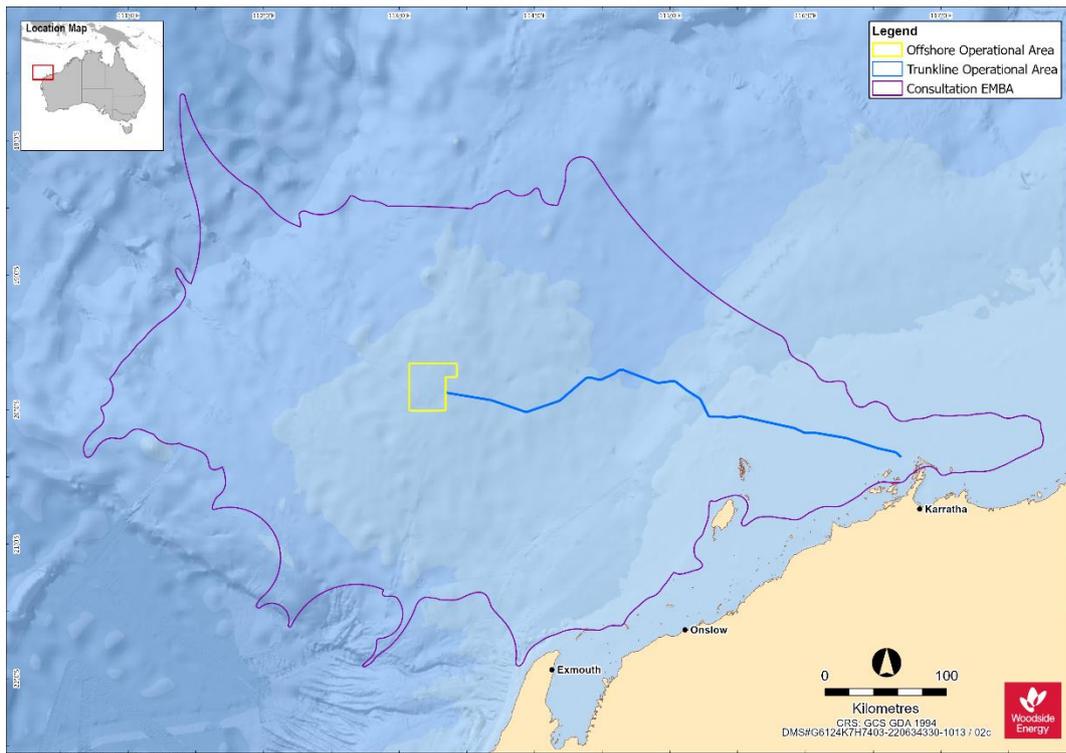

Figure 4: Operational Area and revised EMBA for this EP

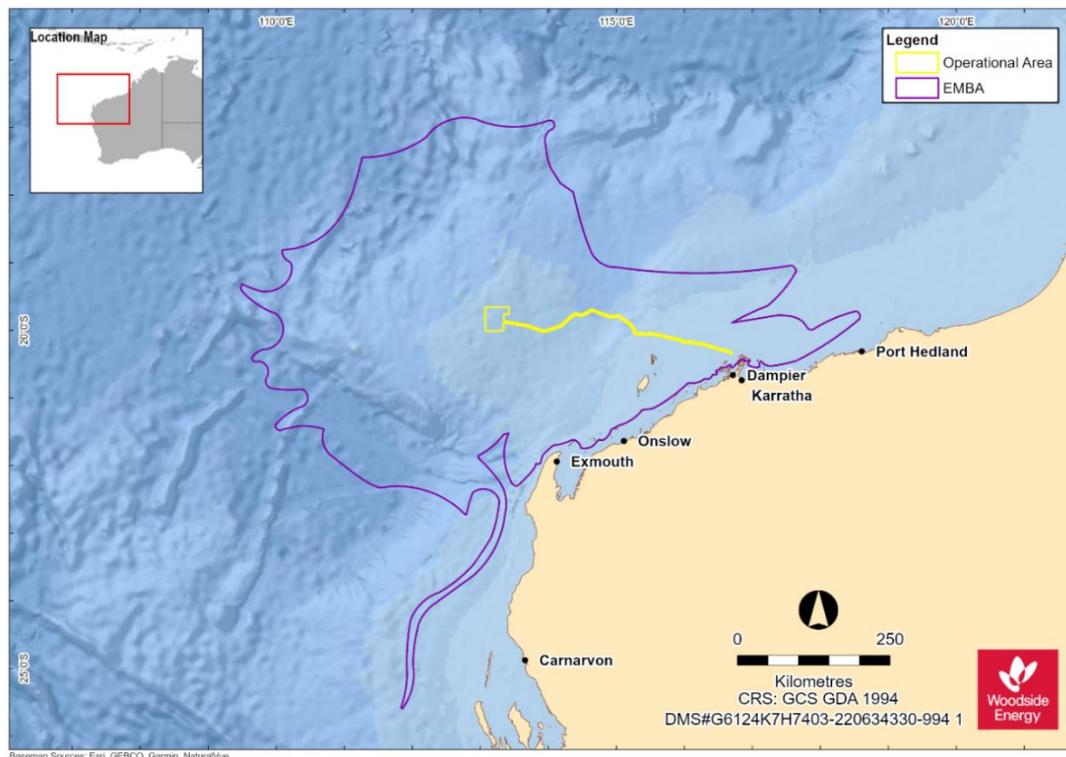

Figure 5: Operational Area and original EMBA for this EP

Table 1: Assessment of Relevance

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there are telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area and the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Safety	Statutory agency for vessel safety and navigation	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery, are active in the EMBA. DAFF – Fisheries' responsibilities may be relevant to the activity as the North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area and the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. Marine Aquarium Managed Fishery, Mackerel Managed Fishery - Pilbara (Area 2), Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery, West Coast Deep Sea Crustacean Managed Fishery and Onslow Prawn Managed Fishery are active in the Operational Area. Marine Aquarium Managed Fishery, Mackerel Managed Fishery, Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery (Condition), West Coast Deep Sea Crustacean Managed Fishery, Onslow Prawn Managed Fishery, Exmouth Gulf Prawn Managed Fishery and Nickol Bay Prawn Managed Fishery are active in the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	
Department of Transport (DoT)	Legislated responsibility for oil pollution response in State waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DoT response in State waters.	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Western Australian Museum (WAM)	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. There are known shipwrecks overlapping the EMBA which the WAM may be responsible for.	Yes
Pilbara Ports Authority (PPA)	Responsible for the operation of the Port of Dampier, Port of Varanus Island and greenfield port Balla Balla.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has the potential to impact Pilbara Ports Authority's responsibilities as the Operational Area and EMBA overlaps the PPA's area of responsibility.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Clean Energy Regulator (CER)	The CER administers schemes legislated by the Australian Government (e.g. National Greenhouse and Energy Reporting Scheme, Emissions Reduction Fund, Renewable Energy Target and Australian National Registry of Emissions Units) for measuring, managing, reducing or offsetting Australia's carbon emissions, determined by climate change law.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. CER's responsibilities may be relevant to the proposed activities in relation to emissions and climate related matters given CER's role in administering schemes legislated by the Australian Government in relation to Australia's carbon emissions.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
<p>Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)</p>	<p>DAFF – Biosecurity administers, implements and enforces the Biosecurity Act 2015. The Department requests to be consulted where an activity has the potential to transfer marine pests.</p> <p>DAFF – Biosecurity also has inspection and reporting requirements to ensure that all conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health Regulations and that any biosecurity risk is managed.</p> <p>The Dept requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.</p>	<p>Woodside has applied its methodology for ‘Government departments / agencies – environment’ under regulation 25(1)(a) of the Environment Regulations.</p> <p>DAFF – Biosecurity’s responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.</p>	<p>Yes</p>
<p>Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW)</p>	<p>Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage.</p> <p>Administers the Underwater Cultural Heritage Act 2018 in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.</p>	<p>Woodside has applied its methodology for ‘Government departments / agencies – environment’ under regulation 25(1)(a) of the Environment Regulations.</p> <p>DCCEEW’s responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity.</p> <p>There is known Maritime Cultural Heritage overlapping the EMBA.</p>	<p>Yes</p>

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within AMPs, and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP on offshore petroleum and greenhouse gas exploration activities if they occur in, or may impact on the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	Yes
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The EMBA for the proposed activities overlap WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The proposed activity has the potential to impact NCWHAC's responsibilities as the EMBA overlaps the Ningaloo Marine Park.	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Department of Mines, Industry Regulation and Safety (DEMIRS)	Department of relevant State Minister	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes

Commonwealth Commercial fisheries and peak representative bodies			
North West Slope and Trawl Fishery	Commonwealth commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p>	Yes
Western Deepwater Trawl Fishery	Commonwealth commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p>	Yes
Western Tuna and Billfish Fishery	Commonwealth commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA but has not been active in the Operational Area or EMBA within the past five years.</p> <p>Woodside chose to consult Western Tuna and Billfish Fishery at its discretion in line with Section 5.3.7 of the EP.</p>	No
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area.</p> <p>The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery, are active in the EMBA.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		CFA's functions may be relevant to the activity as the North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area and EMBA.	
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Tuna Australia's functions are not relevant to the activity as the Western Tuna and Billfish Fishery is not active in the EMBA. Woodside chose to consult Tuna Australia based on the Western Tuna and Billfish Fishery overlap with the initial EMBA.	No
State Commercial fisheries and peak representative bodies			
Mackerel Managed Fishery – Area 2 (Pilbara)	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Mackerel Managed Fishery - Pilbara (Area 2) as relevant persons.	Yes
Mackerel Managed Fishery – Area 3 (Central)	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and revised EMBA but has not been active in the Operational Area or revised EMBA within the past five years. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Mackerel Managed Fishery – Area 3 (Central) based on overlap with the initial EMBA.	No
Pilbara Crab Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under Regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Pilbara Crab Managed Fishery as relevant persons.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Marine Aquarium Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Marine Aquarium Managed Fishery as relevant persons.</p>	Yes
West Coast Deep Sea Crustacean Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted West Coast Deep Sea Crustacean Managed Fishery as relevant persons.</p>	Yes
Specimen Shell Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Specimen Shell Managed Fishery as relevant persons.</p>	Yes
Onslow Prawn Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Onslow Prawn Managed Fishery as relevant persons.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Nickol Bay Prawn Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA.</p> <p>As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.</p> <p>As all individual licence holders in this fishery were consulted as part of other relevant fisheries, Woodside has chosen to consult the Nickol Bay Prawn Managed Fishery at its discretion in line with Section 5.3.7.</p>	No
Western Australian Sea Cucumber Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Western Australian Sea Cucumber Fishery as relevant persons.</p>	Yes
Exmouth Gulf Prawn Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA.</p> <p>As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.</p> <p>As all individual licence holders in this fishery were consulted as part of other relevant fisheries, Woodside has chosen to consult the Exmouth Gulf Prawn Managed Fishery at its discretion in line with Section 5.3.7.</p>	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Gascoyne Demersal Scalefish Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the revised EMBA. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Gascoyne Demersal Scalefish Fishery based on overlap with the initial EMBA.	No
Land Hermit Crab Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under Regulation 25(1)(d) of the Environment Regulations. Under an agreement between WAFIC and Woodside, WAFIC has advised there is no need to consult this fishery given the proposed activities operate in depths ~31-1400m which is outside the depth of the hand collection methods used by this fishery.	No
Pilbara Trawl Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Pilbara Trawl Fishery as relevant persons.	Yes
Pilbara Trap Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Pilbara Trap Fishery as relevant persons.	Yes
Pilbara Line Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Pilbara Line Fishery as relevant persons.	Yes

Peak Industry Representative bodies			
Australian Energy Producers (AEP) (previously APPEA)	Represents the interests of oil and gas explorers and producers in Australia.	Woodside has applied its methodology for 'Peak Industry Representative bodies' under regulation 25(1)(d) of the Environment Regulations. AEP's responsibilities are identified as having an intersect with Woodside's planned activities in the EMBA.	Yes
Traditional Custodians and nominated representative corporations			
Wanparta Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Wanparta Aboriginal Corporation jointly manages 80 Mile Beach Marine Park which is adjacent to the EMBA.	Yes
Kariyarra Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Kariyarra native title claim, for which the Kariyarra Aboriginal Corporation is the Registered Native Title Body Corporate, overlaps the EMBA. The Kariyarra Aboriginal Corporation is party to the Kariyarra and State ILUA, which is coastally adjacent to the EMBA.	Yes
Murujuga Aboriginal Corporation (MAC)	Representative Aboriginal Corporation Local government and community representative groups or organisations (part of Karratha Community Liaison Group)	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA), which is coastally adjacent to the EMBA and underpins land access for the onshore component of the Scarborough Project. MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no native title being found over the lands subject to the BMIEA or below the low water mark. MAC also owns and co-manages the Murujuga National Park, is responsible for the Dampier Archipelago (including Burrup peninsula) National Heritage Place	Yes

		<p>and is progressing the World Heritage nomination of the Murujuga Cultural Landscape. The EMBA does not overlap the Murujuga National Park, but does overlap the National Heritage Place. Woodside supports MAC as the relevant Traditional Owner group in relation to the Murujuga World Heritage nomination and is one of many parties MAC engages in this process.</p> <p>Woodside has consulted with MAC in regard to the Scarborough Project area generally since 2018 and MAC has been involved in ethnographic surveys that included the planned activities of this EP.</p> <p>As discussed further below, Woodside engaged with YMAC as the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia to confirm the best approach to confirm additional cultural values (if any) for the broader Scarborough Project, the scope of which included the proposed activity for this EP. YMAC advised that the most appropriate stakeholders for the Scarborough project generally are MAC and NAC, who are not represented by YMAC (refer to Table 2).</p>	
<p>Ngarluma Aboriginal Corporation (NAC)</p>	<p>Representative Aboriginal Corporation</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Ngarluma People's native title determined area does not overlap the EMBA. The determination, for which NAC is the Registered Native Title Body Corporate, is coastally adjacent to the EMBA.</p> <p>The historical Ngarluma/Yindjibarndi native title claim overlaps the EMBA.</p> <p>NAC is party to the Anketell Port, Infrastructure Corridor and Industrial Estates Agreement, which overlap the EMBA.</p> <p>NAC is party to the RTIO Ngarluma Indigenous Land Use Agreement (Body Corporate Agreement), which is adjacent to the EMBA.</p> <p>The EMBA overlaps the Dampier Commonwealth Marine Park, over which the North-west Marine Parks Network Management Plan specifies NAC as representing people whose sea country extends into the marine park which is valued for cultural identity, health and wellbeing.</p> <p>As noted above (and discussed further below), Woodside sought guidance from YMAC as the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia to confirm the best approach to identify additional cultural values (if any) for the broader Scarborough Project, the scope of which included the proposed activity for this EP. YMAC advised that the most appropriate stakeholders for the Scarborough project generally are MAC and NAC, who are not represented by YMAC (refer to Table 2).</p>	<p>Yes</p>

Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Operational Area, where planned activities will occur, overlaps the Yaburara & Mardudhunera People's native title claim. In addition, the EMBA is either coastally adjacent or overlaps native title claims and ILUAs, as described below.</p> <p>The Yaburara & Mardudhunera People's native title claim, the determination for which WAC is the Registered Native Title Body Corporate, overlaps the EMBA.</p> <p>WAC is party to the KM & YM ILUA and Cape Preston Project Deed (YM Mardie ILUA), which overlap the EMBA.</p> <p>WAC is party to the Cape Preston West Export Facility ILUA, which is coastally adjacent to the EMBA.</p>	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25 (1)(d) of the Environment Regulations. The Operational Area, where planned activities will occur, is over 190 km from Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People's, native title determinations. However, the EMBA is either coastally adjacent or overlaps the claims, determinations and ILUAs, as described below.</p> <p>The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims, the determinations for which NTGAC and YAC are the Registered Native Title Bodies Corporate, overlaps the EMBA.</p> <p>YAC is party to the Brickhouse and Yinggarda Aboriginal Corporation ILUA and Quobba – Yinggarda Pastoral ILUA, which are coastally adjacent to the EMBA.</p> <p>The YAC nominated representative was the YMAC and the YAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside therefore consulted YAC, via YMAC. Woodside was advised that as of late April 2023, the nominated representative for YAC was Gumala Aboriginal Corporation.</p>	Yes
Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The historic Ngarluma/Yindjibarndi native title claim, the successor determinations for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA.</p> <p>The EMBA overlaps the Dampier Commonwealth Marine Park, over which the North-west Marine Parks Network Management Plan specifies the Yindjibarndi</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Aboriginal Corporation as representing people whose sea country extends into the marine park which is valued for cultural identify, health and wellbeing.	
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Thalanyji native title claim does not overlap the EMBA. The claim, for which BTAC is the Registered Native Title Body Corporate, is coastally adjacent to the EMBA. BTAC is also party to the Macedon ILUA which is coastally adjacent to the EMBA.	Yes
Robe River Kuruma Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. There are no native title claims or determinations that the Robe River Kuruma Aboriginal Corporation is party to overlapping the EMBA or coastally adjacent to the EMBA. The Robe River Kuruma Aboriginal Corporation is party to the KM & YM ILUA, which overlaps the EMBA. The Robe River Kuruma Aboriginal Corporation is party to the RTIO Kuruma Marthudunera People ILUA, which is coastally adjacent to the EMBA.	Yes
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Operational Area, where planned activities will occur, is over 190 km from Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims. However, the EMBA is either coastally adjacent or overlaps native title claims, determinations and ILUAs, as described below. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims, the determination of which NTGAC and YAC are the Registered Native Title Bodies Corporate, overlaps the EMBA. The NTGAC is also party, with the WA State Government, to the Ningaloo Conservation Estate Indigenous Land Use Agreement (the ILUA) which overlaps the EMBA. The NTGAC is responsible for the joint management of the Ningaloo Marine Park (State Waters) which is overlapped by the EMBA. The NTGAC is also party to the Gnarloo ILUA, which is coastally adjacent to the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The NTGAC's nominated representative is the YMAC and the NTGAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside has therefore consulted the NTGAC, via YMAC.	
Malgana Aboriginal Corporation	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Malgana Part A native title claim, for which the Malgana Aboriginal Corporation is the Registered Native Title Body Corporate, is no longer adjacent to the revised EMBA.</p> <p>Malgana Aboriginal Corporation was relevant based on the original EMBA and had already been included as part of the consultation. Accordingly, to take an inclusive approach and to consult more widely, Woodside has included the Malgana Aboriginal Corporation in Table 3.</p>	No
Native Title Representative Bodies			
Yamatji Marlpa Aboriginal Corporation (YMAC)	Native Title Representative Body	<p>Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders.</p> <p>The NTGAC's nominated representative is YMAC. Woodside has therefore consulted the NTGAC via YMAC.</p> <p>YMAC was also the nominated representative for YAC. Woodside was advised that as of late April 2023, the nominated representative for YAC is now Gumala Aboriginal Corporation.</p> <p>Woodside contacted YMAC to seek guidance with respect to the appropriate Traditional Custodian group(s) to engage with respect to the proposed activity where this was not clear.</p> <p>YMAC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.</p>	Yes

Self-identified First Nations Groups			
<p>Ngarluma Yindjibarndi Foundation Ltd (NYFL)</p>	<p>Representative Aboriginal Corporation Local government and community representative groups or organisations (part of Karratha Community Liaison Group)</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>In 1998 [prior to resolution of the Ngarluma and Yindjibarndi native title claim], Elders of the Ngarluma and Yindjibarndi people [native title claimants] signed an Agreement with the North West Shelf JV partners covering a number of matters including how payment would be made for land use on the Burrup Peninsula. The Ngarluma Yindjibarndi Foundation Ltd (NYFL) was formed and incorporated in 2000 to receive those payments. Subsequent to that, the Ngarluma people settled their native title claim and established their nominated representative corporation, the Ngarluma Aboriginal Corporation (NAC). The Yindjibarndi people also settled their native title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation (Yindjibarndi). The Ngarluma Aboriginal Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests.</p> <p>While the NYFL's members have been assessed as being relevant persons (and have been consulted on this EP), NYFL's own functions interests and activities were not considered to overlap with the EMBA for this EP and NYFL was therefore not assessed as being relevant for this EP. In the course of consultation, NYFL self-identified and has advised it is relevant for this EP. Woodside has therefore consulted with NYFL on this EP.</p>	<p>Yes</p>
Local government and elected Parliamentary representatives, community groups or organisations			
<p>City of Karratha</p>	<p>Local government governed by the Local Government Act 1995 representing the suburbs and localities of Baynton, Baynton West, Bulgarra, Cossack, Dampier, Gap Ridge, Karratha, Karratha Industrial Estate, Jingarri, Madigan, Millars Well, Nickol, Pegs Creek, Point Samson, Roebourne, Whim Creek and Wickham.</p>	<p>Woodside has applied its methodology for 'Local government and elected Parliamentary representatives, community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The City of Karratha's area of responsibility overlaps the EMBA.</p>	<p>Yes</p>

CONSULTATION ACTIVITIES

Scarborough Offshore Facility and Trunkline EP Consultation Activities

Woodside has been undertaking consultation with relevant persons and other parties related to this EP since at least February 2018. Preliminary consultation for the Scarborough OPP commenced with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside’s proposed opportunities.

A broad and extensive consultation process has been undertaken with relevant persons for the Operations EP. Consultation was designed to be inclusive, transparent, voluntary, respectful and two-way, and was undertaken considering a relevant person’s consultation preference (i.e. by email, letter, phone call and/or meeting).

Discharging Regulation 25 of the Environment Regulations

Woodside advertised the planned activities proposed for this EP in national, state and relevant local newspapers (see Record of Consultation, reference 3.2). Regional newspapers do not require subscription and are available (and in some cases delivered) directly to households. The aim was that communities within or adjacent to the EMBA had access to this information. Despite the broad ranging advertising, no direct comments or feedback were received on account of the advertisements.

Newspaper	Coverage	Publication dates
1. The Australian	National	9 August 2023
2. The West Australian	Regional (WA)	9 August 2023
3. Pilbara News	Local (WA)	9 August 2023
4. The Geraldton Guardian	Local (WA)	11 August 2023
5. Midwest Times	Local (WA)	9 August 2023
6. North West Telegraph	Local (WA)	9 August 2023
7. Koori Mail	Indigenous	9 August 2023
8. National Indigenous Times	Indigenous	29 August 2023

A Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.4). The Consultation Information Sheet included an activity overview, maps, a summary of key risks and/or impacts and management measures (Record of Consultation, reference 1.1).

Since the commencement of the initial consultation period in August 2023, the Consultation Information Sheet has been available on Woodside’s website. It included a toll-free 1800 phone number and Woodside’s feedback email address (feedback@woodside.com) to enable persons to engage in consultation.

The Woodside [Consultation Activities](#) webpage is accessible on the Consultation Information Sheet, via a QR code, banners at community events, and via social media content and advertisements. It includes Consultation Information Sheets for the EPs on which Woodside is currently consulting, including this EP. The website page also features a “subscribe” field to enable people to elect to receive EP-focussed communications from Woodside.

Additional targeted information was provided to specific relevant persons as necessary. For example, targeted information was provided to relevant marine users including AHO and AMSA – Marine Safety (Record of Consultation, reference 1.10 and 1.11). This information included maps and additional information (GIS shape files) relevant to the specific category of persons. The relevant persons had a 30-day period in which to provide feedback.

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Where appropriate and to support consultation, proactive follow-up emails were sent to relevant persons who had not provided a response prior to the close of the consultation feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.3.4).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement undertaken with persons or organisations Woodside assessed as not relevant but chose to contact or who self-identified and Woodside assessed as not relevant (see Section 5.3.4) are summarised at Appendix F, Table 3.

From May 2023 to January 2024, Woodside ran a geotargeted, sponsored social media campaign to raise awareness around general consultation on EPs (Record of Consultation, reference 3.4).

From 22 August 2023, Woodside ran an Operations EP specific geotargeted, sponsored social media campaign (Record of Consultation, reference 3.3) across regions within or coastally adjacent to the Operations EP EMBA. The campaign was designed to bring the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they could find out about Woodside's proposed activities by visiting Woodside's website.

Proactive Consultation

Community Engagement

The Community Information Sessions or community events that Woodside has conducted or attended are outlined below and set out in more detail in Record of Consultation, reference 3.7. In order to provide broad capture of relevant or interested persons, Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media to support attendance.

From September to October 2023, Woodside undertook a Community Consultation Roadshow on the Scarborough Energy Project and consulted on this EP (Record of Consultation, reference 3.7.4, 3.7.6, 3.7.7). Other community events included the Dampier Markets (Record of Consultation, reference 3.7.8) and Pilbara Consultation roadshow in March 2024 (Record of Consultation, reference 3.7.9). Woodside published advertisements ahead of community information sessions in relevant local newspapers and on social media to support attendance (Record of Consultation, reference 3.7).

Date	Location	Event (if applicable)
5 and 6 August 2023	Karratha	FeNaCING Festival
18 August 2023	Onslow	Passion of the Pilbara Festival
23 and 24 August 2023	Karratha	National Economic Development Conference

26-28 August 2024	Karratha	Developing Northern Australian Conference
12 October 2024	Dampier	Dampier Beachside Markets
2 November 2024	Dampier	Dampier Beachside Markets
14 November 2024	Exmouth	Community Information Session

Community Liaison Group Engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha region. Woodside regularly meets with the two CLGs to discuss a range of issues including consultation of specific EPs.

Let's Talk – EP Newsletter

In March 2024, Woodside launched its first EP-focussed newsletter as a new communication avenue to reach existing and potential stakeholders. Let's Talk editions were also published in April 2024 and July 2024.

Woodside is building on its existing consultation approach, and is providing additional resources to inform relevant persons about its EP consultation. The newsletter aims to provide periodic updates generally to interested persons and relevant persons about EP consultation activities, case studies on effective consultation with relevant persons and other EP focussed updates such as upcoming events where Woodside personnel will be consulting with the local community. It is distributed in a variety of locations (see Record of Consultation, reference 3.1.2) as well as across digital platforms including on woodside.com, and social media platforms. People are encouraged to subscribe to receive copies. (Record of Consultation, reference 3.1.2).

Woodside also publishes the Karratha Community Update newsletter which includes a QR code and encourages people to go to the Woodside Consultation Activities webpage to subscribe and find information about EPs (Record of Consultation, reference 3.1.11).

NGOs and Save our Songlines and/or [Individual 3] and/or [Individual 4] Engagement

Woodside undertook additional proactive activities to provide sufficient information to relevant persons, raise awareness of the Operations EP consultation period, encourage participation in consultation and to facilitate consultation on the proposed activities.

On 27 November 2023 and 5-6 December 2023, Woodside proactively contacted stakeholders that had not responded to Woodside’s emails or who had not participated in consultation. For those who had previously consulted with Woodside on other Scarborough Energy Project EPs, Woodside proactively summarised previous feedback and topics of interest to those persons and advised of the consultation closing date for preparation of the Operations EP. Woodside also included offers to meet.

On 7 March 2024, Woodside further proactively engaged NGOs who had provided feedback on climate issues by providing an email and link to the Woodside Climate Transition and Action Plan and 2023 Progress Report. Woodside also proactively sent links to this EP when it was published on NOPSEMA’s website.

A high-level overview of consultation with NGOs and Save our Songlines and their public position to stop gas projects is in the table below. Further information including issues raised and addressed during consultation is included in Table 2 and 3.

Consultation with [Individual 3], [Individual 4] and Save our Songlines on the Operations EP began with the Summary Information Sheet and a bespoke email being sent directly, copying in the Environmental Defenders Office, on 3 September 2023. Proactive correspondence summarising past topics of interest, objections and feedback raised by [Individual 3], [Individual 4] and Save our Songlines was sent to [Individual 3], [Individual 4] and Save our Songlines on 27 November 2023.

Several attempts were made to meet with [Individual 3], [Individual 4] and Save our Songlines in the lead up and after consultation closed in preparation of the Operations EP on 20 December 2023 including offers to meet in late January-February. The last offer from Woodside to meet was made in late-March 2024. On 10 April 2024, EDO advised Woodside that [Individual 3] would engage in consultation in a written format going forward.

Extended Consultation

For a number of relevant persons, Woodside extended its Operations EP consultation period from 30 days to four and a half months, from September to December 2023. During that time, Woodside undertook additional proactive activities to provide sufficient information to relevant persons, raise awareness of the EP consultation period, and to facilitate consultation on the proposed activities.

In addition to an initial Operations EP geotargeted, sponsored social media campaign in August 2023, during November 2023 Woodside launched a second Operations EP geotargeted sponsored social media campaign promoting consultation (Record of Consultation, reference 3.4).

Throughout extended consultation period, Woodside continued to offer to meet with NGOs and [Individual 3], [Individual 4] and Save our Songlines.

Social Media Platform	Geotargeted Reach	Additional Social Media Campaign Dates	Impact
Facebook and Instagram	Metro and Regional: Users 18+ located within 80kms of Perth Metro, Broome, Carnarvon, Denham, Exmouth, Onslow, Port Hedland and Karratha	15 – 24 November 2023	Reach: 1,713,790 Frequency: 3.37 Impressions: 5,769,203 Link clicks: 6,969 CTR%: 0.12%

Self-Identification

Social Media Campaign – Are you a relevant person?

In October 2023, Woodside commenced a targeted social media campaign, both organic and sponsored, focusing on raising the awareness of community members of key towns within the Kimberley, Pilbara, Gascoyne and Murchison regions. The campaign delivered targeted information to several profiled relevant person groups via story and feed content with text and a short accessible video (Record of Consultation, reference 3.5).

The campaign aims to support self-identification and provides information about Woodside's consultation with relevant persons when preparing EPs and encourages participation in the consultation process.

Six different videos with specific information to potential relevant persons groups were launched on Facebook and Instagram:

- Local communities – volunteering
- Local communities - apprentices/trainees
- Commercial fishing
- Recreational fishing
- Recreational marine users
- Traditional Owners.

Results of first burst at February 2024 are as follows:

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	389,383	4.37	1,701,418	2,298	0.14%

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The commercial fisheries, recreational fisheries and Traditional Owners videos are available on the Woodside [Consultation Activities](#) webpage.

Broad Understanding

Integrated Information Campaign - Scarborough Energy Project

From October 2023 to February 2024, Woodside launched an integrated advertising campaign to inform the general public about Woodside’s activities related to this EP and the broader Scarborough Energy Project (Record of Consultation, reference 3.6). The campaign encouraged stakeholders to visit the Woodside webpage for further information, which includes information on the Operations EP consultation.

Campaign advertisements were run in parallel to the Operations EP consultation advertisements across traditional media, online media and google display, social media and out of home (billboards and flyers).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The dedicated Scarborough Energy Project webpage features on the Woodside website home page and the webpage displays links to the consultation activities webpage. The webpage provides information and resources that are in addition to the consultation information sheet such as information about managing emissions at the project, which was a topic of interest to a number of relevant persons who consulted in relation to this EP.

Traditional Custodian Specific Consultation

In addition to the approaches above including community information sessions, additional activities were undertaken with relevant Traditional Custodians. The activities were specifically designed to encourage engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (Record of Consultation, reference 1.2).

As noted above (see headings Consultation Approach; Relevancy Assessment; and Environment That May Be Affected (EMBA)), consultation was completed based on the extent of a broad EMBA. On the application of an industry-wide agreed approach to EMBA modelling, the EMBA area for this activity was reduced. This has meant Woodside originally engaged in a broader and more inclusive consultation basis than would have been necessary if Woodside had initially applied its methodology to the reduced EMBA. The consultation for affected stakeholders (for example, Malgana Aboriginal Corporation and Wanparta Aboriginal Corporation) was completed and is still included in Appendix F, but, as a result of the updated EMBA, they are now included in Table 3 as “chose to contact” rather than as a relevant person in Table 2.

Consultation undertaken specifically with Traditional Custodians for this Environment Plan included:

- Consultation with nominated representative bodies via the contact listed on the Office of the Registrar of Indigenous Corporations (ORIC) website, requesting advice on how they would like to be engaged and asking whether there are other members and/or individuals who should be consulted and requesting that information be shared with their members or any other Traditional Custodian groups or individuals they believe should receive the information and be consulted.
- Each relevant group was provided a Summary Consultation Information Sheet developed and reviewed by Indigenous representatives in collaboration with technical experts so as to make the content appropriate for Traditional Owners and groups.
- A First Nations team member was assigned as a focal person for EP consultation. That person was a dedicated contact person available for engagement in consultation and for building relationships who was available to be contacted, provide information and take feedback.

This resulted in:

- Various requests from Traditional Owners and offers from Woodside of resourcing to enable and support consultation
- Exchanges of written consultation feedback and correspondence
- Meetings with directors, PBC representatives, Elders and nominated representatives, by telephone and video conference, or in person on-Country. Those meeting were attended by Woodside representatives, subject matter experts and First Nations relations advisers with experience in community engagement. The meetings facilitated effective consultation including by:
 - Mutually agreed agendas (with an aim of avoiding ample time for information to be understood).
 - Provision of Woodside subject matter experts to answer questions and explain information.
 - Encouragement of Traditional Custodian attendees to control the pace of the meetings and pause at any time to ask questions, seek clarification or provide feedback.
 - Provision of visual aids such as presentations, videos and real-world pictures and footage.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Emphasis on potential planned and unplanned risks and impacts of the activity.
- Ample opportunity for questions and feedback.
- Discussion about ongoing relationship development and opportunities.
- Woodside providing reasonable costs to enable consultation such as sitting fees, travel costs, legal support, executive support and other reasonable support requests.

Ongoing consultation remains an important part of the relationship with Traditional Custodians and is informed by availability, cultural protocols and the preferred method of consultation for relevant Traditional Owners. In the case of the Scarborough Energy Project, Woodside has consulted with a number of Traditional Owners about the project including the whole project proposal OPP and specific activities under the four previous Scarborough EPs.

Woodside’s ongoing consultation with relevant Traditional Custodians is demonstrated by:

- Ongoing efforts to consult and develop relationships by a variety of methods such as by email, phone calls, alternative contacts, texts and where possible, face-to-face meetings at a location they nominate.
- Woodside advising groups that feedback would continue to be accepted for the life of the EP.

Indigenous Media and Publications

Woodside ran a wide-reaching campaign designed to bring the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can find out about Woodside’s proposed activities by visiting Woodside’s website, which details the intent of consultation with relevant persons under the Regulations. The campaign reached more than two million people across various regions as shown in Record of Consultation, reference 3.4.

The campaign included:

- Advertising in Indigenous publications (Record of Consultation, reference 3.2).
- Advertising on Ngaarda radio, the only licensed Aboriginal broadcaster in the Pilbara (Record of Consultation, reference 3.8)

Newspaper	Coverage	Publication dates
Koori Mail	Indigenous	9 August 2023
National Indigenous Times	Indigenous	29 August 2023
Ngaarda Radio	Pilbara	26 August – 30 November 2024

- Woodside ran an Operations EP geotargeted, sponsored social media campaign (Record of Consultation, reference 3.4) for various communities that are coastally adjacent to the EMBA for the proposed activities.
- These social media posts were developed with input from Indigenous representatives. Social media is an effective means to engage Indigenous audiences as outlined in Indigenous Digital Life (Professor Carlson, 2021). Advertisements used language and information appropriate to Indigenous audiences. Feedback from community engagements indicates a high level of penetration for this technique.

Woodside has employed a diverse range of techniques to allow relevant persons to become aware of the proposed activity and how it may affect their functions, interests or activities, and to understand their ability to provide feedback. The combination of engagement meetings, traditional print media, social media and face-to face community interaction was designed with input from Indigenous representatives and adapted to the audience, so that it provides a wide-ranging opportunity to consult.

TABLE 2: CONSULTATION REPORT WITH RELEVANT PERSONS OR ORGANISATIONS

The black numbering (N) in the *Summary of information provided and record of consultation for this EP* in Table 2 denotes an issue raised by a relevant person. The green numbering (N) in this section denotes Woodside's response to that issue.

Commonwealth and WA State Government Departments or Agencies – Marine

Australian Border Force (ABF)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed ABF advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
<p>Summary Report – Consultation Complete</p> <p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with ABF for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:</p> <p>Sufficient Information</p> <p>Woodside has given ABF sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:</p> <ul style="list-style-type: none"> The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to ABF on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included: <ul style="list-style-type: none"> The purpose of consultation and set out what was being sought through consultation. A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures. 		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ABF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to ABF advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ABF 30 days for consultation. For consultation on EPs, 30 days is the usual period for ABF.
- In this context, Woodside allowed ABF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ABF is appropriate and adapted to the nature of ABF:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with ABF.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding ABF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ABF did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ABF's functions, interests or activities.

Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 7 December 2023, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 1.24) and provided a Consultation Information Sheet, a communications cable figure, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 19 December 2023, ACMA thanked Woodside for the opportunity to comment on this EP and stated it had reviewed the materials (SI Report, reference 53.1). In addition:
 - (1) ACMA noted that operational areas identified were not in the vicinity of any existing protection zones but appeared to be in the vicinity of submarine cables and as such, it encouraged Woodside to contact the owner of existing or planned cables within the projects areas.
 - (2) ACMA also noted that the map for this EP was similar to the North West Shelf and Julimar Exploration Wellhead Environmental Plan and the cable to the north of the operational areas marked as proposed appeared to be part of Vocus' Darwin Jakarta Singapore cable system which was active as of July 2023.
 - (3) ACMA recommended that Woodside contact the AHO for further assistance identifying submarine cables that may be impacted by the proposed activities.

Ongoing engagement:

- (1) On 27 December 2023, Woodside emailed AMCA and confirmed the operational areas for this EP were not in the vicinity of any existing protection zones, but did appear to be in the vicinity of submarine cables, so Woodside had been in contact with Telstra, the relevant owner of the submarine cables (existing or planned), since March 2020 (SI Report, reference 53.2).
- (2) Woodside was also aware that Vocus' Darwin Jakarta Singapore cable system was active.
- (3) Woodside noted that AHO could be contacted should further assistance be required to identify submarine cables.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) ACMA confirmed the operational areas were not in the vicinity of any existing protection zones but were in the vicinity of submarine cables and Woodside should contact the owners of those cables.</p>	<p>(1) Woodside assessment: Woodside noted ACMA's confirmation that the operational areas were not in the vicinity of existing protection zones but were in the vicinity of submarine cables. Woodside response: Woodside confirmed it had been in contact with Telstra, the relevant owner of the submarine cables. Woodside also consulted Vocus for this activity.</p>	<p>(1) Communications infrastructure located in the vicinity of the PAP is set out in Section 4.10.6 of the EP.</p>
<p>(2) ACMA noted the cable to the north of the operational areas marked as proposed appeared to be part Vocus' Darwin Jakarta Singapore cable system.</p>	<p>(2) Woodside assessment: Woodside acknowledges that the Darwin Jakarta Singapore cable system is active. Woodside response: Woodside confirmed it was aware that Vocus' Darwin Jakarta Singapore cable system was active. Woodside subsequently consulted Vocus for this EP.</p>	<p>(2) Consultation with Vocus is set out in Appendix F, Table 2 of the EP.</p>
<p>(3) ACMA recommended that Woodside contact the AHO for further assistance identifying cables.</p>	<p>(3) Woodside assessment: Woodside has consulted AHO for this EP and no feedback was provided on submarine cables. Woodside has sufficient geospatial information and has consulted the owners of the submarine cables, being Vocus and Telstra.</p>	<p>(3) Communications infrastructure located in the vicinity of the PAP is set out in Section 4.10.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside noted the AHO could be contacted should further assistance be required to identify submarine cables.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACMA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given ACMA sufficient information to allow ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to ACMA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations.
- In addition to the Consultation Information Sheet, Woodside provided ACMA with information tailored to ACMA by including a map of submarine communication cables.
- On 19 December 2023, ACMA consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided ACMA with further information in response to ACMA’s feedback (email of 27 December 2023).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed ACMA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commenced 17 months ago in August 2023.
- A consultation period was notified in the initial correspondence to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- As ACMA responded to Woodside within the timeframe provided, in this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACMA is appropriate and adapted to the nature of interests of ACMA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with ACMA.
- Woodside considers a reasonable opportunity was provided to ACMA as evidenced by its response on 19 December 2023 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from ACMA.
 - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 September 2023, AFMA thanked Woodside for the advice (SI Report, reference 20.1) and:
 - **(1)** Advised AFMA had no specific comments on the proposal.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> - (2) Encouraged Woodside, if it had not already done so, to engage directly with Commonwealth fishing operators in the area and included contact details for relevant industry associations. • (1, 2) On 10 September 2023, Woodside thanked AFMA for its feedback and confirmed information had been provided to relevant representative organisations and fishing operators (SI Report, reference 20.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AFMA advised it had no specific comments on the proposal.	(1) Woodside assessment: Woodside accepts AFMA has no specific comments on the proposal. Woodside response: Woodside thanked AFMA for its feedback.	(1) Not required.
(2) AFMA encouraged Woodside to consult directly with fishing operators who have entitlements to fish within the proposed area.	(2) Woodside assessment: Woodside considered that consultation with fishing operators, based on overlap with the proposed area, may result in consultation fatigue. However, Woodside recognised AFMA's position recommending direct consultation with fishing operators. Woodside response: Woodside confirmed it had consulted individual Commonwealth fishing operators in the area, as well as relevant representative bodies and fishing industry associations.	(2) Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has consulted AFMA, DAFF – Fisheries, CFA and individual relevant licence holders. Woodside has assessed the merits of any each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside will provide notifications to AFMA (see Table 7-8 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AFMA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information directly to AFMA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 5 September 2023, AFMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside provided further information to AFMA on 10 September 2023 which addressed AFMA's topics of interest in response to feedback from AFMA.

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed AFMA 30 days for consultation. For consultation on EPs, 30 days is the usual period for AFMA.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AFMA is appropriate and adapted to the nature of interests of AFMA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AFMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside considers a reasonable opportunity was provided to AFMA as evidenced in their response on 1 September 2023 when they provided feedback.

Outcomes of Consultation:

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to AFMA’s feedback.
 - Made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP but as standard practice will notify AFMA as per PS 1.8.1.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 10 August 2023, AHO emailed Woodside advising it had received the email and that the data supplied would be registered, assessed, prioritised and validated in preparation for updating its Navigational Charting products. These adhere to International and Australian Charting Specifications and standards. These standards may result in some data generalisation or filtering due to the scale of existing charts, proximity to other features, and the level of risk a reported feature presents to mariner (SI Report, reference 3.1). **(1)** Woodside noted AHO’s feedback but no response was required.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) AHO acknowledged receipt of consultation email and advised on updates to its Navigational Charting products.</p>	<p>(1) Woodside assessment: Woodside acknowledges AHO has received data regarding the activity and has no specific feedback for this activity. Woodside response: Woodside noted AHO’s acknowledgement of its email and that it would use data supplied to update its Navigational Charting products.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p>	<p>Woodside will notify the AHO no less than four working weeks before operations commence, as referenced as C 1.5 in this EP. No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	
--	---	--

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AHO for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to AHO on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and measurement measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations.
- In addition to the Consultation Information Sheet, Woodside provided AHO with information tailored to AHO by including a map of shipping lanes relevant to the activity.
- On 10 August 2023, AHO shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed AHO 30 days for consultation. For consultation on EPs, 30 days is the usual period for AHO.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with AHO is appropriate and adapted to the nature of interests of AHO:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA’s guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AHO.
- Woodside considers a reasonable opportunity was provided to AHO as evidenced by their response on 10 September 2023 when they provided feedback.

Outcomes of Consultation:

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AHO provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from AHO.
 - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP but as standard practice will notify AHO as per C 1.5 of the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Maritime Safety Authority (AMSA) – Marine Safety

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMSA – Marine Safety advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside will notify AMSA–Marine Safety at least 24-48 hours before operations commence and at the end of activities as referenced as PS 1.6.1 in the EP. Woodside will also provide updates to the AHO and JRCC should there be any changes to the activity. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA – Marine Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Safety sufficient information to allow AMSA – Marine Safety to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to AMSA – Marine Safety on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AMSA – Marine Safety with information tailored to AMSA – Marine Safety by including a map of shipping lanes relevant to the activity.

Reasonable Period

Woodside allowed AMSA – Marine Safety a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AMSA – Marine Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed AMSA – Marine Safety 30 days for consultation. For consultation on EPs, 30 days is the usual period for AMSA – Marine Safety.
- In this context, Woodside allowed AMSA – Marine Safety a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Marine Safety is appropriate and adapted to the nature of interests of AMSA – Marine Safety:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AMSA – Marine Safety.
- Woodside proactively sent a follow-up consultation email reminding AMSA – Marine Safety of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Safety did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Safety's functions, interests or activities.

Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.2).
- On 25 March 2024, Woodside emailed AMSA – Marine Pollution advising of the proposed activity and provided the Oil Pollution First Strike Plan (SI Report, reference 60.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has addressed oil spill preparedness and response strategy in Appendix H. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA – Marine Pollution for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given AMSA – Marine Pollution sufficient information to allow AMSA – Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to AMSA – Marine Pollution on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information in the Consultation Information Sheet, Woodside provided AMSA – Marine Pollution with the Oil Pollution First Strike Plan for the EP and reminded AMSA – Marine Pollution of the opportunity to provide feedback on the EP (email of 25 March 2024).

Reasonable Period

Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AMSA – Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed AMSA – Marine Pollution 30 days for consultation. For consultation on EPs, 30 days is the usual period for AMSA – Marine Pollution consultation.
- In this context, Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with AMSA – Marine Pollution is appropriate and adapted to the nature of interests of AMSA – Marine Pollution.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA’s guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AMSA – Marine Pollution.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding AMSA – Marine Pollution of the opportunity to provide feedback.
- Woodside again reminded AMSA – Marine Pollution of the opportunity to provide feedback when Woodside sent the Oil Pollution First Strike Plan (email of 25 March 2024).

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution’s functions, interests or activities.

Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DAFF – Fisheries advising of the proposed activity (Record of Consultation, reference 1.12) and provided a Consultation Information Sheet and link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted AFMA, DAFF – Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DAFF – Fisheries (see Table 7-8 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DAFF – Fisheries for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Fisheries sufficient information to allow DAFF - Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet has been publicly available on the Woodside website since August 2023. Woodside provided this information to DAFF – Fisheries on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF - Fisheries a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DAFF – Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed DAFF – Fisheries 30 days for consultation. For consultation on EPs, 30 days is the usual period for DAFF – Fisheries.
- In this context, Woodside allowed DAFF – Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with DAFF – Fisheries is appropriate and adapted to the nature of interests of DAFF - Fisheries:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA’s guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DAFF - Fisheries.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DAFF – Fisheries of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF - Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Fisheries’ functions, interests or activities.

Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 1.13) and provided a Consultation Information Sheet, defence zone map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.3).
- (1)** On 8 September 2023, DoD advised Woodside that a new person would be responsible for co-ordinating the Offshore Petroleum Inbox (SI Report, reference 21.1).
(1) Woodside updated its records as a result of DoD’s feedback but no further response was required from Woodside at that time.
- On 19 September 2023, DoD thanked Woodside for its email (SI Report, reference 21.2). DoD provided feedback regarding:
 - (2)** The location of the activity areas within an exercise area and restricted airspace.
 - (3)** Unexploded ordinances (UXOs) that may be present on and in the seafloor, and that Woodside must inform itself as to the risks associated with conducting activities in that area, with the Commonwealth of Australia taking no responsibility for reporting the UXO in the area, identifying or removing UXO from the area, or any loss or damage suffered or incurred by Woodside or any third party arising out of, or directly related to, UXO in the area.
 - (4)** DoD’s notification requirements including liaison with the Australian Hydrographic Service/Office (AHS/AHO).
- On 2 November 2023, Woodside thanked DoD for its feedback (SI Report, reference 21.3) and confirmed:
 - (2)** It had noted the location of activity areas and the presence of exercise areas and restricted airspace.
 - (3)** It had noted the advice regarding location, identification, removal or damage to equipment from unexploded ordinances (UXOs).
 - (4)** The Australian Hydrographic Service/Office (AHS/AHO) had been engaged for this activity and is part of the activity notification protocols.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) Advised a new DoD contact for the Offshore Petroleum Inbox.	(1) Woodside assessment: Woodside noted that DoD had new contacts for its Offshore Petroleum Inbox. Woodside response: Woodside updated its records to reflect the new DoD contact information for ongoing consultation.	(1) Not required.
(2)	(2)	(2)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Confirmed that activity areas are within North-West Exercise area and restricted airspace.	<p>Woodside assessment: Woodside acknowledged DoD's guidance on exercise areas and restricted airspace.</p> <p>Woodside response: Woodside noted DoD's advice on the location of activity areas within the North-West Exercise area and restricted airspace.</p>	Woodside has recorded the defence areas overlapping the PAA in Section 4.10.7 of this EP.
<p>(3) Advised on the risk of unexploded ordinance (UXO) on and in sea floor.</p>	<p>(3) Woodside assessment: Woodside acknowledged DoD's advice on the risk of UXO.</p> <p>Woodside response: Woodside confirmed it had noted DoD's advice with respect to the risk, location, identification, removal or damage from UXO on and in the sea floor.</p>	<p>(3) Woodside has recorded the defence areas overlapping the PAA in Section 4.10.7 of this EP.</p>
<p>(4) Woodside should continue liaising with AHS/AHO and ensure AHS/AHO is notified three weeks prior to the actual commencement of activities.</p>	<p>(4) Woodside assessment: Woodside acknowledged DoD's notification advice and the need to continue liaising with AHS/AHO.</p> <p>Woodside response: Woodside confirmed it had engaged AHS/AHO for these activities and it was included in Woodside's activity notification protocols.</p>	<p>(4) Woodside will notify the AHO no less than four working weeks before operations commence as referenced as C 1.5 in the EP.</p> <p>Where the activities overlap a defence area, DOD will be notified of the activity start date no less than five weeks before the scheduled commencement date, see C 1.9 in the EP.</p> <p>Notifying the AHO provides DoD with information of the PAP through maritime safety information.</p>
While feedback has been received, there were no objections or claims.	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoD for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DoD on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DoD with information tailored to DoD by including a map of defence zones relevant to the activity.
- On 19 September 2023, DoD consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DoD to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided DoD with further information in response to DoD's feedback (email of 2 November 2023).

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days of consultation.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DoD of the opportunity to provide feedback.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DoD.
- Woodside considers a reasonable opportunity was provided to DoD as evidenced in their response on 19 September 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DoD provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DoD.
 - As standard practice (and as requested by DoD during consultation), Woodside will provide activity notifications to AHO and DoD as referenced as C 1.5 and C 1.9.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 11 August 2023, DPIRD emailed Woodside thanking it for the opportunity to be consulted but advised it had previously commented in February on the Scarborough project, in regard to a related Scarborough EP and their area of interest, and had no further comments (SI Report, reference 4.1).
- **(1)** On 17 August 2023, Woodside responded thanking DPIRD for its prompt response (SI Report, reference 4.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) DPIRD advised it had no further comments at this time.	(1) Woodside assessment: Woodside accepts that DPIRD has no comments at this time. Woodside response: Woodside thanked DPIRD for its response and noted there were no further comments.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside has consulted DPIRD, WAFIC, and individual licence holders (via WAFIC). Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries (see Table 7-8) ten days before activity commences, and following completion of activities., as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	
--	---	--

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DPIRD on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 11 September 2023, DPIRD consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DPIRD to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for consultation. DPIRD engaged in consultation and provided feedback during this period.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DPIRD as evidenced in their response on 11 August 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPIRD provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DPIRD.
 - Made no changes or inclusions to the EP as a result of consultation with DPIRD because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Transport (DoT)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DoT advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 21 August 2023, DoT responded to Woodside's email and asked to be consulted if there was a risk of a spill impacting State waters (SI Report, reference 12.1).
- **(1)** On 28 August 2023, Woodside responded thanking DoT for its email and confirming DoT would be consulted if there was a risk of a spill impacting State waters from the proposed activities (SI Report, reference 12.2).

Ongoing engagement:

- On 25 March 2024, Woodside emailed DoT advising of the proposed activity and provided a copy of the Scarborough Offshore Facility and Trunkline Operations Oil Pollution First Strike Plan (SI Report, reference 12.3).
- On 3 May 2024, DoT emailed Woodside thanking it for the First Strike Plan (SI Report, reference 12.4). DoT also:
 - **(2)** Asked for clarification as to why there was a mention in the FSP to only notify DoT for a Level 2 or 3 spill incident in port waters.
- On 8 May 2024, Woodside emailed DoT thanking it for the feedback on the FSP (SI Report, reference 12.5). Woodside:
 - **(2)** Provided amended text that stated DoT would be notified for all spills that occurred within port waters.
- **(2)** On 9 May 2024, DoT responded to Woodside stating it was happy with the change and had no further comment (SI Report, reference 12.6).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) DoT requested to be consulted if there is a risk of a spill impacting State waters.</p>	<p>(1) Woodside assessment: Woodside will consult DoT if there is a risk of a spill impacting State waters. Woodside response: Woodside confirmed that if there was a risk of a spill impacting State waters, DoT would be consulted. Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan (Appendix I). Woodside will consult DoT if there is a spill impacting State waters from the proposed activity, as referenced in the OSPRMA (Appendix H).</p>	<p>(1) Woodside will consult DoT if there is a spill impacting State waters from the proposed activity, as referenced in the OSPRMA (Appendix H). Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan (Appendix I).</p>
<p>(2) DoT asked for clarification on why the FSP noted it would only be notified of Level 2 and 3 spills within port waters.</p>	<p>(2) Woodside assessment: Woodside acknowledged DoT's feedback regarding spill notifications and has incorporated the feedback into the notification requirements in the FSP. Woodside response: Woodside provided amended text to DoT, on which DoT had no further feedback, and Woodside updated the FSP accordingly.</p>	<p>(2) Woodside has updated the Oil Pollution First Strike Plan (Appendix I) to include notification to DoT of Level 1, 2 and 3 spills within port waters.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2) of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoT for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoT sufficient information to allow DoT to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DoT on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- Woodside also provided DoT with the Oil Pollution First Strike Plan for the EP and again reminded DoT of the opportunity to provide feedback on the EP (email of 25 March 2024).
- On 21 August 2023, 3 May 2024 and 9 May 2024, DoT shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DoT to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed DoT a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DoT advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoT 30 days for consultation. DoT engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed DoT a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoT is appropriate and adapted to the nature of interests of DoT:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DoT as evidenced in their responses on 21 August 2023, 3 May 2024 and 9 May 2024 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DoT provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DoT.

- Based on DoT's feedback, updated the Scarborough Offshore Facility and Trunkline Operations First Strike Plan to include Level 1 spills.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 1.14) and provided a Consultation Information Sheet, a list of shipwrecks in State waters within the EMBA, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.4).
- On 1 September 2023, DPLH emailed Woodside thanking it for the opportunity to comment on this EP (SI Report, reference 17.1). DPLH:
 - (1) Noted it had no comment on the installation of the Floating Production Unit, exploration wells or gas export trunkline.
 - (2) In addition, it stated that in relation to the shipwrecks Trial and Lady Ann, the Western Australian Museum (WAM) was the delegated authority and should be contacted for advice regarding any maritime archaeological impacts.
- On 6 September 2023, Woodside emailed DPLH thanking it for its feedback (SI Report, reference 17.2). Woodside:
 - (1) Acknowledged DPLH had no feedback on the activity.
 - (2) Confirmed shipwreck information had been sent to WAM.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) DPLH advised it had no feedback.</p>	<p>(1) Woodside assessment: Woodside accepts that DPLH has no feedback on the activity. Woodside response: Woodside noted DPLH had no feedback on the activity and thanked it for its response.</p>	<p>(1) Not required.</p>
<p>(2) DPLH advised that WAM is the delegated authority for the Trial and Lady Ann shipwrecks and should be contacted.</p>	<p>(2) Woodside assessment: Woodside recognises that WAM is the delegated authority for shipwrecks and has consulted WAM as a relevant person. Woodside response: Woodside confirmed shipwreck information had been sent to WAM.</p>	<p>(2) The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the PAP and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Section 4.9 of this EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned</p>

		hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Appendix H
While feedback has been received, there were no objections or claims.	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DPLH on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 1 September 2023, DPLH consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DPLH to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided further information to DPLH in response to its topics of interest and feedback (email of 6 September 2023).

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was notified in the initial correspondence to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for consultation. DPLH engaged in consultation and provided feedback within this period.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DPLH of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to DPLH as evidenced in their response on 1 September 2023.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPLH provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DPLH.
 - Made no changes or inclusions to the EP as a result of consultation with DPLH because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 1.14) and provided a Consultation Information Sheet and a list of shipwrecks in State waters within the EMBA, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 21 August 2023, WAM responded thanking Woodside for the information (SI Report, reference 14.1). WAM:
 - **(1)** Advised that under the *Underwater Heritage Act 2018*, proponents should, in the first place, contact DCCEE as the Commonwealth regulator.

- (2) Directed Woodside to refer to the Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.
- (3) Recommended that Woodside engage a suitably qualified and experienced maritime archaeologist to undertake a UCH Desktop Assessment to identify Aboriginal and non-Aboriginal UCH within the project area.
- (4) Recommended that Woodside consult with Traditional Custodians where appropriate if the project involved seabed disturbance in water shallower than 130 metres.
- On 20 November 2023, Woodside responded and thanked WAM for its feedback (SI Report, reference 14.2). Woodside:
 - (1) Confirmed it had consulted the Commonwealth regulator, DCCEEW, for this EP.
 - (2) Confirmed it referred to the Commonwealth Government's Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.
 - Noted that this EP involved the Operations phase of the Scarborough facility and associated trunkline, which were being installed under other Environment Plans.
 - (3) Advised that during the assessment of the existing environment in support of Scarborough Project Environment Plans, Woodside engaged a qualified maritime archaeologist to complete desktop assessments using geophysical and geotechnical survey data, completed ethnographic surveys with Traditional Custodians and engaged the University of WA to conduct submerged heritage predictive modelling.
 - (4) Confirmed that Woodside had consulted with Traditional Owners in the course of preparing EPs since 2018 and also engaged in ongoing consultation subsequent to the approval of EPs.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Advised Woodside contact DCCEEW as the Commonwealth regulator under the <i>Underwater Cultural Heritage Act 2018</i>.</p>	<p>(1) Woodside assessment: Woodside understands that DCCEEW administers the <i>Underwater Cultural Heritage Act 2018</i> and identified DCCEEW as a relevant person. Woodside response: Woodside confirmed it had consulted DCCEEW for this EP.</p>	<p>(1) Consultation with DCCEEW is described in Appendix F, Table 2.</p>
<p>(2) Referred to the Commonwealth Government's Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.</p>	<p>(2) Woodside assessment: Woodside acknowledges and refers to the Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage. Woodside response: Woodside confirmed for this EP, it referred to the Commonwealth Government's Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines</p>	<p>(2) Underwater cultural heritage assessments are addressed in Section 4.9 of this EP. While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.8.3 to 6.8.7, and Appendix H of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.	
(3) Recommended Woodside engages a maritime archaeologist to undertake a UCH Desktop Assessment.	(3) Woodside assessment: Woodside recognised the need for a qualified maritime archaeologist to undertake a desktop review for the Scarborough Project of submerged heritage predictive modelling. Woodside response: Woodside confirmed that, as part of assessments for the Scarborough Project, it completed a desktop review by qualified and experienced maritime archaeologist, completed ethnographic surveys with Traditional Custodians, and engaged the University of WA to conduct submerged heritage predictive modelling.	(3) Section 4.9 of this EP outlines the underwater cultural heritage assessments undertaken by maritime archaeologists, for the Scarborough Project.
(4) Recommended Woodside consults Traditional Owners where appropriate if the project involves seabed disturbance in water shallower than 130m.	(4) Woodside assessment: Woodside consults with relevant Traditional Custodian groups guided by its assessment of relevance consultation methodology for all activities. Woodside response: Woodside confirmed it has consulted with Traditional Custodians from 2018 to present and has completed numerous activities to understand the potential for Traditional Custodians (and non-First Nations) Underwater Cultural Heritage to exist in areas where activities will be undertaken.	(4) Consultation with Traditional Custodians is described in Appendix F of the EP. New heritage information, where applicable to this proposed activity, will be addressed as part of ongoing consultation as referenced in Section 5.7 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAM for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised above in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023 and emailed directly to WAM on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided WAM with information tailored to WAM by including a list of shipwrecks relevant to the EP in State waters.
- On 21 August 2023, WAM consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAM to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided further information to WAM addressing WAM's topics of interest and feedback (email of 20 November 2023).

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for consultation. WAM engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM because:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to WAM as evidenced in their response on 21 August 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- WAM provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from WAM.
 - Made no changes or inclusions to the EP as a result of consultation with WAM because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Pilbara Ports Authority (PPA)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> • On 9 August 2023, Woodside emailed PPA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • On 30 August 2023, as no response had been received, Woodside proactively sent a follow up email (Record of Consultation, reference 2.1). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with PPA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PPA sufficient information to allow PPA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to PPA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed PPA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to PPA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed PPA 30 days for consultation. For consultation on EPs, 30 days is the usual period for PPA.
- In this context, Woodside allowed PPA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with PPA is appropriate and adapted to the nature of interests of PPA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding PPA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were adopted as a result of consultation as PPA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on PPA's functions, interests or activities.

Commonwealth and WA State Government Departments or Agencies – Environment

Clean Energy Regulator (CER)

Summary of information provided and record of consultation for this EP:

- On 11 September 2024, Woodside telephoned CER to provide notification of consultation for this EP and confirm the best contact at CER for consultation information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 11 September 2024, Woodside emailed CER advising of the proposed activity (Record of Consultation, reference 1.38) and provided a Consultation Information Sheet, a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community* and a link to the EP on NOPSEMA’s website.
- On 17 September 2024, Woodside sent an email following up on consultation and offering to organise a meeting if CER preferred (SI Report, reference 67.1).
- On 26 September 2024, CER responded accepting a meeting in the week commencing 7 October 2024 (SI Report, 67.2).
- On 11 October 2024, Woodside met with CER to discuss consultation for this EP (SI Report, 67.3). During the meeting:
 - Woodside provided an overview of its consultation process, including a description of the EMBA and the purpose of consultation.
 - Woodside provided an overview of the activities, infrastructure and timeframe associated with the Scarborough Operations EP.
 - **(1)** CER asked for clarification on when Woodside would take control of the infrastructure and operations.
 - **(1)** Woodside advised that once the FPU was hooked up, commissioning would be done under Woodside’s permit and safety case, and this was anticipated in the second half of 2025.
 - **(2)** Woodside noted that its understanding was that the SGM regulations required the FPU to be a new facility, separate to Pluto.
 - **(2)** CER confirmed this was consistent with the regulations and provided further clarification on requirements for a new facility. CER acknowledged that this does not need to be reflected in the EP, as it falls under separate legislation.
 - **(3)** CER asked where the Scarborough facility ties in to onshore processing, whether it was into the Pluto trunkline or the Pluto LNG facility.
 - **(3)** Woodside responded that the Scarborough trunkline comes ashore at the existing Pluto LNG Plant, which is currently being expanded. It does not tie into the Pluto trunkline. Woodside also provided an overview of the process, including wells, subsea equipment, and trunkline using a schematic diagram.
 - **(4)** CER advised it had no additional comments regarding the project at this time but it appreciated the opportunity to discuss the project with Woodside. CER confirmed its main interest in the project would be reporting requirements once operational, and noted CER is confident in Woodside’s understanding of its obligations.
 - **(4)** Woodside acknowledged CER had no additional comments on the project at this stage and advised it would continue to accept feedback throughout the life of the EP.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) Information on when Woodside would take control of operations.	(1) Woodside assessment: Woodside acknowledged and responded to CER’s request for information on timeframes and responsibilities. Woodside response: Woodside confirmed it would take control of the FPU from hook-up and this was anticipated in the second half of 2025.	(1) Not required.
(2) Requirements for a new facility.	(2) Woodside assessment: Woodside acknowledges the need for the FPU to be a new facility under SGM regulations. Woodside response: Woodside confirmed it would adhere to CER’s process for a new facility under SGM regulations.	(2) Information on the Federal SGM is set out in EP Section 6.7.6 under subheading <i>Management and Abatement</i> .

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(3) Where the Scarborough facility ties into onshore processing.</p>	<p>(3) Woodside assessment: Woodside acknowledged and responded to CER's request for information on the process. Woodside response: Woodside provided an overview of the process for Scarborough gas including onshore processing, clarifying that the Scarborough trunkline ties in to the existing Pluto LNG Facility which is being expanded</p>	<p>(3) The EP describes that the Scarborough trunkline ties into the Pluto LNG Plant in Section 3.9.4</p>
<p>(4) No additional comments on the project.</p>	<p>(4) Woodside assessment: Woodside accepts that CER has no additional concerns or comments at this time and acknowledges CER's interest is primarily in compliance and reporting once the project is operational. Woodside response: Woodside noted CER had no comments and advised it would continue to accept feedback throughout the life of the EP.</p>	<p>(4) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CER for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CER sufficient information to allow CER to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided the information to CER on 11 September 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information in the Consultation Information Sheet, Woodside provided CER with further information on CER's topics of interest (meeting of 11 October 2024).

Reasonable Period

Woodside allowed CER a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CER advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CER 30 days for consultation, including a meeting. CER engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed CER a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CER is appropriate and adapted to the nature of interests of CER:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with CER.
- Woodside also telephoned CER to advise of consultation and confirmed CER's preferred consultation method.
- Woodside considers a reasonable opportunity was provided to CER as evidenced by CER's response on 26 September 2024 and the meeting held between Woodside and CER on 11 October 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- CER provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from CER.
 - Made no changes or inclusions to the EP as a result of consultation with CER because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DAFF – Biosecurity advising of the proposed activity (Record of Consultation, reference 1.12) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 August 2023, DAFF – Biosecurity emailed Woodside outlining the Department's biosecurity requirements (SI Report, reference 6.1). DAFF – Biosecurity also stated the following:
 - (1) Intended operating practices may expose domestic conveyances (support vessels and aircraft) to interactions with the Installation/PIV/MODU which may pose an unacceptable level of biosecurity risk.
 - (2) To have biosecurity risk status assessed, offshore installation projects must apply to the department at least two months prior to project commencement.
 - (3) Requested information must be submitted before the assessment can commence.
- On 27 November 2023, Woodside responded (SI Report, reference 6.2) as follows:
 - (1) Recognises the requirement to manage biosecurity risk to domestic conveyances, the attention drawn to requirements under the *Biosecurity Act 2015*, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.
 - (2) Acknowledged the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".
 - (3) Prior to the entry of the Floating Production Unit (FPU) into Australian waters, Woodside will ensure that all specified requirements are met and that all required reporting and documentation detailed in DAFF – Biosecurity's email are submitted to allow for timely assessment of the FPU as required under the *Biosecurity Act 2015*.
 - (3) Woodside will be the operator of the FPU but will not be the operator of other vessels described in the EP. Woodside continues to work closely with its contractors to ensure compliance with all requirements can be met as defined by DAFF – Biosecurity's 's email, and meet all requirements under Section 6 of the Biosecurity (Exposed Conveyances – Exceptions from Biosecurity Control) Determination 2016.
 - A third-party contractor has been negotiating, via phone calls and emails, the application for ballast water exemption for the temporary ballast water treatment system with DAFF – Biosecurity on behalf of Woodside. At submission of this EP this process was still underway.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Flagged that intended operating practices may expose domestic conveyancers to interactions which may pose an unacceptable level of biosecurity risk. Noted that an exposed conveyance may be eligible for an exception from biosecurity control if the department concludes that the level of risk associated with the survey vessel is low.</p>	<p>(1) Woodside assessment: Woodside recognises domestic conveyances could be exposed to biosecurity risks which will be managed in accordance with the <i>Biosecurity Control Act 2015</i>. Woodside response: Woodside confirmed it recognised the requirement to manage biosecurity risk to domestic conveyances, the attention drawn to requirements under the Biosecurity Control Act 2015, and the mechanism for</p>	<p>(1) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.12 of the EP). Vessels are required to comply with the Australian <i>Biosecurity Act 2015</i>, specifically the Australian Ballast Water Management Requirements (aligned with the International Convention for the Control and</p>

	<p>exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.</p>	<p>Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. All vessels (including the FPU) are required biosecurity clearances/approvals per the <i>Biosecurity Act (2015)</i> prior to entering Australian waters. This process and risk management are handled by DAFF through their own procedures, independent of the EP processes.</p>
<p>(2) Noted to have biosecurity risk status assessed, offshore installation projects must apply to the Department at least two months prior to project commencement.</p>	<p>(2) Woodside assessment: Woodside acknowledges and accepts the biosecurity risk status assessment timeframe and will adhere to it. Woodside response: Woodside noted and will adhere to the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".</p>	<p>(2) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.12 of the EP). Vessels are required to comply with the Australian <i>Biosecurity Act 2015</i>, specifically the Australian Ballast Water Management Requirements (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. All vessels (including the FPU) are required biosecurity clearances/approvals per the <i>Biosecurity Act (2015)</i> prior to entering Australian waters. This process and risk management are handled by DAFF through their own procedures, independent of the EP processes.</p>
<p>(3) Requested that all information must be submitted before the assessment can commence.</p>	<p>(3) Woodside assessment: Woodside acknowledged the information required for the biosecurity risk status assessment submission for the FPU. Woodside will need to work with contractors of other vessels to ensure compliance with DAFF – Biosecurity's request. Woodside response: Woodside advised that prior to the entry of the FPU into Australian waters, Woodside would ensure that all specified requirements are met and that all required reporting and documentation detailed in DAFF – Biosecurity's email are submitted to allow for timely assessment of the FPU as required under the <i>Biosecurity Act 2015</i>. For clarity, Woodside also advised that Woodside would be the operator of the offshore installation (being the FPU) but would not be the operator of other vessels described in the EP. Woodside continues to work closely with its contractors to ensure compliance with all requirements can be met as</p>	<p>(3) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.12 of the EP). All vessels (including the FPU) are required biosecurity clearances/approvals per the <i>Biosecurity Act (2015)</i> prior to entering Australian waters. This process and risk management are handled by DAFF through their own procedures, independent of the EP processes.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	defined by DAFF – Biosecurity’s email, and meet all requirements under Section 6 of the Biosecurity (Exposed Conveyances – Exceptions from Biosecurity Control) Determination 2016.	
While feedback has been received, there were no objections or claims.	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DAFF – Biosecurity for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF - Biosecurity sufficient information to allow DAFF - Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DAFF – Biosecurity on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 11 August 2023, DAFF – Biosecurity consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DAFF – Biosecurity to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided further information to DAFF – Biosecurity in response to DAFF – Biosecurity’s feedback (email of 27 November 2023).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed DAFF - Biosecurity a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DAFF – Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside provided DAFF – Biosecurity with 30 days for consultation. DAFF – Biosecurity engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed DAFF – Biosecurity a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with DAFF - Biosecurity is appropriate and adapted to the nature of interests of DAFF - Biosecurity:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA’s guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DAFF - Biosecurity.
- Woodside considers a reasonable opportunity was provided to DAFF – Biosecurity as evidenced in their response on 21 August 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DAFF – Biosecurity provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DAFF – Biosecurity.
 - Made no changes or inclusions to the EP as a result of consultation with DAFF – Biosecurity because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 1.15) and provided a Consultation Information Sheet, Commonwealth Shipwrecks Information, and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.5).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DCCEEW on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed DCCEEW 30 days for consultation. For consultation on EPs, 30 days is the usual period for DCCEEW.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DCCEEW.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DCCEEW of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities.

Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 1.16) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.6).
- On 23 November 2023, in the absence of specific feedback from DNP, Woodside proactively sent a second follow-up email (Record of Consultation, reference 2.15). This email reviewed past feedback from DNP on the Scarborough D&C, SITI, Seismic and Subsea EPs which may be relevant to this EP and provided assessment and response as follows:
 - Activities identified and managed all impacts and risks on Australian marine park values (including ecosystem values) to an acceptable level and had considered all options to avoid or reduce them to ALARP.
 - Activities must not be inconsistent with marine park management plans.
 - Notification instructions in emergency response situations.
- On 7 December 2023, DNP responded thanking Woodside for consulting with it regarding this EP and apologised for the delayed reply (SI Report, reference 25.1). DNP advised it had the following objections or claims:
 - **(1)** For 24-hour operations within biologically important areas for sea turtles, applicable recommendations from the National Light Pollution Guidelines for Wildlife must be adopted.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (2) For routine and non-routine discharges relating to subsea operations and activities, that where possible, marine parks were avoided for this type of activity. If this type of activity could not be avoided, then the impacts of the discharge must be reduced to ALARP and comply with relevant regulatory requirements or frameworks (such as the Chemical Hazard Assessment and Risk Management model under the Offshore Chemical Notification Scheme).
- On 8 December 2023, Woodside responded thanking DNP for its email (SI Report, reference 25.2). Woodside:
 - (1) Confirmed it would apply applicable recommendations from the National Light Pollution Guidelines for Wildlife, for operations within 20km of turtle nesting beaches. Due to the remote location of the floating production unit (FPU), Woodside considered that potential impacts to turtles was limited to inspection, maintenance, monitoring and repair works. During activities within 20km of turtle nesting beaches, Woodside would implement controls such as:
 - Lighting be limited to minimum required for navigation and safe operational requirements.
 - Vessel crews trained in light reduction measures when operating within 20km of islands.
 - Use of block out blinds on accommodation quarters.
 - (2) Advised there were no planned discharges from the Scarborough trunkline in marine parks, and the only planned discharge associated with this PAP which could occur in the Montebello Marine Park Multiple Use Zone (MUZ) were those associated with usual vessel operations governed by MARPOL discharge requirements. Woodside further advised it would implement controls while operating in the Montebello MUZ to reduce potential impacts from routine and non-routine discharges, including:
 - Vessels would avoid making discharges including sewage, grey water and food waste until outside of the Montebello MUZ.
 - Chemicals intended or likely to be discharged into the marine environment would be approved through Woodside’s chemical assessment process.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Provided recommendations from the National Light Pollution Guidelines for wildlife must be adopted for 24-hour operations within biologically important areas for sea turtles.</p>	<p>(1) Woodside assessment: Woodside referred to the National Light Pollution Guidelines for Wildlife given potential impacts of light pollution sea turtles and uses the guidelines in its impact assessment for this activity. Woodside response: Woodside confirmed it would apply applicable recommendations from the National Light Pollution Guidelines for Wildlife for operations within 20 km of turtle nesting beaches and will implement controls including lighting to be limited to the minimum required for navigation and safe operational requirements; vessel crews trained in light reduction measures; use of block out blinds on accommodation quarters.</p>	<p>(1) Impact and risk analysis, evaluation and Environment Performance Outcomes and Standards for routine light emissions are described in Section 6.7.3 of the EP. As confirmed to DNP in response to its feedback, lighting will be limited to that required for safe work/navigation, as referenced as C 3.1 of the EP.</p>
<p>(2) Included guidance on routine and non-routine discharges relating to subsea operations and advised that activities should, where possible, avoid marine parks.</p>	<p>(2) Woodside assessment: Woodside has referred to the guidance on routine and non-routine discharges and uses this guidance to ensure discharges avoid marine parks. Woodside response: Woodside advised there were no planned discharges from the trunkline in marine parks, and the only planned discharge which</p>	<p>(2) Impact and risk analysis, evaluation and Environment Performance Outcomes and Standards for routine and non-routine discharges are described in Sections 6.7.9 – 6.7.12 of the EP. As referenced as C 8.5 of the EP, vessel related discharges will be carried out outside of</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>may occur in the Montebello MUZ were those associated with usual vessel operations.</p> <p>Woodside will implement controls while in the Montebello MUZ to reduce potential impacts including ensuring that vessels would avoid making discharges including sewage, grey water and food waste until outside of the Montebello MUZ and chemicals likely to be discharged into the marine environment will be approved through Woodside's chemical assessment process.</p>	<p>the Montebello Marine Park unless vessel safety is compromised, and as referenced as C 8.4, chemicals will be selected with the lowest practicable environmental impacts and risks, subject to technical constraints,</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The EP demonstrates that the risks and impacts of proposed planned activities within permitted areas of the Dampier Marine Park and Montebello Marine Park are reduced to ALARP and acceptable levels, including protection of Australian Marine Park values (Sections 6.7 and 6.8). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.3 and Section 6.8.4 and Appendix H.</p> <p>This EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plans (Section 6).</p> <p>Woodside will ensure the DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix I).</p> <p>No additional measures or controls are required.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations consultation with DNP for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided DNP this information on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- When no response was received, Woodside proactively provided further information to DNP addressing its topics of interest and reminding DNP of the opportunity to provide feedback (email of 23 November 2023).
- On 7 December 2023, DNP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside provided further information when it responded to feedback from DNP (email of 8 December 2023).

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 4 months for consultation.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DNP is appropriate and adapted to the nature of interests of DNP:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DNP.
- Woodside considers a reasonable opportunity was provided to DNP as evidenced in their response on 7 December 2023 when they provided feedback.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DNP and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - A control to limit lighting to that required for safe work/navigation, as referenced as C 1. 3 in the EP, was already to be included in the EP and addresses feedback raised by DNP during consultation.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 1 September 2023, DBCA responded thanking Woodside for the email and consultation information (SI Report, reference 18.1). DBCA noted:
 - **(1)** The operations are in vicinity of reserves managed by DBCA under the CALM Act and given the ecological importance of areas potentially affected by a hydrocarbon release from the proposed activities, it is considered important that the baseline values and state of the potentially affected environment are appropriately understood and documented prior to operations commencing.
 - **(2)** It would like to have confidence that Woodside has established appropriate baseline survey data on the current state of areas supporting important ecological values and any current contamination if present within the area of potential impact of hydrocarbon releases.
 - **(3)** It undertakes monitoring in marine parks and reserves and published monitoring reports which are available on its website, however Woodside should be aware this monitoring is targeted to inform DBCA's values and objectives and is not necessarily suitable to provide baseline information for oil spill risk assessment and management planning.
 - **(4)** It recommends Woodside refer to the Department of Climate Change, Energy, the Environment and Water's National Light Pollution Guidelines for Wildlife as a best-practice industry standard for managing potential impacts of light pollution on marine fauna.
 - **(5)** In the event of a hydrocarbon release, it is requested that Woodside notify DBCA's Pilbara regional office as soon as practicable.
 - **(6)** It will not implement an oiled wildlife management response on behalf of a petroleum operator except as part of a whole of government response mandated by regulatory decision makers.
 - **(7)** Woodside should refer to the Department of Transport's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements. **(7)** Woodside refers to DoT's resources regarding marine pollution.
- On 30 October 2023, Woodside responded thanking DBCA for its feedback (SI Report, reference 18.2). Woodside:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1) Confirmed it maintained knowledge and an understanding of areas of ecological importance within and adjacent to operational areas.
 - (2, 3) Advised its oil spill scientific monitoring program would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release.
 - (4) Confirmed it had considered DCCEEW's National Light Pollution Guidelines with respect to vessel activities. The impact assessment determined that the impacts of lighting were as low as reasonably practicable.
 - (5) Advised it had incorporated the DBCA Pilbara regional office telephone number as part of the notifications listed in the Oil Pollution First Strike Plan, which describes the incident management structure, notification and reporting requirements, the Operational Area, activity specific credible spill scenarios, and the hydrocarbon spill response strategies available.
 - (6) Noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.
- On 31 October 2023, Woodside emailed DBCA Shark Bay consultation information on this EP and other unrelated EPs (Record of Consultation 1.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Areas of ecological importance are in the vicinity of the proposed operations and could be potentially affected by a hydrocarbon release. Baseline values should be understood and documented prior to commencement of activities.</p>	<p>(1) Woodside assessment: Woodside referred to and accepted DBCA's points about ecologically important areas including marine parks and island conservation reserves being located within the EMBA and the potential for them to be affected by unplanned activities. Woodside response: Woodside reaffirmed that areas of ecological importance in the proximity of the EP Operational Areas would not be impacted by planned activities.</p>	<p>(1) The EP demonstrates that the proposed activities are outside the boundaries of a proclaimed State Marine Park and identifies that there are no credible impacts to the values of any State Marine Parks as a result of planned activities (Section 4.8 and Section 6.7 of the EP). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.8.3, 6.8.4 and Appendix H of the EP.</p>
<p>(2) The establishment of appropriate baseline survey data on the current state of the areas.</p>	<p>(2) Woodside assessment: Woodside maintains knowledge of areas of ecological importance adjacent to the Operational Areas and assesses the existing environment that may be affected in the EP. Woodside response: Woodside confirmed it maintained knowledge and an understanding of areas of ecological importance adjacent to Operational Areas. It utilises an information system to track current existing environment knowledge that is regularly updated. Woodside advised its oil spill scientific</p>	<p>(2) Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in Section 7.10.1.3 of this EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release.	
(3) Encouragement of Woodside to acquire the necessary information to implement a Before-After Control Impact (BACI) framework.	(3) Woodside assessment: Woodside reviewed the request about implementing a BACI framework. Woodside response: Woodside advised its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors.	(3) Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in Section 7.10.1.3 of this EP.
(4) Recommended Woodside refer to DCCEEW's National Light Pollution Guidelines for Wildlife.	(4) Woodside assessment: Woodside referred to the DCCEEW's National Light Pollution Guidelines for Wildlife. Woodside response: Woodside confirmed it had considered DCCEEW's National Light Pollution Guidelines for Wildlife and that lighting associated with this EP is required as a priority for safe operation.	(4) Woodside's impact assessment for light emissions is based on recommendations of the National Light Pollution Guidelines for Wildlife (see Section 6.7.3). Lighting will be limited to that required for safe work/navigation, as referenced as C 3.1 of the EP.
(5) Regarding its Incidents and Emergency process, Woodside should notify DBCA's Pilbara office as soon as practicable in the event of a hydrocarbon release.	(5) Woodside assessment: Woodside has incorporated the DBCA Pilbara number into its First Strike Plan. Woodside response: Woodside confirmed the DBCA Pilbara number had been incorporated as part of the Oil Pollution First Strike Plan.	(5) DBCA's Pilbara phone number has been incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix I).
(6) DBCA will not implement an oiled wildlife management response except as part of a mandated government response.	(6) Woodside assessment: Woodside accepts that DBCA would not implement an oiled wildlife management response. Woodside response: Woodside noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.	(6) Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix H).
(7) Woodside should refer to the DoT's web content regarding marine pollution and the Guidance Note Marine Oil Pollution: Response and Consultation Arrangements.	(7) Woodside assessment: Woodside refers to DoT's resources regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements. Woodside response: Woodside referred to DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.	(7) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
--	--	---

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DBCA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. This information was provided to DBCA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 1 September 2023, DBCA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided DBCA with further information in response to DBCA’s feedback (email of 30 October 2023).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside’s methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for consultation. DBCA engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with DBCA is appropriate and adapted to the nature of interests of DBCA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DBCA as evidenced in their response on 1 September 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from DBCA.
 - Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NCWHAC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to NCWHAC on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and measurement measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to NCWHAC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed NCWHAC 30 days for consultation. For consultation, 30 days is the usual period for NCWHAC.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding NCWHAC of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC’s functions, interests or activities.

Commonwealth and WA State Government Departments or Agencies – Industry

Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DISR on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed DISR 30 days for consultation. For consultation on EPs, 30 days is the usual period for DISR.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DISR.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DEMIRS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside will provide notifications to DEMIRS at least 10 days prior to commencement of activities, as referenced at Table 7.8 in the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEMIRS for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DEMIRS sufficient information to allow DEMIRS to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DEMIRS on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DEMIRS a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was notified in the initial correspondence to DEMIRS advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed DEMIRS 30 days for consultation. For consultation on EPs, 30 days is the usual period for DEMIRS.
- In this context, Woodside allowed DEMIRS a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with DEMIRS is appropriate and adapted to the nature of interests of DEMIRS:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding DEMIRS of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DEMIRS did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DEMIRS’ functions, interests or activities.

Commonwealth Commercial Fisheries and Peak Representative Bodies

North West Slope and Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed North West Slope and Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan

---	--	--

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with North West Slope and Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable period have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to North West Slope and Trawl Fishery on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- A consultation period was notified in the initial correspondence to North West Slope and Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed North West Slope and Trawl Fishery with 30 days for consultation. For consultation on EPs, 30 days is the usual period for North West Slope and Trawl Fishery.
- In this context, Woodside allowed North West Slope and Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with North West Slope and Trawl Fishery is appropriate and adapted to the nature of interests of North West Slope and Trawl Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding North West Slope and Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as North West Slope and Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on North West Slope and Trawl Fishery’s functions, interests or activities.

Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Western Deepwater Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted AFMA, DAFF – Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Deepwater Trawl Fishery sufficient information to allow Western Deepwater Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. This information was provided to Western Deepwater Trawl Fishery on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Deepwater Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Western Deepwater Trawl Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Western Deepwater Trawl Fishery.
- In this context, Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Deepwater Trawl Fishery is appropriate and adapted to the nature of interests of Western Deepwater Trawl Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding Western Deepwater Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Deepwater Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Deepwater Trawl Fishery’s functions, interests or activities.

Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted CFA, AFMA, DAFF – Fisheries and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, (see Table 7-8) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CFA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to CFA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed CFA 30 days for consultation. For consultation on EPs, 30 days is the usual period for CFA.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

State Commercial Fisheries and Peak Representative Bodies

Mackerel Managed Fishery – Pilbara (Area 2)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9).
- Woodside consulted relevant individual fishery licence holders in Mackerel Managed Fishery – Pilbara (Area 2). On 11 September 2023, WAFIC, on behalf of Woodside, emailed Mackerel Managed Fishery (Area 2) individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders regarding the activity (SI Report, reference 40.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Mackerel Managed Fishery – Pilbara (Area 2) sufficient information to allow Mackerel Managed Fishery – Pilbara (Area 2) to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. This information was provided to Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Mackerel Managed Fishery – Pilbara (Area 2) a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders 60 days for consultation.
- In this context, Woodside allowed Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Mackerel Managed Fishery – Pilbara (Area 2) is appropriate and adapted to the nature of interests of Mackerel Managed Fishery – Pilbara (Area 2):

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Mackerel Managed Fishery – Pilbara (Area 2) of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside – sent an email to Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders' functions, interests or activities.

Pilbara Crab Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Pilbara Crab Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9).
- Woodside consulted relevant individual fishery licence holders in Pilbara Crab Managed Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Crab Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Crab Managed Fishery individual licence holders regarding the activity (SI Report, reference 41.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Crab Managed Fishery individual licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically

Sufficient Information

Woodside has given Pilbara Crab Managed Fishery sufficient information to allow Pilbara Crab Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided information to Pilbara Crab Managed Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Crab Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Crab Managed Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Crab Managed Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed Pilbara Crab Managed Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Crab Managed Fishery is appropriate and adapted to the nature of interests of Pilbara Crab Managed Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email, reminding Pilbara Crab Managed Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside – sent an email to Pilbara Crab Managed Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Crab Managed Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Crab Managed Fishery individual licence holders' functions, interests or activities.

Marine Aquarium Managed Fishery

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 9 August 2023, Woodside sent a letter to Marine Aquarium Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9).
- Woodside consulted relevant individual fishery licence holders in Marine Aquarium Managed Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Marine Aquarium Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Marine Aquarium Managed Fishery individual licence holders regarding the activity (SI Report, reference 39.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Marine Aquarium Managed Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Aquarium Managed Fishery sufficient information to allow Marine Aquarium Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided information to Marine Aquarium Managed Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Marine Aquarium Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Marine Aquarium Managed Fishery individual licence holders advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Aquarium Managed Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed Marine Aquarium Managed Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Aquarium Managed Fishery is appropriate and adapted to the nature of interests of Marine Aquarium Managed Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Marine Aquarium Managed Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside – sent an email to Marine Aquarium Managed Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Aquarium Managed Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Aquarium Managed Fishery individual licence holders' functions, interests or activities.

West Coast Deep Sea Crustacean Managed Fishery

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> On 9 August 2023, Woodside sent a letter to West Coast Deep Sea Crustacean Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 31 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9). Woodside consulted relevant individual fishery licence holders in West Coast Deep Sea Crustacean Managed Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed West Coast Deep Sea Crustacean Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet. (1) On 12 October 2023, WAFIC advised Woodside it had received feedback from a licence holder in the West Coast Deep Sea Crustacean Managed Fishery (SI Report, reference 42.1). The licence holder advised that while they were currently south of the operations, they had previously been working north of Exmouth and appreciated still being consulted for activities in the Pilbara. (1) Woodside noted WAFIC’s feedback but no response was required. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) A licence holder provided feedback via WAFIC that they appreciated the continuing consultation from Woodside.</p>	<p>(1) Woodside assessment: Woodside reviewed the update from WAFIC from a license holder. Woodside response: Woodside noted one licence holder had responded that they appreciated the continuing consultation.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.</p>
<p>Summary Report – Consultation Complete</p>		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with West Coast Deep Sea Crustacean Managed Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised above in the Consultation Approach. Specifically:</p>		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given West Coast Deep Sea Crustacean Managed Fishery sufficient information to allow West Coast Deep Sea Crustacean Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided information to West Coast Deep Sea Crustacean Managed Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 12 October 2023, WAFIC, on behalf of a licence holder in the West Coast Deep Sea Crustacean Managed Fishery shared feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable licence holders to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed West Coast Deep Sea Crustacean Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to West Coast Deep Sea Crustacean Managed Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed West Coast Deep Sea Crustacean Individual Managed Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed West Coast Deep Sea Crustacean Managed Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with West Coast Deep Sea Crustacean Managed Fishery is appropriate and adapted to the nature of interests of West Coast Deep Sea Crustacean Managed Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up email reminding West Coast Deep Sea Crustacean Managed Fishery of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to West Coast Deep Sea Crustacean Managed Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside considers a reasonable opportunity was provided to West Coast Deep Sea Crustacean Managed Fishery individual licence holders as evidenced by the response on 12 August 2023 when feedback was received from a licence holder.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- A licence holder in the West Coast Deep Sea Crustacean Managed Fishery provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from West Coast Deep Sea Crustacean Managed Fishery.
 - Made no changes or inclusions to the EP as a result of consultation with West Coast Deep Sea Crustacean Managed Fishery because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Specimen Shell Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Specimen Shell Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information referred to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9).
- Woodside consulted relevant individual fishery licence holders in Specimen Shell Managed Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Specimen Shell Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Specimen Shell Managed Fishery individual licence holders regarding the activity (SI Report, reference 43.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations consultation with Specimen Shell Managed Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Specimen Shell Managed Fishery sufficient information to allow Specimen Shell Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided information to Specimen Shell Managed Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description and receiving environment, impacts and risks associated with the PAP, proposed mitigation and measurement measures.
 - A clear timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Specimen Shell Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Specimen Shell Managed Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Specimen Shell Managed Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed Specimen Shell Managed Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Specimen Shell Managed Fishery is appropriate and adapted to the nature of interests of Specimen Shell Managed Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Specimen Shell Managed Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Specimen Shell Managed Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Specimen Shell Managed Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Specimen Shell Managed Fishery individual licence holders' functions, interests or activities.

Onslow Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Onslow Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- Woodside consulted relevant individual fishery licence holders in Onslow Prawn Managed Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Onslow Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Onslow Prawn Managed Fishery individual licence holders regarding the activity (SI Report, reference 44.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.
Summary Report – Consultation Complete		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Onslow Prawn Managed Fishery individual licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow Prawn Managed Fishery sufficient information to allow Onslow Prawn Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Onslow Prawn Managed Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow Prawn Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Onslow Prawn Managed Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow Prawn Managed Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed Onslow Prawn Managed Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow Prawn Managed Fishery is appropriate and adapted to the nature of interests of Onslow Prawn Managed Fishery:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities).
- Woodside ran 2 targeted social media campaigns (see Consultation Activities)
- Woodside proactively sent a follow-up consultation email reminding Onslow Prawn Managed Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Onslow Prawn Managed Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as Onslow Prawn Managed Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow Prawn Managed Fishery individual licence holders' functions, interests or activities.

Western Australian Sea Cucumber Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Western Australian Sea Cucumber Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9).
- Woodside consulted relevant individual fishery licence holders in Western Australian Sea Cucumber Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Western Australian Sea Cucumber Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Western Australian Sea Cucumber Fishery individual licence holders regarding the activity (SI Report, reference 46.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Australian Sea Cucumber Fishery individual licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Western Australian Sea Cucumber Fishery sufficient information to allow Western Australia Sea Cucumber Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet publicly available on the Woodside website since August 2023. Woodside provided this information to Western Australian Sea Cucumber Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Australia Sea Cucumber Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Australian Sea Cucumber Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Australian Sea Cucumber Fishery individual licence holders 60 days for consultation.
- In this context, Woodside allowed Western Australian Sea Cucumber Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity to Provide Feedback

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Australian Sea Cucumber Fishery is appropriate and adapted to the nature of interests of Western Australian Sea Cucumber Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Western Australian Sea Cucumber Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Western Australian Sea Cucumber Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Australian Sea Cucumber Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Australian Sea Cucumber Fishery individual licence holders' functions, interests or activities.

Pilbara Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Pilbara Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- Woodside consulted relevant individual fishery licence holders in Pilbara Trawl Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 23 September 2023, WAFIC sent a follow-up email (Record of Consultation, reference 2.11).
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Trawl Fishery individual licence holders regarding the activity (SI Report, reference 47.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Trawl Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Pilbara Trawl Fishery sufficient information to allow Pilbara Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Pilbara Trawl Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Trawl Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside provided Pilbara Trawl Fishery individual licence holders with a more than 30-day consultation period in the preparation of the EP.
- In this context, Woodside allowed Pilbara Trawl Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Trawl Fishery is appropriate and adapted to the nature of interests of Pilbara Trawl Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Pilbara Trawl Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Pilbara Trawl Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Trawl Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Trawl Fishery individual licence holders' functions, interests or activities.

Pilbara Trap Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Pilbara Trap Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- Woodside consulted relevant individual fishery licence holders in Pilbara Trap Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Trap Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 23 September 2023, WAFIC sent a follow-up email (Record of Consultation, reference 2.11).
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Trap Fishery individual licence holders regarding the activity (SI Report, reference 48.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Trap Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Pilbara Trap Fishery sufficient information to allow Pilbara Trap Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Pilbara Trap Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Trap Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Trap Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Trap Fishery 60 days for consultation.
- In this context, Woodside allowed Pilbara Trap Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Trap Fishery is appropriate and adapted to the nature of interests of Pilbara Trap Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Pilbara Trap Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Pilbara Trap Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as Pilbara Trap Fishery individual licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Trap Fishery individual licence holders' functions, interests or activities.

Pilbara Line Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Pilbara Line Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- Woodside consulted relevant individual fishery licence holders in Pilbara Line Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Line Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet.
- On 23 September 2023, WAFIC sent a follow-up email (Record of Consultation, reference 2.11).
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Line Fishery individual licence holders regarding the activity (SI Report, reference 49.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Line Fishery individual licence holders for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given Pilbara Line Fishery sufficient information to allow Pilbara Line Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Pilbara Line Fishery individual licence holders on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Line Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Line Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Line Fishery 60 days for consultation.
- In this context, Woodside allowed Pilbara Line Fishery individual licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Line Fishery is appropriate and adapted to the nature of interests of Pilbara Line Fishery:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Pilbara Line Fishery individual licence holders of the opportunity to provide feedback (email of 31 August 2023).
- In line with WAFIC's guidelines on consultation with State fisheries, WAFIC - on behalf of Woodside - sent an email to Pilbara Line Fishery individual licence holders offering an additional opportunity to provide feedback (email of 11 September 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were adopted as a result of consultation as Pilbara Line Fishery individual licence holders did not provide feedback for this EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Line Fishery individual licence holders' functions, interests or activities.

Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 1.9) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 16 August 2023, Woodside emailed WAFIC following a phone call earlier that day and confirmed a meeting for 28 August 2023. Woodside also provided an outline of previous, current and upcoming consultation on EPs including this one (SI Report, reference 10.1).
- On 25 August 2023, Woodside sent a letter to WAFIC acknowledging the volume of consultation under consideration by WAFIC and offering to meet to improve consultation outcomes (SI Report, reference 10.2).
- On 28 August 2023, Woodside met with WAFIC and gave a presentation on EPs (SI Report, reference 10.3).
- On 28 August 2023, following a phone call earlier that day regarding consultation on upcoming EPs, Woodside emailed WAFIC regarding consultation information to be sent via WAFIC on Woodside's behalf as per the fee-for-service agreement for this EP (and for two other EPs) (SI Report, reference 10.4).
- **(1) (1)** On 31 August 2023, following a phone call on 30 August 2023 where it was agreed that WAFIC and Woodside would enter into an agreement around EP consultation, Woodside emailed WAFIC and asked that WAFIC circulate consultation material for this EP and another EP under the fee-for-service option 1 (SI Report, reference 10.5).
- **(2)** On 31 August 2023, WAFIC emailed Woodside seeking clarification on the identification of fisheries in the Operational Area for the activities that are the subject of this EP and confirmed that WAFIC would not be distributing consultation information to licence holders in the EMBA as they do not represent Commonwealth fisheries. WAFIC also advised it would consider a longer-term approach to consultation (SI Report, reference 10.6).
- **(2)** On 1 September 2023, Woodside spoke to WAFIC and sent a follow-up email confirming which fisheries needed to be consulted for this EP (SI Report, references 10.7 and 10.8).
- On 11 September 2023, WAFIC emailed relevant commercial fishing licence holders for this activity (SI Report, reference 10.9). The email provided information about this activity and stated that WAFIC was working with Woodside to strategically streamline consultation with the commercial fishing industry. WAFIC requested that any feedback specific to the proposed activity was provided to them.
- **(3)** On the same day, WAFIC confirmed it had delivered consultation notification for this EP to licence holders in the relevant fisheries (SI Report, reference 10.10).
- **(4)** On 12 October 2023, WAFIC advised it had received feedback from one licence holder in the West Coast Deep Sea Crustacean Fishery, stating they were currently south of the operations but as they had been working north of Exmouth in previous years, they appreciated the consultation information. WAFIC advised it had no further concerns regarding the proposed activities (SI Report, reference 10.12).
- **(3, 4)** On 13 October 2023, Woodside responded to WAFIC's email of 12 October and thanked WAFIC for its advice that it had no further concerns regarding the proposed activities (SI Report, reference 10.13).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Need for a fee-for-service agreement to address the volume of consultation required for EPs.</p>	<p>(1) Woodside assessment: Woodside considered and agreed with WAFIC feedback regarding the volume of consultation required for its EPs. Woodside response: Woodside agreed a fee-for-service agreement with WAFIC was appropriate to facilitate best practice consultation for this EP. Woodside and WAFIC negotiated an initial fee-for-service agreement for this and two other EPs.</p>	<p>(1) Not required.</p>
<p>(2) Clarification sought on Operational Area fisheries and confirmation WAFIC would not distribute consultation information to licence holders in the EMBA.</p>	<p>(2) Woodside assessment: Woodside accepted that WAFIC would not distribute consultation information to licence holders in the EMBA. Woodside response: Woodside accepted WAFIC's advice that WAFIC would not distribute consultation information to licence holders in the EMBA and confirmed which fisheries needed to be consulted.</p>	<p>(2) Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP.</p>
<p>(3) WAFIC confirmed it had delivered consultation material to relevant fisheries.</p>	<p>(3) Woodside assessment: Woodside reviewed WAFIC's update on outreach to relevant fisheries which gave them sufficient information to make an informed assessment of possible consequences of the activity on their functions, interests or activities per regulation 25 of the Environment Regulations. Woodside response: Woodside noted consultation information had been distributed to relevant fisheries via WAFIC.</p>	<p>(3) Not required.</p>
<p>(4) WAFIC advised it had no further concerns regarding the proposed activities, and that it had received one response from a licence holder advising that they appreciated the consultation information.</p>	<p>(4) Woodside assessment: Woodside notes WAFIC has no further comments. Woodside response: Woodside noted WAFIC had no further comments and that while one licence holder had responded following consultation, there were no objections or claims from that relevant fishery.</p>	<p>(4) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p>	<p>Woodside will provide notifications to WAFIC (see Table 7-8) no less than ten days prior to commencement and following completion of activities, as referenced as PS 1.8.1 of this EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
--	---	---

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAFIC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to WAFIC on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 12 October 2023, WAFIC shared feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAFIC to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed WAFIC 60 days for consultation.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with WAFIC is appropriate and adapted to the nature of interests of WAFIC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside adapted its consultation approach in line with WAFIC’s guidelines in response to feedback from WAFIC regarding fishery licence holders’ consultation fatigue.
- Woodside considers a reasonable opportunity was provided to WAFIC as evidenced in their response on 12 October 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from WAFIC and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Made no changes or inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Recreational Marine Users and Peak Representative Bodies

Karratha Recreational Marine Users

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> • On 9 August 2023, Woodside emailed Karratha Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.5) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Karratha Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha Recreational Marine Users sufficient information to allow Karratha Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Karratha Recreational Marine Users on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Karratha Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Karratha Recreational Marine Users 30 days for consultation. For consultation on EPs, 30 days is the usual period for Karratha Recreational Marine Users.
- In this context, Woodside allowed Karratha Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha Recreational Marine Users is appropriate and adapted to the nature of interests of Karratha Recreational Marine Users:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Karratha Recreational Marine Users of the opportunity to provide feedback (email of 31 August 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha Recreational Marine Users' functions, interests or activities.

Exmouth Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Exmouth Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.5) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth Recreational Marine Users sufficient information to allow Exmouth Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Exmouth Recreational Marine Users on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description and receiving environment, impacts and risks associated with the PAP, proposed mitigation and measurement measures.
 - A clear timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth Recreational Marine Users advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Exmouth Recreational Marine Users 30 days for consultation. For consultation on EPs, 30 days is the usual period for Exmouth Recreational Marine Users.
- In this context, Woodside allowed Exmouth Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth Recreational Marine Users is appropriate and adapted to the nature of interests of Exmouth Recreational Marine Users:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Exmouth Recreational Marine Users of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures considered as a result of consultation as Exmouth Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth Recreational Marine Users' functions, interests or activities.

- In this context, Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Gascoyne Recreational Marine Users is appropriate and adapted to the nature of interests of Gascoyne Recreational Marine Users:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation letter reminding Gascoyne Recreational Marine Users of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Gascoyne Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Gascoyne Recreational Marine Users' functions, interests or activities.

Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.6) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, reference 2.12).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	<p>Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Pilbara/Kimberley Recreational Marine Users on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation. For consultation on EPs, 30 days is the usual period for Pilbara/Kimberley Recreational Marine Users.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara/Kimberley Recreational Marine Users is appropriate and adapted to the nature of interests of Pilbara/Kimberley Recreational Marine Users:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation letter reminding Pilbara/Kimberley Recreational Marine Users of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara/Kimberley Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara/Kimberley Recreational Marine Users' functions, interests or activities.

Recfishwest

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 August 2023, Recfishwest emailed thanking Woodside for the consultation (SI Report, reference 5.1) and stated:
 - (1) It was unlikely this project would have a high impact on recreational fishing and that it had no concerns based on the information provided.
 - (2) Recfishwest looked forward to further updates as the project progressed.
- (1, 2) On 17 August 2023, Woodside thanked Recfishwest for its response (SI Report, reference 5.2).

<p>Recfishwest had no objection to the proposed activities.</p>	<p>Woodside assessment: Woodside accepted Recfishwest had no objections to the proposed activities given it was unlikely activities would have a high impact on recreational fishing.</p> <p>Woodside response: Woodside thanked Recfishwest for its prompt response.</p>	<p>Not required.</p>
<p>(2) Recfishwest requested to be kept informed as activities progress, given the areas surrounding the operations are accessed by recreational fishers.</p>	<p>(2) Woodside assessment: Woodside acknowledges Recfishwest's request to be informed as activities progress.</p> <p>Woodside response: Woodside confirmed it would keep Recfishwest informed as the activities progressed, given that the areas surrounding the operation is accessed by recreational fishers</p>	<p>(2) Woodside will provide notifications to Recfishwest (see Table 7-8) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has consulted Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations **and** consultation with Recfishwest for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Recfishwest on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
- The purpose of consultation and set out what was being sought through consultation.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Recfishwest 30 days for consultation. Recfishwest engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recfishwest is appropriate and adapted to the nature of interests of Recfishwest:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Recfishwest of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from Recfishwest.
 - Based on Recfishwest's feedback, updated C 1.8.1 to include provision of Start of Activity notifications to Recfishwest.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Marine Tourism WA, Recfishwest, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Marine Tourism WA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Marine Tourism WA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A clear timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Marine Tourism WA 30 days for consultation. For consultation on EPs, 30 days is the usual period for Marine Tourism WA.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Marine Tourism WA of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, WA Game Fishing Association, Marine Tourism WA and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WA Game Fishing Association for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to WA Game Fishing Association on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed WA Game Fishing Association 30 days for consultation. For consultation on EPs, 30 days is the usual period for WA Game Fishing Association.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding WA Game Fishing Association of the opportunity to provide feedback (email of 30 August 2023).
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because::

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

Titleholders and Operators

Chevron Australia (including Osaka Gas Gorgon, Tokyo Gas Gorgon, JERA Gorgon)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Chevron Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 1 October 2024, Woodside emailed Chevron advising that in addition to consultation regarding this EP in August 2023, Woodside was seeking to confirm adjacent titleholder understanding of the proposed activity (SI Report, reference 62.1). Woodside attached a GIS shape file and a map of adjacent titleholders. Woodside noted that:
 - Part of the PAP for the EP included gravimetry surveys and the Operational Area included a radius of 1000m around the outermost concrete pads.
 - Vessel surface activity may temporarily occur within titles adjacent to two Woodside titles due to the proximity of the pads to the title boundary. All survey activities on the seabed would be undertaken within Woodside-operated titles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> - The gravimetry surveys may take up to 55 days and were currently planned to take place every 2-3 years. - To reduce impact on adjacent titleholders, Woodside was proposing to include titleholders in Start of Activity notifications related to gravimetry surveys, and was seeking feedback on any other control measures Chevron may have related to vessel movements for gravimetry surveys on the periphery of its titles. • On 15 October 2024, Chevron thanked Woodside for its email (SI Report, reference 62.2). Chevron: <ul style="list-style-type: none"> - (1) Noted there were no known conflicts at the time of sending but requested to be notified of any start of activity that had the potential to cross the title boundary. - (2) An ingress arrangement could also be required but this would be subject to further discussion when the notification was provided. • On 17 October 2024, Woodside responded thanking Chevron for its feedback (SI Report, reference 62.3). Woodside: <ul style="list-style-type: none"> - (1) Noted there were no known conflicts at this time and confirmed it would provide Chevron with Start of Activity notifications where activities had the potential to cross the title boundary, including gravimetry surveys. - (2) Acknowledged further discussions may be required regarding an ingress arrangement. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) No known conflicts but requested Start of Activity notifications.</p>	<p>(1) Woodside assessment: Woodside acknowledges Chevron has no known conflicts at this time and commits to providing Start of Activity notifications to Chevron. Woodside response: Woodside noted Chevron had no known conflicts at this time and confirmed Woodside would provide Start of Activity notifications relating to activities where there was a potential to cross the title boundary.</p>	<p>(1) Woodside will notify Chevron of gravimetry survey activities that involve vessel overlap with adjacent title areas, as referenced as C 1.11 in Section 6.7.1, and set out in the ongoing consultation program in Table 7-8.</p>
<p>(2) Ingress arrangement may be required.</p>	<p>(2) Woodside assessment: Woodside notes that Chevron may require an ingress arrangement and that further discussions may be needed at the time a notification is provided. Woodside response: Woodside acknowledged that further discussions may be required regarding an ingress arrangement.</p>	<p>(2) Not required.</p>
<p>Woodside has addressed claims and objections as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Chevron Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chevron sufficient information to allow Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Chevron Australia on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided Chevron with additional tailored information regarding the potential impacts of the project on its functions, interests and activities (email of 1 October 2024).

Reasonable Period

Woodside allowed Chevron a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Chevron advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside provided Chevron 30 days for consultation. For consultation on EPs, 30 days is the usual period for Chevron Australia.
- Woodside provided Chevron with an additional consultation period when Woodside sent updated information on the activity (email of 1 October 2024).
- In this context, Woodside allowed Chevron Australia a reasonable period for consultation in preparation of the EP, as evidenced by its response on 15 October 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Chevron is appropriate and adapted to the nature of interests of Chevron:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding Chevron Australia of the opportunity to provide feedback.
- Woodside provided Chevron with further information on the activity on 1 October 2024, providing another opportunity for Chevron to provide feedback.
- Woodside considers a reasonable opportunity was provided to Chevron as evidenced in their response on 15 October 2024 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from Chevron and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Based on Chevron's feedback, adopted a control in Section 6.7.1 of the EP, as referenced as C 1.11, to notify Chevron of gravimetry survey activities that have the potential to overlap its title boundary.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Western Gas

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Western Gas advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 1 October 2024, Woodside emailed Western Gas advising that in addition to consultation regarding this EP in August 2023, Woodside was seeking to confirm adjacent titleholder understanding of the proposed activity (SI Report, reference 63.1). Woodside attached a GIS shape file and a map of adjacent titleholders. Woodside noted that:
 - The PAP for the EP included gravimetry surveys and the Operational Area included a radius of 1000m around the outermost concrete pads, therefore vessel surface activity may temporarily occur within titles adjacent to two Woodside titles due to the proximity of the pads to the title boundary. All survey activities on the seabed would be undertaken within Woodside-operated titles.
 - To reduce impact on adjacent titleholders, Woodside was proposing to include titleholders in Start of Activity notifications related to gravimetry surveys and was seeking feedback on any other control measures Western Gas may have related to vessel movements for gravimetry surveys on the periphery of its titles.
- On 11 October 2024, Woodside emailed Western Gas following up on the information provided regarding gravimetry surveys and seeking to confirm if Western Gas had any further feedback (SI Report, reference 63.2).
- On 11 October 2024, Western Gas responded thanking Woodside for the notification (SI Report, reference 63.3). Western Gas:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1) Confirmed it had no issues with the activities and that it was looking forward to receiving Start of Activity notifications.
- (1) On 14 October 2024, Woodside responded thanking Western Gas for its feedback and confirming Woodside would provide Start of Activity notifications relating to gravimetry surveys for this EP (SI Report, reference 63.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Receiving Start of Activity notifications relating to gravimetry surveys.</p>	<p>(1) Woodside assessment: Woodside commits to notifying Western Gas of gravimetry survey activities that involve vessel overlap with adjacent title areas. Woodside response: Woodside confirmed it would provide Western Gas with Start of Activity notifications relating to gravimetry surveys for this EP.</p>	<p>(1) Woodside will notify Western Gas of gravimetry survey activities that involve vessel overlap with adjacent title areas, as referenced as C 1.11 in Section 6.7.1, and set out in the ongoing consultation program in Table 7-8.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations **and** consultation with Western Gas for the purpose of regulation 25 **is** complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Gas sufficient information to allow Western Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because: Woodside has given Western Gas sufficient information to allow Western Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Western Gas on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided Western Gas with additional tailored information regarding the potential impacts of the project on its functions, interests and activities (email of 1 October 2024).

Reasonable Period

Woodside allowed Western Gas a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Gas advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Western Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Western Gas.
- Woodside provided Western Gas with an additional consultation period when Woodside sent updated information on the activity (email of 1 October 2024).
- In this context, Woodside allowed Western Gas a reasonable period for consultation in preparation of the EP, as evidenced by its response on 11 October 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Gas is appropriate and adapted to the nature of interests of Western Gas:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 30 August 2023, reminding Western Gas of the opportunity to provide feedback.
- Woodside provided Western Gas with further information on the activity on 1 October 2024, providing another opportunity for Western Gas to provide feedback.
- Woodside considers a reasonable opportunity was provided to Western Gas as evidenced in their response on 11 October 2024 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Western Gas provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from Western Gas and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Based on Western Gas's feedback, adopted a control in Section 6.7.1 of the EP, as referenced as C 1.11, to notify Western Gas of gravimetry survey activities that have the potential to overlap its title boundary.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Exxon Mobil Australia

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Exxon Mobil Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exxon Mobil Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exxon Mobil Australia sufficient information to allow Exxon Mobil Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Exxon Mobil Australia on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*. Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed Exxon Mobil Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exxon Mobil Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Exxon Mobil Australia with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Exxon Mobil Australia.
- In this context, Woodside allowed Exxon Mobil Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Exxon Mobil Australia is appropriate and adapted to the nature of interests of Exxon Mobil Australia:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Exxon Mobil Australia of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exxon Mobil Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exxon Mobil Australia’s functions, interests or activities

Shell Australia

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Shell Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan

---	---	---

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shell Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shell Australia sufficient information to allow Shell Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Shell Australia on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shell Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shell Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Shell Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for Shell Australia.
- In this context, Woodside allowed Shell Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Shell Australia is appropriate and adapted to the nature of interests of Shell Australia:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Shell Australia of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shell Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shell Australia's functions, interests or activities

INPEX Alpha

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed INPEX Alpha advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with INPEX Alpha for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given INPEX Alpha sufficient information to allow INPEX Alpha to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to INPEX Alpha on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed INPEX Alpha a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to INPEX Alpha advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed INPEX Alpha 30 days for consultation. For consultation on EPs, 30 days is the usual period for INPEX Alpha.
- In this context, Woodside allowed INPEX Alpha a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with INPEX Alpha is appropriate and adapted to the nature of interests of INPEX Alpha:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding INPEX Alpha of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as INPEX Alpha did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

- The measures and controls described in this EP address the potential impact from the proposed activity on INPEX Alpha's functions, interests or activities.

Carnarvon Energy

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Carnarvon Energy advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Carnarvon Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Carnarvon Energy sufficient information to allow Carnarvon Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Carnarvon Energy on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Carnarvon Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Carnarvon Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Carnarvon Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for Carnarvon Energy.
- In this context, Woodside allowed Carnarvon Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Carnarvon Energy is appropriate and adapted to the nature of interests of Carnarvon Energy:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Carnarvon Energy of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Carnarvon Energy did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Carnarvon Energy's functions, interests or activities

PE Wheatstone (PEW)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed PE Wheatstone advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with PE Wheatstone for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PE Wheatstone sufficient information to allow PE Wheatstone to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to PE Wheatstone on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed PE Wheatstone a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to PE Wheatstone advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed PE Wheatstone 30 days for consultation. For consultation on EPs, 30 days is the usual period for PE Wheatstone.
- In this context, Woodside allowed PE Wheatstone a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with PE Wheatstone is appropriate and adapted to the nature of interests of PE Wheatstone:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding PE Wheatstone of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as PE Wheatstone did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on PE Wheatstone’s functions, interests or activities.

Kyushu Electric Wheatstone (KEW)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Kyushu Wheatstone advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Kyushu Wheatstone for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Kyushu Wheatstone sufficient information to allow Kyushu Wheatstone to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Kyushu Wheatstone on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Kyushu Wheatstone a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Kyushu Wheatstone advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Kyushu Wheatstone 30 days for consultation. For consultation on EPs, 30 days is the usual period for Kyushu Wheatstone.
- In this context, Woodside allowed Kyushu Wheatstone a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Kyushu Wheatstone is appropriate and adapted to the nature of interests of Kyushu Wheatstone:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Kyushu Wheatstone of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Kyushu Wheatstone did not provide feedback for this EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Kyushu Wheatstone's functions, interests or activities

Eni Australia

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Eni Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Eni Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Eni Australia sufficient information to allow Eni Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Eni Australia on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Eni Australia a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to Eni Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Eni Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for Eni Australia.
- In this context, Woodside allowed Eni Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Eni Australia is appropriate and adapted to the nature of interests of Eni Australia:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Eni Australia of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Eni Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Eni Australia's functions, interests or activities.

Jadestone Energy

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Jadestone Energy advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Jadestone Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Jadestone Energy sufficient information to allow Jadestone Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Jadestone Energy on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Jadestone Energy a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to Jadestone Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Jadestone Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for Jadestone Energy.
- In this context, Woodside allowed Jadestone Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Jadestone Energy is appropriate and adapted to the nature of interests of Jadestone Energy:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Jadestone Energy of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Jadestone Energy did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Jadestone Energy’s functions, interests or activities.

KATO Energy

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed KATO Energy advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KATO Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given KATO Energy sufficient information to allow KATO Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to KATO Energy on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed KATO Energy a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to KATO Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed KATO Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for KATO Energy.
- In this context, Woodside allowed KATO Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KATO Energy is appropriate and adapted to the nature of interests of KATO Energy:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding KATO Energy of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as KATO Energy did not provide feedback for this EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on KATO Energy's functions, interests or activities.

KUFPEC

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed KUFPEC advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KUFPEC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given KUFPEC sufficient information to allow KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to KUFPEC on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed KUFPEC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to KUFPEC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed KUFPEC 30 days for consultation. For consultation on EPs, 30 days is the usual period for KUFPEC Energy.
- In this context, Woodside allowed KUFPEC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KUFPEC is appropriate and adapted to the nature of interests of KUFPEC:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding KUFPEC of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as KUFPEC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on KUFPEC's functions, interests or activities.

Santos

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- **(1)** On 4 September 2023, Santos responded thanking Woodside for its email and advising it had no objections or comments at that time (SI Report, reference 19.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> (1) On 6 September 2023, Woodside responded thanking Santos for its email (SI Report, reference 19.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Santos advised it had no objections or comments.	(1) Woodside assessment: Woodside accepts Santos has no objections or comments regarding this EP. Woodside response: Woodside thanked Santos for its response and noted it had no objections or comments regarding this EP.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Santos for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Santos on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 4 September 2023, Santos shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation. Santos engaged in consultation and provided feedback in this period.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Santos is appropriate and adapted to the nature of interests of Santos:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Santos of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from Santos.
 - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Coastal Oil and Gas

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> On 9 August 2023, Woodside emailed Coastal Oil and Gas advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Coastal Oil and Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. - Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Coastal Oil and Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Coastal Oil and Gas.
- In this context, Woodside allowed Coastal Oil and Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Coastal Oil and Gas is appropriate and adapted to the nature of interests of Coastal Oil and Gas:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Coastal Oil and Gas of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Coastal Oil and Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Coastal Oil and Gas’s functions, interests or activities.

Bounty Oil and Gas

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Bounty Oil and Gas advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Bounty Oil and Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Bounty Oil and Gas sufficient information to allow Bounty Oil and Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Bounty Oil and Gas on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Bounty Oil and Gas a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to Bounty Oil and Gas advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Bounty Oil and Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Bounty Oil and Gas.
- In this context, Woodside allowed Bounty Oil and Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Bounty Oil and Gas is appropriate and adapted to the nature of interests of Bounty Oil and Gas:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Bounty Oil and Gas of the opportunity to provide feedback (email of 30 August 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Bounty Oil and Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Bounty Oil and Gas’s functions, interests or activities.

Vermilion Oil and Gas

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Vermilion Oil and Gas advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Vermilion Oil and Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vermilion Oil and Gas sufficient information to allow Vermilion Oil and Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Vermilion Oil and Gas on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Vermilion Oil and Gas a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Vermilion Oil and Gas advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Vermilion Oil and Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Vermilion Oil and Gas.
- In this context, Woodside allowed Vermilion Oil and Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vermilion Oil and Gas is appropriate and adapted to the nature of interests of Vermilion Oil and Gas:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding Vermilion Oil and Gas of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Vermilion Oil and Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Vermilion Oil and Gas's functions, interests or activities.

OMV Australia / Sapura OMV Upstream (WA) (OMV)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed OMV Australia / Sapura OMV Upstream (WA) (OMV) advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with OMV for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given OMV sufficient information to allow OMV to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to OMV on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed OMV a reasonable period for consultation in the preparation of this EP because::

- A consultation period was stated in the initial correspondence to OMV advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed OMV 30 days for consultation. For consultation on EPs, 30 days is the usual period for OMV.
- In this context, Woodside allowed OMV a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with OMV is appropriate and adapted to the nature of interests of OMV:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email reminding OMV of the opportunity to provide feedback (email of 30 August 2023).

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as OMV did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on OMV’s functions, interests or activities.

Peak Industry Representative Bodies

Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Summary report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with AEP for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because::

- Consultation Information Sheet publicly available on the Woodside website since August 2023. Woodside provided this information to AEP on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AEP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AEP advising of consultation as well as when consultation would close for the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed AEP 30 days consultation. For consultation on EPs, this is the usual period for AEP.
- During the consultation period, Woodside sent a follow-up email to AEP to remind AEP of consultation and timeframes (email of 30 August 2023).
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with AEP is appropriate and adapted to the nature of AEP:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AEP.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

Traditional Custodians and Nominated Representative Corporations

The 'Summary of information provided and record of consultation for this EP' section demonstrates that consultation for the purpose of regulation 25 of the Environment Regulations is complete. Woodside's commitment to ongoing consultation with Traditional Custodians includes a Program of Ongoing Engagement, as summarised in Appendix G "Program of Ongoing Engagement with Traditional Custodians."

Kariyarra Aboriginal Corporation (KAC)

Context

Kariyarra is established under the *Native Title Act 1993* (Cth) by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with KAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to KAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with KAC who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites KAC to monthly luncheons.

For consultation on this EP, Woodside contacted the KAC CEO offering an opportunity to present to the KAC Board. Woodside asked KAC how it wished to be consulted, if it required support to participate in consultation, if there were other relevant persons or groups that KAC considered should be consulted and requested that all information shared with KAC be cascaded to its members.

KAC has engaged legal representatives who led aspects of the consultation for KAC. In some instances, items raised by the legal representatives (for example in relation to amount and transfer of funds) did not fall within Woodside's policies and procedures and Woodside confirmed it would not action those. Woodside received notice from KAC (in August 2024) that the legal representative was no longer engaged by KAC.

Woodside notes that during the course of consultation for this EP, there were a number of administrative changes at KAC. Woodside was advised by KAC in August 2024 that it had appointed a new CEO and Woodside updated its contact details so as to engage with the new CEO. KAC also advised that it changed legal representation during the consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As part of its ongoing consultation and relationship building, Woodside provided KAC with a consultation framework agreement which sought from KAC, confirmation as to how KAC would like to be consulted, including KAC's views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation (see emails from 29 November 2023). While an agreement like this is useful to outline consultation norms for KAC, Woodside has noticed that there appears to be limited appetite from groups like KAC to enter in a framework agreement that sets this position out in an agreement form. While Woodside has continued to attempt to progress the framework agreement, despite numerous approaches, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation progressing in parallel to discussions on the framework agreement. (See in particular, exchanges of correspondence between January 2024 and March 2024). We also note that in August 2024, following administrative changes and change of legal advisor, KAC has requested discussions "start fresh" on the consultation framework agreement.

This context and process demonstrates that Woodside's consultation approach with KAC is appropriate and adapted to the nature and interests of KAC.

Historical Information

- On 18 July 2023 Woodside emailed KAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* This email also requested that KAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed KAC Woodside's *Program of Ongoing Engagement with Traditional Custodians*.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 29 August 2023, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 1.26) and provided a Consultation Summary Information Sheet (including a link to the Consultation Information Sheet on Woodside's website). The email requested information on the interests that KAC and its members may have within the EMBA, information on how KAC would like to engage, and requested that KAC provide information to other individuals as required. The email requested feedback from KAC by 29 September 2023.
- On 31 August 2023, KAC emailed Woodside apologising for not responding earlier. KAC noted that recent events at the Corporation had been challenging (SI Report, reference 37.1)
- On 31 August 2023, Woodside emailed KAC acknowledging its response (SI Report, reference 37.2).
- (1) On 31 August 2023, KAC via its legal representative emailed Woodside requesting information about this activity, including the summary document, maps and timelines. The legal representative also asked for confirmation from Woodside that KAC's costs, including legal costs would be met by Woodside. (SI Report, reference 37.3).
- (1) On 10 September 2023, Woodside and KAC's legal representative exchanged emails relating to Woodside covering the costs of consultation meetings (SI Report, references 37.4, 37.5).
- (1) On 13 September 2023, KAC's legal representative emailed Woodside advising he was meeting KAC that morning and advised amongst other things that further consultation would be required now that KAC had legal advice to support consultation and raised the concept of joint environmental management for this project. The representative also suggested that KAC had Sea Rights referenced in its Native Title claim (SI Report, reference 37.6).
- On 13 September 2023, KAC via its legal representative emailed Woodside requesting a copy of the Summary Information Sheet for this EP previously provided by Woodside to KAC (SI Report, reference 37.7).
- (1) On 13 September 2023, Woodside emailed KAC via its legal representative the Summary Information Sheet for this EP and confirmed that Woodside wanted to have a positive relationship with KAC (SI Report, reference 37.8).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 13 September 2023, Woodside emailed KAC via its legal representative confirming that Woodside agreed in principle to funding KAC, noting that reasonable quotes applicable to each line item were required and reiterating that Woodside sought a positive relationship with KAC (SI Report, reference 37.9).
- On 22 September 2023, KAC via its legal representative emailed Woodside attaching a letter and Woodside policy documents (SI Report, reference 37.10). The letter:
 - Requested a meeting with KAC at a suitable time with an agreed agenda to be arranged, including preparation of a “co-management agreement”.
 - **(2)** Proposed an agreement which provided the tools for effective and ongoing consultation by Woodside with KAC.
 - Noted that KAC’s asserted Sea Country in its native title claim.
 - **(1)** Proposed an agreed budget to fund (among other things) preparation of the agreement, meetings, and specialist advice.
 - Provided contact protocols going forward.
- **(1)** On 28 September 2023, KAC via its legal representative emailed Woodside an approximate quote for consultation. (SI Report, reference 37.11).
- On 20 October 2023, several emails were exchanged between Woodside and KAC in relation to funding. (SI Report, references 37.12, 37.13, 37.14, 37.15, 37.16)
- **(1)** On 23 October 2023, Woodside emailed KAC’s legal representative a detailed response to its funding request (SI Report, reference 37.17). The letter included that in order to enable consultation, Woodside offered to pay sitting fees for Traditional Owner groups. Those fees were reasonable and reflective of standard industry rates based on prior consultations, industry benchmarks and experience. Woodside wanted to ensure that Traditional Owner groups such as KAC were adequately resourced to enable them to meaningfully participate in meetings and consultation.
- **(1)** On 26 October 2023, KAC via its legal representative emailed Woodside in relation to a meeting with KAC about EPs and again raised the topic of funding (SI Report, reference 37.18).
- On 14 November 2023, KAC via its legal representative emailed Woodside again in relation to costs for consultation meetings (SI Report, reference 37.19).
- On 22 November 2023, Woodside emailed KAC via its legal representative (SI Report, reference 37.20). Woodside:
 - Confirmed its position on provision of reasonable costs for sitting fees relating to consultation and that Woodside’s antibribery and corruption and other policies firmly state Woodside’s position in relation to provision of funds.
 - Confirmed it was progressing with environmental controls to reduce or remove any potential impacts to Kariyarra Sea Country.
 - Requested a full day meeting between Woodside and KAC to:
 - Present on EPs (including this one), activities and impacts.
 - **(2)** Sign the consultation protocol.
- **(2)** On 23 November 2023, KAC via its legal representative emailed Woodside agreeing to the process outlined in Woodside’s previous email of 22 November 2023. The legal representative requested a draft protocol and suggested several dates for a meeting between KAC and Woodside. The legal representative noted that KAC staff sitting fees were higher than those Woodside proposed to fund (SI Report, reference 37.21).
- **(1)** On 23 November 2023, KAC via its legal representative emailed Woodside about an administrative matter relating to costs (SI Report, reference 37.22).
- On 29 November 2023, KAC via its legal representative emailed Woodside following a phone conversation with Woodside (SI Report, reference 37.23). The legal representative confirmed a meeting of 5 December 2023 in Karratha with KAC and provided details about meeting costs.

- **(2)** On 29 November 2023, KAC via its legal representative emailed Woodside (SI Report, reference 37.24). The email:
 - Requested that the quote for the meeting on 5 December 2023 be confirmed to ensure invoicing is progressed.
 - Noted that KAC had already incurred flight costs for attendees.
 - Provided details of the meeting with KAC.
 - Requested a draft copy of the proposed consultation protocol.
 - Suggested an agenda for the meeting.
- **(1, 2)** On 29 November 2023, Woodside emailed KAC via its legal representative (SI Report, reference 37.25). Woodside:
 - Confirmed the quote for the meeting on 5 December 2023.
 - Proposed a revised agenda, with more time to present about EPs and take feedback on cultural values.
 - Attached its Program of Ongoing Consultation. The program outlined:
 - A request from Woodside for KAC to set out how KAC would like to consult, the basic procedure for initial and ongoing consultation in relation to activities.
 - Agreement as to how Woodside would provide KAC information.
 - How KAC would provide feedback and how Woodside would represent that in submissions.
 - An agreed schedule of rates.
 - How the outputs of consultation would be managed.
- On 29 November 2023, KAC via its legal representative emailed Woodside with an updated agenda which included an allocation of time for Woodside to provide an overview of current projects (SI Report, reference 37.26).
- On 5 December 2023, Woodside and KAC met in Port Hedland (SI Report, reference 37.27). During the meeting:
 - KAC stated it wished to have its views and concerns added to the EPs discussed (including this one). Plans were made for a workshop in late February/early March 2024 for Woodside to understand KAC's concerns (this workshop did not eventuate despite Woodside's support).
 - **(3)** KAC gave a presentation about its Sea Country Rights and Duties. This included:
 - Having access to Sea Country for fishing, trapping, crabbing, catching turtle and collecting shellfish.
 - Visiting offshore islands at low tide.
 - Hunting dugong and taking stingray barbs for spears
 - Having duties to look after and protect Sea Country, noting Yinta is associated with Sea Country and can be dangerous.
 - **(2)** KAC outlined its consultation requirements with Woodside which included:
 - An agreement that includes resourcing.
 - **(4)** Ongoing funding for sea rangers.
 - **(5)** A direct agreement in the case of an oil spill.

- (2) KAC’s legal representative was complimentary of the Program of Ongoing Consultation document provided by Woodside.
- (2) On 13 December 2023, KAC via its legal representative emailed Woodside with outcomes of the 5 December 2023 meeting describing it as “very positive”. The email confirmed availability for a workshop in March 2024 and that KAC and Woodside aim to reach agreement on an engagement protocol by mid-2024 (SI Report, reference 37.28).
- On 20 December 2023, Woodside emailed KAC via its legal representative (SI Report, reference 37.29). Woodside:
 - Confirmed Woodside’s processes for ongoing engagement, clarifying that, once accepted, EPs are not resubmitted, rather information is addressed by applying its Management of Change and Revision processes.
 - Confirmed that this EP would be submitted in January 2024.
 - (3) Confirmed the cultural values raised by KAC and that environmental controls to protect these values would be assessed and implemented (as relevant) in the EP.
 - (5) Clarified that Woodside engages relevant cultural authorities in the event of an oil spill.
 - (2) Woodside also noted it looked forward to reaching agreement with KAC on a consultation framework agreement.
- On 20 December 2023, KAC via its legal representative emailed Woodside (SI Report, reference 37.30), noting further information KAC wished noted within this EP:
 - (6) Impacts on coastal landforms and coastal native vegetation. (6) Woodside noted this and included it in the EP.
 - (7) Tangible and intangible heritage associated with the coast and the ocean. (7) Woodside noted this and included it in the EP.
- On 20 December 2023, KAC via its legal representative emailed Woodside acknowledging it looked forward to progressing an agreement in 2024 between KAC and Woodside (SI Report, reference 37.31).

Ongoing engagement:

- (1) On 13 January 2024, KAC via its legal representative emailed Woodside a letter outlining proposed costs for preparation of a draft agreement with the KAC board (SI Report, reference 37.32).
- On 21 February 2024, Woodside emailed KAC via its legal representative regarding the framework consultation agreement and set out reasons why the funding request from KAC was not compliant with Woodside’s policies and procedures (SI Report, reference 37.33). (2) Woodside also included a draft consultation agreement for KAC’s consideration.
- (2) On 22 February 2024, KAC via its legal representative exchanged emails with Woodside requesting a word version of the document (SI Report, reference 37.34) to which Woodside responded and supplied (SI Report, reference 37.35).
- (2) On 10 March 2024, KAC via its legal representative emailed Woodside (SI Report, reference 37.36) with a 7-page draft agreement between KAC and Woodside for Woodside to review.
- On 12 March 2024, Woodside emailed KAC via its legal representative (SI Report, reference 37.37) acknowledging receipt of the draft agreement and noting it would review it and reply to KAC as soon as able.
- On 26 March 2024, KAC via its legal representative emailed Woodside responding to an email on another activity to advise that KAC would await the consultation agreement for this and other activities (SI Report, reference 37.38).
- (2) On 4 April 2024, Woodside emailed KAC via its legal representative advising Woodside had reviewed the draft agreement, provided some amendments for KAC’s consideration and requested the date for the next Board meeting (SI Report 37.39).

- **(2)** On 4 April 2024, KAC's legal representative emailed Woodside and advised he needed to seek further instructions from KAC about the consultation agreement (SI Report, reference 37.40).
- **(2)** On 26 June 2024, Woodside emailed KAC's legal representative to follow-up whether the legal representative had received further instructions from KAC (SI Report, reference 37.41).
- **(2)** On 3 July 2024, KAC's legal representative emailed Woodside and advised that the consultation agreement and recent Woodside EPs would be addressed by KAC's in-house counsel. The in-house counsel would revert to Woodside about the proposed agreement and EP consultation (SI Report, reference 37.42).
- On 3 July 2024, Woodside emailed KAC's legal representative and requested contact details for KAC's in-house counsel (SI report, reference 37.43).
- On 30 July 2024, KAC's consultant emailed Woodside about a different EP and advised KAC's Board of Directors would be meeting on 7 August (SI Report, reference 37.44).
- On 28 August 2024, KAC's in-house counsel emailed Woodside about a different EP, in the email KAC confirmed it was no longer represented by its former legal representative. The in-house counsel enquired about Woodside's availability for a phone call or online meeting to discuss and plan next steps (SI Report, reference 37.45).
- On 28 August 2024, Woodside emailed KAC and provided information about availability to speak over the phone or meet in person (SI Report reference 37.46).
- On 29 August 2024, Woodside spoke to KAC on the phone (SI Report, reference 37.47). During the conversation:
 - Woodside confirmed its commitment to building meaningful relationships with First Nations groups.
 - KAC confirmed it had recruited a new CEO.
 - KAC expressed interest in negotiating a consultation agreement.
 - Woodside advised that negotiation of the consultation agreement work would run in parallel with EP consultation.
 - Woodside confirmed availability to consult and willingness to travel for meetings.
 - KAC confirmed it wanted to "start fresh" and requested a copy of the draft agreement.
 - KAC requested an online meeting on 3 September 2024.
 - Woodside offered to provide a copy of its presentation ahead of time to allow KAC to review and distribute it to its Board prior to the meeting.
 - KAC requested information about Woodside assets and Woodside advised it has no assets within the determination.
 - Woodside explained how EMBA's are used as part of the methodology to ascertain and contact relevant people.
- On 3 September 2024, Woodside emailed its presentation to KAC for a meeting that day (SI Report, reference 37.48). Matters relevant to this EP that were discussed included:
 - Woodside's current projects including Scarborough.
 - Woodside's commitment to working with First Nations communities.
 - How Woodside consults with First Nations communities, including ongoing consultation on EPs.
- On 3 September 2024, Woodside and KAC met virtually (SI Report, reference 37.49). Matters discussed included the following:
 - KAC advised a recent internal restructure resulting in a new CEO, General Counsel and Native Title Representative.
 - Woodside projects (a map was presented which included the location of the Scarborough Project which incorporates this EP).

- The 7-page draft consultation agreement.
- Woodside's commitment to consultation, that consultation could be customised to suit KAC and that field experts could be made available to provide high-level technical information if desired.
- (2) On 3 September 2024, Woodside provided KAC with a copy of the draft consultation agreement originally provided in February 2024. KAC acknowledged receipt of the email. (SI Report, references 37.50).
- On 4 September 2024 Woodside travelled from Karratha to South Hedland to meet KAC in-person (SI Report, reference 37.51). Matters relevant to this EP that were discussed included:
 - (5) KAC stated that oil spill responses should consider natural impacts, eg cyclones. (5) Woodside confirmed this consideration was part of the process.
 - (3) KAC was asked about Sea Country Values and confirmed that mitigation measures need to be put in place for:
 - Sea turtle nesting
 - Impacts to food sources
 - Impacts to whale migration as Elders have a connection to whale migration through Songlines.
 - (3) Woodside responded that other Traditional Owner groups had similar concerns and that mitigation and avoidance measures are included within EPs.
 - (7) KAC confirmed that surveys would need to be done should Woodside ever plan to place an asset within KAC's determination due to significant sites underwater.
 - Woodside presented a map of its assets on the WA coastline including Scarborough.
 - (2) KAC expressed a desire to finalise the consultation agreement.
 - (2) Woodside confirmed that consultation agreement negotiations run in parallel to EP consultations and that consultation for this EP is complete, but negotiation of the consultation framework agreement can continue.
 - Woodside also confirmed that feedback is open for the life of an EP.
 - (8) KAC confirmed that Wanparta was another relevant group that Woodside should consult with. (8) Woodside replied that it was consulting with Wanparta.
 - (4) KAC said it would like to discuss opportunities with Woodside to support its Ranger Program. (4) Woodside replied that it was looking into a ranger assistance program.
 - Woodside offered to make environmental or heritage experts available to KAC. KAC thanked Woodside for the offer and were open to holding meetings for more technical discussions at a later date.
- On 9 September 2024, Woodside emailed KAC an invite to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 37.52).
- On 3 October 2024, Woodside emailed KAC an invite to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 37.53)

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
---	--	-------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(1) KAC requires costs to be met for KAC to be engaged in consultations with Woodside.</p>	<p>(1) Woodside assessment: The proposed Framework Agreement (See Point (2) below), would be an effective mechanism to address resourcing for consultation. Woodside response: Woodside supports reasonable requests for resourcing. Woodside has agreed to fund reasonable costs and funded the 5 December 2023 meeting. Woodside will fund future consultation meetings on an agreed costs basis to be set out in the draft agreement, sent to KAC in February 2024.</p>	<p>(1) Not required.</p>
<p>(2) KAC has noted it wants to engage on matters with Woodside and would like to develop an Engagement Protocol for (among other things) ongoing input into EPs and a collaborative relationship with Woodside.</p>	<p>(2) Woodside assessment: An agreement with KAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. Woodside response: Woodside agrees to further discussions on the draft consultation agreement with KAC which was sent to KAC in February 2024. Once agreed, it will be useful as a frame for consultation on EPs.</p>	<p>(2) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. The draft agreement with KAC (among other things) will set out the process for consultation and ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.</p>
<p>(3) KAC has advised Woodside it has a duty to look after and protect Sea Country and secret habitat totems. KAC has mentioned fishing, trapping, crabbing catching turtle, hunting dugong, and using stingray barbs for spears and collecting shellfish.</p>	<p>(3) Woodside assessment: Woodside acknowledges KAC's feedback about Sea Country. Woodside response: Woodside has noted KAC's asserted values and interests in Sea Country in Section 4.9. Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats.</p>	<p>(3) Woodside acknowledges KAC's asserted connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>

<p>(4) KAC would like to discuss opportunities for Woodside to support its ranger program</p>	<p>(4) Woodside assessment: Woodside acknowledges the value in having trained rangers available in the highly unlikely event of an oil spill and agrees it would be beneficial to an immediate response in an emergency situation. Woodside response: Woodside is reviewing a ranger assistance program and will provide details to KAC once this has matured.</p>	<p>(4) The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes commitments to social investment to support Indigenous Ranger programs, and support for Indigenous oil spill response capabilities.</p>
<p>(5) KAC sought a direct agreement with Woodside in the case of an oil spill.</p>	<p>(5) Woodside assessment: Woodside notes KAC's concerns about the unlikely event of an oil spill. Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H of the EP. Woodside's Oil Pollution First Strike Plan is in Appendix I of the EP. Woodside response: Woodside informed KAC on 20 December 2023 that it engages relevant cultural authorities in the event of oil spills.</p>	<p>(5) Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H of the EP. Woodside's Oil Pollution First Strike Plan is in Appendix I of the EP.</p>
<p>(6) KAC's legal representative requested Woodside include measures to avoid impacts to coastal landforms and coastal native vegetation.</p>	<p>(6) Woodside assessment: Assessment of the impacts and risks associated with the PAP is undertaken in accordance with and consistent with national and international standards and law and policies. Woodside response: Woodside has implemented controls to reduce potential risks and impacts on the environment to ALARP and to an acceptable level.</p>	<p>(6) Woodside acknowledges KAC's asserted connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(7) KAC's legal representative requested Woodside include measures to avoid impacts to tangible and intangible Aboriginal cultural heritage associated with the coast and the ocean.</p>	<p>(7) Woodside assessment: Woodside seeks to avoid damage or disturbance to cultural heritage (including intangible heritage) and assesses cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs. Mitigation can include any measure or control aimed at supporting the viability of the intangible cultural heritage and its intergenerational transmission. Woodside response: Woodside understands cultural and environmental values are intrinsically linked; in addition to the</p>	<p>(7) Woodside acknowledges KAC's asserted connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>

	specific controls for cultural features and heritage values, the controls and performance standards in Section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats, to ALARP and an acceptable level.	
(8) KAC has stated that Wanparta Aboriginal Corporation is a relevant group that Woodside should consult with.	(8) Woodside assessment: Woodside welcomes feedback from Traditional Owners about additional people for Woodside to approach for consultation. Woodside response: Woodside has consulted with Wanparta Aboriginal Corporation (see Table 3). Woodside has informed KAC that it is also consulting with Wanparta.	(8) No action required.
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside has addressed the objections or claims raised by KAC. No additional measures or controls are required.
Summary Report: Consultation Complete		
Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with KAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: Sufficient Information Sufficient information has been provided because:		
<ul style="list-style-type: none"> Woodside has given KAC relevant consultation documents, including NOPSEMA's <i>Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information</i> (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023). 		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In August 2023, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 29 August 2023, Woodside commenced consultation with KAC on this EP. Woodside gave to KAC:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of KAC's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked KAC to forward the information to its members.
 - Woodside offered to provide more specific information, maps and images to KAC if required.
- Woodside provided further information to KAC addressing its functions, interests and activities during a meeting on 5 December 2023 and correspondence on the 20 December 2023. Information relevant to this EP was also discussed on 3 and 4 September 2024.
- Woodside sought direction on KAC's preferred method of consultation. This resulted in a face-to-face meeting on 5 December 2023. During the meeting:
 - Woodside presented information in a format and style that was readily accessible and appropriate.
 - Woodside provided KAC with an environmental subject matter expert to answer questions and provide specific environmental information as well as a Woodside First Nations team focal point.
 - Woodside confirmed the purpose of consultation and set out in detail what information it was seeking.
 - KAC provided Woodside with information about Sea Country Values, demonstrating an understanding of the project, outcomes of the consultation process and information shared.
 - Woodside discussed its Program of Ongoing Consultation Document. KAC's legal representative was complimentary of this document.
 - KAC advised it would like Woodside to attend an on-Country workshop to be organised and facilitated by KAC. Woodside notes it is still open to attend this style of workshop although it has not been progressed further by KAC and when following up on progress, Woodside understands that this is something KAC no longer wishes to pursue.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with KAC in August 2023 and provided information on the EP on that date. Since then, Woodside and KAC have engaged in consultation for 17 months, demonstrating a "reasonable period" of consultation, where a two-way dialogue has occurred through both written and face-to-face exchanges on this activity.

- A consultation period was communicated to KAC during Woodside's initial email on 29 August 2023. KAC was asked to provide feedback by 29 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- A further email was sent on 20 December 2023 advising the EP was proposed to be submitted in January 2024.
- Woodside provided KAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for KAC's input into how KAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of the activity and EP (See section 3.4). Woodside notes KAC regularly uses social media.
- Woodside's initial email about this EP on 29 August 2023:
 - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
 - Offered for Woodside to speak with KAC members as well as the KAC Board.
 - Asked KAC to advise how it would like Woodside to engage and whether KAC required further information.
- Woodside met with KAC on 5 December 2023. The meeting was attended by Woodside's First Nations Engagement team focal person and an environmental subject matter expert who answered questions and provided specialist information on this EP.
- Woodside asked KAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. KAC identified Wanparta Aboriginal Corporation as a relevant group.
- Woodside considers a reasonable opportunity was provide to KAC as evidenced by the information KAC provided Woodside about its cultural values and other matters during a meeting on 5 December 2023 and subsequent correspondence on 13 and 20 December.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- On 5 December 2023, KAC advised Woodside it has a duty to look after Sea Country and secret habitat totems. Woodside has incorporated this feedback in the EP (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.
- On 20 December 2023, KAC through its legal representative requested Woodside include measures to avoid impacts to coastal landforms and coastal native vegetation. Woodside has incorporated this feedback in the EP (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.
- On 20 December 2023, KAC's legal representative requested Woodside include measures to avoid impacts to tangible and intangible Aboriginal cultural heritage associated with the coast and the ocean. Woodside incorporated this feedback in the EP (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.

- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Murujuga Aboriginal Corporation (MAC)

Context

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Woodside has an existing relationship with MAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to MAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with MAC who is responsible for building a consultative relationship and is readily available to provide information and take feedback.

On 27 August 2018, MAC and the WA Government announced it was pursuing World Heritage Listing for the Murujuga Cultural Landscape. As such, Woodside considers MAC the appropriate body to consult with about matters relating to Murujuga as a potential World Heritage site.

For consultation on this EP, Woodside contacted MAC's acting CEO offering an opportunity to present to the MAC Board. Woodside asked MAC how it wished to be consulted, if it required support to participate in consultation, if there were any additional groups that MAC believed should be consulted and requested that all information shared with MAC be cascaded to its members.

Woodside has also, in the course of consultation, referred matters to MAC for confirmation. For example, questions related to Elder status and cultural information to which MAC provided confirmations (see emails dated 21 August 2023 and 1 September 2023 and telephone calls on 4 October 2023).

Aside from regular consultation about EPs, Woodside invites MAC to Woodside's Quarterly Heritage Meetings and monthly Community Luncheons. Woodside provides regular updates about the Scarborough Project to MAC including a weekly update for the Scarborough Seabed Intervention activities. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs during its engagement with MAC.

This context and process demonstrates that Woodside's consultation approach with MAC is appropriate and adapted to the nature and interests of MAC.

Historical Engagement:

- Woodside has been consulting with MAC on the Scarborough Project area generally since 2018, including over the area for which this EP relates. Woodside discussed the Floating Production Unit in a number of previous meetings and confirmed it was to be considered as part of this Operations EP.
- On 1 May 2019, cultural authorities nominated by MAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice. While this survey was conducted for the Scarborough project's development footprint, a landscape-scale approach was undertaken, to better understand the submerged landscape. The survey found no ethnographic values within the Operational Area or EMBA. Participants in this ethnographic survey had an opportunity to input and contributed to the findings and recommendations of Mott 2019 which are detailed in the EP (Section 4.9.4.2) and included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Onshore heritage sites were identified, beyond the Operational Area and EMBA of this EP.
- No known sites or values were identified beyond the low water mark. The potential for cultural values to exist was identified and further work was offered by Woodside (although this has not been taken up).
- Recommendation to keep Traditional Custodians informed including through existing quarterly meetings.
- Recommendation to engage with researchers on options to identify submerged heritage. Woodside continues to provide this opportunity although it has not been taken up.
- Recommendation for cultural awareness training for contractors.
- Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP. On 22 June 2023, Woodside met with the MAC Board and Circle of Elders and presented on the Scarborough Project (including D&C, SITI, Seismic and Subsea EPs) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP).
- On 18 July 2023, Woodside emailed MAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. Woodside requested that MAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed MAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 21 August 2023, Woodside emailed MAC seeking MAC's cultural clarifications about information in relation to Elder status and whether cultural information about Murujuga can be held by individuals and not known to others.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 1.27) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that MAC and its members may have within the EMBA, information on how MAC would like to engage, and requested that MAC provide information to other individuals as required. The email requested feedback from MAC by 2 October 2023.
- **(1)** On 1 September 2023, MAC emailed a letter to Woodside (SI Report, reference 35.1), noting the following:
 - In response to Woodside's email of 21 August 2023, MAC consulted with women appointed to its Circle of Elders.
 - MAC is comfortable that the women in the Circle of Elders are the right people to be consulted about these matters.
 - MAC notes that it would be extremely unusual for knowledge to be held by an individual without surrounding groups knowing about it.
 - The Circle of Elders themselves represent the Ngarda-Ngarli; the collective term for the Traditional Custodians who look after Murujuga Country.
- **(1)** On 4 October 2023, Woodside phoned MAC to discuss the cultural appropriateness of a visit to Rosemary Island. Woodside was advised not to undertake the trip due to cultural safety concerns.
- **(1)** On 4 October 2023, MAC emailed Woodside thanking it for the call and informing Woodside that it is MAC's expectation that Woodside continues to request advice regarding cultural safety prior to such trips being undertaken (SI Report, reference 35.2).
- **(1)** On 4 October 2023 Woodside responded to MAC's email, confirming it had cancelled a trip to Rosemary Island and thanking MAC and its Circle of Elders for providing cultural advice (SI Report, reference 35.3).

- In October 2023, Woodside became aware of ongoing cultural matters in the Pilbara community which required Woodside to pause its communication with local groups as a sign of respect (SI Report, reference 35.4).
- On 5 January 2024, Woodside emailed MAC (SI Report, reference 35.5). The email:
 - Provided MAC with a table of EP consultations with MAC including this EP.
 - Provided MAC a link to the detailed information sheet on Woodside's website.
 - Asked MAC to respond at its earliest convenience.
 - Offered to meet with MAC to discuss EPs.

Ongoing engagement:

- On 23 April 2024, Woodside emailed MAC (SI Report, reference 35.6), in response to earlier correspondence. Woodside acknowledged MAC's workload and offered to work with MAC to manage this. Woodside provided MAC another copy of the table displaying EPs, including this one, originally sent on 5 January 2024.
- On 2 August 2024, MAC emailed Woodside a letter relating to another EP (SI Report, reference 35.7). Matters relating to this EP include:
 - **(2)** MAC's advice that activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values.
 - **(3)** MAC's request that the protection of environmental values be assessed separately from the protection of cultural values.
 - **(4)** That MAC expects to be consulted about any activity located near Murujuga and informed if there is an environmental incident whereby Murujuga falls within the possible impact zone.
- **(4)** On 2 August 2024, Woodside responded to MAC's email confirming it would inform MAC of all projects located near Murujuga and in the very unlikely case of an environment incident (SI report 35.8).
- On 9 September 2024, Woodside invited MAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 35.9).
- On 17 September 2024, Woodside emailed MAC responses to matters raised in correspondence on 2 August 2024 (SI Report, reference 35.10). The letter stated:
 - **(2,3)** Woodside assesses potential cultural impacts on marine species including controls for mammal migration paths and behaviour collaboratively with environmental impacts.
 - **(4)** Woodside actively seeks ongoing engagement and consultation with MAC on its cultural interests, activities and functions.
 - Woodside is available to meet with MAC.
- On 25 September 2024, MAC attended Woodside's monthly luncheon for Traditional Owners (SI Report, reference 35.11). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 3 October 2024, Woodside emailed MAC an invitation to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 35.12).
- On 23 October 2024, MAC attended Woodside's community luncheon for Traditional Owners in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 35.13)
- On 21 November 2024, NYFL emailed Woodside a letter advising that due to the passing of a Senior Elder, grieving protocols were underway in the Roebourne area. This is relevant to consultation with MAC to whom this also applies (SI Report, reference 35.14).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) MAC has informed Woodside that its Circle of Elders are the right people to be consulted about Scarborough matters. The Circle of Elders represent the Traditional Custodians who look after Murujuga Country.</p>	<p>(1) Woodside assessment: Woodside respects MAC's advice that its Circle of Elders represent the Traditional Custodians who look after Murujuga Country. Woodside response: Woodside confirms it will consult MAC about matters relating to Murujuga Country. An example is Woodside consulting MAC on 4 October 2023 about the cultural appropriateness of a proposed visit to Rosemary Island.</p>	<p>(1) No action required.</p>
<p>(2) During ongoing engagement, MAC advised Woodside that any activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values.</p>	<p>(2) Woodside assessment: When developing EPs, Woodside considers potential cultural impacts on marine species including impacts and associated controls for marine mammal migration paths and behaviour. Woodside response: Woodside recognises that whales and other species of totemic importance need to be protected, including their populations and migration patterns. As assessed in Section 6, Woodside considers that when the impacts and risks to marine species, including potential totemic species, have been reduced to ALARP and an acceptable level in offshore areas, the potential impacts and risks to cultural values associated with coastal Indigenous connection with, or traditional uses of marine species and associated ecosystems in nearshore coastal waters are also reduced to ALARP and an acceptable level.</p>	<p>(2) Woodside has assessed impacts and risks to marine species in Section 6 of the EP. Items relating to MAC appear in table 4.20 in section 4.9.4.</p>
<p>(3) During ongoing engagement, MAC stated that the protection of environmental values should be assessed separately from the protection of cultural values in EPs.</p>	<p>(3) Woodside assessment: Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively. Woodside response: Woodside has responded to MAC and informed it that environmental and cultural impacts have been assessed both individually and collaboratively.</p>	<p>(3) Woodside's Impact and Risk Assessment of cultural values is outlined in Section 6.10.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(4) During ongoing engagement MAC stated that it expects to be consulted about any activity located near Murujuga and contacted in the event of an environmental incident whereby Murujuga falls within the possible impact zone.</p>	<p>(4) Woodside assessment: Woodside acknowledges MAC's advice that it should be consulted about any activity located near Murujuga and in the unlikely case of an environmental incident. Woodside response: Woodside has advised MAC that it will inform MAC of projects proposed on Murujuga.</p>	<p>(4) Under Woodside's methodology for identifying relevant persons, MAC is considered a relevant person for EPs with an EMBA covering/in proximity to Murujuga. Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H of the EP. Woodside's Oil Pollution First Strike Plan is in Appendix I of the EP Section 1 (Table 1-1): has notifications details to relevant cultural authorities and specifically refers to MAC as a required notification in event of a spill.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with MAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has been consulting with MAC on the Scarborough Project area generally since 2018, including over the area for which this EP relates. There have been numerous meetings with MAC and the Circle of Elders on this project since that time.
- Woodside has given information to MAC about the Scarborough Project through the ethnographic survey work over the project footprint.
- Woodside has given MAC relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In August 2023, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- Woodside provided information to MAC on 1 September 2023 (when Woodside commenced consulting with MAC on this EP) and subsequently on 5 January 2024. Woodside provided MAC:
 - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing
 - Maps showing the location and EMBA
 - A summary of the risks and impacts of the activity
 - Diagrams
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of MAC's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked MAC to forward the information to its members.
 - Woodside offered to provide more specific information, maps and images to MAC if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with MAC in September 2023 and provided information on the EP on that date. Since then, Woodside and MAC have engaged in consultation for 16 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to MAC during Woodside's initial email on 1 September 2023. MAC was asked to provide feedback by 2 October 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided MAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside first met with MAC to discuss the broader Scarborough Project in August 2020. Woodside has addressed and responded to MAC for more than three years on the Scarborough Project and 16 months on this EP, demonstrating a "reasonable period" of consultation.
- Woodside notes that during consultation, it also respectfully paused consultation in periods when MAC was observing Sorry Business or cultural matters (see October 2023).

Reasonable Opportunity

- A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:
- Woodside asked for MAC's input into how MAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.

- In 2019, cultural authorities nominated by MAC attended an ethnographic survey which considered the Scarborough project's development footprint. This provided opportunity for MAC to input on the survey and Scarborough Project, particularly from a cultural values perspective.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing eight advertisements in national, state, local newspapers including Indigenous newspapers, The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of the activity and EP (See section 3.4).
- Woodside's initial email about this EP on 1 September 2023:
 - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
 - Offered for Woodside to speak with MAC members as well as the MAC Board.
 - Asked MAC to advise how it would like Woodside to engage and whether MAC required further information.
- Woodside has offered to meet with MAC on a number of occasions.
- Woodside has provided a reasonable opportunity for input as evidenced by its initial email to MAC about the activity on 1 September 2023 and follow-up email on 5 January 2024. A genuine two-way dialogue has occurred via Scarborough Project meetings and written exchanges to further understand the environment in which the activity will take place. Woodside's ongoing relationship with MAC is evidenced by MAC's letter to Woodside on 2 August 2024 in which MAC provided relevant information about cultural values and consultation requirements. Woodside has accepted this feedback and has incorporated it into the EP.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- MAC advised Woodside that any activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values. Woodside has assessed impacts and risks to marine species in Section 6 of the EP. Items relating to MAC appear in table 4.20 in section 4.9.4.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Ngarluma Aboriginal Corporation (NAC)

Context

NAC is established under the *Native Title Act 1993* (Cth) by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NAC which extends prior to consulting on this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NAC on 26 July 2023). Woodside has assigned a First

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Nations Engagement team member as a dedicated focal point for EP consultation with NAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

For consultation on this EP, Woodside contacted NAC offering an opportunity to present to the NAC Board. Woodside asked NAC how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that NAC believed should be consulted and requested that all information shared with NAC be cascaded to its members.

During consultation for this EP, Woodside became aware that NAC was experiencing staff turnover and structural change. This ultimately meant that consultation with NAC involved Woodside communicating with two different CEOs and two different acting CEOs. Woodside understands that NAC has fewer than five staff members and that NAC engages consultants and contractors to engage in EP consultation and conduct other business activities on NAC's behalf. During the consultation period (and following), Woodside's focus has been on supporting NAC through the period of change whilst enabling NAC to consult and remain informed about Woodside's, activities including activities proposed to be undertaken for this EP.

In September 2023, NAC proposed the formation of a Working Group to consult with Woodside on EPs, including this EP, demonstrating an understanding of the consultation requirements. Woodside agreed to the proposal (while specific details were being worked on) and agreed to reasonable funding for the group to convene. The group is yet to be established and Woodside continues to support it and seek updates from NAC to progress it.

As part of its ongoing consultation and relationship building, Woodside provided NAC with a consultation framework agreement which sought from NAC, confirmation as to how NAC would like to be consulted, including NAC's views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. It has become clear during engagements with NAC that this framework agreement is not a priority and negotiation of it will likely continue into the future. Consultation for this EP has occurred in parallel to discussions around the framework consultation agreement (which remain ongoing).

On 17 April 2024, Woodside was notified of a tragic passing in the Roebourne community and that the cultural protocols associated with Sorry Business were in place. Woodside understood that this would impact NAC and, out of respect, did not contact NAC during this time.

In addition to consultation for specific EPs relevant to NAC, Woodside meets NAC regularly during Quarterly Heritage Meetings, monthly community luncheons and monthly relationship building meetings. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs at these meetings.

This context and process demonstrates that Woodside's consultation approach with NAC is appropriate and adapted to the nature and interests of NAC.

Historical Engagement:

- On 1 May 2019, cultural authorities nominated by NAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the Traditional Custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice. This survey was conducted for the Scarborough project's development footprint. A landscape-scale approach was undertaken, in order to better understand the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA. Participants in this ethnographic survey had an opportunity to input and contributed to the findings and recommendations of Mott 2019 which are detailed in the EP (Section 4.9.4.2) and included:
 - Identification of onshore heritage sites, beyond the Operational Area and EMBA of this EP.
 - No known sites or values identified beyond the low water mark. The potential for cultural values to exist was identified and further work was offered by Woodside although this has not been taken up.
 - A recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below).
 - A recommendation to engage with researchers on options to identify submerged heritage. Woodside continues to provide this opportunity although it has not been taken up.
 - A recommendation for cultural awareness training for contractors.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP.
- Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.4), kept NAC informed of the progress of the Scarborough Project through quarterly meetings (see below), and where appropriate ensured employees and contractors have completed cultural awareness training through NAC.
- On 17 May 2023, Woodside met with NAC and provided a high-level overview of the Scarborough project noting it would return to speak about the Floating Production Unit (information relevant to this EP).
- On 18 July 2023, Woodside emailed NAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information This email also reiterated Woodside's request that NAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians.
- On 11 August 2023, NAC and Woodside met. During the meeting NAC confirmed that it wanted to understand which EPs were to be prioritised and it noted it needed support capacity-wise.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 1.28) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NAC and its members may have within the EMBA, information on how NAC would like to engage, and requested that NAC provide information to other individuals as required. The email asked NAC to provide feedback before 2 October 2023.
- On 18 September 2023, NAC emailed Woodside (SI Report, reference 36.1). In the email NAC:
 - Acknowledged Woodside's planned and future activities (including Scarborough) would be extensive in scope and take place over the coming decades.
 - **(1)** Proposed the establishment of Joint Working Group to manage the consultation process for EPs.
 - **(1)** Sought a draft protocol/agreement with Woodside to cover the joint working group arrangements and costs for the next 12 months.
 - Proposed monthly working group meetings to start in October.
 - Noted that arrangements would be needed to cover future scope of consultations with NAC.
- On 28 September 2023, NAC and Woodside held telephone discussions about the Joint Working Group (SI Report, references 36.2, 36.3).
- In October 2023, Woodside became aware of ongoing cultural matters in the Pilbara community which required Woodside to pause its communication with local groups as a sign of respect (SI Report, reference 36.4)
- On 10 October 2023, Woodside emailed NAC (SI Report, reference 36.5). In the email Woodside:
 - **(1)** Gave in principle approval for the working group.
 - Enquired about NAC's availability to meet.
 - **(1)** Asked if NAC would provide a first draft of the protocol/agreement or would prefer Woodside prepare one as a starting point.

- On 19 October 2023, Woodside exchanged emails with NAC about the progress of the working group and draft protocol/agreement (SI Report, references 36.6, 36.7).
- On 2 and 3 November 2023, Woodside and NAC exchanged emails. Woodside provided NAC a list of EPs it wished to consult on, including this one, and included links to Summary Information sheets. Woodside requested NAC's availability to meet. (SI Report, references 36.8, 36.9).
- **(1)** On 3 November 2023, NAC emailed Woodside a draft consultation protocol and information about NAC's working group (SI Report, references 36.10, 36.11).
- **(1)** On 13 November 2023, NAC emailed Woodside advising its Working Group would not be available until the week of 25 November to meet and asked for confirmation that consultation on EPs would be covered (SI Report, reference 36.12).
- On 13 November 2023, Woodside emailed NAC (SI Report, reference 36.13). Woodside:
 - Acknowledged NAC was unavailable for consultation until 25 November 2023
 - Clarified that Woodside needed to meet with NAC to discuss two separate matters – EP Consultation and a separate project not related to this EP.
 - Reiterated that the consultation protocol would be finalised as soon as possible.
- **(1)** On 13 November 2023, NAC emailed Woodside noting there were no other urgent EP consultations, noting this EP (among others) had previously been flagged for consultation and requiring the engagement protocol be in place prior to any meetings occurring (SI Report, reference 36.14).

Ongoing engagement:

- **(1)** On 1 March 2024, Woodside emailed NAC with a 7-page letter setting out the draft terms of an agreement between NAC and Woodside (SI Report, reference 36.15). The purpose of the agreement was to seek input from NAC on its preferred method of consultation. The agreement (among other things) included the following:
 - Confirmation of what is sufficient information for NAC for consultation.
 - Confirmation of what is a reasonable period for consultation.
 - NAC's preferred method for provision of information.
 - NAC's preferred method of providing objections or claims.
 - How information is to be published in the EP.
 - Cost and termination of the agreement.
- On 17 April 2024, NYFL emailed Woodside (SI Report, reference 36.16) to advise there had been a tragic passing in the Roebourne community, the cultural protocols associated with Sorry Business were in place, and that consultation may be impacted as PBC's support affected families. Woodside understood this would impact consultation with NAC.
- On 26 April and 20 May 2024, Woodside emailed NAC to follow-up on the draft consultation agreement and requested an update on its review of the consultation agreement (SI Report, reference 36.17, 36.18).
- On 5 September 2024, Woodside emailed NAC after meeting its newly appointed acting CEO. Woodside invited NAC to its Quarterly Heritage Meetings, included proposed dates for the meetings, information about attendance fees and requested NAC confirm a list of attendees prior to each meeting (SI Report, reference 36.19).
- On 9 September 2024, Woodside emailed NAC an invitation to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 36.20).
- On 22 September 2024, Woodside emailed NAC about an administrative matter relating to the Quarterly Heritage Meetings (SI Report, reference 36.21)

- On 25 September 2024, NAC attended Woodside’s monthly luncheon for Traditional Owners (SI Report, reference 36.22). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 25 September 2024, Woodside phoned NAC and sent a follow-up email containing a consultation update on this EP (SI Report, reference 36.23). The email:
 - Updated NAC about the consultation history of the EP including that Woodside began consultation on 1 September 2023 (This was done for a number of reasons, including that NAC recently employed a new CEO who was not working for the Corporation when this initial email was sent).
 - Attached the initial communication sent to NAC on 1 September 2023 and the Summary Information Sheet.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Acknowledged that consultation framework agreement discussions with NAC were ongoing but that EP consultation including for this EP had progressed in parallel.
 - Invited NAC to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside provided the date of Friday 4 October as the deadline for this feedback.
 - Provided contact details for Woodside and NOPSEMA.
 - Confirmed that Woodside would accept feedback for the life of the EP.
- On 26 September 2024, Woodside had a monthly relationship meeting with NAC. During the meeting Woodside noted the email sent on 25 September 2024 about this EP. NAC confirmed it had received the email and directed to the appropriate person (SI Report 36.24).
- On 3 October 2024, Woodside invited NAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 23 October 2024 (SI Report, reference 36.25).
- On 10 October 2024, NAC attended Woodside’s Quarter 3 Heritage Meeting in Roebourne (SI Report, reference 36.26) where Woodside presented to Traditional Owners. Matters relevant to this EP included consultation for Woodside EPs including an explanation of State and Commonwealth regulatory requirements, an explanation of EMBA’s and the process Woodside undertakes to identify Traditional Owners groups, and how Traditional Owners could provide information to Woodside about cultural values, interests and activities, including any other groups who should be consulted, to be considered in EPs.
- On 23 October 2024, Traditional Owner members from NAC attended Woodside’s Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 36.27).
- On 21 November 2024, NYFL emailed Woodside a letter advising that due to the passing of a Senior Elder, Sorry Business was grieving protocols were underway in the Roebourne area This is relevant to consultation with NAC to whom this also applies (SI Report, reference 36.28).
- On 5 December 2024, NAC attended Woodside’s Quarter 4 Heritage Meeting in Karratha (SI Report, reference 36.29). Matters discussed relevant to this EP included:
 - Woodside provided an update on the Scarborough Energy Project.
 - Woodside reminded the meeting about ongoing consultation.
- On 11 December 2024, Woodside became aware via a social media post from RRKAC that due to the recent passings of two significant Elders cultural grieving protocols were underway (SI Report, reference 36.30).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
---	--	-------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(1) NAC proposed establishing a Joint Working Group to engage in meetings with Woodside for ongoing consultation. NAC proposed entering into a draft protocol/agreement with Woodside to cover the joint working group arrangements and costs for the next 12 months.</p>	<p>(1) Woodside assessment: An agreement with NAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes, including with the NAC Working Group. An agreement would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside agrees to the concept of a working group. Woodside continues to work with NAC on this and continues to discuss the terms and conditions with NAC. The draft consultation agreement sent to NAC in March 2024, will be used to frame future EP consultation as well as ongoing consultation during the life of the EP.</p>	<p>(1) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with NAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given information to NAC about the Scarborough Project through the ethnographic survey work and a meeting on 17 May 2023 at which Woodside provided NAC with a high-level overview of the project.
- Woodside has given NAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 1 September 2023, Woodside commenced consultation with NAC on this EP. Woodside provided NAC:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NAC's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked NAC to forward the information to its members.
 - Woodside offered to provide more specific information, maps and images to NAC if required.
- NAC has shown an understanding of the project and activities in a number of instances (see 18 September 2023).
- Woodside has sent a Summary Information sheet to NAC on multiple occasions (see 1 September 2023, 3 November 2023, 25 September 2024).
- On 25 September 2024, Woodside updated NAC (which had recently replaced its CEO) about the EP. Woodside attached the initial communication sent to NAC on 1 September 2023 and Summary Information Sheet. Woodside also acknowledged that consultation framework agreement discussions with NAC were ongoing but that EP consultation including for this EP had progressed in parallel.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with NAC in September 2023 and provided information on the EP on that date. Since then, Woodside and NAC have engaged in consultation for over 16 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to NAC during Woodside's initial email on 1 September 2023. NAC was asked to provide feedback by 2 October 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided NAC with more than four months to consult ahead of preparing the EP for submission and continues to take feedback in relation to the EP.
- On 3 November 2023, Woodside emailed NAC and advised that it anticipated the EP would be submitted on 14 December 2023.
- Woodside notified NAC on 25 September 2024 that it was planning to resubmit the EP. Woodside invited NAC to provide any additional comments, feedback, claims or objections that it would like Woodside to consider, giving NAC a two-week period to do so.

- Woodside notes that, during consultation, it has also respectfully paused consultation in periods when NAC was observing sorry time or cultural matters (see October 2023; 17 April 2024) and has been sensitive to NAC's structural and other changes.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for NAC's input into how NAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- In 2019, cultural authorities nominated by NAC attended an ethnographic survey which considered the Scarborough project's development footprint. This provided an opportunity for NAC to input into the survey and Scarborough Project, particularly from a cultural values perspective.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (see section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of consultation (see section 3.4).
- Woodside's initial email about this EP on 1 September 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with NAC members as well as the NAC Board.
 - Asked NAC to advise how it would like Woodside to engage and whether NAC required further information.
- Throughout the consultation period (and following submission of the EP for assessment), Woodside and NAC have exchanged multiple emails, had phone calls and have met on a number of occasions and have otherwise had direct contact lines to each other during the period.
- Woodside sought input from NAC as to NAC's preferred method of consultation. This led to NAC proposing the formation of a Working Group to consult with Woodside on EPs, including this EP, demonstrating an understanding of Woodside's consultation requirements. Woodside agreed to the working group, pending agreement of terms and conditions (including funding). Woodside remains open to the working group. It is yet to be established and Woodside continues to seek updates from NAC to progress it.
- Woodside conditionally agreed to NAC's proposal to form a Working Group to consult with Woodside on EPs. Woodside agreed to provide reasonable funding for the group to convene. NAC has yet to establish the group.
- Woodside invites NAC to Quarterly Heritage Meetings, and monthly relationship meetings and luncheons.
- In September 2024, Woodside provided NAC with an additional two-weeks to provide feedback ahead of Woodside resubmitting the EP. NAC acknowledged this communication during a meeting with Woodside on 26 September 2024.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 16 months NAC has provided feedback, but has not raised objections or claims about the adverse impact of each activity to which this EP relates.

- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Wanparta Aboriginal Corporation (Wanparta)

Context

Wanparta is established under the Native Title Act 1993 by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Wanparta jointly manages the 80 Mile Beach Marine Park which is adjacent to the EMBA. Woodside has an existing relationship with Wanparta. Woodside has assigned a First Nations Engagement team member as a dedicated focal point for EP consultation with Wanparta who is responsible for building a consultative relationship and is available to provide information and take feedback. This team member meets with Wanparta regularly. Woodside also attends Wanparta's Board Meetings when invited.

On 31 August 2023, Woodside met with Wanparta Board and members in South Hedland. Woodside and Wanparta discussed the project. Following the meeting, Wanparta's lawyer provided verbal confirmation that Wanparta supports the activity and confirmed Wanparta's commitment to continuing its relationship with Woodside.

- On 18 July 2023, Woodside emailed Wanparta NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
 - On 26 July 2023, Woodside emailed Wanparta Woodside's planned Program of Ongoing Engagement with Traditional Custodians
- Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.*

Summary of information provided and record of consultation for this EP:

- On 28 August 2023, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 1.25) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to other individuals as required.
- On 31 August 2023, Woodside met with Wanparta Board and members in South Hedland (SI Report, reference 29.1), Woodside:
 - Described the EP framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of EPs.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities open for consultation in 2023/24.
 - Woodside provided an overview of this activity, describing the location, offshore facility, subsea infrastructure, gas pipeline, liquefied and domestic gas.
 - Described the types of vessels involved.
 - Described the planned impacts and respective controls of the above activity including: the presence of vessels, seabed disturbance, underwater noise, discharge from vessels, emissions to air and external lighting.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
- Displayed and spoke to the EMBA for each proposed activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
- Stated that Woodside wanted to understand how the functions, activities, or interests of Wanparta and the people it represents may be impacted by any of those activities.
- Woodside specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- Advised that Woodside will continue to take feedback from Wanparta for the life of the EP.
- Provided personal contact details for further feedback. Woodside provided NOPSEMA's contact details, should Wanparta desire to provide feedback directly to the Regulator.

At the 31 August 2023 meeting Wanparta asked/noted:

- **(1)** What chemicals in the water may be discharged during commissioning.
- **(1)** Woodside responded that biocide, oxygen scavenger and corrosion inhibitor, have low concentrations. They are carefully regulated to make sure they don't persist in the environment.
- **(2)** Wanparta stated that water is extremely important to Ngarla people, and they feel a responsibility to look after the ocean and lore. They noted the spiny bream, octopus, stingray and kestrel as totemic species.
- **(3)** Wanparta would like to discuss a program of support for rangers with Woodside in the future.
- **(3)** Woodside responded that they would come back to Wanparta with regards to training and future support for a Ranger Program.
- **(3)** Wanparta would like to engage in an annual meeting with Woodside.
- Wanparta advised that whilst there are 5 family groups within Wanparta, only 4 were represented at the meeting. The others would be brought up to speed by emails, and chats.
- Wanparta broke for a closed session, when asked if there were any stories that could be shared with Woodside.
- **(4)** On return, Wanparta through their lawyer gave verbal support for this EP activity and said they were keen to continue a relationship with Woodside.
- **(4)** Woodside responded that there was further opportunity to provide feedback and indicated tentative dates for meetings in the next eight to nine months.
- On 14 September 2023, Woodside emailed Wanparta following up on previous consultation and information discussed at the 31 August 2023 meeting (SI Report, reference 29.2). Woodside advised of the planned start date for the activity (December 2024), and once again requested if Wanparta was aware of any other people with whom Woodside should consult, and if there was any information Wanparta wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 11 December 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached. Woodside sent through an EP and activity dates for this EP, asking Wanparta for any further feedback. The email also contained

within NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.

- On 14 September 2023, Wanparta thanked Woodside and confirmed receipt of emails (SI Report, reference 29.3).
- (3) On 4 October 2023, Woodside phoned Wanparta, to check in generally and inform about upcoming EPs (SI Report, reference 29.4). A discussion was had about Wanparta Rangers, a tour of the Karratha Gas Plant and a school kids visit to the Woodside Perth Office.
- On 4 October 2023, Woodside emailed Wanparta following up with a summary of the previous phone call (SI Report, reference 29.5). The outcomes of the phone discussion were:
 - (3) Wanparta's interest in a Wanparta Ranger program and EP funding.
 - Wanparta's interest in a Karratha Gas Plant visit, as well as possible school visits and Perth Office visits.
 - Wanparta's request for updates on EPs unrelated to this one.
 - Woodside's query into Wanparta's view on a formal authorisation/consent/endorsement process regarding future EPs.
- On 6 October 2023, Wanparta emailed Woodside thanking Woodside for the 4 October email and summary of discussion had and stating that Wanparta would bring all the 4 October 2023 items to the Board for further consideration and would revert shortly after (SI Report, reference 29.6).
- (3) On 10 November 2023, Woodside and Wanparta spoke by phone, Wanparta emailed Woodside a Ngarla ranger proposal document (SI Report, reference 29.7).
- (5) On 13 November 2023, Wanparta emailed Woodside, requesting funding to assist with ongoing consideration of Woodside EPs (SI Report, reference 29.8). Wanparta noted the consultation meeting to be held between Wanparta and Woodside in February 2024.
- (5) On 22 November, Woodside acknowledged Wanparta's requests and agreed to seek out available options for funding (SI Report, reference 29.9).
- On 24 November 2023, Woodside emailed Wanparta requesting availability for a telephone discussion relating to EP funding (SI Report, reference 29.10).
- On 30 November 2023, Wanparta emailed Woodside in relation to a financial matter, their email also noted the Directors availability for a meeting on 23 February 2024 (SI Report, reference 29.11).

Ongoing engagement:

- Between 8 – 15 February 2024, Woodside and Wanparta exchanged emails confirming logistics of consultation and site visit meetings in Karratha for week of 26 February 2024 (SI Report, references 29.12, 29.13, 29.14, and 29.15).
- On 20 February 2024, Wanparta emailed Woodside informing of a death in the community and requesting a re-schedule of the meeting (SI Report, reference 29.16).
- On 21 February 2024, Woodside acknowledged and agreed to a re-schedule (SI Report, reference 29.17).
- On 23 February 2024, Wanparta emailed Woodside with suggested dates for a re-scheduled meeting in April 2024 (SI Report, reference 29.18).
- On 26 February 2024, Woodside emailed Wanparta confirming availability for the proposed April meeting and noting logistics (SI Report, reference 29.19).
- Between 16-22 April, Woodside and Wanparta exchanged emails regarding logistics and funding for a meeting for consultation on another activity and a site visit with the Wanparta Board. (SI Report, references, 29.20-29.29)
- On 24 April 2024, Woodside met with Wanparta at Murujuga. Woodside presented an overview of EPs and ongoing consultation in 2024, and provided information on another activity, Aboriginal employment, and ranger programs. Wanparta informed Woodside that there were no issues following the discussion (SI Report, reference 29.30).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 7 May 2024, Wanparta emailed Woodside following the meeting on 24 April 2024 (SI Report, reference 29.31). Wanparta advised:
 - (6) The Ngarla People have a deep spiritual connection to sea country.
 - (2) The Ngarla peoples’ totem species – the octopus, stingray, spiny bream fish and kestrel – is of great significance.
 - (2) The protection and management of marine life and healthy ocean plays a significant role in their lore, culture and customs.
 - (7) That they request Woodside attends an annual Board meeting with Wanparta for the purposes of progressing ongoing and meaningful consultation.
- On 30 May 2024, Woodside emailed Wanparta in response to its correspondence of 7 May 2024 (SI Report, reference 29.32). Woodside acknowledged and supported the feedback raised by Wanparta including:
 - (2)The significance of the Ngarla People’s totem species- the octopus, stingray, spiny bream fish and kestrel.
 - (2) The role that the protection and management of marine life plays in Ngarla People’s practise of lore, culture and customs.
 - (6) The Ngarla People’s connection to sea country.
 - (7) Woodside’s willingness to attend Wanparta’s annual Board meeting for the purpose of consultation.
- On 28 August 2024, Woodside met Wanparta (SI Report, reference 29.33). Matters discussed that were relevant to this EP include:
 - Woodside provided an overview of the company and EPs.
 - (3) Wanparta asked Woodside for an update about the Ranger Program. (3) Woodside responded that its proposal is under assessment.
- On 11 September 2024, Woodside emailed Wanparta an update about activities relating to the Scarborough project (SI Report, reference 29.34).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) During face-to-face engagement, related to this activity and others Wanparta requested further information on topics related to this proposed activity which was responded to during the meeting: What chemicals in the water may be discharged during commissioning.</p>	<p>(1) Woodside assessment: Woodside’s response at the meeting noted that biocide, oxygen scavenger and corrosion inhibitor, have low concentrations. They are carefully regulated to make sure they don’t persist in the environment. Woodside response: No further information request or follow-up has been received.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p>
<p>(2) Wanparta stated that water and the ocean is extremely important to them, and that they have a responsibility to look after the ocean and their law. They noted the bream, octopus, stingray and kestrel as totemic species.</p>	<p>(2) Woodside assessment: Woodside assessed Wanparta’s interest in water and the species described to represent potential cultural values.</p>	<p>(2) Woodside updated Section 4.9 to record Wanparta’s interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.10.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.	
(3) Wanparta expressed interest in a range of social investment opportunities including a ranger program and have an interest in ongoing engagement with Woodside.	(3) Woodside assessment: A framework agreement is an effective mechanism for social investment opportunities, including for a ranger program and ongoing consultation. It aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians. Ranger program funding may allow Traditional Custodians to be involved in spill response. Woodside response: Woodside is continuing to work with Wanparta regarding social investment opportunities. A framework agreement will be proposed at a meeting in April with the Wanparta Board.	(3) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, an agreement with Wanparta (among other things) could address social investment in ranger programs and would set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).
(4) At the 31 August 2023 meeting, Wanparta expressed support for the EP, Wanparta said they had no concerns regarding the activity for now and wished to be kept updated on any changes.	(4) Woodside assessment: Woodside accepts Wanparta's position. Woodside response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	(4) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.
(5) Wanparta requested funding to participate in ongoing consultation.	(5) Woodside assessment: Woodside considers funding requests and supports funding within reasonable parameters. The proposed agreement will address reasonable requests for funding, including ranger program support. Woodside response: Woodside has agreed to fund reasonable requests.	(5) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.
(6) On 7 May 2024, Wanparta advised of their connection to sea country.	(6) Woodside assessment: Woodside assessed Wanparta's connection to sea country to represent potential cultural values. Woodside response: Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.	(6) Woodside recognises that Wanparta's connection to Sea Country (Section 4.9). Potential impacts on cultural features and heritage values are assessed in Section 6.10 of the EP.
(7)	(7) Woodside assessment: Woodside supports ongoing consultation with Traditional Custodians.	(7) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>On 7 May 2024, Wanparta requested Woodside attend an annual Board Meeting for the purpose of ongoing consultation.</p>	<p>Woodside response: Woodside supports ongoing consultation with Wanparta through their preferred method of consultation.</p>	
<p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Based on the engagement to date, no additional controls have been identified.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and considers consultation with Wanparta for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given Wanparta relevant consultation documents, including NOPSEMA’s *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA’s website in June 2024.
- On 28 August 2023, Woodside commenced consulting with Wanparta on this EP. Woodside provided Wanparta:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of Wanparta’s interests and how the activity could impact those interests.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside invited Wanparta to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided Wanparta NOPSEMA's contact information.
- Woodside asked Wanparta to forward the information to its members
- Woodside offered to provide more specific information, maps and images to Wanparta if required.
- On 31 August 2023, Woodside met with Wanparta Board and members in South Hedland. Woodside made First Nations team members and environmental specialists available to provide information. Wanparta asked questions demonstrating an understanding of the EP.
- On 14 September 2023, Woodside emailed Wanparta to follow-up on information discussed at the 31 August 2023 meeting.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with Wanparta on 28 August 2023 and provided information on the EP on that date. Since then, Woodside and Wanparta have engaged in consultation for a period of over 17 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to Wanparta during Woodside's initial email on 28 August 2023. Wanparta was asked to provide feedback by 28 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided Wanparta with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for Wanparta's input into how Wanparta would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for more than 17 months. This has included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns (See section 3.4).
- Woodside's initial email about this EP on 28 August 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with Wanparta members as well as the Wanparta Board.
 - Asked Wanparta to advise how it would like Woodside to engage and whether Wanparta required further information.
- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians providing information on how Woodside supports ongoing consultation with First Nations groups.

Outcomes of Consultation:

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- Wanparta stated that water and the ocean are extremely important, and that members have a responsibility to look after the ocean and their law. Bream, octopus, stingray and kestrel were noted as totemic species. Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.10.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Wirrawandi Aboriginal Corporation (WAC)

Context

WAC is established under the Native Title Act 1993 (Cth) by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with WAC prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program on Ongoing Engagement (sent to WAC on 26 July 2023). Woodside has assigned First Nations Engagement team member as a focal person for WAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

For consultation on this EP, Woodside contacted WAC offering an opportunity to present to the WAC Board. Woodside asked WAC how it wished to be consulted, if it required support to participate in consultation, whether there were additional groups that WAC believed should be consulted and requested that all information shared with WAC be cascaded to its members.

During consultation for this EP, WAC underwent organisational restructures. By way of courtesy, Woodside respectfully engaged with various representatives from the group including a General Manager, three Acting Director/Chairs, a CEO and an Operations Manager. Woodside understands that WAC currently has one employee who Woodside understands is focussed on supporting the Board with its AGM and Director elections (November 2024). Woodside's focus has been on supporting WAC through its period of change so it is informed about Woodside's activities and is enabled to engage in consultation. This has included Woodside's focal person visiting the WAC office each week, facilitating Quarterly Heritage Meetings and running monthly community meetings over lunch.

On 11 September 2023, WAC's former General Manager (who is no longer with the corporation) informed Woodside that WAC did not object to the EP on the proviso that Woodside enters into a consultation framework agreement. Woodside therefore understands that WAC has no objection to this EP. Woodside has also clarified with WAC that discussions about a consultation framework agreement have occurred in parallel to consultation for this EP. On 3 October 2024, WAC's Operations Manager emailed Woodside and confirmed WAC had no further feedback or objections to this EP and was satisfied with the way consultation had taken place.

It should also be noted that, Woodside provided WAC (on a number of occasions, for example August 2023 and March 2024) with a draft 7-page framework agreement for consultation. This agreement proposes to obtain WAC's input regarding how WAC would like consultation to occur (what is sufficient information, how much time is a reasonable period etc). It has

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

become clear during engagements that this framework agreement is not a priority. Consultation for this EP has occurred in parallel to discussions around the framework consultation agreement (which remain ongoing).

Aside from regular consultation about EPs relevant to WAC, Woodside meets WAC regularly during Quarterly Heritage Meetings, monthly community luncheons and monthly relationship building meetings. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs at those meetings.

This context and process demonstrates that Woodside's consultation approach with WAC is appropriate and adapted to the nature of interests of WAC.

Historical Engagement:

- On 1 May 2019, cultural authorities nominated by WAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice. This survey was conducted for the Scarborough project's development footprint. A landscape-scale approach was undertaken in order to better understand the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA. Participants in this ethnographic survey had an opportunity to input and contributed to the findings and recommendations of Mott 2019 which are detailed in the EP (Section 4.9.4.2) and included:
 - Identification of onshore heritage sites, beyond the Operational Area and EMBA of this EP.
 - No known sites or values identified beyond the low water mark. The potential for cultural values to exist was identified and further work was offered by Woodside (although this has not been taken up).
 - A recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below).
 - A recommendation to engage with researchers on options to identify submerged heritage. Woodside continues to offer this opportunity although it has not yet been taken up.
 - A recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP.
 - Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.4), kept WAC informed of the progress of the Scarborough Project through quarterly meetings (see below), and where appropriate ensured employees and contractors had completed cultural awareness training through MAC.
- On 23 March 2023, Woodside met with WAC and presented on several activities including the Scarborough Project (D&C, SIT1, Seismic and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP). WAC asked several questions related to activities, during the meeting which were responded to in the meeting or after the meeting in responsive communications.
- On 18 July 2023, Woodside emailed WAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that WAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed WAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 28 August 2023, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 1.29) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that WAC and its members may have within the EMBA,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

information on how WAC would like to engage, and requested that WAC provide information to other individuals as required. The email asked WAC to provide feedback before 28 September 2023.

- On 31 August 2023, WAC emailed a letter to Woodside (SI Report, reference 26.1). The letter:
 - Acknowledged that Woodside had commenced consultation with it or intended to consult on activities and EPs including this EP.
 - Thanked Woodside for its commitment to ongoing consultation throughout the life of EPs and associated activities.
 - **(1)** Sought a formalised framework for consultation which could:
 - Cover Woodside's sponsorship of WAC's Culture Capture Program.
 - Assist WAC build capacity (such as through sponsorship of ranger and other programs).
 - Provide reasonable costs for WAC to progress engagement and consultation.
- **(1)** On 11 September 2023, WAC emailed Woodside a copy of the letter of 31 August 2023 (SI Report, reference 26.2) and advised:
- WAC does not object to Woodside progressing EPs (including this one) on the proviso it enters into a framework agreement.
- That WAC reserved the right to review its position in the future should modelling of EMBA's change or if new information becomes available about environmental or cultural values.
- On 12 September 2023, Woodside acknowledged receipt of the email of 11 September 2023 (SI Report, reference 26.3).
- On 28 September 2023, Woodside emailed WAC introducing WAC to a new focal person within Woodside and providing contact details for the new focal person (SI Report, reference 26.4).
- On 3 October 2023, WAC and Woodside exchanged emails to set up a meeting between WAC and Woodside's focal person. Woodside offered to travel if needed (SI Report, references 26.5, 26.6, 26.7, 26.8).
- In October 2023, Woodside became aware of ongoing cultural matters in the Pilbara community which required Woodside to pause its communication with local groups as a sign of respect (SI Report, reference 26.9).
- On 20 October 2023, Woodside met WAC's new CEO and Chairperson (SI Report, reference 26.10). During the meeting:
 - Woodside discussed correspondence it had received from WAC's General Manager on 31 August 2023 and 11 September 2023.
 - WAC confirmed it would address all outstanding EPs as a matter of priority.
 - Woodside provided information about support available to WAC for EP consultation.
 - **(1)** Woodside acknowledged that WAC was in the process of a corporate restructure and would be willing to discuss a consultation framework/process once a new CEO had settled in.
- On 12 December 2023, Woodside emailed WAC's new CEO and resent information about this EP originally sent on 28 August 2023 (SI Report, reference 26.11). Woodside again provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested:
 - WAC's new CEO review the information.
 - That WAC's new CEO advise Woodside if WAC members, the Board, Elders or other relevant persons wished to be further consulted about the EP.
 - WAC advise Woodside if it would like to meet to discuss the EP.

- That WAC advise how it would like Woodside to engage with it and whether there was specific information, maps or images it required.
- That MAC provide feedback to Woodside or NOPSEMA (contact details were provided).

Ongoing engagement:

- On 6 February 2024, WAC's new CEO emailed Woodside to inform Woodside he was leaving WAC and that WAC's Managing Director would be in contact (SI Report 26.12).
- On 28 February 2024, Woodside emailed WAC noting WAC had experienced staff changes. Woodside enquired who the appropriate person was to speak to noting it had previously been given the name of WAC's Managing Director (SI Report, reference 26.13).
- On 28 February 2024, Woodside emailed the Managing Director at WAC to advise details of an interim focal point. Woodside enquired if the Managing Director was the most appropriate person to speak to (SI Report, reference 26.14).
- **(1)** On 6 March 2024, Woodside emailed WAC a letter setting out the draft terms of an agreement between WAC and Woodside and offered to meet to discuss the document further (SI Report, reference 26.15). This draft agreement had been sent to two previous CEOs. The purpose of the agreement was to seek input from WAC on its preferred method of consultation. The agreement (among other things) included the following:
 - Confirmation of what is sufficient information for WAC for consultation.
 - Confirmation of what is a reasonable period for WAC for consultation.
 - WAC's preferred method for provision of information.
 - WAC's preferred method for providing objections or claims.
 - How information is to be published in the EP
 - Cost and termination of the agreement.
- **(1)** On 6 March 2024, WAC emailed Woodside requesting a word copy of the draft terms of agreement sent 6 March 2024. Woodside provided the copy (SI Report, reference 26.16, 26.17).
- On 25 June 2024, WAC attended Woodside's Quarterly Heritage meeting in Karratha (SI Report, reference 26.18). WAC and the other attendees agreed they would like Woodside to include information about EPs at future heritage meetings.
- On 15 July 2024, Woodside and WAC met (SI Report, reference 26.19). Matters discussed included:
 - WAC was undergoing staffing changes and was recruiting a new CEO/General Manager.
 - WAC would be appointing a casual manager to attend to daily operations until a permanent employee was recruited.
- **(2)** WAC was eager to participate in a sea mapping project and to discuss possible sponsorship opportunities once a CEO/General Manager was recruited.
 - On 15 July 2024, WAC emailed Woodside following a meeting on the same day (SI Report, reference 26.20). WAC confirmed:
 - It was recruiting a General Manager to oversee operations in the Pilbara.
 - The WAC Board was eager to meet and consult with Woodside for future EPs once recruitment had taken place.
- On 9 September 2024, Woodside invited WAC to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 26.21).
- On 22 September 2024, Woodside emailed WAC about an administrative matter relating to the Quarterly Heritage Meeting (SI report 26.22).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 25 September 2024, WAC attended Woodside's community monthly luncheon for Traditional Owners (SI Report, reference 26.23). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 25 September 2024, Woodside emailed WAC a consultation update on this EP (SI Report, reference 26.24). The email:
 - Updated WAC about the consultation history of the EP including that Woodside began consultation on 28 August 2023.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Acknowledged that discussions relating to the framework agreement were ongoing, and that consultation for this EP has occurred in parallel.
 - Confirmed Woodside had provided sufficient information, allowed a reasonable period of time for consultation and given WAC a reasonable opportunity to provide feedback.
 - Invited WAC to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside provided the date of Friday 4 October as the deadline for this feedback.
 - Provided contact details for Woodside and NOPSEMA.
 - Confirmed that Woodside would accept feedback for the life of the EP.
- On 26 September 2024, Woodside emailed WAC in relation to its email on 25 September 2024 and advised that the feedback date for the EP had been extended until 9 October 2024 (SI Report, reference 26.25). Woodside encouraged WAC to contact it if it had any questions.
- On 30 September 2024, Woodside met WAC (SI Report, reference 26.26). During the meeting:
 - WAC confirmed it has one employee who is attending to consultation.
 - WAC confirmed its priority was appointing a new Board at its AGM in November.
- On 3 October 2024, WAC emailed Woodside in response to Woodside's email from 25 September 2024 (SI Report, reference 26.27). WAC confirmed:
 - WAC had no further feedback or objections to this EP.
 - WAC will comment later if perceived environmental or cultural issues arise.
 - WAC is satisfied with the consultation that had taken place for this EP.
- On 3 October 2024, Woodside an invitation to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report reference 26.28).
- On 10 October 2024, Woodside met with WAC (Quarterly Heritage Meeting). (SI Report, reference 26.29). Matters discussed relevant to this EP included:
 - Woodside explained EMBA's and processes which Woodside uses to identify relevant persons.
 - Woodside explained feedback periods including ongoing feedback.
 - Woodside shared a slide showing all activities including this one.
- On 14 October 2024, Woodside was notified that Sorry Business was taking place in the Roebourne and Karratha area (SI Report, reference 26.30).
- On 18 October 2024, Woodside emailed WAC to discuss Woodside's attendance at the next WAC Board meeting (SI Report, reference 26.31).
- On 28 October 2024, Woodside attended WAC's Board meeting (SI Report, reference 26.32). Matters discussed that were relevant to this EP include:
 - Woodside's consultation processes.

<ul style="list-style-type: none"> - (2) WAC asked about oil spill reporting. (2) Woodside responded that Woodside conducts an internal investigation and abides by an Oil Spill Management Plan. • On 2 November 2024, Woodside attended the Dampier Markets and engaged with relevant persons from WAC. Woodside discussed EPs generally (SI Report, reference 26.33). • On 21 November 2024, NYFL emailed Woodside to advise that Sorry Business was taking place in the Roebourne Community (SI Report, reference 26.34). • On 5 December 2024, WAC attended Woodside’s Quarter 4 Heritage Meeting in Karratha (SI Report, reference 26.35). Matters discussed relevant to this EP included: <ul style="list-style-type: none"> - Woodside provided an update on the Scarborough Energy Project. - Woodside reminded the meeting about ongoing consultation. • On 11 December 2024, Woodside became aware via a social media post from RRKAC that due to the recent passings of two significant Elders cultural grieving protocols were underway (SI Report, reference 26.36). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) WAC confirmed that it does not object to Woodside progressing Scarborough Project EPs (including this activity) on the proviso that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation and a desire for ongoing engagement and partnership through a Framework Agreement.</p>	<p>(1) Woodside assessment: An agreement with WAC aligns with Woodside’s Program of Ongoing Engagement with Traditional Custodians. Woodside understands that negotiations on a consultation framework have not been a priority for WAC and that consultation with WAC for this EP has occurred in parallel to discussions about a framework agreement. Woodside response: The draft framework agreement sent to WAC in March 2024, once agreed, will be used to frame future consultation as well as ongoing consultation during the life of the EP. Discussions about the draft agreement have occurred in parallel to consultation about this EP. This has been confirmed by WAC. Woodside has provided WAC sufficient information, allowed a reasonable period of time for consultation and given WAC a reasonable opportunity to provide feedback about this EP.</p>	<p>(1) Woodside’s program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft framework consultation agreement with WAC, once agreed will, among other things, set out the process for future consultations and ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>
<p>(2) During ongoing consultation, WAC enquired about oil spill reporting.</p>	<p>(2) Woodside assessment: Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA.</p>	<p>(2) Woodside has addressed oil spill preparedness and response strategy in Appendix H.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP, and Appendix H.</p>	
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and considers consultation with WAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given information to WAC about the Scarborough Project through the ethnographic survey work and also a meeting on 23 March 2023 at which Woodside provided WAC with a high-level overview of the project.
- Woodside has given WAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 28 August 2023, Woodside commenced consulting with WAC on this EP. Woodside provided WAC:
- A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the activity and proposed timing.
- Maps showing the location and EMBA.
- A summary of the risks and impacts of the activity.
- Diagrams.
- Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of WAC's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside invited WAC to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided WAC NOPSEMA's contact information.
- Woodside asked WAC to forward the information to its members
- Woodside offered to provide more specific information, maps and images to WAC if required.
- Woodside has provided information on this EP to WAC on a number of occasions (see 28 August 2023 and 12 December 2023)
- On 3 October 2024, WAC confirmed it had no objections to the EP and was satisfied that consultation had taken place.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with WAC on 28 August 2023 and provided information on the EP on that date. Since then, Woodside and WAC have engaged in consultation for a period of 17 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to WAC during Woodside's initial email on 28 August 2023. WAC was asked to provide feedback by 28 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided WAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside notified WAC on 25 September 2024 that it was planning to resubmit the EP. Woodside invited WAC to provide additional feedback, claims or objections that it would like Woodside to consider, giving WAC a two-week period to do so. WAC responded on 3 October 2024 that it had no feedback or objections in relation to the EP and was satisfied consultation had taken place.
- Woodside notes that, during consultation, it has also respectfully paused consultation in periods when WAC was observing sorry time or cultural matters (see October 2023) and has been sensitive to WAC's structural and other changes (see 20 October 2023, 6 February 2024, 28 February 2024 and 15 July 2024).

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for WAC's input into how WAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.

- In 2019, cultural authorities nominated by WAC attended an ethnographic survey which considered the Scarborough project's development footprint. This provided opportunity for WAC to input on the survey and Scarborough Project, particularly from a cultural values perspective.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns (See section 3.4).
- Woodside's initial email about this EP on 28 August 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with WAC members as well as the WAC Board.
 - Asked WAC to advise how it would like Woodside to engage and whether WAC required further information.
- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians providing information on how Woodside supports ongoing consultation with First Nations groups. Woodside's commitment to ongoing consultation is demonstrated by its Quarterly Heritage Meetings with WAC. To this end, Woodside invites WAC to Quarterly Heritage Meetings, monthly luncheons, and weekly visits by Woodside's focal point to WAC's office.
- Woodside has also offered on a number of occasions to travel to Karratha to meet with WAC to discuss activities (see 3 October 2023)
- In September 2024, Woodside provided WAC with an additional two-weeks to provide feedback ahead of Woodside resubmitting the EP. WAC confirmed via email that it had no feedback or objections to the EP.

Outcomes of Consultation:

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- During the past 13 months WAC has provided feedback but has not raised objections or claims about the adverse impact of each activity to which this EP relates.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Yinggarda Aboriginal Corporation (YAC)

Context

YAC is established under the Native Title Act 1993 by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has actively consulted with YAC about the wider the Scarborough Project and Scarborough EPs since July 2023. Woodside's consultation approach for Traditional Custodians has a focus on building and maintaining long-term relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to YAC on 26

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

July 2023). Woodside assigns an individual from the First Nations team to act as a relationship focal person for each group to provide a personalised experience. In August 2023 YAC retained a legal representative to engage with Woodside on NOPSEMA matters. Woodside has adapted its consultation processes to YAC's requirements by sending all correspondence relating to this EP to the legal representative, as requested by YAC.

YAC is also assisted by GAC with administrative matters. YAC's legal representatives have in some instances raised matters (for example, indemnity agreements, and amount and transfer of funds) during the course of consultation. Woodside confirmed it would not action these requests as they did not fall within Woodside's policies and procedures.

As part of its ongoing consultation and relationship building, Woodside provided YAC with a 7-page consultation framework agreement which sought from YAC, confirmation as to how YAC would like to be consulted, including YAC's views of what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While an agreement like this is useful for Woodside to understand consultation norms for YAC, Woodside has noticed that there appears to be limited appetite from groups like YAC to enter into a framework agreement that sets this position out in an agreement form. While Woodside has continued to attempt to progress the framework agreement, despite numerous attempts, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation progressing in parallel to discussions on the framework agreement.

This context and process demonstrates that Woodside's consultation approach with YAC is appropriate and adapted to the nature and interests of YAC.

Historical Engagement:

- On 5 July 2023, Woodside met YAC and gave a presentation about several EPs relating to the Scarborough Project. Matters relevant to this EP included:
 - (1) YAC stated that plants, animals and the environment are inexorably linked to its culture and asked whether Woodside had undertaken environmental studies, whether these studies were ongoing and what environmental monitoring occurred after EPs were approved.
 - (1) Woodside responded that it had undertaken numerous environmental studies that form part of EPs and had an ongoing commitment to environmental studies and research. Woodside also explained that environmental monitoring was an ongoing activity and was committed to ongoing consultation with YAC and would take feedback if any new information in relation to risks came to light.
 - (2) YAC expressed concern about potential impacts to patterns of whales and potential collisions.
 - (2) Woodside responded by explaining controls that would be put in place to minimise impacts and risks to whales.
 - (3) YAC advised seagrass, mullet and dugong in Shark Bay are important resources.
 - (3) Woodside explained that the only potential impact to Shark Bay is via a highly unlikely hydrocarbon spill and controls are in place.
- On 19 July 2023, Woodside emailed YAC via GAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also requested that YAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed YAC via GAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed YAC advising of the proposed activity (Record of Consultation, reference 1.30) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that YAC and its members may have within the EMBA, information on how YAC would like to engage, and requested that YAC provide information to other individuals as required. The email asked YAC to provide feedback before 2 October 2023.

- (4) On 13 September 2023, YAC's legal representative emailed Woodside and advised that in the absence of a draft consultation agreement, the legal representative was unable to respond in substance to the matters raised as the legal representative had no instructions from YAC (SI Report, reference 38.1).
- (4) On 14 September 2023, Woodside emailed YAC via its legal representative with draft consultation framework principles (SI Report, reference 38.2).
- Between 14 September 2023 and 18 November 2023, Woodside and YAC's legal representative exchanged emails about the content of the draft consultation framework (SI Report, references 38.3, 38.4, 38.5, 38.6, 38.7).
- On 14 December 2023, Woodside emailed YAC via its legal representative providing information about the proposed activity including a Summary Information Sheet, which was sent to YAC on 1 September 2023 (SI Report, reference 38.8). Woodside requested information on how the activity could impact the interests and activities and or cultural values of YAC. Woodside asked if YAC had any concerns about the proposed activity and what should be done about those concerns and whether there were any other individual, groups or organisation that YAC thought Woodside should talk to. Woodside invited YAC to contact it if it had any questions or required further information.

Ongoing Engagement:

- (4) On 8 March 2024 Woodside emailed YAC via its legal representative (SI Report, reference 38.9) with a 7-page draft consultation agreement for consideration by YAC and an invitation for YAC to propose a schedule of rates and other details relating to engagement. The purpose of the agreement was to seek input from YAC on its preferred method of consultation. The draft agreement included:
 - Confirmation of what is sufficient information for YAC for consultation.
 - Confirmation of what is a reasonable period for consultation.
 - YAC's preferred method for provision of information
 - YAC's preferred method of providing objections or claims
 - How information is to be published in the EP
 - Costs and termination of the agreement
- Between 12 March 2024 and 4 April 2024, YAC's legal representative and Woodside exchanged emails about matters relating to legal fees and consultation costs (SI Report, reference 38.10, 38.11, 38.12, 38.13).
- (5) On 8 April 2024, YAC via its legal representative emailed Woodside (SI Report, reference 38.14) and advised the next YAC Board would be on 9 May 2024. The legal representative asked if Woodside would fund the cost of the meeting, how much time Woodside would require, and asked for a list of NOPSEMA matters for discussion to enable it to provide a cost estimate for legal fees.
- (5) On 10 May 2024, Woodside emailed YAC via its legal representative (SI Report, reference 38.15) advising Woodside would cover agreed costs for an upcoming meeting with the YAC Board and stated:
 - The meeting would include discussion of environment plans.
 - Woodside would meet at a location of YAC's choosing.
 - YAC was welcome to provide feedback on EPs at any time.
- On 15 July 2024, Woodside received a call from Gumala Aboriginal Corporation (GAC provides administrative support to YAC). GAC invited Woodside to a YAC Board meeting on 18 July 2024 and Woodside accepted (SI Report, reference 38.16).

- On 16 July 2024, Woodside and YAC exchanged emails to arrange Woodside's attendance at the YAC Board meeting on 18 July 2024. Matters discussed included funding for the meeting, attendees and presentation materials (SI Report, references 38.17, 38.18). On 18 July 2024, Woodside and YAC met to discuss two unrelated EPs. Matters discussed that are considered relevant to this EP include:
 - (6) YAC's interest in Woodside's support for education and training including oil spill training for rangers.
 - (5) Opportunities for funding and/or support for YAC.
 - (4) Workshops to discuss agreement formalisation between Woodside and YAC.
- On 26 July 2024, Woodside emailed a letter to YAC to follow-up on matters raised during its meeting on 18 July 2024 (SI Report, reference 38.20). Matters relevant to this EP included:
 - (1) YAC spoke about the importance of animals, particularly concerns about potential impacts to turtles and whales.
 - (1) Woodside explained that it had undertaken numerous environmental studies and had an ongoing commitment to research. Woodside also explained that environmental monitoring was an ongoing activity.
 - (6) Woodside will keep YAC informed about Woodside's consideration of ranger initiatives.
 - (4) Woodside looked forward to receiving YAC's feedback on the consultation framework.
 - Woodside was committed to continuing consultation with Traditional Custodians beyond the submission of EPs and this would not be YAC's only opportunity to engage with Woodside.
 - Woodside invited YAC to share information with other organisations and individuals.
- On 9 September 2024, Woodside invited YAC to share stories and receive updates from Woodside at their monthly luncheon for Traditional Owners (SI Report, reference 38.21).
- On 25 September 2024, YAC attended Woodside's community monthly luncheon for Traditional Owners (SI Report, reference 38.22). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 25 September 2024, Woodside emailed YAC's legal representative a consultation update on this EP (SI Report, reference 38.23). The email:
 - Noted YAC's consultation history for the EP, including that Woodside began consultation on 1 September 2023.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Confirmed Woodside had provided sufficient information, allowed a reasonable period of time for consultation and given YAC a reasonable opportunity to provide feedback.
 - Invited YAC to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside provided the date of 9 October 2024 as the deadline for this feedback.
 - Acknowledged that discussions relating to the framework agreement were ongoing, and that consultation for this EP has occurred in parallel.
 - Confirmed that Woodside would accept feedback for the life of the EP.
 - Asked YAC's legal representative to forward the email to YAC members.
- On 2 November 2024, Woodside attended the Dampier Markets and engaged with relevant persons from Yinggarda. Woodside discussed EPs generally (SI Report, reference 38.24).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) YAC stated that plants, animals and the environment are inexorably linked to its culture and asked whether Woodside had undertaken environmental studies, whether these studies were ongoing and what environmental monitoring occurred after EPs were approved.</p>	<p>(1) Woodside assessment: Woodside acknowledges YAC's feedback that plants, animals and the environment are inexorably linked to its culture. Woodside has undertaken numerous environmental studies, has an ongoing commitment to research and conducts environmental monitoring after EPs are accepted.</p> <p>Woodside response: Woodside has advised YAC that it has undertaken numerous environmental studies, has an ongoing commitment to research and conducts environmental monitoring after EPs are accepted.</p> <p>Woodside has also advised YAC that it continues to take feedback for the life on an EP and will inform YAC of any new information in relation to risks.</p>	<p>(1) Woodside has updated Section 4.9.4 to record YAC's interests and potential cultural values. Potential impact on these, including controls are detailed in Section 4.9.4.</p> <p>Woodside's commitment to ongoing engagement with YAC including informing YAC if new information becomes available about potential risks is detailed in Section 5.7.</p> <p>Woodside's environmental controls are described in Section 6.</p>
<p>(2) YAC expressed concern about potential impacts to patterns of whales and potential collisions.</p>	<p>(2) Woodside assessment: Woodside has noted YAC's interest in whales and has controls in place to minimise impacts and risks to whales.</p> <p>Woodside response: Woodside has advised YAC that controls are put in place to minimise impacts and risks to whales.</p>	<p>(2) Woodside has updated Section 4.9.4 to record YAC's interests and potential cultural values. Information about whales and migration patterns is recorded in Sections 4.6.3 and 4.6.5. Potential impact on these, including controls are detailed in Section 6.</p>
<p>(3) YAC advised that seagrass, mullet and dugong in Shark Bay are important resources.</p>	<p>(3) Woodside assessment: Woodside has noted YAC's interest in seagrass, mullet and dugong in Shark Bay.</p> <p>Woodside response: Woodside has advised YAC that controls are in place to mitigate risk to seagrass, mullet and dugong in the unlikely case of an environmental incident.</p>	<p>(3) Woodside has updated Section 4.9.4 to record YAC's interests and potential cultural values. Potential impact on these, including controls are detailed in Section 6.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(4) YAC has requested a consultation agreement with Woodside.</p>	<p>(4) Woodside assessment: An agreement with YAC aligns with Woodside’s Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. Woodside response: Woodside continues to work with YAC on the draft agreement, although a request for a consultation agreement is not a pre-requisite for consultation under regulation 25 of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has also provided a reasonable period and opportunity for consultation over 12 months. The draft agreement sent to YAC in September 2023, will be used to frame ongoing consultation during the life of the EP.</p>	<p>(4) Woodside’s program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with YAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians (Appendix G).</p>
<p>(5) YAC requested resourcing to engage in ongoing consultation.</p>	<p>(5) Woodside assessment: The proposed agreement (See Point (4) above), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing.</p>	<p>(5) The Framework Agreement will support any reasonable requests for funding.</p>

<p>(6) YAC has expressed an interest in Woodside's support for education and training including oil spill training for rangers.</p>	<p>(6) Woodside assessment: Woodside acknowledges the value in having trained rangers available in the highly unlikely event of an oil spill and agrees it would be beneficial to an immediate response in an emergency situation. Woodside response: Woodside is reviewing a ranger assistance program and will provide details to YAC once this has matured.</p>	<p>(6) The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes commitments to social investment to support Indigenous Ranger programs, and support for Indigenous oil spill response capabilities.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with YAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside provided YAC with NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 1 September 2023, Woodside commenced consultation with YAC on this EP. Woodside provided YAC:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.

- Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YAC’s interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked YAC to forward the information to its members.
 - Woodside offered to provide more specific information, maps and images to YAC if required.
- Woodside sought direction on YAC’s preferred method of consultation. This resulted in a face to face meeting in the Pilbara between YAC and Woodside on 18 July 2024.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with YAC in September 2023 and provided information on the EP on that date. Woodside and YAC have engaged in consultation for over 16 months, demonstrating a “reasonable period” of consultation.
- A consultation period was communicated to YAC via its legal representative during Woodside’s initial email on 1 September 2023. YAC was asked to provide feedback by 2 October 2023 in line with Woodside’s methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided YAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside notified YAC via its legal representative on 25 September 2024 that it was planning to resubmit the EP. Woodside invited YAC to provide any additional feedback, claims or objections that it would like Woodside to consider as part of its resubmission, giving YAC a two-week period to do so.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside asked for YAC’s input into how YAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for YAC and First Nations groups.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns (See section 3.4).
- Woodside’s initial email about this EP on 1 September 2023:
 - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside’s First Nations Engagement team. Woodside also provided contact details for NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Offered for Woodside to speak with YAC members as well as the YAC Board.
- Asked YAC to advise how it would like Woodside to engage and whether YAC required further information.
- Woodside asked YAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invited YAC to monthly luncheons.
- On September 2024, Woodside provided YAC with an additional two-weeks to provide feedback ahead of Woodside resubmitting the EP.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- During the past 16 months YAC has raised a number of issues, however none of those issues have been relevant to this EP. YAC raised relevant cultural heritage matters during discussions about the overall Scarborough Project in July 2023 (see Summary of Feedback, Objection or Claim 1,2 and 3). These matters have been incorporated into this EP.
- Woodside engages in ongoing consultation once an EP is submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Yindjibarndi Aboriginal Corporation

Context

Yindjibarndi AC is established under the Native Title Act 1993 by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to Yindjibarndi on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with Yindjibarndi who is responsible for building a consultative relationship and is available to provide information and take feedback from Yindjibarndi.

For this consultation, Woodside asked Yindjibarndi how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that Yindjibarndi believed should be consulted and requested that all information shared with Yindjibarndi be cascaded to its members.

Yindjibarndi has informed Woodside that it will not be providing comment on the broader Scarborough Project. Yindjibarndi requested Woodside refer all correspondence about EPs to the Ngarluma Yindjibarndi Foundation Ltd (NYFL).

This context and process demonstrates that Woodside's consultation approach with Yindjibarndi is appropriate and adapted to the nature and interests of Yindjibarndi.

Historical Engagement:

- **(1)** On 26 February 2023, Yindjibarndi emailed Woodside advising that it will not be providing any comment on the broader Scarborough Project and noted it respected the Traditional Owners whose land and sea lies adjacent to, and within the precinct of, the projects, and will leave any comment and advice to be provided by them.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 6 and 7 July 2023, Woodside called Yindjibarndi. During the conversation, Yindjibarndi reiterated it would prefer that comments come from coastal Aboriginal Corporations and not itself.
- On 18 July 2023, Woodside emailed Yindjibarndi NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that Yindjibarndi advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed Yindjibarndi Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.
- **(2)** On 1 August 2023, Yindjibarndi emailed Woodside and asked that Oil and Gas matters relating to Yindjibarndi be directed to NYFL. **(2)** Woodside acknowledged this and adjusted its consultation accordingly.
- *Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.*

Summary of information provided and record of consultation for this EP:

- On 28 August 2023, Woodside emailed Yindjibarndi via NYFL advising of the proposed activity (Record of Consultation, reference 1.31) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Yindjibarndi and its members may have within the EMBA, information on how Yindjibarndi would like to engage, and requested that Yindjibarndi provide information to other individuals as required. The email asked Yindjibarndi to provide feedback before 28 September 2023.

See NYFL on behalf of Yindjibarndi below for record of further engagement.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Yindjibarndi stated it would prefer that Traditional Owner groups with land and sea adjacent to and within the precinct of the Scarborough provide comment.</p>	<p>(1) Woodside assessment: Woodside respects Yindjibarndi's position that Traditional Owners whose land and sea are adjacent to or within the precinct of the projects should be able to provide comment. Woodside response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>(1) Woodside's consultation with Traditional Owner groups with land and sea adjacent to the project area is captured in Appendix F and this Table.</p>
<p>(2) Yindjibarndi has instructed Woodside that it will be represented by NYFL in ongoing discussion about EPs.</p>	<p>(2) Woodside assessment: Woodside accepts Yindjibarndi's right to be represented by NYFL.</p>	<p>(2) Ongoing consultation will be undertaken as set out in Section 7.10.5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: Woodside will engage with NYFL on behalf of Yindjibarndi for ongoing consultation related to this activity.</p>	
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Yindjibarndi for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given Yindjibarndi relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 28 August 2023, Woodside commenced consulting with Yindjibarndi via NYFL on this EP. Woodside's provided Yindjibarndi via NYFL:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of Yindjibarndi's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked Yindjibarndi to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to Yindjibarndi if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with Yindjibarndi in August 2023 and provided information via NYFL on that date. Woodside has corresponded with NYFL over 17 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to Yindjibarndi via NYFL during Woodside's initial email on 28 August 2023. Yindjibarndi was asked to provide feedback by 28 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided Yindjibarndi with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside has asked for Yindjibarndi's input into how it would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for over 17 months. This has included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous newspapers The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (see section 3.2).
- Woodside ran two targeted social media campaigns (See section 3.4).
- Woodside's initial email about this EP on 28 August 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with Yindjibarndi members as well as the Yindjibarndi Board.
 - Asked Yindjibarndi to advise how it would like Woodside to engage and whether Yindjibarndi required further information.
- Woodside asked Yindjibarndi if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 17 months Yindjibarndi has not raised matters relevant to this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of the EP).

Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

Context

BTAC is established under the Native Title Act 1993 by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has been working with BTAC for more than two years. Woodside's consultation approach for Traditional Custodians has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to BTAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with BTAC who is responsible for building a consultative relationship and is available to provide information and take feedback from BTAC.

During consultation for this EP, Woodside consulted via BTAC's CEO and Heritage Manager. During this time, Woodside observed that there were a number of administrative changes at BTAC, including a change of CEO, who had been the point of contact for Woodside. Woodside considered BTAC's consultation preferences and adapted its approach to consulting with BTAC based on BTAC's evolving circumstances.

On 13 October 2023, BTAC appointed a legal representative and requested that Woodside correspond with both the CEO and BTAC's legal representative moving forward. In some instances, during the course of consultation, BTAC's legal representative raised items in relation to legal fees and indemnity agreements. Woodside confirmed it would not action these requests as they did not fall within Woodside's policies and procedures. BTAC's legal representative also maintained a strong focus on agreements rather than consultation. Despite this, Woodside remained open to consult on this EP and consultation for this EP did not cease during this period and was not impeded during this process.

As part of its ongoing consultation and relationship building, Woodside provided BTAC with a 7-page consultation framework agreement which sought from BTAC, confirmation as to how BTAC would like to be consulted, including BTAC's views of what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While an agreement like this is useful to outline consultation norms for BTAC, Woodside has noticed that there appears to be limited appetite from groups like BTAC to enter in a framework agreement that sets this position out in an agreement form. We note, however, that this has not prevented consultation progressing in parallel to discussions on the framework agreement.

It is noted that Sea Country mapping is ongoing even though consultation has been completed for this EP. BTAC's Sea Country has been identified as relating to nearshore islands which are not relevant to this EP which has operations in Commonwealth waters.

This context and process demonstrates that Woodside's consultation approach with BTAC is appropriate and adapted to the nature and interests of BTAC.

Historical Engagement:

- On 20 February 2023, BTAC emailed Woodside a letter in relation to consultation on the broader Scarborough activities including the footprint of this activity. Matters relevant to this EP included:
 - **(1)** BTAC on behalf of the Thalanyji people had an enduring deep connection to Sea Country north of Onslow, extending out to islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel islands.
 - **(2)** BTAC sought support from Woodside to enable it to define and articulate its Sea Country values in a manner that could be more clearly understood by the offshore sector.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 19 July 2023, Woodside emailed BTAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that BTAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed BTAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.
- **(1, 2)** On 31 July 2023, in response to BTAC's request for support, Woodside emailed 3 letters to BTAC, one of which outlined support for an ethnographic assessment to:
 - Identify Sea Country values generally sufficient to inform all Woodside EPs.
 - Identify any work necessary to clarify or define the offshore areas that are relevant to the Thalanyji People.
- *Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.*

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, after a phone call to discuss this EP, Woodside emailed BTAC advising of the proposed activity (Record of Consultation, reference 1.32) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that BTAC and its members may have within the EMBA, information on how BTAC would like to engage, and requested that BTAC provide information to other individuals as required. The email asked BTAC to provide feedback before 2 October 2023.
- On 14 September 2023, BTAC emailed two letters to Woodside (SI Report, reference 32.1, 32.2). The letters
 - Noted the commencement of consultation for a number of EPs, including this EP
 - **(3)** Outlined BTAC's intention to formalise a co-ordinated streamlined approach to progressing meaningful ongoing engagement and consultation about EPs, including this one, through a framework agreement and sought Woodside's agreement to pay BTAC's reasonable costs to progress engagement and consultation matters relating to EPs.
 - Requested a full list of all activities and EPs that Woodside wanted to consult with BTAC about.
- On 14 September 2023, Woodside emailed BTAC noting it would review BTAC's correspondence and respond (SI Report, reference 32.3).
- On 20 September 2023, BTAC emailed Woodside to follow-up on its earlier correspondence (SI Report, references 32.4, 32.5):
- On 22 September 2023, Woodside emailed BTAC (SI Report 32.6). Woodside:
 - **(3)** Attached a signed copy of BTAC's Cost Acceptance Letter.
 - Provided a list of current activities.
 - **(3)** Advised it had prepared a draft consultation agreement that was subject to internal review.
 - Sought a meeting with BTAC.
 - Asked BTAC to contact Woodside if it required further information or assistance.
- On 26 September 2023, BTAC emailed Woodside acknowledging it had received Woodside's email from 22 September 2023. BTAC also confirmed it had retained a legal representative to engage with Woodside and requested that future correspondence relating to EPs be addressed to the legal representative (SI Report, reference 32.7).
- Between 27 September 2023 and 31 October 2023, BTAC's legal representative and Woodside exchanged emails clarifying BTAC's legal representation and matters relating to the content of the draft consultation agreement (SI Report, references 32.8, 32.9, 32.10, 32.11).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 1 November 2023, BTAC emailed Woodside an invitation to present on Woodside activities during a 1-hour slot in the BTAC Common Law Holders meeting on 27 November 2023 (SI Report, reference 32.12).
- On 1 November 2023, Woodside emailed BTAC accepting the offer to present at the Common Law Holders meeting. Woodside offered to assist with meeting arrangements and costs (SI Report, reference 32.13).
- On 2 November 2023, Woodside and BTAC's legal representative exchanged emails relating to the content of the draft consultation agreement that Woodside provided to BTAC (SI Report, references 32.14, 32.15).
- On 3 November 2023, BTAC via its legal representative emailed Woodside about its attendance at the 27 November meeting (SI Report, reference 32.16).
- On 18 November 2023, Woodside emailed BTAC via its legal representative about matters relating to the content of the draft consultation agreement. Woodside advised it remained committed to building ongoing relationships and consulting with BTAC (SI Report, reference 32.17).
- On 27 November 2023, Woodside attended and presented at the BTAC Common Law Holders meeting (SI Report, reference 32.18). Matters relevant to this EP discussed during the meeting include:
 - Woodside presented PowerPoint slides and gave details about:
 - Woodside's activities on Thalanyji country and offshore.
 - EPs that Woodside was consulting on including this EP.
 - Woodside's request to learn about Thalanyji Sea Country values.
 - Woodside offered to meet and further consult about any of the EPs and asked whether there was anyone else Woodside should consult with.
 - **(2)** BTAC advised it was not aware Woodside had previously offered to pay for Sea Country matters. Woodside agreed to re-send relevant correspondence to BTAC's new CEO.
 - BTAC did not request further consultation on any of the EPs.
- **(3)** On 7 December 2023, Woodside emailed BTAC relating to the contents of the draft consultation agreement and attached its *Program of Ongoing Engagement with Traditional Custodians* (SI Report, reference 32.19).
- **(2)** On 7 December 2023, Woodside emailed BTAC forwarding correspondence received from and sent to the previous CEO dated 20 February 2023 and 17 March 2023 relating to Sea Country mapping (SI Report, reference 32.20). The email also confirmed details of Woodside's First Nations Engagement team focal points for BTAC, including for EP consultation.
- **(2)** On 7 December 2023, BTAC emailed Woodside (SI Report, reference 32.21) accepting the offer to take up Sea Country mapping and research, and requested a meeting in the week of 15 January 2024 to plan for upcoming activities, noting EPs in particular.
- Between 8 December 2023 and 11 December 2023, BTAC's legal representative and Woodside exchanged emails relating to legal costs (SI Report, reference 32.22, 32.23, 32.24).
- **(2,3)** Between 11 December 2023 and 12 December 2023, Woodside, BTAC and BTAC's legal representative exchanged emails about the possibility of meeting during the week of 15 January 2024 to discuss Sea Country mapping (SI Report, references 32.25, 32.26). Woodside suggested the meeting be an opportunity to progress the framework agreement, present on the status of current EPs and seek feedback.
- On 15 December 2023, BTAC emailed Woodside requesting a copy of the slide presentation from the meeting of 27 November 2023 (SI Report, reference 32.27).
- On 18 December 2023, Woodside emailed BTAC a copy of the slide presentation as requested from the meeting of 27 November 2023 (SI Report, reference 32.28).
- On 19 December 2023, Woodside emailed BTAC agreeing to meet on 17 January 2024 and provided details of administrative matters relating to costs (SI Report, reference 32.29).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 19 December 2023 and 20 December 2023, BTAC and BTAC's legal representative and Woodside exchanged emails about fees associated with the 17 January 2024 meeting (SI Report, reference 32.30, 32.31).

Ongoing engagement:

- Between 9 January 2024 and 16 January 2024, Woodside and BTAC exchanged emails relating to costs and logistics for the 17 January 2024 meeting (SI Report, reference 32.32, 32.33, 32.44).
- On 17 January 2024, Woodside met with BTAC (SI Report, reference 32.35) Matters relating to this EP include:
 - (2) BTAC wanted to progress Sea Country mapping.
 - (4) BTAC preferred early notice on EPs and planned to form a committee for consultation on EPs.
 - (5) BTAC was interested in employment/training opportunities and opportunities for rangers.
- (5) On 17 January 2024, Woodside emailed BTAC information about training pathways as discussed at the meeting with BTAC on 17 January 2024 (SI Report, reference 32.36).
- (2) On 8 February 2024, Woodside emailed BTAC following up on a quote for Woodside to support BTAC articulating Sea Country values (SI Report, reference 32.37).
- (2) On 8 February 2024, BTAC emailed Woodside noting it had a consultant generating a scope of work for articulating Sea Country values. Woodside responded acknowledging the email (SI Report, references 32.38, 32.39).
- (3) On 28 February 2024, Woodside emailed BTAC with a letter setting out the draft terms of an agreement between BTAC and Woodside (SI Report, reference 32.40). The purpose of the agreement was to seek input from BTAC on its preferred method of consultation. The agreement (among other things) included the following topics:
 - Confirmation of what is sufficient information for BTAC for consultation.
 - Confirmation of what is a reasonable period for consultation.
 - BTAC's preferred method for provision of information.
 - BTAC's preferred method for providing objections or claims.
 - How information is published in the EP.
 - Cost and termination of the agreement.
- On 28 February 2024, BTAC's legal representative and Woodside exchanged emails about legal costs (SI Report, reference 32.41, 32.42).
- (4) On 11 March 2024, BTAC via a legal representative emailed Woodside to advise it had appointed a Woodside NOPSEMA Engagement Committee (SI Report reference 32.43)
- Between 15 April 2024 and 22 April 2024, BTAC and Woodside exchanged emails to confirm Woodside would attend a meeting with BTAC Directors on 22 May 2024 (SI Report, references 32.44, 32.45, 32.46, 32.47).
- (2) On 22 May 2024, Woodside met BTAC. (SI Report, reference 32.48) During the discussion Woodside reiterated its commitment to supporting BTAC articulate Sea Country Values. Woodside advised it had provided proposals to BTAC and was awaiting a response.
- On 13 June 2024, Woodside emailed BTAC seeking an update on how Woodside could assist BTAC in articulating Sea Country Values (SI Report, reference 32.49)

- **(2)** Between 19 June 2024 and 31 July 2024, Woodside and BTAC exchanged emails about BTAC’s proposed scope for Sea Country mapping (SI report, references 32.50, 32.51, 32.52, 32.53, 32.54, 32.55). Sea Country mapping will be ongoing even though consultation on this EP has closed. It is noted that BTAC’s Sea Country has been identified as relating to nearshore islands which are not relevant to this EP which has operations in Commonwealth waters.
- On 9 September 2024, Woodside invited BTAC to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 32.56).
- On 25 September 2024 and 26 September 2024, Woodside emailed BTAC a consultation update on this EP (SI Report, references 32.57, 32.58). The emails:
 - Updated BTAC about the consultation history of the EP including that Woodside began consultation on 1 September 2023.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Confirmed information provided by BTAC during consultation.
 - Acknowledged that discussions relating to the framework agreement were ongoing, and that consultation for this EP has occurred in parallel.
 - Confirmed Woodside had provided sufficient information, allowed a reasonable period of time for consultation and given BTAC a reasonable opportunity to provide feedback.
 - Invited BTAC to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside provided the date of Friday 4 October as the deadline for this feedback (this date was amended to 9 October 2024 in a subsequent email).
 - Provided contact details for Woodside and NOPSEMA.
 - Confirmed that Woodside would accept feedback for the life of the EP.
- On 3 October 2024, Woodside invited BTAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 32.59).
- On 18 November 2024, Woodside emailed BTAC in relation to a meeting that had occurred on 15 November 2024 about a matter not related to this EP (SI Report, reference 32.60). Matters relating to this EP included:
 - **(2)** Woodside and BTAC would finalise a sea country mapping scope.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) BTAC has a cultural obligation to care for the environmental values of Sea Country. BTAC’s interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Mackerel Islands.</p>	<p>(1) Woodside assessment: Woodside assessed BTAC’s cultural obligation to care for environmental values of Sea Country to represent potential cultural values. The nearshore islands identified by BTAC do not fall within the EMBA. Woodside response: Updated relevant sections in the EP to record interests and potential cultural values and assessed the potential impact on these and included controls. The islands will not be impacted by the activities set out in the EP and Sea Country mapping will therefore continue even though consultation for this EP is closed.</p>	<p>(1) Woodside has recorded BTAC’s interests and potential cultural values in Section 4.9 and assessed potential impact on these, including controls, in Section 6.10.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) BTAC does not have its values regarding Sea Country recorded in a format that could be articulated for consultation. BTAC sought support from Woodside to enable BTAC to obtain technical advice relating to the proposed activities and to define and articulate its values on Sea Country in a manner that could be more clearly understood by the offshore sector, government, and the community.</p>	<p>(2) Woodside assessment: Completion of an ethnographic assessment is not required to undertake or complete consultation under regulation 25 of the Environment Regulations and/or for a comprehensive description of the environment. Woodside has developed an understanding of Thalanyji Sea Country cultural values and features in absence of an ethnographic assessment by consulting with BTAC, by reviewing literature and from a history of working in the region. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be reviewed, assessed and where appropriate, Woodside will apply its Management of Change and Revision process (see section 7.2.7.2)</p> <p>Woodside response: Woodside has agreed to support BTAC to articulate and record its Sea Country values which will assist with other engagements and assessments outside of this EP. It is noted that BTAC's Sea Country relates to nearshore islands which are not relevant to this EP.</p>	<p>(2) Woodside has taken all reasonable steps to identify cultural features and heritage features of Thalanyji people within the EMBA. This is described in Section 4.9, with potential impacts to Cultural Features and Heritage Values assessed in Section 6.10. PS 24.2.1 ensures that potential impacts to newly identified cultural values is managed to ALARP and Acceptable levels.</p>
<p>(3) BTAC proposed a Consultation Agreement as an appropriate mechanism to provide ongoing feedback to Woodside regarding its activities. This agreement would include appropriate cost recovery.</p>	<p>(3) Woodside assessment: Woodside supports reasonable requests for funding to support consultation activities. An agreement with BTAC aligns with Woodside's Program of Ongoing Engagement with Traditional custodians and will frame ongoing consultation processes.</p> <p>Woodside response: Woodside continues to work with BTAC on the 7-page draft agreement, although a request for a consultation agreement is not a pre-requisite for consultation under regulation 25 of the Environment Regulations. The agreement will be used to frame ongoing consultation during the life of the EP. Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members.</p>	<p>(3) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.</p>

<p>(4) BTAC requested early notification on EPs and is interested in forming a committee for ongoing consultation on EPs.</p>	<p>(4) Woodside assessment: . Woodside is supportive of BTAC's initiative to form a committee for ongoing consultation on EPs going forward. As described in the summary above, Woodside has afforded sufficient information and reasonable time for BTAC to provide feedback in the course of preparing this EP Woodside response: Woodside supports ongoing consultation with BTAC. A draft Consultation Framework Agreement has been sent to BTAC for review and for BTAC to propose inclusions regarding a consultation committee approach.</p>	<p>(4) Not required.</p>
<p>Woodside has addressed objections or claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on BTAC's functions, interests or activities. Based on the engagement to date, no additional controls have been identified.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with BTAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided BTAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters (see 18 July 2023).
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 1 September 2023, Woodside commenced consultation with BTAC on this EP. Woodside provided BTAC:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of BTAC's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked BTAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to BTAC if required.
- Further information was provided to BTAC during an in-person meeting on 27 November 2023. This meeting was attended by the BTAC CEO, Board, members and common law holders. Members from Woodside's First Nations Team (including BTAC's assigned focal person for EP consultation) and environmental subject matters experts were available to answer all questions and provide specialist information on this EP.
- A further email summarising BTAC's feedback and advising proposed resubmission dates for this EP was sent on 25 September 2024. Woodside also acknowledged that consultation framework agreement discussions with BTAC were ongoing but that EP consultation including for this EP had progressed in parallel.

It is noted that Sea Country mapping is ongoing even though consultation has been completed for this EP and may be useful for BTAC in consultation on other EPs and in other forums. In any event, BTAC's Sea Country has been identified as relating to nearshore islands which are not relevant to this EP.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with BTAC in September 2023 and provided information on the EP on that date. Since then, Woodside and BTAC have engaged in consultation for over 16 months, demonstrating a "reasonable period" of consultation, where a genuine two-way dialogue has occurred through both written and face-to-face exchanges on this activity.
- A consultation period was communicated to BTAC during Woodside's initial email on 1 September 2023. BTAC was asked to provide feedback by 2 October 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided BTAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside commenced consultation with BTAC in September 2023. Woodside has addressed and responded to BTAC queries over 16 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

- A reasonable period for consultation in the preparation of this EP has been provided because:
- Woodside asked for BTAC's input into how BTAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on the EP publicly available for over 17 months. This included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (see section 3.2).
- Woodside ran two targeted social media campaigns (see section 3.4).
- Woodside's initial email about this EP on 1 September 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with BTAC members as well as the BTAC Board.
 - Asked BTAC to advise how it would like Woodside to engage and whether BTAC required further information.
 - Woodside asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Throughout the consultation period (and following submission of the EP for assessment), Woodside and BTAC have exchanged multiple emails, had phone calls and met on a number of occasions. BTAC also has a legal representative who is able to support BTAC through the consultation process.
- Woodside met with BTAC on 27 November 2023. This meeting was attended by Woodside's First Nations Team and environmental subject matter experts who were available to answer all questions and provide specialist information this EP. BTAC attendees did not request further consultation on this EP at the conclusion of this meeting or afterwards. Woodside has not received any further requests from BTAC in relation to this EP.
- On 25 September 2024, Woodside provided BTAC with an additional two-weeks to provide feedback ahead of Woodside resubmitting the EP.
- Woodside invites BTAC to monthly luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BTAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated BTAC's interests and potential cultural values in Section 4.9 and assessed potential impact on these, including controls, in Section 6.10.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of the EP).

It is noted that Sea Country mapping is ongoing even though consultation has been completed for this EP. BTAC's Sea Country has been identified as relating to nearshore islands which are not relevant to this EP which has operations in Commonwealth waters.

Robe River Kuruma Aboriginal Corporation (RRKAC)

Context

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

RRKAC is established under the Native Title Act 1993 by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of their cultural values.

Woodside had an existing relationship with RRKAC which extends prior to consulting on this EP. Woodside has assigned a First Nations Engagement team member as a focal point to RRKAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

During consultation for this EP, RRKAC has asked for assistance with resourcing and has taken time to recruit subject matter experts to assist with consultation. Woodside's focus has been on supporting RRKAC through this period whilst enabling RRKAC to remain informed about Woodside's activities, including activities proposed to be undertaken for this EP. Aside from regular consultation about EPs, Woodside invites RRKAC to monthly luncheons.

Summaries of the consultation between RRKAC and Woodside as well as an assessment of the merits of the objections or claims made by RRKAC about the adverse impact of the activity under this EP (if any) is set out below. Following that is a brief, high level summary. The full text is included in the Sensitive Information report.

Historical Engagement:

- On 9 March 2023, following notification of the broader Scarborough Project, RRKAC emailed Woodside (and copied in the CEO of Wirrawandi Aboriginal Corporation (WAC)). RRKAC advised:
 - It had discussed the proposed activities with the Robe River Kuruma Heritage Advisory Committee and recommended that the interests of Robe River Kuruma people were best served through the joint Heritage Advisory Committee (HAC) under the Yaburara Mardudhunera and Kuruma Marthudunera Indigenous Land Use Agreement.
 - HAC/WAC facilitated this Committee and noted there was an emerging need to deal with other proponent matters, so there is an opportunity to link the engagement from a meeting efficiency perspective.
- On 31 March 2023, Woodside met with HAC/WAC and presented on several activities including the Scarborough Project (D&C, SITI, Seismic and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity under this EP).
- On 19 July 2023, Woodside emailed RRKAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also requested that RRKAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed RRKAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of historic consultation on Scarborough project EPs.

Summary of information provided and record of consultation for this EP:

- On 29 August 2023, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 1.33) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that RRKAC and its members may have within the EMBA, information on how RRKAC would like to engage in consultation, and requested that RRKAC provide information to other individuals as required. The email asked RRKAC to provide feedback before 29 September 2023.
- **(1)** On 15 September 2023, RRKAC emailed Woodside requesting Woodside fund additional resources for RRKAC to engage in consultation and respond (SI Report, reference 27.1).
- **(1)** On 18 September 2023, Woodside emailed RRKAC twice about funding available to enable RRKAC to engage in consultation (SI Report, references 27.2 and 27.3).
- On 18 September 2023, Woodside emailed RRKAC an advertisement about community drop-in sessions (SI Report 27.4). The advertisement invited relevant persons to consult with Woodside, receive information about EPs and discuss their functions, activities and interests which may be affected.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1) On 14 November 2023, Woodside emailed RRKAC offering to meet at a location of RRKAC's choosing to discuss support RRKAC needed in order to engage in EP consultation. Woodside noted that Traditional Owner input was sought in order for the EPs to capture relevant cultural values or interests (SI Report, reference 27.5).
- On 14 November 2023, RRKAC emailed Woodside and advised it would provide Woodside the most appropriate team member to progress consultation (SI Report, reference 27.6).
- On 16 November 2023, Woodside emailed RRKAC and advised it would await its response (SI Report, reference 27.7).
- On 19 December 2023, Woodside emailed RRKAC reiterating that Woodside was available if RRKAC or any other relevant persons required further information or consultation sessions on any Woodside project (SI Report, reference 27.8).

Ongoing engagement:

- On 11 January 2024, Woodside and RRKAC, held a telephone discussion (SI Report, reference 27.9). RRKAC advised:
 - It had recently employed new personnel. RRKAC noted that once the new employees were settled in, RRKAC would be happy to consult with Woodside on relevant EPs.
 - (2) Some RRKAC country was on the coast (and may potentially be affected by an oil spill or another such environmental incident). It felt that EMBA's were too broad, and covered too large of an area.
- On 5 March 2024, RRKAC emailed Woodside noting it expected to fill a team position who would be able to respond to EP matters. Woodside replied acknowledging RRKAC's email (SI Report, references 27.10, 27.11).
- On 20 March 2024, Woodside and RRKAC held an online meeting (SI report 27.12). Matters discussed that relate to this EP included:
 - Woodside outlined the purpose of engagement with Traditional Owner groups and PBCs and explained the roles of the First Nations Engagement team.
 - Woodside explained that Traditional Owner participation and feedback was important to the preparation of EPs.
 - (2) Woodside gave an overview of Environment Plans
 - Discussed Sea Country subsea mapping.
 - RRKAC would advise Woodside on future meeting opportunities.
- (1) On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 27.13) to follow-up on the meeting, and to outline the upcoming activities for consultation, that reasonable financial support is available for meetings for the purpose of enabling RRKAC consultation, to ask for guidance on preferred next steps, and to provide Woodside's Program of Ongoing Engagement.
- On 5 April 2024, Woodside emailed RRKAC to follow-up on previous emails on other activities, to request an opportunity to introduce engagement staff, and to provide RRKAC with information it required more information (SI Report, reference 27.14).
- (3) On 4 July 2024 RRKAC emailed Woodside in response to a different EP (SI Report, reference 27.15). In the email RRKAC enquired about the potential for a bathymetric survey of the coastal shelf involving coastal groups.
- On 5 July 2024, Woodside emailed RRKAC (SI Report, reference 27.16). In the email Woodside:
 - (3) Acknowledged RRKAC's enquiry about a bathymetric survey and advised it would respond.
 - Enquired how RRKAC would like to receive information about EPs.
 - Noted that Woodside wanted to support RRKAC so it remained informed on Woodside's activities.

<ul style="list-style-type: none"> - Again offered to meet RRKAC to consult on activities. • On 29 July 2024, Woodside emailed RRKAC (SI Report, reference 27.17). In the email Woodside: <ul style="list-style-type: none"> - (3) Advised Woodside had no current plans to conduct regional bathymetric surveys but offered to meet RRKAC to discuss other available datasets covering coastal regions as well as Woodside’s own mapping of deeper water areas. - Stated that Woodside was willing to provide additional information and data to assist RRKAC participate in consultation. - Noted Woodside’s endeavour to provide opportunities for traditional landowners during consultation on its Environment Plans in a manner that respects and incorporates the knowledge and traditions of the Robe River Kurama people. - Offered for RRKAC to meet with Woodside’s survey and geospatial focal persons to discuss the datasets and generate information that might be useful to RRKAC. • On 9 September 2024, Woodside invited RRKAC to share stories and receive updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 27.18). • On 3 October 2024, Woodside invited RRKAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners (SI Report, reference 27.19). • On 11 December 2024, Woodside became aware via a social media post from RRKAC that due to the recent passings of two significant Elders cultural grieving protocols were underway (SI Report, reference 27.20). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) RRKAC has requested Woodside fund additional resources so RRKAC can fully engage and respond</p>	<p>(1) Woodside assessment: Woodside supports reasonable requests for funding from Traditional Owners to engage in consultation. Woodside response: Woodside has offered to meet RRKAC to discuss how it can support RRKAC with consultation. Woodside has informed RRKAC that reasonable financial support is available for meetings</p>	<p>(1) The proposed Framework Agreement described in the Program of Ongoing Engagement with Traditional Custodians (Appendix G) addressed appropriate resourcing issues that RRKAC has noted.</p>
<p>(2) RRKAC noted it feels that EMBAs are too broad, and the areas covered by EMBAs are too big and unfeasible.</p>	<p>(2) Woodside assessment: Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside response:</p>	<p>(2) Woodside has addressed oil spill preparedness and response strategy in Appendix H.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	During consultation about EPs Woodside has explained to RRKAC how EMBA's are determined. The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP, and Appendix H.	
(3) RRKAC enquired about the potential for a bathymetric survey of the coastal shelf involving coastal groups.	(3) Woodside assessment: Woodside has no plans to conduct regional bathymetric surveys. Woodside response: Woodside has offered to meet RRKAC to discuss publicly available datasets covering coastal regions as well as Woodside's own mapping of deeper water areas.	(3) No action required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on RRKAC's functions, interests or activities. Based on the engagement to date, no additional controls have been identified.

Summary Report | Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with RRKAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information:

Sufficient information has been provided because:

- On 19 July 2023, Woodside emailed RRKAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 26 July 2023, Woodside emailed RRKAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*, providing information on how Woodside supports ongoing consultation with First Nations groups.
- In August 2023 Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 29 August 2023, Woodside commenced consulting with RRKAC on this EP. Woodside's email to RRKAC included:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity
 - Maps showing the location and EMBA
 - Diagrams
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of RRKAC's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside invited RRKAC to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided AC NOPSEMA's contact information.
 - Woodside asked RRKAC to forward the information to its members and offered to speak to RRKAC members as well as the RRKAC Board.
 - Woodside offered to provide more specific information, maps and images to RRKAC if required.
- Woodside advised RRKAC that reasonable financial support was available for meetings for the purpose of consultation.
- Woodside provided RRKAC with details about community drop-in sessions where RRKAC could learn more about EPs including this one.

Reasonable Period:

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside published advertisements in Indigenous, national, state, and relevant local newspapers including The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023), The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with RRKAC in August 2023. Woodside has responded to BTAC over 17 months, demonstrating a "reasonable period" of consultation, where a genuine two-way dialogue has occurred on this activity.
- A clear consultation period was communicated to RRKAC during Woodside's initial email on 29 August 2023. RRKAC was asked to provide feedback by 29 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided RRKAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside commenced consultation with RRKAC in August 2023. Woodside has addressed and responded to RRKAC queries over 17 months, demonstrating a "reasonable period" of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity:

RRKAC has been provided a reasonable opportunity to provide feedback because:

- Woodside published eight advertisements in national, state, local and Indigenous newspapers (See section 3.2).
- Woodside ran two targeted social media campaigns (See section 3.4).
- Woodside sent the initial email about this EP on 29 August 2023:
 - Included email addresses and telephone numbers for a Woodside focal point and NOPSEMA.
 - Offered for Woodside to speak with RRKAC members as well as the RRKAC Board.
 - Asked RRKAC to advise how it would like Woodside to engage and whether RRKAC required further information.
 - Woodside asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invited RRKAC to monthly luncheons.

Outcomes of Consultation:

- During the past 14 months, RRKAC has not raised matters relevant to this EP.
- Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on RRKAC's functions, interests or activities.

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

Context

NTGAC is established under the Native Title Act 1993 by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NTGAC that extends to a period prior to consultation for this EP. Woodside's consultation approach for NTGAC and Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NTGAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with NTGAC who is responsible for building a relationship and is available to provide information and take feedback.

Aside from regular consultation about EPs, Woodside invites NTGAC to Woodside's Quarterly Heritage Meetings and monthly Community Luncheons. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs during its engagement with NTGAC, including on this EP.

YMAC is the Native Title Representative Body (NTRB) for the Aboriginal corporations in the Yamatji and Pilbara regions, including NTGAC. NTRBs exist to provide assistance to native title claimants and holders in relation to their native title rights. No native title has been recognised over the Project Area, however YMAC is identified in the North-west Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

YMAC provides NTGAC with legal and administrative assistance. NTGAC has worked with an environmental scientist to understand this EP and enable consultation on it (see correspondence from NTGAC dated 6 September 2023).

As part of its ongoing consultation and relationship building, Woodside provided NTGAC with a 7-page consultation framework agreement which sought from NTGAC, confirmation as to how NTGAC would like to be consulted, including NTGAC's views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation (see 28 February 2024). While an agreement like this is useful to outline consultation norms for NTGAC, Woodside has noticed that there appears to be limited appetite from groups like NTGAC to enter in a framework agreement that sets this position out in an agreement form. While Woodside has continued to attempt to progress the framework agreement, despite numerous attempts, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation on this EP from progressing in parallel to discussions on the framework agreement (See August 2023, September 2023 and September 2024).

This context and process demonstrates that Woodside's consultation approach with NTGAC is appropriate and adapted to the nature of and interests of NTGAC.

Historical Engagement:

- On 19 July 2023, Woodside emailed NTGAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NTGAC via YMAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*, noting that Woodside's Program would complement what is proposed in NTGAC's proposed Framework.
- On 15 August 2023, Woodside met with NTGAC/YMAC. Matters discussed that relate to this EP include:
 - Woodside provided an update and overview of the Scarborough Project including activities relating to this EP.
 - Woodside asked:
 - How could these activities impact your cultural values, interests, and activities – does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
 - NTGAC/YMAC asked the following questions and gave the following feedback:
 - **(1)** YMAC asked about whale sightings and response.
 - **(1)** Woodside advised that response depended on activity and controls. Woodside also confirmed that a control for this EP is that Marine Mammal Observers are engaged for whale sightings.
 - **(2)** NTGAC asked about ballast water discharges.
 - **(2)** Woodside described ballast water discharge management and also that there are controls in place to manage the risk of introduction of invasive Marine Species.
 - **(3)** A proposed framework for consultation was discussed, involving Woodside funding a General Project Report to be written by an independent, suitably qualified and experienced consultant. The report would outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities.
 - Terms for ongoing engagement were discussed, including frequency, participation, and content in context of the proposed General Project Report.
 - **(4)** NTGAC stated that information provided on consultations for other EPs had been technical and too difficult to understand for consultation purposes.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 August 2023, Woodside emailed NGTAC via YMAC providing a copy of the presentation from the meeting of 15 August 2023. Woodside communicated its understanding of next actions:
 - (3) YMAC would provide a first draft of a consultation agreement. Woodside offered to provide support or a first draft if NTGAC desired. Woodside noted that consultation activities would continue prior to the consultation agreement being finalised. Woodside would send emails of notification so that NTGAC was kept up to date with Woodside's activities and so that Woodside was available to provide further information if required by NTGAC.
 - (4) Woodside acknowledged NTGAC's feedback about the appropriateness of information provided (too technical) and would work with NTGAC to develop the process further. Woodside confirmed that consultation had commenced and was ongoing.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed NTGAC via YMAC advising of the proposed activity (Record of Consultation, reference 1.34) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The Consultation Summary Information Sheet contained plain English and had been reviewed by a member of Woodside's First Nations team so that the content was clear. The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required. Woodside requested feedback by 2 October 2023.
- On 6 September 2023, NTGAC via YMAC emailed Woodside acknowledging the information and noted it had passed the information to its environmental scientist (SI Report, reference 31.1).
- (3) On 14 December 2023, Woodside emailed YMAC attaching the Program of Ongoing Engagement and advised that Woodside wanted to progress negotiations on consultation frameworks with groups represented by YMAC (including NTGAC) (SI Report, reference 31.2). Woodside proposed the protocol would include (among other things):
 - The procedures Woodside would follow when a submission required consultation.
 - Initial and ongoing consultation in relation to activities.
 - (4) Agreement as to how Woodside would provide NTGAC with the information NTGAC required.
 - Agreement as to how NTGAC would provide feedback and how that could best be represented in EPs.
 - An agreed schedule of rates to support NTGAC's participation in consultation.
 - How the outputs of the consultations would be managed, assessed and incorporated in the EP by Woodside (if required).

Ongoing engagement:

- (3) On 28 February 2024, Woodside emailed NTGAC via YMAC with a letter setting out the draft terms of a 7-page agreement between NTGAC and Woodside (SI Report, reference 31.3). The purpose of the agreement was to seek input from NTGAC on its preferred method of consultation. The agreement (among other things) sought NTGAC's input on:
 - what is sufficient information for NTGAC for consultation.
 - what is a reasonable period for NTGAC for consultation.
 - NTGAC's preferred method for provision of information.
 - NTGAC's preferred method for providing objections or claims.

- How information is to be published in the EP.
- Costs to support consultation and termination of the agreement.
- On 29 February 2024, YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 31.4).
- On 16 May 2024, Woodside emailed NTGAC via YMAC to request potential availability to meet with the NTGAC Board as it had EPs due for release to discuss (SI Report, reference 31.5).
- On 21 May 2024 Woodside and NTGAC via YMAC exchanged emails on the possibility of meeting with the NTGAC Board in July. NTGAC noted that the Board had a relatively full agenda and it would respond with confirmation of its availability (SI Report, references 31.6, 31.7, 31.8).
- On 19 June 2024, Woodside emailed NTGAC via YMAC and again requested an opportunity to meet to discuss EPs open for consultation (SI Report 31.9).
- On 27 June 2024, Woodside emailed NTGAC via YMAC and requested an update on its review of the Consultation Framework Agreement provided on 25 February 2024 (SI Report, reference 31.10).
- **(3)** On 28 June 2024, NTGAC via YMAC emailed Woodside (SI Report, reference 31.11). In the email NTGAC:
 - Noted there had been a break in communication about the consultation agreement and thanked Woodside for its patience on the matter.
 - Requested a Word version of the draft consultation agreement.
 - Noted it would advise Woodside about the next NTGAC Board of Directors meeting.
 - Provided a cost estimate.
- On 1 July 2024 and 10 July 2024, Woodside and NTGAC via YMAC exchanged emails about a Word version of the agreement and future meeting dates (SI report, references 31.12, 31.13).
- Between 30 July 2024 and 20 August 2024 Woodside and NTGAC via YMAC exchanged emails about a meeting scheduled for 12 September 2024 (SI report, references 31.14, 31.15, 31.16, 31.17).
- On 6 September 2024, Woodside spoke to NTGAC on the phone (SI Report, reference 31.18). Matters discussed relevant to this EP include:
 - The agenda for the 12 September 2024 meeting including EPs intended to be presented.
 - NTGAC thanked Woodside for efforts in making a personal connection.
- **(3)** On 10 September 2024, NTGAC via YMAC emailed Woodside a proposed agenda for its meeting on 12 September 2024 (SI report 31.19). NTGAC noted that it would respond to EP presentations and provide comments on Woodside's draft consultation protocol.
- Between 10 September 2024 and 11 September 2024, Woodside and NTGAC via YMAC exchanged emails relating to logistics of the 12 September 2024 meeting (SI Report, references 31.20, 31.21, 31.22, 31.23, 31.24).
- On 12 September 2024, Woodside and NTGAC had a meeting (SI Report reference 31.25). Matters discussed relating to this EP include:
 - Woodside confirmed attendees were familiar with EPs and NOPSEMA. Attendees acknowledged they were.
 - Woodside discussed this EP noting it was under assessment with NOPSEMA and that consultation had commenced in August 2023.
 - Woodside invited attendees to provide further feedback by 27 September 2024 as part of the resubmission of this EP.

- Woodside provided an overview of the activity and EMBA of this EP.
- NTGAC queried the use of dry gas. Woodside explained this concept and offered to run a workshop to explain further.
- The group had no further questions.
- On 25 September 2024, Woodside emailed NTGAC via YMAC a consultation update on this EP (SI Report, reference 36.26). The email:
 - Updated NTGAC about the consultation history of the EP including that Woodside began consultation on 1 September 2023
 - Attached the initial communication sent to NTGAC on 1 September 2023 and Summary Information Sheet.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Acknowledged that consultation framework agreement discussions with NTGAC were ongoing but that EP consultation including for this EP had progressed in parallel.
 - Invited NAC to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside provided the date of Friday 4 October as the deadline for this feedback.
 - Provided contact details for Woodside and NOPSEMA.
 - Provided an attachment containing information NTGAC had provided to Woodside during consultation which had been incorporated into this EP.
- On 26 September 2024, Woodside emailed NTGAC via YMAC advising the feedback date for this EP had been extended from 4 October to 9 October 2024 (SI Report, reference 31.27).
- On 26 September 2024, NTGAC via YMAC emailed Woodside to thank it for the updated information about this EP but did not otherwise provide any feedback, claim or objection about it (SI Report, reference 31.28).
- On 3 October 2024, Woodside emailed NTGAC an invitation to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 31.29).
- On 2 November 2024, Woodside attended the Dampier Markets and engaged with relevant persons from NTGAC. Woodside discussed EPs generally (SI Report, reference 31.30).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) NTGAC requested further information about whale sightings and response.</p>	<p>(1) Woodside assessment: Woodside has controls in place that address whale sightings and response. Woodside response: Marine Mammal observers are in place during relevant activity and vessel speed management controls are in place at relevant times.</p>	<p>(1) Potential impacts to marine fauna are assessed in Section 6.8.10 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) NTGAC requested further information about ballast water discharges.</p>	<p>(2) Woodside assessment: Woodside has controls in place to manage risks associated with unplanned ballast water exchange. The controls will be implemented during and prior to the PAP. Woodside response: Woodside considers the adopted controls appropriate to manage the risks of invasive marine species to ALARP and an acceptable level.</p>	<p>(2) Potential impacts from ballast water transfer are assessed in Section 6.8.12 of the EP.</p>
<p>(3) NTGAC is developing the first draft of a Consultation Agreement, and General Report. The proposal for the General Report is that it would outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities.</p>	<p>(3) Woodside assessment: An agreement with NTGAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. The agreement and General Report/s would be used to frame ongoing consultation to occur as part of Woodside's post EP preparation consultation. Woodside response: Woodside continues to progress the agreement with NTGAC, the draft agreement terms sent to NTGAC in March 2024, will be used to frame future EP consultation as well as ongoing consultation during the life of the EP.</p>	<p>(3) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with NTGAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>
<p>(4) On 15 August 2023 (before consultation officially began on this EP) NTGAC stated that information provided on previous EPs had been too technical and that timeframes were not sufficient.</p>	<p>(4) Woodside assessment: In order to assist consultation, Woodside met with NTGAC nominated representatives, at location of NTGAC's choice on 15 August 2023 and 12 September 2024 for multiple hour sessions where activities relating to Scarborough EPs were described face to face by Woodside project representatives, subject matter experts and First Nations relations advisers (see Section 5 in the EP for approach). This included specifically developed "plain English" material developed by First Nations personnel in collaboration with technical experts, maps and pictures. During the meeting, NTGAC and YMAC representatives were encouraged to control the pace of the engagement and seek clarification when needed. Attendees were asked through the presentations if there were any questions or further information was required. NTGAC and YMAC asked</p>	<p>(4) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to take feedback following acceptance of the EP, as set out in Section 7.10.5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>questions about the activity (see (1, 2) above) which indicates that material was engaged with. Woodside has also provided funding support for YMAC's in-house environmental scientist to enable consultation</p> <p>Woodside response: Woodside does not agree with NTGAC's claim that it has not been consulted on this activity, or, given the simplified information sheets and face-to-face meetings, that information provided has been too technical to consult on.</p>	
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on NTGAC's functions, interests or activities.</p> <p>Based on the engagement to date, no additional controls have been identified.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside provided NTGAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In August 2023, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 1 September 2023, Woodside commenced consultation with NTGAC on this EP. Woodside provided NTGAC:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information sheet. Following previous feedback from NTGAC, this Summary Information sheet was developed specifically for First Nations groups and reviewed by a Woodside First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing
 - Maps showing the location and EMBA
 - A summary of the risks and impacts of the activity
 - Diagrams
 - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NTGAC's interests and how the activity could potentially impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked NTGAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to NTGAC if required.
- Woodside provided further information to NTGAC addressing its functions, interests and activities during a face-to-face meeting in the Pilbara on 15 August 2023 (this meeting discussed the overall Scarborough project including matters relevant to this activity), 12 September 2024 and by emailing a consultation update on 25 September 2024.
- Woodside sought direction on NTGAC's preferred method of consultation for the overall Scarborough Project. This led to a meeting on 15 August 2023. As per a request from NTGAC, Woodside funded a YMAC lawyer to attend this meeting with NTGAC so as to enable consultation. This assisted in ensuring any technical information was provided in a way which allowed NTGAC to make an informed assessment of the possible consequences of the activities on the functions, interests or activities. On 6 September 2023, NTGAC via YMAC informed Woodside that information relating to this EP had been passed on to YMAC's environmental scientist for assessment.
- When Woodside enquired on 25 September 2024 whether further information was required on this EP, NTGAC did not respond seeking anything further.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with NTGAC in September 2023 and has provided further information on the EP on that date. Since then, Woodside and NTGAC have engaged in consultation over a 16 month period demonstrating a "reasonable period" of consultation, where a genuine two-way dialogue has occurred during both written and face-to-face exchanges on this EP.
- A consultation period was communicated to NTGAC during Woodside's initial email on 1 September 2023. NTGAC was asked to provide feedback by 2 October 2023 in-line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided NTGAC with more than four months to consult ahead of Woodside preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

- A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside asked for NTGAC's input into how NTGAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for NTGAC and First Nations groups more generally.
- Woodside has made information on this EP publicly available for more than 17 months. This has included publishing advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of the activity and EP (See section 3.4).
- Woodside has an existing relationship with NTGAC and both Woodside and NTGAC commonly use email to consult and correspond. Woodside also engages with NTGAC in face-to-face meetings, at forums and in phone calls.
- Woodside's initial email about this EP on 1 September 2023:
 - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
 - Offered for Woodside to speak with NTGAC members as well as the NTGAC Board.
 - Asked NTGAC to advise how it would like Woodside to engage and whether NTGAC required further information.
- Woodside met with NTGAC on 15 August 2023 to discuss the overall Scarborough Project including matters relating to this EP and met with NTGAC again on 12 September 2024. The meeting was attended by Woodside's First Nations Engagement team focal person and an environmental subject matter expert who answered questions and provided specialist information on this EP. This was done deliberately so that information could be provided to NTGAC in a way that enabled NTGAC to understand the information (in a time frame and with questions controlled by NTGAC).
- Woodside asked NTGAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During consultation about the Scarborough Project NTGAC has requested:
 - Information about whale sightings and response. Woodside has assessed potential impacts to marine fauna in Section 6.8.11 of the EP. Controls already in place in the EP are appropriate to manage the risks and impacts associated with whales.
 - Information about ballast water discharges. Woodside has assessed potential impacts from ballast water transfer in Section 6.8.12 of the EP. Controls already in place in the EP are appropriate to manage the risks and impacts associated with ballast water discharges.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Native Title Representative Bodies

Yamatji Marlpa Aboriginal Corporation (YMAC)

Context

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, it is not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community. Rather, YMAC exists to assist native title claimants and holders.

In March 2023, YMAC notified Woodside that it was a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. YMAC confirmed it did not intend to provide substantive comment on the content of EPs.

YMAC provides administrative and legal assistance to NTGAC, a group identified as a relevant person for this EP. Woodside has consulted with YMAC in this capacity.

Woodside has an existing relationship with YMAC that extends to a period prior to consulting on this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to YMAC on 25 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with YMAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

In June 2023, YMAC requested Woodside enter into a draft consultation framework and fund an in-house position to assist YMAC's clients including NTGAC in consultation on EPs. In response to this request, Woodside provided YMAC with a 7-page draft consultation framework in February 2024 which sought confirmation from YMAC as to how it would like to be consulted, including its views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While Woodside has continued to attempt to progress the framework agreement, despite numerous attempts, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation on this EP from progressing in parallel to discussions on the framework agreement.

For consultation on this EP, Woodside contacted YMAC offering an opportunity to present to the YMAC Board. Woodside asked YMAC how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that YMAC believed should be consulted and requested that all information shared with YMAC be cascaded to its members.

This Context and process demonstrates that Woodside's consultation approach with YMAC is appropriate and adapted to the nature and interests of YMAC.

Historical Engagement:

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough Project area, including but not limited to the scope of this EP and nearby marine parks:
 - Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.
 - Woodside noted that YMAC was identified in the North West Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if the cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough Project areas.
 - Woodside requested advice from YMAC on how best (in addition to work completed) to identify cultural values in the Marine Parks and in the broader project footprint.
 - YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
- **(1)** On 19 July 2022, in response to an enquiry from Woodside, YMAC emailed Woodside stating the Scarborough Project area requires correspondence directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation. **(1)** Woodside noted YMAC's feedback and consulted both of those corporations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** On 20 March 2023, YMAC responded to an earlier email from Woodside to confirm that in its view YMAC is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. YMAC confirmed that its role is limited and that it does not intend to provide substantive comment on the content of EPs. **(2)** Woodside acknowledged YMAC's feedback.
- **(3)** On 12 June 2023, YMAC emailed Woodside on behalf of itself and its clients. The email attached:
 - A proposal for Woodside to fund an in-house position to support consultations and administration of the consultation framework.
 - A draft consultation framework.
 - On 19 July 2023, Woodside emailed YMAC and NTGAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that YMAC/NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
 - **(3)** On 25 July 2023, Woodside emailed YMAC. Woodside:
 - Agreed in principle to the draft consultation framework and funding proposal but sought further discussion on details.
 - Attached Woodside's Program for Ongoing Engagement with Traditional Custodians.
 - Sought a meeting with YMAC in relation to the draft consultation framework at YMAC's earliest convenience.

Please see *Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report)* for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 29 August 2023, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 1.36) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that YMAC and its members may have within the EMBA, information on how YMAC would like to engage, and requests that YMAC provide information to other individuals as required. The email asked YMAC to provide feedback before 2 October 2023.
- **(3)** On 14 December 2023, Woodside emailed YMAC re-attaching the Program of Ongoing Consultation and advising that Woodside would like to progress negotiations on consultation frameworks with groups represented by YMAC (SI Report, reference 28.1). Woodside proposed the protocol would include (among other things):
 - The procedures relevant to the group that Woodside will follow when a submission requires consultation.
 - Initial and ongoing consultation in relation to activities.
 - Agreement as to how Woodside will provide the information groups.
 - Agreement as to how groups will provide feedback and how that can best be represented in EPs.
 - An agreed schedule of rates for groups to enable participation in consultation.
 - How to manage the outputs of the consultations.

Ongoing engagement:

- **(3)** On 28 February 2024, Woodside emailed YMAC with a letter setting out the draft terms of a 7-page consultation framework agreement between NTGAC and Woodside (SI Report, reference 28.2). The purpose of the agreement was to seek input from YMAC on its preferred method of consultation. The agreement (among other things) included:
 - Confirmation of what is sufficient information for YMAC for consultation.

- Confirmation of what is a reasonable period for YMAC for consultation.
- YMAC's preferred method for provision of information.
- YMAC's preferred method of providing objections or claims.
- How information is to be published in the EP.
- Funding to enable consultation and termination of the agreement.
- On 29 February 2024, YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 28.3).

Please see NTGAC for further correspondence with YMAC

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) YMAC has advised the most appropriate stakeholders for the Scarborough Project generally are Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation who are not represented by YMAC.</p>	<p>(1) Woodside assessment: Woodside acknowledges YMAC's advice that MAC and NAC should be consulted regarding the activity. Woodside response: Woodside has consulted with MAC and NAC for this EP.</p>	<p>(1) Not required.</p>
<p>(2) YMAC has provided feedback that in its view it is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs but only in a limited way – in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation and does not intend to provide substantive comment on the content of EPs.</p>	<p>(2) Woodside assessment: YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders. Woodside response: Woodside acknowledges YMAC's feedback that it is a relevant person only in relation to its facilitation and coordination function as a representative body. Woodside has consulted with YMAC in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation, and it has responded that it does not intend to provide substantive comment on the content of EPs.</p>	<p>(2) YMAC represents NTGAC. YMAC has been consulted with in accordance with the methodology described in Section 5 of the EP.</p>

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided YMAC/NTGAC with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In August 2023, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- On 1 September 2023, Woodside commenced consultation with YMAC/NTGAC on this EP. Woodside provided YMAC/NTGAC:
 - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
 - An overview of the activity and proposed timing
 - Maps showing the location and EMBA
 - A summary of the risks and impacts of the activity
 - Diagrams
 - Details about how to provide feedback.
 - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YMAC/NTGAC's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked YMAC to forward the information to NTGAC and its members.
 - Woodside offered to provide more specific information, maps and images to YMAC/NTGAC if required.
- Woodside provided further information to YMAC and sought direction on YMAC's preferred method of consultation. YMAC informed Woodside that it did not intend to provide substantive comment on the content of EPs and was a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of its facilitation and coordination function as a Native Title Representative Body

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation on this EP with YMAC/NTGAC in August 2023 and provided information on the EP on that date. Since then, Woodside and YMAC/NTGAC have engaged in consultation for 17 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to YMAC/NTGAC during Woodside's initial email on 29 August 2023. YMAC/NTGAC was asked to provide feedback by 2 October 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided YMAC/NTGAC with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside and YMAC have a history of consulting and engaging. A primary means of consultation is by email. Consultation for this EP therefore commenced via email.
- Woodside asked for YMAC's input into how YMAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for YMAC and First Nations groups.
- Woodside has made information on this EP publicly available for more than 17 months. This has included publishing advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (See section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of the activity and EP (See section 3.4).
- Woodside's initial email about this EP on 29 August 2023:
 - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
 - Offered for Woodside to speak with YMAC/NTGAC members as well as the YMAC/NTGAC Board.
 - Asked YMAC to advise how it would like Woodside to engage and whether YMAC/NTGAC required further information.
- Woodside asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside has consulted in the way that YMAC has asked and in the capacity that YMAC has asked it consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- During the past 17 months, consistent with its purpose and aims, YMAC has not provided feedback or raised objections or claims about the content of the EP or the adverse impact of each activity to which this EP relates.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Self-identified First Nations Groups

Ngarluma Yindjibarndi Foundation Ltd (NYFL)

Context:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As noted on NYFL's website: in 1998 [prior to resolution of the Ngarluma and Yindjibarndi native title claim], Elders of the Ngarluma and Yindjibarndi people [native title claimants] signed an Agreement with the North West Shelf JV partners under which payment would be made for land use on the Burrup Peninsula and donations relating to goodwill and mutually beneficial relationships. The Ngarluma Yindjibarndi Foundation Ltd (NYFL) was formed and incorporated in 2000 to receive those payments.

In 1999, the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, two PBCs to represent the various interests: the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation (Yindjibarndi) as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP. Therefore the members of NYFL have been consulted for this EP.

While the NYFL's members have been assessed as being relevant persons (and have been consulted on this EP), NYFL's own functions interests and activities do not overlap with the EMBA for this EP and NYFL was therefore not assessed as being relevant for this EP. In the course of consultation, NYFL self-identified and has advised it is relevant for this EP. Woodside has therefore consulted with NYFL on this EP.

Woodside had an existing relationship with NYFL on other matters and consultations prior to consulting on this EP. Consultation on previous EPs has primarily occurred by email and face to face meetings – there is a history and pattern of consultation in this manner being undertaken by, and being acceptable to NYFL. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NYFL on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with NYFL who is responsible for building a relationship and is available to provide information and take feedback.

In October 2023, NYFL advised Woodside it did not have the capacity to respond to matters relating to EPs until "Woodside provided an improved consultation process". NYFL declined multiple offers by Woodside to meet to clarify NYFL's expectations about this consultation process. In March 2024, Woodside emailed NYFL a 7-page letter setting out, for NYFL's input, the draft terms of a consultation agreement between NYFL and Woodside. In response, NYFL provided Woodside with a quote for an initial review of the draft agreement. Woodside declined to pay the amount quoted for an initial review of the agreement and advised NYFL the amount was excessive and outside of Woodside's policies and procedures. On 20 November 2024, Woodside and NYFL met and agreed on an amount for Woodside to fund NYFL to review and finalise the consultation agreement for presentation to the NYFL Board for its consideration. .

Woodside provides reasonable funding for consultation and has provided NYFL with further information about amounts available and processes to be followed. On 5 December 2024, it was confirmed with NYFL that the funding issue had been resolved and that consultation on this EP occurred in parallel to the discussions regarding funding for NYFL to review and finalise the consultation agreement.

On 17 April 2024, Woodside was notified of a tragic passing in the Roebourne community and that the cultural protocols associated with Sorry Business were in place. Woodside understood that this would impact NYFL and out of respect did not contact NYFL during this time.

In addition to consultation for specific EPs relevant to NYFL, Woodside also consults NYFL through its membership on the Karratha Community Liaison Group, Quarterly Heritage meetings and monthly luncheons. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs.

This context and process demonstrates that Woodside's consultation approach with NYFL is appropriate and adapted to the nature of interests of NYFL.

Historical Engagement:

- On 19 July 2023, Woodside emailed NYFL NOPSEMA's *Consultation Guideline, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* This email also requested that NYFL advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NYFL Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- After NYFL self-identified, by email dated 28 August 2023, Woodside gave NYFL information advising of the proposed activity (Record of Consultation, reference 1.37) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required. Woodside asked NYFL to provide feedback by 28 September 2023.
- On 30 August 2023, Woodside met with NYFL (SI Report, reference 34.1) Matters discussed included:
 - **(1)** NYFL asserted that it is under-resourced and requires support.
 - **(2)** NYFL requested Woodside fund three Traditional Owner roles internal to NYFL to engage/consult with NYFL members.
 - **(3)** NYFL stated that timeframes must be longer than one month for consultation.
- On 31 August 2023, NYFL emailed Woodside (SI Report 34.2) copies of correspondence Woodside had sent to the Karratha Community Liaison Group (ROC references 1.17 and 2.1) and requested a copy of the consultation record for NYFL for this EP.
- On 12 September 2023, NYFL emailed Woodside noting outcomes of the meeting held on 30 August 2023 (SI Report, reference 34.3) including:
 - Traditional Owner expectations that engagement commences on projects at an early stage.
 - **(1)** Digital animations would assist with communicating projects to Traditional Owners.
 - **(2)** Resourcing for Traditional Owner organisations is required in order to support consultation.
 - Confirmation around the discussion related to capacity building, cultural sensitivity, and the role of NYFL and other organisations.
 - An action on Woodside to follow-up with NYFL on next steps.
- On 14 September 2023, Woodside emailed NYFL information relating to its representation of Yindjibarndi (SI reference 34.4).
- On 27 October 2023, NYFL emailed Woodside and attached a letter (SI Report, reference 34.5). Matters raised included:
 - **(4)** NYFL expected Woodside to present an updated proposal about the consultation processes.
 - **(1,2,3)** NYFL required financial support and more time, information and resources.
- On 3 November 2023, Woodside emailed NYFL acknowledging its previous correspondence. Woodside offered support to NYFL and its members for EP consultation and offered to meet to discuss the EP and the consultation process (SI Report, reference 34.6).
- On 7 November 2023, Woodside emailed NYFL again requesting to meet in person or via telephone to discuss NYFL's requests relating to consultation (SI Report, reference 34.7).
- On 19 November 2023, NYFL emailed Woodside (SI Report, reference 34.8). NYFL stated:
 - It was unable to meet.
 - **(1,4)** NYFL expected Woodside to update the consultation framework as NYFL had limited capacity to do so.
 - NYFL was interested in discussing this EP but required a consultation framework to do so.
- On 20 November 2023, Woodside emailed NYFL acknowledging its email of 19 November 2023 (SI Report, reference 34.9).
- On 4 December 2023, Woodside emailed NYFL (SI Report, reference 34.10): In the email:
 - Woodside acknowledged its valued partnership with NYFL over the years, and that Woodside is a strong support of NYFL.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has noticed a change in NYFL's position towards consultation.
- (4) NYFL had requested Woodside make improvements to the consultation framework.
- Woodside had requested to meet NYFL on multiple occasions to clarify NYFL's expectations and understand the reasoning behind NYFL's shift in position.
- NYFL had declined Woodside's offers to meet.
- On 6 December 2023, NYFL emailed Woodside noting that (SI Report, reference 34.11):
 - At the meeting of 30 August 2023 there was discussion about challenges and proposed solutions to progress EP consultation.
 - (1) NYFL operates in a resource-constrained environment.
 - NYFL expects Woodside to make a proposal to NYFL responding to issues raised at the meeting.
- On 13 December 2023, Woodside emailed NYFL (SI report 34.12). Woodside:
 - Acknowledged Woodside and NYFL were working towards an updated consultation process.
 - Advised it felt it important to check if NYFL wanted to be consulted on this EP.
 - Included information about this EP originally sent on 29 August 2023 including the Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website).
 - Requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required.
 - Offered to meet, and asked if NYFL required further information, maps or images on this EP
- On 14 December 2023, Woodside emailed NYFL, (SI Report, reference 34.13). In the email:
 - (2) Woodside noted it intended engaging a senior Ngarluma person in an advisory/liaison capacity, which would include facilitating consultation with NYFL members in relation to EPs.
 - (4) Woodside proposed a consultation framework on EPs which would include:
 - An agreed schedule of rates for consultation.
 - Agreement as to how Woodside would provide NYFL with information about EPs.
 - Woodside proposed the formation of a Consultation Working Group with representation from Woodside and NYFL.
 - Woodside proposed a discussion on the proposal at the NYFL/Woodside Quarterly meeting on 19 December 2023.

Ongoing Engagement:

- (4) On 6 March 2024, Woodside emailed NYFL with a letter setting out the draft terms of a 7-page consultation agreement between NYFL and Woodside (SI Report, reference 34.14). The agreement (among other things) sought NYFL's input on the following:
 - Confirmation of what is sufficient information for NYFL for consultation.
 - (3) Confirmation of what is a reasonable period for consultation.
 - NYFL's preferred method for provision of information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- NYFL's preferred method for providing objection or claims.
- **(1)** Cost and termination of the agreement.
- Between 14 March 2024 and 12 April 2024 Woodside and NYFL exchanged emails about the draft consultation agreement (SI Report, references 34.15, 34.16, 34.17, 34.18, 34.19, 34.20).
- On 17 April 2024, NYFL emailed Woodside noting it was attending to Sorry Business and as per cultural protocols would require time within the community and engagement would be delayed until appropriate to recommence (SI Report, reference 34.21). Woodside supports engaging with NYFL when it is appropriate to do so.
- **(4)** On 10 May 2024 and 3 July 2024, Woodside and NYFL exchanged emails about draft consultation agreement costs (SI Report, reference 34.22, 34.23).
- On 9 September 2024, Woodside emailed NYFL an invitation to share stories and receives updates from Woodside at its monthly luncheon for Traditional Owners (SI Report, reference 34.24).
- On 25 September 2024, Woodside sent a follow-up email to NYFL containing a consultation update on this EP (SI Report, reference 34.25). The email:
 - Updated NYFL about the consultation history of the EP including that Woodside began consultation on 29 August 2023.
 - Attached the initial communication sent to NYFL on 29 August 2023 which contained the information relevant to this EP.
 - Confirmed that the EP was available on the NOPSEMA website and that Woodside would shortly resubmit the EP for further assessment.
 - Acknowledged that consultation framework agreement discussions with NYFL were ongoing but that EP consultation including for this EP had progressed in parallel to those discussions.
 - Invited NYFL to provide additional feedback, claims or objections about the EP that it would like Woodside to consider as part of its resubmission. Woodside asked for feedback by Friday 4 October.
 - Provided contact details for Woodside and NOPSEMA.
- On 25 September 2024, NYFL attended Woodside's monthly luncheon for Traditional Owners (SI Report, reference 34.25). During the luncheon Woodside requested feedback about EPs and provided information about the consultation process.
- **(5)** On 21 October 2024, NYFL emailed Woodside (SI Report, reference 34.26). In the email NYFL asserted:
 - Consultation had not taken place between NYFL and Woodside on this EP and others.
 - Woodside's emails did not meet the standard of meaningful consultation.
 - Woodside has provided NYFL with a draft consultation agreement but had declined to agree with NYFL's estimated costs to proceed with the agreement.
 - NYFL would progress consultation on this EP and others once the consultation agreement had been formalised.
 - Woodside must note in any record provided to NOPSEMA that NYFL had not been consulted on this EP and others.
- **(5)** On 29 October, Woodside emailed NYFL a response to its email on 21 October 2024 (SI Report, reference 34.27). In the letter Woodside stated:
 - Woodside did not agree with NYFL's assertion that Woodside had not consulted NYFL in relation to this EP.
 - Woodside had consulted with NYFL in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) (Regulations).
 - Woodside commenced consulting with NYFL on 28 August 2023 by emailing NYFL an information sheet about the EP and additional information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- NYFL had written to Woodside on 19 November 2024 expressing an interest in consulting on the Scarborough “operations approvals”.
- Woodside sent a follow-up email on 13 December 2023 that acknowledged Woodside and NYFL were working towards an updated consultation process and felt it was important to check if NYFL wanted to be consulted on the EP.
- Woodside had offered to meet and to provide further information, maps or images to NYFL.
- Woodside sent NYFL a project update on 25 September 2024 and provided NYFL an additional invitation to provide feedback, claims or objects on about the EP that it would like Woodside to consider as part of its resubmission.
- Woodside had provided sufficient information, allowed a reasonable period of time for consultation and given a reasonable opportunity for NYFL to provide feedback on the EP.
- Consultation on the EP had been adapted and appropriate to the nature and interests of NYFL.
- That discussions between Woodside and NYFL regarding the 7-page consultation framework agreement had and will continue to occur in parallel to consultation for EPs.
- **(5)** On 31 October 2024, NYFL emailed Woodside a response to its email on 29 October 2024 (SI Report, reference 34.28). In the email NYFL:
 - Acknowledged the steps Woodside has outlined and clarified that its role as a Traditional Owner representative organisation is to ensure that consultation processes on EPs are carried out in a manner that genuinely allows NYFL to engage its members and provide informed feedback.
 - Again raised the topic of cost estimates and rates that had been agreed for North West Shelf matters (not applicable to this EP)
 - Despite NYFL itself regularly engaging in consultation communications via email, reiterated its view that “passive notifications, such as emails” did not meet the standard of genuine consultation.
 - Advised that NYFL would hold its AGM in December and would seek guidance from its members on the preferred way forward in response to consultation matters.
 - Reiterated that it is committed to working with proponents under an agreed consultation framework that allows for genuine engagement and with appropriate resources to support NYFL’s role as a Traditional Owner organisation.
 - Offered to meet Woodside in person to discuss further.
- **(5)** On 4 November 2024, Woodside emailed NYFL as follows (SI Report, reference 34.29)
 - Responded to NYFL’s cost estimates and rates and reiterated that they are excessive, and the rates quoted by NYFL related to the North West Shelf agreements and were not consistent with reasonable rates for enabling and supporting consultation on this EP. This is particularly so where the high rates quoted by NYFL were for an initial review of a 7-page agreement.
 - Offered again to meet and discuss this issue further anytime. And that Woodside would be available to meet in person in Ieramungadu in the week of 18 November 2024.
 - Confirmed that Woodside’s use of email as one of the methods to engage in consultation correspondence mirrored what appears to be NYFL’s primary approach of emailing consultation correspondence. However Woodside is also happy and discuss this EP and the various other EPs NYFL has listed in its recent correspondence.
 - Reiterated that the ongoing negotiation of a consultation framework agreement can and continues to occur in parallel to consultation for EPs.
 - Included a table showing the status of each of the EPs referenced by NYFL in its letter. This list includes Scarborough EPs which NYFL was consulted on (although now is saying it has not been consulted on) and which have been accepted by NOPSEMA.
- On 8 November 2024, NYFL emailed Woodside requesting to meet on 20 November 2024 (SI Report, reference 34.30).

- On 15 November 2024, Woodside and NYFL exchanged emails confirming the invitation to meet on 20 November 2024. Woodside stated it would separately email NYFL about the remaining EPs outlined in the 21 October 2024 correspondence (SI Report, references 34.31, 34.32).
- On 20 November 2024, Woodside met with NYFL. Woodside emailed NYFL a summary of its meeting earlier that day (SI Report, reference 34.33). Matters relevant to this EP included:
 - (4) Agreement was reached regarding administrative matters relating to NYFL’s review of the draft consultation agreement.
 - Woodside sought time to present to the NYFL Board on EPs.
- On 21 November 2024, NYFL advised Woodside about the passing of a Senior Yindjibarndi Elder and founding member of NYFL. The NYFL Board advised that Sorry Business was underway, and the community was commencing a period of mourning (SI Report, reference 34.34).
- On 5 December 2024, Woodside emailed NYFL a response to its letter of 21 October 2024 (SI Report, reference 34.35). Matters relevant to this EP included:
 - Woodside confirmed consultation had taken place for this EP.
 - (4) Woodside confirmed that it had met NYFL on 20 November 2024 to continue discussions (in parallel to consultation on EPs) regarding the draft consultation agreement.
- On 6 December 2024, NYFL emailed Woodside acknowledging its correspondence on 5 December 2024. Woodside thanked NYFL for its response (SI Report, references 34.36, 34.37).
- On 9 December 2024, NOPSEMA emailed Woodside a letter dated October 2024 that NOPSEMA had received from NYFL about Woodside’s EPs (SI Report, reference 34.38). Matters relevant to this EP include:
 - (5) Woodside had indicated to NYFL that consultation had occurred on EPs including this one however NYFL did not believe it had participated in consultation. (5) Woodside addressed this matter in its correspondence on 4 November 2024 and 5 December 2024.
 - (5) NYFL acknowledged that it had received emails from Woodside but did not believe that this met the threshold of genuine consultation. (5) Woodside addressed this matter in its correspondence on 4 November 2024 and 5 December 2024.
 - (4) Woodside had provided NYFL with a draft consultation agreement but this had not progressed. (4) Woodside addressed this matter in its correspondence on 5 December 2024.
 - (1, 5) NYFL requires adequate resourcing and respectful engagement to fulfil its obligations as the Traditional Owner representative body for the area. (5) Woodside has previously addressed this, for example correspondence on 29 October and 4 November 2024.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>NYFL self-identified and advised Woodside it is a relevant person for activities.</p>	<p>Woodside assessment: Before NYFL members’ native title claim was resolved, NYFL was created to receive payments relating to the Northwest Shelf Agreement 1998 on behalf of its members. NYFL’s membership is made up of Ngarluma people and Yindjibarndi people. Membership is not open to any person who is not accepted as Ngarluma or Yindjibarndi.</p> <p>When their native title claim was resolved, Ngarluma Aboriginal Corporation (NAC) and Yindjibarndi Aboriginal Corporation (Yindjibarndi) were appointed by the Federal Court, at the request of the Ngarluma and Yindjibarndi native title holders as PBCs to</p>	<p>NYFL has been consulted with in accordance with the methodology described in Section 5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>represent the communal interests of the Ngarluma and Yindjibarndi people respectively. NAC and Yindjibarndi are representative of all Ngarluma and Yindjibarndi people regardless of membership.</p> <p>For this EP, Woodside has consulted with the NYFL membership – it has consulted with Ngarluma Aboriginal Corporation and Yindjibarndi Aboriginal Corporations individually..</p> <p>Woodside response: Woodside has consulted with NYFL’s membership. Nevertheless, Woodside responded to NYFL’s self-identification and consulted with it as a relevant person.</p>	
<p>(1) NYFL is under resourced and requires support.</p>	<p>(1) Woodside assessment: Woodside supports reasonable requests for funding to support consultation activities. The proposed consultation agreement (see point 4) would be an effective mechanism to address resourcing for ongoing consultation.</p> <p>Woodside response: Woodside supports reasonable requests for resourcing. Woodside will continue to work with NYFL to finalise a consultation agreement.</p>	<p>The proposed consultation agreement will address reasonable funding for consultation.</p>
<p>(2) NYFL requested Woodside fund three Traditional Owners roles internal to NYFL to engage/consult with NYFL members.</p>	<p>(2) Woodside assessment: Woodside does not consider NYFL’s request that Woodside fund three Ngarluma/Yindjibarndi Traditional Owners roles for NYFL to consult with NYFL members a reasonable proposal or a necessary step to allow consultation to occur. Woodside has already separately consulted with NYFL’s members so this would be a double-up of consultation effort. Woodside also notes that consultation must be capable of reasonable and practicable discharge. Woodside’s consultation efforts are informed and undertaken by personnel with significant experience in First Nations relations, including Indigenous employees. Woodside supports reasonable requests for funding to support consultation.</p> <p>Woodside response: Woodside has employed a Ngarluma person in an advisory position who will be facilitating consultation with NYFL. The proposed consultation agreement will address appropriate NYFL resourcing.</p>	<p>(2) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(3) NYFL stated that time frames must be longer than one month for consultation.</p>	<p>(3) Woodside assessment: Woodside has already provided NYFL with reasonable period of time to participate in consultation (as required by Regulation 25 of the Environment Regulations). Woodside response: Woodside has provided NYFL much longer than a month for consultation (August 2023 – June 2024). The draft consultation framework sent to NYFL in March 2024 will provide a framework for consultation.</p>	<p>(3) Not required.</p>
<p>(4) NYFL has acknowledged it supports an agreement to enable a process of consultation.</p>	<p>(4) Woodside assessment: Separate from consultation under regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required to undertake and/or complete consultation in the course of preparing this EP. Sufficient information to allow informed assessment has already been provided by other means. Woodside has an existing engagement framework in place with NYFL which enables regular (quarterly) communication about Woodside activities. Feedback from NYFL on 27 October 2023 requested Woodside develop a draft consultation framework. Woodside response: Woodside sent a 7-page draft consultation framework to NYFL in March 2024 for its input and consideration. Woodside met NYFL on 20 November 2024 and agreement was reached regarding administrative matters relating to NYFL's review of the agreement.</p>	<p>(4) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes continued engagement regarding the proposed Framework Agreement which would be applied to ongoing consultation for this activity. Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.</p>
<p>(5) NYFL has stated no formal consultation had taken place between NYFL and Woodside on this EP. NYFL would progress consultation on this EP once the draft consultation agreement was finalised.</p>	<p>(5) Woodside assessment: Woodside rejects NYFL's assertion that has not been consulted on this EP. Woodside began consulting NYFL on 29 August 2023 and has provided sufficient information, a reasonable period of time, and reasonable opportunity for NYFL to provide feedback. Woodside has clearly communicated to NYFL that consultation for this EP and others has occurred in parallel to negotiations about the draft consultation agreement. Woodside notes that the consultation agreement is not required to undertake and/or consult with NYFL on EPs. This position was</p>	<p>(5) Not required.</p>

	<p>confirmed in correspondence dated 4 November 2024 and 5 December 2024.</p> <p>Woodside response: The information provided by Woodside meets the requirements of regulation 25 of the Environment Regulations for the reasons set out above.</p>	
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on NYFL's functions, interests or activities.</p> <p>Based on the engagement to date, no additional controls have been identified.</p>

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NYFL for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NYFL sufficient information to allow NYFL to make an informed assessment of the possible consequence of the activity on the functions, interests or activities of NYFL because:

- NYFL was established in order to receive payments relating to the Northwest Shelf Agreement 1998 (not this EP or the Scarborough Project) on behalf of its members.
- NYFL is not assessed as a relevant person under Woodside's methodology. Never-the-less, NYFL self-identified and Woodside has provided NYFL with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In August 2023, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on NOPSEMA's website in June 2024.
- Woodside provided information to NYFL on 28 August 2023 (when Woodside commenced consulting with NYFL on this EP). Woodside provided NYFL:
 - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the activity and proposed timing.
 - Maps showing the location and EMBA.
 - A summary of the risks and impacts of the activity.
 - Diagrams.
 - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NYFL's interests and how the activity could impact those interests.
 - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
 - Woodside asked NYFL to forward the information to its members.
 - Woodside offered to provide more specific information, maps and images to NYFL if required.
 - Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

Woodside has allowed NYFL a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with NYFL in August 2023 and provided information on the EP on that date. NYFL told Woodside it required more than 30 days for consultation. Since information was first provided to NYFL, Woodside and NYFL have engaged in consultation for more than 17 months, demonstrating that has acted consistently with NYFL's request for more than 30 days consultation and has provided a "reasonable period" of consultation.
- A consultation period was communicated to NYFL during Woodside's initial email on 28 August 2023. NYFL was asked to provide feedback by 28 September 2023 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided NYFL with more than four months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside notified NYFL on 25 September 2024 that it was planning to resubmit the EP. Woodside invited NYFL to provide any additional comments, feedback, claims or objections that it would like Woodside to consider, giving NYFL a two-week period to do so.
- Woodside notes that during consultation, it also respectfully paused consultation in periods when NYFL was observing Sorry Business or cultural matters (see April 2024).

Reasonable Opportunity

Woodside has given NYFL a reasonable opportunity to provide feedback and Woodside's approach to consultation is appropriate and adapted to the nature of the interests of NYFL because:

- NYFL was established in order to receive payments relating to the Northwest Shelf Agreement 1998 (not this EP or the Scarborough Project) on behalf of its members.
- Woodside has consulted NYFL's membership on this EP.
- Woodside asked for NYFL's input into how NYFL would like to engage in consultation. In accordance with previous consultations and communications which have occurred via emails and meetings, Woodside and has consulted in a way that Woodside understands is appropriate for NYFL and First Nations groups.

- Woodside has made information on this EP publicly available for more than 17 months. This has included publishing eight advertisements in national, state, local and Indigenous newspapers including Indigenous publications The Koori Mail (9 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback (see section 3.2).
- Woodside ran two targeted social media campaigns which provided a broad awareness of consultation (see section 3.4).
- Woodside's initial email about this EP on 28 August 2023:
 - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
 - Offered for Woodside to speak with NYFL members as well as the NYFL Board/Office holders.
 - Asked NYFL to advise how it would like Woodside to engage and whether NYFL required further information.
- Throughout the consultation period (and following submission of the EP for assessment), Woodside and NYFL have exchanged multiple emails, had phone calls and have met on a number of occasions and have otherwise had direct contact lines to each other during the period.
- Woodside invites NYFL to Quarterly Heritage Meetings and monthly luncheons.
- In September 2024, Woodside provided NYFL with an additional two-weeks to provide feedback ahead of Woodside resubmitting the EP.
- Woodside and NYFL continue to negotiate a framework consultation agreement. Despite this negotiation going on in the background, Woodside has made it clear that consultation for this EP can and has occurred in parallel with the ongoing negotiations relating to the framework consultation agreement. This has most recently been communicated on 4 November 2024 and 5 December 2024.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 17 months NYFL has provided feedback, but has not raised objections or claims about the adverse impact of each activity to which this EP relates.
- NYFL was established in order to receive payments on behalf of its members relating to the Northwest Shelf Agreement 1998. That Agreement relates to a number of matters including payment for land use on the Burrup Peninsula by the North West Shelf Joint Venture (not for this EP or the Scarborough Project). NYFL was assessed as **not** being a relevant person for this EP because NYFL's functions, interests or activities are not assessed as potentially being affected by the activities to be carried out under the EP. NYFL's members have been consulted on this EP. Consultation with NYFL's members has given Woodside the opportunity to receive information and better understand how NYFL's members perceive environmental impacts and risks of the activities under the EP. Those consultations have enabled Woodside to refine or change measures it proposes to address those impacts and risks by taking into account the information acquired from NYFL's members during consultation. In the context of NYFL's role and the consultations undertaken by Woodside for this EP, the purpose of consultation has been achieved despite NYFL not raising any objections or claims about the adverse impact of the activities to which this EP relates. Consultation is complete.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Local Government and Elected Parliamentary Representatives, Community Groups or Organisations

City of Karratha

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with City of Karratha for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given City of Karratha sufficient information to allow City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet has been publicly available on the Woodside website since August 2023. Woodside provided this information to City of Karratha on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed City of Karratha a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to City of Karratha advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed City of Karratha with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Shire of Karratha.
- In this context, Woodside allowed City of Karratha a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with City of Karratha is appropriate and adapted to the nature of City of Karratha:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding City of Karratha of the opportunity to provide feedback.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcome of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as City of Karratha did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on City of Karratha's functions, interests or activities.

Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Shire of Exmouth for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Exmouth sufficient information to allow Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Shire of Exmouth, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to Shire of Exmouth advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Exmouth with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Shire of Exmouth.
- In this context, Woodside allowed Shire of Exmouth a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of Shire of Exmouth:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding Shire of Exmouth of the opportunity to provide feedback.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

Shire of Ashburton (SoA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Shire of Ashburton (SoA) advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 14 August 2023, SoA emailed Woodside and invited Woodside to present at SoA's December community information sessions (SI Report, reference 15.1). It was also suggested that for more regular information sharing, Woodside could submit articles to the *Onslow Pipeline*.
- On 28 August 2023, SoA responded to Woodside's 9 August 2023 email thanking Woodside for its correspondence and noting its support of the significant contribution the oil and gas sector makes to the community (SI Report, reference 15.2). SoA asked for consideration of the following comments:
 - (1) SoA confirmed it had no objections to the proposed activities.
 - (2) SoA expected that Woodside would identify, manage and mitigate all possible impacts and risks in line with relevant regulatory frameworks.
 - (3) The Aboriginal Cultural Heritage Inquiry System (ACHIS) should be consulted to ensure site of significance are not impacted without consents.
 - (4) SoA required Woodside to brief its Local and District Emergency Management Committee's on its planned responses to such events before any activities commence.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (5) SoA required Woodside to communicate with appropriate emergency management agencies at either/or National, State, District and Local levels on potential hazards and risks around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability and sustainability of response activities and escalation triggers.
- (6) SoA anticipated that Woodside had undertaken their own emergency management planning to mitigate risk and recover from a risk related incident, has engaged with external emergency management agencies to ensure emergency management plans are aligned with outcomes to respond and/or recovery from the incident.
- (7) SoA anticipated that Woodside had engaged with the community regarding what may happen in areas that are affected by the proposed activities.
- SoA proposed that Woodside consider the SoA operated Pilbara Regional Waste Management Facility for future decommissioning, recycling and waste disposal purposes.
- (8) SoA appreciated the opportunity to comment on the proposed activities and requested that Woodside provide SoA with further updates as the proposal progresses.
- On 26 September 2023, Woodside and SoA exchanged four emails regarding SoA's next Local and District Emergency Management Committee (LEMC) meeting and Woodside attending the meeting (SI Report, references 15.3, 15.4, 15.5 and 15.6).
- On 17 October 2023, SoA and Woodside exchanged further emails confirming presentation start time and attendee details (SI Report, reference 15.7).
- On 6 November 2023, Woodside responded to SoA on a range of items relating to a separate EP and confirmed it was looking forward to presenting to SoA on 21 November 2023 (SI Report, reference 15.8). Woodside also sought to clarify a request from SoA that the Shire required Woodside to brief the Shire's Local and District Emergency Management Committee's on its planned responses to such events before any activities commenced as this would potentially mean Woodside was providing frequent briefings on the same issue.
- On 14 November 2023, SoA responded and, regarding Woodside's query seeking clarification on LEMC briefing requirements (SI Report, reference 15.9), confirmed:
 - Woodside was not required to give a briefing on its response capability every time it undertook an activity that had a risk of a hydrocarbon release.
 - It was proposed that Woodside, when operating in an area, provided a briefing that covered its program of activities over a period of time, which could be determined by Woodside's own assessment of the need and liaison with the relevant LEMC/DEMC.
 - The word briefing should not be confused with advising stakeholders of any assessed high-risk activity where it was appropriate to inform those who may be impacted or involved in a response or recovery process.
- On 20 November 2023, Woodside responded to SoA's email of 28 August 2023 thanking SoA for its feedback on this EP (SI Report, reference 15.10). Woodside noted:
 - (2) Woodside was required to manage environmental impacts and risks to the environment that may be affected (EMBA) by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Environment Regulations), through the implementation of the EP. Woodside's proposed EPs would be submitted to NOPSEMA for assessment and acceptance.
 - (3) Woodside routinely used the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and included the results of these inquiry system searches as an appendix to each EP.
 - (4) Woodside was looking forward to presenting to SoA at its LEMC on 21 November 2023 on its approach to managing a hydrocarbon release in the highly unlikely event this occurred. Woodside confirmed it would welcome questions regarding this EP during the presentation. Woodside also sought to clarify SoA's request to provide a briefing prior to activities commencing as this would potentially mean Woodside was providing frequent briefings on the same issue.
 - (5) Woodside had an Oil Pollution First Strike Plan in place for all EPs which detailed potential impacts, notifications and response mitigations that may be executed to manage an emergency event.

- (6) In the course of developing an EP, Woodside developed oil spill preparedness and response positions tailored for individual projects. Woodside consulted with the relevant external emergency management agencies to ensure all emergency management plans were aligned with effective outcomes.
- (7) Woodside confirmed it consulted relevant persons in the course of preparing an EP, and as per Woodside’s ongoing consultation approach, feedback and comments from relevant persons continued to be assessed and responded to, as required, throughout the life of an EP.
- Woodside aimed to work with local business through employment and contracting opportunities, where practical, to create and build community capacity and capability. While future decommissioning of infrastructure in the Scarborough Field was not expected until End of Field Life (EOFL) and was outside of the scope of this EP, any future decommissioning would be subject to a separate consultation under a future EP.
- (8) Woodside confirmed it would continue to provide the SoA with significant updates with respect to the proposed activities when relevant.
- On 21 November 2023, Woodside presented at the SoA LEMC meeting (SI Report, reference 15.11) and provided:
 - An overview of proposed activities relevant to SoA including this EP.
 - An outline of the consultation approach and explanation of the EMBA as a modelling process of the broadest extent an unplanned hydrocarbon release could spread based on a number of conditions.
 - Details of the oil spill response approach in the highly unlikely event of a hydrocarbon spill.
 - Woodside’s key steps when activating an oil spill response plan.
 - (1) SoA thanked Woodside for presenting to the committee and no questions or concerns were raised.
- On 22 November 2023, Woodside responded thanking SoA for its email from 14 November 2023 (SI Report, reference 15.12) and confirmed:
 - SoA’s advice that it was not required to provide a briefing on its response capability every time it undertook an activity that had a risk of a hydrocarbon release.
 - It accepted SoA’s proposal to provide briefings that covered its program of activities over a period of time, as determined by Woodside’s own assessment of need and in liaison with the relevant LEMC.
 - It would provide notifications to relevant stakeholders if required as per Woodside’s oil spill response arrangements.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Supports the contribution of the oil and gas sector and had no objections to the proposed activities.</p>	<p>(1) Woodside assessment: Woodside acknowledges SoA had no objections in relation to the activities. 	potential impacts, notifications and response mitigations that may be executed to manage an emergency event.	
(6) Assumed Woodside had emergency management planning in place.	(6) Woodside assessment: Woodside has developed oil spill preparedness and first response plans for this EP. Woodside response: Woodside confirmed that in the course of developing EPs, it developed oil spill preparedness and response positions tailored for individual projects. Woodside consults with the relevant external management agencies to ensure all emergency management plans were aligned with effective outcomes.	(6) In the course of developing this EP, Woodside has developed oil spill preparedness and response positions and an Oil Pollution First Strike Plan (See Appendix H and I of this EP).
(7) Woodside has engaged with the community.	(7) Woodside assessment: Woodside has consulted relevant persons whose functions, interests or activities may be impacted by the activity, in line with regulation 25 of the Environment Regulations. Woodside response: Woodside confirmed it consulted relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continued to be assessed and responded to, as required, throughout the life of an EP.	(7) Woodside consults relevant persons in the course of developing an EP as described in Section 5.3 of the EP.
(8) Provide updates as the proposal progresses.	(8) Woodside assessment: Woodside will provide SoA with updates with respect to the activities the subject of this EP. Woodside response: Woodside confirmed it would continue to provide SoA with significant updates with respect to the proposed activities when relevant.	(8) Woodside engages in ongoing consultation and will provide notifications of significant change, as appropriate, to relevant persons as referenced at Section 7.10.5 in this EP.
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management	The measures and controls described within this EP address the potential impact from the proposed activities on SoA's functions, interests or activities. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

of Change and Revision process (see Section 7.2.7.2 of this EP).

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with SoA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given SoA sufficient information to allow SoA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information directly to SoA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 August 2023, SoA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable SoA to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside provided further information to SoA in its response on 20 November 2023 which addressed SoA’s topics of interest in response to feedback from SoA.

Reasonable Period

Woodside allowed SoA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to SoA advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed SoA with 30 days for consultation. SoA engaged in consultation and provided feedback within this period.
- In this context, Woodside allowed SoA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with SoA is appropriate and adapted to the nature of interests of SoA:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to SoA as evidenced in their response on 28 August 2023 when they provided feedback.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- SoA provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from SoA and has assessed the merits of any objection or claim about the adverse impact of the proposed activities to which this EP relates.
 - Made no changes or inclusions to the EP as a result of consultation with SoA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Exmouth Community Liaison Group (Exmouth CLG)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed the Exmouth CLG advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 20 October 2023, Woodside sent an email to the Exmouth CLG to advise that Woodside employees would be in Exmouth on 23 October 2023 if anyone wanted to discuss Woodside EPs (SI Report, reference 23.1).
- On 21 November 2023, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI Report, reference 23.2). A summary of this meeting is as follows:
 - Woodside Corporate Affairs, Scarborough Energy Project, Aviation and Operations representatives were available to answer questions.
 - 12 individuals attended the meeting representing:
 - Exmouth Volunteer Marine Rescue
 - Gascoyne Development Commission
 - Shire of Exmouth

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- PHI Helicopters
- Bhagwan Marine
- Exmouth Chamber of Commerce and Industry
- Ningaloo Coast World Heritage Advisory Council
- Australia's Coral Coast Tourism
- Santos.
- The Exmouth CLG raised the following questions:
 - **(1)** What was under the waterline of the Scarborough Floating Production Unit (FPU) and did it have a riser turret?
 - **(1)** Woodside explained the subsurface and advised that there was no turret.
 - **(2)** How many people would be on board the FPU?
 - **(2)** Woodside advised the living quarters could hold 75 people and during normal operations it was expected that about 12 people would be on board. During maintenance campaigns, this could be between 50 – 75 people.
 - **(3)** Why wasn't the FPU being built in Australia?
 - **(3)** Woodside advised that due to the scale, there was no facility large enough in Australia to build the FPU. Woodside also advised that some of the subsea infrastructure was being built in Henderson, WA, and where possible, Woodside was using local content.
 - **(4)** When would the FPU be in location?
 - **(4)** Woodside advised the FPU would be ready for start-up in 2026 and installation was expected to commence in 2025.
 - **(4)** Woodside committed to continue providing the Exmouth CLG with updates on the Scarborough Energy Project.
- On 4 December 2023, Woodside emailed the November 2023 Exmouth CLG meeting presentation to all CLG members, regardless of their attendance (SI Report, reference 23.3).
- On 6 March 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide that listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI report, reference 23.4). No feedback was provided on this EP. 12 individuals attended the meeting representing:
 - Exmouth Volunteer Marine Rescue
 - Gascoyne Development Commission
 - Shire of Exmouth
 - PHI Helicopters
 - Exmouth Freight and Logistics
 - Exmouth Chamber of Commerce and Industry
 - Ningaloo Coast World Heritage Advisory Council
 - WA Country Health Service
 - Santos.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 2 April 2024, Woodside's presentation was emailed to all Exmouth CLG members, regardless of their attendance at the meeting.
- On 17 July 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI report, reference 23.5). No feedback was provided on this EP. 13 individuals attended the meeting representing:
 - Exmouth Volunteer Marine Rescue
 - Gascoyne Development Commission
 - Shire of Exmouth
 - PHI Helicopters
 - Exmouth Chamber of Commerce and Industry
 - Ningaloo Coast World Heritage Advisory Council / NOPSEMA Community and Environment Reference Group
 - Santos
 - AIMS
 - Department of Health.
- Woodside's presentation was emailed to the CLG members, regardless of their attendance at the meeting.
- On 12 November 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide listing EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI report, reference 23.6).
 - 13 individuals attended the meeting representing:
 - Shire of Exmouth
 - Gascoyne Development Commission
 - Exmouth Chamber of Commerce and Industry
 - Ningaloo Coast World Heritage Advisory Council / NOPSEMA Community and Environment Reference Group
 - West Australian Country Health Service
 - Bhagwan Marine
 - PHI Helicopters
 - Exmouth Volunteer Marine Rescue
 - CSIRO
 - Santos

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1)	(1)	(1)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Provided feedback and asked the following:</p> <ul style="list-style-type: none"> What was under the waterline of the Scarborough Floating Production Unit (FPU) and did it have a riser turret? 	<p>Woodside assessment: There is no riser turret. Woodside response: Woodside explained the subsurface and advised that there was no turret.</p>	<p>An overview of the Scarborough FPU and associated infrastructure is provided in Section 3 of the EP.</p>
<p>(2)</p> <ul style="list-style-type: none"> How many people will be on board the FPU? 	<p>(2) Woodside assessment: The number of people on board varies. During normal operations approximately 12 people would be on board the FPU; during maintenance between 50-75 people. Woodside response: Woodside advised the living quarters could hold 75 and that during normal operations it was expected that about 12 people would be on board. During maintenance campaigns, this could be between 50-75 people.</p>	<p>(2) An overview of the Scarborough FPU and associated infrastructure is provided in Section 3 of the EP.</p>
<p>(3)</p> <ul style="list-style-type: none"> Why wasn't the FPU being built in Australia? 	<p>(3) Woodside assessment: Due to the scale, it was not possible to build the FPU in Australia. Woodside response: Woodside advised that due to the scale, there was no facility large enough in Australia. Some of the subsea infrastructure was being built in Henderson, WA and Woodside was using local content where possible.</p>	<p>(3) Not required.</p>
<p>(4)</p> <ul style="list-style-type: none"> When will the FPU be in location? 	<p>(4) Woodside assessment: Installation is expected to occur in 2025. Woodside response: Woodside advised the FPU would be ready for start-up in 2026 and that installation was expected to commence in 2025. feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth CLG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG sufficient information to allow Exmouth CLG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information directly to Exmouth CLG on 10 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum m environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 21 November 2023, Exmouth CLG shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Exmouth CLG to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided further information to Exmouth CLG on 4 December 2023 and 6 March 2024.
- Woodside presented to the Exmouth CLG on 21 November 2023, 6 March 2024 and 17 June 2024 (and provided further information to Exmouth CLG following these meetings).

Reasonable Period

Woodside allowed Exmouth CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed Exmouth CLG 30 days for consultation. For consultation on EPs, 30 days is the usual period for Exmouth CLG.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- As has been made clear in consultation emails and at meetings, Woodside is open to receiving feedback after EP submission and throughout the life of an EP.
- In this context, Woodside allowed Exmouth CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG is appropriate and adapted to the nature of interests of Exmouth CLG

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- On 21 November 2023, 6 March 2024 and 17 June 2024, Woodside presented to the Exmouth CLG on Woodside activities including on this EP, and Woodside staff were available to answer questions and receive feedback.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Furthermore, Woodside considers a reasonable opportunity was provided to Exmouth CLG as evidenced in their response on 21 November 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Exmouth CLG provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from Exmouth CLG.
 - Made no changes or inclusions to the EP as a result of consultation with Exmouth CLG because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Karratha Community Liaison Group (Karratha CLG)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- **(1)** On 30 August 2023, Dampier Community Association emailed Woodside (SI Report, reference 16.1) and confirmed the information had been passed on to its committee and that no comments or feedback had been received.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1) On 6 September 2023, Woodside responded noting Dampier Community Association had no comments (SI Report, reference 16.2).
- On 20 September 2023, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI Report, reference 16.3). One slide included a QR and URL to the Consultation Activities page of the Woodside website. No feedback was provided on this EP. A summary of the meeting is below:
 - Woodside Corporate Affairs representatives were available to answer questions.
 - 14 individuals attended the meeting representing:
 - City of Karratha – Council representatives and staff representatives
 - Karratha Central Health Care
 - Bechtel
 - Dampier Community Association
 - Pilbara Development Commission
 - Regional Development Australia
 - Karratha & Districts Chamber of Commerce & Industry
 - Ngarluma Yindjibarndi Foundation Ltd
 - Pilbara Ports Authority.
 - Woodside provided details of local engagement sessions held at the Karratha Shopping Centre, Red Earth Arts Precinct, Woodside’s Roebourne Office and at the South Hedland Square. Woodside shared that sessions were for local community members to seek information about its EPs, to discuss functions, activities or interest that may be affected by its proposed projects and to provide an opportunity for feedback. Woodside noted sessions were advertised in the Pilbara News and through social media advertising (Record of Consultation, reference 3.8).
- On 22 March 2024, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI report, reference 16.4). Woodside also presented on how Woodside consults relevant persons in the course of preparing its EPs and provided information on relevant persons and EMBA’s. The slides included a QR and URL to the Consultation Activities page of the Woodside website, and upcoming consultation opportunities in Roebourne, Karratha and Dampier from the 22 March to 24 March 2024. No feedback was provided on this EP. Seven Karratha CLG members attended the meeting representing:
 - City of Karratha
 - Dampier Community Association
 - Department of Education
 - Murujuga Aboriginal Corporation
 - Karratha and Districts Chamber of Commerce and Industry
 - Karratha Central Health.
- On 5 April 2024, Woodside’s March presentation to the CLG was emailed to the CLG regardless of their attendance at the meeting.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

On 21 June 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities, including this EP (SI Report, reference 16.5). No feedback was provided on this EP. Woodside also presented on how Woodside consults relevant persons in the course of preparing its EPs and provided information on relevant persons and EMBA's. The slides included a QR and URL to the Consultation Activities page of the Woodside website and copies of the latest edition of 'Let's Talk' were provided in hard copy and sent electronically with the minutes and presentation pack. No feedback was provided on this EP. Seven CLG members attended the meeting representing:

- City of Karratha – Council and staff representatives
- Karratha Central Health Care
- Dampier Community Association
- Pilbara Development Commission
- Department of Education – staff representatives.

- On 17 July 2024, Woodside's June presentation to the CLG was emailed to the CLG regardless of their attendance at the meeting.
- On 20 September 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities, including this EP (SI Report, reference 16.6). No feedback was provided on this EP. Woodside also presented on how Woodside consults relevant persons in the course of preparing its EPs and provided information on relevant persons and EMBA's. The slides included a QR and URL to the Consultation Activities page of the Woodside website and copies of the latest edition of 'Let's Talk' were provided in hard copy and sent electronically with the minutes and presentation pack. No feedback was provided on this EP. Eight CLG members attended the meeting representing:
 - City of Karratha – staff representatives
 - Dampier Community Association
 - Pilbara Development Commission
 - Department of Education – staff representatives
 - Karratha and Districts Chamber of Commerce and Industry
 - Pilbara Ports Authority.
- On 13 October 2024, Woodside's September presentation to the CLG was emailed to the CLG regardless of their attendance at the meeting.
- On 29 November 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities, (SI report, reference 16.7).
 - No feedback was provided on this EP.
 - Woodside also presented on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBA's. The slides included a QR code and a URL to the Consultation Activities page of the Woodside website. Copies of the latest edition of Let's Talk were provided in hard copy and sent electronically with the minutes and pack.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

Summary Report – Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Karratha CLG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG sufficient information to allow Karratha CLG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Karratha CLG on 10 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 30 August 2023, the Dampier Community Association, a member of the Karratha CLG, shared its feedback, claims or objections regarding this activity, and advised it had no feedback, indicating the information provided was sufficient to enable Karratha CLG members to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- In addition, to the Consultation Information Sheet, Woodside provided further information to the Karratha CLG on 5 April 2024, 17 July 2024 and 13 October 2024.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside presented to the Karratha CLG on 29 September 2023, 22 March 2024, 21 June 2024 and 20 September 2024 (and provided further information to Karratha CLG following these meetings).

Reasonable Period

Woodside allowed Karratha CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to Karratha CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Karratha CLG 30 days for consultation. Karratha CLG engaged in consultation and provided feedback in this period.
- As has been made clear in consultation emails and at meetings, Woodside is open to receiving feedback after EP submission and throughout the life of an EP.
- In this context, Woodside allowed Karratha CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG is appropriate and adapted to the nature of interests with Karratha CLG:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- On 29 September 2023, 22 March 2024, 21 June 2024 and 20 September 2024, Woodside presented to the Karratha CLG on Woodside activities including on this EP, and Woodside staff were available to answer questions and receive feedback. Woodside also provided opportunity to receive feedback at local engagement sessions at the Karratha Shopping Centre, Red Earth Arts Precinct, Woodside's Roebourne Office and at the South Hedland Square.
- Furthermore, Woodside considers a reasonable opportunity was provided to Karratha CLG as evidenced by the response from the Dampier Community Association on 30 August 2023 when they provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- A member of the Karratha CLG provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to the member of the Karratha CLG's feedback.
 - Made no changes or inclusions to the EP as a result of consultation with Karratha CLG because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Onslow Chamber of Commerce and Industry (Onslow CCI)

Summary of information provided and record of consultation for this EP:

- On 31 August 2023, Woodside emailed Onslow Chamber of Commerce and Industry (Onslow CCI) advising of the proposed activity (Record of Consultation, reference 1.20) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Onslow CCI for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow CCI sufficient information to allow Onslow CCI to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Onslow CCI on 31 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow CCI a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was notified in the initial correspondence to Onslow CCI advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow CCI with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Onslow CCI.
- In this context, Woodside allowed Onslow CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow CCI is appropriate and adapted to the nature of Onslow CCI:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Onslow CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow CCI's functions, interests or activities.

Exmouth Chamber of Commerce and Industry (Exmouth CCI)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed the Exmouth Chamber of Commerce and Industry (Exmouth CCI) President and CEO advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 23 October 2023, the Exmouth CCI President and CEO attended an information session in Exmouth on behalf of the Chamber (Record of Consultation, reference 3.8.7).and also attended the Exmouth CLG on 21 November 2023 where further information was supplied (SI Report, reference 23.2).
- Woodside's presentation was emailed to the CLG members, regardless of their attendance at the meeting.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Exmouth CCI is appropriate and adapted to the nature of Exmouth CCI:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding Exmouth CCI of the opportunity to provide feedback.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CCI’s functions, interests or activities.

Karratha & Districts Chamber of Commerce and Industry (Karratha & Districts CCI)

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Karratha & Districts Chamber of Commerce and Industry (Karratha & Districts CCI) advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).	No additional measures or controls are required.

Summary Report – Consultation Complete

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Karratha & Districts CCI for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha & Districts CCI sufficient information to allow Karratha & Districts CCI to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Karratha & Districts CCI on 16 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha & Districts CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to Karratha & Districts CCI advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Karratha & Districts CCI with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Karratha & Districts CCI.
- In this context, Woodside allowed Karratha & Districts CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha & Districts CCI is appropriate and adapted to the nature of Karratha & Districts CCI:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding Karratha & Districts CCI of the opportunity to provide feedback.

- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha & Districts CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha & Districts CCI's functions, interests or activities.

Other Non-government Groups or Organisations or Individuals

Conservation Council of WA (CCWA)

Context

CCWA states that it is a 'mix of a campaign group, environmental advocacy group, hands on environment body and a forum for like-minded organisations and individuals'.ⁱ

Climate is one of its two key focuses and to this end it has a "Fossil Fuels program" under which it is working on multiple fronts to stop gas expansion.ⁱⁱ CCWA launched its "Go Beyond Gas" campaign in mid-2023 which is directed at 'stopping the biggest gas plans - Woodside's Burrup Hub mega gas project including Scarborough, the North West Shelf extension and Browse'.ⁱⁱⁱ In April 2024, CCWA used its Go Beyond Gas campaign to call out to other NGOs to join the protest at Woodside's AGM stating 'Woodside is a dangerous and dodgy operator'.^{iv} Woodside understands that CCWA has a fundamental objection to fossil fuels.

CCWA has been actively engaged with Woodside around the Scarborough Energy Project since at least 2018 when it was consulted on the Scarborough OPP and provided feedback via the Environmental Defenders Office (EDO), specifically around topics associated with management, risks and impacts of GHG emissions. Since that time, Woodside has consulted CCWA in relation to the preparation of the Scarborough Seismic, D&C, SITI and Subsea EPs. CCWA engaged in consultation via the EDO for the SITI and D&C EPs. Woodside has continued to consult CCWA consistently with the formats acceptable to CCWA, that is, by email and in some instances in face-to-face meetings.

In relation to this EP, it has been 13 months since consultation commenced with CCWA. Woodside has given information to CCWA and offered to meet however, this offer has not been taken-up.

The historic engagement is important context to confirm that consultation with CCWA is appropriate and adapted to the nature of interests of CCWA.

Historical Engagement:

2018 – 2020

- CCWA has been aware of and consulting on the Scarborough Project (including operations) for around 6 years. In 2018, CCWA was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020. The activities under this EP were described in the OPP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- CCWA provided comment on the OPP via the Environmental Defenders Office (EDO) (Record of Consultation, reference 4) including on the following topics:
 - Assessment of GHG emissions and regulation/management of emissions.
 - Risks and impacts of GHG emissions on environmental receptors and climate change.
 - Potential impacts to Murujuga rock art and control measures for managing the impacts/risks.
- Woodside addressed all CCWA's comments in the OPP (Record of Consultation, reference 4).

2021 – 2023

- From 2021 to 2023, Woodside consulted CCWA on the Scarborough D&C, SIT1, Subsea and Seismic EPs. Woodside has carefully considered the topics and issues raised by CCWA during consultation on these EPs. A number of topics and issues raised by CCWA during consultation on those EPs have been raised as part of consultation on this EP and include:
 - consultation with relevant persons; provision of draft EPs and other studies; provision of additional time for feedback.
 - GHG emissions, global warming and climate change as well as information relating to control measures for reducing impacts and risks associated with individual EPs and the broader Scarborough Project.
 - Assessment of direct or indirect impacts on cultural heritage including Murujuga rock art and the Dampier Archipelago National Heritage Place.
 - Approval of the Scarborough Project under the EPBC Act and potential impacts on the Great Barrier Reef.
 - Paris Agreement alignment, warming and energy mix scenarios being factored into the impact assessment.
 - Modelling data from habitats outside the impact zones, and uncertain results.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 17 August 2023, CCWA and [Individual 7] emailed Woodside stating CCWA was interested in providing feedback but needed more time to consider the information provided and would like to meet (SI Report, reference 11.1).
- On 4 September 2023, Woodside thanked CCWA for its email and provided three dates to meet and offered to meet at any other time that suited CCWA (SI Report, reference 11.2).
- On 14 September 2023, after no response, Woodside proactively emailed CCWA asking if it would like to meet on 9 October 2023 (SI Report, reference 11.3).
- On 10 October 2023, after still no response, Woodside again emailed CCWA to follow up on CCWA's request for a consultation meeting, asking that CCWA provide dates it was available to meet (SI Report, reference 11.4).
- On 6 November 2023, when there was no response, Woodside phoned [Individual 7], (CCWA contact on emails), and left a message stating that Woodside was following up on past emails and was still open to meeting at a time convenient to CCWA.
- On 12 December 2023, after receiving no further response, Woodside proactively sent an email and letter to CCWA (SI Report, reference 11.5). Woodside:
 - Summarised the consultation with CCWA since the Scarborough Project's Offshore Petroleum Project (OPP) document was released.
 - Resent a link to the Consultation Information Sheet.
 - Advised that consultation in the course of preparing the EP was closing on 20 December 2023 and requested feedback and offered to meet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of specific feedback on the Scarborough Operations EP, Woodside provided a review and assessment of past topics of interest and feedback from CCWA on the Scarborough D&C, SIT1, Seismic and Subsea EPs that may be relevant to this EP as follows:
 - (1) Woodside's consultation process.
 - ❖ (1) Woodside complies with regulations and engages with stakeholders throughout the life of an EP.
 - (2) Impacts on Dampier Archipelago National Heritage Place.
 - ❖ (2) Both indirect and direct environmental impacts and risks will be assessed.
 - (3) Approval of the Scarborough Project under the EPBC Act and potential impacts on World Heritage and National Heritage values of the Great Barrier Reef.
 - ❖ (3) The Scarborough OPP was approved under the EPBC Act and Woodside does not accept the assertion that the Scarborough Project is likely to have a significant impact on the heritage values of the Great Barrier Reef, or the basis for that assertion as identified in the letter.
 - (4) The Scarborough EPs should include an evaluation of impacts and risks related to GHG emissions caused by the Project.
 - ❖ (4) GHG emissions will be assessed in the EP. GHG emissions will be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP will assess both direct and indirect impacts and risks associated with the activity, having regard to the nature and scale of the proposed PAP.
 - (5) Indirect impacts and risks in terms of climate change and degradation of rock art is not properly addressed.
 - ❖ (5) There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the offshore Floating Production Unit. Gas will be exported onshore and processed at the Pluto Gas Plant. Pluto LNG's Air Quality Management Plan has been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant.
 - (6) Some modelling on receptors and environment impacts is not relevant.
 - ❖ (6) The EP will be informed and supported by a range of literature and studies, with many publicly available. Woodside has commissioned a range of modelling related to the activities described in the EP, which includes analysis against various environmental receptors.
 - (7) Importance of epifauna and infauna to overall ecosystem health is downplayed, as is environmental impact on benthic communities in the spoils ground.
 - ❖ (7) Disturbance to the seabed and impacts to benthic habitat and communities is assessed in the EP. Spoils ground issues are addressed in the Seabed Intervention and Trunkline Installation EP accepted by NOPSEMA in December 2023.
- On 12 December 2023, in response to Woodside's letter sent via email, Woodside received two auto-generated out of office replies, including one from [Individual 7].
- [Individual 7] advised that as of 27 October 2023 they no longer worked for CCWA and to send future emails to conswa@ccwa.org.au (SI Report, reference 11.6).
 - The second out-of-office reply directed emails to be sent to two other people (SI Report, reference 11.7).
- On 12 December 2023, Woodside resent its letter via email to the three email addresses provided on the out-of-office replies (SI Report, reference 11.8).
- On 13 December 2023, CCWA responded to Woodside via a letter thanking Woodside for its correspondence dated 12 December 2023 (SI Report, reference 11.9), and claiming the following:
 - (1) It was disingenuous for Woodside to state it had been in a continued dialogue with CCWA.

- (1) CCWA was not aware of the previous requests to consult on this EP and stated that although it was regrettable that emails and phone calls were not responded to, it should be understood that CCWA had limited resources and staff.
- (8) CCWA had the right to be consulted and wished to review relevant information and respond by 31 January 2024. CCWA stated this timeframe was not unreasonable given the commencement date for activities was the second half of 2025.
- (1) As this EP covered decades of substantial fossil fuel production operations, there should be a high degree of consultation.
- (1, 4) The Consultation Information Sheet contained limited information about impacts from the activity with no details of GHG emissions and CCWA required more information on this aspect of the activity.
- On 19 December 2023, Woodside responded to CCWA advising the following (SI Report, reference 11.10):
 - (1) It had provided the Consultation Information Sheet to CCWA on 9 August 2023 and received a response on 17 August 2023 that it had received the information. Woodside had then sent four further pieces of correspondence including offering times and places to meet with CCWA with no response from CCWA to any of that consultation correspondence.
 - (1) To accommodate CCWA's request for more time, Woodside had already extended the consultation period from ending on 11 September 2023 to ending on 20 December 2023.
 - (1) Woodside had also run an extensive media and social media campaign calling for comments and providing stakeholders with further information.
 - (1) Assessed that based on the many attempts to engage with CCWA and provision of material already provided to CCWA, that sufficient information and a reasonable period of time had been provided to CCWA and that as previously advised, consultation closed on 20 December 2023.
 - (1) It also noted that since August 2021, Woodside had been actively engaged in an exchange of correspondence with CCWA and/or the EDO on behalf of CCWA regarding the other 4 Scarborough EPs and those EPs had now been accepted by NOPSEMA. The exchange of consultation correspondence by email was the usual method used by CCWA.
 - (1) In the absence of feedback, Woodside proactively reviewed, considered and addressed CCWA's previous topics of interest on the four Scarborough EPs. Woodside also proactively reviewed, considered and addressed CCWA's previous feedback on the Scarborough OPP. Woodside set that out in the correspondence.
 - (1) Woodside also provided links to the Statement of Reasons for the OPP, the formal consultation report for the OPP and a factsheet about the Pluto LNG Facility Greenhouse Gas Abatement Program.
 - (1) Woodside advised that consultation continues to occur during the life of an EP and that the Management of Change and Review process can be applied if appropriate.

Ongoing engagement:

- On 7 March 2024, Woodside sent proactive emails to CCWA stating that as they had shown an interest in climate-related topics, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, references 11.11, 11.12 and 11.13).
 - The email included links to the CTAP and the ASX Announcement.
 - (1) The email re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - (1) Finally, the email stated that Woodside was available to meet with CCWA to discuss this EP should they be interested.
- On 4 July 2024, Woodside again proactively emailed CCWA and provided a link to the publicly available EP on NOPSEMA's website (SI Report, reference 11.14). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with CCWA over the next month. Based on CCWA's previous feedback, Woodside also included a table of specific topics which CCWA might be interested in, and where to find that topic in the EP, including:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(4)** Information on GHG emissions associated with the project and the potential impacts of climate change can be found in EP Section 6.7.6.
- **(5)** Information on the assessment of potential risks and impacts of atmospheric emissions could be found in EP Section 6.7.7.
- **(4)** Information regarding Paris Agreement alignment and scenarios could be found in EP Section 6.7.6.
- **(6)** Consideration of climate science could be found in EP Section 6.7.6.
- On 12 July 2024, CCWA emailed Woodside (and copied NOPSEMA) regarding this EP (SI Report, reference 11.15). CCWA reiterated previous topics and also provided the following feedback, claims or objections:
 - **(1)** Information provided by Woodside fell short of consultation requirements under reg 25 and did not meet reg 34 of the Environment Regulations.
 - **(8)** Confirmation was requested of CCWA's relevant person status.
 - **(1)** The accuracy and adequacy of information in the EP, OPP and Information Sheet and whether it was misleading or incorrect.
 - **(9)** The statement of reasons for the Scarborough OPP did not mention adequacy of information provided on impacts that would affect CCWA.
 - **(10)** Inadequate information had been provided on emissions from the Scarborough and climate change in WA.
 - **(11)** The OPP was reliant on out-of-date information relating to climate impacts, energy scenarios and emissions scenarios.
 - **(12)** The OPP used information and scenarios from 2018-2020 and the current EP referenced an IEA Net Zero Roadmap which had been updated but not referenced by the EP.
 - **(13)** The NDC referenced in the OPP had been updated in the EP.
 - **(14)** The conditions set out for the Pluto LNG facility, as referenced in the OPP, were inadequate.
 - **(15)** Questioned the claim that LNG was expected to play a key role in the future energy mix and in displacing more carbon intensive power generation.
 - **(16)** Long-term economic, environmental, social and equitable considerations due to climate change had not adequately outlined and therefore were not able to be adequately considered by NOPSEMA.
 - **(17)** GHG emissions would have impacts that were of consequence on sensitive and high-quality environments. These included climate change impacts on MNES that would be exacerbated by GHG emissions from the Scarborough project.
 - **(18)** The OPP Statement of Reasons stated that environmental impacts and risks had been appropriately identified, and asserted there were impacts and risks that had not been appropriately identified.
 - **(19)** It not been provided with information as to how the project would fit into Australia's NDC.
 - **(20)** GHG emissions from the project would not be reduced to ALARP levels.
 - **(21)** Claimed that Woodside had lobbied against climate policy that would drive demand for low carbon fuels; for example, Victoria's gas substitution road map.
 - **(22)** All Australians had the right to be consulted on matters that would affect their wellbeing and environment - there are groups and individuals who qualified as relevant persons who had not been regarded as such.
 - **(23)** The consultation information sheet did not give information on Scope 3 emissions or climate impacts associated with these emissions.
 - **(24)** Further information, including climate impacts, should be distributed to all relevant persons.
 - **(25)** Every tonne of CO₂-e emitted into the atmosphere added to global warming.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(26)** The 878MtCO₂-e from the Scarborough gas project is likely to cause an approximate increase of 0.0003951°C in global surface temperature, and that associated emissions through Pluto and the greater Burrup Hub would be additional to this.
- **(27)** Woodside's claim that total emissions from the proposal amounted to an insignificant contribution to the global carbon budget, however, the Scarborough project would occupy approximately 0.439% of this budget. This is a significant contribution that must be qualified.
- **(28)** Estimates had not been provided of remaining carbon budgets as of the proposed start date of the project, and the resulting budget occupation.
- **(29)** The project's emissions will occupy 0.0976% of the carbon budget that is the difference between 1.5°C global heating and 2.0°C global heating. Estimates had not been provided of how many species would become extinct as a result of its contribution to a 2.0°C world.
- **(30)** Claimed it was incorrect to state there was no direct link between GHG emissions from Scarborough and climate change impacts.
- **(31)** Section 6.7.6 of the EP should include ecosystems/habitat, species, and socioeconomic considerations.
- **(32)** The statement that "emissions associated with the project are negligible" was misleading and its estimate of approximate annual scope 1 emissions of 6.4 MtCO₂-e were significant and material on both a state and national level.
- **(33)** The EP quoted the IPCC AR6 working group report, and suggested that the report noted that societal choices and actions implemented in the next decade will determine the extent to which medium and long-term pathways would deliver climate resilient development, and that projects such as Scarborough were exactly the choices the IPCC AR6 group referred to.
- **(34)** The "no consequence assigned" to GHG emissions was inaccurate and unacceptable.
- **(35)** The Statement of Reasons for the OPP made a case that natural gas was expected to play a key role in the future energy mix, and would therefore contribute to the IEA's sustainable development scenario (SDS), however the SDS had been updated.
- **(36)** The documents contain unsubstantiated claims that LNG would contribute to global emissions reduction effort, and adequate information had not been provided to show gas from the project would be replacing coal.
- **(37)** A recent paper noted IEA's 2023 NZE roadmap showed gas use needed to be declining already at 2% per year towards 2030 and accelerating to 8% per year between 2030 and 2040. Recent research showed LNG capacity greatly exceeded any needs for coal to gas switching as part of 1.5°C compatible, energy transitions.
- **(38)** Contested the claim that gas was less emissions intensive than coal when full lifecycle emissions were accounted for.
- **(39)** Estimates were not provided of the cumulative emissions that the Scarborough project would contribute to worldwide.
- **(40)** Woodside's Climate Transition Action Plan and 2023 Progress Report contained plans and targets that were unenforceable.
- **(41)** Abatement plans consisted nearly entirely of offsets, and offsetting was not sufficient to mitigate climate change impacts.
- **(42)** Good and achievable mitigation measures that sat above offsetting on the mitigation hierarchy were available. Woodside stated it would seek to reduce emissions as a priority but provided no estimates or any commitment to reducing emissions from the facility, including no consideration or commitment to reducing combustion emissions via more efficient combined cycle turbines or electrification options such as e-drives. This was not consistent with the OPP.
- **(43)** No commitments had been made to reducing Scope 3 emissions.
- **(44)** The project was not consistent with state aspirations of net zero by 2050.

- **(45)** The statement that “the majority of emissions and discharges, particularly those which will occur during the full lifecycle of Scarborough, will be made within the permit area” was not correct. The majority of Co2-e emissions would not be made within the permit area, and emissions made within the permit area were subject to dispersal to nearby population centres which must be notified and consulted about potential health impacts.
- **(46)** When referencing renewable power sources, Woodside displayed disregard for emissions reductions by stating implementation of the control required considerable cost with minimal environmental benefit.
- **(47)** The Paris Agreement was not accurately represented and it did not talk about limiting global warming to well below 2 degrees but holding warming to well below 2 degrees while pursuing efforts to limit warming to 1.5 degrees.
- **(48)** Stated Woodside was cherry-picking a certain scenario to make a general conclusion and that was not an appropriate use of the IPCC scenario database.
- **(49)** The P3 pathway relied on by Woodside referenced 687Gt of CO2 CCS, and it had not contributed to this CCS total.
- **(50)** Proper consideration was not given to the global carbon budget.
- **(51)** Scope 3 emissions could better be controlled by leaving them safely buried underground.
- **(52)** Referenced Australia’s legislated emission reduction target and said:
 - The target did not include Scope 3 emissions.
 - The target was not aligned with the temperature goals of the Paris Agreement.
 - The Scarborough Project would produce the majority of its emissions after 2030.
 - It was estimated that 960 Mt of emissions abatement would be achieved by federal reduction policies, which the Scarborough Project would cancel out over 91%.
- **(53)** Requested further information on how the Scarborough project fit into 1.5°C scenarios.
- **(54)** Disagreed with the assertion that the total lifecycle impact of gas, including the Scarborough project, was expected to result in lower net global atmospheric concentrations of GHG than would otherwise have been the case.
- **(55)** No specifics were given regarding monitoring and management actions to address uncertainties in the role of natural gas in displacing higher emission insensitive fuels.
- **(56)** Scarborough did not create an LNG demand but could contribute to meeting it, and claimed reductions in supply from the proponent would have climate benefits.
- **(57)** Woodside’s statements relating to net-zero and the lack of implications assigned to Scarborough gas amounted to greenwashing, according to the UN and International Standardisation Organisation. This was displayed by: Not supporting the phase out of fossil fuels; continuing to build and invest in new fossil fuels; not prioritising emissions reductions; not reducing absolute emissions; relying almost entirely on offsets; not including interim targets; not accounting for Scope 3 emissions reductions; lacking a detailed transition plan.
- **(58)** NOPSEMA should not rely upon information that did not pass greenwashing standards.
- **(59)** Ample evidence existed to show projects such as Scarborough and associated processing at the Pluto LNG facility were having negative impacts on Murujuga rock art.
- **(60)** The proposal did not mitigate any impacts on Murujuga rock art.
- **(61)** MRAMP’s first-year report showed the rock art to be in almost permanently acidic environment with all sites showing high acidity levels.
- **(62)** No management responses were proposed from MRAMP.
- **(63)** Woodside was not ensuring that “no air emissions from the proposal have an adverse impact accelerating the weathering of rock art within Murujuga beyond natural rates”

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(64)** The Scarborough project presented unacceptable risk and irreversible impacts to the environment and any approval would be a violation of the precautionary principle.
- **(65)** The Scarborough Project violated the intergenerational principle.
- **(66)** The project represented a violation of the biodiversity principle.
- **(67)** Further information, including reports, analyses, assessments, modelling and other documents, is required on a number of topics including: the environment that may be affected; environmental risks and impacts of the activities; potential impacts and risks on species; potential risks and impacts in relation to Sea Country; potential impacts and risks of GHG emissions; GHG control measures including any proposal for carbon capture and storage; potential cumulative impacts of the project.
- **(68)** More specific and up-to-date information on proposed control measures were required.
- **(69)** The EP needed to include an evaluation of “all the environmental impacts and risks arising directly or indirectly”. The indirect impacts and risks of GHG emissions associated with a new fossil fuel development must be evaluated.
- On 15 August 2024, Woodside emailed CCWA advising it was assessing the topics raised in CCWA’s consultation correspondence dated 12 July 2024, and offered to meet CCWA to discuss the items raised. Woodside noted it had previously offered to meet with CCWA when consultation on this EP began in August 2023 and was making that offer again (SI Report, reference 11.16).
- On 30 August 2024, CCWA emailed Woodside confirming it had received the offer to meet and asked whether Woodside’s assessment of the points raised in its correspondence would be made available to them before any potential meeting (SI Report, reference 11.17).
- On 8 October 2024, Woodside thanked CCWA for its correspondence dated 12 July 2024 and further correspondence in August 2024 regarding Woodside’s offer to meet (SI Report, reference 11.18). In the consultation correspondence on 8 October 2024, Woodside:
 - Advised it had assessed and responded to the topics and issues raised by CCWA, and confirmed that, following consultation with CCWA, updates had been made to the EP.
 - Described its consultation process which is consistent with regulation 25 of the Environment Regulations, and provided a summary of historical consultation between Woodside and CCWA regarding Scarborough EPs, as well as a summary of consultation regarding the Operations EP.
 - Advised it had recently reviewed CCWA’s website and noted statements that suggested CCWA was fundamentally opposed to the fossil fuel industry. It was also noted there were stated connections on CCWA’s website between CCWA and other NGOs who had campaigns against Woodside, including Doctors for the Environment Australia (DEA) and the Australian Conservation Foundation (ACF).
 - Noted CCWA was informed, resourced, had legal advisors, had brought or been involved in multiple Court cases against Woodside relating to environmental approvals associated with the Scarborough Project, and had made numerous detailed and informed submissions to the Western Australian Appeals Convenor about Woodside’s environmental approvals. These demonstrated CCWA had a sufficient understanding of the activities to allow CCWA to make an informed assessment of the possible consequences of the proposed activity on its functions, interests or activities.
 - In response to topics and issues raised by CCWA, Woodside:
 - **(8)** Confirmed that CCWA had been identified as a relevant person for the purposes of consultation for the Operations EP.
 - **(1)** Disagreed with CCWA’s position that the EP, OPP and fact sheets did not contain sufficient information. Woodside disagreed with the assertion that its fact sheets did not contain sufficient information on the activity in this EP, or that CCWA had not been given sufficient information for the purposes of consultation.
 - **(9)** Advised it did not author the Statement of Reasons therefore did not respond to CCWA’s criticism of it. Further, there was no requirement for NOPSEMA’s Statement of Reasons to mention or provide information on impacts to CCWA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(10)** Clarified the regulations require Woodside to provide sufficient information. Woodside has given CCWA sufficient information to allow CCWA to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of CCWA. Regarding the assertion that the Scarborough Project would exacerbate climate impacts in WA, Woodside:
 - Acknowledged climate science that stated climate change was understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere. Changes in global atmospheric GHG concentration could not be attributed to any one activity or one project, including the Scarborough Project, as they were instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the start of the industrial revolution.
 - Woodside's view was that LNG could have a role in the energy transition and if the introduction of Scarborough LNG served to reduce GHG emissions elsewhere, in Woodside's view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentrations. Therefore, Woodside did not accept the Scarborough Project would contribute to the exacerbation of climate change impacts in Western Australia.
 - However, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the project were hypothetically treated as additive was considered in the latest version of the EP. The contribution was de minimis.
 - Woodside noted that notwithstanding this, climate change was recognised as a global issue and provided a summary of the contextual evaluation that is included in the EP, for reference, in Section 6.7.6.
- **(11)** Disagreed that the OPP was accepted on the basis of out of date, inadequate or misinterpreted information. Information has, by its nature, increased in volume since the Scarborough OPP was accepted, but more recently published information did not necessarily mean the information was different or contained new concepts. EPs were also designed to include updated information (if relevant).
- **(12)** Acknowledged updates and confirmed the 2023 IEA Net Zero Roadmap was aligned with references to the original 2021 report set out in the EP. Woodside confirmed the revised EP reflected the updated roadmap and noted Section 6.7.6 of the EP discussed the project in the context of gas demand in climate-related scenarios.
- **(13)** Acknowledged that Australian GHG emissions targets had been updated and the updated targets were incorporated in the Operations EP. The targets were relevant to the Federal Safeguard Mechanism (SGM) and further information was provided in Section 6.7.6 of the EP.
- **(14)** Acknowledged the EPA had provided advice regarding the Pluto LNG facility and advised that Woodside was currently updating the Pluto LNG Plant's Greenhouse Gas Abatement Program in accordance with Ministerial Statement 1208. Woodside advised the EPA report also included a recommendation of a requirement 'to ensure that air emissions from the (Pluto) proposal do not accelerate the weathering of rock art on Murujuga beyond natural rates'. The Pluto LNG facility's current Air Quality Management Plan (AQMP) managed potential impacts to Aboriginal rock art and Woodside noted further amendments may be made to Pluto documents after the outcomes of the Murujuga Rock Art Monitoring Program (MRAMP) were published.
- **(15)** Confirmed its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. Woodside noted references to and quotes from the OPP and a CSIRO report were quoted by CCWA in isolation and should be read in their full context. Woodside noted the EP used a hypothetical assumption where anticipated GHG emissions associated with the project were assumed to be additive and, based on this hypothetical assumption, contributions of the project to the global carbon budgets estimated by the IPCC to achieve the goals of the Paris Agreement were de-minimis and therefore acceptable.
- **(16)** Disagreed with CCWA's assertion and advised the EP assessed GHG emissions associated with the project. Woodside noted that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the industrial revolution. A contextual evaluation of climate change impacts was included in the EP, and NOPSEMA had accepted the OPP on the basis that the impacts and risks of the Scarborough project were acceptable.
- **(17)** Disagreed with the assertion that direct and indirect emissions associated with the Scarborough project would have impacts that were of serious consequence on sensitive and high-quality environments. As set out in **(10)**, changes in global atmospheric GHG concentrations could not be attributed to any one activity or one project, including the

Scarborough project. Even discounting the role gas could play in the energy transition, emissions associated with the project were negligible in the context of existing and future predicted global GHG emissions.

- (18) Noted the extract from the Statement of Reasons and disagreed that the OPP did not appropriately identify environmental impacts and risks and considered these were addressed in the OPP.
- (19) Advised Australia's carbon management framework had continued to develop since the OPP was accepted, and the current framework was reflected in the EP. Woodside provided an overview of the Federal SGM and noted further detail and context was set out in Section 6.7.6 of the EP.
- (20) Confirmed Woodside considered GHG emissions associated with the project, and the impact on global carbon budgets which were expected to achieve the goals of the Paris Agreement, would be managed to ALARP. Woodside provided details of its multiple project phases to design out and operate out direct GHG emissions. Woodside noted Scope 3 emissions associated with onshore processing of Scarborough gas were subject to GHG emissions frameworks and regulatory approvals. Woodside continued to pursue a range of management and mitigation measures relevant to GHG emissions associated with third party consumption of gas.
- (21) Disagreed with the assertion that it had actively lobbied against effective climate policy that would drive demand for low carbon fuels. Woodside's advocacy aimed to support the goals of the Paris Agreement. Woodside noted the corresponding reference to CCWA's assertion was unclear, but provided links to its Climate Policy, Climate Transition Action Plan and 2023 Progress Report, and a list of government submissions and reports made by Woodside.
- (22) Noted that if CCWA knew of relevant persons to be consulted, CCWA should identify them so that Woodside could apply its consultation methodology including assessing them for reference. This methodology was set out in Section 5.3.4 of the EP.
- (23) Confirmed routine and non-routine atmospheric and GHG emissions were covered in the information sheet, including indirect (Scope 3) emissions from support vessels and onshore processing. Woodside provided further information on sources and volumes of Scope 3 emissions.
- (24) Noted information on the topics of climate change and emissions was set out in the EP which was publicly available; referred to Woodside's methodology for identifying relevant persons; and confirmed Woodside had advertised consultation widely for this EP to allow broad awareness.
- (25) Acknowledged climate science and that human-caused climate change was understood to be the consequence of net GHG emissions that have accumulated in the atmosphere since the start of the industrial revolution from energy use, land use change, lifestyle patterns of consumption and production. Woodside acknowledged IPCC statements regarding the near linear relationship between cumulative anthropogenic CO₂ emissions and the global warming they caused and provided information on the IPCC's estimated global carbon budget related to Paris Agreement scenarios. Woodside noted the reduction in a carbon budget by emissions associated with the project, and therefore its alignment with Australia's targets aligned to the Paris Agreement, was a relevant measure to apply to assess acceptability of the project. Woodside provided its view that LNG could have a role in the energy transition and that the full volume of GHG emissions associated with the project were not expected to be additive. As described above, even in the hypothetical scenario when taken to be wholly additive, the GHG emissions created by and associated with the project represented a de minimis contribution to the carbon budgets anticipated to achieve the goals of the Paris Agreement.
- (26) Noted that CCWA had not included workings or figures for its emissions calculations and noted CCWA's ability to make the asserted calculations was inconsistent with its claims it had not been provided with sufficient information relating to GHG emissions associated with the project.
- (27) Maintained its position regarding the acceptability of the project. Woodside noted a portion of GHG emissions associated with the project were anticipated to contribute to a consumption of carbon budgets estimated to achieve the goals of the Paris Agreement. Woodside, however, noted CCWA had not provided background workings or figures underpinning its calculations and without that visibility it was not possible for Woodside to comment on CCWA's calculations. Woodside set out further information on how the project fit within carbon budgets.

- (28) Noted carbon budgets were subject to change and assessment was undertaken on the basis of information current and available at the time, and assuming the hypothetical scenario where the entirety of emissions associated with the project were hypothetically additive to global GHG concentrations.
- (29) Disagreed with CCWA's position and its calculations regarding carbon budgets and referred CCWA's to previous responses on Woodside's position on climate change and GHG emissions, and its position on carbon budgets related to the Paris Agreement.
- (30) Advised that changes in global atmospheric GHG concentrations could not be attributed to any one activity or one project, including the Scarborough project, as they were instead the result of global GHG emissions, minus global GHG sinks, that had accumulated in the atmosphere since the start of the industrial revolution. The accumulation of net GHG emissions in the atmosphere was, in turn, influenced by a number of factors including global energy demand and the composition of the global energy mix.
- (31) Confirmed that, in response to feedback, assessment of GHG emissions associated with the Scarborough project was undertaken against global GHG concentrations.
- (32) Stated that Woodside was not engaging in misleading or deceptive conduct and explained the context and background to the conclusion it made. Woodside disagreed with CCWA's estimate of GHG emissions associated with the project and advised the annual estimated Scope 1 emissions created by the activity were estimated to be 0.61 MtCO₂-e. Woodside also provided details of the Federal SGM, and regulatory frameworks for GHG emissions originating within WA.
- (33) Confirmed Woodside recognised the IPCC as a leading body on climate change science and acknowledged the AR6 report.
- (34) Confirmed the GHG emissions assessment in the current EP version focused on assessment of GHG emissions associated with the Scarborough Project against global GHG concentrations. As described in other responses, the contribution of the project to global carbon budgets estimated to achieve the goals of the Paris Agreement was de minimis. Woodside confirmed that, as part of the assessment process, the EP included further background and context and assigned a consequence of "F" in accordance with the Woodside risk matrix.
- (35) Noted CCWA's acknowledgement of the IEA's SDS update.
- (36) Advised that the regulations require Woodside to provide sufficient information. Woodside maintained the position that LNG could have a role in displacing higher carbon intensity fuels. Woodside advised expected customer nations' NDCs under the Paris Agreement pointed to the use of LNG as a means of achieving customer nation commitments and noted electricity generation using natural gas typically released about half the Lifecycle amount of GHG compared to electricity generation fuelled by coal (IEA 2019).
- (37) Disagreed with CCWA's position, including because the IEA NZE was not the only pathway to meet the objectives of the Paris Agreement. Woodside referred CCWA to other responses for further information on Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project on carbon budgets.
- (38) Advised that Woodside supports management of methane emissions. Woodside advised measures to mitigate methane emissions had been implemented on the FPU and further background, context and information was provided in Section 6.7.6 of the EP under the subheading *Management and Mitigation*. Woodside noted emissions factors used in the EP to estimate Scope 3 GHG emissions took into account expected methane emissions. Woodside further noted the IEA also stated in its 2024 Global Methane Tracker that the Australian upstream gas industry had the equal second-lowest methane intensity of the top oil and gas producing countries.
- (39) Advised a breakdown of emissions sources extended over 11 pages in Section 6.7.6 of the EP, which also included a definition from the GHG Protocol of direct and indirect emissions which was based on operational control of the project. Woodside advised the total estimated GHG emissions associated with the project, as presented in Table 6-21 of the publicly available EP, were approximately 880 MtCO₂-e over the life of the activity.
- (40) Advised the information and commitments in the EP were consistent with the OPGGS(E) Regulations and the CTAP provided broader business context and internal plans and targets, and was not published under regulatory requirement.

- (41) Referred CCWA to other responses which provided information on the mitigation and management approach undertaken for the project. Woodside confirmed avoiding and reducing GHG emissions was its priority and Woodside aimed to achieve this principally by pursuing opportunities in the design and operation of assets. Offsetting emissions allowed a reduction of net emissions while asset and technology decarbonisation plans were matured and implemented, and in the longer term, and in circumstances where emissions were hard-to-abate, residual emissions would be offset using carbon credits in order to achieve emission reduction requirements.
- (42) Confirmed that Woodside applied a framework to reduce emissions during the design phase, and that as a result of this process, some measures to reduce emissions had been implemented and others had not. Woodside noted that by way of example, combined cycle power generation turbines were considered but not selected for the Scarborough FPU, and set the reasons. Woodside noted electrification of compressor drive (e-drive compressors) may be a feasible alternative for onshore facilities where other power supply was available, however, the electricity used to power an e-drive on the facility would be generated by other turbines burning fuel gas and producing GHG emissions. Woodside advised that as a result of CCWA's feedback, Woodside had updated the latest version of the EP to include assessment of combined cycle turbines and electrification of compressors.
- (43) Confirmed the Woodside titleholder for this EP did not have operational control over Scope 3 emissions associated with third party consumption of Scarborough gas and in these circumstances, the measures in the EP were appropriate and practicable. Woodside further advised that emissions arising from the consumption of Scarborough gas along with other feed sources in customer markets would be considered under domestic and international emissions control framework, and that anticipated customers of gas from the Scarborough project were countries that were parties to the Paris Agreement.
- (44) Provided information on the Federal SGM regulation requirements. Woodside advised Scope 1 emissions from the project originated in Commonwealth waters and were not subject to WA carbon frameworks. Scope 3 emissions associated with onshore processing of Scarborough gas would originate within WA and these facilities were subject to WA legislation which was implemented in a number of ways. At a corporate level, Woodside was targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030 relative to a starting base, with an aspiration of net zero by 2050 or sooner.
- (45) Advised the statement CCWA had replicated from the OPP was misconstrued. Read in context, the statement concerned aspects such as physical presence, light emissions and discharges from project vessels, where reference to the Permit Area was appropriate.
- (46) Advised that CCWA's referenced statement was made out of context. Woodside confirmed assessment of potential controls was undertaken in accordance with the ALARP framework and NOPSEMA guidance which stated that alternative control measures may be discounted if they were "grossly disproportionate to the benefit gained". In the case of supplying power from shore to the FPU, Woodside maintained that the cost associated with installation of a 430km cable from shore to the field location was grossly disproportionate to the environmental benefit gained.
- (47) Provided an extract from article 2 of the Paris Agreement in demonstration of its understanding of the overarching goal of the Agreement. Woodside referred CCWA to other responses for further information on Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project on carbon budgets.
- (48) Agreed that cherry-picking climate scenarios was not appropriate, which was why Woodside had considered the IPCC's range of scenarios and scenarios from other providers, and further information was set out in Figure 6-7 of the EP in Section 6.7.6. Woodside also noted it engaged directly with customer markets to understand market intentions.
- (49) Confirmed Woodside's assessment did not "favour" any particular climate scenario but rather aimed to show how the Scarborough project could fit within a range of Paris-aligned scenarios.
- (50) Referred CCWA to other responses for further information on Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project on carbon budgets.

- (51) Confirmed that Woodside was required, including under the Offshore Petroleum and Greenhouse Gas Storage (Resource Management and Administration) Regulations to ensure that the plan to develop the resource was compatible with the optimum long-term recovery of petroleum from the offshore area.
- (52) Advised that:
 - ❖ Australia's targets include Scope 3, and confirmed that Australia's targets did include Scope 3 emissions as defined in relation to the Scarborough project.
 - ❖ CCWA's position that the target was not aligned with the temperature goals of the Paris Agreement was a matter on which the Australian Government had enacted legislation which Woodside was relevantly complying with.
 - ❖ Australia is anticipating setting a 2035 target consistent with the Paris Agreement.
 - ❖ It is inappropriate to conflate emissions that would occur internationally.
 - ❖ Emissions arising from the consumption of Scarborough and Pluto gas would be considered under domestic and international emissions control frameworks. Under the Paris Agreement and global GHG accounting conventions, each country was responsible for accounting for, reporting and reducing emissions that physically occurred in its jurisdiction.
- (53) Advised emissions associated with the project fit within Australia's NDC and the NDC of customer's nations. Both Australia and current expected customer nations had set targets consistent with the Paris Agreement to pursue efforts to limit global warming to 1.5°C. Woodside referred CCWA to other responses which set out in detail how GHG emissions associated with the project were assessed against global carbon budgets.
- (54) Confirmed it maintained that the total life cycle impact of gas, including Scarborough gas, is expected to result in lower net global atmospheric concentrations of GHGs than would otherwise have been the case.
- (55) Advised that at a corporate level, Woodside had measures for monitoring and managing uncertainty in the role of natural gas in displacing higher emission intensive fuels. This included engaging with customers and potential customers regarding demand and the carbon policies of the governments in the jurisdictions in which they operated.
- (56) Advised the assumption that global energy demand would decrease if the Scarborough project did not go ahead was flawed. Woodside noted global energy demand was influenced by a number of factors including population growth and government policy. Woodside also noted the statement from the OPP should be read in its full context.
- (57) Woodside understands CCWA's allegations regarding greenwashing to be an allegation that Woodside has engaged in misleading or deceptive conduct. Woodside does not agree. In Woodside's view, the a-h points provided by CCWA were no indicators of misleading or deceptive conduct. Woodside noted it was aware of the UN High Level Expert Group on Net Zero Integrity Matters – Net Zero Commitments by Businesses, Financial Institutions, Cities and Regions and the ISO Net Zero Guidelines as well as a range of other forums, public dialogues and reports regarding purported greenwashing. Woodside recently participated in the Australian Senate Inquiry into Greenwashing. As per its statement, Woodside takes care with its statements, particularly in relation to climate change, so that these statements were accurate. Woodside provided further information on its climate targets from a corporate perspective and advised further information was available in its Climate Transition Action Plan and 2023 Progress Report.
- (58) In addition to its response to the previous point (57), Woodside noted it had a practice of carefully considering and verifying statements and disclosures. Woodside provided a link to the Fact Checker on its website.
- (59) Provided information from MRAS which stated that data currently available from previous monitoring projects did not allow for a conclusive answer on whether anthropogenic emissions were impacting Murujuga's rock art, and that the MRAS was therefore essential to fill these gaps in knowledge. Woodside directed CCWA to sections of the EP which discussed existing research on onshore emissions, and assessment of potential impacts of onshore emissions on rock art.
- (60) Referred CCWA to its previous response regarding the inconclusive position on rock art impacts. Woodside confirmed that nevertheless, precautionary measures were in place that reduce risk of impact, and further information was provided in the EP. Woodside also noted controls considered in the EP had been extended to reflect the requirement of the Pluto Gas Plant to implement best practice in minimising air emissions, and provided a list of examples.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(61)** Noted the MRAMP report also stated that “data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time”. Woodside does not consider these results to be definitive and recognises that further work by MRAMP is required.
 - **(62)** Referred CCWA to other responses which addressed the uncertainty regarding the potential impact pathway from onshore atmospheric emissions on Murujuga rock art and noted onshore industrial air emissions were being managed by EPA, while DWER was also involved including via the MRAS.
 - **(63)** Referred CCWA to other responses which addressed the uncertainty regarding the potential impact pathway from onshore atmospheric emissions on Murujuga rock art, and precautionary measures taken to address the uncertainty.
 - **(64)** Disagreed with CCWA’s assertion that Scarborough Project presented an unacceptable risk and (would cause) irreversible impacts to the environment. Woodside noted the highest magnitude for the activity under the EP was: planned impact/consequence Slight, short-term impact (<1yr) on species and/or habitat (not affecting ecosystem function) physical or biological attributes. For unplanned activities, the highest level of impact or consequence is Moderate, medium-term impact (2-10 yrs) on ecosystems, habitat or physical/biological attributes. This relates to the low likelihood event of vessel collision resulting in marine diesel release along the Trunkline route.
 - **(65)** Noted the impacts and risks of the Scarborough project were determined to be acceptable in the Scarborough OPP through consideration of evaluation criteria which includes the principles of ecologically sustainable development consistent with the EPBC Act. Woodside also set out four points outlining how the Scarborough project was considered to align with the core objectives of ESD.
 - **(66)** Referred CCWA to other responses for further information on Woodside’s position on climate change and GHG emissions, and Woodside’s assessment of the hypothetical contribution of the Scarborough project on carbon budgets.
 - **(67)** Advised it was not reasonable for Woodside to provide information, technical evaluations and studies requested by CCWA which included commercially sensitive or confidential information, and it was not required in order to allow CCWA to make an informed assessment of the possible consequences of the activity on CCWA’s functions, interests or activities. Woodside again noted the full EP and OPP were publicly available, and referred CCWA to other responses regarding the volume of information already provided to CCWA relevant to this EP. Woodside also noted the EP included the information requested and provided references to relevant sections. Regarding CCS, Woodside noted it was not currently a feasible abatement measure for the Scarborough FPU due to infrastructure, non-concentrated Co2 sources, and reservoir requirements.
 - **(68)** Referred to other responses which provided an indication of the volumes of documents and pages of information Woodside had provided or were otherwise available to CCWA relevant to this EP. Woodside also noted the EP was publicly available and included a link to the EP on NOPSEMA’s website.
 - **(69)** Acknowledged that indirect impacts were assessed in environment plans. Woodside directed CCWA to Sections 6.6, 6.7 and 6.8 for further information on assessments of direct and indirect impacts associated with the EP. Woodside noted the indirect impacts and risks of GHG emissions were assessed in the EP.
- On 8 October 2024 and 21 October 2024, correspondence raising no claims or objections relating to the adverse impacts of the activity was erroneously sent to Woodside and does not require a response (SI Report, references 11.19 and 11.20).
 - On 9 December 2024, NOPSEMA provided Woodside with correspondence sent to NOPSEMA from CCWA on 4 December 2024 (SI Report, reference 11.21) which included feedback on a number of topics including:
 - **(70)** Woodside’s letter had taken the view that it was no longer required to meaningfully engage with CCWA because CCWA had consistently raised its concerns, through consultation and publicly, that fossil fuel projects such as the Scarborough Project posed unacceptable risks.
 - Woodside had undertaken a detailed review of CCWA’s activities, including trawling through CCWA’s website and websites of other environmental NGOs, and provided its own analysis of CCWA’s engagement in public participation on climate change and protection of the environment.

- CCWA called for NOPSEMA to conduct an investigation with respect to Woodside's ability to comply with the consultation requirements and the potential abuse of the consultation processes.
- CCWA stated environmental decision-making required robust and informed public participation which was the work of CCWA and NOPSEMA's role was to ensure organisations like CCWA were provided with information needed to meaningfully engage in consultation.
 - **(65)** The principles of ESD enshrined in s3A of the EPBC Act and the Environment Regulations at Regulation 4 guided NOPSEMA's task in deciding whether or not to accept an EP.
 - **(65)** The principles of ESD included the principle of intergenerational equity important for projects such as Scarborough where impacts will be passed on to future generations. The burden on NOPSEMA to ensure genuine and meaningful public participation on this project was high.
- **(1, 8, 70)** CCWA stated consultation was required.
 - CCWA was a relevant person; Woodside was obliged to consult CCWA with respect to the EP and NOPSEMA had to be satisfied that Woodside had consulted CCWA in line with the Regulations.
 - CCWA's position on the project was not relevant to consultation requirements in the Regulations. CCWA rejected any implication that Woodside did not have to continue consulting and providing information to CCWA because of generalised statements that CCWA does not support the development of fossil fuels (12) (14) (15) (16)
 - CCWA rejected any claim by Woodside that consultation was finished.
 - CCWA had continued to engage in good faith by requesting information necessary to understand the impacts of the activity on its functions, interests and activities, and Woodside was required to provide that information and could not unilaterally terminate consultation.
- **(1)** CCWA claimed sufficient information was lacking.
 - Woodside was obligated to provide CCWA with sufficient information.
 - **(1, 14)** The onshore processing of gas from the Scarborough fields had never been the subject of a proposal in WA (it was being undertaken pursuant to the original approval of the Pluto gas plant in 2014). That is, the Scarborough project had never been before the Appeals Convenor. As a relevant person, CCWA was entitled through that process to sufficient information and a reasonable period for consultation.
 - **(1, 4, 5, 10, 14, 36, 37, 38, 59)** Woodside had refused to provide information For example, CCWA had still has not been provided with sufficient information on the updated conditions to the Pluto gas facility and how Woodside proposed to address impacts and risks identified by the EPA. CCWA had also still not been provided with information about how the climate impacts caused by the proposal would affect its functions, interests and activities; nor had CCWA been provided with sufficient information or evidence that gas was displacing coal instead of renewables, or how polluting gas was when full lifecycle emissions were taken into account.
 - **(1, 4, 18, 64, 69)** CCWA could not make an informed assessment of the proposal as climate and environment impacts had not been fully explained, and requested information had not been provided.
 - **(4, 5, 44, 47, 50, 59, 60, 61, 63)** Regarding Australia's commitment to net zero emissions by 2050, there were concerns about the viability of the project from a climate and environment perspective. There were also concerns about impact on Murujuga Rock Art.
- CCWA included comments regarding Woodside's letter dated 8 October 2024 which included:
 - **(70)** After outlining past consultation with CCWA, Woodside's letter took an aggressive tone, and revealed Woodside had reviewed CCWA's website where CCWA stated it was "fundamentally opposed to the fossil fuel industry".

- **(70)** A statement regarding the context and history of consultation between CCWA and Woodside that raised serious concerns about Woodside's approach to the statutory consultation process.
- **(72)** Reference to proceedings commenced by ACF and a claim that CCWA was involved in those proceedings which CCWA was not.
- **(70)** Woodside had adopted an adversarial approach to consultation, suggesting it viewed CCWA as an opponent rather than a peak body representative of the broader public interest concerned with protection of the environment and the climate. CCWA's views represented concern about the impacts of the Scarborough Project, including contribution to climate change due to direct and indirect emissions over the life of the Project.
- **(70)** CCWA claimed that the flawed approach to consultation affected NOPSEMA's consideration of the EP acceptance criteria and that NOPSEMA could not accept the EP given Woodside's apparent position that it was not required to consider the issues raised by CCWA, and its view that it considered CCWA's submissions to be "meritless.". NOPSEMA could not be reasonably satisfied that the criteria in s34 had been met.
- **(70)** CCWA further claimed that the Letter had raised broader issues about abuse of process.
 - The letter could be interpreted as threatening in nature toward a relevant person; it revealed that CCWA was subject to a form of surveillance by Woodside that had an intimidatory effect. The power imbalance should be noted as Woodside was a billion dollar corporation while CCWA was an environmental charity with some AUD\$3.8 million in assets.
 - The letter could have discouraged CCWA from engaging further in consultation and in public participation on issues concerning Woodside's activities.
 - The fact that the letter had been written in the context of a statutory consultation process, where Woodside would be legally required to continue to engage with CCWA if NOPSEMA were to accept the EP, gave it all the hallmarks of an abuse of process that would discourage ongoing public participation by CCWA on the issue of environment protection.
- CCWA requested a response within 2 weeks as to what action NOPSEMA would take.
- On 17 January 2025, Woodside responded to CCWA (SI Report, reference 11.22). Woodside:
 - **(70)** Confirmed it had consulted CCWA as a relevant person for this EP and continued to review, assess and respond to CCWA correspondence. Woodside provided a summary of consultation that had taken place with CCWA and an overview of CCWA's topics of interest for this EP. Woodside further confirmed that, in complying with Regulation 25, it had assessed CCWA's consultation correspondence as well as CCWA's literature more broadly. This provided context for consultation on the EP and, for example, demonstrated that CCWA and Woodside had differing views and positions on matters related to the oil and gas industry. It was therefore likely that CCWA and Woodside would have differing views on Woodside's responses to CCWA's feedback and Woodside's assessment of the merits of CCWA's objections or claims. Woodside confirmed its consultation process was transparent and provided a summary of the consultation approach for the EP. Woodside further provided information on the purpose of consultation in accordance with the Regulations and NOPSEMA's Consultation Guideline and set out its consultation regime for the EP and OPP.
 - **(65)** Noted the principles of ESD as set out in s3A of the EPBC Act and confirmed these had been considered and assessed in the environmental approval process for the Scarborough Project and provided sections of both the OPP and EP which provided further information. Woodside confirmed the EP set out how impacts and risks were reduced to ALARP and Acceptable level, with further information available in specified sections of the OPP and EP.
 - **(1, 8, 70)** Confirmed it had consulted CCWA as a relevant person and referred CCWA to its responses regarding the context for this consultation, the transparent nature of consultation and the EP consultation regime.
 - **(1)** Confirmed it had given CCWA sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests and activities, and provided an overview of information that had been given to CCWA regarding this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1, 14) Noted that, as previously confirmed to CCWA, the onshore processing of gas at the Pluto Gas Plant was considered in the EP, and noted that CCWA had made submissions on the Scarborough OPP during that consultation process in 2018. Woodside also noted that CCWA had instituted court proceedings relating to the primary approval for the Pluto Gas Plant, and had made submissions to the Appeals Convenor regarding Pluto Gas Plant approvals, and provided positions on CCWA’s position relating to Pluto Gas Plant and Pluto Train 2.
- (1, 4, 5, 10, 14, 36, 37, 38, 59) Disagreed with CCWA’s assertion that some requests for information remain unsatisfied and referred CCWA to Woodside’s previous response regarding the context for consultation which set out reasons why CCWA and Woodside’s differing viewpoints may mean that CCWA was unlikely to be satisfied with information provided by Woodside. Woodside further provided examples of where it had previously responded to CCWA on Pluto gas facility, greenhouse gas emissions, Murujuga rock art, gas displacing coal, and lifecycle emissions of gas.
- (1, 4, 18, 64, 69) Confirmed it had consulted CCWA in accordance with Regulation 25, and in addition, CCWA had had access to the full EP published on NOPSEMA’s website as well as the Scarborough OPP, both of which included an assessment of the risks and impacts of the project and activity.
- (4, 5, 44, 47, 50, 59, 60, 61, 63) Confirmed it had previously provided responses to CCWA regarding potential climate change impacts, evaluation criteria including the principles of ESD, and potential impacts to Murujuga rock art.
- (70) Did not agree with CCWA’s characterisation of tone and confirmed that, in complying with Regulation 25, Woodside had reviewed CCWA’s consultation correspondence as well as literature and information CCWA had published publicly. Woodside referred CCWA to its previous responses which set out some reasons why context was included in the consultation information.
- (72) Referred to letters received from CCWA’s lawyers which resolved the query.
- (70) Disagreed that Woodside had adopted an adversarial approach to consultation and confirmed it had consulted CCWA as a relevant person and referred CCWA to previous responses which set out reasons why context was included in the consultation information.
- (70) Disagreed that Woodside’s position was that it was not required to consider the issues raised by CCWA. Woodside confirmed it consulted CCWA in accordance with Regulation 25 and, in accordance with Regulation 24, had assessed the merits of CCWA’s objections or claims about the adverse impacts of the activity to which the EP related. Woodside also provided reference to Section 7 of the EP which set out the implementation strategy including ongoing consultation.
- (70) Disagreed with CCWA’s interpretation that Woodside’s correspondence was “threatening in nature” and confirmed Woodside’s intention was not to threaten or intimidate CCWA. Regarding a power imbalance, Woodside disagreed with CCWA’s characterisation and noted CCWA had received advice and been represented by the EDO – experienced environmental lawyers – and that CCWA had instituted court proceedings against Woodside. Woodside referred CCWA to previous responses regarding the transparent nature of consultation, the consultation assessment process, and some of the reasons for including context for consultation.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Woodside’s consultation did not meet requirements:</p> <ul style="list-style-type: none"> • It was disingenuous for Woodside to state it had been in a continued dialogue with CCWA 	<p>(1) Woodside assessment: Woodside has provided CCWA with sufficient information, via the Consultation Information Sheet, publicly available EP, Scarborough OPP, assessing feedback provided by CCWA on other Scarborough EPs as it relates to this EP, and direct responses to CCWA’s feedback, for CCWA to make an informed assessment of the possible</p>	<p>(1) CCWA has been provided sufficient information and a reasonable period of time for consultation, as described in Section 5.4 of the EP.</p>

<ul style="list-style-type: none"> Insufficient information and time provided for consultation, and consultation not wide enough As the EP covered decades of substantial fossil fuel production operations, there should be a high degree of consultation. 	<p>consequences of the activity. Woodside extended the consultation period to 4.5 months and has made it clear to CCWA that Woodside continues to accept feedback throughout the life of an EP.</p> <p>Woodside response: Woodside noted that CCWA had been a consultation participant since the Scarborough OPP document was released for public comment in 2018.</p> <p>For this EP, Woodside provided CCWA with a consultation information sheet on 9 August 2023 and requested feedback. Woodside also made multiple attempts to reach CCWA for the purposes of organising a meeting. In the absence of feedback, Woodside proactively reviewed prior feedback from CCWA regarding other Scarborough EPs that may be relevant to this EP. Woodside also extended the consultation period from an initial four-week period to 4.5 months.</p> <p>Once the EP was publicly available on the NOPSEMA website, Woodside provided CCWA with the link.</p>	
<p>(2) Impacts on Dampier Archipelago National Heritage Place need to be assessed.</p>	<p>(2) Woodside assessment: Impacts to cultural heritage places and values, including Dampier Archipelago National Heritage Place, are assessed in the EP.</p> <p>Woodside response: Woodside confirmed the EP would assess both direct and indirect environmental impacts and risks associated with the PAP. The EP assessed impacts to heritage places and values including the potential for unplanned impacts.</p>	<p>(2) Cultural features and heritage values are described in Section 4.9 of the EP. The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(3) Scarborough OPP not properly addressed under EPBC Act and potential impacts on World Heritage and National Heritage values of the Great Barrier Reef.</p>	<p>(3) Woodside assessment: The Scarborough OPP has been approved under the EPBC Act through its acceptance by NOPSEMA. Woodside does not accept the assertion that the Scarborough Project is likely to have a significant impact on the heritage values of the Great Barrier Reef.</p> <p>Woodside response: Woodside confirmed the Scarborough OPP had been approved under the EPBC Act through its acceptance by NOPSEMA. Woodside advised that specifically, the 'offshore component' of the Scarborough Project would be undertaken in accordance with the endorsed</p>	<p>(3) Not required.</p>

	program referred to in the OPGGS Endorsed Program Approval. Woodside advised it did not accept the assertion that the Scarborough Project was likely to have a significant impact on the heritage values of the Great Barrier Reef.	
(4) Risks and impacts of GHG emissions on climate change caused by the Project should be evaluated.	(4) Woodside assessment: Woodside assesses emissions against a range of scenarios and assessment of these is described in the EP in Section 6.7.6 <i>Routine and Non-routine Greenhouse Gas Emissions</i> . Woodside response: Woodside confirmed it assessed indirect impacts associated with the project in the EP. Woodside noted that assessment of the broader Scarborough Project including the contribution to global GHG emissions and the potential impacts on sensitive receptors within Australian jurisdictions was described in the OPP.	(4) GHG emissions related to the proposed activity are assessed in Section 6.7.6 of the EP.
(5) Indirect impacts and risks in terms of climate change and degradation of rock art not properly addressed; more information about total acid gas and GHG emissions over life of Project required.	(5) Woodside assessment: There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU. Woodside supports the MRAMP and will implement feasible recommendations of the program. Woodside supports the decision of Traditional Owners and the State to pursue World Heritage listing for the Burrup Peninsula. Woodside response: Woodside confirmed it had carried out an assessment of the direct and indirect emissions from the Scarborough Project. It advised there were no credible impacts to Murujuga rock art in relation to air emissions produced at the offshore FPU. Woodside advised gas would be exported onshore and processed at the Pluto Gas Plant, for which the AQMP has been reviewed and approved by the WA EPA. Woodside confirmed it would implement feasible recommendations of the MRAMP and assess and implement Design Out and Operate Out opportunities to reduce emissions.	(5) Cultural features and heritage values are described in Section 4.9 of the EP. The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(6)	(6)	(6) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Some modelling on receptors and environment impacts is not relevant.</p>	<p>Woodside assessment: Woodside has commissioned a range of modelling related to the activities described in the EP and will include relevant information in the EP.</p> <p>Woodside response: Woodside confirmed the EP was informed and supported by a wide range of literature and studies, with many publicly available. Relevant information from modelling commissioned by Woodside was included within the EP to support relevant impact/risk evaluations.</p>	
<p>(7) Importance of epifauna and infauna to ecosystem health.</p>	<p>(7) Woodside assessment: Disturbance to the seabed and impacts to benthic habitat and communities are assessed in the EP.</p> <p>Woodside response: Woodside confirmed benthic epifauna and infauna living on or in the sediments may be impacted, particularly in the physical footprint of permanent infrastructure which would result in the displacement and/or permanent loss of epifauna and infauna. Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate control measures are defined in the EP.</p>	<p>(7) Potential impacts to benthic habitats are described and assessed in Section 6.7.2 of the EP.</p>
<p>(8) CCWA is a relevant person and had the right to be consulted.</p>	<p>(8) Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations. For this EP, CCWA has been assessed as a relevant person based on its functions, interests or activities.</p> <p>Woodside response: Woodside confirmed CCWA had been assessed as a relevant person for this EP based on its functions, interests and activities.</p>	<p>(8) Woodside's assessment of relevant persons for this EP is described in Appendix F, Table 1.</p>
<p>(9) The Scarborough OPP Statement of Reasons outlined which impacts were taken into consideration with no mention of, or inadequate information provided on, impacts that would affect CCWA.</p>	<p>(9) Woodside assessment: Woodside is not the author of the Statement of Reasons therefore it does not respond to this criticism.</p> <p>Woodside response: Woodside advised that, given it was not the author, it would not respond to criticism of the Statement of Reasons. Further, there was no requirement for the Statement of Reasons to provide information on impacts to CCWA.</p>	<p>(9) Not required.</p>

<p>(10) Inadequate information had been provided on emissions from the Scarborough project and climate change in WA.</p>	<p>(10) Woodside assessment: Woodside acknowledges climate science that states climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and changes in concentration could not be attributed to any one project or activity, including the Scarborough project. Further, Woodside's view is that the full volume of GHG emissions associated with the project will not be additive to global GHG concentrations. Therefore, Woodside does not accept the project will contribute to the exacerbation of climate change impacts in Western Australia. Woodside response: Woodside confirmed its view was that LNG could have a role in the energy transition, however, to facilitate a comparison against carbon budgets, a hypothetical assumption had been used in the EP where GHG emissions associated were hypothetically treated as additive, and the contribution was de minimis. Woodside confirmed climate change was recognised as a global issue, and, for reference, a contextual evaluation of climate change impacts was set out in detail in the EP. Woodside provided a list of relevant projections for climate change in Australia as well as nine key climate risks for the Australasian region.</p>	<p>(10) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>
<p>(11) Scarborough OPP was reliant on out-of-date, inadequate or misinterpreted information.</p>	<p>(11) Woodside assessment: Woodside disagrees that the OPP was accepted on the basis of out-of-date or misinterpreted information. Woodside response: Woodside noted that while information had naturally increased in volume since the OPP was published, more recently published information did not necessarily mean the information was different or contained new concepts, and the EPs were designed to include updated information, if relevant.</p>	<p>(11) Not required.</p>
<p>(12) The current EP referenced an IEA Net Zero Roadmap which had been updated but not referenced by the EP.</p>	<p>(12) Woodside assessment: Woodside has reflected the updated roadmap in the latest version of the EP. Woodside response: Woodside confirmed the 2023 roadmap was aligned with references to the original 2021</p>	<p>(12) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	report but confirmed the latest version of the EP reflected the updated roadmap.	
(13) The NDC referenced in the OPP had been updated in the EP.	(13) Woodside assessment: Australian GHG emissions targets have been updated and are incorporated in the EP. Woodside response: Woodside confirmed Australian GHG targets had been updated relevant to the Federal SGM and were incorporated in the EP.	(13) Further detail on the Federal SGM is described in Section 6.7.6 of the EP, <i>Management and Abatement</i>
(14) The WA EPA had provided advice that the conditions set out for the Pluto LNG facility were inadequate.	(14) Woodside assessment: Woodside acknowledges the EPA has provided advice. Woodside is currently updating the Pluto GGAP in accordance with Ministerial Statement 1208. Woodside response: Woodside acknowledged that the EPA had provided advice and provided CCWA with context on the EPA report. Woodside noted it was updating its GGAP and advised its Pluto LNG AQMP managed potential impacts to Aboriginal rock art in accordance with the MRAS. Woodside noted further amendments may be made to Pluto documents after the outcomes from the MRAMP were published.	(14) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(15) Validity of claims LNG was expected to play a key role in the future energy mix and in displacing more carbon intensive power generation.	(15) Woodside assessment: Woodside's view is that LNG can have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. Woodside notes CCWA's references to the OPP and CSIRO report are used in isolation and should be read in their full context. Woodside response: Woodside confirmed its view was that the full volume of GHG emissions associated with the project would not be additive to global GHG concentrations, however, for a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP. The contribution to global carbon budgets was de minimis.	(15) Comparisons against carbon budgets are set out in EP Section 6.7.6, <i>Gas's Role in the Energy System</i> .
(16)	(16)	(16)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Long-term economic, environmental, social and equitable considerations due to climate change had not been adequately considered by NOPSEMA.</p>	<p>Woodside assessment: Woodside disagrees with CCWA's assertion. The EP has assessed GHG emissions associated with the project, including an assessment against relevant acceptability criteria.</p> <p>Woodside response: Woodside noted human-caused climate change was a consequence of net GHG emissions that accumulated in the atmosphere since the start of the industrial revolution, and a contextual evaluation of climate change impacts was included in the EP. Woodside advised NOPSEMA had accepted the OPP on the basis that the impacts and risks of the project were acceptable.</p>	<p>Not required.</p>
<p>(17) The associated GHG emissions would have impacts that were of consequence on sensitive and high-quality environments.</p>	<p>(17) Woodside assessment: Woodside disagrees with CCWA's assertion that direct and indirect GHG emissions from the Scarborough project will have impacts that are of serious consequence on sensitive and high-quality environments.</p> <p>Woodside response: Woodside noted changes in global atmospheric GHG concentration could not be attributed to any one activity or one project, including the Scarborough Project, as they were instead the result of global GHG emissions, minus global GHG sinks, that had accumulated in the atmosphere since the industrial revolution started. Woodside advised that even discounting the role gas could play in the energy transition, emissions associated with the project were negligible in the context of existing and future predicted global GHG emissions.</p>	<p>(17) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>
<p>(18) Environmental impacts and risks not appropriately identified in the OPP.</p>	<p>(18) Woodside assessment: Woodside disagrees the OPP does not appropriately identify environmental impacts and risks.</p> <p>Woodside response: Woodside confirmed it considered environmental risks and impacts were appropriately identified in the OPP.</p>	<p>(18) Not required.</p>
<p>(19) Lack of information as to how the project would fit into Australia's NDC.</p>	<p>(19) Woodside assessment: Australia's carbon management framework has continued to develop and the current framework is reflected in the EP.</p>	<p>(19) Further detail on Federal SGM is described in Section 6.7.6 of the EP, <i>Management and Abatement</i>.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside provided an overview of the Federal SGM and advised further detail and context was set out in the EP.	
(20) Statements regarding concerns that GHG emissions from the project would not be reduced to ALARP levels.	(20) Woodside assessment: Woodside considers GHG emissions associated with the project, and the impact on global carbon budgets which are expected to achieve the goals of the Paris Agreement, will be managed to ALARP. Woodside response: Woodside provided details of its multiple project phases to design out and operate out direct GHG emissions as well as measures related to Scope 3 emissions.	(20) Management and abatement measures are set out in Section 6.7.6 of the EP. Woodside's demonstration of ALARP is also set out in Section 6.7.6 of the EP.
(21) Claims Woodside lobbied against climate policy that would drive demand for low carbon fuels.	(21) Woodside assessment: Woodside disagrees with CCWA's assertion and notes the corresponding reference to CCWA's assertion is not clear. Woodside response: Woodside confirmed its advocacy aimed to support the goals of the Paris Agreement, and provided links to further information on Woodside's climate policy, CTAP, and government submissions.	(21) Not required.
(22) Not all relevant persons have been consulted.	(22) Woodside assessment: Woodside disagrees with CCWA's assertion and has consulted relevant persons in accordance with regulation 25 of the Environment Regulations. Woodside response: Woodside advised that if CCWA knew of relevant persons to be consulted, it should identify them so Woodside could apply its methodology for identifying relevant persons. Woodside advised it had advertised consultation for this EP widely to ensure broad awareness, and further information was set out in the Consultation Approach in Appendix F.	(22) Woodside's assessment of relevant persons is set out in Appendix F, Table 1.
(23) Insufficient information on Scope 3 emissions in the Consultation Information Sheet.	(23) Woodside assessment: Woodside has given CCWA sufficient information regarding GHG emissions via the Consultation Information Sheet, Scarborough OPP, publicly	(23) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>available EP, and direct responses to CCWA, for CCWA to make an informed assessment of the possible consequences of the activity.</p> <p>Woodside response: Woodside confirmed the EP, OPP, fact sheets and website material contained more than 2000 pages of information relating to the Scarborough Operations EP. Woodside also confirmed routine and non-routine atmospheric and GHG emissions were covered in the Consultation Information Sheet, including Scope 3 emissions from support vessels and onshore processing.</p>	
<p>(24) Further information should be distributed to all relevant persons.</p>	<p>(24) Woodside assessment: Woodside has consulted relevant persons in accordance with regulation 25 of the Environment Regulations and in line with its methodology as set out in Section 5.</p> <p>Woodside response: Woodside confirmed the EP was publicly available, Woodside had consulted in line with its methodology, and Woodside had widely advertised consultation of this EP to allow for broad awareness.</p>	<p>(24) Not required.</p>
<p>(25) Every tonne of CO2-e emitted into the atmosphere added to global warming.</p>	<p>(25) Woodside assessment: Woodside acknowledges climate science and that human-caused climate change is understood to be a consequence of net GHG emissions that have accumulated in the atmosphere since the start of the industrial revolution. A hypothetical assumption where GHG emissions associated with the project are treated as hypothetically additive has been considered in the EP and the contribution to carbon budgets is de minimis.</p> <p>Woodside response: Woodside acknowledged IPCC statements regarding climate change and advised the reduction in a carbon budget by emissions associated with the project, and therefore its alignment with Australia's targets aligned to the Paris Agreement, was a relevant measure to apply to assess acceptability of the project. Woodside set out its view that LNG could have a role in the energy transition but noted that for comparison against carbon budgets, the EP had considered a scenario where all GHG emissions</p>	<p>(25) Assessment of potential climate change impacts is set out in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	associated with the project were hypothetically treated as additive.	
(26) Claims the 878MtCO ₂ -e from the Scarborough gas project is likely to cause an approximate increase of 0.0003951°C in global surface temperature, and Pluto/Burrup Hub emissions would be in addition.	(26) Woodside assessment: Woodside disagrees with CCWA's assertion and notes that CCWA had sufficient information on GHG emissions to make its own calculations. Woodside response: Woodside noted CCWA had not included workings or figures behind its calculations, but, for context, noted that onshore emissions were included in the Scope 3 estimates and were contained within the 878 MtCo ₂ -e estimate. Woodside also noted CCWA's ability to make calculations was inconsistent with previous claims it had not been provided sufficient information.	(26) Estimates of GHG emissions associated with the project are described in Section 6.7.6 of the EP and summarised in Table 6-22.
(27) Claims emissions from the project would make a significant contribution to the global carbon budget.	(27) Woodside assessment: Woodside disagrees with CCWA's position and maintains the contribution to carbon budgets is de minimis even if GHG emissions associated with the project are wholly additive. Woodside response: Woodside noted a portion of GHG emissions associated with the project were anticipated to contribute to a consumption of carbon budgets estimated to achieve the goals of the Paris Agreement. Woodside noted CCWA had not provided workings underpinnings it calculations, therefore it was not possible for Woodside to comment. Woodside provided further information on how the project fit within carbon budgets.	(27) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.
(28) Estimates of remaining carbon budgets as of the proposed start date of the project, and the resulting budget occupation.	(28) Woodside assessment: Woodside's assessment has been undertaken on the basis of current and available information. Woodside response: Woodside noted carbon budgets were subject to change and the assessment assumed a hypothetical scenario where the entirety of emissions associated with the project were additive to global GHG concentrations.	(28) Comparisons against carbon budgets are set out in EP Section 6.7.6.
(29)	(29)	(29)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Claims the project's emissions will occupy 0.0976% of the carbon budget that is the difference between 1.5°C global heating and 2.0°C global heating, and estimates of how many species would become extinct as a result of its contribution to a 2.0°C world.</p>	<p>Woodside assessment: Woodside disagrees with CCWA's position and calculations regarding carbon budgets. Woodside response: Woodside referred CCWA to other detailed responses regarding Woodside's position on climate change and GHG emissions, and its position on carbon budgets related to the Paris Agreement.</p>	<p>A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>. Comparisons against carbon budgets are also set out in Section 6.7.6 of the EP.</p>
<p>(30) Claims it was incorrect to state there was no direct link between GHG emissions from Scarborough and climate change impacts.</p>	<p>(30) Woodside assessment: Woodside disagrees with CCWA position. Changes in global atmospheric GHG concentrations cannot be attributed to any one activity or one project, including the Scarborough project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the start of the industrial revolution. Woodside response: Woodside referred CCWA to other detailed responses regarding Woodside's position on climate change and GHG emissions, and its position on carbon budgets related to the Paris Agreement.</p>	<p>(30) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>. Comparisons against carbon budgets are also set out in Section 6.7.6 of the EP.</p>
<p>(31) Section 6.7.6 of the EP should include ecosystems/habitat, species, and socioeconomic considerations.</p>	<p>(31) Woodside assessment: Woodside disagrees with CCWA's position and assessment of GHG emissions associated with the Scarborough project is undertaken against global GHG concentration. Woodside response: Woodside referred CCWA to other detailed responses regarding Woodside's position on climate change impacts and noted additional information evaluating potential impacts of climate change on Australian and global receptors was presented in Section 6.7.6 of the EP.</p>	<p>(31) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>
<p>(32) Claims the statement that "emissions associated with the project are negligible" was misleading and inaccurate.</p>	<p>(32) Woodside assessment: Woodside disagrees with CCWA's assertion which appears to assert that Woodside is engaging in misleading or deceptive conduct. Woodside response: Woodside noted that it had explained the context and background to conclusions it had made. Woodside confirmed it disagreed with CCWA's estimate of emissions associated with the project and advised the annual</p>	<p>(32) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	estimated Scope 1 emissions created by the activity were estimated to be 0.61 MtCO ₂ -e.	
(33) Projects such as Scarborough were the choices the IPCC AR6 group referred to when it noted societal choices and actions in the next decade would determine the extent to which medium and long-term pathways would deliver climate resilient development.	(33) Woodside assessment: Woodside disagrees with CCWA's assertion and recognises IPCC as a leading body on climate change science. Woodside response: Woodside acknowledged the AR6 report and referred CCWA to its advice in other responses on IEA and roadmaps, Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project to carbon budgets.	(33) Not required.
(34) Claims "no consequence assigned" to GHG emissions was inaccurate and unacceptable.	(34) Woodside assessment: Woodside disagrees with CCWA's assertion. The contribution of the project to global carbon budgets estimated to achieve the goals of the Paris Agreement is de minimis. Woodside response: Woodside confirmed the GHG assessment in the current EP version focused on assessment of GHG emissions associated with the Scarborough project against global GHG concentrations. Woodside advised the contribution of the project to global carbon budgets estimated to achieve the goals of the Paris Agreement was de minimis. As part of the assessment process, Woodside assigned a consequence of "F" in accordance with the Woodside risk matrix.	(34) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.
(35) Updates to SDS since it was referenced in Scarborough OPP.	(35) Woodside assessment: Woodside notes CCWA's acknowledgement regarding the IEA's SDS. Woodside response: Woodside noted CCWA's acknowledgement that the IEA's SDS had been updated.	(35) Not required.
(36) "Unsubstantiated" claims that Woodside's LNG would contribute to global emissions reduction effort and inadequate information to show its product was replacing coal.	(36) Woodside assessment: Woodside is required to give sufficient information and maintains its position that LNG can have a role in displacing higher carbon intensity fuels.	(36) Gas's role in the energy system is set out in Section 6.7.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: Woodside reiterated the regulatory requirements regarding sufficient information and confirmed its view that LNG could have a role in displacing higher carbon intensity fuels. Woodside again noted that the latest draft of the EP had been updated to consider a hypothetical assumption where GHG emissions associated with the project were assumed to be additive to global atmospheric GHG concentrations.</p>	
<p>(37) Recent research showed the LNG capacity greatly exceeded any needs for coal to gas switching.</p>	<p>(37) Woodside assessment: Woodside disagrees with CCWA's position, including because the IEA NZE is not the only pathway to meet the objectives of the Paris Agreement. Woodside response: Woodside referred CCWA to other detailed responses on Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project on carbon budgets.</p>	<p>(37) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>. Comparisons against carbon budgets are also set out in Section 6.7.6 of the EP.</p>
<p>(38) Contested the claim that gas was less emissions intensive than coal when full lifecycle emissions were accounted for.</p>	<p>(38) Woodside assessment: Woodside disagrees with CCWA's position, however it does support management of methane emissions. Woodside response: Woodside confirmed measures to mitigate methane emissions had been implemented on the FPU and further information was set out in Section 6.7.6. Woodside also noted emissions factors used in the EP to estimate Scope 3 emissions took into account expected methane emissions.</p>	<p>(38) Measures to mitigate methane emissions associated with the FPU are set out in Section 6.7.6 of the EP.</p>
<p>(39) Estimates have not been provided of the cumulative emissions that the Scarborough project would contribute to worldwide.</p>	<p>(39) Woodside assessment: Woodside disagrees with CCWA's position. A breakdown of emissions sources extends over 11 pages in the EP. Woodside response: Woodside provided an overview of the GHG emissions sources included in the EP and advised the total estimated GHG emissions associated with the project, as presented in Table 6-21, were approximately 880 MtCO₂-e over the life of the activity.</p>	<p>(39) Estimates of GHG emissions associated with the project are described in Section 6.7.6 of the EP and summarised in Table 6-22.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(40) CTAP and 2023 Progress Report contained plans and targets that were unenforceable.</p>	<p>(40) Woodside assessment: Woodside does not consider this assertion relevant to the assessment of the EP. Woodside response: Woodside confirmed the information and commitments in the EP were consistent with the OPGGS(E) Regulations and that the CTAP provided broader business context and was not published under regulatory requirement.</p>	<p>(40) Not required.</p>
<p>(41) The offsetting proposed was not sufficient to mitigate climate change impacts.</p>	<p>(41) Woodside assessment: Woodside does not agree with CCWA's position. Avoiding and reducing GHG emissions are Woodside's priority. Woodside response: Woodside referred to prior information on mitigation and management measures. Woodside confirmed avoiding and reducing GHG emissions were Woodside's priority, however, offsetting emissions allowed a reduction of net emissions while asset and technology decarbonisation plans were matured and implemented.</p>	<p>(41) Management and abatement measures are set out in Section 6.7.6 of the EP.</p>
<p>(42) No consideration or commitment to reducing combustion emissions via more efficient combined cycle turbines or electrification options such as e-drives.</p>	<p>(42) Woodside assessment: Woodside has assessed the feasibility of combined cycle turbines and electrification of compressors in the EP. Woodside response: Woodside confirmed it applied a framework to reduce emissions during the design phase, and that as a result of this process, some measures to reduce emissions had been implemented and others had not. Woodside provided information on the feasibility of combined cycle turbines and e-drive compressors and advised that based on feedback, assessment of combined cycle turbines and e-drive compressors had been included in the EP.</p>	<p>(42) In response to feedback, Woodside has included assessment of combined cycle turbines and electrification of compressors in EP Section 6.7.6.</p>
<p>(43) No commitments to reducing Scope 3 emissions.</p>	<p>(43) Woodside assessment: Woodside disagrees with CCWA's position. In the circumstances of Scope 3 emissions associated with third party consumption of Scarborough gas, the measures in the EP are appropriate and practical. Woodside's corporate approach to Scope 3 targets is outlined</p>	<p>(43) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>in its Climate Transition Action Plan and 2023 Progress Report.</p> <p>Woodside response: Woodside confirmed it did not have operational control over Scope 3 emissions associated with third party consumption of Scarborough gas and therefore, the measures in the EP were appropriate and practicable. Woodside advised that emissions arising from the consumption of Scarborough gas along with other feed sources in customer markets would be considered under domestic and international emissions control framework.</p>	
<p>(44) The project was not consistent with state aspirations of net zero by 2050.</p>	<p>(44) Woodside assessment: Woodside disagrees with CCWA's assertion. Emissions associated with the onshore processing of Scarborough gas are subject to Western Australian legislation and frameworks which manage GHG emissions under WA requirements (and aspirations). Woodside response: Woodside outlined regulatory frameworks for managing Scope 1 emissions – which originated in Commonwealth waters - and Scope 3 emissions and confirmed at a corporate level Woodside was targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030 relative to a starting base, with an aspiration of net zero by 2050 or sooner.</p>	<p>(44) Further detail on the Federal SGM is described in Section 6.7.6 of the EP, <i>Management and Abatement</i>.</p>
<p>(45) Claims the majority of Co2-e emissions would not be made within the permit area, and emissions made within the permit area were subject to dispersal to nearby population centres.</p>	<p>(45) Woodside assessment: Woodside disagrees with CCWA's position which is based on an OPP statement that has been taken out of context. Woodside response: Woodside confirmed the statement CCWA had replicated from the OPP had been misconstrued, and referred to aspects such as physical presence, light emissions and discharges from project vessels.</p>	<p>(45) Not required.</p>
<p>(46) Disregard for emissions reductions in reference to renewable power sources.</p>	<p>(46) Woodside assessment: Woodside disagrees with CCWA's assertion and considers it has been taken out of context. Woodside response: Woodside confirmed assessment of potential controls was undertaken in accordance with the</p>	<p>(46) Assessment of adopted controls is set out in Section 6.7.6 <i>Demonstration of ALARP</i>.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	ALARP framework and NOPSEMA guidance which stated that alternative control measures may be discounted if they were "grossly disproportionate to the benefit gained". Woodside maintained its position in the case of supplying power from shore to the FPU.	
(47) The Paris Agreement has not been accurately represented.	(47) Woodside assessment: Woodside acknowledges the goals of the Paris Agreement. Woodside response: Woodside provided an extract from article 2 of the Paris Agreement in demonstration of its understanding of the goals of the Agreement.	(47) Not required.
(48) Cherry-picking single scenarios wasn't the purpose of the scenario database, and claims that Woodside had cherry-picked a scenario to make a general conclusion.	(48) Woodside assessment: Woodside agrees that cherry-picking climate scenarios is not appropriate and has therefore considered the IPCC's range of scenarios and scenarios from other providers. Woodside response: Woodside noted that gas demand was depicted in a range of Paris aligned scenarios, and further information was provided in Figure 6-6 of EP section 6.7.6. Woodside considered the IPCC's range of scenarios and scenarios from other providers.	(48) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.
(49) Claims Woodside favoured the P3 pathway which relied on 687Gt of CO2 CCS, and it had not contributed to this CCS total.	(49) Woodside assessment: Woodside disagrees with CCWA's position. Woodside's assessment does not "favour" any particular climate scenario and considers a range of scenarios in the EP. Woodside response: Woodside stated its assessment aimed to show how the Scarborough project could fit within a range of Paris-aligned scenarios and directed CCWA to Section 6.7.6 of the EP for further information and context.	(49) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.
(50) Claims Woodside had not given proper consideration to the global carbon budget.	(50) Woodside assessment: Woodside disagrees with CCWA's position. Even in the hypothetical scenario when taken to be additive, GHG emissions associated with the project represent a de minimis contribution to carbon budgets.	(50) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: Woodside referred CCWA to other responses for further information on Woodside’s position on climate change and GHG emissions, and Woodside’s assessment of the hypothetical contribution of the Scarborough project on carbon budgets.</p>	
<p>(51) Woodside was not in a position to control Scope 3 emissions which were currently safely underground.</p>	<p>(51) Woodside assessment: Woodside disagrees with CCWA’s position. Woodside is required to ensure that the plan to develop the resource is compatible with the optimum long-term recovery of petroleum from the offshore area. Woodside response: Woodside noted it anticipated demand among potential customer nations for LNG to meet their climate goals. Further information was available in the EP as well as Woodside’s Climate Transition Action Plan and 2023 Progress Report, to which Woodside provided a link and a section reference.</p>	<p>(51) Further information on customer markets’ NDCs and commitments is set out in Section 6.7.6 of the EP.</p>
<p>(52) Assertions that Australia’s legislated emission reduction target didn’t include Scope 3 emissions, was not aligned with the Paris Agreement, the Scarborough project would produce the majority of emissions after 2030, and emissions would cancel out federal abatement reduction policies.</p>	<p>(52) Woodside assessment: Woodside disagrees with CCWA’s assertions regarding Scope 3 emissions and Scarborough’s impact on national abatement measures. Woodside response: Woodside noted Australia’s targets did include Scope 3 emissions and CCWA’s position that Australia’s target was not Paris-aligned was a matter on which the Australian Government had enacted legislation. Woodside noted Australia was anticipating setting a 2035 target, and advised it was inappropriate to conflate emissions that would occur internationally.</p>	<p>(52) Not required.</p>
<p>(53) Further information requested on how the Scarborough project fit into 1.5°C scenarios and claims the proponent did not present any carbon removal strategies.</p>	<p>(53) Woodside assessment: Woodside disagrees with CCWA’s position and notes that it appears inconsistent with other claims from CCWA. Woodside has provided CCWA with volumes of information on these topics. Woodside response: Woodside advised emissions associated with the project fit within Australia’s NDC and the NDC of customer nations. Both Australia and current expected customer nations had set targets consistent with the</p>	<p>(53) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Paris Agreement to pursue efforts to limit global warming to 1.5°C.	
(54) Contested the claim that the total lifecycle impact of gas, including the Scarborough project, was expected to result in lower net global atmospheric concentrations of GHG than would otherwise have been the case.	(54) Woodside assessment: Woodside maintains its position regarding the role of LNG in the energy transition. Woodside response: Woodside confirmed it maintained that the total lifecycle impact of gas, including Scarborough gas, is expected to result in lower net global atmospheric concentrations of GHGs than would otherwise have been the case.	(54) Gas's role in the energy system is set out in Section 6.7.6 of the EP.
(55) Monitoring and management actions to address uncertainties in the role of natural gas in displacing higher emission insensitive fuels.	(55) Woodside assessment: Woodside has corporate-level measures for monitoring and managing uncertainty in the role of natural gas in displacing higher emission intensive fuels. Woodside response: Woodside confirmed its measures included engaging with customers and potential customers regarding demand and the carbon policies of the governments in the jurisdictions in which they operated.	(55) Not required.
(56) Contested the statement that Scarborough did not create this demand but could contribute to meeting it.	(56) Woodside assessment: Woodside does not agree with CCWA's position. Global energy demand is influenced by a number of factors including population growth and government policy. Woodside response: Woodside stated that the assumption that global energy demand would decrease if the Scarborough project does not go ahead was flawed and noted that global energy demand was influenced by a number of factors.	(56) Not required.
(57) Believed Woodside's claims to net-zero and the lack of implications assigned to Scarborough gas amounted to greenwashing.	(57) Woodside assessment: CCWA makes a serious allegation regarding greenwashing which Woodside understands to be an allegation that it has engaged in misleading or deceptive conduct. Woodside does not agree. Woodside response: Woodside confirmed it did not consider CCWA's a-h points to be indicators of misleading or	(57) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	deceptive conduct. Woodside noted it recently participated in the Australian Senate Inquiry into greenwashing where its statement, the transcript of which is available Hansard, confirmed Woodside takes care with statements, especially in relation to climate change. Woodside provided further corporate perspective on climate policies and included at link to Woodside's CTAP and 2023 Progress Report.	
(58) Claims NOPSEMA should not rely on information from Woodside that did not pass greenwashing standards.	(58) Woodside assessment: Woodside does not agree with CCWA's assertions. Woodside response: Woodside noted that in addition to its response to the previous point (57), Woodside had a practice of carefully considering and verifying statements and disclosures. Woodside provided a link to the Fact Checker on its website.	(58) Not required.
(59) Claims ample evidence existed to show projects such as Scarborough and associated processing at the Pluto LNG facility were having negative impacts on Murujuga rock art	(59) Woodside assessment: Woodside does not agree with CCWA's position. There is inconclusive evidence of a causal link between industrial air emissions and anthropogenic change to rock art on Murujuga. Woodside response: Woodside directed CCWA to sections of the EP which discussed existing research on onshore industrial emissions and assessment of potential impacts. Woodside also provided information from MRAS that the data currently available from previous monitoring did not allow for a conclusive answer on whether anthropogenic emissions were impacting Murujuga's rock art.	(59) Assessment of the potential risks and impacts to Murujuga rock art is set out in Section 6.7.7 of the EP.
(60) The EPA had stated remediation of Murujuga rock art was not possible after it was impacted and the proposal did not mitigate any impacts.	(60) Woodside assessment: Woodside does not agree with CCWA's position. There is inconclusive evidence of a causal link between industrial air emissions and anthropogenic change to rock art on Murujuga and uncertainty regarding impact pathway. Woodside response: Woodside confirmed precautionary measures were in place to reduce the impact of risk to Murujuga rock art. Woodside also extended the controls	(60) Assessment of the potential risks and impacts to Murujuga rock art is set out in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	considered in the EP to reflect the requirement of the Pluto Gas Plan to implement best practice in minimising air emissions, and Woodside included a list of examples in its response.	
(61) MRAMP's first-year report showed the rock art to be in almost permanently acidic environment with all sites showing high acidity levels.	(61) Woodside assessment: Woodside does not consider these results to be definitive and recognises that further work by MRAMP is required. Woodside response: Woodside noted the statement from the MRAMP report but noted the same report stated that "data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time". Woodside directed CCWA to the Summary of Existing Research on Onshore Industrial Emissions section of the EP for further information.	(61) Existing research on onshore industrial emissions is set out in Section 4.9.6 of the EP.
(62) Claims no management responses proposed from MRAMP.	(62) Woodside assessment: Operators of the Pluto LNG Facility and Northwest Shelf Karratha Gas Plant have both made public commitments to supporting the outcomes of MRAS. Woodside response: Woodside referred CCWA to other responses which addressed the uncertainty regarding the potential impact pathway from onshore atmospheric emissions on Murujuga rock art and noted onshore industrial air emissions were being managed by EPA, while DWER was also involved including via the MRAS.	(62) Assessment of the potential risks and impacts to Murujuga rock art is set out in Section 6.7.7 of the EP.
(63) Asserted Woodside was in no way ensuring that "no air emissions from the proposal have an adverse impact accelerating the weathering of rock art within Murujuga beyond natural rates.	(63) Woodside assessment: Woodside does not agree with CCWA's assertion. There is inconclusive evidence of a causal link between industrial air emissions and anthropogenic change to rock art on Murujuga and uncertainty regarding impact pathway. Woodside will continue to assess science on this topic. Woodside response: Woodside referred CCWA to other responses which addressed the uncertainty regarding the potential impact pathway from onshore atmospheric	(63) Assessment of the potential risks and impacts to Murujuga rock art is set out in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	emissions on Murujuga rock art, and precautionary measures taken to address the uncertainty.	
(64) Claims the Scarborough project presented unacceptable risk and irreversible impacts to the environment	(64) Woodside assessment: Woodside does not agree the Scarborough project represents an unacceptable risk and will cause irreversible impacts to the environment. Woodside response: Woodside noted the highest magnitude for the activity under the EP was: planned impact/consequence Slight, short-term impact (<1yr) on species and/or habitat (not affecting ecosystem function) physical or biological attributes. For unplanned activities, the highest level of impact or consequence is Moderate, medium-term impact (2-10 yrs) on ecosystems, habitat or physical/biological attributes.	(64) Assessments of the potential impacts of environmental risks and impacts are set out in sections 6.7 and 6.8 of the EP.
(65) Claims Woodside could not ensure the Scarborough Project would maintain or enhance the health, diversity and productivity of the environment for future generations and therefore violated the intergenerational principle. The principles of ESD guided NOPSEMA's task in deciding whether to accept an EP.	(65) Woodside assessment: Woodside does not agree with CCWA's position. Evaluation criteria which includes the principles of ESD has been considered. Woodside response: Woodside noted the impacts and risks of the Scarborough project were determined to be acceptable in the Scarborough OPP through consideration of evaluation criteria which included the principles of ecologically sustainable development consistent with the EPBC Act. Woodside further set out how the EP and OPP complied with regulations 4(a) and 4(b) and advised CCWA further information was available in Section 2.3.6 of the EP.	(65) Not required.
(66) Claims the project represented a violation of the biodiversity principle.	(66) Woodside assessment: Woodside does not agree with CCWA's position. Woodside does not accept that the Scarborough project will contribute to the exacerbation of climate change impacts in Western Australia. Woodside response: Woodside referred CCWA to other responses for further information on Woodside's position on climate change and GHG emissions, and Woodside's assessment of the hypothetical contribution of the Scarborough project on carbon budgets.	(66) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(67) Further information including reports, analyses, assessments, modelling and/or other documents on a number of topics including: The environment that may be affected; environmental risks and impacts of the activities; potential impacts and risks on species; potential impacts and risks on Scott Reef Marine Park; potential risks and impacts in relation to Sea Country risks; potential impacts and risks of GHG emissions; GHG control measures including any proposal for carbon capture and storage; potential cumulative impacts of the project.</p>	<p>(67) Woodside assessment: Woodside declines to provide the information requested and that it is not required to allow CCWA to make an informed assessment of the possible consequences of the activity on CCWA’s functions, interests or activities. Woodside response: Woodside noted it was not reasonable to provide information, technical evaluations and studies which included commercially sensitive or confidential information, and it was not required to allow CCWA to make an informed assessment of the possible consequences of the activity on CCWA’s functions, interests or activities. Woodside noted the EP and OPP were publicly available and referred CCWA to other responses regarding the volume of information already provided. Woodside noted the EP included information on the topics raised and provided section references. Woodside also noted CCS was not currently a feasible abatement measure for the Scarborough FPU.</p>	<p>(67) In response to feedback, Woodside has included assessment of the feasibility of CCS in Section 6.7.6 of the EP.</p>
<p>(68) Requested more specific and up-to-date information on proposed control measures compared to the OPP.</p>	<p>(68) Woodside assessment: Woodside has provided CCWA with volumes of information relevant to this EP, and the EP is publicly available. Woodside response: Woodside referred CCWA to other responses which provided an indication of the volumes of documents and pages of information Woodside had provided or were otherwise available to CCWA relevant to this EP</p>	<p>(68) Not required.</p>
<p>(69) Statements that the EP needed to include an evaluation of “all the environmental impacts and risks arising directly or indirectly.</p>	<p>(69) Woodside assessment: Woodside assesses potential direct and indirect impacts in the EP. Woodside response: Woodside directed CCWA to Sections 6.6, 6.7 and 6.8 for further information on assessments of direct and indirect impacts associated with the EP. Woodside noted the indirect impacts and risks of GHG emissions were assessed in the EP.</p>	<p>(69) Direct and indirect impacts are assessed in sections 6.6-6.8 of the EP.</p>
<p>(70)</p>	<p>(70)</p>	<p>(71)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Statements that Woodside’s correspondence took the view that Woodside was no longer required to meaningfully engage with CCWA due to CCWA’s views on fossil fuel projects, was aggressive, and took an adversarial approach, and therefore NOPSEMA should investigate Woodside’s ability to comply with consultation requirements, and the potential abuse of the consultation process.</p>	<p>Woodside assessment: Woodside does not agree with CCWA’s assertions. Woodside has consulted CCWA as a relevant person for this EP, in accordance with Regulation 25. In complying with Regulation 25, Woodside has reviewed CCWA’s consultation correspondence as well as literature and information CCWA has published publicly. This information provides context for consultation.</p> <p>Woodside response: Woodside confirmed it had consulted CCWA in accordance with the Regulations and continued to review, assess and respond to CCWA correspondence. Woodside provided summaries of its consultation for this EP; set out reasons for including context to the consultation; provided information on the consultation regime, the transparent nature of consultation, the assessment process, and the implementation strategy.</p>	<p>Not required.</p>
<p>(71) Reference to court proceedings commenced by ACF and Woodside’s claim that CCWA was involved in the proceedings, for which Woodside did not provide any basis.</p>	<p>(71) Woodside assessment: Woodside has relevant documents related to this claim. Woodside response: Woodside referred to letters received from CCWA’s lawyers which resolved the issue but would not be replicated for confidentiality reasons.</p>	<p>(71) Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures and controls in the EP address CCWA’s functions, interests or activities.</p>

Summary Report – Consultation Complete

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CCWA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCWA sufficient information to allow CCWA to make an informed assessment of the possible consequence of the activity on CCWA's functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided the information directly to CCWA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information provided in the Consultation Information Sheet for this EP, information about this activity is contained in the OPP which has been publicly available since 2018, and information relevant to this EP was provided to CCWA on previous consultations. Woodside also gave CCWA further detailed information which addressed CCWA's specific topics of interest and feedback, objections or claims related to this EP (see information given on 12 December 2023, 19 December 2023, 7 March 2024, 4 July 2024, 8 October 2024, 17 January 2025).
- Given CCWA's interest in climate-related matters, Woodside also proactively reminded CCWA about the ability to provide feedback on this EP and gave CCWA information on Woodside's Climate Transition Action Plan and 2023 Progress report (email of 7 March 2024).
- In addition, Woodside proactively provided CCWA with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). In its email to CCWA, Woodside also provided specific references within the EP that pointed to climate-related topics and interests that CCWA had previously sought information on. Woodside also reminded CCWA again that it could provide feedback on this EP.
- On 8 October 2024, Woodside confirmed it would shortly resubmit the EP for assessment and reminded CCWA that Woodside remained open to receiving feedback.
- On 13 December 2023 and 12 July 2024, CCWA claimed it had not been provided with sufficient information, either from the EP, OPP or fact sheets. Woodside disagrees with this assertion because CCWA responded to Woodside's consultation information with feedback specific to the activity, indicating the information provided was sufficient to enable CCWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. CCWA shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above. Further, CCWA's feedback on 12 July 2024 included calculations with multiple decimal numbers, indicating the information provided was sufficient for CCWA to make its own calculations regarding this EP.

Reasonable Period

Woodside has allowed CCWA a reasonable period for consultation in the preparation of this EP has been provided because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was advised in the initial correspondence to CCWA. That consultation correspondence advised when consultation closed for purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed CCWA over 4.5 months for consultation period.
- During the consultation period and following it, Woodside proactively sent follow-up emails to CCWA to remind CCWA of consultation and timeframes on numerous occasions (4 September 2023, 14 September 2023, 10 October 2023, 12 December 2023, 19 December 2023, 7 March 2024, 4 July 2024, 8 October 2024).
- In this context, Woodside allowed CCWA a reasonable period for consultation in preparation of the EP.
- On 13 December 2023, CCWA claimed it had not been provided with a reasonable period of time to provide feedback and it considered the 2025 start date of the activity should allow for additional time. Woodside disagrees with this assertion as Woodside commenced consultation on 9 August 2023, and extended the consultation period to 4.5 months.
- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP. CCWA has demonstrated it understands this and is willing to provide feedback irrespective of consultation timeframes as demonstrated in its feedback received on 12 July 2024.
- Woodside has never-the-less continued to respond to feedback, claims and objections from CCWA.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCWA is appropriate and adapted to the nature of interests of CCWA:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to CCWA because Woodside notes CCWA regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity and consultation.
- In previous consultations, CCWA has engaged by email. Woodside therefore followed this approach.
- Woodside also provided CCWA with a link to NOPSEMA's various information sheets and brochures assisting to provide CCWA with context around the consultation process (9 August 2023).
- In response to Woodside's consultation information, CCWA advised on 17 August 2023 it would like to meet with Woodside. Woodside followed up 3 times on this request in September and October 2023, providing multiple time/date suggestions for a meeting and asking CCWA to nominate its own date if preferred. Woodside copied multiple staff members in the emails. Woodside did not receive any further response from CCWA regarding a meeting. Woodside again offered to meet with CCWA on subsequent occasions.
- On 13 December 2023, CCWA claimed it was not aware of the previous requests to consult, despite the correspondence between Woodside and CCWA in September and October regarding a meeting on this EP.
- Following publication of the EP on NOPSEMA's website, Woodside proactively provided CCWA with correspondence on climate-related matters and directed them to the sections of the EP which contain additional information relevant to their interests. This enabled CCWA to engage with those specific topics of interest and Woodside gave CCWA yet another opportunity to consult on this EP.
- Woodside considers a reasonable opportunity was provided to CCWA as evidenced in its exchanges with CCWA and in particular as evidenced by CCWA's responses on 13 December 2023 and 12 July 2024 where it provided feedback, claims and objections.

Outcomes of Consultation:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- CCWA provided feedback or claims or objections regarding the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from CCWA and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Based on CCWA's feedback, assessed the feasibility of combined cycle turbines, electrification of compressors, and CCS in Section 6.7.6 of the EP. No new measures were adopted as a result of CCWA's feedback. However, as a result of consultation, Woodside has updated its EP to include assessment of combined cycle turbines, electrification of compressors and CCS.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Greenpeace (GAP)

Context

GAP is a campaigning organisation with campaigns that target Woodside.^v On its website, GAP states it is 'working to take on the biggest polluters and stop new coal, oil and gas projects in Australia'.^{vi} GAP's website also states it 'has been fighting Woodside's Burrup Hub', which includes the Scarborough Project, since 2021 and has been 'working to stop the Burrup Hub'.^{vii} GAP's website states one of the issues it works on is 'No New Fossil Fuels'.^{viii} GAP currently has a campaign titled 'Woodside's Dirty Gas' inviting donations to 'stop the biggest fossil fuel project currently proposed in Australia' (including the Scarborough Project),^{ix} a current campaign to 'Stop Woodside',^x and a petition titled 'Whales NOT Woodside'.^{xi} GAP also ran a campaign against Woodside: 'Blasting our ocean: Woodside's dangerous seismic plan'.^{xii}

In addition to this, GAP has engaged in unsafe conduct including by entering the designated petroleum safety zone, climbing onto Woodside's Nganhurra riser turret mooring in Commonwealth waters and attaching a banner.^{xiii} It also climbed a crane next to Woodside's Perth headquarters and displaying a banner stating STOP WOODSIDE.^{xiv}

On 29 August 2023, GAP commenced proceedings against Woodside in the Federal Court of Australia in relation to the Scarborough 4D B1 Marine Seismic Survey Environment Plan. GAP discontinued these proceedings around a week later, on 7 September 2023.^{xv}

GAP also initiated proceedings against Woodside in December 2023 in the Federal Court of Australia alleging 'that the fossil fuel giant has been misrepresenting its climate performance and plans'.^{xvi} In those proceedings, GAP 'claims that the Woodside Energy Group Ltd has made and continues to make misleading or deceptive representations about its plans to reduce its greenhouse gas emissions in response to climate change'.^{xvii} GAP is legally represented in those proceedings by the Environmental Defenders Office.^{xviii}

In 2018, GAP was invited to participate in consultation on the Scarborough Energy Project OPP. GAP chose not to participate in that consultation process.

Since that time, Woodside has consulted GAP in relation to the Scarborough D&C, SITI, Subsea and Seismic Environmental Plans.

Woodside also consulted GAP in relation to this EP and offered to meet with GAP. However GAP indicated its preference was for Woodside to only consult in writing (email 20 December 2023 and 9 January 2024). Consultation with GAP on this EP has therefore involved the exchange of written correspondence between Woodside and GAP. GAP has confirmed it has a fundamental objection to Woodside developing the Scarborough gas project and undertaking the activities under this EP (9 January 2024). It also has an objective to phase out all fossil fuel use (9 January 2024).

Historical Engagement:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2018 – 2020

- GAP has been aware of the Scarborough Project (including operations) for around 6 years. In 2018, GAP was invited to consult on three phases (preliminary, formal, ongoing) of consultation the Scarborough Offshore Project Proposal (OPP). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - The activities under this EP are described in the OPP. GAP chose not to take up the opportunity to participate in consultation.

2022 – 2023

- From 2022 to 2023 Woodside consulted GAP on the Scarborough D&C, SITI, Subsea and Seismic EPs. Woodside has carefully considered the topics and issues raised by GAP during consultation on those EPs. A number of topics and issues raised by GAP during consultation on those EPs have been raised again by GAP as part of consultation on this EP. These include:
 - Routine light emissions including external lighting on project vessels.
 - Information on the direct and indirect GHG emissions of the activity.
 - How expected emissions from the activities align with global temperature and decarbonisation goals.
 - Summary of the expected offsets to be provided in the EP.
 - Inclusion of indirect scope 3 emissions in the assessment of impacts and risks.
 - Assessment of climate-related impacts to MNES coral reef systems such as Ningaloo Marine Park and the Great Barrier Reef.
 - Unplanned hydrocarbon release – vessel collision.
 - Risk of collision with marine fauna and vessel speed.
 - Routine acoustic emissions, including potential cumulative impacts from Scarborough activities.
 - Adapting the consultation process to GAP's needs, including that consultation be in writing.
 - A public statement by GAP stating its objective was to use every means possible to stop Woodside.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 13 September 2023, GAP sent a letter to Woodside (SI Report, reference 1.1) and stated the following:
 - **(1)** GAP was a relevant person and GAP asked that Woodside provide written confirmation that Woodside considered Greenpeace to be a relevant person under regulation 25 of the Environment Regulations.
 - **(2)** As per Regulation 25(2), GAP required additional information about the activities in the EP to make an informed assessment of the possible consequences of the activities on its functions, interests or activities. GAP advised it needed:

- Approximately one month to consider and respond to additional information provided by Woodside. An opportunity to respond within the above timeframe to any additional information including an expectation that Woodside would not resubmit EPs to NOPSEMA for assessment without first allowing GAP approximately one month (or longer if advised by GAP) to consider and respond to additional information.
- The full text of any changes made to a published draft EP. For clarity and to prevent confusion, GAP preferred this to be provided as an updated version of the EP.
- GAP expected Woodside to be open and generous with the provision of additional information, and GAP expected Woodside to directly address the questions and concerns GAP raised.
- GAP required any additional information provided to be at a similar level of detail and supported by a similar level of evidence that was normally provided to NOPSEMA within an EP. GAP needed all descriptions, statements, justifications, reasonings, etc to be fully referenced and the underlying technical or scientific evidence provided.
- Additional information required:
 - **(3)** Comprehensive information setting out the sources and volumes of GHG emissions considered in the EP, as well as those GHG emissions Woodside has chosen not to consider in the EP.
 - **(4)** Detailed, comprehensive and fully justified information about each potential planned and unplanned risk and impact, and proposed mitigation actions.
 - **(5)** Copies of any full text modelling, reports or analyses underlying the Proponent's risk assessment.
 - **(6)** The states and countries in which the direct and indirect GHG emissions were expected to be released, and the volume of greenhouse gases to be released in each state and country.
 - **(7)** Full explanation and justification as to whether and/or how the expected direct and indirect GHG emissions in the EP fit within:
 - ❖ Australia's portion of the remaining global carbon budget needed to limit global warming to 1.5°C (with a 66% probability).
 - ❖ Western Australia's portion of the remaining global carbon budget needed to limit global warming to 1.5°C (with a 66% probability).
 - ❖ the remaining carbon budget for Australia that would allow the nation to reach net zero GHG emissions by 2050, and
 - ❖ the remaining carbon budget for Western Australia that would allow the state to reach net zero GHG emissions by 2050.
 - **(8)** Comprehensive information about any carbon offsets that may be used to offset the direct or indirect GHG emissions from the activities, and
 - **(9)** Comprehensive information about the species and protected areas at risk from the planned and unplanned activities.
- On 6 December 2023, Woodside responded to GAP in a letter (SI Report, reference 1.2). Woodside stated:
 - **(2)** Woodside had been in a continued dialogue, with a significant exchange of information, with GAP since December 2018 around the Scarborough Project which had been acknowledged by GAP.
 - This exchange of information continued from April 2022 around the 4 Scarborough EPs.
 - GAP had shown a high level of technical awareness of the Scarborough Project which demonstrated a comprehensive and detailed understanding of the potential environmental risks and potential impacts and Woodside's mitigations.
 - Woodside had advertised about this EP extensively in media and social media and run Community Information Sessions in regional WA.
 - Woodside had offered to meet with GAP but this had not been taken up and instead, GAP had run an ongoing campaign called Stop Woodside where protestors had scaled a crane next to the Woodside Perth office and unlawfully entered offshore safety exclusion zones and boarded decommissioned infrastructure.

- Woodside advised GAP consultation would close on 20 December 2023 and asked if GAP had any feedback before this time or would like to meet.
- (2) Woodside complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside engaged in ongoing consultation with stakeholders throughout the life of an EP.
- (2) Woodside provided information on this EP via the Consultation Information Sheet to GAP on 9 August 2023 and had provided a reasonable period of time for GAP to submit feedback in relation to the EP. Feedback and comments received continued to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- (2, 4, 9) The Consultation Information Sheet provided to GAP provided information to enable a person to make an informed assessment of the possible consequences of the activity on their functions, interests or activities of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program (PAP) and a summary of proposed mitigation and management measures. The information contained within the Consultation Information Sheet was sufficient to inform consultation. Woodside does not provide drafts of EPs and while content was subject to change. Publicly available versions assisted stakeholders to access and comment on the same information and removes confusion when iterations of the EP are submitted during the assessment process. The EP would be made publicly available on NOPSEMA's website once it had been submitted and is under assessment by NOPSEMA.
- (2) Woodside has had ongoing contact with GAP throughout the Scarborough Project, this had included correspondence and offers to meet with GAP regarding the Scarborough Project. Woodside continued to welcome the opportunity to meet with GAP to discuss any specific questions or concerns regarding the activity.
- (2) The Woodside response contained responses to GAP questions, topics and issues raised by GAP.
- (5) The EP would be informed and supported by literature and studies (many of these being publicly available). The relevant information from these will be included within the EP to support the relevant impact and risk evaluation and will be referenced as appropriate, in response to questions, topics and issues of interest to GAP.
- (5) The EP and relevant appendices (such as reports, analyses and modelling) would be made publicly available once the EP is submitted to NOPSEMA and was under assessment by NOPSEMA.
- (3) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (3) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide, and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- (3) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rates estimated by contractors, internal helicopter fuel consumption data and emission factors from the NGER Scheme.
 - An impact assessment of GHG from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub. Woodside also had in place a Climate Strategy which was an integral part of the company strategy. The strategy had two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.

- Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way we designed our assets.
 - ❖ Reducing GHG emissions through the way we operated our assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
- (7) Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would likely be offset using carbon credits in order to achieve its net zero aspiration.
- (4, 9) The existing environment that may be affected by the PAP would be described in the EP. This included details of values and sensitivities of the environment, including species and protected areas, which would be used for the assessment of impacts and risks for planned and unplanned activities. A specific assessment would be undertaken to confirm that the PAP would not be inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community and would be consistent with the principles of Ecologically Sustainable Development.
- On 20 December 2023, GAP emailed Woodside (SI Report, reference 1.3) and:
 - Confirmed it did have additional feedback.
 - (10) Advised it preferred all relevant person consultation to be in writing and it generally required one month to consider and respond to information. As such, GAP asked to have until 6 January 2023 to respond. GAP also requested that Woodside respond to this email by 10 January 2023.

Ongoing engagement:

- On 21 December 2023, Woodside responded to GAP (SI Report, reference 1.4) as follows:
 - (1, 2, 10) It had responded to feedback, claims and objections and advised consultation would close on 20 December 2023.
 - (2, 10) It had extended its consultation period from four weeks to 4.5 months giving GAP time and opportunity to provide feedback, claims and objections.
 - (2) On the basis of the extended period for consultation, numerous attempts to engage GAP, and provision of information sheets as well as the 6 December 2023 response to feedback, claims and objections; sufficient information, a reasonable period of time and opportunity for consultation has been provided to GAP.
 - It advised that consultation continued to occur during the life of an EP and that the Management of Change and Review process could be applied if appropriate.
 - (10) Noted GAP preferred to be consulted in writing however, Woodside was still open to meeting in the future.
- On 9 January 2024, GAP responded to Woodside (SI Report, reference 1.5) as follows:
 - (1, 10) GAP is a relevant person but does not want to meet with Woodside and wants all communications in writing.
 - (2, 10) The consultation process should be adjusted to allow access to more detailed information.
 - (11) GAP objected to Woodside developing the Scarborough gas field and undertaking the activities in the EP.
 - (4) GAP required detailed additional information on each of the potential impacts that posed a risk to marine wildlife, habitats or environments including:
 - Physical presence – seabed disturbance.
 - Routine light emissions – FPU and project vessels.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Routine acoustic emissions – FPU and project vessels including intensity and frequency, distances which marine fauna may be impacted and mitigations.
- Routine and non-routine discharges from project vessels including make-up, toxicity, characteristics, volumes, frequency and impacts on marine wildlife, habitats and environments, and mitigations.
- Routine and non-routine discharges from FPU operations (waste water streams).
- Routine and non-routine discharges from FPU and subsea commissioning.
- Routine and non-routine discharges from FPU operations.
- Routine and non-routine discharges from FPU operations (commingled produced water/cooling water stream).
- Routine and non-routine discharges subsea operations and activities.
- Unplanned hydrocarbon release – FPU loss of structural integrity including volumes released, time to stop and contain a spill, adequacy of actions to prevent unplanned release, environmental impacts of unplanned release and remediation.
- Unplanned hydrocarbon release – vessel collision.
- Unplanned hydrocarbon release – loss of well containment.
- Unplanned hydrocarbon release – trunkline, flowline and riser loss of containment.
- Unplanned hydrocarbon or chemical release – hydrocarbon release during bunkering/refuelling and chemical release during transfer, storage and use
- Unplanned discharges – deck and subsea spills.
- Unplanned discharges – loss of hazardous and non-hazardous wastes/equipment.
- Physical presence (unplanned) seabed disturbance.
- Physical presence (unplanned): vessel collision with marine fauna.
- Physical presence (unplanned): introduction of invasive marine species.
- Potential impacts associated with climate change, including routine and non-routine atmospheric and GHG emissions. GAP was concerned about:
 - **(3)** The sources and volumes of GHG emissions.
 - **(6)** The volumes of GHG emissions expected to be released in Western Australia, Australia and overseas.
 - **(7)** How these compare to the remaining carbon budgets (allowing for a 66% probability of limiting global warming to 1.5 degrees Celsius) for Western Australia, Australia and globally.
 - **(12)** The effectiveness of the decarbonisation plan for the Pluto Hub.
 - **(13)** Environmental harm that may result from warming associated with the release of the GHG emissions.
 - **(14)** The full extent of Scarborough Scope 3 emissions (and their associated environmental impacts) are not being considered in the EP.
 - **(15)** Residual GHG emissions will remain high, even after mitigation efforts.
 - **(8)** There will be an overreliance on carbon offsets to mitigate the GHG emissions.

- **(16)** GAP was concerned that Woodside may rely on its Climate Strategy to mitigate the potential impacts of the direct and indirect GHG emissions that may result from the activities.
- **(17)** The integrity of the modelling underlying any assessment of GHG emissions and their potential impacts.
- On 1 February 2024, Woodside responded to GAP (SI Report, reference 1.6) as follows:
 - **(10)** Woodside noted GAP's objection to meeting but still extended its offer for GAP to meet with Woodside.
 - **(2, 10)** Information had been provided which addressed the key issues raised, sufficient for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities and specifically to understand the nature of the GHG emissions that were estimated to be associated with the activity and the overall Scarborough project. The global context on emissions were also public.
 - **(10, 11)** While the information in this EP Consultation Information Sheet may not meet GAP's objective to phase out all fossil fuel use (i.e. fundamental opposition to the Scarborough Project), that was not required in order for the consultation requirements under the Regulations to be met.
 - **(3)** Woodside had also referred GAP to the published OPP for further detailed information and quantification of Scope 3 emissions estimates from the overall project.
 - **(11)** Woodside noted GAP's fundamental opposition to the activities described in this EP and would cite GAP's fundamental objection to Woodside and its activities in this EP when it was submitted to NOPSEMA.
 - **(4, 9)** Woodside noted GAP's request for more detailed additional information on each of the potential impacts that posed a risk to marine wildlife, habitats or environmental, plus those associated with climate change.
 - **(2, 9, 10)** Woodside considered the information in the Scarborough OPP as well as previous information provided to GAP to be sufficient to allow GAP to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of GAP.
 - **(2, 10)** Woodside also noted that GAP was contacted in 2018 to provide comment on the Scarborough Project OPP. GAP did not provide any comment regarding its functions, interests or activities nor any claims or objections regarding the Scarborough Project OPP.
 - **(3)** It should be noted this EP would include a revised estimate of emissions, taking into account changes since the OPP was accepted by NOPSEMA, including but not limited to:
 - Updated GHG emission factors.
 - Maturation of FPU design and operational details.
 - Changes in associated regulatory requirements such as the updated Pluto LNG Facility GHG Abatement Program and associated conditions in Ministerial Statement 1208.
 - **(3)** The Scarborough OPP acknowledged that GHG estimates were subject to a range of variables that may change and presented a description of the methodology and emission factors used to quantify emission estimates. The total GHG emission estimates for the field life had not changed, although some annual variations were anticipated, consistent with the narrative set out in the Scarborough OPP.
 - **(7, 13)** Climate science had drawn a robust link between cumulative net emissions of greenhouse gases and global temperature levels. The link between cumulative net emissions and temperature levels allowed a carbon budget to be calculated. This was the remaining amount of net emissions (i.e. all global sources of emissions minus all global sinks of emissions) that could occur before today's concentration of greenhouse gases increased to the concentration associated with potential temperature outcomes.
 - However, the distribution of this carbon budget across different human activities required additional judgements about a wider range of social, economic and technological factors and consumer and policy choices. Strategies to achieve emissions reductions included transitioning from fossil fuels without Carbon Capture Storage (CCS) to very low-

or zero-carbon energy sources, such as renewables or fossil fuels with CCS, demand side measures and improving efficiency, reducing non-CO₂ emissions, and deploying carbon dioxide removal methods to counterbalance residual GHG emissions.

- Pathways to limit warming therefore show different combinations of sectoral mitigation strategies consistent with a given warming level.
- As a result the demand for oil and gas in climate-related scenarios that could limit global warming to 1.5°C or 2°C was uncertain. For example in the AR6-WG3 report, the IPCC stated that in pathways that limit warming to 1.5°C (with a greater than 50% probability and with no or limited overshoot) the potential global use of gas in 2050 ranged from 30% above 2019 levels to 85% below them with a median 45% decline.
- (7) Woodside sees an ongoing role for Scarborough LNG and pipeline gas to support its customers' plans to secure their energy needs, while they reduce their emissions. The Scarborough reservoir contained only around 0.1% carbon dioxide and would be combined with processing design efficiencies at the FPU (offshore) and at Pluto Train 2 (onshore) to deliver one of the lowest carbon intensity projects for LNG delivered into Asian markets.
- (17) On the integrity of the modelling underlying the assessment of GHG emissions and their potential impacts, Woodside emphasised that, due to the high level of complexity and numerous variables associated with climate and ecological processes, it was not considered feasible to correlate the potential impact of Scarborough GHG emissions on receptors given:
 - That it is the net global GHG concentrations that caused climate change and climate related impacts.
 - The inability to precisely predict the amount of total future global GHG emissions.
 - The inability to predict future national and international initiatives on climate change and the impact they would have on total future global GHG emissions, including Scarborough emissions.
- (12) On the effectiveness of the decarbonisation plan for the Pluto Hub, Woodside noted that interim and long-term emission reduction targets for the Pluto LNG Facility had been set to achieve net zero emissions by 2050. Following the State Minister's inquiry under section 46 of the *Environmental Protection Act* 1986, these emission reduction targets had become emission limits in Ministerial Statement 1208. Furthermore, public reporting by Woodside would be undertaken to confirm compliance with the various emission limits, providing assurance of the effectiveness of the Pluto LNG Facility Greenhouse Gas Abatement Program.
- (3, 13, 14) It was important to acknowledge that climate change impacts could not be directly attributed to any one project as they were instead the result of GHG emissions, minus GHG sinks, that had accumulated in the atmosphere since the industrial revolution started. This meant there was no link between GHG emissions from Scarborough and climate impacts.
- (3) The EP would assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct estimated GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- (3, 14) Indirect estimated GHG emissions associated with the PAP from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
- (8) Avoiding and reducing GHG emissions were a Woodside priority, and this was principally achieved through pursuing opportunities in the design and operation of our assets that were economically viable when assessed using an internal long-term cost of carbon, currently US\$80/tCO₂e, which exceeded the current market price of Australian Carbon Credit Units (ACCU).

- (8) Offsetting emissions allowed Woodside flexibility to reduce net emissions, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would be offset using carbon credits in order to achieve our emission reduction requirements.
- (5) Woodside's climate strategy was an integral part of the company strategy. It had two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that its customers needed as they secured their energy needs and reduced their emissions.
- (17) Woodside announced a Scope 3 emissions plan in 2021, which had three key elements:
 - 1. Invest: New energy products and lower carbon services – Woodside expected increasing demand for new energy products such as hydrogen and ammonia, and lower carbon services such as CCUS. These could reduce the emissions arising when our customers consumed energy compared to unabated use of fossil fuels.
 - ❖ Woodside was investing to add these new products and services to its portfolio, seeking to match the pace, scale and needs of its customers as they determined their own decarbonisation pathways.
 - ❖ In December 2021, Woodside announced a US\$5 billion investment target in new energy products and lower carbon services by 2030. The US\$5 billion was intended for investments that helped its customers decarbonise by using these products and services. It was not used to fund reductions of Woodside's net equity Scope 1 and 2 emissions which were managed separately through asset decarbonisation plans.
 - 2. Support: Customer and supplier emissions reduction – Woodside could support its customers and suppliers by identifying opportunities to collaborate on their decarbonisation pathways.
 - 3. Promote Global measurement and reporting – Woodside was actively participating in industry collaboration initiatives to mature, harmonise and advocate for accurate and transparent measurement and reporting.
- (17) GAP was advised that Woodside's Climate Strategy was not the governing framework outlining the management and mitigation measures to reduce GHG emissions associated with the Scarborough Project, the Scarborough OPP outlined the management and mitigation measures already adopted by Woodside for the Scarborough Project.
 - Furthermore, the Pluto LNG Facility Greenhouse Gas Abatement Program outlined the strategies adopted to avoid, reduce, mitigate and offset GHG emissions associated with the Pluto LNG Facility.
- On 7 February 2024, Woodside emailed GAP correcting a date on previous correspondence (SI Report, reference 1.7).
- On 7 March 2024, Woodside sent GAP an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 1.8).
 - (7, 8) The email included links to the CTAP and the ASX Announcement.
 - (1, 10) It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - (1, 10) Finally it stated Woodside was available to meet with GAP to discuss this EP should they be interested.
- On 4 July 2024, Woodside emailed GAP and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 1.9). Based on GAP's previous feedback, Woodside noted:
 - (7) Information on how expected emissions aligned with global temperature and decarbonisation goals could be found in EP section 6.7.6 under subheadings *Context – Relevant Energy Mixes and Climate Related Scenarios* and *Management and Mitigation*.
 - (3, 13) Information on the impacts associated with climate change, including routine and non-routine GHG emissions, could be found in Section 6.7.6 and 6.7.7.

- (17) Information on the integrity of the modelling underlying any assessment of GHG emissions could be found in Section 6.7.6 under subheading *Description of Source*.
- (3, 6, 14) Information regarding sources and volumes of emissions, including the full extent of Scarborough Scope 3 emissions, could be found in Section 6.76 under subheading *Description of Source*.
- (8) Further information regarding carbon offsets could be found in Section 6.7.6 under subheading *Management and Mitigation, Offset*.
- Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with GAP over the next month.
- On 8 October 2024, Woodside emailed GAP to thank it for its feedback and for engaging in consultation with Woodside on this EP (SI Report, reference 1.10). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by GAP. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - (1) Confirmed GAP had been identified as a relevant person for this EP.
 - (4) Advised the EP – specifically sections 6.7 and 6.8 – contained detailed and comprehensive information about the planned and unplanned risks/events relevant to the PAP, and that each of the risk assessments contained proposed mitigative actions. In response to GAP’s particular concern regarding the risk of vessel collision with marine fauna, Woodside confirmed Control 4.8 in the EP committed to the reduction of vessel speeds within the Operational Area during pygmy blue and humpback whale migration seasons.
 - (5) Noted the EP and relevant appendices were publicly available on NOPSEMA’s website and that it was not reasonable for Woodside to provide technical evaluations and studies, nor was it necessary for GAP to have those documents in order to assess the potential consequences of the activity on its functions, interests or activities.
 - (3) Provided an overview of GHG sources and volumes associated with the project, including estimates for Scope 1 and Scope 3 emissions.
 - (6) Advised that based on Table 6-21 of the EP, over the life of the facility approximately 12 MtCO₂-e was expected to be emitted in Commonwealth Waters and approximately 88 MtCO₂-e in Western Australia associated with onshore processing of Scarborough Gas. Of the approximately 780 MtCO₂-e expected to be emitted in association with third party consumption, a small portion was expected to be emitted in WA via the domestic gas network, but the vast majority would be international.
 - (7) Advised its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels, therefore, if the introduction of Scarborough LNG served to reduce GHG emissions elsewhere, then in Woodside’s view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentration. However, Woodside confirmed a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP and the contribution was de minimis.
 - (8) Disagreed with GAP’s assertion regarding an overreliance on carbon offsets. Woodside confirmed avoiding and reducing GHG emissions was Woodside’s priority, however, offsetting emissions allowed a reduction of net emissions while asset and technology decarbonisation plans were matured and implemented.
 - (9) Advised that information on species and protected areas relevant to the PAP were provided in various places in the EP, including Sections 4.6, 6.7, 6.8 and 6.9.
 - (12) Advised access to the Pluto Decarbonisation Plan was not required for GAP to assess how its functions, interests or activities may be affected, but noted the Pluto Greenhouse Gas Abatement Program was publicly available.
 - (13) Advised contextual evaluation of climate change impacts on global and Australian receptors was set out in the EP for reference, and provided GAP with a list of relevant projections for climate change in Australia.
 - (14) Confirmed Scope 3 emissions were assessed in the EP and that the total estimated Scope 3 emissions associated with the project, as set out in Table 6-21 of the EP, were approximately 870 MtCO₂-e.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (15) Confirmed it had considered GAP's feedback.
- (16) Advised Woodside's Climate Strategy provided broader business context and as such, Woodside would not respond to feedback on the Climate Strategy in consultation in the course of preparing the EP.
- (17) Noted that Woodside used publicly available and reputable sources for climate science, including the IPCC.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) GAP self-identified as a relevant person and requested to be consulted on Scarborough EPs.</p>	<p>(1) Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations and has assessed GAP as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside confirmed GAP had been identified as a relevant person for the purposes of the Operations EP and had been provided with consultation information on the activity.</p>	<p>(1) Woodside has assessed GAP as a relevant person in its Assessment of Relevance (see Appendix F, Table 1 of this EP).</p>
<p>(2) Additional information and time required to make informed assessments about possible consequences on its functions, interests or activities.</p>	<p>(2) Woodside assessment: Woodside has provided GAP with sufficient information and a reasonable period of time to make an informed assessment of the possible consequences of the proposed activity on its functions, interests or activities. Woodside commenced consultation with GAP in August 2023 and has given volumes of information to GAP and has addressed and responded to GAP's feedback over a 14-month period. Through its feedback, GAP has also demonstrated a high level of technical awareness of the Scarborough Project. Woodside response: Woodside confirmed it had provided GAP with a Consultation Information Sheet for this EP on 9 August 2023 and had extended the consultation period from an initial four weeks to 4.5 months. Woodside also provided direct responses to GAP's feedback, and emailed GAP a link to the EP when it was publicly available on NOPSEMA's website. Woodside noted it had been in a continued dialogue with GAP regarding Scarborough EPs since April 2022, and</p>	<p>(2) GAP has been provided with sufficient information and a reasonable period for consultation, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	GAP had shown a high level of technical awareness of the Scarborough Project, demonstrating a comprehensive and detailed understanding of the potential environmental risks and impacts.	
<p>(3) Comprehensive information setting out sources and volumes of direct and indirect emissions related to the EP.</p>	<p>(3) Woodside assessment: GAP has been provided with sufficient information regarding sources and volumes of emissions related to the EP, via the Consultation Information Sheet, Scarborough OPP (which contains emissions estimates consistent with the EP), publicly available EP and responses directly to GAP correspondence, for GAP to make an informed assessment of the possible consequences of the proposed activity on its functions, interests or activities.</p> <p>Woodside response: Woodside provided GAP with an overview of sources and volumes of direct and indirect emissions related to the EP, including estimated Scope 1 and Scope 3 emissions. Woodside advised the total estimated GHG emissions associated with the project, as presented in Table 6-21 in the publicly available EP, were approximately 880 MtCO₂-e over the life of the activity.</p> <p>Woodside also provided GAP with a link to the publicly available EP and advised further information on emissions sources and volumes was set out in Section 6.7.6. Further, Woodside had previously advised GAP the various direct and indirect sources and volumes of emissions were included in the OPP, on which GAP was invited to comment in 2018.</p>	<p>(3) Direct and indirect emissions associated with the proposed activity are presented and assessed in Sections 6.7.6 and 6.7.7 of the EP.</p>
<p>(4) Detailed comprehensive information about each potential planned and unplanned risk to marine wildlife or habitats, and proposed mitigating actions, including the risk of vessel collision with marine fauna.</p>	<p>(4) Woodside assessment: GAP has been provided with sufficient information on the potential planned and unplanned risk to marine wildlife or habitats, via the Consultation Information Sheet, Scarborough OPP, publicly available EP and responses directly to GAP correspondence, for GAP to make an informed assessment of the possible consequences of the proposed activity on its functions, interests or activities.</p> <p>Woodside response: Woodside provided GAP with a link to the publicly available EP and set out which specific sections provided further information and mitigation measures for each</p>	<p>(4) Woodside has assessed the potential impacts and risks to marine wildlife from planned and unplanned activities in Sections 6.7 and 6.8 of the EP.</p> <p>Woodside will manage vessel speed in the humpback and PBW whale BIAs in migration seasons within the trunkline Operational Area, as referenced as C 4.8 in the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>of the planned and unplanned risks to marine wildlife raised by GAP.</p> <p>Regarding the risk of vessel collision with marine fauna, Woodside confirmed Control 4.8 in the EP committed to the reduction of vessel speeds within the Operational Area in the pygmy blue and humpback whale migration BIAs, during migration seasons.</p> <p>Woodside also noted GAP was contacted in 2018 to provide comment on the Scarborough OPP, which included information on potential risks to marine wildlife, habitats or environments.</p>	
<p>(5) Copies of any full text modelling, reports or analyses underlying the risk assessment.</p>	<p>(5) Woodside assessment: GAP does not require copies of the full text modelling, reports or analyses in order to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside response: Woodside advised the EP and relevant appendices were publicly available on NOPSEMA's website, and it was not reasonable for Woodside to provide the level of detail, technical evaluations and studies which included commercially sensitive or confidential information. Woodside confirmed the final outcomes of technical evaluations and studies relevant to the activity were described in the EP and in Woodside responses to GAP.</p>	<p>(5) Not required.</p>
<p>(6) Requested information on the states and countries in which direct and indirect GHG emissions are expected to be released, and the volumes.</p>	<p>(6) Woodside assessment: Woodside has provided GAP sufficient information on GHG emissions sources via the Scarborough OPP, publicly available EP, and direct responses to GAP, for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside response: In addition to previous information on emissions sources provided to GAP through the Consultation Information Sheet and Scarborough OPP, Woodside confirmed that based on estimates presented in the EP, over the life of the facility approximately 12 MtCO₂-e was expected to be emitted in Commonwealth Waters and</p>	<p>(6) A breakdown of emissions sources and volumes is provided in Section 6.7.6 of the EP and summarised in Table 6-22.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>approximately 88 MtCO₂-e was expected to be emitted in Western Australia associated with onshore processing of Scarborough Gas. Regarding third party consumption of product, a small portion of this was expected to be emitted in WA via the domestic gas market but the vast majority would be international.</p>	
<p>(7) Full explanation as to whether/how expected GHG emissions fit within temperature and decarbonisation goals.</p>	<p>(7) Woodside assessment: A hypothetical assumption where GHG emissions associated with the Scarborough project are treated as additive is considered in the EP. This scenario is not expected to eventuate. Woodside response: Woodside advised a portion of GHG emissions associated with the project were anticipated to contribute to carbon budgets estimated to achieve the goals of the Paris Agreement. Woodside advised its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels, and in Woodside's view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentration. Regardless, to facilitate a comparison against carbon budgets, Woodside confirmed a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP. Based on this hypothetical assumption, the contribution of the project to carbon budgets was de minimis.</p>	<p>(7) Section 6.7.6 of the EP discusses the Scarborough Project in the context of gas demand in climate-related scenarios.</p>
<p>(8) Concerns there will be an overreliance on carbon offsets to mitigate GHG emissions.</p>	<p>(8) Woodside assessment: Avoiding and reducing GHG emissions are Woodside's priority, however offsetting emissions allows a reduction of net emissions while asset and technology decarbonisation plans are matured and implemented. Woodside response: Woodside confirmed avoiding and reducing GHG emissions were its priority and that Woodside aimed to achieve this principally by pursuing opportunities in the design and operation of its assets that were economically viable when assessed using an internal long-term cost of carbon, currently US\$80/tCO₂e, which exceeds the current market price of Australian Carbon Credit Units (ACCU).</p>	<p>(8) Management and abatement measures are set out in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Offsetting emissions allowed a reduction of net emissions while asset and technology decarbonisation plans were matured and implemented. In the longer term, and in circumstances where emissions were hard to abate, residual emissions would be offset using carbon credits.	
<p>(9) Requested comprehensive information about the species and protected areas at risk from the planned and unplanned activities.</p>	<p>(9) Woodside assessment: Woodside has provided GAP sufficient information on the species and protected areas at risk from the planned activities via the Consultation Information Sheet, Scarborough OPP, references to specific sections of the publicly available EP, and direct responses to GAP, for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside response: Woodside confirmed information on species and protected areas relevant to the PAP was provided in the EP, including Section 4.6 which described species, habitats and communities in the EMBA and Operational Area that might be affected; Sections 6.7 and 6.8 which provided risk assessments for impacts to particular species and environments; and Section 6.9 which looked at the assessed impacts in the context of Principles of ESD, MNES, and recovery/threat abatement plans. Woodside further noted that additional information had been available to GAP via the Scarborough OPP since 2018.</p>	<p>(9) Species and protected areas are described in Section 4.6 of the EP. Risk assessments for planned and unplanned activities are set out in Sections 6.7 and 6.8 of the EP. Assessment of environment protection and Biodiversity Conservation Act is set out in Section 6.9.</p>
<p>(10) Statements that the consultation process did not incorporate all relevant persons and needed to be adapted for GAP, including all claims in writing, highly detailed and specific information, timeframes for consultation prior to resubmission, and full text of any changes to the EP.</p>	<p>(10) Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations in relation to the consultation process for EPs. Woodside accepts GAP's preference is not to meet, but nevertheless remains open to meet with GAP should GAP's position change. Sufficient information has been provided which addresses the key issues raised. Woodside response: Woodside advised that it noted GAP's objection to meeting and that it complied with regulation 25 of the Environment Regulations in relation to the consultation</p>	<p>(10) Woodside's consultation methodology is described in Section 5 of the EP and its assessment of relevant persons is described in Appendix F, Table 1 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>process for this EP. Woodside confirmed it engaged in ongoing consultation throughout the life of an EP.</p> <p>Woodside advised it considered sufficient information had been provided via the Consultation Information Sheet, Scarborough OPP and previous responses provided to GAP which addressed the key issues raised, for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p>	
<p>(11) GAP has called on Woodside to abandon fossil fuel expansion plans particularly in relation to the proposed development of the Burrup Hub.</p>	<p>(11) Woodside assessment: Woodside is aware of GAP's fundamental opposition to the activities described in this EP. Woodside response: Woodside confirmed it had noted GAP's fundamental opposition to the activities and advised GAP it would cite this opposition in the EP.</p>	<p>(11) Not required.</p>
<p>(12) The effectiveness of the decarbonisation plan for the Pluto Hub.</p>	<p>(12) Woodside assessment: Access to the Pluto Hub Decarbonisation Plan is not required for GAP to assess how its functions, interests or activities may be affected by activities described in the EP. Woodside response: Woodside advised the Pluto Greenhouse Gas Abatement Program was publicly available on Woodside's website. Woodside also noted that interim and long-term emission reduction targets for the Pluto LNG Facility had been set to achieve net zero emissions by 2050.</p>	<p>(12) Not required.</p>
<p>(13) Environmental harm that may result from warming associated with the release of GHG emissions.</p>	<p>(13) Woodside assessment: Woodside acknowledges climate science and that climate change is understood to be caused by the net cumulative global concentration of GHG in the atmosphere. However, changes in global atmospheric GHG concentration cannot be attributed to any one activity or one project, including the Scarborough Project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Woodside response: Woodside advised GAP that contextual evaluation of climate change impacts on global</p>	<p>(13) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	and Australian receptors was set out in Section 6.7.6 of the EP. While noting the full section in the EP was pages long, Woodside provided a list of relevant projections for climate change in Australia based on IPCC AR6-WG11.	
<p>(14) The full extent of Scarborough Scope 3 emissions are not being considered in the EP.</p>	<p>(14) Woodside assessment: Woodside does not agree with GAP's assertion and confirms that Scope 3 GHG emissions associated with the Scarborough Project are assessed in the EP. Woodside response: Woodside confirmed the estimated Scope 3 emissions associated with the project were presented in Table 6-21 of the EP and, in total, were approximately 870 MtCO₂-e over development life, sensitive to production rate which was subject to uncertainty associated with reservoir and process performance. Woodside advised Scope 3 sources summarised in Table 6-21 included Scope 3 GHG emissions associated with support vessels and helicopters, Scope 3 emissions associated with onshore processing of Scarborough gas, and Scope 3 emissions associated with third party consumption.</p>	<p>(14) Emissions associated with the proposed activities are assessed in Sections 6.7.6 and 6.7.7 of the EP.</p>
<p>(15) Concerns residual GHG emissions will remain high even after mitigation efforts.</p>	<p>(15) Woodside assessment: Woodside notes GAP's feedback regarding residual GHG emissions. The EP sets out Woodside's approach to mitigation efforts and approach to offsets. Woodside response: Woodside acknowledged that it had noted GAP's feedback.</p>	<p>(15) Management and abatement measures are set out in Section 6.7.6 of the EP.</p>
<p>(16) Concerns Woodside may rely on its climate strategy.</p>	<p>(16) Woodside assessment: Woodside's climate strategy is an integral part of the company's strategy but is not the governing framework for management and mitigation measures to reduce GHG emissions associated with the Scarborough Project. Information and commitments required to meet the OPGGS(E)R are contained in the EP. Woodside response: Woodside advised its climate strategy provided broader business context and was not enforceable</p>	<p>(16) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	by NOPSEMA. As such GAP's feedback on Woodside's corporate climate strategy is not specific to this EP.	
(17) Integrity of the modelling underlying any assessment of GHG emissions and their potential impacts.	(17) Woodside assessment: Woodside uses outcomes from publicly available and reputable sources including the Intergovernmental Panel on Climate Change (IPCC) which Woodside recognises as a leading body on climate change science. Woodside response: Woodside advised that as described in Section 6.7.6 of the EP, outcomes from publicly available and reputable sources such as the IPCC were drawn upon to provide contextual evaluation of the impacts of climate change.	(17) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i> .
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).	The measures and controls described within this EP address the potential impact from the proposed activities on GAP's functions, interests or activities.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with GAP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given GAP sufficient information to allow GAP to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to GAP on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure: Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information about this activity contained in the OPP, and the initial EP consultation information provided to GAP, Woodside provided GAP with further detailed information which addressed GAP's specific feedback, objections or claims (see information given on 6 December 2023, 21 December 2023, 1 February 2024, 7 March 2024, 4 July 2024, 8 October 2024).
- Woodside proactively reminded GAP it could provide feedback on this EP and given GAP's interest in climate-related matters, provided GAP with information on Woodside's Climate Transition Action Plan and 2023 Progress Report (email of 7 March 2024).
- Woodside again proactively reminded GAP it could provide feedback on this EP and proactively provided GAP with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). Woodside also provided specific references within the EP that addresses areas of interest identified by GAP.
- On 8 October 2024, Woodside also emailed GAP to confirm it would shortly resubmit the EP for assessment and reminded GAP that Woodside remained open to receiving feedback.
- In total, excluding the Consultation Information Sheet and publicly available EP, Woodside has provided GAP with volumes of additional information and responses addressing GAP's claims and objections in relation to this EP.
- On 13 September 2023 and 9 January 2024, GAP claimed it had not been provided with sufficient information as the information in the Consultation Information Sheet was too brief and high-level. Woodside disagrees with this assertion because GAP responded to Woodside's Consultation Information Sheet with questions and concerns regarding the specific activity, indicating the information provided was sufficient to enable GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- Further, GAP's feedback on the Scarborough Project, including this EP, has shown a high level of technical awareness, demonstrating a comprehensive and detailed understanding of the potential environmental risks and impacts. GAP shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above.

Reasonable Period

Woodside allowed GAP a reasonable period for consultation in the preparation of this EP because:

- A consultation process and period was stated in the initial correspondence to GAP advising of consultation as well as when consultation would close for purposes of preparing the EP (email dated 9 August 2023). This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed GAP over 4.5-months for consultation.
- During the consultation period and following it, Woodside sent follow-up emails to GAP to remind GAP of consultation and timeframes on numerous occasions (30 August 2023, 6 December 2023, 1 February 2024, 7 March 2024, 4 July 2024, 9 October 2024).
- In this context, Woodside allowed GAP a reasonable period for consultation in preparation of the EP.
- On 13 September 2023 and 20 December 2023, GAP stated that it had not been provided with a reasonable time to provide feedback. Woodside disagrees with this assertion as Woodside commenced consultation on 9 August 2023, and on 6 December 2023 provided additional information to GAP and advised it had extended the consultation period to 20 December 2023. The consultation requirement under Reg 25 cannot be one that is incapable of being complied with within a reasonable time (Tipakalippa Full Court para 136).

- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP. GAP has demonstrated it understands this and it continues to provide feedback to Woodside, irrespective of consultation timeframes as demonstrated in GAP's emails received on 13 September 2023 and 9 January 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with GAP is appropriate and adapted to the nature of interests of GAP:

- Woodside published 8 advertisements in national, state and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to GAP because Woodside notes GAP regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity under the EP and also of consultation.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.
- Woodside provided an alternative method for GAP to provide feedback by offering meetings. The offer to meet was not taken up by GAP, which advised written communication was its preferred method of consultation (20 December 2023 and 9 January 2024) (which Woodside has done). This demonstrates Woodside has received input from GAP on its preferred consultation method and has respectfully followed that method.
- Following publication of the EP on NOPSEMA's website, Woodside provided GAP with correspondence on climate-related matters and directed it to sections of the EP which contain additional information relevant to its interests.
- GAP confirmed it has a fundamental objection to Woodside developing the Scarborough gas field and undertaking the activities under the EP and has an objective to phase out all fossil fuel use (email 9 January 2024). This informs the way Woodside's efforts to consult with GAP should be considered.
- Woodside considers a reasonable opportunity was provided to GAP as evidenced in its exchanges with GAP and in particular as evidenced in GAP's responses on 13 September 2023, 20 December 2023 and 9 January 2024 when GAP provided feedback, claims and objections.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- GAP provided feedback or objections or claims about the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2, Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from GAP and has assessed the merits of any objection or claim about the adverse impact of activities to which this EP relates.
 - Made no changes or inclusions to the EP as a result of consultation with GAP because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Conservation Foundation (ACF)

Context

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

ACF is an advocacy organisation which has the stated goal 'to have 80% of coal, gas and uranium exports replaced by renewables by 2030'.^{xix}

ACF has several active petitions and campaigns against gas, the Scarborough Project and Woodside including: urging the Australian government to stop all subsidies and tax breaks for fossil fuels and end new climate-heating coal and gas projects and infrastructure in Australia, quoting Woodside's Scarborough project^{xx}, "Stop Woodside's Scarborough Gas project climate bomb"^{xxi}, "Pre-written message to the Prime Minister to stop Woodside and Santos"^{xxii}, and "Ask your super fund to announce their intention to vote against Woodside's board directors who don't respond to climate damage".^{xxiii} In June 2022, ACF commenced legal proceedings in the Federal Court against Woodside's Scarborough Gas Project calling it 'one of the most polluting new fossil fuel proposals in Australia'.^{xxiv}

On 21 December 2023, ACF publicly stated it would ask the Federal Court to stop Woodside's Scarborough Project until its impact on the Great Barrier Reef was assessed.^{xxv} On 19 August 2024, ACF discontinued its case against Woodside's Scarborough Project stating "it became apparent that the case was unlikely to succeed."^{xxvi}

In 2018, ACF was invited to participate in consultation on the Scarborough Energy Project OPP. ACF chose not to participate in that consultation process.

During 2023, Woodside consulted with ACF on other Scarborough-related EPs and commenced consultation with ACF on this EP on 9 August 2023.

Historical Engagement:

2018 – 2020

- ACF has been aware of the Scarborough Project (including operations) for around 6 years. In 2018, ACF was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
- The activities under this EP are described in the OPP. ACF chose not to take up the opportunity to participate in consultation on the OPP.

2022 – 2023

- From 2022 to 2023 Woodside consulted ACF on the Scarborough D&C, SIT1, Subsea and Seismic EPs. Woodside has carefully considered the topics and issues raised by ACF during consultation on those EPs. A number of topics and issues raised by ACF during consultation on those EPs were addressed and have been raised as part of consultation on this EP and include:
 - Several vulnerable and endangered marine and avian species within the Operational Areas.
 - Impacts and risks from light emissions on seabirds.
 - Impacts and risks from acoustic emissions on cetaceans, turtles, pygmy blue whales, fish and sharks.
 - Impacts to benthic habitats and communities and the Gascoyne Marine Parks.
 - Purported impacts of GHG emissions.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of feedback from ACF, Woodside proactively emailed ACF (Record of Consultation, reference 2.20) and stated:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside had met with ACF in October 2022 and had briefed it on the Scarborough Project and related EPs. Since then, ACF and Woodside had engaged in consultation on all four EPs.
- Woodside had emailed ACF and provided the Consultation Information Sheet for the Scarborough Operations EP on 9 and 30 August 2023 and had also included a link to the online Consultation Information Sheet.
- Woodside advised that consultation in the course of preparing the EP had closed on 20 December 2023 and asked if ACF had feedback and/or would like to meet.
- In the absence of feedback from ACF on this EP, the letter also reviewed past feedback from ACF and topics of interest on the Scarborough D&C, SIT1, Seismic and Subsea EPs and provided an assessment and response as follows:
 - **(1)** The Scarborough Project EPs should include an evaluation of all impacts and risks related to the GHG emissions that would be caused by the Project.
 - ❖ **(1)** GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database.
 - ❖ **(1)** The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - ❖ **(1)** Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - **(2)** There were several vulnerable, endangered and critically endangered marine species within both the Operational Area and the environment that may be affected (EMBA) including loggerhead and leatherback turtles, blue whales and the eastern curlew.
 - ❖ **(2)** In accordance with regulation 13(2) and 13(3) of the Environment Regulations, the EP would describe the existing environment that may be affected by the activity, including details of the particular relevant values and sensitivities of the environment. This included the presence of turtles, whales and seabirds. Controls would be implemented to reduce risks to As Low as Reasonably Possible (ALARP) and acceptable levels.
 - **(3)** Light emissions from the activities were expected to have potential impacts and risks including behavioural disturbance, injury and mortality to seabirds while the activities were underway.
 - ❖ **(3)** Evaluation of risks and impacts associated with routine light emissions from the Field Production Unit (FPU) and Project Vessels would be presented in the EP. This included routine lighting from FPU and vessel operation. As the FPU was approximately 430 km offshore and away from islands or other emergent features, including a 105 km separation from a breeding Biologically Important Area (BIA) for the wedge-tailed shearwater, any presence of seabirds or shorebirds was considered likely to be of a transient nature only.
 - ❖ **(3)** The Trunkline Operational Area was in proximity to and overlapped breeding and foraging habitat for a number of seabird species, with descriptions and impacts evaluated in the EP. However, planned activities in the Trunkline Operational Area were minimal, limited to infrequent and short-term vessel presence. The Trunkline Operational Area also represented a relatively small portion of the seabird BIAs and while seabird presence may occur, it was considered likely to be of a transient nature only.
 - ❖ **(3)** Further details including demonstration that impacts of lighting on seabirds would be reduced to ALARP and acceptable levels, with controls implemented would be presented in the EP.
 - **(4)** Acoustic emissions from the activities were expected to have potential impacts and risks on marine species, including:
 - ❖ **(4)** Recognition that noise interference was a key threat to migratory and threatened cetaceans and marine turtles within the Operational Area.

- ❖ (4) The potential for pygmy blue whales to deviate from their migration course.
- ❖ (4) Noise emissions exceeding thresholds for behavioural impacts on cetaceans.
- ❖ (4) A risk of moderate impacts on marine turtles, in the context of a “paucity of data” on these species.
- ❖ (4) Behavioural impacts on fish and sharks in the Operational Area.
 - The PAP would be comprised of different acoustic emissions sources, primarily associated with infield vessel operations and support activities, such as geophysical surveys and other IMMR activities. Sound levels would fluctuate over the course of the PAP.
 - Woodside had undertaken a comprehensive assessment of routine acoustic emissions, including underwater noise emissions modelling, with justification of the impacts and risks for the Regulator to assess in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*, and NOPSEMA Guidance Note (N-04750-GN1344 A339814) EP Content Requirement.
- (5) Localised impacts to benthic habitat and communities including displacement and/or permanent loss of epifauna and infauna within the physical footprint.
 - ❖ (5) Disturbance to the seabed and impacts to benthic habitat and communities was assessed in the EP. Benthic epifauna and infauna living on or in the sediments may be impacted by the activities that cause disturbance to the seabed. Permanent infrastructure would be present for the duration of field life and would result in the displacement and/or permanent loss of epifauna and infauna within the physical footprint. Gravimetry surveys or IMMR activities may cause temporary disturbance to the seabed as a result of working close to or on the seabed.
 - ❖ (5) No threatened or migratory species, or ecological communities (as defined under the EPBC Act), were identified in the benthic communities during studies completed in the Petroleum Activities Area (PAA).
 - ❖ Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate controls measures was defined in the EP.
- (6) Hydrocarbon spill to Ningaloo Coast and Gascoyne marine parks.
 - ❖ (6) The EP would assess potential impacts of a highly unlikely hydrocarbon spill. This included a combination of modelling at three locations in the PAA from a worst-case release of marine diesel from a vessel collision resulting in rupture of a tank.
- On 20 December 2023, ACF responded to Woodside (SI Report, reference 55.1) and raised the following issues:
 - (7) ACF was a relevant person under regulation 25 and understood Woodside accepted this.
 - (8) The Consultation Information Sheet did not comply as the information was not sufficient to enable ACF to make an informed assessment of the possible consequences on its functions, interests or activities.
 - ACF requested further information on:
 - (9) Process for and results of the assessment of potential impacts and risks to the environment
 - (1) Consequences of emissions on Australia’s and Western Australia’s carbon budgets to limit global warming to 1.5°C and the release of GHGs
 - (10) Details of any offsetting regime or CCS being considered
 - (11) Details of surveys undertaken to understand marine fauna and flora
 - (12) The basis for conclusions regarding the impact of marine discharges on marine fauna
 - (13) The basis for the conclusion that collisions with marine fauna are considered unlikely
 - ACF requested to meet with Woodside to discuss the EP.

Ongoing engagement:

- On 8 January 2024, Woodside responded to ACF (SI Report, reference 55.2), as follows:
 - (8) Woodside provided to ACF information and a Consultation Information Sheet including a link to NOPSEMA's *Consultation on offshore petroleum environment plans: Information for the community* on 9 and 30 August 2023.
 - As well as directly consulting ACF, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers, and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information on this project available at community events in the Gascoyne, Pilbara and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - In the absence of a response from ACF, Woodside proactively addressed previously raised issues and topics of interest (see 5 December 2023 summary).
 - (8) Woodside had extended the consultation period from four weeks to 4.5 months.
 - (7) Sufficient information and a reasonable period of time had been provided.
 - Woodside asked ACF to advise a date which suited ACF so that arrangements could be made to meet.
- On 1 February 2024, Woodside responded to ACF's feedback, claims, objections, further information from 20 December 2023 (SI Report, reference 55.3), as follows:
 - (8) Woodside had provided sufficient information, and a reasonable period of time and opportunity for consultation.
 - As offered in December 2023 and January 2024 and as requested by ACF, Woodside was still willing to meet and consult with ACF on this EP at its convenience.
 - ACF had made it clear in multiple forums that its functions, interests, or activities included efforts to phase out fossil fuel use and development in Australia and specifically to block new gas field developments. Woodside noted ACF's fundamental opposition to the activities described in this EP.
 - Woodside noted ACF's published response to the Australian Future Gas Strategy around its push for a rapid exit from gas. In the submission ACF stated:
 - Recommendation 1: Add an explicit objective to the strategy to rapidly phase out gas, starting with a ban on new gas.
 - Recommendation 2: New fossil fuel developments are incompatible with a safe climate. The science is very clear on this, there is no role for new gas in Australia's energy future. None! The strategy needs to aggressively phase out fossil gas. Future gas supply should only be short term to satisfy the planned and phased reduction of fossil gas demand.
 - Given ACF's fundamental objection to the Australian gas industry, and considering the information already exchanged between Woodside and ACF during consultation, and a reasonable period of time of 4.5 months being provided, Woodside considered consultation with ACF for the purpose of preparing this EP under the Environment Regulations had been completed.
 - (8, 9) Woodside also noted that a significant volume of information on the Scarborough Project had been provided to ACF in the Scarborough Offshore Project Proposal (Scarborough OPP) which had been publicly available since 2020. Woodside noted that ACF was contacted in 2018 to provide comment on the Scarborough Project OPP. ACF did not provide feedback regarding the Scarborough Project OPP.
 - (8, 9) The Consultation Information Sheet provided by Woodside on 9 August 2023 also set out the relevant activity description as well as a summary of the key risks and impacts and preliminary management measures.
 - (1) It was important to acknowledge that climate change impacts could not be directly attributed to any one project, as they were instead the result of GHG emissions, minus GHG sinks that had accumulated in the atmosphere since the industrial revolution started. This means there was no link between GHG emissions from Scarborough and climate change impacts.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** An updated estimate of the total direct and indirect GHG emissions associated with the Scarborough facility and trunkline operations (Petroleum Activities Program) would be included in the EP, noting that estimates of the annual average and total GHG emissions were included in the Scarborough OPP, Section 7.1.3.
- **(1)** Avoiding and reducing emissions was Woodside's first priority for reducing GHG emissions. However, offsetting emissions provided flexibility in reducing net emissions, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would be offset using carbon credits in order to achieve emission reduction requirements.
- **(11)** With regards to Carbon Capture and Storage, for which ACF had requested more information, assessment of this opportunity would form part of Woodside's assessment in the EP to demonstrate that direct and indirect emissions would be reduced to as low as reasonably practicable (ALARP).
- **(12)** Consistent with information supplied in the Consultation Information Sheet, Woodside would implement appropriate controls (as required) so that potential environmental impacts resulting from marine discharges were reduced to ALARP and acceptable levels.
- **(2, 13)** In assessing potential impacts from vessel collisions with cetaceans, Woodside had analysed publicly available data and information in peer reviewed papers. An assessment of the likelihood based on these sources would be presented in the EP.
 - Woodside considered there was a low likelihood of a vessel interaction with a cetacean in the offshore operational area as it did not overlap with any migratory or foraging biologically important areas (BIA) for cetaceans.
 - Although there was increased likelihood of marine mammal presence within the Trunkline Operational Area, vessel presence would be significantly reduced, and would be transiting the area for short periods of time only as required to undertake inspection, monitoring, maintenance, and repair activities.
- **(1)** On 7 March 2024, Woodside proactively sent ACF an email stating that as ACF had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 55.4).
 - The email included links to the CTAP and the ASX Announcement.
 - It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Finally, it stated Woodside was available to meet with ACF to discuss this EP should they be interested.
- On 4 July 2024, Woodside again proactively emailed ACF and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 55.5). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with ACF over the next month. Based on ACF's previous feedback, Woodside also included a table of specific climate topics which ACF might be interested in, and where to find that topic in the EP, including:
 - **(1)** Further information on GHG emissions associated with the project was provided in sections 6.7.6 and 6.7.7 of the EP.
 - **(10)** Further information on offsetting regimes was provided in Section 6.7.6 of the EP.
- On 8 October 2024, Woodside emailed ACF to thank it for its feedback and for engaging in consultation with Woodside on this EP (SI Report, reference 55.6). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by ACF. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - **(1)** Advised that it acknowledged climate science and that climate change was understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere. To facilitate a comparison against carbon budgets, Woodside advised a hypothetical assumption had been used in the EP where GHG emissions associated with the project were

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

hypothetically treated as additive, and the contribution was de minimis. Woodside also provided a contextual list of projections for climate change in Australia, noting that further information was available in Section 6.7.6 of the EP.

- (2) Referred to sections 6.7 and 6.8 of the EP where impact assessments were summarised in Table 6-1 and showed the highest impact/consequence rating was Slight; short-term impact (<1yr) on species, habitat (but not affecting ecosystems function), physical or biological attributes. Further, an assessment of Recovery Plans and Threat Abatement Plans was carried out in Section 6.9.3 of the EP.
- (3) Advised the impact assessment of Routine Light Emissions from the FPU and other vessels in Section 6.7.3 of the EP concluded the isolated and remote location of the Offshore Operational Area relative to sensitive receptors would reduce light impacts to 'no lasting effect'. The magnitude of impact to seabirds and migratory shorebirds in the Trunkline Operational Area from artificial light emissions was determined to be 'no lasting effect'. For all the PAA, the receptor sensitivity was high and therefore the impact significance level had been identified as Slight (short-term impact (<1 year)).
- (4) Noted the Operations EP covered the FPU which was a moored facility that didn't actively make noise. Machinery noise might be radiated into the underwater environment and other sources of noise included intermittent and infrequent support vessel transit and the once-off noise associated with the installation of the FPU. Due to the open water location of the FPU, and the mobility of fish and their known behaviours, behavioural impacts on cetaceans, fish and sharks were predicted to have no lasting effect, with an impact significance level of Slight.
- (5) Confirmed the risk assessment in Section 6.7.2 of the EP concluded that the scale and magnitude of potential impacts would be limited to the offshore seabed infrastructure and trunkline physical footprint. The impact magnitude for epifauna and infauna was predicted to be Slight, with a Negligible Impact Significance Level. This risk was mitigated through controls in the EP.
- (6) Provided an overview of the EMBA and noted the worst-case credible spill scenarios for this EP were the highly unlikely loss of marine diesel during a vessel collision at the FPU location, from a vessel along the trunkline in the Montebello MUZ, or from a vessel along the trunkline at the Commonwealth/State waters boundary. Based on modelling, if a spill scenario occurred there was a 0.5% chance of entrained diesel at >100 ppb contacting the Ningaloo Australian Marine Park. No surface or dissolved hydrocarbon contact above thresholds was predicted. No hydrocarbon contact above impact thresholds was expected at the Gascoyne Marine Park.
- (9) Advised the publicly available EP contained comprehensive information about the planned and unplanned risks/events. It was not reasonable for Woodside to provide further documents such as technical evaluations and studies, nor were further documents required for ACF to assess the potential consequences of the activity on its functions, interests or activities.
- (10) Advised that proposed GHG abatement measures were described in Section 6.7.6 of the EP in the Demonstration of ALARP table, and that in response to feedback, Woodside had updated the latest draft of the EP to include assessment of carbon capture and storage opportunity. Woodside further noted that CCS was not currently a feasible abatement measure for the Scarborough FPU due to infrastructure, non-concentrated Co2 sources, and reservoir requirements.
- (12) Outlined the types of marine discharges which were assessed in the EP and advised the impact or consequence potential of Slight was primarily driven by the deep-water open ocean receiving environment.
- (13) Advised various studies were used to understand collision risk with cetaceans and included three examples. Woodside advised that information was coupled with contextual information specific to the PAA, including BIAs and vessel presence/speed.
- On 18 October 2024, Woodside sent a follow-up email to ACF, addressing an additional query made in ACF's 20 December 2023 correspondence (SI Report, reference 55.7).
Woodside:

<p>- (11) Confirmed it utilised data from a range of sources including marine sediment quality surveys, geophysical surveys of the seafloor, and scientific studies of habitat and benthic communities to understand marine fauna and ecosystems which may be affected by the PAP. Woodside provided a list of some Scarborough Project specific studies and advised further data was obtained from government databases and reputable research. Woodside noted a description of the existing environment was provided in Section 4 of the EP.</p>		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Evaluation of all impacts and risks related to the GHG emissions that will be caused by the Project, including the impact of emissions anticipated on carbon budgets and the consequences on the environment.</p>	<p>(1) Woodside assessment: A hypothetical assumption where GHG emissions associated with the Scarborough project are treated as additive is considered in the EP to facilitate a comparison against carbon budgets. Woodside does not expect this scenario to eventuate. Woodside response: Woodside acknowledged that climate science suggests that climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough Project. Woodside advised it had used a hypothetical assumption in the EP where GHG emissions were treated as additive, and the amount was de minimis. However, Woodside noted climate change was recognised as a global issue and advised contextual evaluation of climate change impacts was set out in the EP for reference. Woodside noted the section of the EP was pages long, however provided a list of some relevant projections for Australia.</p>	<p>(1) GHG emissions and indirect emissions associated with the activity are considered in sections 6.7.6 and 6.7.7 of the EP.</p>
<p>(2) There were several vulnerable, endangered and critically endangered marine species within both the Operational Area and the EMBA that may be affected.</p>	<p>(2) Woodside assessment: Woodside has considered ACF's feedback regarding vulnerable, endangered and critically endangered marine species. The measures and controls described within this EP address the potential impact from the proposed activities on ACF's functions, interests or activities. Woodside response: Woodside advised sections 6.7 and 6.8 of the EP set out impact assessments for relevant receptors. The impact assessments were summarised in Table 6-1 and showed the highest impact/consequence rating was Slight; short-term impact on species, habitat, physical or biological attributes. Woodside confirmed an assessment was also carried out in Section 6.9.3 of the EP to ensure the PAP was not inconsistent with recovery plans or threat abatement plans.</p>	<p>(2) Woodside has assessed the potential impacts and risks to marine and avian species in sections 6.7 and 6.8 of the EP. Assessment of recovery plans and threat abatement plans is set out in Section 6.9.3 of the EP.</p>
<p>(3)</p>	<p>(3)</p>	<p>(3)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Light emissions from the activities were expected to have potential impacts and risks including behavioural disturbance, injury and mortality to seabirds while the activities were underway..</p>	<p>Woodside assessment: Woodside has considered ACF's claim relating to the potential risks of light emissions and particularly the impact potential on birds. The measures and controls described within this EP address the potential impact from the proposed activities.</p> <p>Woodside response: Woodside confirmed the isolated and remote location of the FPU and related vessels in the Offshore Operational Area, and the intermittent IMMR activity in the Trunkline Operational Area, reduced light impacts to 'no lasting effect'. For all the PAA, the receptor sensitivity was high and thus the impact significance level had been identified as 'slight'. Woodside noted controls in place to reduce impact included IMMR activities within 20km of wedge-tail shearwater rookeries to be avoiding during April where practicable, and implementation of the Woodside Seabird Management Plan.</p>	<p>Woodside has assessed the potential impacts and risks associated with routine light emissions in Section 6.7.3 of the EP.</p>
<p>(4) Acoustic emissions from the activities were expected to have potential impacts and risks on marine species, including cetaceans, turtles, pygmy blue whales, fish and sharks.</p>	<p>(4) Woodside assessment: Woodside has considered ACF's claim relating to the potential risks and impacts of acoustic emissions from the PAP. The measures and controls described within this EP address the potential impact from the proposed activities.</p> <p>Woodside response: Woodside noted the FPU was a moored facility that didn't actively make noise. Machinery noise might be radiated into the underwater environment and other sources of noise included intermittent and infrequent support vessel transit and the once-off noise associated with the installation of the FPU. Due to the open water location of the FPU, and the mobility of fish and their known behaviours, behavioural impacts on cetaceans, fish and sharks were predicted to have no lasting effect, with an impact significance level of Slight.</p>	<p>(4) Potential impacts associated with routine acoustic emissions are assessed in Section 6.7.5 of the EP.</p>
<p>(5) Localised impacts to benthic habitats and communities including displacement and/or permanent loss of epifauna and infauna.</p>	<p>(5) Woodside assessment: Woodside has considered ACF's claim regarding potential risks and impacts to benthic habitats and communities. The measures and controls described within this EP address the potential impact from the proposed activities.</p> <p>Woodside response: Woodside advised the risk assessment in the EP concluded that the scale and magnitude of potential impacts would be limited to the offshore seabed infrastructure and trunkline physical footprint. The impact magnitude for epifauna and infauna was predicted to be Slight, with a Negligible Impact Significance Level. This risk was mitigated through controls in the EP.</p>	<p>(5) Disturbance to the seabed and impacts to benthic habitat and communities is assessed in Section 6.7.2 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(6) Hydrocarbon spill to Ningaloo Coast and Gascoyne Marine Parks.</p>	<p>(6) Woodside assessment: Woodside notes ACF’s feedback regarding potential hydrocarbon spill risks. No hydrocarbon contact above impact thresholds is expected at the Gascoyne Marine Park. Woodside has a well-developed hydrocarbon spill response management framework in place in the highly unlikely event of a spill. Woodside response: Woodside noted the worst-case credible spill scenarios for the EP were highly unlikely loss of marine diesel during a vessel collision at the FPU, in the Montebello MUZ, or at the Commonwealth/State waters boundary. Based on a modelling, in a spill scenario there was a 0.5% chance of entrained diesel at >100ppb contacting Ningaloo Marine Park, but no surface or dissolved hydrocarbon contact above thresholds was predicted. No hydrocarbon contact above impact thresholds would be expected at the Gascoyne Marine Park.</p>	<p>(6) Credible spill scenarios are described in Section 6.8 of the EP. Woodside has addressed oil spill preparedness and response strategy in Appendix H of the EP.</p>
<p>(7) ACF is a relevant person.</p>	<p>(7) Woodside assessment: In accordance with regulation 25 of the Environment Regulations, Woodside has assessed ACF as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside provided ACF with sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, including directly providing consultation information to ACF on 9 August 2023 and subsequent correspondence on 30 August 2023, 5 December 2023, 8 January 2024, 1 February 2024, 7 March 2024, 4 July 2024, 8 October 2024 and 18 October 2024.</p>	<p>(7) Woodside’s assessment of ACF as a relevant person is set out in Appendix F, Table 1.</p>
<p>(8) Statements that the Consultation Information Sheet for the Scarborough Operations EP did not comply with Regulation 25(2) as the information was not sufficient.</p>	<p>(8) Woodside assessment: Woodside has complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. The Consultation Information Sheet contains sufficient information for ACF to have made an informed assessment of the possible consequences of the activity on its functions, interests and activities, as demonstrated by its feedback on 20 December 2023 which included questions related to specific expected risk assessment results. Woodside response: Woodside confirmed the Consultation Information Sheet provided by Woodside on 9 August 2023 set out the relevant activity description as well as a summary of the key risks and impacts</p>	<p>(8) ACF has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	and preliminary management measures. Woodside noted the EP would be made publicly available on NOPSEMA's website upon submission (and later provided the link to ACF) and also noted ACF had been invited to comment on the Scarborough OPP in 2018.	
(9) Assessment of the potential impacts and risks to the environment, including documents which set out the process and results.	(9) Woodside assessment: Woodside has provided ACF with sufficient information on potential impacts and risks to the environment, via the Consultation Information Sheet (in which Table 3 sets out a summary of key risks and/or impacts and preliminary management measures), publicly available EP, and Scarborough OPP, for ACF to make an informed assessment of the possible consequence of the activity on its functions, interests or activities. This is demonstrated by ACF's feedback on 20 December 2023, which included references to the expected risk assessment results for marine discharges and vessel collisions. Woodside response: Woodside advised it had provided ACF with sufficient information, via the Consultation Information Sheet and Scarborough OPP, to allow ACF to make an informed assessment of the possible consequences that the activity may have on its functions, interests or activities. In addition, once the EP was publicly available on the NOPSEMA website, Woodside directed ACF to the sections of the EP where further detailed and comprehensive information regarding potential impacts and risks could be found. Woodside noted it was not reasonable to provide more detailed or technical documents to ACF as it was not necessary for ACF to have those documents in order to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.	(9) Risk assessments for planned and unplanned activities are set out in Sections 6.7 and 6.8 of the EP.
(10) Details of any offsetting regime or CCS being considered.	(10) Woodside assessment: Woodside assesses the feasibility of CCS in the EP and has incorporated this into Section 6.7.6 of the EP. Woodside response: Woodside confirmed abatement measures were assessed in Section 6.7.6 of the EP and that based on feedback, it had included assessment of CCS in the EP. Woodside advised that CCS was currently not a feasible abatement measure for the Scarborough FPU as it would require additional infrastructure, it remained difficult to capture CO2 from the non-concentrated sources on the FPU, and required a suitable reservoir.	(10) Based on feedback, Woodside has included assessment of CCS in Section 6.7.6 of the EP.
(11)	(11)	(11)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Details of surveys undertaken to understand marine flora and fauna present in locations relevant to the EP.</p>	<p>Woodside assessment: Information regarding surveys undertaken to support the Scarborough Project has been publicly available via the Scarborough OPP since 2020. Woodside has used data from a range of sources, including Scarborough specific studies, to understand marine fauna and ecosystems relevant to the PAP.</p> <p>Woodside response: Woodside advised data from sources including marine sediment quality surveys, geophysical surveys, and scientific studies of habitat and benthic communities had been used to understand marine fauna and ecosystems relevant to the PAP. Woodside provided some examples of Scarborough-specific studies and confirmed a description of the existing environment was provided in Section 4 of the EP.</p>	<p>A Description of the Existing Environment is provided in Section 4 of the EP, including Section 4.5 <i>Habitats and Biological Communities</i> and 4.6 <i>Protected Species</i>.</p>
<p>(12) The basis for conclusions regarding the impact of marine discharges on marine fauna.</p>	<p>(12) Woodside assessment: Woodside notes ACF's request for further information on the basis for marine discharge risk ratings. Risk ratings in the EP are consistent with those in the publicly available Scarborough OPP, to which ACF has had access since at least 2020.</p> <p>Woodside response: Woodside advised five marine discharge risk assessments were included in the EP. Each relevant receptor was then considered and a risk rating or impact significance rating assigned. Woodside advised that of the five, all were determined to have an impact of Slight – short-term impact (<1 yr) on species, habitat (but not affecting ecosystem function), physical or biological attributes. Woodside noted the risk ratings were consistent with those from the OPP and primarily driven by the deep-water open-ocean environment with no immediate proximity to sensitive receptors.</p>	<p>(12) Risk assessments for marine discharges are set out in sections 6.7.9 – 6.7.13 of the EP.</p>
<p>(13) The basis for the conclusion that collisions with marine fauna are considered unlikely.</p>	<p>(13) Woodside assessment: Woodside notes ACF's request for further information regarding collision risk for cetaceans. Woodside has drawn on various studies to understand collision risk with cetaceans, coupled with contextual information specific to the PAP.</p> <p>Woodside response: Woodside provided a list of studies used to understand collision risk with cetaceans and advised the information was coupled with contextual information such as the offshore operational area not overlapping with migratory or foraging BIAs, the significantly reduced vessel presence in the trunkline, vessels within the operational areas are likely to be travelling <8 knots unless operating in an emergency, and</p>	<p>(13) Collision risk with marine fauna is assessed in Section 6.8.10 of the EP, <i>Physical Presence (Unplanned): Interactions with Marine Fauna</i>.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	vessels will follow the EPBC Regulations 2000 – Part 8 Division 8.1 which prescribes vessel speeds and distances around cetaceans.	
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim about the adverse impact of the activity to which the EP relates (if any), as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	The measures and controls described within this EP address the potential impact from the proposed activities on ACF's functions, interests or activities.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACF for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to ACF on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information about this activity contained in the OPP, and the initial EP consultation information provided to ACF, Woodside provided ACF with further detailed information which addressed ACF's specific feedback, objections or claims (see information given on 5 December 2023, 8 January 2024, 1 February 2024, 7 March 2024, 4 July 2024, 8 October 2024, 18 October 2024).
- Woodside proactively reminded ACF it could provide feedback on this EP and given ACF's interest in climate-related matters, provided ACF with information on Woodside's Climate Transition Action Plan and 2023 Progress Report (email of 7 March 2024).
- Woodside again proactively reminded ACF it could provide feedback on this EP and proactively provided ACF with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). Woodside also provided specific references within the EP that addresses areas of identified by ACF.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 8 October 2024, Woodside also emailed ACF to confirm it would shortly resubmit the EP for assessment and reminded ACF that Woodside remained opened to receiving feedback.
- In total, excluding the Consultation Information Sheet and publicly available EP, Woodside has provided ACF with a volume of additional information and responses addressing ACF's claims and objections in relation to this EP.
- On 20 December 2023, ACF claimed it had not been provided with sufficient information because the Consultation Information Sheet did not comply with regulation 25(2) of the Environment Regulations as it did not allow ACF to make an informed assessment of the possible consequences of the activity on its functions, interest or activities. Woodside disagrees with this assertion because ACF responded to Woodside's email with informed questions, specific to the activity, including references to expected risk assessment results, indicating the information provided was sufficient to enable ACF to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. ACF shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above. We also note that ACF received a significant amount of information about the Scarborough Project during the Federal Court proceedings it commenced in relation to the Scarborough Project's environmental approvals and OPP.

Reasonable Period

Woodside allowed ACF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ACF advising of consultation as well as when consultation closed for the purposes of preparing the EP (email dated 9 August 2023). This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACF over 4.5 months for consultation.
- During the consultation period and following it, when ACF did not provide a response, Woodside proactively sent follow-up emails to ACF to remind ACF of consultation and timeframes. This was done on numerous occasions (30 August 2023, 5 December 2023, 8 January 2024, 1 February 2024, 7 March 2024, 4 July 2024, 8 October 2024, 18 October 2024).
- In this context, Woodside allowed ACF a reasonable period for consultation in preparation of the EP.
- As has been made clear in consultation emails, Woodside is open to receiving feedback after EP submission and throughout the life of an EP.

Reasonable Opportunity

A reasonable opportunity has been provided because Woodside's consultation was appropriate and adapted to the nature of the interests of ACF:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to ACF because Woodside notes ACF regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity under the EP and also of consultation.
- When no response was received from ACF, Woodside proactively sent ACF a follow-up consultation email on 30 August 2023, followed by a proactive letter on 5 December 2023 which addressed previous topics of interest and feedback received from ACF on the Scarborough Project that was relevant to this EP.
- Woodside consulted ACF in writing and via email which is consistent with the way ACF has engaged in consultation with Woodside. Woodside also provided an alternative method for ACF to provide feedback by offering meetings. In response to Woodside's 5 December 2023 email, ACF advised it wished to meet with Woodside. Woodside responding agreeing to a meeting and requesting dates and availability from ACF. Woodside has reiterated this offer on a number of occasions. However ACF has not responded on dates for a meeting or when Woodside followed up on opportunities to hold a meeting.

- Following publication of the EP on NOPSEMA's website, Woodside proactively provided ACF with correspondence on climate-related matters and directed it to sections of the EP which contain additional information relevant to its interests. This enabled ACF to engage with those specific topics of interest and Woodside gave ACF yet another opportunity to consult on this EP.
- Woodside considers a reasonable opportunity was provided to ACF as evidenced in its exchanges with ACF and in particular as evidenced in ACF's response on 20 December 2023 when it provided feedback, claims and objections.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACF provided feedback or objections or claims about the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from ACF and has assessed the merits of any objection or claim about the adverse impacts of activities to which this EP relates.
 - Based on ACF's feedback, assessed the feasibility of Carbon Capture and Storage in EP Section 6.7.6, *Management and Mitigation*. No new measures were adopted as a result of ACF's feedback. However, as a result of consultation, Woodside has updated its EP to include an assessment of CCS.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

350 Australia (350A)

Context

350A states on its website that 350.org is "one of the world's largest creative activism groups working to build a powerful movement demanding climate change action. We work in almost every country in the world to stop new fossil fuel project and speed up the transition to renewable energy".

350A states on its website that it is a 'growing grassroots movement to end fossil fuels built through leaders forming local groups and running strategic campaigns in their communities'.^{xxvii} In 2021, 350A promoted the #NoNeedForScarboroughGas campaign which was supported by Friends of Australian Rock Art (FARA).^{xxviii} 350A also currently has an active petition calling on people to stop Woodside from sponsoring the Western Australian Symphony Orchestra.^{xxix}

During 2023, Woodside consulted with 350A on other Scarborough-related EPs and consulted with 350A on this EP in September 2023.

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside consulted 350A on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of topics and issues raised by 350A during consultation on those EPs were addressed and have been raised again as part of consultation on this EP and include:
 - The Scarborough development's potential to impact marine wildlife.
 - Access to JASCO acoustic modelling.
 - Impacts from all pollution sources on all potential receptors and information about monitoring and pollution response programs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Carbon emissions associated with the Scarborough Development in next 25 years adding to WA's emissions and accelerating climate change.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed 350A advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 September 2023, 350A sent an email to Woodside (SI Report, reference 22.1):
 - **(1)** Stating 350A was a relevant person.
 - **(2)** Requesting further information on routine acoustic emissions from the FPU and project vessels.
 - **(3)** Requesting further information on routine and non-routine atmospheric and GHG emissions.
- On 6 December 2023, Woodside responded thanking 350A for its email (SI Report, reference 22.2). Woodside stated 350A had been provided with sufficient information. Woodside also advised that consultation in the course of preparing this EP would close on 20 December 2023 and asked if 350A had further feedback or would like to meet. Woodside noted any further feedback received after 20 December 2023 would be accepted and considered as part of ongoing consultation. Woodside also stated:
 - **(1)** Woodside complied with Regulation 11A (now Regulation 25) in relation to the consultation process for this EP.
 - **(2)** The Petroleum Activities Program (PAP) would comprise a number of different acoustic emissions sources, primarily associated with vessel operations and support activities, such as geophysical surveys and other inspection, maintenance, monitoring and repair (IMMR) activities. Some sound will also be associated with the start-up and operations phase of the Floating Production Unit (FPU) and subsea facilities. Sound levels will fluctuate over the course of the PAP. Generally, underwater sound associated with steady state operations will be limited as the FPU is moored and not dynamically positioned. Woodside has undertaken an assessment of routine acoustic emissions, including an assessment of the impacts and risks. Acoustic modelling results and other pertinent information related to modelling completed for the assessment of noise impacts would be presented in the EP. The EP would be made publicly available once submitted to NOPSEMA for assessment. The area over which sound may adversely impact marine species depends upon multiple factors including the extent of sound propagation relative to the location of receptors, and the sensitivity and range of spectral hearing of different species. Based on the implementation of controls, the potential impacts of noise emissions from the activity on cetaceans were likely to be limited to temporary behavioural changes (avoidance) in individuals moving through the Petroleum Activity Area, with predicted noise not considered likely to cause injury effects. The impact assessment in the EP would provide a suite of management actions that would be in place to avoid or minimise potential impacts to relevant threatened fauna, and specifically whales, as a result of the PAP.
 - **(3)** GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
 - There were no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the Floating Production Unit (FPU). Gas would be exported on shore and processed at Pluto Train 2.

- Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant.
- Woodside would implement feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation.
- Woodside would optimise flaring at the FPU to reduce GHG emissions and allow for safe operation of the facility through design measures and a suite of management actions.
- On 6 December 2023, 350A responded to the Woodside email with an out of office reply asking that Woodside forward urgent emails to another email address (SI Report, reference 22.3).
- On 6 December 2023, Woodside forwarded the letter to the new email address as requested (SI Report, reference 22.4).
- On 20 December 2023, 350A emailed Woodside attaching a letter and copying in NOPSEMA (SI Report, reference 22.5), which stated:
 - **(1)** 350A was a relevant person and should be consulted. Woodside must provide sufficient information and a reasonable period for consultation. 350A was also willing to assist Woodside to identify other relevant persons.
 - **(3)** Climate change impacts, including Scope 3 emissions which would result from the Scarborough Project, fell under the scope of indirect consequences that must be assessed.
 - **(4)** The information provided in the Consultation Information Sheet and the response to the letter dated 6 December 2023 were not sufficient. As Woodside had not yet provided sufficient information, further time was required to consider information.
 - **(5)** This EP should not be finalised, submitted to NOPSEMA or assessed until Regulation 25 had been met and Woodside should respond to this letter within two weeks, no later than 1 January 2024.
 - 350A requested Woodside to respond to Attachment A as a minimum to assess effects of this EP. Attachment A included the following feedback, objections/claims/requests for further information:
 - **(3)** Estimates of greenhouse gas and other emissions, including Scope 3 emissions from the Scarborough project. At a minimum, this should include:
 - ❖ Independent assessment of all emissions that would arise from the development, including all emissions sources and scopes (direct and indirect), annually and over the lifetime of the project with evidence of independent verification.
 - ❖ A breakdown of each emissions source, its nature and location, whether it was under the operational control of Woodside, and how it would be reduced or otherwise abated in each year that the project was operational.
 - **(6)** Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE. At a minimum this should include:
 - ❖ Independent evaluation of the impacts of the Scarborough Project on global temperature scenarios, global GHG concentrations in the atmosphere, and globally agreed temperature and fossil fuel phase down goals, including what incremental warming was anticipated to occur as a result of the direct and indirect emissions from the Scarborough project.
 - ❖ Independent evaluation of the alignment and compatibility of the Scarborough Project with global 1.5 degree compatible energy scenarios, including what global 1.5 degree scenarios were considered by Woodside to be aligned with the Scarborough project, and which global energy scenarios were not considered to be aligned with the project.
 - ❖ Where global energy scenarios relied on carbon removals from the atmosphere, what was the volume of carbon removals that was assumed, how and where and by what means Woodside expected this to occur, and what (if any) carbon removals would be implemented by Woodside.
 - ❖ What fossil fuel phase down scenarios were considered by Woodside to be compatible with the Scarborough project.

- ❖ What effect the Scarborough Project would have on GHG concentrations in the atmosphere, including how long CO₂ from direct and indirect emissions associated with the Scarborough Project would remain in the atmosphere, and what effect this would have on global concentrations of GHG over this period.
- ❖ Analysis of the GHG concentrations that would be in the atmosphere, and climate effects that would be felt as a result of the global energy scenario that the Scarborough Project was consistent with. For example, if global demand for fossil gas was maintained and increased as anticipated by Woodside in commercial decisions to proceed with the Scarborough project, what GHG concentrations and temperature outcomes would result from this global energy scenario on an annual and decade basis for the life of the project and its impacts.
- **(7)** Independent assessment of the climate change impacts of the Scarborough Project on the Australian environment: At a minimum, this should include:
 - ❖ Analysis of sensitive environmental receptors in Australia and internationally that would be impacted by global climate change, including the Great Barrier Reef, Ningaloo Reef, other Matters of National Environmental Significance (MNES) and other cultural and environmental values.
 - ❖ What the anticipated effects of the Scarborough Project would be on these receptors, both as a result of emissions from the Scarborough Project itself, and from the international energy scenario that the Scarborough Project is compatible with.
- **(8)** Assessment of the climate change impacts of the Scarborough Project on communities that were impacted by climate change: At a minimum, this should include:
 - ❖ Evidence of consultation that had been undertaken by Woodside pursuant to the Environment Regulations to understand the particular interests and activities of communities affected by climate change, including but not limited to: island nations and communities, indigenous communities, farmers, young people, people with special needs and other groups. This should include evidence of what attempts at consultation with such communities had been made by Woodside, a summary of responses received by Woodside to date, and Woodside's responses to issues raised.
 - ❖ Evidence of Woodside's own analysis of impacts of the Scarborough Project and this EP on communities that were affected by climate change, including those listed above, including information on what communities had been considered, what baseline information had been used by Woodside regarding climate impacts to these communities, and what impacts were anticipated by Woodside, both as a result of the Scarborough Project itself, and from the international energy and global gas demand scenario that the Scarborough Project was compatible with.
- **(9)** Independent analysis of mitigation options and commitments. At a minimum, this should include:
 - ❖ The impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions, including a decarbonisation plan for the Pluto Hub as described in the letter from Woodside to 350 Australia dated 6 December 2023. This should include all technical studies, consultation, and other data that was relied upon or used in the development of these documents, including details of what (if any) independent review had been undertaken, including the outcomes of such independent review.
 - ❖ An independent analysis of all available mitigation options that had been considered by Woodside in relation to Scope 1, 2, and 3 emissions that would result from the project.
 - ❖ Detailed information on what (if any) mitigation of emissions were expected to occur at each stage or facility in the extraction, processing, transport and end use of gas from the Scarborough field. This should include information on whether this mitigation effort is voluntary commitment from Woodside or another party or resulting from an enforceable regulatory requirement. If the latter, describe the regulatory arrangements and jurisdiction as applicable.
 - ❖ Independent analysis to demonstrate that mitigation efforts at each stage and scope (including Scope 1,2 and 3 emissions) result in emissions reduced to As Low As Reasonably Practicable (ALARP)
 - ❖ Evidence to demonstrate why any potential mitigation efforts that would not be undertaken by Woodside or third parties on behalf of Woodside had not been considered reasonably practicable, including detailed independent evaluation of the cost impacts and operational consequences of each available mitigation option.
 - ❖ Identification of any third parties which Woodside relied upon in delivering mitigation actions for direct and indirect emissions from the project, and evidence of contractual obligations or other binding agreements to demonstrate the mitigation efforts would be delivered.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Independent assessment of abatement options for the Scarborough Project according to a mitigation hierarchy which prioritised avoidance and at source mitigation before offsets and other forms of abatement, with justification for Woodside's chosen mitigation commitments over the life of the project.
- ❖ Identification of all offsets that would be used by Woodside in meeting abatement goals and commitments, including the type, method, provider and jurisdiction where the offsets would occur, what registry would be used, what standards of accountability and accreditation would be applied and, how the offsets would be retired and what measures would be put in place to ensure that offsets would be guaranteed in the event of unplanned events.
- ❖ What ongoing public reporting and verification would be provided by Woodside of emissions and abatement from the project, including direct and indirect emissions from all sources (including unplanned emissions).
- **(10)** Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources. At a minimum, this should include:
 - ❖ Evidence of what other energy sources were expected to be displaced, both in current market and for those forecast over the life of the project, including any displacement of renewable energy, fossil fuels, or other energy sources that will result from the Scarborough Project and the net effect of such displacement on global emissions.
 - ❖ Evidence of where this displacement was expected to occur, when and how.
 - ❖ Evidence of contractual or other arrangements that were, or would be in place, to ensure that this displacement occurred as predicted by Woodside.
 - ❖ Independently verifiable evidence to demonstrate that any displacement of more emissions intensive fuels resulting from the Scarborough project, and any resulting absolute and net emissions abatement would be additional to what would otherwise had occurred if the Scarborough Project did not proceed.
 - ❖ Evidence of third party verification (such as internationally recognised or domestic carbon credits) that would be provided by Woodside or other parties to verify claims of abatement achieved through net fuel displacement, including additionality and verifiability of such claims.
- **(11)** Independent assessment of how the Scarborough Project and associated mitigation efforts met the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines. At a minimum, this should include:
 - ❖ How Woodside's corporate emissions reduction targets and those for the Scarborough Project were science-based, and covered all-scopes of emissions, and took into consideration Woodside's historical emissions.
 - ❖ How the mitigation efforts for the Scarborough Project would deliver an immediate an absolute reduction in emissions from current levels.
 - ❖ How the Scarborough Project supported a global and local phase out of fossil fuels.
 - ❖ How the abatement efforts proposed by Woodside included targets for methane-specific emissions, including what these targets were and how they would be achieved.
 - ❖ Evidence of Woodside's lobbying and advocacy efforts and how these were aligned with global temperature scenarios.
- **(12)** Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect GHG emissions from the project would be achieved. At a minimum, this should include:
 - ❖ Details of contractual, regulatory, or other measures that demonstrate that both Woodside and third-party emissions reduction through fuel displacement, offsets or other abatement would be delivered according to international standards for carbon accounting, and for all scopes of direct and indirect emissions.
- **(13)** Other documents, including documents relied upon by Woodside, and the draft of this EP. At a minimum, this should include:
 - ❖ All studies, information and other material commissioned or relied upon by Woodside in assessing the GHG emissions and climate impacts from the project, including mitigation options, climate impacts, alignment with global temperature goals, and any other issues mentioned above.
 - ❖ A copy of the draft of this EP.

Ongoing engagement:

- On 27 December 2023, Woodside responded to 350A's 20 December 2023 letter (SI Report, reference 22.6), as follows:
 - (4, 5) Based on Woodside's provision of the Consultation Information Sheet on 9 August 2023, which provided a summary of the activity description, the receiving environment, impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, and Woodside's substantive feedback to 350A's requests on 6 December 2023, 350A has been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Additionally:
 - (4, 5) Woodside extended the consultation period from an initial four-week period ending on 11 September 2023, to 4.5 months, ending on 20 December 2023. Woodside did not receive any response from 350A until 20 December 2023, the day consultation closed. Woodside then addressed feedback, claims, objections and additional information provided by 350A in its response on 27 December 2023.
 - As requested, Woodside responded to 350A before 1 January 2024. The responses, however received out of office replies from 350A stating they would be on leave until 2 January 2024 and 15 January 2024 respectively.
 - (3) GHG emissions relevant to the Petroleum Activities Program, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
 - (6) Woodside assesses emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report were assured by GHD.
 - Woodside aims to thrive through the energy transition by building a low cost, lower carbon, profitable, resilient and diversified portfolio. For Woodside, a lower carbon portfolio was one from which the net equity Scope 1 and 2 GHG emissions, which included the use of offsets, were being reduced towards targets, and into which new energy products and lower carbon services were planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's Climate Policy set out the principles that it believes would assist achieve this aim.
 - The climate strategy has two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.

- Woodside's net equity emissions reduction targets have an aspiration of net zero by 2050 or sooner. The target is for net equity Scope 1 and 2 GHG emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.
 - Woodside has set near- and medium-term targets to reduce net equity Scope 1 and 2 GHG emissions and had three ways to achieve these targets: avoiding emissions through design; reducing them through efficient operations; and offsetting the remainder.
 - Avoiding and reducing emissions is Woodside's priority for meeting its net equity emissions reduction targets. However, offsetting emissions allows Woodside flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also be offset using carbon credits to achieve net zero aspiration.
 - Woodside is developing a portfolio of carbon credits to contribute to the achievement of its net equity Scope 1 and 2 GHG emissions targets. These also have the potential to be bundled with product sales if customer demand was present, at a scale which was able to be supported.
- (7) In accordance with regulation 13(2) and 13(3) of the Environment Regulations, the EP would describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential. This included consideration of Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
- The Scarborough Offshore Project Proposal (OPP) – publicly available on the NOPSEMA website – defined a level of Significant Impact for receptors, informed by the MNES Significant impact guidelines. Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.
- (8) Woodside consulted relevant persons in the course of preparing an EP in accordance with regulation 25 of the Environment Regulations. Consultation was designed to ensure that relevant persons were identified and given sufficient information and a reasonable period to allow them to make an informed assessment of the possible consequences of the proposed activity on them and, to ensure that Woodside could consider and adopt appropriate measures in response to the matters raised by relevant persons. Consistent with regulation 3 of the Environment Regulations, consultation also supported Woodside's objective to ensure that the environmental impacts and risks of the activity are reduced to ALARP and an acceptable level.
- Woodside's consultation with relevant persons would be summarised and included in the EP which would be made public on the NOPSEMA website.
 - The FPU Safety Case and facility design take into consideration/ assesses impacts to worker health and safety from facility operations including emissions and discharges. Woodside considers there are no credible impacts to populations onshore from planned emissions/discharges from the Scarborough FPU at the FPU location.
 - Indirect emissions from Scarborough FPU operations, such as processing through the Pluto LNG Plant, had been assessed for potential to impact on human health and remain within recognised criteria (i.e. World Health Organisation and National Environment Protection Measure limits).
- (9) Woodside would report GHG emissions as required by relevant reporting regulations including Australian National Greenhouse and Energy Reporting (NGER).
- (12) For Scarborough project-wide impacts and controls, 350A could refer to the OPP as Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, so as to maintain Acceptable levels.
- (1, 4) The Consultation Information Sheet provided to 350A on 9 August 2023 provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program (PAP) and proposed mitigation and management measures.
- Woodside does not provide drafts of an EP while in development or under assessment for a number of reasons including because of the potential for content to change. Restricting access to publicly available versions enables stakeholders to access and comment on the same information and removes potential for confusion. The EP would be made publicly available on NOPSEMA's website once it has been submitted and was under assessment.

- In response, on 27 December 2023, Woodside received two out of office email replies from 350A stating 350A personnel were on leave until 2 January 2024 and 15 January 2024 (SI Report, references 22.7 and 22.8).
- On 7 March 2024, Woodside proactively sent 350A an email stating that, as 350A had shown an interest in climate-related topics and matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 22.9). The email included links to the CTAP and the ASX Announcement and:
 - **(1, 4, 5)** It re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - **(1, 4, 5)** Finally, it stated Woodside was available to meet with 350A to discuss this EP should 350A be interested.
- On 7 March 2023, Woodside received an automatic reply from 350A advising that the recipient of Woodside's email no longer worked for the organisation and provided an alternate contact address at 350A (SI Report, reference 22.10).
- On 8 March 2023, Woodside forwarded its correspondence from 7 March 2024 to the supplied 350A address from the automatic reply on the same day (SI Report, reference 22.11).
- **(4, 5)** On 28 March 2024, Woodside received a response from 350A to the Pluto Facility Operations EP consultation email (sent to 350A on 27 February 2024) stating it had not been consulted adequately on the Scarborough Operations EP (SI Report, reference 22.12).
- **(4, 5)** On 2 April 2024, Woodside responded to 350A seeking clarification on its email dated 28 March 2023 (SI Report, reference 22.13).
- **(4, 5)** On 10 May 2024, Woodside sent a second email seeking clarification on its email dated 28 March 2023 (SI Report, reference 22.14).
- On 4 July 2024, Woodside emailed 350A and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 22.15). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with 350A over the next month. Based on 350A's previous feedback on climate topics, Woodside also included a table of specific topics which 350A might be interested in, and where to find that topic in the EP, including:
 - **(3)** Further information regarding estimates of emissions associated with the Scarborough Project could be found in Section 6.7.6.
 - **(7)** Contextual information about potential climate change impacts could be found in Section 6.7.6 and included consideration of climate science including the IPCC's Sixth Assessment Report.
 - **(9)** Further information about mitigation options could be found in Section 6.7.6 under subheading *Management and Mitigation*.
- On 8 October 2024, Woodside emailed 350A to thank it for its feedback and for engaging in consultation with Woodside on this EP (SI Report, reference 22.16). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by 350A. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - **(3)** Acknowledged provision of information pertaining to Scope 3 emissions from the Scarborough Project and confirmed that as demonstrated in Section 6.7.6 of the EP, the total estimated Scope 3 emissions associated with the project was approximately 870 MtCO₂-e. Further, Woodside noted:
 - Independent assessment of emissions sources, scopes and calculations had not been undertaken and was not warranted. As described in the EP, Woodside applied estimation techniques aligned with the National Greenhouse and Energy Reporting Determination and Federal Safeguard Mechanism.

- A breakdown of emissions sources extended over 11 pages in the EP however, by way of summary, the total estimated GHG emissions associated with the project, including Source 1 and 3, were approximately 880 MtCO₂-e over the life of the activity. Woodside had considered a range of actions to mitigate GHG emissions, which were presented in Section 6.7.6, as well as details of ongoing work through multiple project phases to design and operate out direct GHG emissions.
- (6) Woodside disagreed with 350A's position regarding independent verification including because Woodside employs internal specialists on climate matters. Woodside acknowledged climate science and that climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one activity or project including the Scarborough Project. Woodside noted its view that LNG could have a role in the energy transition, however advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were treated as additive. This amount was de minimis. Woodside noted emissions from the project fit within Australia's NDC and the NDC of customer nations, and that through compliance with the SGM framework, the project would be aligned with Australia's implementation of the Paris Agreement.
- (7) Acknowledged that climate change was impacting Australian and global receptors but disagreed with 350A's position regarding independent assessment including because Woodside employs internal environmental climate and science specialists. Woodside noted that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the Industrial Revolution, and that the EP included a contextual evaluation of these impacts drawing on reputable sources including the IPCC Sixth Assessment Report. The IPCC AR6-WGII concluded that one of the nine key climate risks for the Australasian region was "loss and degradation of coral reefs" due to ocean warming and marine heatwaves.
- (8) Advised that Woodside consulted relevant persons whose functions, interests or activities may be affected by the activities. Since climate change impacts were associated with net global atmospheric GHG concentrations, and not with the activity described in the EP, being potentially affected by climate change was not considered an appropriate test for inclusion of people as a relevant person. Woodside took a broad consultation approach for this EP. Woodside further noted that AR6-WGII contained information about projected impacts to health and wellbeing for the Australasian region. Woodside confirmed it did not consider that impacts on communities could be attributed to GHG emissions associated with the project.
- (9) Confirmed that Woodside agreed that GHG emissions associated with the Scarborough project should be minimised and managed to ALARP and acceptable levels but did not agree with 350A's assertion that this should be done independently. Third-party support had been used to identify potential opportunities for abatement, but it was more appropriate to leverage the understanding of the project held by internal personnel. Woodside also advised:
 - Woodside would not provide technical evaluations and studies which included commercially sensitive or confidential information and were not necessary for 350A to make an informed assessment of the possible consequences of the activity on 350A's functions, interests or activities. Access to the Pluto Hub Decarbonisation Plan was also not required by 350A.
 - Lists of emissions abatement opportunities and features implemented were included for Scope 1 and Scope 3 GHG emissions in Section 6.7.6 of the EP. The incorporation (or not) of particular abatement options were reflected in the GHG emissions estimates provided.
 - The description of emissions abatement opportunities in the EP included when aspects were applicable and which were required under regulatory frameworks.
 - Independent analysis was not required to determine whether GHG emissions were reduced to ALARP.
 - Contractual or binding agreements between Woodside and third parties were confidential and would not be shared. Avoiding and reducing GHG emissions were Woodside's priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology carbonisation plans were matured and implemented.
 - It had established a carbon business in 2018 to develop a portfolio of carbon credits and skills and expertise in managing carbon credit integrity.
 - It would report domestic GHG emissions associated with the project as required under NGERS.

- **(10)** Disagreed with 350A’s position on independent modelling. Woodside’s view was that LNG could have a role in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes, however, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the Scarborough project were treated as hypothetically additive was considered in the latest version of the EP. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels. Compliance with Australian carbon frameworks including the Federal SGM was consistent with Australia’s implementation of the Paris Agreement, as set out in section 6.7.6.
- **(11)** Disagreed with 350A’s position and noted it was aware of the UN High Level Expert Group on Net Zero Integrity Matters and the ISO Net Zero Guidelines as well as a range of forums, public dialogues and reports regarding greenwashing. Woodside recently participated in a Senate inquiry into greenwashing and its Hansard transcript was available. Woodside takes care with statements, especially in regards to climate change, so that they are accurate. Woodside further noted:
 - Its corporate emission reduction targets were included in the EP as relevant to Scope 3 emissions only.
 - The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global and local phase out of fossil fuels. As such, neither were proposed in the EP.
 - It had incorporated methane-specific GHG abatement measures.
 - Its advocacy aimed to support the goals of the Paris Agreement. Woodside provided a link to its Climate Policy and a list of government submissions and reports made by Woodside.
- **(12)** Confirmed the Scarborough OPP was approved by NOPSEMA in March 2020. The Operations EP demonstrated how these OPP requirements were implemented for the specific activity. The EPOs in the EP demonstrated an equal or better environment outcome than those in the OPP. Further, Woodside noted it would not share contractual detail due to confidentiality obligations, and that regulatory and other measures which managed GHG emissions associated with the project were comprehensively described in Section 6.7.6 of the EP.
- **(13)** Advised there were no requirements for Woodside to make studies and internal information publicly available. It was not reasonable for Woodside to provide studies, information or other material including because this was not necessary for 350A to assess the possible consequences of the activity on its functions, interests or activities. The Operations EP was publicly available on NOPSEMA’s website.
- **(2)** Noted that based on modelling of sound propagation loss under the worst-case noise scenario during FPU hook-up and installation, predicted noise levels would drop below behavioural response thresholds within 43.4km. Temporary and permanent threshold shifts might occur much closer to the noise source but it was highly unlikely cetaceans would stay within these ranges of the FPU facility for 24 hours. It was possible pygmy blue whales may deviate slightly from their migration route but could continue without any likely biologically significant impacts. Noise emissions from FPU installation, operation and IMMR activities along the Trunkline route were all rated as having No Lasting Effect to Marine Mammals with a Slight Impact Significance Level.
- On 8 October 2024, Woodside received an Out of Office reply advising one of the email recipients no longer worked at 350A (SI Report, reference 22.17).
- On 9 October 2024, Woodside forwarded its 8 October 2024 correspondence to an additional 350A email address as recommended in the Out of Office reply (SI Report, reference 22.18).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) 350A is a relevant person.	(1)	(1) Woodside’s assessment of 350A as a relevant person is set out in Appendix F, Table 1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside assessment: In accordance with regulation 25 of the Environment Regulations, Woodside assessed 350A as a relevant person for this EP based on its functions, interests or activities.</p> <p>Woodside response: Woodside confirmed it complied with regulation 25 of the Environment Regulations and had provided 350A with sufficient information and a reasonable period to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p>	
<p>(2) Requested further information on routine acoustic emissions from the FPU and project vessels, and likely impacts on whales.</p>	<p>(2) Woodside assessment: Woodside has provided 350A with sufficient information regarding routine acoustic emissions, via the Consultation Information Sheet, publicly available EP, and direct responses to 350A, for 350A to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside response: Woodside advised that under a worst-case noise scenario during FPU hook-up and installation, predicted noise levels would drop below behavioural response thresholds within 43.4km. Temporary and permanent threshold shifts might occur much closer to the noise source but it was highly unlikely cetaceans would stay within these ranges of the FPU facility for 24 hours. Noise emissions from FPU installation, operation and IMMR activities along the Trunkline route were all rated as having No Lasting Effect to Marine Mammals with a Slight Impact Significance Level.</p>	<p>(2) Routine acoustic emissions are assessed in Sections 6.7.4 and 6.7.5 of the EP.</p>
<p>(3) Requested estimates of GHG emissions and other emissions, including Scope 3 GHG emissions from the Scarborough Project, including independent assessment of all emissions, and a breakdown of each emissions source and abatement measures.</p>	<p>(3) Woodside assessment: Woodside has provided 350A with sufficient information regarding sources and volumes of emissions associated with the EP as well as abatement measures, via the Consultation Information Sheet, publicly available EP and responses directly to 350A, for 350A to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside response: Woodside provided estimates of GHG emissions associated with the project, including Scope 3 emissions, which were further set out in the EP, but noted independent assessment had not been undertaken and was not warranted as Woodside applied estimation techniques aligned with the National Greenhouse and Energy Reporting Determination and Federal SGM. Woodside noted it had considered a range of actions to mitigate GHG emissions and</p>	<p>(3) Routine and non-routine atmospheric and GHG emissions associated with the activities are assessed in Sections 6.7.6 and 6.7.7 of the EP.</p>

	provided some examples while advising where further details were available in the EP.	
(4) Woodside has not provided sufficient information, either in its Consultation Information Sheet or its responses.	(4) Woodside assessment: Woodside has provided 350A with sufficient information, via the Consultation Information Sheet, Scarborough OPP, publicly available EP, and direct responses to 350A, to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside response: Woodside summarised its correspondence with 350A regarding this EP, which started with an initial email including a Consultation Information Sheet on 9 August 2023. The sheet provided a summary of impacts and risks associated with the PAP and proposed mitigation and management measures. Woodside extended the consultation period from an initial four-week period to 4.5 months and provided substantive responses to 350A's feedback, claims and objections on 6 December 2023 and 27 December 2023. Woodside provided further information to 350A regarding this EP on 7 March 2024, 4 July 2024 and 8 October 2024.	(4) 350A has been provided sufficient information and a reasonable period for consultation, as described in Section 5.4 of the EP. Woodside engages in ongoing consultation as described in Section 7.10.5 of the EP.
(5) The EP should not be finalised, submitted to NOPSEMA or assessed until regulation 25 has been met.	(5) Woodside assessment: Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations for this EP. Woodside response: Woodside advised it complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside also noted it engaged in ongoing consultation throughout the life of an EP and was open to receiving feedback and discussing issues raised in the relation to the EP.	(5) Woodside's consultation methodology is described in Section 5 of the EP.
(6) Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals.	(6) Woodside assessment: Woodside does not agree with 350A's position regarding independent verification. Woodside employs internal specialists who stay abreast of developments in the evolving science of climate change and support assessment of projects against climate frameworks. In the latest version of the EP, a hypothetical assumption where GHG emissions associated with the Scarborough project are treated as additive is considered. This scenario is not expected to eventuate.	(6) Section 6.7.6 of the EP discusses the Scarborough Project in the context of gas demand in climate-related scenarios.

	<p>Woodside response: Woodside acknowledged that climate science understood climate change to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough Project. However, to facilitate a comparison against carbon budgets, Woodside confirmed it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive, and the amount was de minimis. Woodside noted emissions fit within Australia's NDC and would comply with the Federal SGM.</p>	
<p>(7) Independent assessment of the climate change impacts of the Scarborough Project on the Australian environment.</p>	<p>(7) Woodside assessment: Woodside acknowledges that climate science suggests that climate change, caused by the net cumulative global concentration of GHG in the atmosphere, is impacting Australian receptors. It does not agree with 350A's position regarding independent assessment.</p> <p>Woodside response: Woodside noted that climate science suggests that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the industrial revolution. Woodside included in the EP a contextual evaluation of climate change impacts which encompassed environmental receptors including coral reefs.</p>	<p>(7) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>
<p>(8) Assessment of the climate change impacts of the Scarborough Project on communities that are impacted by climate change.</p>	<p>(8) Woodside assessment: Woodside consults relevant persons whose functions, interests or activities may be affected by the activities to be carried out under the EP. Since climate science suggests that climate change impacts are associated with net global atmospheric GHG concentrations, being affected by climate change is not considered an appropriate test for inclusion as a relevant person.</p> <p>Woodside response: Woodside advised it took a broad and proactive approach to consultation for this EP to raise public awareness of the activity and the opportunity for consultation. Woodside noted the AR6-WGII contained information about projected impacts to health and wellbeing for the Australasian region. Woodside does not consider that impacts on communities could be attributed to GHG emissions associated with the project.</p>	<p>(8) Woodside's record of consultation with relevant persons is described in Appendix F, Table 2 of the EP.</p>
(9)	(9)	(9)

<p>Independent analysis of mitigation options and commitments.</p>	<p>Woodside assessment: Woodside acknowledges the legislative regime which requires emissions associated with the Scarborough Project to be minimised and managed to ALARP and acceptable levels but does not agree with 350A's assertion that this should be done independently.</p> <p>Woodside response: Woodside advised that 350A does not require technical evaluations, studies or access to the Pluto Decarbonisation Plan to assess the possible consequences of the activity on its functions, interests or activities. Lists of emissions abatement opportunities and features implemented were included in the EP, including whether they were required under regulatory frameworks or voluntary. Woodside also noted contractual or binding agreements between Woodside and third parties would not be shared, and avoiding and reducing GHG emissions were Woodside's priorities, however offsetting emissions allowed Woodside to, amongst other things, reduce net emissions while asset and technology decarbonisation plans were matured and implemented. Woodside also provided details on its carbon business, established in 2018, and confirmed it would report domestic GHG emissions as required under NGERs.</p>	<p>Routine and non-routine atmospheric and GHG emissions associated with the activities, and options analysis of reduction/abatement measures (in the form of ALARP demonstration) are assessed in 6.7.6 and 6.7.7 of the EP.</p>
<p>(10) Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources.</p>	<p>(10) Woodside assessment: Woodside does not agree with 350A's position on independent modelling. Woodside has used a hypothetical assumption in the EP where GHG emissions associated with the project are hypothetically treated as additive. This scenario is not expected to eventuate.</p> <p>Woodside response: Woodside confirmed its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. However, to facilitate a comparison against carbon budgets, Woodside advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels.</p>	<p>(10) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.</p>
<p>(11) Independent assessment of how the Scarborough project and associated mitigation efforts meets the requirements of the UN High Level Expert Group on</p>	<p>(11) Woodside assessment: Woodside does not agree with 350A's position. Woodside takes care with its statements, especially in relation</p>	<p>(11) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines.</p>	<p>to climate change, to ensure statements are accurate and not misleading.</p> <p>Woodside response: Woodside confirmed it was aware of a range of forums, public dialogues and reports regarding greenwashing. Woodside advised it had recently participated in the Australian Senate Inquiry into greenwashing and as per its statement at the Inquiry, took care so that statements were accurate and not misleading. Woodside further noted its corporate emissions reduction targets were included in the EP. The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global or local phase out of fossil fuels, thus neither was proposed in the EP. Woodside noted it had incorporated methane-specific GHG abatement measures, and its advocacy aimed to support the goals of the Paris Agreement.</p>	
<p>(12) Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect GHG emissions from the project would be achieved</p>	<p>(12) Woodside assessment: The Operations EP demonstrates how OPP requirements are implemented for the specific activity. Woodside response: Woodside confirmed the Scarborough OPP was approved by NOPSEMA in 2020. EPOs for the EP were mapped against those from the OPP in Table 6-2 of the EP. Woodside noted it would not share contractual detail of third-party emissions reduction measures due to confidentiality obligations, but that regulatory and other measures to manage GHG emissions were described in Section 6.7.6 of the EP. Woodside also applied GHG accounting frameworks from NGERs as applicable to Scope 1 emissions in Australia and the Greenhouse Gas Protocol Corporate Value Chain (Scope 3) Standard for Scope 3 emissions.</p>	<p>(12) A comparison of Environmental Protection Outcomes (EPOs) between the OPP and the EP is provided in the EP Section 6.3.</p>
<p>(13) Other documents relied upon by Woodside, including studies, information, and a draft EP.</p>	<p>(13) Woodside assessment: There are no requirements for Woodside to make studies and internal information publicly available. Woodside response: Woodside noted it was not reasonable for Woodside to provide all studies or other material as this was not necessary for 350A to make an informed assessment of the possible consequences of the activity. The GHG estimates provided were a more appropriate metric for 350A. Woodside also noted the EP was publicly available on NOPSEMA's website.</p>	<p>(13) Not required.</p>

<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures and controls described within this EP address the potential impact from the proposed activities on 350A's functions, interests or activities.</p>
---	--	---

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with 350A for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given 350A sufficient information to allow 350A to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to 350A on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information provided in the Consultation Information Sheet for this EP, information about this activity is contained in the OPP which has been publicly available since 2018 and information relevant to this EP was provided to 350A on previous consultations. Woodside also gave 350A further detailed information which addressed 350A's specific topics of interest and feedback, objections or claims related to this EP (see information given on 6 December 2023, 27 December 2023, 7 March 2024, 4 July 2024, 8 October 2024).
- Given 350A's interest in climate-related matters, Woodside also proactively gave 350A information on Woodside's Climate Transition Action Plan and 2023 Progress report (email of 7 March 2024). Woodside also proactively reminded 350A about the ability to provide feedback on this EP.
- In addition, Woodside proactively provided 350A with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). In its email to 350A, Woodside also provided specific references within the EP that pointed to climate-related topics and interests that 350A had previously sought information on. Woodside also reminded 350A again that it could provide feedback on this EP.
- On 8 October 2024, Woodside also emailed 350A to confirm it would shortly resubmit the EP for assessment and reminded 350A that Woodside remained open to receiving feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In total, excluding the Consultation Information Sheet and publicly available EP, Woodside had provided 350A with sufficient information and responses providing information on topics of interest to 350A as well as addressing 350A's feedback, claims and objections in relation to this EP.
- On 20 December 2023, 350A claimed it had not been provided with sufficient information. Woodside disagrees with this assertion including because of the volume of information provided to 350A and because 350A responded to Woodside's consultation information with questions specific to the activity indicating the information provided was sufficient to enable 350A to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. 350A shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above.

Reasonable Period

Woodside allowed 350A a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to 350A advising of consultation as well as when consultation closed for purposes of the preparation of the EP (email dated 9 August 2023). This provided 350A with a reasonable period in which to consult and enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed 350A over 4.5 months for consultation.
- During the consultation period and following it, Woodside proactively sent follow-up emails to 350A to remind 350A of consultation and timeframes on numerous occasions (6 December 2023, 27 December 2023, 7 March 2024, 4 July 2024, 8 October 2024).
- In this context, Woodside allowed 350A a reasonable period for consultation in preparation of the EP.
- On 20 December 2023, 350A claimed it had not been provided with a reasonable period of time to provide feedback. Woodside disagrees with this assertion as Woodside commenced consultation on 9 August 2023 and 350A responded with feedback. On 6 December provided additional information to 350A and advised it had extended the consultation period to 20 December 2023. The consultation requirement under Regulation 25 cannot be one that is incapable of being complied with within a reasonable time (Tipakalippa Full Court para 136).
- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with 350A is appropriate and adapted to the nature of interests of 350A:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to 350A because Woodside notes 350A regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity and consultation.
- Woodside also provided 350A with a link to NOPSEMA's various information sheets and brochures assisting to provide 350A with context around the consultation process (9 August 2023).
- As per previous consultation methods, Woodside emailed 350A to engage in consultation and also provided an alternative method for 350A to provide feedback by offering meetings. Woodside followed 350A's instructions when the contact person from 350A changed. Woodside's offer to meet with 350A was not taken up by 350A. Consultation was therefore engaged in via email which aligns with 350A's style of consultation.
- Following publication of the EP on NOPSEMA's website, Woodside proactively provided 350A with correspondence on climate-related matters and directed it to sections of the EP which contain additional information relevant to what Woodside understands to be topics of interest to 350A.

- Woodside considers a reasonable opportunity was provided to 350A because Woodside engaged in consultation in the style 350A has historically engaged in (via email) and also as evidenced in its exchanges with 350A and in particular as evidenced in 350A's responses on 11 September 2023 and 20 December 2023 where it provided feedback, claims and objections.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- 350A provided feedback or claims or objections regarding the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from 350A and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Made no changes or inclusions to the EP as a result of consultation with 350A because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

The Wilderness Society (TWS)

Context

TWS' states that it 'believes in protecting, promoting and restoring wilderness and natural processes across Australia for the survival and ongoing evolution of life on Earth and from the corridors of Canberra to the streets of your town, we're taking on transnational corporations, rogue operators, and the armies of lobbyists and politicians who defend them'.^{xxx}

In mid-2021, TWS called on the Government to make it clear to the market that it will not accept transfer of BHP to Woodside based on Woodside's decommissioning record.^{xxxi}

In 2018, TWS was invited but did not participate in consultation on the Scarborough Energy Project OPP.

In late 2022, Woodside met with TWS and briefed it on the broader Scarborough Energy Project and Scarborough-related EPs.

Woodside reached out to TWS three times in relation to this EP, including a proactive letter outlining past issues raised by TWS, and has continued to offer to meet, however TWS has not responded over the past 13 months.

This and the historic consultation effort is important because it provides context to demonstrate that Woodside's consultation is appropriate and adapted to the nature of interests of TWS.

Historical Engagement

2018 - 2020

- TWS has been aware of the Scarborough Project (including operations) for around 6 years. In 2018, TWS was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
- The activities under this EP were described in the OPP. TWS chose not to take up the opportunity to participate in consultation.

2022- 2023

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In October 2022, Woodside provided a face-to-face and online briefing to TWS on the on the Scarborough D&C, SITI, Subsea and Seismic EPs as well as the broader Scarborough Project. During the briefing and in follow-up correspondence, TWS raised several issues and topics which are also relevant to this EP including:
 - Impacts and risks to marine fauna populations and their migration patterns and controls in place to mitigate impacts from acoustic surveillance and marine fauna observers.
 - Details regarding the Scarborough trunkline.
 - Environmental impacts and risks.
 - How Woodside engaged with Traditional Owners on its EPs.
 - Carbon offsets, biodiversity and native vegetation.
 - An assertion that Woodside employees being financially incentivised to achieve acceptance of EPs.
 - Continuous consideration of cumulative impacts occurred for the proposed activities under each of the Scarborough EPs and the pipeline and subsea infrastructure was designed to be removed from the seabed (the subject of a future decommissioning EP and approval).
 - How has Woodside addressed the risk of real or perceived bias in relation to funding, support or influence of scientific studies, for example those cited as undertaken by the AIMS and UWA?

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed TWS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, because it had not received a response from TWS, Woodside sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of specific feedback from TWS, Woodside sent a letter via email to TWS (Record of Consultation, reference 2.19) which stated:
 - Woodside met with TWS in October 2022 and briefed it on the Scarborough Project and related EPs. Since then, TWS and Woodside have engaged in correspondence on all four EPs.
 - In a letter sent on 17 October 2022, Woodside noted TWS's more general interest in carbon offsets, biodiversity and native vegetation, and although outside the scope of the Scarborough Project consultation, Woodside welcomed the opportunity to meet with TWS to discuss the work Woodside was undertaking in this space. TWS did not take up this offer.
 - Woodside had provided TWS with Consultation Information Sheets on 9 August 2023 and 30 August 2023 and provided a link to this.
 - Woodside advised that consultation in the course of preparing this EP would close on 20 December 2023 and asked if TWS had feedback and/or would like to meet.
 - In the absence of specific feedback from TWS on this EP, Woodside had reviewed feedback from TWS on the D&C, Subsea, SITI and Seismic EPs which may be relevant to this EP as follows:
 - **(1)** Work undertaken to understand marine fauna populations and their migration patterns in relation to Woodside's proposed activities and controls in place to mitigate potential impacts.
 - ❖ **(1)** Woodside engaged environmental consultants to provide information related to the existing environment including migratory patterns and behaviours associated with marine mammals to inform assessment of potential risks and impacts on marine fauna as a result of activities described in the EP. Woodside demonstrated reduction of all impacts to ALARP and acceptable levels and implements controls to achieve this.
 - ❖ **(1)** Woodside undertook research with scientific partners to understand impacts on migratory species including Woodside's partnership with AIMS.
 - **(2)** The route of the Scarborough trunkline, including the position, depth and length.
 - ❖ **(2)** The route for the Scarborough trunkline could be found in the publicly available SITI EP (on NOPSEMA's website).
 - **(3)** Woodside's engagement with Traditional Owners on relevant EPs.
 - ❖ **(3)** To identify Traditional Custodian groups or individuals, Woodside:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Used existing systems of recognition to identify First Nations groups who overlapped or were coastally adjacent to the EMBA.
- Notified and invited consultation with First Nations people through their nominated representative corporation or the Native Title representative body.
- Requested the nominated representative body forward notifications and invitations to consult to their members (individual communal rights holders).
- Requested advice around which other First Nations groups or individuals should be consulted.
- Advertised widely to invite self-identification and consultation by First Nations groups and/or individuals.
- **(4)** Woodside's current methodology and application regarding offsets (carbon and biodiversity), in response to proposed activities.
 - ❖ **(4)** Woodside's Climate Strategy, an integral part of the company strategy, had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in products and services Woodside's customers needed as it secured its energy needs and reduced its emissions.
 - ❖ **(4)** Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets by avoiding GHG emissions through the way it designed its assets; reduced GHG emissions through the way it operated its assets; originated and acquired carbon credits to use as offsets for the remainder.
 - ❖ **(4)** Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also likely be offset using carbon credits in order to achieve net zero aspiration.
- **(5)** Were direct financial incentives (e.g. bonuses) provided to employees following EP acceptance? Does Woodside link corporate KPIs regarding EPs to employee or contractor remuneration?
 - ❖ **(5)** Direct financial incentives (e.g. bonuses) were not provided to employees following EP acceptance. There were no linkage to remuneration or bonus schemes for achievement of EP acceptance and no corporate or business KPI suite linked the progress/finalisation of EPs to employee or contractor remuneration.
- **(6)** Confirmation that the development of a cumulative/holistic impact assessment covered the full breadth of development, production and decommissioning activities.
 - ❖ **(6)** The PAP for this EP covered the hook-up, commissioning and ongoing operations of the Scarborough FPU and Trunkline. TWS had previously been consulted on the other Scarborough EPs which covered the construction of the Scarborough infrastructure and which included assessment of risks associated with concurrent operations and cumulative impact.
 - ❖ **(6)** Decommissioning activities were not expected to be required within the life of this EP and would be subject to a future EP.
- **(7)** Outline of how dissenting scientific or technical expertise to the proposal was identified, actively sought and considered.
 - ❖ **(7)** Woodside previously advised the importance of scientific understanding and knowledge to its environmental management approach and confirmed that input from internal and external experts was part of the established EP process. This included consideration of recently published peer-reviewed data and studies to inform understanding of risk and impact assessment, and consideration of current best practice controls within the ALARP framework.
- With still no response or feedback received from TWS, on 8 October 2024, Woodside emailed TWS advising it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by TWS in regards to the Scarborough Project (SI Report, reference 66.1). Woodside demonstrated an openness to consult with TWS when it reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - **(1)** Advised it presented information on protected species in Section 4.6 of the EP, and the data was gathered from government databases and publicly available peer-reviewed journal articles and reputable research papers. Sections 6.7 and 6.8 of the EP contained impact assessments for marine fauna as well as the controls in place to limit impacts.
 - **(3)** Confirmed that avoiding and reducing GHG emissions were Woodside's priorities, and this was principally achieved through pursuing opportunities in the design and operation of its assets. Offsetting emissions allowed Woodside flexibility to reduce net emissions while asset and technology decarbonisation plans were matured and implemented. With

regards to biodiversity offset, the activity would not have any planned impacts at a population or species level and therefore would not impact biodiversity, nor require biodiversity offsets.		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Information on marine fauna populations and their migration patterns in relation to Woodside's proposed activities and controls in place to mitigate potential impacts.	(1) Woodside assessment: Woodside has completed work to understand marine fauna migration patterns, using data gathered from government databases and peer reviewed journal articles. TWS has been provided sufficient information regarding marine fauna populations and mitigation measures via the Consultation Information Sheet, publicly available EP and direct responses to TWS, for TWS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside response: Woodside engaged qualified environmental consultants to provide information related to the existing environment and used data from government and other peer reviewed sources to inform its assessment of potential risks and impacts on marine fauna as a result of activities described in the Scarborough EPs. Woodside also undertook research with scientific partners to understand impacts on migratory species including Woodside's partnership with AIMS.	(1) Risk assessments related to marine fauna are set out in sections 6.7 and 6.8 of the EP.
(2) Route of the Scarborough trunkline, including the position, depth and length.	(2) Woodside assessment: Sufficient information regarding the Scarborough trunkline has been provided to TWS via the publicly available SITI EP and in direct response to TWS during a consultation meeting on the Scarborough Project. Woodside response: Woodside previously provided information to TWS regarding the route of the Scarborough trunkline, including the position, depth and length, and also advised that this information could be found in the publicly available SITI EP on NOPSEMA's website.	(2) Not required.
(3) Woodside's engagement with Traditional Owners.	(3) Woodside assessment: Woodside has consulted with relevant Traditional Owners and their representative groups on relevant EPs. Woodside consults with relevant First Nations groups guided by its consultation assessment of relevance methodology for all activities.	(3) Woodside's approach to consultation with Traditional Owners is described in Section 5 of the EP. A summary of consultation with First Nations groups is provided in Appendix F, Table 2 of the EP.

	Woodside response: Woodside confirmed it had consulted with relevant Traditional Owners and their representative groups including archaeological and ethnographic surveys. Woodside detailed its consultation process to identify and engage with Traditional Owners groups or individuals.	
(4) Woodside's methodology and application regarding offsets (carbon and biodiversity).	(4) Woodside assessment: Avoiding and reducing GHG emissions are Woodside's priority, however offsetting emissions allows Woodside flexibility to reduce net emissions while asset and technology decarbonisation plans are matured and implemented. Woodside response: Woodside confirmed avoiding and reducing GHG emissions were its priority and this was principally achieved through pursuing opportunities in the design and operation of assets. Offsetting emissions allowed Woodside to reduce net emissions while asset and technology decarbonisation plans were matured and implemented, and in the longer term, where emissions were hard-to-abate, residual emissions would likely be offset using carbon credits. Woodside recognised that assessing integrity of carbon credits and managing a diverse portfolio was important and further information was available in Woodside's Climate Transition Action Plan and 2023 Progress Report. Woodside advised the activity would not have any planned impacts at a population or species level and therefore would not impact biodiversity.	(4) GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.
(5) Linkage of any remuneration or business unit KPIs to the progression of the EP or the commencement of related activities.	(5) Woodside assessment: Financial incentives (e.g. bonuses) are not provided to employees in order to incentivise EP acceptance at all costs. No corporate or business KPIs are linked to the progress/finalisation of EPs. Woodside response: Woodside confirmed there was no linkage to remuneration or bonus schemes for achievement of EP acceptance and also confirmed no corporate or business unit KPI suite links the progress/finalisation of EPs to employee or contractor remuneration.	(5) Not required.
(6) Does development of a cumulative/holistic impact assessment cover the full breadth of development, production and decommissioning activities.	(6) Woodside assessment: Cumulative impact from the Scarborough Energy Project as a whole is assessed and approved in the Scarborough OPP. Woodside has assessed the potential impacts and risks associated with the PAP for this EP. While decommissioning	(6) Woodside has assessed the potential impacts and risks associated with the PAP in Section 6 of the EP. Planning for decommissioning is described in Section 7.3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>activities are not within the 5-year period covered by this EP, planning and management for decommissioning is covered in the EP.</p> <p>Woodside response: Woodside noted that per its previous responses, the Scarborough OPP considered cumulative impact from the project. For this EP, the PAP covered the hook-up, commissioning and ongoing operations of the Scarborough FPU and Trunkline. TWS has previously been consulted on the other Scarborough EPs which covered the construction of the Scarborough infrastructure. The EPs included assessment of risks associated with concurrent operations and cumulative impact. Decommissioning activities were not expected to be required within the life of this EP and would be subject to a future EP.</p>	
<p>(7) How is dissenting scientific or technical expertise to the proposal identified, actively sought and considered?</p>	<p>(7) Woodside assessment: Woodside has an established process to inform and guide its environmental management process that includes consideration of published data and best practice controls within the ALARP framework.</p> <p>Woodside response: Woodside noted the importance of scientific understanding and knowledge to its environmental management approach and confirmed that input from internal and external experts was an integral part of Woodside's established EP process. This included consideration of published peer-reviewed data and studies to inform understanding of risk and impact assessment, and consideration of current best practice controls within the ALARP framework.</p>	<p>(7) Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of any objection or claim about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures and controls described within this EP address the potential impact from the proposed activities on TWS's functions, interests or activities.</p>
<p>Summary Report – Consultation Complete</p>		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with TWS for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given TWS sufficient information to allow TWS to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of TWS because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to TWS on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure: Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information about this activity contained in the OPP and the initial EP consultation information provided to TWS on 9 August 2023, Woodside proactively provided TWS with further detailed information which addressed feedback, objections or claims previously raised by TWS in relation to the Scarborough Project that were relevant to this EP (see information given on 5 December 2023 and 8 October 2024).
- Woodside also emailed TWS to confirm it would shortly resubmit the EP for assessment and reminded TWS that Woodside remained open to receiving feedback (email of 8 October 2024).

Reasonable Period

Woodside has allowed TWS a reasonable period for consultation in the preparation of this EP because:

- A consultation process and period were advised in the initial correspondence to TWS including when consultation would close for purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed TWS over 4.5 months for consultation.
- During the consultation period and following it, Woodside proactively sent follow-up emails to TWS to remind TWS of consultation and timeframes on numerous occasions (30 August 2023, 5 December 2023, 8 October 2024).
- TWS has not responded or replied to Woodside's correspondence.
- In this context, Woodside allowed TWS a reasonable period for consultation in preparation of the EP.
- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with TWS is appropriate and adapted to the nature of interests of TWS:

- Woodside published 8 advertisements in national, state and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to TWS because Woodside notes TWS regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside also provided TWS with a link to NOPSEMA's various information sheets and brochures assisting to provide TWS with context around the consultation process (email of 9 August 2023).
- Woodside consulted TWS in the same way that TWS corresponded with Woodside, ie by email. Woodside has also provided an alternative method for TWS to provide feedback by offering meetings. This offer to meet for this EP was not taken up by TWS.
- In the absence of feedback, Woodside sent a follow-up consultation email on 30 August 2023, followed by a proactive letter on 5 December 2023 which addressed previous feedback received from TWS on other EPs that were relevant to this EP.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were required as TWS did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in the EP address the potential impact from the proposed activity on TWS's functions, interests or activities.

Say No to Scarborough Gas (SNTSG)

Context

SNTSG is the name of a campaign established by the Conservation Council of Western Australia to protest against Woodside's Scarborough Project and Pluto LNG expansion.^{xxxii}

SNTSG's last social post on Facebook was in August 2022 and we understand that campaign is either no longer active or is paused.^{xxxiii} CCWA's newer campaign is entitled Go Beyond Gas (see CCWA for further information).

Woodside has previously consulted SNTSG in relation to previous Woodside Scarborough EPs. Woodside used the same method of consultation and contact details for consultation with SNTSG and emailed the same contact addresses three times in relation to this EP. This included providing a proactive letter outlining past topics of interest issues raised by SNTSG and responses and an offer to meet, however SNTSG has not engaged or responded over the past 13 months.

This background is important as it provides context confirming that consultation attempts with SNTSG have been appropriate and adapted to the nature of interests of SNTSG and while it engaged in consultation on previous EPs, it has elected not to consult on this EP.

Historical Engagement:

2022- 2023

- In October 2022, Woodside provided a face-to-face briefing to SNTSG on the Scarborough D&C, SITI, Subsea and Seismic EPs as well as the broader Scarborough Project. During the briefing and in follow-up correspondence, SNTSG expressed an interest in topics which are relevant to this EP including:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Information on which communities and groups would be consulted and the process for incorporating feedback and re-releasing the EPs. SNTSG asked if Woodside would publish its redrafted EPs and how local groups had been made aware of consultation.
- Consistency of EPs with existing conservation plans or ecological principles including the intergenerational principle and the Blue Whale Conservation Management Plan/threatened species recovery plans.
- The independence of participants in the environmental risk and impact identification workshop mentioned in the EP and the meaning / determinants of ALARP.
- Emissions from the Scarborough Project and Scope 1, 2 and 3 emissions. SNTSG requested further information and figures on lifetime emissions of the project, emissions forecasting, consistency with conservation management plans and species recovery plans, Woodside's response to various external reports and sources, carbon capture storage (CCS) and carbon offset planning, emissions projections and Scope 3 emissions.
- The introduction of artificial lights which had an effect on ecological processes and asked about the impacts of these lights on ecological processes, seabirds, why routine light emissions were only estimated to have an impact for a year and whether Woodside would commit to the National Light Pollutions Guidelines for Wildlife.
- In terms of post-extraction, the methods for long-term monitoring of environmental health, including post-production and decommissioning.
- Ecosystem impacts and whether climate change would affect the interactions between marine life and the disturbance and pollution caused by the project and asked where the effects of this had been considered. What ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? And what grounds do Woodside propose for not suspending work during pygmy blue whale migration season?

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed SNTSG advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, given Woodside had not received any response from SNTSG, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of specific feedback from SNTSG, Woodside proactively sent another letter via email (Record of Consultation, reference 2.16) which stated the following:
 - Woodside met with SNTSG in October 2022 and briefed it on the Scarborough Project and related EPs. Since then, SNTSG and Woodside had engaged in correspondence on four EPs.
 - Woodside had provided SNTSG with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Consultation Information Sheet.
 - Woodside advised that consultation for this EP closed on 20 December 2023 and asked if SNTSG had feedback and/or would like to meet.
 - The 5 December 2023, letter also reviewed past feedback from SNTSG and topics of interest on the Scarborough D&C, SITI, Seismic and Subsea EPs and provided assessment and response as follows:
 - **(1)** As to SNTSG's questions on the nature and process of Woodside's community consultation, its thoroughness in nature, and whether it was genuine in intent, or purely a box-ticking exercise.
 - ❖ **(1)** Consultation requirements set out in regulation 11A (now regulation 25) of the Environment Regulations had been complied with in relation to the consultation process for the EPs which Woodside detailed during its consultation meeting with SNTSG on 13 October 2022. Woodside's consultation process had continued to evolve based on ongoing Regulator feedback and feedback received during consultation.

- ❖ (1) Where feedback was received which informed Woodside of measures that it may take to mitigate potential environmental impacts from the PAP, Woodside incorporated this feedback into its EP, and where appropriate, introduced additional controls to ensure risks were managed to ALARP and an acceptable level.
- (2) As to SNTSG's query regarding consistency with existing conservation plans and ecological principles. The EPs are consistent with the principles of ecologically sustainable development (ESD). And the Blue Whale Conservation Management Plan and threatened species recovery plans.
 - ❖ (2) The activities would be carried out in a manner consistent with the principles of ESD (as defined in Section 3A of the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)).
 - ❖ (2) The activities were not inconsistent with recovery plans or threat abatement plans. Woodside confirmed that the EP would include demonstration of acceptability and provide assessment of relevant activities against the Blue Whale Conservation Management Plan, including relevant EPOs and Controls.
- (3) As to SNTSG's query around the independence of participants in environmental risk and impact identification workshop (ENVID).
 - ❖ (3) An ENVID was undertaken to identify potential risks and impacts to inform the EP. Participants were from varied backgrounds, knowledgeable and experienced, and included external environmental consultants with understanding of all topics relevant to the PAP.
- (4, 5, 6, 7, 8, 9) As to SNTSG's queries regarding emissions and whether the EP considered the large-scale Scope 1, 2 and 3 emissions and global warming, gas leakage, flaring, GHG emissions, UN stating 'investing in new fossil fuels infrastructure is moral and economic madness', IEA comments that no new oil and natural gas fields were required, CCS project inadequacies, credibility issues around carbon offset programs, protection of coral reefs, and catastrophic climate outcomes.
 - ❖ (4) GHG emissions, including sources and volumes, would be presented and assessed in the EP and estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).
 - ❖ (5) The EP would assess both direct and indirect impacts and risks associated with the activities, having regard to the nature and scale of the proposed activities. GHG emissions of carbon dioxide, methane and nitrous oxide and total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - ❖ (6) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - ❖ (7) An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken and included development of a decarbonisation plan for the Pluto Hub.
 - ❖ (8, 9) Woodside had in place a Climate Strategy which was an integral part of the company strategy. The strategy had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - ❖ (8, 9) Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways: 1. Avoiding GHG emissions through the way it designs its assets; 2. Reducing GHG emissions through the way it operates its assets; 3. Originating and acquiring carbon credits to use as offsets for the remainder.
 - ❖ (8, 9) Avoiding and reducing emissions were Woodside's priorities for meeting the net equity emissions reduction targets, however, offsetting emissions would allow Woodside more flexibility to meet targets, while asset and technology decarbonisation plans were matured and implemented.
- (10) SNTSG's query around lighting impacts on ecological processes in the upper ocean such as vertical migration of plankton, seabirds and marine turtle hatchlings.

- ❖ (10) Routine light emissions associated with the activity would be considered in the EP and would include assessment of lighting on marine ecosystem receptors and species including seabirds and marine turtles. The EP would demonstrate impacts from lighting would be reduced to ALARP and provided demonstration of acceptability.
- (11) SNTSG's query around post extraction, what methods for long-term monitoring of environmental health in the area were in place; what potential existed for the re-introduction of contaminants into the environment; would a good practice measure of conducting environmental monitoring of the seabed before and after the activities be implemented; what was the likelihood of disturbed species recolonising affected areas.
 - ❖ (11) The EP would provide an assessment of discharges from the Floating Production Unit (FPU) including wastewater streams. Woodside would implement controls which demonstrated that impacts and risks from potential contaminants entering the marine environment were ALARP and acceptable.
 - ❖ (11) Woodside proactively planned for decommissioning including the development of the Scarborough Decommissioning Strategy. Decommissioning activity was not part of this activity and would be subject to future EPs.
- (12) SNTSG questions as to climate change and interactions between marine life and the disturbance and pollution caused by the project including where the effects of climate change and subsequent ocean changes such as higher water temperatures increased the toxicity of petroleum hydrocarbons, expansion of oxygen minimum zones and further oxygen depletion, and ocean acidification. Also, which ecological parameters were used to assess impacts on species, populations, assemblages and ecosystems and which ecological baselines were used for these assessments. The process behind the deep-water environment survey and from this, which species were most likely to suffer losses. What assessments were done on microbial communities and processes and on what grounds does Woodside propose for not suspending work during pygmy blue whale migration season.
 - ❖ (12) Emissions and discharges including from atmospheric and greenhouse gases, as well as discharges of commingled produced water and cooling water streams would be assessed in the EP. This included an evaluation of all receptors that may be impacted from these.
 - ❖ (12) Potential impacts on pygmy blue whales would be assessed throughout the EP and impacts and risks controlled and reduced to ALARP and acceptable levels.
 - ❖ (12) In the course of preparing an EP, Woodside engaged suitably qualified environmental consultants and experts to inform what ecological parameters were required to be considered to inform potential risks and impacts from activities. Additionally, Woodside had extensive experience working in the offshore environment and had developed a comprehensive database of information related to the existing environment. Woodside drew on this experience when evaluating aspects relating to the risks and impacts of the activity and in developing appropriate control measures to mitigate impacts to environmental receptors.
- With still no response or feedback received from SNTSG, on 8 October 2024, Woodside once again proactively emailed SNTSG advising it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by SNTSG in regard to the Scarborough Project (SI Report, reference 64.1). Woodside demonstrated an openness to consult with SNTSG when it reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - (1) Advised it took a broad and proactive tiered consultation approach over an extended period of at least four and a half months for this EP. The consultation approach was advertised widely to raise public awareness of the consultation opportunity and to enable self-identification. It included two social media campaigns and advertising in national, state, regional and Indigenous newspapers. Consultation was also extended at the request of some relevant and non-relevant persons.
 - (2) Acknowledged SNTSG's interest in conservation plans and ecological principles, specifically the intergenerational principle which was used, along with other principles of Ecological Sustainable Development (ESD), to define Acceptable limits for identified impacts and risks in the OPP. The principles of ESD are reflected in the EPOs set in the OPP which were then cascaded to the Scarborough EPs. In the Operations EP, this is summarised in section 6.3 and Table 6-2. Consistency with the principles of ESD, MNES and Recovery Plans and Threat Abatement Plans is assessed in section 6.9 of the EP (publicly available), including the Blue Whale Conservation Management Plan (ref. Table 6-46 and Table 6-48).

- (4) Acknowledged that emissions associated with the Scarborough project should be assessed in the EP. A breakdown of emissions sources extended over 11 pages in the EP however the total estimated GHG emissions associated with the project, including Source 1 and 3, were approximately 880 MtCO₂-e over the life of the activity. Woodside further advised:
 - (5) 'Gas leakage' and flaring - the Scarborough FPU was designed to have no continuous operational flaring. In the unlikely event flares were extinguished or unavailable, hydrocarbon gas discharged via the flare system may initially not be combusted during the period required to purge the flare and re-establish flare ignition which could result in short term low-rate release of methane.
 - (6) Climate related scenarios and fossil fuel investment – the EP discussed the Scarborough Project in the context of gas demand in climate related scenarios. A range of pathways which limit global warming to either 1.5°C or 2°C have been published. Woodside noted that even in the Net Zero Emissions Scenario, investment in oil and gas development does not cease. The IEA estimates the need for an average \$365 billion of upstream oil and gas investment every year until 2030, and \$171 billion every year thereafter to 2050 is required in the NZE Scenario. There are a range of climate related scenarios which limit global warming to 1.5°C or 2°C with predicted gas supply that will not be met with current supply, or even with investment in existing and approved projects. These are set out in Section 4.2 and Section 4.3 in Woodside's Climate Transition Action Plan and 2023 Progress Report (CTAP).
 - (7) Carbon Capture and Storage (CCS) – is not currently in place for offshore activities or onshore facilities processing Scarborough through Scarborough gas processing such as leveraging the Angel CCS project.
 - (8) Carbon offsets - Avoiding and reducing GHG emissions are Woodside's priority and offsetting emissions allows Woodside to reduce net emissions while asset and technology carbonisation plans are matured and implemented. Where emissions are hard-to-abate, residual emissions would be offset using carbon credits in order to achieve our emission reduction requirements, supported by the Australian Government's Nationally Determined Contribution (NDC) and National Greenhouse and Energy Reporting Scheme (NGERS) framework.
 - (9) Potential impacts of climate change – Woodside acknowledged that climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere however, changes in global atmospheric GHG concentration cannot be attributed to any one activity or one project, including the Scarborough Project, as they are the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution. Woodside noted its view that LNG could have a role in the energy transition and advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive. This amount was de minimis. Woodside noted emissions from the project fitted within Australia's NDC and the NDC of customer nations, and that through compliance with the SGM framework, the project would be aligned with Australia's implementation of the Paris Agreement.
- (10) Impacts from Routine Light emissions associated with the activity are assessed in the EP and included seabirds, turtles, fish, sharks and rays as well as krill and plankton, which may aggregate around light sources and result in temporary behavioural changes of whale sharks. Impact to fish from artificial light emissions would be negligible. For turtles, seabirds and migratory shorebirds, impact from light emissions was determined as slight.
- (11) The EP provided an assessment of discharges from the FPU including wastewater streams and relating to comingled produced water and seawater return discharges and the monitoring framework associated with these. Woodside' has controls in place and risks from potential contaminants entering the marine environment were managed to ALARP and acceptable.
 - The EP detailed Woodside's Decommissioning Framework. Decommissioning activities were not covered under this EP and would be subject to future approvals.
 - Regarding recolonisation of benthic communities post activity, Woodside explained that at ~900-1000m deep, the offshore Operational Area is characterised by a soft-bottom seafloor with sparse marine life due to the lack of light. Woodside recognises the positive impact that artificial habitat such as the Trunkline can have on benthic communities.
- (12) Woodside reiterated that changes in global atmospheric GHG concentration cannot be attributed to any one activity or project.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> ▪ Regarding work during pygmy blue whale migration season(s), impact assessments relating to noise had determined this to be ALARP and acceptable due to the distance of the Offshore Operational Area from the pygmy blue whale Migration BIA, infrequent and short duration of IMMR activities along the Trunkline Operational Area, the noise profile of the FPU minimised by it being moored and not dynamically positioned, and the short duration of FPU installation activities. • On 16 October 2024, after receiving advice that Woodside's email to SNTSG of 8 October 2024 was undeliverable, Woodside resent the email and attachment to an alternative email address for SNTSG (SI Report, 64.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Questions related to the nature and process of Woodside's community consultation.</p>	<p>(1) Woodside assessment: Woodside has complied with regulation 25 of the Environment Regulations for this EP in terms of community consultation. Woodside response: Woodside took a broad and proactive tiered consultation approach over an extended period of at least four and a half months for this EP. The consultation approach was advertised widely to raise awareness and enable self-identification. It included two social media campaigns and advertising in national, state, regional and Indigenous newspapers. Consultation was also extended at the request of some relevant and non-relevant persons.</p>	<p>(1) Woodside's consultation process is outlined in Section 5 of the EP and is in accordance with regulation 25 of the Environment Regulations. Please also refer to 'Consultation Approach' in Appendix F of the EP.</p>
<p>(2) The previous EPs are not consistent with the principles of ecologically sustainable development (ESD), specifically the 'intergenerational principle'. How do these plans meet these principles? How is the plan consistent with the Blue Whale Conservation Management Plan and threatened species recovery plans?</p>	<p>(2) Woodside assessment: The activity is not inconsistent with relevant recovery plans or threat abatement plans. Woodside response: The intergenerational principle, along with the other principles of ESD, were used to define Acceptable limits for identified impacts and risks in the OPP. Consistency with the principles of ESD, MNES and Recovery Plans and Threat Abatement Plans is assessed in the EP (publicly available), including the Blue Whale Conservation Management Plan.</p>	<p>(2) Woodside's assessment with the relevant principles of ESD is described in Section 2.3.6 of the EP. A comparison of EPOs in the EP and the OPP are summarised in section 6.3. Consistency with the principles of ESD, MNES and Recovery Plans and Threat Abatement Plans is assessed in section 6.9 of the EP, including the Blue Whale Conservation Management Plan (Table 6-47 and Table 6-49).</p>
<p>(3) Question relating to the independence of participants in environmental risk and impact identification workshop (ENVID).</p>	<p>(3) Woodside assessment: Woodside does not agree - the ENVID workshop was undertaken with independent subject matter experts from various backgrounds.</p>	<p>(3) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: The participants at the ENVID workshop (undertaken to identify potential risks and impacts to inform preparation of this EP) were from a multi-disciplinary background with relevant knowledge and experience and included external environmental consultants supporting the EP development with experience across the topics relevant to the activity for this EP.</p>	
<p>(4) Question related to GHG emissions caused by the Scarborough Project, including Scope 1, 2 and 3. Emissions cannot be ignored. Further questions related to emissions included:</p> <ul style="list-style-type: none"> • global warming, 	<p>(4) Woodside assessment: GHG emissions are assessed in the EP. Woodside does not accept that the Scarborough project will contribute to the exacerbation of climate change impacts in Western Australia. Woodside has provided SNTSG with sufficient information regarding sources and volumes of emissions associated with the EP as well as abatement measures, via the Consultation Information Sheet, publicly available EP and responses directly to SNTSG, for SNTSG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside response: Woodside advised the EP assessed both direct and indirect impacts and risks associated with the activity and a breakdown of emissions sources associated with the project, including Scope 3 emissions, are set out in the EP. The total estimated GHG emissions associated with the project, including Source 1 and 3, were approximately 880 MtCO₂-e over the life of the activity.</p>	<p>(4) GHG emissions and indirect emissions are considered in Section 6.7.6 and 6.7.7 of the EP. Section 6.7.6 discusses the Scarborough Project in the context of gas demand in climate related scenarios.</p>
<p>(5)</p> <ul style="list-style-type: none"> • gas leakage, flaring, 	<p>(5) Woodside assessment: Woodside flares hydrocarbons as required, to maintain the safe and efficient operation of facilities. Woodside response: Woodside advised the Scarborough FPU was designed to have no continuous operational flaring. In the unlikely event flares were extinguished or unavailable, hydrocarbon gas discharged via the flare system may initially not be combusted during the period required to purge the flare and re-establish flare ignition which could result in short term low-rate release of methane.</p>	<p>(5) Flaring is discussed in the EP in Section 6 Routine Atmospheric Emissions: Offshore, and Indirect Emissions from Gas Processing Onshore</p>
<p>(6)</p> <ul style="list-style-type: none"> • greenhouse gas emissions, UN stating 'investing in new fossil fuels infrastructure is moral and economic madness', IEA comment 	<p>(6) Woodside assessment: The EP discusses the Scarborough Project in the context of gas demand in climate related scenarios. Woodside response: Woodside advised the EP considers the Scarborough project in the context of gas demand in climate related scenarios. A range of</p>	<p>(6) Section 6.7.6 of the EP considers Routine and Non-Routine Greenhouse Gas Emissions and discusses the Scarborough Project in the context of gas demand in climate related scenarios.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>that no new oil and natural gas fields are required,</p>	<p>pathways which limit global warming to either 1.5°C or 2°C have been published. Even in the Net Zero Emissions Scenario, investment in oil and gas development does not cease.</p> <p>The IEA estimates the need for an average \$365 billion of upstream oil and gas investment every year until 2030, and \$171 billion every year thereafter to 2050 is required in the NZE Scenario.</p> <p>Figure 6-7 in the EP depicts a range of climate related scenarios which limit global warming to 1.5°C or 2°C with predicted gas supply that will not be met with current supply, or even with investment in existing and approved projects.</p> <p>Sections 4.2 and 4.3 of Woodside’s Climate Transition Action Plan and 2023 Progress Report also sets these out.</p>	
<p>(7)</p> <ul style="list-style-type: none"> CCS project inadequacies, credibility issues around carbon offset programs, protection of coral reefs, and catastrophic climate outcomes. 	<p>(7)</p> <p>Woodside assessment: CCS is not currently in place for offshore activities or onshore facilities processing Scarborough gas.</p> <p>Woodside response: Woodside advised CCS technology is not currently in place for offshore activities or onshore facilities processing Scarborough gas, however Woodside is conducting CCS feasibility studies to address onshore emissions generated through Scarborough gas processing.</p> <p>Woodside assessed the feasibility of CCS in the EP.</p>	<p>(7)</p> <p>Based on feedback, Woodside has included assessment of CCS in Section 6.7.6 of the EP.</p>
<p>(8)</p> <ul style="list-style-type: none"> credibility issues around carbon offset programs, 	<p>(8)</p> <p>Woodside assessment: Avoiding and reducing GHG emissions are Woodside’s priority. Offsetting emissions allows a reduction of net emissions, while asset and technology decarbonisation plans are matured and implemented.</p> <p>Woodside response: Woodside advised avoiding and reducing GHG emissions were Woodside’s priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology carbonisation plans were matured and implemented. Where emissions are hard-to-abate, residual emissions would be offset using carbon credits in order to achieve our emission reduction requirements, supported by the Australian Government’s Nationally Determined Contribution (NDC) and National Greenhouse and Energy Reporting Scheme (NGERS) framework.</p>	<p>(8)</p> <p>Information regarding carbon offsets is described in Section 6.7.6 under subheading <i>Management and Abatement</i> of the EP.</p>
<p>(9)</p>	<p>(9)</p>	<p>(9)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> protection of coral reefs, and catastrophic climate outcomes (potential impacts of climate change). 	<p>Woodside assessment: Woodside acknowledges climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough Project.</p> <p>Woodside response: Woodside acknowledged that climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere however, changes in global atmospheric GHG concentration cannot be attributed to any one activity or one project, including the Scarborough Project.</p> <p>Woodside noted its view that LNG could have a role in the energy transition, however advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were treated as hypothetically additive. This amount was de minimis. Woodside noted emissions from the project fit within Australia's NDC and the NDC of customer nations, and that through compliance with the SGM framework, the project would be aligned with Australia's implementation of the Paris Agreement.</p>	<p>GHG emissions and indirect emissions are considered in Section 6.7.6 and 6.7.7 of the EP.</p>
<p>(10) Lighting: Impact on ecological processes in the upper ocean such as vertical migration of plankton, seabirds, and marine turtle hatchlings.</p>	<p>(10) Woodside assessment: Woodside has assessed impacts of lighting in the EP. Woodside response: Routine light emissions associated with the PAP are considered in the EP and include assessment of lighting on marine ecosystem receptors and species including seabirds and marine turtles. The EP demonstrates impacts from lighting will be reduced to ALARP and will provide demonstration of acceptability.</p>	<p>(10) Woodside has assessed the potential impacts and risks associated with routine light emissions in Section 6.7.3 of the EP.</p>
<p>(11) Post extraction: What methods for long-term monitoring of environmental health in the area are in place, including post-production and decommissioning? What potential exists for the re-introduction of contaminants into the environment? Will a good practice measure of conducting environmental monitoring of the seabed before and after the activities be implemented?</p>	<p>(11) Woodside assessment: Management of decommissioning is a step in the project life cycle and is addressed in the EP. Decommissioning activities would be subject to future approvals. Woodside response: Woodside advised the EP provides an assessment of discharges from the FPU including wastewater streams and controls will be implemented so that impacts and risks from potential contaminants entering the marine environment are managed to ALARP and acceptable levels. The EP details Woodside's Decommissioning Framework. While equipment will be designed, installed and maintained to enable decommissioning at the end of field life, actual decommissioning activities are not covered under this EP and will be subject to future approvals.</p>	<p>(11) See Sections 6.7.9 – 6.13 in relation to Routine and Non-routine Discharges: Planning for decommissioning is described in Section 7.3 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>What are the likelihoods of disturbed species recolonising affected areas, particularly around the base of the cuttings pile?</p>		
<p>(12) Ecosystem impacts:</p> <ul style="list-style-type: none"> • Would climate change affect interactions between marine life and the disturbance and pollution caused by the project and have the effects of this been considered? • What ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? • What grounds does Woodside propose for not suspending work during pygmy blue whale migration season? 	<p>(12) Woodside assessment: Woodside has assessed ecosystem impacts and risks in the EP. Woodside has engaged experts and consultants and draws on its own expertise and experience to inform the required ecological parameters. Woodside response: Climate change cannot be attributed to any one activity or project. GHGs are assessed in the EP including an evaluation of receptors that may be impacted from these. Impacts on pygmy blue whales have been assessed throughout the EP and controls are in place to manage impacts and risks to ALARP and acceptable levels. Woodside engages suitably qualified experts to assist with an assessment of what ecological parameters are required to be considered to inform potential risks and impacts. Woodside draws on experience when assessing risks and impacts and develops appropriate control measures to mitigate impacts to environmental receptors.</p>	<p>(12) GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP. The approach used to assess potential impacts is described in Section 2.3 of the EP. Potential impacts to marine fauna are assessed in Section 6 of the EP. Acoustic impacts (including on pygmy blue whales) are assessed in Section 6.7.4 and Section 6.7.5.</p>
<p>No feedback, objections or claims received for this EP despite follow-up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures described within this EP address SNTSG's claims or objections about the adverse impact of the activity. No additional measures or controls have been included from consultation with SNTSG.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with SNTSG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given SNTSG sufficient information to allow SNTSG to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of SNTSG because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation Information Sheet has been publicly available on the Woodside website since August 2023. Woodside provided this information to SNTSG on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the activity, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure: Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the initial EP consultation information provided SNTSG on 9 August 2023, in the absence of feedback from SNTSG, Woodside proactively provided information which summarised SNTSG's past feedback on related Scarborough project EPs and provided assessment and response in relation to this EP (see information given on 5 December 2023 and 8 October 2024).
- Woodside also emailed SNTSG to confirm it would shortly resubmit the EP for assessment and reminded SNTSG that Woodside remained open to receiving feedback (email of 8 October 2024).

Reasonable Period

A Woodside has allowed SNTSG a reasonable period for consultation in the preparation of this EP because:

- A consultation process and period were advised in the initial correspondence to SNTSG including when consultation would close for purposes of the preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed SNTSG over 4.5 months for consultation.
- During the consultation period and following it, Woodside proactively sent follow-up emails to SNTSG confirming Woodside was open to consulting with SNTSG and to remind SNTSG of consultation and timeframes on numerous occasions (on 30 August 2023, 5 December 2023 and 8 October 2024).
- In this context, Woodside allowed SNTSG a reasonable period for consultation in preparation of the EP.
- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with SNTSG is appropriate and adapted to the nature of interests of SNTSG:

- Woodside published 8 advertisements in national, state and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 30 August 2023, followed by a proactive letter on 5 December 2023 which addressed previous topics of interests and feedback received from SNTSG on other EPs that were relevant to this EP. Based on this additional information, Woodside sought further feedback from SNTSG and offered to meet to consult.

- When no response was received from SNTSG, Woodside sent another proactive letter on 8 October 2024 advising it had further assessed the merits of a number of objections and claims raised by SNTSG and reiterated that feedback could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA.
- Woodside engaged in consultation in the manner used by SNTSG in previous consultations, that is by email. In the letter of 5 December 2023, Woodside also provided an alternative method for SNTSG to provide feedback by offering a meeting. The offer to meet was not taken up by SNTSG. No responses were received by Woodside from SNTSG on this EP.

Outcome of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- The measures and controls described in the EP address feedback, claims or objections by SNTSG and are appropriate.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Marine Conservation Society (AMCS)

Context

AMCS' website states it is 'Australia's peak marine conservation organisation and Australia's leading national charity dedicated solely to protecting ocean wildlife' and that it is 'An independent charity, staffed by a scientists, educators and advocates'.^{xxxiv} AMCS has been running a petition campaign encouraging people to write to Woodside Board members and investors and urge them to 'recognise the immense dangers of the Scarborough proposal and transition its operations to renewable energy to maintain a safe climate'.^{xxxv} In May 2024, AMCS released a media statement criticising the Federal Government's Future Gas Strategy and claiming it would 'help bring cataclysmic climate change as dirty fossil fuels could not be a transition fuel for a clean energy economy'.^{xxxvi} AMCS launched another petition against Woodside in 2024 asking people to email WA and Federal Ministers to Save Scott Reef, linking it to operations on the Burrup, urging them to reject the proposals.^{xxxvii} The information on AMCS's website suggests AMCS has a fundamental objection to the Scarborough project and actively protests against Woodside's environmental approvals.

Woodside has provided information to AMCS about Scarborough-related EPs, including this EP, since 2023. AMCS has not engaged other than by email asking to be recognised as a Relevant Person, provide details of its role and ensure Woodside has the correct contact details. Woodside gave AMCS consultation information in August 2023 and offered to meet with AMCS around 12 months ago (November 2023), however this offer has not been taken-up.

Historical Engagement:

2022- 2023

- From 2022 to 2023, Woodside sent consultation material to AMCS on the Scarborough D&C, SIT1 and Subsea EPs as Woodside had identified that AMCS had referred to the Scarborough Project in an online public campaign.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1). On 16 November 2023, in the absence of specific feedback from AMCS, Woodside sent a letter via email to AMCS (Record of Consultation, reference 2.13) which stated the following: <ul style="list-style-type: none"> Woodside consulted AMCS on the Scarborough D&C, SITI and Seismic EPs and was advised AMCS was involved in a large number of consultations and needed to prioritise resources but requested it still be sent notifications and reminders of future consultation. Woodside had provided AMCS with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Information Sheet. Advised that Woodside was reaching out one final time and requested AMCS provide feedback by 8 December 2023. Woodside also asked AMCS to advise by 8 December 2023 if AMCS wished to meet with Woodside. On 20 December 2023, AMCS sent an email to Woodside (SI Report, reference 51.1), passing on personal details to ensure: <ul style="list-style-type: none"> (1) AMCS was recognised as a relevant person, and That Woodside had correct contact details, as well as outlining AMCS's role. (1) On 20 December 2023, Woodside responded to AMCS confirming it had been assessed as a relevant person, and as such, had already been sent the Consultation Information Sheet on 9 August 2023 and a follow-up email on 30 August 2023 to the general enquiries email address (SI Report, reference 51.2). It had also been sent a proactive follow-up letter on 16 November 2023. Woodside again attached a copy of the Consultation Information Sheet. <ul style="list-style-type: none"> Woodside updated its database to include the additional email address. No response has been received from AMCS. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AMCS is a relevant person.	(1) Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed AMCS as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside confirmed AMCS had been assessed as a relevant person for this EP and had been provided with consultation information.	(1) Woodside's assessment of AMCS as a relevant person is described in Appendix F, Table 1.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its	The measures and controls described within this EP address the potential impact from the proposed activities on AMCS functions, interests or activities. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Management of Change and Revision process (see Section 7.2.7.2 of this EP).	
--	---	--

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMCS for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMCS sufficient information to allow AMCS to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to AMCS on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AMCS a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to AMCS advising of consultation as well as when consultation closed for purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed AMCS with 4 months for consultation.
- Woodside is open to receiving feedback after EP submission and throughout the life of the EP. AMCS has demonstrated it understands this and it continues to provide feedback to Woodside, irrespective of consultation timeframes, as demonstrated in AMCS’s email received on 20 December 2023.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with AMCS is appropriate and adapted to the nature of interests of AMCS:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to AMCS because Woodside notes AMCS regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity under the EP and of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 30 August 2023, followed by a proactive letter on 16 November 2023, reminding AMCS of the opportunity to provide feedback.
- Woodside consulted with AMCS in the way that AMCS had engaged in (via email) and also provided an alternative method for AMCS to provide feedback by offering a meeting. The offer to meet was not taken up by AMCS.
- Woodside also consulted the Protect Ningaloo conservation program, which is hosted by AMCS, providing AMCS with another opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to AMCS as evidenced by AMCS's response on 20 December 2023 when it provided a response, but no feedback, claims or objections about the proposed activity.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMCS provided feedback but no objections or claims about the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from AMCS and, as it made no objections or claims, has not made further assessments for this EP.
 - Made no changes or inclusions to the EP as a result of consultation with AMCS because no objections or claims about the adverse impact of the activity were made and appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable

Doctors for the Environment Australia (DEA)

Context

DEA states on its website that they are 'medical doctors who call for climate action in recognition of the health harms caused by global heating and climate change'.^{xxxviii} DEA (WA) is a member group of the Conservation Council WA. DEA (WA) website links transfer to DEA as an umbrella organisation.^{xxxix}

DEA (WA) Facebook page directs people to join at the DEA website. The DEA (WA) Facebook page administrator^{xl} is also the Deputy Chair of DEA and President of CCWA.^{xli}

On its website, DEA claims 'fossil fuels kill and harm our health' and states that '...similar to addressing the health impacts of tobacco by first quitting smoking, to address the health impacts on fossil fuels we must first quit coal, oil and gas'. DEA encourages people to email their Member for Parliament and sign the petition calling on government to ban all new coal, oil and gas projects.^{xlii} In June 2024, DEA published an open letter in The Australian newspaper claiming 'coal, oil and gas were hazardous to health and wellbeing and calling on the government to ban all new coal, oil and gas projects'.^{xliii}

In August 2024, DEA launched its Smoke Kills campaign with the tagline 'Burning fossil fuels causes more deaths than tobacco' including a petition to the Federal Government in which it states 'Coal, oil and gas are health hazards. They cause dangerous air pollution which is responsible for a staggering 8 million deaths per year across the globe.'^{xliv} Woodside understands that DEA is fundamentally opposed to fossil fuels.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

DEA requested to be consulted on the Scarborough Energy Project EPs about potential global and local impacts of climate change and industrial emissions on human health. DEA did not respond to any of the three pieces of consultation correspondence on this EP however on 19 December 2023, DEA (WA) requested to be consulted as a relevant person.

Woodside has responded to DEA's consultation correspondence and has offered to meet with DEA. DEA has subsequently engaged on a non-Scarborough related EP, raising similar issues to those raised with this EP, and Woodside has continued to respond to claims in both its correspondence and the EP.

The background is important as it provides context that confirms consultation has been appropriate and adapted to the nature of the interests of DEA.

Historical Engagement

2022- 2023

- From 2022 to 2023 Woodside consulted and responded to feedback from DEA on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of topics raised by DEA during consultation on those EPs have been addressed and raised again as part of consultation on this EP. These include:
 - DEA requested to be consulted on the proposed activity due to its membership comprising of medical professionals who dealt with people impacted directly and indirectly by climate change e.g. youth, elderly, First Nations people, people from low socioeconomic backgrounds, disabled people, those with disabilities, pre-existing medical conditions and people who lived in remote and rural communities.
 - Climate change was being called the greatest global health threat of the 21st century and in Australia, the Australian Medical Association and the Australian College of Nursing had said climate change was a health emergency and health impacts of climate change threatened to undermine the last centuries progress in public and global health.
 - Gas was also recognised as a health threat e.g. gas in domestic premises has been shown to contribute to childhood asthma.
 - Gas processing on the Burrup Peninsula would also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type could cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DEA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of specific feedback from DEA on this EP, Woodside proactively sent a letter via email to DEA (Record of Consultation, reference 2.17) which stated the following:
 - **(1)** DEA self-identified for the Scarborough D&C, SIT1 and Seismic EPs and provided feedback to Woodside which was addressed.
 - Woodside had provided DEA with a Consultation Information Sheet on this EP on 9 and 30 August 2023.
 - Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if DEA had feedback and/or would like to meet.
- The 5 December 2023 letter also reviewed past feedback and topics raised by DEA on the Scarborough D&C, SIT1 and Seismic EPs and provided an assessment and response as it relates to this EP. Woodside assessed DEA's feedback as follows:
 - **(2)** DEA members would be affected by the Scarborough Project because climate change and the use of gas as an energy source for domestic and commercial use produces both direct and indirect health impacts.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (2) Climate change had impacted on health directly, indirectly, and via social mechanisms and world-wide, including in Western Australia, these impacts had been seen including extreme heat, increasingly severe extreme weather events, drought, changing infectious disease patterns, and resource scarcity, among others.
- (2) In addition to the contribution to climate change, gas itself had also been recognised as a health threat.
- (2) The processing of the gas at facilities on the Burrup Peninsula would also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type could cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure.
- Woodside responded to the feedback as follows:
 - (2) GHG emissions relevant to the activity, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - (2) The EP would assess both direct and indirect impacts and risks associated with the activity, having regard to the nature and scale of the proposed activity. Direct GHG emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - (2) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - (2) An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken and included development of a decarbonisation plan for the Pluto Hub.
 - (2) Woodside had a Climate Strategy which was an integral part of the company strategy and had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secure their energy needs and reduced their emissions.
 - (2) Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way it designs its assets.
 - ❖ Reducing GHG emissions through the way it operates its assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
 - (2) Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets however, offsetting emissions would allow Woodside flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve net zero aspiration.
- On 19 December 2023, DEA sent an email and letter to Woodside, copying in NOPSEMA, stating it was, on behalf of the Western Australia Committee for Doctors for the Environment Australia, requesting that it be consulted as a relevant person (SI Report, reference 52.1). It also stated the following which include a number of repeated topics already addressed by Woodside:
 - (1) DEA, WA considered itself a relevant person and DEA, WA had not been contacted by Woodside in relation to the EP. DEA, WA was concerned Woodside did not understand its interests, functions and activities affected by the project and outlined these in detail. DEA, WA also invited Woodside to reflect on the purpose of the consultation regime and outlined regulation 25 of the Environment Regulations requirements.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(3)** DEA, WA stated it understood the EP had been submitted to NOPSEMA for consideration and asked that the project not be accepted until regulation 25 of the Environment Regulations was met.
- DEA required a response to its letter within two weeks, no later than 2 January 2024.
- In addition, DEA requested reports, analyses, assessments, modelling and/or other documents around the following:
 - **(4)** A description of the environment that may be affected by the activities, including the potential extent and area of a hydrocarbon release/loss of containment from planned and unplanned activities.
 - **(5)** The potential environmental impacts and risks of the activities, including in relation to a Worst Case Oil Spill.
 - **(6)** The potential impacts and risks on any species listed under the *Environment Protection and Biodiversity Conservation Act 1999* (Cth), including in relation to a Worst-Case Oil Spill.
 - **(7)** The potential impacts and risks on the Scott Reef Marine Park, and any other significant marine ecosystem, including in relation to a Worst Case Oil Spill.
 - **(8)** The potential impacts and risks in relation to Sea Country and other areas of marine or terrestrial Aboriginal cultural significance and/or heritage, including in relation to a Worst Case Oil Spill.
 - **(9)** The total GHG emissions associated with the activities and where these GHG emissions would occur, including any flaring/venting of GHG emissions both offshore and onshore.
 - **(10)** The potential impacts and risks of the activities' GHG emissions in relation to global warming and climate change, including whether and how those emissions would fit within a carbon budget and emissions reduction scenarios aligned with the temperature goals of the Paris Agreement, and specifically whether the Project could be accommodated within a carbon budget for a 1.5 degree, well below 2 degree, or 2 degree warming scenario.
 - **(11)** The proposed GHG emissions control measures, including details of any proposed offsets and any proposal for carbon capture and storage (CCS).
 - **(12)** The potential cumulative impacts of the above listed impacts or risks considered in the context of existing and proposed developments and/or activities in the vicinity of the area that may be affected by the activities and/or the Project, including in relation to a Worst Case Oil Spill.
 - **(13)** The potential cumulative impacts of upstream and downstream activities associated with the Project as a whole, including transport of gas via undersea pipeline and onshore processing of gas.
 - **(2)** The potential impacts on human health of the Project's GHG emissions, air and water pollution, including in the event of a Worst Case Oil Spill.
 - **(14)** The Proponent should provide information explaining whether reasonably available options had been explored for resolving or minimising the degree to which DEA, WA and the environment generally, may be affected by the activities, particularly through control measures. Accordingly, DEA also requested the following information, including any reports, analyses, assessments and/or other documents, that:
 - ❖ Demonstrated that the environmental impacts and risks of the activities would be reduced to as low as reasonably practicable.
 - ❖ Demonstrated that the environmental impacts and risks of the activities would be of an acceptable level.
 - ❖ Details of the environmental performance outcomes, environmental performance standards and measurement criteria to be adopted in relation to the activities.
 - ❖ Details of the implementation strategy and monitoring, recording and reporting arrangements in relation to the environmental impacts and risks of the activities.
 - **(15)** DEA, WA noted that a copy of any draft EP would assist an informed assessment.
- On 20 December 2023, Woodside sent a letter via email to DEA, DEAWA and NOPSEMA (SI Report, reference 52.2), and addressed the following:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1, 3) Woodside confirmed DEA had been assessed as a relevant person, and as such, had already been sent the Consultation Information Sheet on 9 August 2023 and a follow-up email on 30 August 2023 to the email address used for previous correspondence in relation to other EPs. It had also been sent a proactive follow-up letter on 5 December 2023 outlining responses to previous claims, objections and requests for information and advising consultation closed on 20 December 2023 for this EP.
 - (3) As well as directly corresponding with DEA, Woodside advertised the EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - (3) The provision of consultation information, an extended period over and above a reasonable period for consultation, numerous attempts to engage DEA, and proactively considering information previously provided by DEA on other Scarborough Project EPs, meant that sufficient information, a reasonable period of time and reasonable opportunity for consultation had been provided.
 - (3) The EP had not yet been submitted to NOPSEMA.
- Woodside responded the next day (well before the requested response date of 2 January 2024).
- (4) Woodside advised the EP would describe the EMBA including details of receptor sensitivities and exposure potential.
 - The EMBA was defined as the largest spatial extent where unplanned events could have an impact on the surrounding environment and for this EP, was the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the highly unlikely event of a loss of marine diesel from vessel collision.
 - The EMBA also included any areas that were predicted to experience shoreline contact with hydrocarbons above threshold concentrations.
- (5) The potential environmental impacts and risks of activities, including from a worst-case credible loss of containment event, had been explained in the Consultation Information Sheet sent on 9 and 30 August 2023.
- (6) The EP would describe details of the particular relevant values and sensitivities of the environment including identification of EPBC Act listed species considered to be Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
 - The EP would include an evaluation of potential impacts to EPBC Act listed species including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of a vessel collision. The impact assessment in the EP would provide a suite of controls that would be implemented during the activity to avoid or minimise potential impacts to relevant EPBC listed species.
- (7) Woodside does not consider that there would be any credible impact on Scott Reef Marine Park as a result of the activity described in the EP including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of vessel collision.
- (8) The EP would assess potential impacts and risks in relation to cultural heritage on both land and sea including from unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of vessel collision.
 - Woodside had consulted with relevant Traditional Custodian(s)/groups in development of all Scarborough EPs to identify any cultural values, interests, activities and functions as well as respond to claims and feedback prior to submission. Examples of Sea Country considerations, including controls to reduce impacts to ALARP and acceptable levels, could be seen in the accepted Scarborough EPs publicly available on the NOPSEMA website.
- (9) GHG emissions relevant to the activity, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.

- The EP would assess both direct and indirect impacts and risks associated with the activity, having regard to the nature and scale of the proposed activity. Direct GHG emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
- An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken including the development of a decarbonisation plan for the Pluto Hub.
- **(10)** Woodside had a Climate Strategy which had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way it designed its assets.
 - ❖ Reducing GHG emissions through the way it operates its assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
 - Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets, however, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would be offset using carbon credits to achieve its net zero aspiration.
- **(11)** Woodside would include control measures in the EP to reduce potential impacts resulting from GHG emissions to ALARP and acceptable levels and these would be made publicly available in the EP on NOPSEMA's website once it had been submitted and was under assessment by NOPSEMA.
 - Relevant controls and Environmental Performance Objectives (EPOs) would cascade from the Scarborough Offshore Project Proposal (OPP) which was publicly available on the NOPSEMA website.
- **(12, 13)** The Scarborough OPP assessed the potential cumulative impact of the Scarborough Project and other activities/developments. In addition, Woodside had considered other Scarborough activities that could result in overlapping temporal and spatial extents. While concurrent operations were currently not anticipated to occur between activities included in these activities and Scarborough activities covered by other EPs (i.e., D&C, SITI, Seismic and Subsea); where they did occur, this would be assessed.
- The FPU safety case and facility design took into consideration/assessed impacts to worker health and safety from facility operations including emissions and discharges. Woodside considered there were no credible impacts to populations onshore from planned emissions/discharges from the Scarborough FPU at the FPU location.
 - **(2)** Indirect emissions from Scarborough FPU operations, such as processing through the Pluto LNG Plant, had been assessed for potential to impact on human health and remained within recognised criteria.
- **(14)** Woodside confirmed the EP would demonstrate that environmental impacts and risks would be reduced to ALARP and acceptable levels. The EP would outline the implementation strategy, which would include systems, practices and procedures to direct, review and manage the activities so environmental risks and impacts were continually being reduced to ALARP and acceptable levels, and so that EPOs and Standards outlined in this EP were achieved.
 - In addition to the above, DEA may wish to access the following publicly available documents which provided additional detail on the project:
 - ❖ Acceptance of Scarborough Offshore Project Proposal – Statement of Reasons (link included)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Scarborough OPP Formal Consultation Report (pages 1073-1081) (link included)
- ❖ Pluto LNG Facility Greenhouse Gas Abatement Program Factsheet (link included).

- (3, 14, 15) The Consultation Information Sheet provided to DEA on 9 August 2023 provided a summary of the activity, the receiving environment, a summary of impacts and risks and proposed mitigation and management measures. Woodside confirmed it did not provide EP drafts during EP development due to the potential for content to change and in addition, restricting access to publicly available versions enabled stakeholders to access and comment on the same information, removing potential for confusion. The EP would be publicly available on NOPSEMA's website once it had been submitted and was under assessment.
- On 20 December 2023, Woodside received an out of office notification from DEA (SI Report, reference 52.3).

Ongoing engagement:

- (2) On 7 March 2024, Woodside proactively sent DEA an email stating that as it had shown an interest in climate-related matters, it may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 52.4) The email included links to the CTAP and the ASX Announcement.
 - It also re-iterated that consultation in the preparation of the EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Finally, it stated Woodside was available to meet with DEA to discuss the EP should they be interested.
- On 24 April 2024, during the course of preparing the Pluto Facility EP, DEA self-identified by emailing NOPSEMA and included a feedback letter addressed to Woodside regarding this EP and the Pluto Facility EP (SI Report, reference 52.5). That letter included a number of repeated topics (already addressed by Woodside) and stated that DEA:
 - Understood Woodside was undertaking consultation with relevant persons for both EPs under the Regulations) prior to NOPSEMA assessment.
 - (1) Considered itself to be a relevant person and Woodside was required to consult.
 - (3, 16) Noted that Woodside was required by regulations 11A(2) and (3) of the Regulations to provide relevant persons with "sufficient information" to assess the possible consequences of the activities on its functions, interests or activities and provide "reasonable period" for consultation.
 - (1) Provided statements related to its interests, functions, activities and resources including:
 - background on DEA as an independent, non-government organisation of medical doctors and students in Australian States and Territories that had a voice in the sphere of environmental health.
 - reference to annual reports that articulated its strategy and impact goals to reduce fossil fuel combustion and cut global greenhouse gas emissions this decade.
 - resources including health reports, fact sheets and submissions.
 - consultation-relevant fact sheets "How Climate Change Affects Your Health: The Facts, How Climate Change Affects Mental Health in Australia" and "Asthma and Indoor Gas Appliances."
 - submissions including the Senate Inquiry Duty of Care Intergenerational Equity Bill and Protecting the Spirit of Sea Country Bill 2023.
 - support of phasing-out gas in households and policies and programs to phase out use of Gas in Australia.
 - Support of global emissions reduction aligned with the Paris Agreement with DEA arguments found in its Future Gas Strategy consultation paper.

- **(2)** Understood a range of different pathways and energy scenarios may be considered to align with globally agreed temperature goals and each had different levels of certainty, risk profiles and public health outcomes, so DEA supported the position of the United Nations, IEA and other authorities that there should be no new fossil fuel resource developments that were not already under production. It considered that Woodside projects were not consistent with findings and wanted more information to understand and evaluate health implications.
- **(3)** Noted the consultation helped the proponent and environment in improving an EPs content and it looked forward to receiving more information and opportunity to comment.
- **(3, 16)** Noted that consultation required under regulation 11A of the Regulations, required a proponent to provide DEA with “sufficient information” to make an informed assessment and provide a “reasonable period” for consultation.
- **(3)** Referenced NOPSEMA’s “Guidance Note: Environment Plan content requirements” dated September 2020 (EP Content Guidance) and “Guideline: Consultation in the course of preparing an environment plan” dated 12 May 2023 (Consultation Guideline) and stated that consultation in relation to any EP for development activities should assist the proponent to understand the external context, define “acceptable levels” of environmental impact and risk, and inform appropriate control measures.
- **(2, 3, 9, 10, 11, 12, 13)** Did not feel that Woodside’s published consultation material for this EP or another EP provided “sufficient information” as it did not address indirect impacts related to greenhouse gas emissions, climate change impacts and health impacts associated with gas usage. Nor did it sufficiently address local air pollution impacts from Woodside’s gas processing facilities.
- **(2, 9, 10)** Cited Woodside’s estimate of total lifecycle emissions from the development – 878m tonnes – and that indirect consequences on climate change and health impacts of air pollution from fuel combustion were significant.
- **(1, 2)** Believed its interests and objective would be impacted by the Operations EP in at least the following ways:
 - health impacts in Australia and elsewhere as a consequence of climate change
 - health impacts for workers and the local community as a result of Woodside’s LNG processing operations
 - health and wellbeing impacts for Aboriginal peoples who experience impacts to cultural heritage and Sea Country as a result of Woodside’s gas processing operations and climate change and ocean acidification more generally
 - health and wellbeing impacts associated with the use of gas in domestic and commercial settings, both in Western Australia and elsewhere where the gas is exported
 - health considerations arising from carbon pollution mitigation options such as the use of offsets, carbon capture and storage, direct mitigation, or other abatement methods
 - impacts and implications for healthcare professionals and health care systems arising from the health impacts mentioned above.
- **(10)** Noted indirect impacts from GHG emissions from this activity and climate change and air pollution from burning fossil fuels were not considered or provided.
- **(10)** Noted that climate change impacts, including from Scope 3 emissions that would result from another activity, fell under the scope of indirect consequences which must be assessed in accord with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(3)** Considered that Woodside had not provided DEA with sufficient information to make an informed assessment of consequences on its functions, interests and activities.
- **(3)** Provided examples of information DEA required to make an assessment including:
 - Woodside’s analysis of impacts
 - Woodside’s analysis of impacts including independent health impact assessments, baseline health studies or other analysis including:
 - health impacts from use of gas produced by Australian and overseas projects

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- health impacts arising from climate impacts that were attributable to emissions from these projects
 - health impacts from climate change and other effects
 - identification of groups or communities disproportionately affected by impacts
 - health and wellbeing effects of both direct and indirect impacts of the projects to Sea Country and cultural heritage
 - health and wellbeing impacts for the local community and others who may be exposed to, or impacted by airborne emissions and other effects of Woodside's gas processing and export facilities, or other infrastructure associated with the projects
 - health impact on workers involved in the construction and production phase of the projects and the gas processing facilities over the period they would be utilised for these projects
 - information regarding mitigation measures
 - information about what mitigation measures were proposed (if any) by Woodside to address impacts that have been identified, including what effects these mitigation measures are likely to have, how they will be implemented
 - details of the implementation strategy and monitoring, recording and reporting arrangements in relation to the described indirect and direct environmental impacts and risks of the activities, including how they would be reviewed and evaluated
 - details on how the proposed mitigation measures and implementation strategy would be subject to enforceable regulatory requirements or otherwise regulated
 - information about what other mitigation options had been considered by Woodside (if any) but were not proposed for implementation
 - information regarding Woodside's evaluation and selection process for mitigation measures, including how decisions had been made and what criteria had been applied to the consideration by Woodside of what mitigation measures would be implemented
 - information to demonstrate how the chosen mitigation measures would achieve the required outcome of 'as low as reasonably practicable and acceptable' residual impacts
 - information on residual impacts and risks
 - information to specify what residual health risks, impacts and outcomes Woodside believed would occur as a result of the projects after the application of proposed mitigation measures
 - details of what residual impacts Woodside considered to be acceptable, in the context of the regulatory requirement for 'as low as reasonably practicable and acceptable'
 - information on relevant person consultation in relation to health impacts and effects
 - what efforts Woodside had made to identify and consult with persons or organisations who may be impacted by health effects of the activities as relevant persons under the regulations
 - what relevant persons Woodside had consulted with who may be impacted by health effects of the activities and what concerns or issues had been raised in the process of such consultation to date.
- **(3)** Shared why the above information was needed for DEA to make an informed assessment as it wanted to respond in an evidenced-based manner and direct its activities to better protect the health of communities from such impacts and prepare the health sector for climate change impacts.
 - **(3)** Requested the above information as part of consultation and it should include reports, analyses, assessments, modelling and/or other documents used by Woodside.

- **(2)** Noted that Woodside had made general statements related to its Climate Transition Action Plan and 2023 Progress Report and given majority of this project's emissions would be from Scope 3 emissions which the report set only a 5 Mtpa abatement target it did not describe the health outcomes or impacts from its proposed activities.
- **(16)** Noted regulation 11A of the Environment Regulations requires a "reasonable period" for consultation.
- **(16)** Referenced the EP Content Guidance note that specified consultation time should be based on complexity and volume of information provided and practicalities of DEA's available personnel and resources. After receiving requested information, it can determine the length of time needed for consultation. It noted that the 30 day period for public exhibition of certain EPs specified under regulation 11B(1)(a) of the Environment Regulations is unlikely to be sufficient for the purposes of consultation under Regulation 11A. This is because the consultation envisaged by Regulation 11A is required to be more rigorous than public exhibitions.
- **(16)** Noted the EP Content Guidance and Consultation Guidelines stated that under Regulation 11A, consultation should demonstrate two-way communication, transparency, collaboration and inclusiveness. It continued that Regulation 16(b) requires proponents to provide feedback to DEA on its comments.
- **(3, 16)** Reiterated that any EP for the project should not be accepted until the requirements of Regulation 11A were met, including consultation requirements with DEA identified in this document.
- **(3)** Noted it looked forward to receiving more information so consultation could commence in accordance with regulation 11A of the Environment Regulations.
- On 14 May 2024, Woodside responded to DEA's email from 24 April 2024 (SI Report, reference 52.6) and:
 - Noted receipt of DEA's letter which related to this EP and another EP.
 - **(1)** Woodside consulted DEA for this EP starting in August 2023. Woodside outlined its EP feedback process and Management of Change and Review process. Based on feedback for the Pluto Operations EP, DEA had been assessed as being a relevant person for the Pluto Operations EP.
 - **(1)** Confirmed it consulted relevant persons during EP preparation in accordance with regulation 25 of the Regulations.
 - **(1)** Noted DEA's statements and document references but made no comment as to the factual accuracy or otherwise of these documents.
 - **(2, 9, 10)** Referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report. Woodside referred DEA to publicly available information and noted that more granular detail relating to GHG emissions would be set out and assessed in the respective EPs. GHG emissions would be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).
 - **(3, 16)** Confirmed it referred to NOPSEMA's guidance materials when undertaking consultation.
 - **(2, 9, 10, 11, 12, 13, 14)** Noted that GHG information for this EP is already publicly published. The statutory regime relating to onshore emissions includes various State and Commonwealth legislation which manages potential impacts and risks to environment and cultural features, and legislation is applied to the relevant proponents for the onshore processing facilities.
 - **(2, 9, 10)** Recommended review of Section 3.1 Climate strategy (on page 14), Section 3.5 Scope 3 emissions (on page 32 and 33) and Section 3.6 Scope 3 targets (on pages 34 – 40) of Woodside's CTAP and 2023 Progress Report. The EPs would assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct and indirect emissions with the potential to result in climate change impacts will be considered.
 - **(2, 3)** Noted that emissions associated with onshore gas processing were subject to a range of legislative requirements including those which considered and managed potential to impact on human health (for example Part IV environmental impact assessment and associated air quality monitoring management, as well as broader World Health Organisation requirements and National Environment Protection Measure limits and specific health and safety related regulations.).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(15)** Confirmed that Woodside does not provide drafts of EPs while in development or under assessment for a number of reasons, including the potential for content to change. Allowing access to publicly available versions enables stakeholders to access and comment on the same information, assists with version control and removes potential for confusion. The EP would be made publicly available on NOPSEMA's website once it had been submitted and was under assessment.
- **(10)** Noted that climate change impacts couldn't be attributed to any one activity or one project, as they were instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with Scarborough and Pluto couldn't be linked to climate change impacts to the environment, a contextual evaluation of climate change impacts will be provided in the EPs. Encouraged DEA to read Woodside's suite of climate disclosures including Woodside's Climate Report 2021, Climate Report 2022 and CTAP and 2023 Progress Report.
- **(1, 3, 16)** Woodside disagreed with the assertion that the Project should not be accepted as Woodside had engaged in consultation with DEA in accordance with Regulation 25.
- On 12 June 2024, DEA emailed Woodside (SI Report, reference 52.7) in response to Woodside's letter dated 14 May 2024. DEA once again repeated a number of topics already addressed by Woodside:
 - **(1)** Welcomed Woodside's acknowledgement that DEA is a relevant person for this EP and another Woodside EP.
 - **(2, 3, 16)** Did not consider that information provided to date was sufficient in terms of consultation, in particular regarding climate and health impacts. DEA stated that consultation requirements of the Regulations have not been met.
 - **(3, 17)** Further stated that given the limited information provided by Woodside, and DEA's voluntary capacity, the information in the letter should not be taken to reflect DEA's complete position or complete submissions on the proposal and that DEA reserved the right to make further submissions as capacity and information became available.
 - **(18)** Stated that limited additional information Woodside had provided were past assessments that could not be relied upon i.e. NOPSEMA's Acceptance of Scarborough OPP – Statement of Reasons; OPP Formal Consultation Report; Pluto LNG Facility Greenhouse Gas Abatement Program (GGAP), and Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report.
 - **(19)** Asserted that there were no references to or consideration of health impacts in the Acceptance of Scarborough OPP – Statement of Reasons demonstrating that health impacts were not considered by Woodside or NOPSEMA at the time and therefore must be considered now.
 - **(3)** Claimed there was no evidence in information provided to DEA that Woodside has considered the following:
 - Health and wellbeing impacts arising in vulnerable communities impacted by climate change in Australia and elsewhere
 - Indirect health impacts resulting from exposure compounds arising from the combustion of gas in households (especially by children) and workplaces
 - Health and wellbeing impacts of Traditional Custodians related impacts to cultural heritage on the Burrup Peninsula, where gas processing is proposed to take place.
 - **(20)** Stated that the Formal Consultation Report on the Scarborough OPP did not appear to be publicly available and the link provided to this document in Woodside's previous response was incorrect.
 - **(21)** Claimed that climate change impacts outlined in the Scarborough OPP were no longer relevant to this assessment because the Statement of Reasons shows that the OPP was assessed against outdated criteria no longer accurate or relevant to the current assessment. Reasons given are:
 - **(22)** The NDC test is no longer relevant as Australia's NDC has been updated and strengthened considerably.
 - Other legislation and approvals have not been updated e.g. the EPA recommended that further changes to Ministerial Statement 757 are necessary to protect the environment however no action has been taken to update the Ministerial Statement.
 - Since the acceptance of the Scarborough OPP the IEA SDS scenario has been revised to significantly reduce the amount of gas in the global energy mix.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Even the IEA's STEPS scenario shows a significant reduction in the role of gas in the global energy mix since the Scarborough OPP was assessed in 2020 and that the relevant scenario that should be adopted for the purposes of assessing the impact of this project on global temperature goals is the IEA Net Zero Emissions (NZE) Scenario which shows that gas production and use must decline significantly from current levels.
- Asserted that the relevant scenario that should be adopted for the project is the NZE and that under this, no additional gas projects are possible.
- **(23)** Noted that since the 2020 assessment of the Scarborough OPP, both the UN and ISO have published guidelines for the NZE which assist the identification of net zero plans that are greenwash from genuinely aligned global temperature and decarbonisation goals.
 - The Pluto LNG Facility GGAP does not meet the requirements of these guidelines,
 - Is an example of greenwash and therefore cannot be relied upon by regulators in the assessment of the acceptability of the climate impacts of the proposed project.
 - Also, the EPA has advised the WA Minister for the Environment that the plan is no longer adequate and needs updating.
- **(24)** Claimed that as well as climate change harming human health:
 - Oil and gas developments result in direct health harms from pollution including cancer, reproductive harms, impairment of normal human growth and development, birth defects, respiratory and cardiovascular disease and deaths as well as interference with the body's communication system of hormones regulating growth, behaviour, metabolism and reproductive function; and
 - The destruction of sites of spiritual significance to First Nations people by fossil fuel developments compounds psychosocial harms.
- **(25)** Advised that any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum:
 - Woodside's assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100 year period and preferably longer;
 - Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable measures must be imposed by the regulator to ensure this takes place.
- **(26)** Claimed Woodside's CTAP and 2023 Progress Report (and climate plans in general) could not be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because:
 - The plans and targets are unenforceable;
 - The CTAP and 2023 Progress Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero;
 - The plans have repeatedly been rejected as insufficient by a majority of Woodside's shareholders.
- **(27)** Asserted that reliance on the Federal safeguarding mechanism as a means to align with Australian national emissions goals is inappropriate because of:
 - Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement;
 - Ongoing project emissions beyond 2030 reduction targets;
 - Emissions that will result from these projects in other countries outside of Australia;
 - Potential use of low integrity undisclosed offsets.
- **(27)** Claimed that if comparisons to Australia's emissions reduction targets and budget are to be used, then the total emissions from the proposed activities (not just domestic emissions) should be compared with Australia's abatement efforts and policies.

- **(28)** Stated it did not accept the argument that the total emissions from the proposals are an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable as if this were true, Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant.
- **(29)** Stated that Woodside must adhere to the UN and ISO's guidelines in relation to its proposed activities as part of any assessment on the impacts on the climate and on DEA's activities and interests under the Regulations.
- **(3, 29)** Further stated that Woodside has not provided information to DEA to show that its net zero plans for the proposed operations, or its activities in general, comply with the requirements. From the information that has been provided to DEA, it was evident that Woodside's abatement activities and net zero plans amount to dangerous greenwash.
- **(3)** Stated that it looked forward to Woodside providing further information to address DEA's concerns and demonstrating that the impacts of the proposed activities will be managed to a level that is acceptable to DEA.
- **(2, 9, 10, 11, 12, 13)** On 4 July 2024, Woodside proactively emailed DEA and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 52.8). Based on DEA's previous feedback, Woodside also included a table of specific topics which DEA might be interested in, and where to find that topic in the EP. Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with DEA over the next month. Woodside also acknowledged receipt of DEA's letter dated 12 June 2024 and advised it would be responding shortly.
- On 9 July 2024, Woodside responded (SI Report, reference 52.9) to DEA's letter dated 12 June 2024. Woodside reiterated a number of previous responses and:
 - **(1)** Noted DEA's comments regarding relevant person status.
 - **(3)** Directed DEA to the Scarborough Operations EP (Rev 1 publicly available) for further information on emissions and reiterated that in accordance with regulation 25 of the Environment Regulations, Woodside's consultation process provided relevant persons with sufficient information to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. Woodside assessed any objections or claims received and adopted appropriate measures so that the activity would be carried out in a manner whereby environmental impacts and risks were reduced to ALARP.
 - Noted that DEA's public position was that all new coal, oil and gas projects should be banned, and that DEA provided public statements that indicated it was fundamentally opposed to fossil fuels. Woodside also noted connections between DEA and other NGOs who have campaigns against Woodside.
 - **(2)** Advised that in terms of climate and health impacts associated with this EP, climate change impacts are the result of global GHGs and cannot be attributed to any one activity or project. Emissions associated with the projects are negligible in the context of existing and future anticipated global GHG emissions. In addition, gas can play a role towards the energy transition.
 - Directed DEA to the IPCC's Sixth Assessment Report (AR6) in 2023 and Woodside's approach to climate change (Section 5.3 'Managing Physical Risk' and Section 6.3 'A Just Transition' of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report) for information on GHG emissions in a global and Australian context.
 - **(17)** Noted that, based on DEA's website, DEA's members cite a significant volume of studies, scientific research and videos to inform its position on human impacts from climate change demonstrating that DEA has access to information, and capacity and understanding of that information. Woodside also noted that a number of DEA's members attended Woodside's 2024 AGM.
 - **(18)** Advised that:
 - The Scarborough OPP remained in force and current; an OPP is designed to be prepared at an early stage in project development, before detailed planning of component activities occurs. More detailed descriptions of the component activities are then described in subsequent EPs. This EP contains a table which assesses concordance of the activities with the OPP.
 - The Pluto GGAP is in force and compliant with the requirements of relevant Ministerial Statements.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The CTAP and 2023 Progress Report summarises Woodside's climate-related plans, activities, progress and climate-related data for the period 1 January 2023 to 31 December 2023.
- (19) Explained that the definition of *environment* in the Regulations 2023 includes *Ecosystems and their constituent parts, including people and communities*. Woodside EPs include a consideration of risks and impacts of the activity to the Ecosystem and its constituent parts. People and communities are identified under this heading, assessment is undertaken and appropriate control measures are implemented to reduce these to ALARP and an acceptable level.
 - Potential impact to people and communities is considered in Section 6.7.6 and 6.7.7 of the EP, including assessment of atmospheric emissions against the relevant National Environment Protection Measures (NEPM).
 - Noted that domestic and commercial gas appliances which combust gas provided by commercial retailers are regulated by the Western Australian government. Woodside does not consider this to be part of the petroleum activities.
- (20) Advised the link provided in Woodside's previous response was to all of the publicly available Appendices for the OPP and referred DEA to Appendix M for the Scarborough OPP Formal Consultation Report.
- (21) Responded that NOPSEMA's Statement of Reasons for the accepted Scarborough OPP outlines NOPSEMA's consideration of direct and indirect GHG emissions associated with the Scarborough Project. This consideration includes the EPOs described in the Scarborough OPP, consistent with those described in Section 6.7.6 of the EP. Further controls are included in the EP to outline how these EPOs will be achieved.
- (22) Referenced relevant climate related information in the Scarborough OPP and considered in NOPSEMA's Statement of Reasons includes the potential implications of Scarborough GHG emissions on Australia's previous NDCs and the IEA'S Sustainable Development Scenarios. Further information on Australia's updated NDC's and the IEA's NZE 2050 scenario were provided, and are in the EP.
- Described how the Federal Safeguarding Mechanism requires facilities to reduce or limit their net emissions in line with Australia's current emission reduction targets, with the baseline for Scarborough set based on "international best practice" with an annual decline rate.
- (23) Advised it is currently updating the Pluto GGAP in accordance with Ministerial Statement 1208, which will then be assessed by the Department of Water and Environment Regulation. Noted that the EPA has recommended conditions mandating relevant facilities to comply with air quality standards such as those to be derived from the Murujuga Rock Art Monitoring Strategy (MRAS), which Woodside has committed to implementing.
- Noted that section 6.7.6 of the EP *Routine and Non-Routine Greenhouse Gas Emissions* discusses the Scarborough Project in the context of gas demand in climate related scenarios. A range of pathways which limit global warming to either 1.5°C or 2°C have been published, and it is noted that even in the NZE Scenario, investment in oil and gas development does not cease.
- (22) Advised Woodside's current corporate GHG reduction targets and the sections of the Climate Transition Action Plan which described disclosures and transparency. Woodside is aware of the new Australian Accounting Standards Board (AASB) climate standards, which include additional climate-related disclosures in financial reporting in coming years.
- (23) Advised that the net zero emissions guidelines are not intended to apply as requirements of facility operator's management plans for a specific activity, and that the current Pluto GGAP was developed to meet specific requirements of Ministerial Statement 757 and the (then current) Western Australian GHG Emissions Policy for Major Projects. The current Pluto GGAP was approved by the Minister for Environment in 2021 on advice of the EPA, and is being updated to meet requirements of Ministerial Statement 1208.
- (23) Stated it did not agree with DEA's position regarding greenwashing.
- (24) Reiterated that climate change impacts are the result of global GHG emissions and cannot be attributed to any one project.
 - Gas can play a role in the energy transition.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Stated that the proposed petroleum activities were not anticipated to result in the destruction of sites of spiritual significance to First Nations people.
- (25, 26) Noted DEA's comments regarding the need for emissions produced from now on needing to be removed at a later date, and advised DEA that additional information was also available within Woodside's CTAP and 2023 Progress Report regarding decarbonisation technology development and the role of removal credits over time in support of our net zero aspiration (pages 28 and 29).
- (27) Stated it does not agree with DEA's position that the Federal Safeguarding Mechanism is misaligned with the goals of the Paris Agreement and that scope 3 international emissions should be considered against Australia's targets, as they are subject (where relevant) to customer nations' Paris NDCs
- (27) Advised that emissions associated with the consumption of Scarborough gas along with other feed sources in customer markets will be considered under domestic and international emissions control frameworks. Anticipated customers of gas from the Scarborough Project are in countries that have ratified the Paris Agreement. Under the Paris Agreement and global GHG accounting conventions, each country is responsible for accounting for, reporting and reducing emissions that physically occur in its jurisdiction.
- (28) Stated it did not accept the position that if the emissions associated with the project are insignificant, so too are Australia's national abatement efforts.
- (29) Stated it does not agree with DEA's position that ISO net zero guidelines must be applied to the proposed activities. Section 2.3.6 of the EP defines criteria for demonstration of acceptability.
- (3) Stated it does not agree with DEA's position that impacts of the proposed activity must be acceptable to DEA, referring to the purpose of consultation and that acceptability is determined by NOPSEMA under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations.
- (3) Advised the acceptability of the proposed activities will be determined by NOPSEMA pursuant to the OPGGS (Environment) Regulations.
- On 10 July 2024, DEA thanked Woodside for the clarification and for Woodside's complete, considered and prompt response to DEA's request (SI Report, reference 52.10).
- On 8 October 2024, Woodside thanked DEA for its feedback and for engaging in consultation with Woodside on this EP (SI Report, reference 52.11). Woodside advised it would shortly be resubmitting the EP for further assessment and that as part of consultation, it had further assessed the merits of a number of objections and claims raised by DEA. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - (6) Advised impacts and risks to species were provided in Section 4.6 of the EP and assessed in sections 6.7 and 6.8. A worst case credible spill scenario, determined to be a vessel collision resulting in diesel spill, was presented in section 6.8.2.
 - (4) Directed DEA to Section 4.1 of the EP for a description of the EMBA including the potential extent and area of a highly unlikely hydrocarbon release/loss of containment from planned and unplanned activities.
 - (8) Advised it had consulted with First Nations groups and representatives to identify cultural values, interests, activities and functions. Potential impacts on Cultural Features and Heritage Values were assessed in Section 6.10 of the EP which determined that the planned activities were unlikely to result in an impact greater than negligible and unplanned activities were assessed to have a residual risk rating of moderate (or lower).
 - (9) Directed DEA to Section 6.7.6 of the EP for a breakdown of emissions sources including Scope 1 and Scope 3 emissions.
 - Advised that the Scarborough FPU had been designed to have no continuous operational flaring but in the unlikely event the flares were extinguished or unavailable, the hydrocarbon gas discharged via the flare system might not initially be combusted during the period required to purge the flare and re-establish flare ignition which may result in the short term low-rate release of methane to atmosphere.
 - Total estimated Scope 3 emissions associated with the project, set out in Table 6-21 of the EP, were approximately 870 MtCO₂-e.

- **(10)** In response to how GHG emissions would fit within a carbon budget and scenarios aligned with the goals of the Paris Agreement and whether the Project could be accommodated within a carbon budget for a 1.5 degree, well below 2 degree or 2 degree warming scenario, Woodside acknowledged climate change is understood to be caused by the net cumulative global concentration of GHG in the atmosphere but stated changes in global atmospheric GHG concentration cannot be attributed to any one project, including Scarborough, as they are the result of global GHG emissions, minus global GHG sinks, accumulated in the atmosphere since the industrial revolution. A portion of GHG emissions associated with the project were anticipated to contribute to a consumption of carbon budgets estimated to achieve the goals of the Paris Agreement.
 - LNG could have a role in the energy transition and in displacing higher carbon intensity fuels, therefore, if the introduction of Scarborough LNG served to reduce GHG emissions elsewhere, then in Woodside's view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentration. Woodside confirmed a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP and the amount was de minimis.
- **(11)** In response to proposed GHG emissions control measures, including details of any proposals for offsets and CCS, Woodside advised proposed GHG emissions abatement measures were described in Section 6.7.6 of the EP.
 - Work was done with third party consultants and a number of opportunities to reduce direct GHG emissions or reduce direct emissions intensity were identified. These resulted in an estimated 13% reduction of emissions compared to reference case design. Woodside advised it aimed to continue identifying and, where practicable, reducing operate-phase emissions by minor design changes and embedding GHG emissions reductions through operations readiness and planning.
 - Net direct GHG emissions from the Scarborough offshore facility would be managed in accordance with the Federal Safeguard Mechanism (SGM) baseline, aligned with international best practice emissions intensity and declining.
 - Regarding Scope 3 emissions associated with onshore processing of Scarborough gas, onshore processing facilities were subject to GHG emissions management frameworks and approvals including the publicly available Pluto Greenhouse Gas Abatement Program and the North West Shelf Project Extension Proposal Greenhouse Gas Management Plan which include monitoring and management commitments related to GHG emissions.
 - Regarding Scope 3 emissions associated with third party consumption of Scarborough gas, Woodside advised it continued to pursue a range of measures relevant to GHG emissions associated with third party consumption of gas from the Scarborough project but it did not have operational control over third party GHG emissions and measures undertaken by Woodside in this context are therefore appropriate and practicable.
 - Carbon Capture and Storage (CCS) was not currently a feasible abatement measure for the Scarborough FPU as it would require significant additional processing infrastructure not aligned with the overarching minimally attended operational concept.
- **(12)** Advised that cumulative impact from the whole Scarborough Energy Project was assessed in the OPP and subsequent EPs assessed cumulative impact potential between activities as part of the PAP, or between the PAP as a whole and other industry/stakeholder activities. In this EP, cumulative impact assessment was summarised in Section 6.2.1. Risk assessments in Section 6.7.4 and 6.7.5 and Section 7.8.10 included a cumulative impact assessment. While there was spatial overlap between the Trunkline and other third-party assets, it was highly unlikely that concurrent activities with other operators would occur and no cumulative risks or impacts would credibly occur.
- **(13)** Advised that in regard to potential cumulative impacts of upstream and downstream activities including transport of gas via undersea pipeline and onshore processing of gas, there were no credible circumstances where these would occur. For GHG emissions associated with offshore and onshore activities, Section 6.7.6 of the EP detailed emissions from each component of the Scarborough Energy Project operations.
- **(2)** Advised it did not consider that impacts on human health could be attributed to GHG emissions associated with the project.
- **(14)** Regarding DEA's claim that Woodside should provide information explaining whether options had been explored to minimise how DEA and the environment would be affected particularly through control measures and its request for information that demonstrates impacts will be reduced to ALARP and an acceptable level, Woodside advised Section 6 of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- the EP spanned 300 pages that assessed all risks and impacts associated with the Scarborough project with control measures which managed risks and impacts to acceptable and ALARP levels.
- **(15)** A draft EP was not required as the Operations EP was publicly available on NOPSEMA's website.
 - **(2)** Confirmed that as Woodside did not consider that impacts on human health could be attributed to GHG emissions associated with the project, an independent assessment was not warranted.
 - **(2, 3)** In response to the assertion that DEA had been provided with inadequate information particularly regarding climate and health impacts, Woodside clarified it was required to provide sufficient information under the Regulations and that it had provided previous information to DEA, the comprehensive assessment of all risks and impacts associated with the Scarborough project in Section 6 of the EP, and also the information contained in this letter (which discussed human health in WR 9 in the letter) and climate change (in WR 5 in the letter) and that this was sufficient.
 - **(3, 16)** Confirmed it had given DEA sufficient information, a reasonable period for consultation, and a reasonable opportunity to provide feedback. An updated revision of the EP would shortly be resubmitted for assessment which would contain the updated information in this correspondence.
 - **(18)** In response to DEA's statement that past assessments cannot be relied upon (including NOPSEMA's Statement of Reasons, the OPP, the Pluto LNG GGAP, Woodside's Climate Transition Action Plan and 2023 Progress Report), Woodside advised the EP was publicly available on NOPSEMA's website and that a revision of the EP would shortly be resubmitted for assessment. Information in Attachment A of this letter contained updated information that would be included in the resubmitted EP.
 - **(19)** In response to DEA's note that there were no references to or consideration of health impacts in the Statement of Reasons and this demonstrated that health impacts were not considered by Woodside or NOPSEMA at that time and therefore must be considered now, Woodside advised the publicly available EP included considerations of human health in Section 6.7.7. While the EP included considerations of, and EPOs relating to, human health, Woodside did not consider that impacts on human health could be attributed to GHG emissions associated with the project.
 - **(21)** In response to the claim that climate change impacts considered in the OPP and the Statement of Reasons were no longer relevant, Woodside explained that the OPP is prepared at an early stage and the subsequent EPs include updated information. Each Scarborough EP developed under the OPP contained a table setting out concordance of activities described in the OPP with those in the EP (refer to Appendix J of this EP).
 - **(22)** In response to the statement that the NCD test is no longer relevant, Woodside advised Australia's carbon management framework has continued to develop since the OPP was accepted, and this is now reflected in the EP. Advised the SGM sets baselines on the net GHG emissions of facilities including the Scarborough offshore facility and Woodside's onshore gas processing plants. Through these limits, the Australian Government aims to help achieve Australia's emission reduction targets, as set out in Australia's Nationally Determined Contribution (NDC) to the Paris Agreement of 43% below 2005 levels by 2030 and net zero by 2050. The Scarborough Project was aligned with Australia's plan to meet its NDC as per Section 6.7.6 of the EP.
 - Disagreed with DEA's comments regarding the UN and ISO's guidelines for net zero emissions for corporations and non-state entities that assist with identifying net zero plans that are greenwash. Woodside advised it took great care with its statements in relation to climate change, to ensure they were accurate and not misleading and were tested so that there was a reasonable basis for its statements.
 - **(23)** In terms of the Pluto LNG Facility Greenhouse Gas Abatement Program, the UN and ISO guidelines for net zero emissions were not intended to apply as requirements of facility operator's management plans for a specific activity.
 - **(24)** Regarding comments in relation to the difference in human health outcomes between the different energy and temperature scenarios, Woodside advised it noted in the EP that the AR6--WGII report contained information about projected impacts to health and well-being for the Australasian region however Woodside did not consider that impacts on human health could be attributed to GHG emissions associated with the project.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (26) Explained its Climate Transition Action Plan and 2023 Progress Report (CTAP) was not enforceable by NOPSEMA however information and commitments required to meet the OPGGS(E)R were contained in the EP and were enforceable by NOPSEMA.
 - Disagreed with the allegation that Woodside's CTAP constituted greenwashing.
 - Is targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner. The net equity Scope 1 and 2 emissions reduction targets were relative to a starting base of 6.32 million tonnes of CO₂-e, representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020. This starting base might be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.
 - The targets mean that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2025 were targeted to be 15% lower than the starting base, and that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2030 were targeted to be 30% lower than the starting base.
 - Advised that more information could be found at Section 3.3 in the CTAP and in Section 3.5 which described Woodside's approach to Scope 3 emissions.
- Does not agree with DEA's position on its abatement and offset plans:
 - (27) The SGM set baselines on net GHG emissions of facilities emitting over 100 ktCO₂-e per year. Emissions limits will decline gradually. Through these limits, the Government aims to help achieve Australia's emission reduction targets, as per the NDC to the Paris Agreement of 43% below 2005 levels by 2030 and net zero by 2050. Through compliance with this and related other pieces of domestic policy, the project is aligned with Australia's plan to meet its NDC.
 - Avoiding and reducing GHG emissions were Woodside's priority, achieved mainly through pursuing opportunities in the design and operation of Woodside assets that were economically viable when assessed using an internal long-term cost of carbon, currently US\$80/tCO₂e, which exceeded the current market price of Australian Carbon Credit Units (ACCUs).
 - Offsetting emissions allowed Woodside to reduce net emissions, while asset and technology decarbonisation plans matured and were implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would be offset using carbon credits in order to achieve emission reduction requirements.
 - Carbon offset arrangements were commercially sensitive or subject to contractual confidentiality and could not be shared.
 - Woodside established a carbon business in 2018 to develop a portfolio of carbon credits and skills and expertise in managing carbon credit integrity.
 - More information on Woodside's approach and management of carbon credits could be found in Section 3.4 of Woodside's CTAP.
- (28) In response to Woodside stating that total emissions from the proposals are an insignificant contribution to the global carbon budget and therefore its proposal's should not be considered unacceptable, Woodside stated it did not agree with DEA's position and that a portion of GHG emissions associated with the project were anticipated to contribute to carbon budgets estimated to achieve the goals of the Paris Agreement.
- (29) Disagreed with DEA's position and further comments on greenwashing and that to effectively tackle greenwashing and ensure a level playing field, non-state actors needed to move from voluntary initiatives to regulated requirements for net zero. Woodside advised:
 - It was aware of the UN High Level Expert Group on Net Zero Integrity Matters – Net Zero Commitments by Businesses, Financial Institutions, Cities and Regions, as well as a range of other forums, public dialogues and reports regarding greenwashing.
 - It had recently participated in the Australian Senate Inquiry into greenwashing. Woodside's appearance transcript was available on the Parliament of Australia's Hansard. As per Woodside's statement at the Inquiry, Woodside took great care with its statements, especially in relation to climate change, so that statements were accurate and not misleading. Woodside also took care that in forward-looking statements, there was a reasonable basis for the statements to be made.

- Disagreed with DEA's position that Woodside must apply ISO's Net Zero Guidelines to its activities as part of any assessment of impacts on climate. DEA stated that Woodside had not provided information to DEA to show that its net zero plans for its activities complied and it was evident that Woodside's abatement activities amounted to dangerous greenwash.
 - Woodside carefully considers and verifies its statements and disclosures and publishes a fact checker on its website.
 - From a corporate perspective, Woodside is targeting a reduction of net equity scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner.
 - The targets mean that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2025 are targeted to be 15% lower than the starting base, and that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2030 are targeted to be 30% lower than the starting base.
 - Section 3.3 of Woodside's Climate Transition Action Plan and 2023 Progress Report explains this further. Section 3.5 on Scope 3 emissions and 3.6 on Scope 3 targets give further information.
- On 5 November 2024, DEA thanked Woodside for its detailed and considered response to DEA's concerns on this EP. DEA stated it appreciated Woodside's advice regarding the ongoing capacity feedback throughout the life of the EP and that it would respond accordingly in due course (SI Report, reference 52.12).
- On 5 November 2024, Woodside emailed DEA to confirm that consultation on this EP commenced with DEA on 9 August 2023 nearly 15 months ago (SI Report, reference 52.13). Woodside noted:
 - The volume of consultation correspondence between DEA and Woodside and Woodside's assessment of claims and objections and comprehensive responses.
 - DEA's topics of interest to date have included:
 - **(2, 9, 10, 11, 25, 28)** Climate change and greenhouse gas emissions
 - **(4, 5, 6, 7, 8)** Health and social impacts
 - **(1, 3, 16)** Consultation with relevant persons
- On 6 December 2024, DEA emailed Woodside (and copied NOPSEMA) in response to Woodside's letter dated 9 July 2024 concerning consultation on the Scarborough Operations EP and other EPs associated with the Scarborough gas project and stated (SI Report, reference 52.14):
 - **(30)** DEA rejected any implication that Woodside did not have to consult with DEA because of generalised statements made in Woodside's letter that DEA does not support the development of fossil fuels; this was inappropriate and wholly inconsistent with Woodside's obligations under the Environment Regulations.
 - **(3)** Woodside had not discharged its consultation obligations and had not provided sufficient information to DEA.
 - **(31)** Woodside had suggested DEA was not engaging in good faith and Woodside therefore ought not be required to continue consulting with DEA or providing sufficient information as requested by DEA, and that Woodside had included similar arguments in the Scarborough Operations EP regarding consultation with environmental NGOs.
 - **(1)** The purpose of consultation was not to obtain consent for an activity or to have a relevant person express support but to ensure any relevant persons' input was considered in development of EPs, and the titleholder adopted appropriate measures in response to matters raised regardless of a relevant persons' personal views on the activity.
 - **(3)** Regarding DEA's claim of insufficient information, it stated:
 - NOPSEMA guidelines state that consultation should assist the proponent to understand the external context, define "acceptable levels" of environmental impact and risk, and inform appropriate control measures and should be directed at enabling the avoidance and minimisation of impacts and risks on relevant persons and the environment.
 - There were outstanding requests from DEA for relevant information. For example:

- ❖ **(2)** Woodside's letter to DEA dated 9 July 2024 (Attachment A, item 10), stated that health and wellbeing impacts arising in vulnerable communities impacted by climate change in Australia and elsewhere were addressed in Sections 6.7.6 and 6.7.7 of the Scarborough Operations EP however Section 6.7.7 DEA could not find this information.
 - ❖ **(32)** In DEA's letter to Woodside dated 12 June 2024, DEA referred to the Commonwealth Government's updated 2030 emissions reduction target. Woodside's letter to DEA dated 9 July 2024, referred to the safeguard mechanism, and stated that its targets were "broadly aligned" with the Government's target to reduce emissions by 43% by 2030; however Woodside also stated that its target was only a 30% reduction by 2030, and only applicable to its equity emissions. As titleholder, Woodside was responsible for the entire activity. Woodside had not communicated how emissions as a whole can be consistent with the Government's 2030 target.
 - ❖ **(33)** In the same letter, DEA had also requested information on updating the conditions on Ministerial Statement 757 for the Pluto gas processing facility. Woodside's response dated 9 July 2024 referred to changes to condition 12 in Ministerial Statement 757 however that change to condition 12 was in response to an inquiry directed only to removing the aspects of the conditions which were no longer applicable. In the EPA's report on that inquiry the EPA provided additional advice that the modified conditions were still not adequate to protect the environment and a further substantive review was needed. Consequently, the changes to condition 12 do not address the EPA's concerns that further changes to Ministerial Statement 757 are necessary to protect the environment. Woodside's response made it appear that DEA's concerns arising from the EPA's identification that further action was needed to protect the environment had been addressed, when this is not the case.
 - ❖ **(26)** In the same letter, DEA raised that Woodside's 2023 "Climate Transition Action Plan" was voted against by its own shareholders. Woodside's letter dated 9 July 2024 continued to refer to that Plan; no information was provided regarding shareholders voting against the Plan.
- **(2)** DEA asserted NOPSEMA had to be satisfied that impacts and risks were acceptable in order to accept the EP; the EP did not demonstrate that greenhouse gas emissions on human health were acceptable. DEA requested a response within 2 weeks by 20 December 2024.
 - On 6 December 2024, DEA also emailed NOPSEMA (and copied Woodside) reiterating that the Scarborough Operations EP could not be accepted as impacts and risks of the activity were unacceptable. DEA stated (SI Report, reference 52.15):
 - **(2)** It wished to correct the record on a response Woodside gave to DEA in relation to a matter raised in the consultation process, and to clarify that Woodside's response was misleading and did not provide the information that DEA had requested.
 - **(14)** The EP had to demonstrate that impacts and risks would be reduced to as low as reasonably practicable and of an acceptable level.
 - **(2, 3)** 'Environment' was broadly defined and included 'people and communities', meaning impacts and risks with respect to people and communities were included within the meaning of 'environmental impacts and risks of the activity' and therefore Woodside needed to demonstrate that risks and impacts on human health caused by its activity had been reduced to as low as reasonably practicable and an acceptable level for EP acceptance.
 - **(3, 27, 28)** Woodside had not provided information to DEA demonstrating that the Scarborough Gas Project was consistent with particular net zero scenarios or that it would not have unacceptable impacts on climate.
 - **(32)** In its letter dated 12 June 2024, DEA requested information from Woodside on updating the conditions on Ministerial Statement 757 for the Pluto gas processing facility, given formal advice from the WA EPA that the greenhouse gas conditions on the WA approval for the facility were not adequate to protect the environment. Woodside responded on 9 July 2024 and referred to changes to condition 12 in Ministerial Statement 757 however, that change was in response to an inquiry directed only to removing the aspects of the conditions which were no longer applicable. In the EPA's report on that inquiry, it provided additional advice that the modified conditions were still not adequate to protect the environment and further review was needed. Consequently, changes to condition 12 did not address the EPA's concerns that further changes to Ministerial Statement 757 were necessary to protect the environment. Woodside's response made it appear that DEA's concerns arising from the EPA's identification that further action was needed to protect the environment had been addressed when this was not the case. Therefore, Woodside had not provided the information DEA requested.
 - NOPSEMA ought to be aware that the Minister had not actioned the advice from the WA EPA (i.e. that the conditions on the WA approval were not adequate to protect the environment).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(3)** The EP could not be accepted in its current form and NOPSEMA must refuse or invite resubmission of the EP under reg 33(7)(b) of the Environment Regulations.
- Due to the short timeframe for a decision, DEA requested its letter be considered as a matter of urgency and a response was requested from NOPSEMA by 13 December 2024.
- On 12 December 2024, Woodside emailed DEA to advise it was working on a response to DEA's correspondence dated 6 December 2024 (SI report, reference 52.16).
- On 17 January 2025, Woodside responded to DEA (SI Report, reference 52.17). Woodside:
 - **(30)** Confirmed it had consulted with DEA as a relevant person in accordance with the Regulations and continued to review, assess and respond to DEA correspondence, including correspondence received more than a year past the consultation closing date to prepare the EP. Woodside noted DEA's stated opposition to the oil and gas industry which provides context for consultation on this EP as it demonstrated that DEA and Woodside had differing views and positions. Given these differing positions, it was likely DEA and Woodside would have differing views on Woodside's responses to DEA feedback and Woodside's assessment of the merits of DEA's objections or claims about the adverse impact of the activity to which this EP relates.
 - **(3)** Confirmed it had given DEA sufficient information to allow DEA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, and provided a summary of consultation with DEA for this EP.
 - **(31)** Disagreed with DEA's assertion that it appeared Woodside was suggesting that Woodside ought not be required to consult with DEA. Woodside confirmed it had consulted with DEA in accordance with Regulation 25, and referred DEA to previous answers which set out a summary of consultation, and reasons why Woodside had provided context for its consultation with DEA.
 - **(1)** Agreed that NOPSEMA had published a guideline on consultation and provided a relevant paragraph from the guideline. Woodside confirmed that in line with the Regulations and the purpose of consultation, Woodside had consulted with DEA, had considered DEA's input in the development of the EP, and had given DEA sufficient information and allowed a reasonable period to allow DEA to make an informed assessment of the possible consequences of the adverse impacts of the activity on its functions, interests or activities.
 - **(3)** Confirmed it had given DEA sufficient information and provided a summary of information provided to DEA regarding this EP. Woodside further confirmed it had reviewed, assessed and responded to items and topics raised by DEA during consultation, and referred to an earlier response which set out reasons why Woodside had provided context for its consultation with DEA, including the differing views and positions of DEA and Woodside on activities, risks and mitigations proposed under this EP. Woodside further:
 - **(2)** Disagreed with DEA's assessment that Woodside has not provided DEA information that considers the health impacts of the activity and confirmed that in addition to information already provided to DEA, Woodside had included text that considered the health impacts of climate change in Section 6.7.6 of the EP. Woodside further noted, however, that since GHG emissions associated with the project constituted a de-minimis contribution to net global GHG concentrations, the potential impacts of climate change cannot be attributed to the activity.
 - **(32)** Disagreed that as operator it was responsible for the entire activity and provided the example that Woodside accounted for its net equity emissions where it was itself a joint venture partner in other assets. Woodside also confirmed the total emissions values included in the EP were calculated for the entire Scarborough project.
 - **(33)** Advised that on 15 October 2024, the WA Government released its updated GHG emissions policy for major projects and will no longer apply conditions relating to GHG emissions where GHG emissions of a major proposal are subject to other regulatory measures including the Federal SGM. Woodside confirmed the Pluto GGAP remained current until the WA Government took steps to amend the relevant Ministerial Statement in accordance with the updated policy.
 - **(26)** Advised the CTAP was put to a non-binding advisory vote and remained the relevant document setting out Woodside's corporate climate related targets.

- (2) Reaffirmed that since the GHG emissions associated with the project constituted a de-minimis contribution to net global GHG concentrations, the potential impacts of climate change cannot be attributed to the activity and noted that while health impacts were set out in the EP, assessment of impacts associated with climate change was not a requirement of the Regulations.
- (2) Confirmed that Woodside had consulted DEA and Woodside had reviewed, assessed and provided responses to DEA, including a response in October 2024 which addressed human health impacts from both air emissions and GHG emissions. Woodside noted the differing views held by DEA and Woodside may prompt DEA to re-raise items that have already been addressed by Woodside.
- (14) Advised the risks assessed in this EP aligned with those in the OPP and noted further information was set out in the Acceptability Statement at the conclusion of each risk assessment in Section 6 of the EP.
- (2,3) Noted the definition of “environment” in Regulation 5 and confirmed that, as far as was relevant, risks and impacts associated with human health were assessed in the EP.
- (3, 27, 28) Confirmed it had consulted DEA as a relevant person for this EP and provided a summary of previous responses which addressed these topics.
- (32) Confirmed Ministerial Statement 757 related to onshore approvals relevant to the Pluto Gas Plant and, as previously advised, so far as they were relevant to the EP, onshore approvals were included in the EP in Section 6.7.6. Woodside provided a summary of the WA State Government’s updated GHG emissions policy which emphasises the Federal SGM as the key piece of legislation that implements the Australian Government’s policy for managing GHG emissions at Australia’s largest industrial facilities. Further, Woodside disagreed with DEA’s assertion that Woodside had not provided the information DEA requested regarding Ministerial Statement 757. Woodside referred DEA to previous responses addressing the topic.
- (3) Confirmed it had consulted DEA in accordance with the Regulations and that consultation requirements under Regulation 25 had been met. Woodside confirmed it had reviewed and assessed the merits of any objection or claim about the adverse impact of activities to which this EP relates.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) DEA is a relevant person and has not been contacted by Woodside in relation to this EP.</p>	<p>(1) Woodside assessment: Woodside identified DEA as a relevant person for this EP and provided consultation information to DEA. Woodside also sent a proactive email addressing DEA’s previous feedback on other Scarborough EPs which was also relevant for this EP. Woodside response: Woodside confirmed DEA had been assessed as a relevant person for this EP. Woodside provided a Consultation Information Sheet to DEA on 9 August 2023 and 30 August 2023, and in the absence of a response, Woodside proactively reviewed, considered and addressed previous feedback provided by DEA on the Scarborough Project in a letter emailed on 5 December 2023. Woodside further confirmed that in accordance with the Regulations and the “purpose of consultation”, Woodside had consulted with DEA, had considered DEA’s input in the development of the EP, and had given DEA sufficient information and allowed a reasonable period to allow DEA to make an informed assessment</p>	<p>(1) Woodside has assessed DEA as a relevant person in Appendix F, Table 1 of the EP in accordance with regulation 25 of the Environment Regulations.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	of the possible consequences of the activity on its functions, interests or activities.	
<p>(2) Climate change is a health emergency Gas is a health threat Potential impacts on human health of the Project's GHG emissions, air and water pollution, including in the event of a Worst Case Oil Spill.</p>	<p>(2) Woodside assessment: Woodside does not consider that impacts on human health can be attributed to GHG emissions associated with the project. Woodside has conducted an impact assessment of GHG emissions from the Scarborough facility and measures to reduce emissions have been undertaken. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels. Woodside response: Woodside advised it does not consider that impacts on human health can be attributed to GHG emissions associated with the project. It has conducted a full assessment of the impacts and risks of the activities the subject of this EP. This includes, in accordance with the definition of Environment in the OPGGS(E)R 2023 Ecosystems and their constituent parts, including people and communities. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels. The EP assesses potential impacts to people and communities, as part of the ecosystem. An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions have been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p>	<p>(2) GHG emissions associated with the activity, and the potential impacts of climate change are described in Section 6.7.6 of the EP, and potential impacts of atmospheric emissions are assessed in Section 6.7.7 of the EP. An Environmental Performance Outcome that considers human health can found in section 6.7.7 of the EP.</p>
<p>(3) Sufficient information not been provided (including climate and health impacts). The EP should not be accepted until regulation 25 of the Environment Regulations is met.</p>	<p>(3) Woodside assessment: Woodside has provided DEA with sufficient information via the Consultation Information Sheet, the Scarborough OPP, the publicly available EP, and direct responses to DEA, to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside response: Woodside summarised its correspondence with DEA regarding this EP, which started with an initial email including a Consultation Information Sheet on 9 August 2023. The sheet provided a summary of impacts and risks associated with the activity and proposed mitigation and management measures. Woodside extended the consultation period from an initial four-week period to 4.5 months and provided substantive responses to DEA's feedback, claims and objections on 20 December 2023, 14 May 2024 and 9 July 2024. Woodside provided further information to DEA regarding this EP on 7 March 2024, 4 July 2024, 8 October 2024 and 17 January 2025</p>	<p>(3) DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>which referred to sections of the publicly available EP where information relating to DEA’s topics of interest (climate and health) can be found. Woodside also advised DEA that it would continue receiving feedback throughout the life of the EP, and that Woodside was available to meet with DEA if desired.</p>	
<p>(4) DEA stated it required further information on:</p> <ul style="list-style-type: none"> A description of the EMBA, including the potential extent and area of a hydrocarbon release / loss of containment from planned and unplanned activities. 	<p>(4) Woodside assessment: DEA has been provided with sufficient information including on the EMBA. A description of the existing environment is provided in Section 4 of the EP and in the Consultation Information Sheet. Woodside response: Woodside advised that in accordance with the Environment Regulations, Section 4.1 of the EP describes the EMBA with the extent shown in Figure 4-1. This is also depicted in the Information Sheet provided to DEA in August 2023.</p>	<p>(4) A description of the existing environment is provided in Section 4 of the EP.</p>
<p>(5)</p> <ul style="list-style-type: none"> The potential environmental impacts and risks of the activities, including in relation to a Worst Case Oil Spill. 	<p>(5) Woodside assessment: Woodside has provided sufficient information in relation to oil spill in the Consultation Information Sheet Woodside response: The potential environmental impacts and risks of activities, including from a worst-case credible loss of containment event, have been described in the publicly available EP and in the Consultation Information Sheet.</p>	<p>(5) An assessment of impacts and risks from planned and unplanned activities is described in Section 6 of the EP.</p>
<p>(6)</p> <ul style="list-style-type: none"> The potential impacts and risks on any species listed under the <i>Environment Protection and Biodiversity Conservation Act 1999 (Cth)</i>, including in relation to a Worst-Case Oil Spill. 	<p>(6) Woodside assessment: The EP includes an evaluation of potential impacts and risks on species listed under the <i>Environment Protection and Biodiversity Conservation Act 1999 (Cth)</i> including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of a vessel collision. Woodside response: Woodside advised the EP includes an evaluation of potential impacts to EPBC Act listed species including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of a vessel collision. The impact assessment provides a suite of controls that will be implemented during the activity to avoid or minimise potential impacts. Information on species relevant to the PAP is provided in various places in the EP.</p>	<p>(6) Sections 4.5 and 4.6 consider species, habitats and communities in the EMBA and Operational Areas. Impact to these species is assessed in Sections 6.7 and 6.8 of the EP. Worst case credible spill scenario impact assessment is in Section 6.8.2 of the EP. Section 6.9 considers the assessed impacts in the context of Principles of ESD, MNES and Recovery / Threat Abatement Plans.</p>
<p>(7)</p>	<p>(7)</p>	<p>(7) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> The potential impacts and risks on the Scott Reef Marine Park, and any other significant marine ecosystem, including in relation to a Worst Case Oil Spill. 	<p>Woodside assessment: Woodside does not consider there will be any credible impact on Scott Reef Marine Park as a result of the activities the subject of this EP.</p> <p>Woodside response: Woodside advised DEA it did not consider there would be any credible impact on Scott Reef Marine Park as a result of the PAP described in the EP.</p>	
<p>(8)</p> <ul style="list-style-type: none"> The potential impacts and risks in relation to Sea Country and other areas of marine or terrestrial Aboriginal cultural significance and/or heritage, including in relation to a Worse Case Oil Spill. 	<p>(8)</p> <p>Woodside assessment: Woodside has consulted with Traditional Owners and their representative groups in the development of the Scarborough EPs, including this one, and has assessed potential impacts in the EP.</p> <p>Woodside response: Woodside advised it has consulted with Traditional Custodian groups in development of the Scarborough EPs including this EP to identify any cultural values, interests, activities and functions as well as respond to any claims and feedback prior to submission.</p> <p>The impact and risk assessment for cultural features and heritage values for this EP determined that the planned activities were unlikely to result in an impact greater than negligible and unplanned activities to have a residual risk rating of moderate (or lower).</p>	<p>(8)</p> <p>Woodside recognises Traditional Custodians' connection to Sea Country in Section 4.9 of the EP. Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(9)</p> <ul style="list-style-type: none"> The total GHG emissions associated with the activities and where these GHG emissions will occur, including any flaring/venting of GHG emissions both offshore and onshore. 	<p>(9)</p> <p>Woodside assessment: Woodside has provided DEA with an overview of GHG emissions relevant to the activity, including sources and volumes, including from flaring, which are presented and assessed in the EP.</p> <p>Woodside response: Woodside advised GHG emissions relevant to the activity, including sources and volumes, were presented and assessed over 11 pages in the EP and include Scope 1 and Scope 3 emissions.</p> <p>The EP assesses both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. An impact assessment of GHG emissions from the Scarborough facility and mitigation management controls to reduce GHG emissions has been undertaken.</p> <p>Woodside flares hydrocarbons as required, to maintain the safe and efficient operation of facilities. Flaring is minimised where safe and practicable to do so, in line with facility flare targets set annually.</p> <p>Total estimated Scope 3 emissions associated with the project are estimated to be 870 MtCO₂-e.</p>	<p>(9)</p> <p>GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p> <p>Table 6-22 of the EP sets out total estimated Scope 3 emissions associated with the project.</p>

<p>(10)</p> <ul style="list-style-type: none"> The potential impacts and risks of the activities' GHG emissions in relation to global warming and climate change, including whether and how those emissions would fit within a carbon budget and emissions reduction scenarios aligned with the temperature goals of the Paris Agreement, and specifically whether the Project can be accommodated within a carbon budget for a 1.5 degree, well below 2 degree, or 2 degree warming scenario. 	<p>(10)</p> <p>Woodside assessment: Woodside acknowledges climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere however, changes in global atmospheric GHG concentration cannot be attributed to any one project.</p> <p>Woodside response: Woodside advised it acknowledged climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere however, changes in global atmospheric GHG concentration cannot be attributed to any one project.</p> <p>A portion of GHG emissions associated with the project were anticipated to contribute to carbon budgets estimated to achieve the goals of the Paris Agreement. Woodside advised its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels, therefore, if the introduction of Scarborough LNG served to reduce GHG emissions elsewhere, then in Woodside's view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentration. Regardless, to facilitate a comparison against carbon budgets, Woodside confirmed a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP. Based on this, the estimated Scarborough GHG emissions over the expected life of the project may contribute approximately 0.3% to the budget anticipated to limit global warming to below 1.5°C, or less than 0.1% to the budget anticipated to limit global warming to below 2°C. This amount is de minimis.</p>	<p>(10)</p> <p>GHG emissions in relation to climate related scenarios are assessed in Section 6.7.6 of the EP.</p>
<p>(11)</p> <ul style="list-style-type: none"> The proposed GHG emissions control measures, including details of any proposed offsets and any proposal for carbon capture and storage (CCS). 	<p>(11)</p> <p>Woodside assessment: Woodside has considered GHG abatement and control measures and will manage net direct GHG emissions from the Scarborough offshore facility in accordance with the Federal Safeguard Mechanism (SGM) baseline. Scope 3 emissions from onshore processing facilities are subject to management frameworks and regulatory approvals. CCS is not currently a feasible abatement measure for the Scarborough FPU.</p> <p>Woodside response: Woodside advised proposed GHG emissions abatement measures were described in the EP and opportunities to reduce direct GHG emissions had been found and Woodside would continue to identify and reduce emissions where practicable.</p>	<p>(11)</p> <p>GHG emissions control measures associated with the activity are considered in Section 6.7.6 of the EP. Woodside's approach to Climate Strategy and carbon offsets is described in Section 6.7.6 of the EP. Based on feedback, Woodside has included assessment of CCS in Section 6.7.6 of the EP.</p>

	<p>Net direct GHG emissions from the Scarborough offshore facility would be managed in accordance with the SGM baseline.</p> <p>For Scope 3 emissions associated with onshore processing of gas, onshore processing facilities are subject to the publicly available Greenhouse Gas Abatement Program and the North West Shelf Project Extension Proposal Greenhouse Gas Management Plan.</p> <p>For Scope 3 emissions associated with third party consumption of Scarborough gas, Woodside pursues a range of management and mitigation measures but did not have control over third party GHG emissions.</p> <p>CCS was not feasible for the Scarborough FPU.</p>	
<p>(12)</p> <ul style="list-style-type: none"> The potential cumulative impacts of the above listed impacts or risks considered in the context of existing and proposed developments and/or activities in the vicinity of the area that may be affected by the activities and/or the Project, including in relation to a Worst Case Oil Spill. 	<p>(12)</p> <p>Woodside assessment: Cumulative impact from the Scarborough Energy Project is assessed and approved in the OPP. Subsequent EPs including this EP have assessed cumulative impact potential between activities as part of the PAP, or between the PAP as a whole and other industry / stakeholder activities.</p> <p>Woodside response: Woodside advised cumulative impact is assessed and approved in the Scarborough OPP and subsequent EPs have assessed cumulative impact potential between activities and other industry / stakeholder activities. This EP identified that cumulative impact from concurrent operations is possible in relation to acoustic emissions and physical presence (unplanned interactions with marine fauna).</p> <p>With respect to cumulative impact from the PAP and other facilities or industry, while there is spatial overlap between the Trunkline and other third-party assets, no cumulative risks or impacts will credibly occur.</p>	<p>(12)</p> <p>Concurrent operations and cumulative impacts are assessed in section 6.2.1 of the EP.</p> <p>Risk assessments in Section 6.7.4, 6.7.5 'Routine Acoustic Emissions' and Section 6.8.10 'Interactions with Marine Fauna' of the EP include a cumulative impact assessment.</p>
<p>(13)</p> <ul style="list-style-type: none"> The potential cumulative impacts of upstream and downstream activities associated with the Project as a whole, including transport of gas via undersea pipeline and onshore processing of gas. 	<p>(13)</p> <p>Woodside assessment: Woodside has considered cumulative impacts of upstream and downstream activities.</p> <p>Woodside response: Woodside advised with respect to cumulative impacts between offshore and onshore activities, there are no credible circumstances that these would occur. GHG emissions associated with offshore and onshore activities are considered in the EP which details emissions from each component of the Scarborough Energy Project operations.</p>	<p>(13)</p> <p>GHG emissions associated with offshore and onshore activities are described in section 6.7.6 of the EP.</p>
(14)	(14)	(14)

<ul style="list-style-type: none"> Proponent should provide information on whether options have been explored for minimising the degree to which DEA and the environment may be affected by the activities, particularly through control measures. DEA also requested information that: <ul style="list-style-type: none"> demonstrates impacts and risk would be reduced to ALARP and an acceptable level; details of the environmental performance outcomes, environmental performance standards and measurement criteria to be adopted in relation to the activities; details of the implementation strategy and monitoring/recording and reporting arrangements for environmental impacts and risks. 	<p>Woodside assessment: The EP comprehensively assesses all risks and impacts associated with the Scarborough project and control measures manage risks and impacts to ALARP and acceptable levels.</p> <p>Woodside response: Woodside advised the EP contains a comprehensive assessment of risks and impacts associated with the Scarborough project with control measures which manage risks and impacts associated with the project to ALARP and acceptable levels. This section is over 300 pages. DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>	<p>Section 6 of the EP assesses all risks and impacts associated with the Scarborough project with control measures which manage risks and impacts to ALARP and acceptable levels.</p>
<p>(15)</p> <ul style="list-style-type: none"> A copy of any EP draft to assist in an informed decision. 	<p>(15)</p> <p>Woodside assessment: Woodside does not provide EP drafts during EP development. The Consultation Information Sheet provided to DEA on 9 August 2023 provided sufficient information. The Scarborough Operations EP is now publicly available on NOPSEMA's website.</p> <p>Woodside response: The Consultation Information Sheet provided to DEA on 9 August 2023 provided a summary of the PAP, the receiving environment, a summary of impacts and risks and mitigation and management measures.</p> <p>Woodside does not provide EP drafts during EP development or under assessment due to the potential for content to change. Also, restricting access to publicly available versions enables stakeholders to access and comment on the same information, removing potential for confusion.</p> <p>Since the EP has been published on NOPSEMA's website following completeness check, Woodside provided correspondence to DEA referring to sections of the EP containing information relevant to their interests.</p>	<p>(15)</p> <p>Not required.</p>
<p>(16)</p>	<p>(16)</p>	<p>(16)</p> <p>Not required</p>

	an EPO relating to, human health however Woodside does not consider that impacts on human health can be attributed to GHG emissions associated with the project.	
(20) The formal Consultation Report on the Scarborough OPP did not appear to be publicly available and the link provided to this document in Woodside's previous response was incorrect.	(20) Woodside assessment: The link provided in Woodside's May 2024 correspondence was correct. Woodside response: Woodside advised the link provided in its May 2024 correspondence was correct. The link provided was to all of the publicly available Appendices for the OPP, and referred DEA to Appendix M for the Scarborough OPP Formal Consultation Report.	(20) Not required
(21) The consideration of climate change impacts outlined in the OPP including the Acceptance of Scarborough Offshore Project Proposal – Statement of Reasons are no longer relevant because the Statement Of Reasons shows that the OPP was assessed against outdated criteria which are no longer accurate or relevant to the current assessment. Evidence of this is provided below	(21) Woodside assessment: Criteria in the Scarborough OPP remains in force and is current. Woodside response: Woodside advised the OPP was based on information current at the time it was accepted in March 2020 and subsequent EPs might contain more granular and updated information and modifications. The Operations EP contained a table setting out concordance of activities described in the OPP with those in the EP.	(21) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6. Appendix J of the EP contains a table setting out concordance of activities described in the OPP with those in the EP.
(22) The Statement of Reasons states "The OPP concludes that the project will not compromise Australia's ability to meet its NDC to reduce emissions by 26-28% below 2005 levels by 2030." This test is no longer relevant as Australia's NDC has been updated and strengthened considerably, and now required a significantly greater abatement effort. The updated NDC for Australia ³ is to reduce emissions by 43% below 2005 levels by 2030, which is a 15 percentage point increase in Australia's target since (<i>missing wording</i>)	(22) Woodside assessment: Australia's carbon management framework has evolved since the OPP was accepted and this is reflected in the EP. Woodside response: Woodside advised Australia's carbon management framework had continued to develop since the OPP was accepted, which was reflected in the EP. The SGM implemented the Australian Government's policy for reducing emissions at Australian industrial facilities emitting over 100 ktCO ₂ e per year including the Scarborough offshore facility and Woodside's onshore gas processing plants. The SGM set baselines on the facilities' net GHG emissions which will gradually decline. Through these limits, the Australian Government aims to help achieve Australia's emission reduction targets, as set out in Australia's NDC to the Paris Agreement of 43% below 2005 levels by 2030 and net zero by 2050. Through compliance with this and related other pieces of domestic policy, the Scarborough project is aligned with Australia's plan to meet its NDC.	(22) Further detail on the Federal SGM is described in Section 6.7.6 of the EP, <i>Management and Abatement</i> .

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>As such, the Pluto LNG Facility Greenhouse Gas Abatement Program can be considered to be an example of greenwash according to these standards, and therefore cannot be relied upon by regulators in the assessment of the acceptability of the climate impacts of the proposed projects.</p>	<p>Woodside assessment: Woodside does not agree with DEA’s position regarding greenwash. The Pluto LNG Facility GGAP is required to meet the specific requirements of Ministerial Statements 757 and now 1208.</p> <p>Woodside response: Woodside advised it was aware of the UN and ISO Net Zero Guidelines as well as other forums, public dialogues and reports regarding greenwashing. Woodside stated it took care with its statements, especially in relation to climate change, to ensure they were accurate and not misleading.</p> <p>Woodside disagrees that the Pluto LNG Facility Greenhouse Gas Abatement Program is an example of greenwash as the guidelines mentioned are not intended to apply as requirements of facility operator’s management plans for a specific activity.</p>	<p>The Pluto GGAP is described in Section 6.7.6 of the EP.</p>
<p>(24)</p> <p>As well as climate change harming human health:</p> <ul style="list-style-type: none"> Oil and gas developments result in direct health harms from pollution including cancer, reproductive and human growth harms, disease and deaths etc; The destruction of sites of spiritual significance to First Nations people by fossil fuel developments compounds psychosocial harms. 	<p>(24)</p> <p>Woodside assessment: Climate change impacts cannot be attributed to any one project and proposed activities are not anticipated to result in the destruction of sites of spiritual significance to First Nations people.</p> <p>Woodside response: Woodside advised climate change impacts are the result of global GHG emissions and cannot be attributed to any one project and that gas had a role in the energy transition.</p> <p>The proposed petroleum activities for this EP were not anticipated to result in the destruction of sites of spiritual significance to First Nations people.</p>	<p>(24)</p> <p>A contextual evaluation of climate change impacts is set out in EP Section 6.7.6.</p> <p>Potential impacts of atmospheric emissions are assessed in Section 6.7.7 of the EP.</p> <p>Potential impacts on cultural features and heritage values are assessed in Section 6.10 of the EP.</p>
<p>(25)</p> <p>Any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum:</p> <ul style="list-style-type: none"> Woodside’s assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100 year period and preferably longer; Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable 	<p>(25)</p> <p>Woodside assessment: Woodside acknowledges DEA’s comments regarding the need for emissions produced from now to be removed at a later date.</p> <p>Woodside response: Woodside advised it noted comments regarding the need for emissions produced now to be removed at a later date and advised that additional information was available in Woodside’s Climate Transition Action Plan and 2023 Progress Report regarding decarbonisation technology development and the role of removal credits over time in support of its net zero aspiration.</p>	<p>(25)</p> <p>The impact of GHG emissions associated with the project on net global GHG concentrations, and carbon budgets estimated to achieve the goals of the Paris Agreement is assessed in Section 6.7.7 of the EP. It is acknowledged in this section that global strategies to achieve the goals of the Paris Agreement may include measures such as CDR, however removal of GHG from the atmosphere at a later date is outside the scope of the PAP.</p>

<p>measures must be imposed by the regulator to ensure this takes place.</p>		
<p>(26) The CTAP and 2023 Progress Report (and climate plans in general) cannot be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because:</p> <ul style="list-style-type: none"> • The plans and targets are unenforceable; • The Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero; <p>The plans have repeatedly been rejected by Woodside's shareholders.</p>	<p>(26) Woodside assessment: Woodside does not agree with DEA's position regarding greenwash. Woodside's Climate Transition Action Plan and 2023 Progress Report provides business context and internal plans and targets – it is not enforceable by NOPSEMA. Commitments required to meet the OPGGS(E)R are contained in the Scarborough Operations EP - enforceable by NOPSEMA. Woodside response: Woodside advised its Climate Transition Action Plan and 2023 Progress Report provides business context and internal plans and targets and is not enforceable by NOPSEMA. Its commitments required to meet the OPGGS(E)R are contained in the Scarborough Operations EP, and these are enforceable by NOPSEMA. Woodside does not agree with DEA's position regarding greenwash. Woodside is targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner; referred DEA to section 3.3 of Woodside's CTAP and 2023 Progress Report; does not agree with DEA's claim regarding greenwash.</p>	<p>(26) Not required.</p>
<p>(27) Reliance on the Federal SGM as a means to align with Australian national emissions goals is inappropriate because of:</p> <ul style="list-style-type: none"> • Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement; • Ongoing project emissions beyond 2030 reduction targets; • Emissions that will result from these projects in other countries outside of Australia; 	<p>(27) Woodside assessment: Woodside does not agree with DEA's position that its plans for meeting abatement requirements rely almost entirely on uncertain and low-integrity offsets which Woodside has not identified or disclosed. Woodside response: Woodside advised it did not agree with DEA's position. The SGM implements the Australian Government's policy for reducing emissions at Australian industrial facilities emitting over 100 ktCO₂-e per year, which includes the Scarborough offshore facility and Woodside's onshore gas processing plants. The SGM sets baselines on the net GHG emissions of these facilities. These emissions limits will decline gradually. Through these limits, the Australian Government aims to help achieve Australia's emission reduction targets, as set out in Australia's NDC to the Paris Agreement of 43% below 2005 levels by 2030 and net zero by 2050.</p>	<p>(27) Further detail on the Federal SGM is described in Section 6.7.6 of the EP, <i>Management and Abatement</i>.</p>

<ul style="list-style-type: none"> Potential use of low integrity undisclosed offsets. 	<p>Through compliance with this and related other pieces of domestic policy, the project is aligned with Australia's plan to meet its NDC.</p> <p>Avoiding and reducing GHG emissions are Woodside's priority. Offsetting emissions allows Woodside to reduce net emissions, while asset and technology decarbonisation plans are matured. Where emissions prove to be hard-to-abate, residual emissions would be offset using carbon credits.</p> <p>Carbon offset arrangements are commercially sensitive or subject to contractual confidentiality and cannot be shared.</p>	
<p>(28)</p> <p>Woodside has stated that total emissions from the proposals are an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable.</p> <p>If this is true, then Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant. DEA does not accept this argument.</p>	<p>(28)</p> <p>Woodside's assessment: Woodside does not agree with DEA's comments as while Woodside acknowledges climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere, changes in global atmospheric GHG concentration cannot be attributed to any one project.</p> <p>Woodside's response: Woodside advised a portion of GHG emissions associated with the project were anticipated to contribute to carbon budgets estimated to achieve the goals of the Paris Agreement.</p> <p>Woodside advised its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels, therefore, if the introduction of Scarborough LNG served to reduce GHG emissions elsewhere, then in Woodside's view the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentration. Regardless, to facilitate a comparison against carbon budgets, Woodside confirmed a hypothetical assumption where GHG emissions associated with the project were treated as additive had been considered in the EP. Based on this, the estimated Scarborough GHG emissions over the expected life of the project may contribute approximately 0.3% to the budget anticipated to limit global warming to below 1.5°C, or less than 0.1% to the budget anticipated to limit global warming to below 2°C. This amount is de minimis.</p>	<p>(28)</p> <p>Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.</p>
<p>(29)</p> <p>The UN High level expert group on Net Zero Integrity Matters includes examples of what non-state actors must include in net zero policies and pledges to be considered genuine efforts and not greenwash:</p>	<p>(29)</p> <p>Woodside assessment: Woodside does not agree with DEA's statements regarding greenwashing. Woodside is aware of the UN High Level Expert Group's views on net zero integrity and carefully considers its statements and disclosures regarding climate change.</p>	<p>(29)</p> <p>Not required.</p>

<ul style="list-style-type: none"> • Non-state actors cannot claim to be net zero while continuing to build or invest in new fossil fuel supply. • Non-state actors must prioritise urgent and deep reduction of emissions across their value chain. • Non-state actors cannot buy cheap credits that often lack integrity instead of immediately cutting their own emissions across their value chain. • Non-state actors cannot focus on reducing the intensity of their emissions rather than their absolute emissions or tackling only a part of their emissions rather than their full value chain (scopes 1, 2 and 3). • Non-state actors require not only long-term pledges but also short-term science-based targets as well as detailed transition plans showing immediate emissions reductions and capital expenditures aligned with these targets and their net zero pathway. <p>To tackle greenwashing and ensure a level playing field, non-state actors need to move from voluntary initiatives to regulated requirements for net zero.</p> <p>Woodside has not provided information to DEA to show that its net zero plans for the proposed operations comply with the requirements. Woodside's abatement activities and net zero plans amount to dangerous greenwash.</p>	<p>Woodside response: Woodside acknowledged DEA's comments but does not agree with DEA's position.</p> <p>Woodside is aware of the UN High Level Expert Group as well as a range of other forums, public dialogues and reports regarding greenwashing. Woodside recently participated in the Australian Senate Inquiry into Greenwashing and takes care with its statements, especially in relation to climate change, to ensure their accuracy.</p> <p>From a corporate perspective, Woodside is targeting a reduction of net equity scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner.</p> <p>The targets mean that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2025 are targeted to be 15% lower than the starting base, and that net equity Scope 1 and 2 emissions for the 12-month period ending 31 December 2030 are targeted to be 30% lower than the starting base.</p> <p>Woodside's Climate Transition Action Plan and 2023 Progress Report provides context and information on its net zero plans.</p>	
<p>(30)</p> <p>Rejected any implication that Woodside did not have to consult with DEA because DEA and other environmental NGOs did not support the development of fossil fuels.</p>	<p>(30)</p> <p>Woodside assessment: Woodside disagrees with DEA's assertion and confirms it has consulted DEA as a relevant person. Woodside considers that DEA's stated opposition to the oil and gas industry provides context for consultation on this EP and confirms that DEA and Woodside have differing views and positions on matters related to environment approvals.</p>	<p>(30)</p> <p>Not required.</p>

	<p>Woodside response: Woodside confirmed it had consulted DEA as a relevant person in accordance with the Environment Regulations and continued to review, assess and respond to DEA correspondence. Woodside noted that DEA's position on the oil and gas industry and other topics like climate change, the role of LNG, the energy transition and health impacts provided context for consultation as it was likely that DEA and Woodside would have differing views on Woodside's responses to DEA's feedback and Woodside's assessment of the merit of DEA's objections and claims. Woodside noted it may be the case that, because of this, DEA may have re-raised items that had already been reviewed, assessed and addressed by Woodside.</p>	
<p>(31) Claims Woodside is suggesting DEA is not engaging in good faith.</p>	<p>(31) Woodside assessment: Woodside has consulted DEA as a relevant person in accordance with Regulation 25. Woodside has provided context to the consultation, including because it shows the differing views and positions of DEA and Woodside on activities, risks and mitigations proposed under this EP and why DEA likely continues to re-raise topics previously addressed by Woodside. Woodside response: Woodside confirmed it had consulted DEA as a relevant person in accordance with Regulation 25 and provided examples of Woodside's consultation with DEA for this EP.</p>	<p>(31) Not required.</p>
<p>(32) As titleholder, Woodside is responsible for the entire activity.</p>	<p>(32) Woodside assessment: Operators are not solely responsible for emissions associated with an activity. Woodside response: Woodside disagreed that as operator, it was responsible for the entire activity and provided the example that Woodside accounted for its net equity emissions where it was itself a joint venture participant in other assets.</p>	<p>(32) Not required.</p>
<p>(33) More information requested on EPA's concerns that further changes required to Ministerial Statement 757.</p>	<p>(33) Woodside assessment: Woodside has given DEA sufficient information on the state's oversight of GHG emissions. Further changes are anticipated to Ministerial Statement 757 due to the WA Government's updated GHG emissions policy. Woodside response: In addition to previous responses to DEA on this topic, Woodside provided an update that the WA Government had released its updated GHG emissions policy and included a summary of the policy.</p>	<p>(33) Ministerial Statement 757 and changes to the WA Government's GHG emissions policy are discussed in Section 6.7.6 of the EP under the subheading <i>Management and Abatement for Onshore Processing (Indirect) GHG Emissions</i>.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside confirmed the Pluto GGAP remained current and the condition would remain in place until the WA Government took steps to amend the relevant Ministerial Statement in accordance with the updated policy.	
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on DEA's functions, interests or activities. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DEA sufficient information to make an informed assessment of the possible consequences of the activity on DEA's functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to DEA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure: Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the initial EP consultation information provided to DEA, Woodside provided DEA with further detailed information which addressed DEA's specific feedback, objections or claims (see information given on 5 December 2023, 20 December 2023, 7 March 2024, 14 May 2024, 4 July 2024, 9 July 2024, 8 October 2024 and 17 January 2025).
- On 19 December 2023, DEA, WA claimed it had not been contacted or provided with sufficient information. Woodside disagrees with this assertion because it sent consultation emails and information for this EP to the same DEA email address it used for previous Scarborough EP consultation on which DEA had previously provided feedback via the same email address.
- Woodside proactively reminded DEA it could provide feedback on this EP and given DEA's interest in climate-related matters, provided DEA with information on Woodside's Climate Transition Action Plan and 2023 Progress Report (email of 7 March 2024).
- Woodside again proactively reminded DEA it could provide feedback on this EP and proactively provided DEA with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). Woodside also provided specific references within the EP that addresses areas of interest identified by DEA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 8 October 2024, Woodside emailed DEA addressing DEA's objections and claims and confirmed it would shortly resubmit the EP for assessment and reminded DEA that Woodside remained open to receiving feedback.
- Excluding the Consultation Information Sheet and publicly available EP, Woodside has provided DEA with volumes of additional information and responses addressing DEA's topics of interest, feedback, claims and objections in relation to this EP.
- On 19 December 2023, 24 April 2024 and 12 June 2024, DEA claimed it had not been provided with sufficient information as the information in the Consultation Information Sheet was too brief and high-level. Woodside disagrees with this assertion because DEA responded to Woodside's Consultation Information Sheet with questions and concerns regarding the specific activity, indicating the information provided was sufficient to enable DEA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- Further, DEA's feedback on the Scarborough Project, including this EP, has shown a high level of technical awareness, demonstrating a comprehensive and detailed understanding of the potential environmental risks and impacts. DEA shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above.

Reasonable Period

Woodside has allowed DEA a reasonable period for consultation in the preparation of this EP because:

- A consultation process and period were advised in the initial correspondence to DEA including when consultation would close for purposes of preparing the EP (email dated 9 August 2023). This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed DEA over 4.5-months for consultation in preparation of the EP.
- During the consultation period and following it, Woodside sent follow-up emails to DEA to remind DEA of consultation and timeframes on numerous occasions (30 August 2023, 5 December 2023, 20 December 2023, 7 March 2024, 14 May 2024, 4 July 2024, 9 July 2024, 8 October 2024, 17 January 2025).
- In this context, Woodside allowed DEA a reasonable period for consultation in preparation of the EP.
- On 24 April 2024 and 12 June 2024, DEA claimed it had not been provided with a reasonable period of time to provide feedback. Woodside disagrees with this assertion as Woodside commenced consultation on 9 August 2023 and provided 2 follow-up emails.
- As noted in consultation emails, Woodside is open to receiving feedback after EP submission and throughout the life of the EP. DEA has demonstrated it understands this and is willing to provide feedback irrespective of consultation timeframes as demonstrated in its email received on 19 December 2023, 24 April 2024, 12 June 2024, 6 December 2024).

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DEA is appropriate and adapted to the nature of interests of DEA:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to DEA because Woodside notes DEA regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity and consultation.
- From August 2023 to June 2024, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne, Pilbara and Murchison to raise awareness of the EP. These events were promoted in local newspapers and on social media.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside also provided DEA with a link to NOPSEMA's various information sheets and brochures assisting to provide DEA with context around the consultation process (9 August 2023).
- In the absence of feedback, Woodside sent a proactive letter on 5 December 2023 addressing previous feedback received from DEA on other EPs that were relevant to this EP. Based on this additional information Woodside sought further feedback from DEA and offered to meet (in addition to undertaking consultation in writing).
- As per previous consultation methods, Woodside emailed DEA to engage in consultation and also provided an alternative method for DEA to provide feedback by offering to meet with DEA in all of its correspondence. Woodside's offer to meet with DEA was not taken up by DEA. Consultation was therefore engaged in via email which aligns with DEA's style of consultation.
- Following publication of the EP on NOPSEMA's website, Woodside proactively provided DEA with correspondence on climate-related matters and directed it to the sections of the EP which contain additional information relevant to what Woodside understands to be topics of interest to DEA.
- DEA confirmed it has a fundamental objection to Woodside developing the Scarborough gas field and undertaking the activities under the EP and has an objective to phase out all fossil fuel use. On its website it states 'fossil fuels kill and harm our health' and that '...similar to addressing the health impacts of tobacco by first quitting smoking, to address the health impacts on fossil fuels we must first quit coal, oil and gas'. DEA encourages people to email their Member for Parliament and sign the petition calling on government to ban all new coal, oil and gas projects and published an open letter to The Australian in June 2024 reiterating this.' In August 2024, DEA launched its Smoke Kills campaign with the tagline 'Burning fossil fuels causes more deaths than tobacco' including a petition to the Federal Government in which it states 'Coal, oil and gas are health hazards. All of these examples inform the way Woodside's efforts to consult with DEA should be considered.
- Woodside considers a reasonable opportunity was provided to DEA as evidenced in its response on 19 December 2023, 24 April 2024, 12 June 2024 and 6 December 2024 because it provided feedback, claims and objections.

Outcomes from Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DEA provided feedback or objections or claims about the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from DEA and has assessed the merits of any objection or claim about the adverse impact of activities to which this EP relates.
 - Based on DEA's feedback, assessed the feasibility of Carbon Capture and Storage (CCS) in the EP in Section 6.7.6, *Management and Mitigation*. No new measures were adopted as a result of DEA's feedback. However, as a result of consultation, Woodside has updated its EP to include an assessment of CCS.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Friends of Australian Rock Art. Inc (FARA)

Context

FARA's website says that it 'works to protect, preserve and promote Australian rock art, particularly the petroglyphs found in the Dampier Archipelago (including Murujuga/Burrup Peninsula) in the Pilbara region of Western Australia'.^{xlv}

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

FARA lists and provides links on its website to its correspondence to Woodside including on the Scarborough Energy Project dating back to February 2020. This includes submissions on this EP, Pluto Operations EP and the Scarborough Trunkline Operations (State Waters) EP.^{xlvi} In March 2024, FARA sent a letter to the Minister for the Environment claiming 'assessment of impacts on Murujuga had been undertaken by Woodside and the WA Government – two parties with declared interests in the ongoing proliferation of industry on the Burrup and fresh, independent assessment of heritage impacts needed to be undertaken'. This letter was co-signed by academics, Traditional Custodians (including Save our Songlines), past and current politicians, and a variety of NGOs including Australian Conservation Foundation, Doctors for the Environment Australia, Conservation Council of WA, Lock the Gate Alliance and Cape Conservation Group.^{xlvii} This suggests that FARA is fundamentally opposed to Woodside's projects in the Pilbara in Western Australia.

In 2018, FARA was invited to participate in consultation on the Scarborough Energy Project OPP. FARA chose not to participate in that consultation process.

Throughout 2023 and 2024, FARA has supplied Woodside, either directly or via NOPSEMA, with a number of research papers. Woodside has carefully considered each of these papers in conjunction with other internal and external research papers. Since engaging in late December 2023 on this EP, FARA has also engaged in consultation on the Scarborough State EP and another Operations EP. Woodside has offered to meet with FARA four times on this EP however FARA has not taken up Woodside's offer.

The historical engagement and this context is important as it demonstrates that consultation is appropriate and adapted to the nature of interests of FARA.

Historical Engagement:

2018 – 2020

- FARA has been aware of the Scarborough Project (including operations) for around 6 years. In 2018, FARA was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the 3 phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - The activities under this EP were described in the OPP. FARA chose not to take up the opportunity to participate in consultation.

2022- 2023

- From 2022 to 2023 Woodside consulted FARA on the Scarborough Subsea EP. Woodside has carefully considered the topics and issues raised by FARA during consultation on the Subsea EP as well as the Scarborough D&C, Seismic and SITI EPs. A number of topics and issues raised by FARA during consultation on those EPs have been raised again by FARA as part of consultation on this EP. These include:
 - FARA wished to be consulted by Woodside on all EPs pertaining to developments which would cause or lead to damage (both direct and indirect impacts) to Murujuga's rock art.
 - The broader impacts of the Scarborough Project including climate change impacts.
 - The damage to the cultural landscape and rock art and impacts on Traditional Custodians of Murujuga and the Dampier Archipelago who would be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).
 - Endorsing and supporting the request made by Murujuga custodians [Individual 4] and [Individual 3] that they were relevant persons to be consulted by Woodside on the Scarborough gas project.
 - Increased industrial emissions on the Burrup Peninsula would almost certainly compromise the application to have the site added as a World Heritage place.
 - Its members (local workers in the gas industry and community members) would be affected by atmospheric emissions from offshore drilling, along associated pipelines, during processing, production, transport of the Scarborough gas, and gas used by Perdaman and others on the Burrup Peninsula.
 - The marine environment and endangered species would be damaged from the impacts from all pollution sources on all potential receptors.
 - Whether there was a robust decommissioning plan with funds set aside.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Acidic emissions from Woodside's Joint Venture site at the Karratha Gas Plant had been impacting on the fragile patina of the adjoining petroglyphs and emissions from Scarborough activities would further increase this impact. It was extremely urgent that Woodside's emissions-control technology, and that of the two Pluto plants, were updated to world standards in order to substantially reduce its toxic NOx and SOx emissions.
- Provided Woodside with a number of research papers.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed FARA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of specific feedback from FARA, Woodside sent a letter via email (Record of Consultation, reference 2.21) which stated the following:
 - FARA self-identified for the Scarborough D&C, SIT1 and Seismic EPs and provided feedback to Woodside which had been addressed.
 - (1) Woodside assessed FARA as a relevant person for this EP and Woodside had provided FARA with the Consultation Information Sheet on 9 and 30 August 2023. Woodside once again included a link to the Information Sheet.
 - Advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if FARA had feedback and/or would like to meet to consult.
 - Woodside had reviewed past feedback from FARA on the Scarborough D&C, SIT1 and Seismic EPs and provided assessment and response as follows:
 - (2) Preservation and conservation of Murujuga rock art and cultural landscape.
 - ❖ (2) Woodside noted research to date on the impacts of emissions on rock art was inconclusive. Woodside recognised the need for further research and supported the Murujuga Rock Art Monitoring Program (MRAMP). In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside was taking reasonable and practicable measures to minimise emissions. Pluto LNG's Air Quality Management Plan had been approved by the Western Australian EPA as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. A number of technologies had been assessed by Woodside and it understood that FARA had previously advocated for the use of "scrubber technology", which Woodside interpreted to refer to some form of selective catalytic reduction (SCR) technology. The installation of SCR systems would introduce new hazards, including significant importation and handling of ammonia or urea, may introduce risks associated with ammonia emissions when operating SCR, and had adverse impacts on greenhouse efficiency.
 - (3) Impact of Scarborough development on Traditional Custodians of Murujuga and Dampier Archipelago.
 - ❖ (3) Woodside advised it had consulted with the Traditional Custodians of Murujuga through their nominated representatives for Scarborough EPs. This consultation had included the appropriate management of cultural heritage on Murujuga, and matters raised were addressed in the EPs. Woodside had addressed the potential impacts which Traditional Custodian representatives had themselves identified, and would not comment on the content of consultation undertaken with Traditional Custodians or their representatives, which may include confidential or culturally sensitive material.
 - (4) The Scarborough gas field development would lead carbon emissions over coming decades, adding to WA's emissions and the planet's burden of climate change impacts.
 - ❖ (4) Woodside advised GHG emissions relevant to the activity, including sources and volumes, would be presented and assessed in the EP. Woodside also provided information on Woodside's climate strategy and confirmed avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would likely be offset using carbon credits in order to achieve its net zero aspiration.

- **(5)** The climate impacts of the project would cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that would arise from these environmental changes and would be particularly acute for indigenous communities in the Pilbara.
 - ❖ **(5)** GHG emissions relevant to the activity, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*. The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
- **(6)** Compromise of the Murujuga World Heritage consideration.
 - ❖ **(6)** Woodside had operated on Murujuga in the Pilbara region of Western Australia for more than 35 years. Woodside understood that the World Heritage nomination had been progressed with full awareness of existing and future industry on the peninsula and reflected the ongoing co-existence of cultural heritage and industry. Woodside's support for the World Heritage listing of the Burrup Peninsula reflected the successful co-existence of cultural heritage and industry.
- **(7)** Impacts from pollution sources on all potential receptors, specifically to the marine environment and biodiversity from catastrophic marine pollution events.
 - ❖ **(7)** While impacts to potential receptors were possible in the event of an unplanned diesel release from vessel collision (the worst case credible spill scenario for this activity), Woodside considered it adopted appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence.
- **(8)** Robust decommissioning plans with funds set aside to ensure all infrastructure is properly decommissioned.
 - ❖ **(8)** Woodside plans for decommissioning and has developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. Decommissioning activities would be subject to future EP approvals.
- **(9)** Endorse and support the requests made by Murujuga custodians [Individual 4] and [Individual 3] that they were relevant persons to be consulted on all potential impacts at each stage of the Scarborough Project.
 - ❖ **(9)** Woodside confirmed it consulted with First Nations communities and stakeholders for EPs.
- On 20 December 2023, FARA sent an email and letter to Woodside, copying in NOPSEMA (SI Report, reference 57.1), stating the following:
 - **(1)** FARA considered itself a relevant person and outlined its interests, functions and activities affected by the project.
 - **(10)** FARA received the copy of this EP Consultation Information Sheet and a letter on 5 December 2023 setting out responses to various issues raised by FARA in the past. FARA claimed Woodside had not provided sufficient information and therefore not allowed a reasonable period of time for consultation and asked that this EP not be accepted until Regulation 25 was met.
 - In addition to objections/claims/information raised in the letter, FARA also sent an Attachment A on 20 December 2023, which included the following which are a number of topics repeated from previous consultation correspondence as well as other objections/claims/information:
 - **(11)** Increased levels of direct disturbance and displacement of petroglyphs and other heritage sites and values that would result from the utilisation of Scarborough gas on the Burrup Peninsula, in particular by the proposed Perdaman urea facility.
 - **(2)** Increased intensity and duration of exposure of petroglyphs to acid gas which dissolved the outer rock patina and degraded the petroglyphs, and other emissions resulting from the processing and use of Scarborough gas on the Burrup, including in the NWS and Pluto LNG facilities and Proposed Perdaman urea plant.

- **(12)** Increased intensity and duration of other industrial impacts on the Murujuga cultural landscape, including noise, light, visual amenity, disruption of views, restrictions of access, and other social and physical impacts resulting from the processing and utilisation of Scarborough gas on the Burrup Peninsula.
- **(13)** Increased disruption to the ongoing cultural practises connected with the Murujuga landscape.
- **(14)** Impacts on the opportunity for visitors, researchers and custodians to use and enjoy the cultural landscape and to appreciate, and benefit from the World Heritage values.
- **(15)** Impacts on the economic, social and other opportunities that existed for local communities and custodians in connection with the protection and maintenance of the outstanding World Heritage values of the area.
- **(5)** Impacts connected with climate change, including impacts of extreme temperature, sea level rise, extreme weather events, wildfires, and other climate-related impacts that would be exacerbated by the Scarborough project.
- **(16)** Impacts on the ability to remediate and restore the Murujuga cultural landscape in the future.
- **(17)** A number of peer-reviewed scientific studies which demonstrated and provided evidence for impacts of industrial emissions, including LNG processing emissions on Murujuga Petroglyphs.
- **(18)** Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 provided information to support the findings of the above mentioned studies, by showing that the pH of rock surfaces within the industrial area was 4.6 or less in October/November 2022, when it was known that the outer rock patina, essential for preservation of the petroglyphs, was dissolved when rock surface pH is 6 or less.
- **(19)** FARA was aware of several options for controlling and mitigating industrial emissions, including from LNG processing and utilisation of natural gas in urea manufacturing. These included, but were not limited to:
 - ❖ Wet scrubber technology, such as commonly used in industrial applications for the removal of NO_x and SO_x from waste gas streams;
 - ❖ Catalytic and electrostatic pollution control equipment commonly used on industrial exhaust gas streams;
 - ❖ Underground disposal and sequestration of compounds such as those removed from feed gas streams in acid gas removal units, for example as currently operational but faulty at the Gorgon LNG facility on Barrow Island.
- **(2)** Impacts on Murujuga petroglyphs:
 - ❖ Estimates of volumes of emissions to air.
 - ❖ Air dispersion modelling and analysis.
 - ❖ Disclosure of what levels of industrial air emissions and what level of impact on Murujuga petroglyphs Woodside considered to be acceptable.
 - ❖ What action would be taken by Woodside if the levels of emissions and impacts considered to be acceptable were exceeded.
 - ❖ Evidence of legal authority for any and all impacts on Murujuga petroglyphs.
 - ❖ Evidence to demonstrate that the regulatory controls on emissions from Pluto LNG were adequate.
 - ❖ Independent analysis of any and all available equipment and technology for controlling atmospheric pollution on the Burrup.
 - ❖ Evidence of when and how technologies would be evaluated in the future.
 - ❖ Any other evidence, studies, engineering reports to demonstrate emissions to air would be ALARP/acceptable.
 - ❖ Evidence that there was no scientific evidence demonstrating impacts and effects on petroglyphs as a result of emissions.
 - ❖ Woodside's response and reasons for dismissing the peer-reviewed scientific literature demonstrating ongoing impact of emissions on petroglyphs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(20)** Other impacts on Murujuga cultural heritage landscape and values:
 - ❖ A description of the heritage values of the Burrup Peninsula that may be affected by the activities.
 - ❖ Independent studies and analysis of the potential impact of industrial operations connected with the processing/use of Scarborough gas on the Burrup Peninsula on the heritage values.
 - ❖ Independent assessment of impact of industrial operations connected with the processing/utilisation of Scarborough gas i.e. on economic, social and cultural benefits from World Heritage Listing.
 - ❖ Range and nature of mitigation options considered.
 - ❖ Levels of industrial air emissions and what level of impact on Murujuga heritage values Woodside considered to be acceptable (repeat question).
 - ❖ What action would be taken if levels of impacts were exceeded (repeat question).
 - ❖ Decommissioning and rehabilitation of sites used for processing and utilisation of Scarborough gas.
- **(21)** Health and social impacts to communities and visitors:
 - ❖ Health impact studies and exposure studies to identify health impacts from industrial operations.
 - ❖ Social impact studies, including access by local custodians for cultural practice.
 - ❖ Baseline social and health data for surrounding communities.
 - ❖ Disclosure of what levels of social and health impacts Woodside considered to be acceptable.
 - ❖ What action would be taken if these were exceeded.
- **(22)** Impacts and effects related to climate change and GHG emissions:
 - ❖ Sensitive environmental receptors that would be impacted by climate change inc. MNES, World Heritage Values etc.
 - ❖ Effects of Scarborough Project on these receptors (emissions from the project and from international energy scenario that the Scarborough Project is compatible with)
 - ❖ Modelling on the following parameters and effect in the landscape – temperature, extreme weather events, fire patterns etc.
 - ❖ Assessment of mitigation options for impacts at a landscape level.
 - ❖ Evidence of consultation with local Pilbara communities affected by climate change.
 - ❖ Evidence of Woodsides analysis of impacts of the Scarborough Project on local Pilbara communities that were affected by climate change.
 - ❖ Assessment of impact on local Pilbara communities including social, economic, and other costs and impacts affected by climate change.
 - ❖ Mitigation options for impacts to local Pilbara communities.
- **(23)** Requests by FARA for other documents and information included:
 - ❖ All studies, information and other material relied upon in assessing the impact of chemical emissions on the surface of rock art, mitigation strategies / options to reduce emissions etc.
 - ❖ All studies, information and other material relied upon in assessing GHG emissions and climate impacts.
 - ❖ A draft copy of this EP.

Ongoing engagement:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 12 January 2024, Woodside responded to FARA (SI Report, reference 57.2), as follows:
 - **(9)** Woodside provided information and a Consultation Information Sheet, including a link to NOPSEMA's *Consultation on offshore petroleum environment plans: Information for the community* which encourages relevant persons to engage with titleholders as early as possible, to FARA on 9 and 30 August 2023.
 - As well as directly consulting FARA, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers, and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - In the absence of a response, Woodside proactively addressed topics previously of interest to FARA (see 5 December 2023 summary).
 - Woodside had extended the consultation period from four weeks to 4.5 months.
 - Woodside reattached the responses sent proactively on 5 December 2023.
 - Sufficient information and a reasonable period of time had been provided.
 - Ongoing consultation could continue during the life of an EP.
 - FARA had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
 - In addition, Woodside sent the following responses to FARA:
 - **(2, 17)** Research to date on the impacts of emissions on rock art had not been conclusive. Woodside recognised the need for further research and supported the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside was taking reasonable and practicable measures across its operations and growth projects to minimise emissions.
 - **(11)** No disturbance or displacement of petroglyphs or other heritage sites was planned or anticipated in the development of the Scarborough Project. The processing of Scarborough gas would occur within the footprint of existing Woodside LNG processing facilities. Woodside could not comment on the activities and impacts of other proponents such as Perdaman.
 - **(11, 12, 13, 14, 15)** There would be no additional impact associated with the processing of Scarborough gas, which occurred within the footprint of existing Woodside LNG processing facilities. Woodside had consulted extensively with Traditional Custodians of Murujuga to understand their functions, interests or activities, which were not anticipated to be impacted by the processing of Scarborough gas.
 - **(5, 8, 16, 18, 19, 21)** Pluto LNG's Air Quality Management Plan (AQMP) had been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants. Modelling investigations focussed on human health and vegetation impacts as well as potential emission deposition impacts on rock art across the Burrup Peninsula. Further refinements of the modelling supporting the AQMP showed that Pluto Train 2 air emissions and impacts remain within the existing MS 757 approval. The modelling shows there is minimal difference between existing NO₂ deposition rates and the modelled future state with Pluto Train 2 in operation, both of which were within the Pluto Public Environment Review deposition monitoring projections.

- **(18)** The Summary Monitoring Studies Report explicitly cautioned against drawing these sorts of conclusions, noting that data collected in the first year of observation does not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time. The document was a summary of the more detailed Murujuga Rock Art Monitoring Program: Monitoring Studies Report 2023, which reported on the first year of monitoring studies completed from March 2022 to March 2023.
- **(19)** A number of technologies had been assessed by Woodside for emissions control at the Pluto LNG Plant. Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Environment Protection Authority (EPA) as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants.
- **(19)** Woodside had undertaken work to estimate the direct and indirect emissions from the Scarborough Project that may impact the Murujuga Petroglyphs. There were no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the Floating Production Unit (FPU). Gas would be processed and exported onshore. Pluto LNG's Air Quality Management Plan had been reviewed and approved by the EPA as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plan. Also see (10).
- **(19)** Woodside would implement relevant feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP).
- **(19)** Woodside would assess and implement Design Out and Operate Out opportunities to reduce emissions on the Scarborough FPU and emissions related to onshore processing of Scarborough gas.
- **(20)** The EP would include a description of cultural features and heritage values that occurred within the Environment that May be Affected (EMBA), as described in the Consultation Information Sheet. This included consideration of cultural features and heritage values identified during consultation with relevant persons. Cultural heritage on the Burrup Peninsula with respect to Pluto Train 2 were managed under existing Pluto LNG Plant approvals.
- **(7)** Woodside proactively planned for decommissioning and had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities would be subject to future EP approvals.
- **(5, 8, 18, 19)** Woodside monitored air quality around the Pluto LNG Plant as per the AQMP which was publicly available on the Woodside website. The AQMP identified no substance exceedances of National Environment Protection Measures (NEPM) standards in the most recent reporting period in 2022. Also see (10).
- **(20, 22)** The EP would provide a full description of the existing environment that may occur within the EMBA. This included a description of Matters of National Environmental Significance (MNES) and World Heritage Values which occurred within the EMBA and whether these would be affected.
- **(2, 22)** Woodside assessed emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report are assured by GHD.
- **(1)** Woodside consulted relevant persons in the course of preparing an EP in accordance with regulation 11A (now regulation 25) under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*.
- **(10)** The Consultation Information Sheet provided to FARA on 9 August 2023 provided a summary of the PAP, the receiving environment, a summary of impacts and risks associated with the PAP and proposed mitigation and management measures.
- **(23)** Woodside does not provide drafts of an EP while in development due to the potential for content to change. Restricting access to publicly available versions enables stakeholders to access and comment on the same information and removes potential for any confusion. The EP would be made publicly available on NOPSEMA's website once it has been submitted and was under assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Revision: 3

Page 460 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

- On 1 February 2024, FARA sent an email and letter to Woodside, copying in NOPSEMA and [Individual 33], [Individual 34] and [Individual 32] (SI Report, reference 57.3). In the email, FARA repeated a number of its topics, feedback, claims and objections and also included the following attachments:
 - EPA response to the Appeals Convenor in relation to public appeals received against EPA Report 1727 North West Shelf Project Extension Proposal – Woodside Energy Ltd Supplementary Appeal by [Individual 33] against the EPA response.
 - *The impact of industrial pollution on the rock art of Murujuga, Western Australia*. Benjamin W. Smith, John L. Black, Stéphane Hœrlé, Marie A. Ferland, Simon M. Diffey, Jolam T. Neumann and Thorsten Geisler
 - *Surface chemistry of Burrup Rock art at the Yara monitoring sites*, October 2020, Report for Yara Pilbara Nitrates by CBG Solutions. Prepared by Dr Ian D MacLeod, Heritage Conservation Solutions. Draft report. Version 1.6. 18 December 2020
 - FARA stated the following in their letter:
 - **(10)** Woodside had not provided sufficient information and requests for detailed information, had ignored a request for a draft copy of this EP and the Fox Report, and that it make this report public.
 - **(10)** Questioned the quality of information used for responses stating:
 - ❖ Woodside had ignored advice of the WA EPA to Minister for the Environment that controls on Pluto LNG facility emissions were inadequate in relation to GHG and rock protection.
 - ❖ Woodside had ignored ‘relevant test’ under the Regulations.
 - ❖ Comparisons with international best practise were irrelevant because of the uniqueness of the situation on the Burrup.
 - ❖ Woodside had a lack of understanding around relevant scientific information (some provided by FARA).
 - **(2)** FARA supported research by MRAMP but questioned if it was influenced by the fact it was funded by industry located on Murujuga and the results would not be available until 2025-2026, after plans for Scarborough were finalised.
 - **(19)** For preservation of the world unique rock art on Murujuga, Woodside must either adopt the SCR technology at all nitrogen dioxide outlets or replace gas with renewable energy-generated electricity for all heat sources used within its operations. Woodside should stop all gas flaring and recycle excess gas back through the LNG process.
 - **(11)** Woodside claimed it could not comment on Perdaman’s activities, but as they were directly dependent on Woodside’s supply of gas, sealed with an official contract, FARA believed Woodside held some responsibility for their actions.
 - **(24)** Requested specific reference to the EPA’s approval statement that Woodside’s AQMP met the requirement for ‘best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant’.
 - ❖ The EPA had subsequently recommended in public advice that Ministerial Statement 757 and amendment MS 850 should be reviewed, as current controls on GHG emissions and measures for the protection of cultural heritage are inadequate. These recommendations had not been addressed by the WA Minister for the Environment and ignored in Woodside’s response.
 - **(3, 9)** Besides the Murujuga Aboriginal Corporation, had Woodside consulted with any other Custodians concerned with the desecration of their rock art heritage such as [Individual 28], [Individual 29], [Individual 30], [Individual 27], [Individual 3], [Individual 4], [Individual 31] and several others FARA could name.
 - **(25)** Had Woodside consulted with any independent archaeologists, anthropologists about the outstanding significance of the ancient art gallery which would be eventually destroyed by Woodside’s industrial development.

- **(4)** Woodside should provide evidence as previously requested that the proposed developments and their impacts would not compromise or otherwise affect the proposed Murujuga for World Heritage listing.
- On 7 February 2024, Woodside responded to FARA thanking them for their correspondence and advising Woodside was working on a response (SI Report, reference 57.4).
- On 22 February 2024, Woodside sent an email and letter to FARA (SI Report, reference 57.5), as follows:
 - **(9)** Woodside confirmed that it provided consultation information and a Consultation Information Sheet on this EP to FARA on 9 August 2023 and 30 August 2023. In the absence of a response to Woodside’s correspondence and requests for feedback on the EP, Woodside proactively reviewed, considered and addressed previous feedback provided by FARA on the Scarborough Project and related EPs, and assessed that feedback in the context of the EP.
 - **(9)** Woodside provided this to FARA on 5 December 2023 and advised that the consultation period, which had been extended, would close on 20 December 2023. Woodside did not receive any response from FARA until 20 December 2023, the day consultation closed, in which FARA acknowledged it received both the Consultation Information Sheet and the letter on 5 December 2023. FARA’s 20 December 2023 letter included a list of claims, objections and additional information which Woodside responded to on 12 January 2024.
 - **(9)** FARA responded to this letter on 1 February 2024, copying in NOPSEMA, [Individual 32] (Climate Safe Consultant), [Individual 33] and [Individual 34], and attaching three documents in the form of reports and papers. Woodside acknowledged receipt of the reports and papers provided by FARA, and confirmed it was already aware of these reports and papers and had considered them in its assessments for the EP.
 - **(9)** FARA sought information as to who Woodside consulted during preparation of the EP and Woodside confirmed that, as well as directly contacting persons and organisations including FARA, Woodside advertised the EP in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had subject matter experts and consultation information available at a number of community events held in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - **(3)** In relation to FARA’s enquiry around consultation regarding cultural features and heritage claims, Woodside confirmed it had consulted extensively with First Nations relevant persons. Woodside also noted that under the United Nations Declaration on the Rights of Indigenous Persons that cultural heritage and other communal rights of Indigenous people must be managed through consultation with representative institutions. Direct consultation with individual First Nations persons outside of this process had the potential to undermine the cultural authority of recognised elders and democratically elected representatives. This process of understanding communally held beliefs had recently been confirmed by the Federal Court in the Munkara v Santos matter.
 - **(23)** Woodside noted that FARA provided references to various articles and academics who FARA copied to the correspondence. Woodside confirmed that it engaged with independent experts in the assessment of its projects where appropriate, including to understand the cultural significance of Murujuga. However, Woodside considered Traditional Custodians to be the primary authority on the significance of the Murujuga Cultural Landscape.
 - **(9)** Woodside confirmed that it engaged in ongoing consultation with stakeholders throughout the life of an EP and that feedback and comments received continued to be assessed and responded to, as appropriate, through the life of an EP.
 - **(8)** Many comments in the FARA letter related to alleged impacts on rock art and approvals that had been granted in relation to the project:
 - Woodside confirmed that, in its capacity as operator of the Pluto LNG Facility, it developed an Assessment of Best Practice for Minimising Emission to Air from Major Plant – Pluto Train 2 (Best Practice Report). The Department of Water Environmental Regulation commissioned an independent peer review of the Best Practice Report which concluded the Best Practice Report was comprehensive and achieved the objectives to demonstrate that adopted pollution control technology was consistent with the current best practice for air emissions control for LNG plants, adopting field proven technology in the Australian regional context. The Western Australian Minister for Environment approved the document in January 2020.

- Similarly, the Pluto LNG Air Quality Management Plan (AQMP) had been updated to incorporate Pluto Train 2 which would process Scarborough gas. The AQMP was approved by the Minister for Environment in April 2020, upon receiving advice from the EPA.
- The assessment of potential impacts to rock art and cultural heritage values from air emissions (and management of them to ALARP and an acceptable level) would be set out in the Atmospheric Emissions section of the EP.
- As to the queries relating to Perdaman, Woodside was not in a position to comment authoritatively on Perdaman's activities.
- Additionally, together with the Murujuga Aboriginal Corporation (MAC), the Western Australian Department of Water and Environmental Regulation (DWER), Yara and Rio Tinto, Woodside was supporting the five-year, A\$7 million State Monitoring Program.
- Woodside, in its capacity as operator of the Pluto LNG Facility and separately as operator of the North West Shelf Karratha Gas Plant, had committed to manage potential impacts to Aboriginal rock art on the Burrup Peninsula in accordance with the Murujuga Rock Art Strategy.
- **(9)** Woodside noted FARA's requests for internal documents and assessments and confirmed it complied with regulation 25 (formerly Regulation 11A) of the Environment Regulations in relation to the consultation process for its EPs.
 - FARA had been provided a reasonable period, reasonable opportunity for consultation and sufficient information to allow FARA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities and to provide its claims or objections.
 - The information provided by Woodside included:
 - ❖ a Consultation Information Sheet, which set out a summary of the activity, the receiving environment, impacts and risks associated with the proposed activity and proposed mitigation and management measures,
 - ❖ Woodside's 5 December 2023 responses to claims or objections from FARA,
 - ❖ Woodside's 12 January 2024 responses to FARA's claims or objections in its 20 December 2023 letter.
 - ❖ Woodside had also referred FARA to the publicly available Scarborough Project Offshore Project Proposal for further detailed information and information relating to topics of interest to FARA, including GHG emissions estimates.
- Woodside advised consultation in the preparation of the EP was closed however Woodside was available to meet with FARA to discuss the EP or to receive and consider further claims or objections from FARA.
- On 7 March 2024, Woodside proactively sent FARA an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 57.6). The email:
 - Included links to the CTAP and the ASX Announcement.
 - Re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Stated Woodside was available to meet with FARA to discuss this EP should they be interested.
- **(9)** On 29 March 2024, Woodside received a response from FARA to the Pluto Facility Operations EP consultation email (sent 27 February 2024) stating it had not been adequately consulted on the Operations EP and that it expects the feedback in all its letters to be included in the public section of the EP to allow for transparency (SI Report, reference 57.7).

- On 1 May 2024, Woodside received an email from FARA regarding a State EP which included three attachments, one of which related to this EP and was dated 26 March 2024 which has been summarised below. This letter was not previously received by Woodside. (SI Report, reference 57.8). FARA:
 - **(1)** Stated it was a relevant person and had a right to be consulted on this EP.
 - **(7)** Woodside was required to consider and address the indirect consequences of the activities the subject of this EP.
 - **(23)** Required an extensive list of information for it to assess the possible consequences of this EP on its functions, activities and interests and provided examples.
 - **(10)** Had not been provided with sufficient information nor a reasonable period for consultation for it to assess the possible consequences of this EP on its functions, activities and interests.
 - **(17)** Provided a number of scientific studies to Woodside setting out the basis of its concerns for the impact of this EP on the Murujuga rock art.
 - **(9)** Woodside's lack of consultation with other relevant persons.
 - **(4)** Lack of assessment and controls of greenhouse gas emissions and climate change impacts.
 - **(10)** Did not believe further meetings with Woodside would be of any value as Woodside would simply use these meetings to claim that it had met the requirements to consult with FARA, when in fact the basic information and time requirements for such consultation had not been met and could not be satisfied by meetings. FARA would seek to take up its concerns including in respect of the lack of adequate consultation directly with NOPSEMA, and through exercising other processes and mechanisms available to FARA as necessary.
 - **(17)** Claimed Woodside had dismissed the peer-reviewed, published academic articles on the impacts of emissions on Murujuga rock surfaces provided by FARA, and has stated that Woodside engages with its own independent experts on such matters. If this were true, FARA requested Woodside provide the previously requested scientific information commissioned or relied upon by Woodside, including the Fox report commissioned by Woodside in 2020, and other research provided by independent experts engaged by Woodside.
 - **(19)** Stated it had repeatedly asked exactly which pollution control technology Woodside would be adopting for the Scarborough/ Pluto 2 operations and where the independent analysis was into the potential application of scrubber (Selective Catalytic Reductive) and other technology options to minimise NOx and other emissions from LNG processing facilities on the Burrup.
 - **(12)** Was not aware of any other LNG facilities operating in proximity to a heritage site like Murujuga. 'Best practise' pollution control for LNG facilities elsewhere had little relevance to Woodside's LNG operations on the Burrup and did not satisfy the requirement for acceptability in this particular unique setting.
 - **(11)** Stated the operations of the Perdaman facility, and its impacts were indirect consequences of this EP which must be addressed by Woodside. The Perdaman facility will contribute to the overall damaging pollution load in the airshed, directly adding to the pollution load from the Pluto LNG facility. This pollution is likely to have both additional impacts and synergistic effects which do not appear to have been understood or quantified by Woodside.
 - **(3)** Stated Woodside's consultation with certain First Nations institutions it determines to be 'appropriate' or 'representative' and not with other First Nations individuals or organisations affected by Woodside's proposed operations did not satisfy the requirements of the Regulations to consult with all relevant persons.
- On 14 May 2024, Woodside sent an email to thank FARA for consulting on the Pluto Facility Operations EP and provided response to its claims, objections and additional information request (SI Report, reference 57.9).
- On 24 May 2024, Woodside received an email, letter and paper from FARA (copied to NOSPEMA), in relation to this EP and the Pluto Facility Operations EP (SI Report, reference 57.10). The letter reiterated points raised in previous letters including:

- **(1, 2)** FARA is a relevant person and has raised concerns regarding indirect impacts of these two EPs on Murujuga rock art as a result of LNG processing and gas use on the Burrup Peninsula.
- **(9)** Woodside has not yet provided sufficient information to FARA to make an informed assessment.
- **(8, 16, 17)** Attached is the April 2024 report entitled The Effects of Acidic Pollution on the Rock Art of Murujuga by [Individual 34] and the Murujuga Rock Art Conservation Project which contains an analysis of the MRAMP campaign. Combined with other reports and studies it shows that atmospheric emissions are causing conditions which are harmful to rock art and increased emissions will increase harmful levels. FARA looks forward to Woodside's response.
- **(9, 16, 17, 18)** A lack of scientific certainty should not prevent the adoption of precautionary avoidance and mitigation measures.
- **(19)** FARA's position is that no impact on the Murujuga rock art from LNG processing an industrial emissions is considered acceptable and wants to know what Woodside considers acceptable.
- **(9, 19)** FARA reiterates its opposition to the proposed activities.
- **(1, 9, 16)** On 28 May 2024, Woodside emailed FARA thanking it for the new information and stating it would assess it alongside other papers in the EP (SI Report, reference 57.11). Furthermore, it stated:
 - FARA has been assessed as being a relevant person for both the Scarborough Offshore Facility and Trunkline Operations EP and the Pluto Facility Operations EP. Woodside has consulted with FARA in accordance with section 25 of the Regulations and FARA has been provided with consultation information for both EPs.
- On 4 July 2024, Woodside proactively emailed FARA and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 57.12). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with FARA over the following month. Based on FARA's previous feedback on climate topics, Woodside also included a table of specific topics which FARA might be interested in, and where to find that topic in the EP, including:
 - **(5)** Further information on the assessment of potential climate change impacts could be found in Section 6.7.6 of the EP.
 - **(3, 6)** Further information on the assessment of potential impacts/risks of atmospheric emissions on rock art could be found in Section 6.7.7 of the EP, and assessment of the potential impacts on cultural heritage more broadly in Section 6.10 of the EP.
 - **(21)** Further information on the assessment of potential risks/impacts on human health could be found in Section 6.7.7 of the EP.
 - **(2, 19)** Further information on atmospheric emissions requirements met by onshore processing facilities could be found in Section 6.7.7 of the EP.
- On 16 August 2024, NOPSEMA forwarded correspondence to Woodside (sent to NOPSEMA by FARA on 1 July 2024) regarding air emissions purportedly recorded over the Dampier Peninsula, that in FARA's view were an indirect consequence of Woodside's project (SI Report, 57.13).
 - **(26)** FARA presented data allegedly showing that air quality over the Burrup was damaging petroglyphs and was set to worsen as more projects were approved, including the development of the Scarborough Gas field and other projects currently under review by NOPSEMA.
 - FARA copied NOPSEMA into its correspondence to the NWS Appeal Convenor (sent on 1 July 2024) which included a series of satellite maps allegedly supporting FARA's claim.
 - FARA advised it had been monitoring the Copernicus Satellite readings for NO₂ above the Burrup over the past 4 years and these recent maps showed how emissions had risen for the 4 years since 2021. In FARA's view this demonstrated that air pollution was affecting the rock art.
 - **(19)** FARA asked again that scrubber technology be installed on the North West Shelf facility so emissions could be cut down to near zero to preserve rock art on the Dampier Peninsula.

- **(11, 12, 16, 18, 22)** FARA also included a map of Australia allegedly showing emissions of 18 sites around Australia, with the Burrup Peninsula being the highest emitted of air pollution in the country, and queried why there was even consideration of adding to this for another 50 years and to whose benefit it was apart from profits of private enterprise.
- On 8 October 2024, Woodside emailed FARA to thank it for its feedback and for engaging in consultation with Woodside on this EP (SI Report, reference 57.14). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by FARA. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - **(3, 12, 14, 15, 16)** Advised developments at onshore processing facilities were outside the scope of the activity and aside from emissions associated with Scarborough gas, were not considered indirect impacts of the activity. These developments were subject to relevant onshore regulatory frameworks.
 - **(21)** Advised the magnitude of emissions from processing Scarborough Gas were insufficient to lead to exceedance of any relevant health criteria on the Burrup Peninsula or surrounding region. Noting the absence of any current impacts to human health from industrial activity on Murujuga and presence of a comprehensive regulatory regime including monitoring, the risk of processing Scarborough Gas to human health was assessed as Negligible.
 - **(5)** Advised that it acknowledged climate science and that climate change was understood to be caused by the net (cumulative) global concentration of GHG emissions in the atmosphere. To facilitate a comparison against carbon budgets, Woodside advised a hypothetical assumption had been used in the EP where GHG emissions associated with the project were hypothetically treated as additive, and the amount was de minimis. Therefore, Woodside did not accept that the Scarborough Project would contribute to the exacerbation of climate change impacts in Western Australia. Noting that climate change was recognised as a global issue, Woodside also provided a contextual list of projections for climate change in Australia and advised further information was available in Section 6.7.6 of the EP.
 - **(17)** Confirmed the EP contained a review of published studies and literature, including information provided by FARA. Woodside provided a statement from MRAS that the data currently available did not allow for a conclusive answer on whether emissions were impacting Murujuga's rock art. Woodside confirmed it would continue to assess science on the topic and would provide information it became aware of to MRAS in recognition of the primacy of the program.
 - **(19)** Noted that the design of onshore processing facilities was outside the scope of the activity in the EP. However, Woodside also:
 - Advised the installation of wet scrubbers or Selective Catalytic Reduction (SCR) on turbines exhausts may result in a reduction in NOx emissions, however it also resulted in ammonia emissions, which was also a potential emission of concern being monitored by MRAMP. Woodside also noted it was not currently aware of instance of retrofitting to LNG mechanical drive turbines. However, in response to feedback, consideration of SCR had been included in Section 6.7.7 of the EP.
 - Noted Electrostatic pollution control equipment may be effective in removing particulates from exhaust streams but this was not considered a significant potential impact associated with onshore processing of Scarborough Gas.
 - Advised CCS was a mature technology which presented a proven solution to abate large-scale industrial GHG emissions. CCS was not currently in place for offshore activities or onshore facilities processing Scarborough gas, however Woodside was conducting feasibility studies to address onshore emissions generated through Scarborough gas processing. In response to feedback, consideration of CCS has been included in Section 6.7.6 of the EP.
 - **(2)** With respect to FARA's feedback on impacts to Murujuga Petroglyphs, Woodside:
 - Provided background on the Department of Water and Environmental Regulation (DWER)-commissioned Ramboll Australia Pty Ltd study on air emissions in the Murujuga airshed. Ramboll (2021) indicated that NOx loads from industrial sources were estimated to be 13,937 tonnes per year and were forecast to reduce to 12,052 tonnes per year by 2030.

- Confirmed it had committed to supporting the MRAS and MRAMP, including monitoring and implementing any outcomes as relevant. Woodside provided statements from MRAS which outlined how the strategy would provide protection for the rock art.
 - Advised there were no planned impacts to Murujuga rock art as a result of onshore processing of Scarborough Gas, and that the *Aboriginal Heritage Act 1972 (WA)* and other legislation provided for the protection and preservation of Aboriginal sites and objects in WA.
 - Advised facilities associated with the onshore processing of LNG were not subject to the OPGGS(E)R and provided a list of relevant legislation, approvals and governance measures that were in place.
 - Noted that under the regulatory conditions and air quality management plans, operators were required to implement a number of controls and risk management practices related to air emissions. Woodside provided examples of best practice technologies implemented to minimise air emissions in Pluto LNG (and Train 2) design and operation.
 - Advised there were no ongoing requirements for additional technologies to be considered. Woodside has committed to implement outcomes of the MRAS program which may include consideration of further NOx reduction alternatives.
 - Noted there had been several independent studies and rock art monitoring initiatives since the mid-2000s, none of which had conclusively demonstrated a causal link between degradation of rock art and industrial activity. Woodside would continue to assess science on this topic.
- (20) Advised that further information on the cultural features and heritage values of the Murujuga Cultural Landscape had been added to the EP. With regards to the potential impact of industrial operations, Woodside referred to the aforementioned DWER-commissioned Ramboll 2021 study and the precautionary approach taken to minimise NOx emissions at onshore facilities. Woodside also advised decommissioning of the Scarborough offshore facility and infrastructure was described in Section 7.3 of the EP, however the decommissioning of onshore gas processing facilities was outside the scope of the activity proposed in the EP.
- (22) Noted the contextual evaluation of climate change impacts in the EP included environment receptors, and that outcomes from publicly available and reputable sources such as the Intergovernmental Panel on Climate Change were drawn upon to provide the contextual evaluation. Woodside also advised:
- In accordance with Woodside’s decarbonisation strategy as relevant to Scope 1 GHG emissions, a scope of work had been ongoing through multiple project phases to design and operate out direct GHG emissions. A number of opportunities to reduce direct GHG emissions or reduce intensity were identified, resulting in an estimated 13% reduction compared to reference case design. Woodside aimed to continue identifying and, where practicable, reducing operate-phase emissions. Onshore processing facilities were subject to GHG emissions management frameworks, and Woodside continued to pursue a range of management and mitigation measures regarding Scope 3 emissions associated with third-party consumption of Scarborough gas.
 - Noted in the EP that AR6-WGII contained information about projected impacts to health and wellbeing for the Australasian region. Therefore, Woodside does not accept that the Scarborough project will contribute to the exacerbation of climate change impacts in Western Australia.
 - Noted in the publicly available EP that AR6-WGII contained information about project impacts to health and wellbeing for the Australasian region. Therefore, Woodside does not accept the Scarborough Project will contribute to the exacerbation of climate change impacts in Western Australia.
- (23) Confirmed that studies and literature relevant to the potential for accelerated anthropogenic change to Murujuga rock art had been reviewing during the course of preparing the EP, and the Operations EP was publicly available on NOPSEMA’s website.
- (4) Disagreed with FARA’s estimate of GHG emissions associated with the Scarborough Project. As described in the EP, the total lifecycle emissions associated with the project was estimated to be 880 MtCO₂-e.
- (7) Advised sections 6.7.3 to 6.7.12 of the EP contained risk assessments of all planned emissions and discharges. Each of the risk assessments identified potential environmental receptors and impact, as well as controls to limit to ALARP and Acceptable levels. Woodside noted the worst-case credible spill scenario for the activity was an unplanned diesel

release from vessel collision and the largest potential spill volume had been used to model the EMBA for the activity. The EMBA was then used to frame species, environmental communities and habitats which might be impacted by a worst-case loss of containment scenario.

- On 25 October 2024, Woodside emailed FARA in response to correspondence FARA sent to NOPSEMA on 1 July 2024 regarding information FARA considered relevant to the NWS Project Extension appeals so that NOPSEMA could consider this while assessing information relating to the Scarborough Gas field (SI Report, reference 57.15). Woodside:
 - (26) Advised it was not possible to comment accurately on the satellite imagery as FARA did not include context on the collection methodology through the atmosphere, relevance of dates selected, and applicability of the units of measure. Also the relationship between “satellite readings of NO₂” and the potential impact to ground level receptors such as Murujuga rock art was also not clear. Woodside disagreed that emissions had risen for the 4 years since 2021 and that air pollution was affecting rock art at an increasing pace.
 - For Murujuga rock art, Woodside and the Murujuga Rock Art Monitoring Program (MRAMP) undertook more relevant techniques which were jointly approved by the Murujuga Aboriginal Corporation (MAC) and the Department of Water and Environmental Regulation (DWER). In December 2023, an MRAMP report stated that results remained inconclusive with regards to whether industrial air emissions were resulting in anthropogenic change to rock art and recommended further studies were undertaken. Woodside supports the MRAS and MRAMP, including by monitoring and implementing relevant outcomes.
 - (19) In regard to scrubber technology, Woodside referred FARA to a response on this topic in its correspondence on 8 October 2024, which noted that the design of onshore processing was outside the scope of the activity described in the EP but provided a position on the feasibility of wet scrubber technology, catalytic and electrostatic pollution control, and underground disposal of compounds. In response to FARA’s feedback, consideration of SCR and CCS as potential controls had been considered in the relevant sections of the EP.
 - (11, 12, 16, 18, 22) With regard to FARA’s map entitled of Australia’s major LNG projects and the comment that the Burrup Peninsula was the highest emitted of air pollution in the country, Woodside referred FARA to its previous responses on the impact of industrial emissions, including LNG processing emissions on Murujuga petroglyphs in its correspondence of 8 October 2024.
- On 25 October 2024, NOPSEMA provided Woodside with correspondence from FARA, sent to NOPSEMA on 17 October 2024, including a report by the Australian Security Leaders Climate Group entitled Too Hot To Handle, The Scorching Reality Of Australia’s Climate-Security Failure (May 2024). FARA states the Federal system to manage emissions is inadequate, the WA EPA has reduced powers, and seeks NOPSEMA to be brave. (SI Report, reference 57.16). Woodside did not respond to FARA because the correspondence is not feedback on the activity, it was provided to NOPSEMA as a general statement.
- On 31 October 2024, FARA emailed to thank Woodside for the reminder, referring to Woodside’s correspondence to FARA dated 25 October 2024. FARA stated it was still working on a response as it had new information to put forward (SI Report, 57.17).
- On 1 November 2024, Woodside emailed FARA to confirm that consultation on this EP commenced with FARA on 9 August 2023 nearly 15 months ago (SI Report, reference 57.18). Woodside noted:
 - The volume of consultation correspondence between FARA and Woodside and Woodside’s assessment of claims and objections and comprehensive responses.
 - FARA’s topics of interest to date which have included:
 - (2, 11, 18, 19) Impacts on rock art
 - (3, 12, 13, 14, 15, 16, 20) Cultural heritage
 - (5, 21) Health and social impacts
 - (4, 22) Climate change and greenhouse gas emissions

- **(10, 23)** Consultation with relevant persons.
- On 29 November 2024, FARA emailed Woodside further feedback on this EP. This correspondence included a cover letter, an Attachment 1 (a copy of a letter sent from FARA to NOPSEMA dated 10 July 2024) and an Attachment 2 (FARA's additional responses to Woodside's consultation update of 8 October 2024). (SI Report, reference 57.19).
 - Cover letter:
 - **(1-26)** FARA reiterated that information provided to FARA for this EP had been insufficient and Woodside had continually refused to provide FARA with a draft EP.
 - **(10)** Woodside had submitted the draft EP on 3 July 2024 without consulting FARA further and adequately addressing FARA's concerns.
 - **(10)** FARA's letter dated 10 July 2024 to NOPSEMA containing additional feedback regarding indirect consequences of the activities had been ignored by Woodside in its consultation update sent to FARA on 8 October 2024.
 - **(10)** Woodside had resubmitted the EP (in November 2024) and had not given FARA adequate time to respond to Woodside's 8 October 2024 consultation update.
 - **(27)** The 8 October 2024 consultation update contained numerous misleading statements that misrepresented FARA's concerns.
 - **(10, 27)** Consultation had not been in good faith and had not meaningfully addressed unacceptable threats to irreplaceable heritage of universally outstanding value.
 - Specifically, Woodside had not:
 - ❖ **(10)** sufficiently met the requirements for relevant person consultation or sufficiently addressed FARA's concerns raised in the consultation process to date and has in some cases completely ignored or failed to respond to FARA's input. Woodside has not adequately understood potential impacts to FARA's interests and activities.
 - ❖ **(2)** adequately understood or assessed the indirect consequences of its proposed activities, including the serious risk of significant and unacceptable impacts to irreplaceable cultural heritage values
 - ❖ **(7)** disclosed what it believed to be acceptable levels of impact are for the purposes of this EP; or demonstrated that its proposed actions would reduce these risks to ALARP or address the impacts on FARA's functions and activities.
 - Further responses were provided in Attachment 1 and 2.
 - Attachment 1
 - **(10)** Regarding assessment of relevant person consultation requirements, FARA's feedback included that:
 - ❖ Woodside had not met relevant person consultation requirements including providing sufficient information and a reasonable period.
 - ❖ Woodside had not met FARA's request for further information concerning indirect impacts on Murujuga rock art, heritage sites, and climate.
 - ❖ Other information not provided was concerned with Woodside's definition of 'acceptable impact'; Woodside's proposed mitigation measures and outcomes these mitigation measures would achieve; and Woodside's response to various scientific studies and other evidence that were submitted by FARA during the course of consultation including peer reviewed scientific papers and the WA government's recent rock art monitoring studies.
 - ❖ Responses provided by Woodside did not address FARA's requests; nor provide sufficient information; Woodside either withheld information from FARA, or misrepresented and misunderstood the nature and significance of the information FARA had provided to Woodside.
 - ❖ FARA had been denied sufficient time for consultation. Matters concerning FARA were technical and required expert analysis that FARA was forced to undertake at its own expense and required time not accommodated by Woodside.
 - ❖ Published information provided by Woodside was inadequate for other relevant parties likely affected by the proposed activities and impacts on Murujuga rock art, heritage, and climate.

- ❖ FARA had not had sufficient time to examine the draft EP which contained new information including Woodside's interpretation of scientific evidence about rock art impacts and assessment of acceptable impact on cultural heritage values and therefore was only able to provide a preliminary and incomplete response to the Draft EP.
- **(7, 22)** Published information also reflected Woodside's interpretation of the EMBA by direct impacts; it did not provide detail regarding indirect impacts.
- **(25)** Woodside had not consulted with a number of rock art experts and scientists whose publications had been dismissed, misunderstood or misrepresented by Woodside.
- **(3, 10)** Traditional Custodians, Language groups and Native Title groups, and other Aboriginal organisations, had not been made sufficiently aware of the indirect consequences of the proposal on Murujuga rock art and their cultural heritage.
- **(2, 11)** FARA rejected Woodside's risk analysis in the Draft EP regarding potential impacts on Murujuga rock art which appeared to be based on:
 - ❖ mischaracterisation of the extent and nature of the impact to the National Heritage Values in a way which ignored that the deposition of acidic material on the Murujuga rock art was in itself a notable alteration, or modification of the values already demonstrably occurring at current pollution levels
 - ❖ mischaracterisation and misunderstanding of the available scientific evidence presented to Woodside which placed beyond doubt that Murujuga rock art was certain to be further impacted through the dissolution of the rock outer crust at the measured acidity levels
 - ❖ failure to consider all of the indirect effects of the processing, combustion and use of Scarborough gas on the Burrup Peninsula.
 - ❖ FARA also rejected claims in the Draft EP that Woodside had demonstrated impacts on Murujuga rock art would be reduced to ALARP and that they were acceptable.
- **(19)** FARA stated no evidence in the draft EP that mitigation measures included consideration of all potential mitigation options and independent analysis of which options were reasonably practicable. Woodside had not responded to FARA's repeated requests to provide information on technologies to reduce/mitigate acid gas emissions, and requests for information on why technologies suggested by FARA were not proposed to be implemented by Woodside.
- **(24)** Woodside appeared to rely on inadequate regulatory instruments including State approvals for the Pluto facility under the EPA and EPBC approvals which provided no protection for Murujuga rock art or climate and did not demonstrate that impacts would be managed to ALARP. Even if ALARP were achieved, this did not mean residual impacts could be considered acceptable.
- **(2)** FARA's position remained that no impact from industrial activities on Murujuga rock art was acceptable consistent with the National Heritage principles and other provisions of the EPBC Act, and commitments in NOPSEMA's EPBC Approved Program.
- **(2)** The statement that '*Processing of gas from the Scarborough project is therefore not predicted to increase NOx within the Murujuga airshed beyond historic maximum levels, which as described in section 4.9.5 has resulted in no scientifically conclusive evidence for anthropogenic change to rock art on Murujuga*' was baseless.
- **(2, 18)** It was indisputable that the surface of Murujuga rock art was currently impacted by acid gas pollution.
- **(2)** If the proposed 40% reduction of NOx emissions from the North West Shelf LNG facility by the end of 2030 were achieved, combustion and processing of Scarborough gas on the Burrup Peninsula would be responsible for ~30% of the total acid gas pollution that would be released annually after 2031. The cumulative impact of this pollution, and its contribution to the acidification of the surface of Murujuga rock art (already observed), had not been addressed in the draft EP.
- **(2)** The indirect consequences were likely to be in breach of the WA Aboriginal Heritage Act.
- **(20)** Relevant for NOPSEMA's assessment, the EPBC *Significant Impact Guidelines* provided that an action was likely to have a significant impact on National Heritage Values of a declared National Heritage Place if there were a possibility that it would cause one or more of the National Heritage values to be degraded or damaged, or one or more of the National Heritage values to be notably altered, modified, obscured or diminished.

- **(2, 20)** FARA contended that the deposition of acid material on Murujuga rock art through industrial pollution, leading to the rock art having measured surface acidity of 100 to 1000 times higher than background levels is a *notable alteration or modification* to the National Heritage values, and should also be regarded as a form of degradation and damage to these values. (31)
- **(2, 15, 20)** It was clear impact to the National Heritage Values was occurring to rock art as a result of industrial pollution, primarily from Woodside facilities including the Pluto LNG processing facility. Studies also showed damage on the outer patina on rock art images in other ways.
- **(2, 3, 15, 20)** FARA observed the release of industrial pollution was currently causing significant impacts on the National Heritage values of the Dampier Archipelago National Heritage Place through at least two mechanisms:
 - ❖ deposition of acidic material on the Murujuga rock art
 - ❖ inevitable degradation of the outer surface of the rock art as a consequence of this acidification.
- **(2, 7)** The draft EP only focused on the second impact through acid dissolution of the surface of rock art, and entirely ignored that an unacceptable impact was already occurring through the deposition of acid material on the rock art. This appeared to be a deliberate mischaracterisation of the nature of the impacts of the proposed Scarborough Operations by Woodside.
- **(2, 7, 22)** FARA asserted Scarborough operations would result in at least 2231 tonnes per year, or up to 30% of future total acid emissions from all sources in the Burrup airshed and that Woodside had not offered any plausible explanation for the ongoing deposition of acidic material on Murujuga rock art, other than the acid gas pollution from industrial sources. It could be concluded that the proposed Scarborough operations would be a primary cause of both the deposition of acid material on rock art and the dissolution of the surface of the rock art as a result of that acidification. Neither are acceptable for the purposes of the Regulations and the commitments in the NOPSEMA EPBC Approved Program.
- **(2, 7, 20, 22)** Approval for this EP would increase both the severity and duration of these significant impacts on the National Heritage Values, which are already unacceptable at current levels.
- **(11)** FARA stated Woodside had claimed the impacts of the Perdaman facility were not relevant to the assessment of the EP because the facility was not under Woodside's operational control but this was inaccurate, and is the wrong test to apply for the purposes of assessment of indirect consequences according to the EPBC Indirect Consequences Policy.
 - ❖ All impacts of the Perdaman facility on the heritage values must be considered indirect impacts of the proposed activity and all are unacceptable.
- **(17)** FARA included a report for additional analysis entitled Woodside's Acid Test – How acidic emissions from Woodside's LNG operations are destroying ancient rock art at Murujuga.
- **(10)** FARA comments were not to be taken as a complete presentation of its concerns regarding this EP due to the limited time provided, and NOPSEMA could not approve the EP because:
 - ❖ Woodside had not met requirements regarding relevant person consultation and in relation to indirect consequences, especially regarding impacts on Murujuga rock art.
 - ❖ Woodside's assessment of impacts on the Murujuga rock art was fundamentally inadequate, based on erroneous conclusions not supported by the evidence, and failed to consider unacceptable impacts already demonstrably occurring.
 - ❖ Approval of the proposed EP would be contrary to the Regulations and the EPBC Approved Program, and would result in ongoing unacceptable and irreversible impacts to National Heritage Values.
- **(10)** FARA was seeking further legal advice; advised NOPSEMA it would action to ensure consultation requirements were met; sought an urgent meeting with NOPSEMA.

- Attachment 2 – this document contains responses from FARA on 29 November 2024 to Woodside’s consultation update of 8 October 2024
 - **(2, 11, 12, 13, 14, 15, 22)** Regarding Woodside’s response that developments at onshore processing facilities were outside the scope of the activity proposed in the EP, and aside from emissions associated with processing Scarborough gas, were not considered indirect impacts of the activity, FARA stated that Woodside had appeared to draw an arbitrary distinction between emissions caused by processing Scarborough gas and other impacts consequences of processing Scarborough gas. FARA’s concerns included visual amenity, impacts on current and future economic, social and other opportunities, and impacts on cultural practices and responsibilities caused by visual impact, noise, light pollution and other physical impacts of the Pluto processing facility on the Burrup and the Perdaman fertiliser facility. Regarding Woodside’s response that these developments were subject to relevant onshore regulatory frameworks and approvals requirements, FARA responded that regulatory arrangements did not fully address the impacts of the facilities on Murujuga Cultural Heritage and were insufficient to address the impacts on FARA’s functions, interests and activities.
 - ❖ FARA assumed the regulations and approval instruments Woodside claimed provided adequate protection of Murujuga rock included:
 - Woodside’s Section 18 consents held under the Aboriginal Heritage Act.
 - The Ministerial Statement under the Environmental Protection Act
 - The DWER Operating License under the Environmental Protection Act
 - The EPBC approval instrument.
 - ❖ FARA stated these should not be relied upon by NOPSEMA and listed reasons and provided evidence of their inadequacy and also stated that the regulatory arrangements in place concerning the Pluto LNG processing facility and Perdaman fertiliser plant generally involved the application of different standards which were not necessarily transferrable to, or appropriate for the purposes of this EP which was being assessed against different criteria. These regulatory frameworks did not provide adequate certainty that impacts would be managed to ALARP and meet other requirements.
 - **(3, 21)** Regarding Woodside’s point that the risk of processing Scarborough gas to human health was assessed as Negligible, FARA replied that:
 - ❖ Woodside had not provided health data supporting this statement
 - ❖ Had failed to undertake assessment of health impacts, and its claimed absence of data did not mean there was an absence of impact, including to the mental health of Traditional Custodians and others which was callous and arrogant
 - ❖ FARA regularly spoke with Traditional Custodians who refuted this and had been distressed regarding the manner in which Woodside had undertaken developments in a way which had denied Custodians the right to be consulted about the impacts and the right to free, prior and informed consent
 - ❖ Woodside had never attempted to understand health impacts of its operations and provided examples of impacts on Traditional Custodians.
 - **(5, 22)** Regarding Woodside’s statement that in its view LNG could have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes, FARA stated that this role was highly contested and at best uncertain and LNG was now the largest source of emissions growth globally and Woodside’s ‘view’ could not be relied upon by NOPSEMA or others where it was not supported by enforceable measures.
 - **(5, 22)** As far as Woodside’s analysis that Nationally Determined Contributions (NDCs) and key policy documents of key customer nations that LNG had an important role in supporting their decarbonisation plans under the Paris Agreement was concerned, FARA stated that NDC’s in customer countries may or may not be aligned with global 1.5 temperature goals or carbon budgets, and may not be backed by policies, programs and measures that will ensure they are achieved. The role of LNG in achieving customer country NDC’s was at best theoretical only and not suitable as a measure for acceptability of GHG emissions arising from the proposed Scarborough operations.
 - **(5, 22)** FARA rejected Woodside’s position that the Scarborough project would not contribute to the exacerbation of climate change impacts in Western Australia and stated it appeared to be linked to the assertion that emissions will be ‘de minimus’ because:
 - ❖ the ‘carbon budget’ referred to by Woodside relied on hypothetical levels of carbon removal from the atmosphere which was unreasonable and implausible

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Woodside's emissions estimates were flawed.
- **(2)** FARA asserted that Woodside's statement that if gas from the Scarborough project was processed at the Karratha Gas Plant, it would displace another source of gas processed at this facility so would not increase NOx emissions was misleading.
 - ❖ The statement appeared to be the basis for many of Woodside's claims regarding the contribution of Scarborough operations to emissions of NOx and SOx from the Pluto LNG facility and had no supporting evidence.
 - ❖ The Pluto LNG facility was being expanded with the sole purpose of processing Scarborough gas.
 - ❖ It was wrong and misleading to suggest that these emissions would occur even if the Scarborough Operations were not approved.
- **(2, 18)** FARA also disputed Woodside's statement that processing of gas from the Scarborough project was not predicted to increase NOx within the Murujuga airshed beyond historic maximum levels, which had resulted in no scientifically conclusive evidence for anthropogenic change to rock art on Murujuga. FARA claimed:
 - ❖ this was misleading
 - ❖ MRAMP clearly stated that ALL monitored sites on Murujuga demonstrated highly elevated levels of acidity on the surface of rocks under monitoring. This acidification of the surface of the rock art is a measured and observable anthropogenic change, irrespective of whether secondary damage is occurring as a result of this acid deposition. Woodside had offered no alternative explanation for this acidification, other than the approximately 25 tonnes per day of acid gas emissions that are being emitted from Woodside's own LNG production facilities.
- **(2, 18)** FARA further disputed Woodside's statement that there were no planned impacts to Murujuga rock art. This statement was misleading as it denied impacts were already occurring as a result of Woodside's LNG processing. Woodside also stated it would continue to comply with The Aboriginal Heritage Act 1972 (WA) and other legislation. FARA argued:
 - ❖ Pollution from LNG processing on Murujuga rock art was a measured and documented phenomenon confirmed by the MRAMP.
 - ❖ The deposition of material and changes to pH levels of rock art surface was a planned impact, to the extent Woodside plans the ongoing release of emissions which cause this impact.
 - ❖ Woodside did not hold authorisation under the Aboriginal Heritage Act 1972 (WA) to alter or impact Murujuga rock art; these impacts were never disclosed or considered by Woodside at the time of applying for Section 18 authorisation and have not been considered or addressed through the relevant processes afforded by that legislation.
 - ❖ Woodside's continued reliance on state regulation as a defense against ongoing impact to rock art was deceptive as it implied ongoing impacts to rock art were adequately addressed and regulated through these processes, which was not the case.
- **(2, 18, 24)** Regarding Woodside's response concerning Condition 11-1 of Ministerial Statement 757, FARA stated that all the processes referred to by Woodside in its response occurred prior to the 2023 EPA report *1734 Pluto Liquefied Natural Gas Development (Site B Option) Burrup Peninsula, Shire of Roebourne – inquiry under section 46 of the Environmental Protection Act 1986 to amend Ministerial Statement 757* and that according to the WA Environmental Protection Act, it was up to the Minister for the Environment to initiate such a review and this had not occurred.
- **(2, 19, 24)** Regarding Woodside's comment that there were no ongoing requirements for additional technologies to be considered and that it was difficult to retrospectively apply new technologies in an operating facility, FARA responded it agreed and that as the Pluto Train 2 facility was under construction there was opportunity to install additional control measures or electrification. For existing facilities, the 'difficulty' of retrofitting was not the primary consideration, but had nonetheless not been demonstrated by Woodside with reference to independent studies and analysis.

- **(2, 18)** In response to Woodside's statement that it had committed to implementing outcomes of the MRAS program which might include consideration of further NOx reduction alternatives, FARA stated it was not aware of any enforceable measures or undertakings that committed Woodside to 'implementing the outcomes of the MRAS program' and it was not clear to what 'outcomes' Woodside was referring. Woodside had not produced evidence of such commitments.
- **(2, 18)** FARA asserted Woodside's assessment of impacts of industrial emissions on Murujuga rock art continued to centre claims of scientific uncertainty surrounding the extent to which observable impacts were occurring or would occur. However, this misunderstood the nature of the impact that was already occurring in a way that leads to the misapplication of the relevant regulations and assessment procedures required for the EP.
- **(2, 18, 19)** FARA stated Woodside's comments regarding options for further controlling acid gas emissions revealed Woodside had not demonstrated that these emissions from processing Scarborough gas would be reduced to ALARP and acceptable levels. Woodside:
 - ❖ Had not provided studies, evidence or independent assessment despite FARA's repeated requests
 - ❖ Had not stated what it believed were acceptable levels of acid gas emissions, or acceptable levels of acid deposition on the surface of rock art nor what contribution Scarborough gas processing and use on the Burrup would make to this acceptable level. Without this, it could not be determined whether the impact of the proposed operations was acceptable. A zero measured elevated acidity on the surface of Murujuga rock art was acceptable.
 - ❖ Had not addressed options such as electrification of LNG trains.
 - ❖ Woodside's claims regarding the potential additional impacts or other consequences of installation of wet scrubbers or other technology were simply statement not evidence supported.
 - ❖ Had misunderstood FARA's comments regarding the use of geosequestration. FARA did not necessarily advocate for such measures, but Woodside had not investigated or addressed FARA's comments about them.
- On 21 January 2025, Woodside responded to FARA's correspondence (SI Report, reference 57.20). Woodside confirmed it had assessed the merits of FARA's objections or claims about the adverse impacts of the activity, and that no new measures were adopted or proposed to be adopted because of this correspondence. Woodside confirmed it would continue to review, assess and respond to relevant claims and objections throughout the life of the EP.
 - Regarding FARA's cover letter to Woodside, Woodside:
 - **(1 - 26)** Confirmed it had consulted FARA as a relevant person for this EP. Woodside provided a summary of what its consultation with FARA had included. Woodside confirmed it had reviewed, assessed and responded to FARA's topics of interest and provided an overview of its response on each topic: Impacts on Murujuga rock art as a result of onshore processing of Scarborough gas and regulatory frameworks (including text from the latest version of the EP which regarding updates to the WA State Government's GHG emissions policy and EPA guidance); studies and publications on Murujuga rock art; impact assessments – direct and indirect impacts; cultural heritage and cultural heritage values; health and social impacts; climate change, greenhouse gas emissions and climate budgets; consultation with relevant persons; and versions of the EP. For these eight topics, Woodside provided a summary of FARA's past feedback, claims and objections on each topic, as well as Woodside's response.
 - **(10)** Confirmed the EP was submitted to NOPSEMA in accordance with the Regulations and that Woodside had consulted FARA as a relevant person. Woodside reiterated that it would continue to review, assess and respond to feedback throughout the life of the EP.
 - **(10)** Noted FARA's statement and confirmed Woodside had not previously received a copy of FARA's 10 July 2024 letter to NOPSEMA. Woodside referred to Attachment B for further responses to the 10 July letter.
 - **(10)** Referred to its previous responses which set out information on consultation, including that feedback could continue to be provided throughout the life of the EP.
 - **(27)** Confirmed that, in complying with the Regulations, it had reviewed, assessed and responded to FARA's consultation correspondence as well as literature and information FARA had published publicly. Woodside noted that FARA's publicly available information stated FARA had links or collaborated with other organisations who were

fundamentally opposed to the oil and gas industry. This provided context for the consultation as FARA and Woodside may have differing views and positions. Given this, it was likely FARA and Woodside would have differing views on Woodside's responses to FARA's feedback and Woodside's assessment of the merits of FARA's objections or claims, and may be a reason why FARA was re-raising topics Woodside had already assessed and responded to during the consultation process.

- **(10, 27)** Confirmed it had consulted with FARA as a relevant person in accordance with Regulation 25 and had given FARA sufficient information, allowed a reasonable period of time and a reasonable opportunity to consult.
 - **(10)** Referred to earlier responses regarding examples of Woodside giving sufficient information to FARA.
 - **(2)** Confirmed that during consultation with FARA, Woodside reviewed, assessed and responded to FARA on cultural heritage values.
 - **(7)** Confirmed that during consultation with FARA, Woodside reviewed, assessed and responded to FARA on indirect impacts associated with the proposed activity and directed FARA to Section 2.3.6 of the EP for further information on the Acceptable levels and how they were assessed. Woodside confirmed the EP was consistent with the requirements of Regulation 21 (5) (c) and included control measures in place to reduce impacts and risks to ALARP and an acceptable level). Woodside confirmed it had also previously addressed FARA when it raised issues with a particular ALARP or Acceptability position.
- With regards to Attachment 1, FARA's letter to NOPSEMA dated 10 July 2024, Woodside:
- **(10)** Confirmed it has consulted with FARA as a relevant person in the preparation of this EP in accordance with Regulation 25 – Woodside has given FARA sufficient information, allowed a reasonable period of time and reasonable opportunity to consult. Woodside confirmed it had reviewed, assessed and responded to objections and claims raised by FARA. Woodside noted FARA's references to the Regulations and provided an excerpt from NOPSEMA's consultation guideline. Woodside provided summaries of the consultation timeline with FARA and information given to FARA.
 - **(7, 22)** Confirmed the concept of the EMBA was set out in the Regulations, and Woodside's understanding was further detailed in Section 4 of the EP. Woodside provided an overview of the EMBA for this activity. Woodside further confirmed the EP assessed the impacts and risks arising directly and indirectly from the activity. Woodside referred FARA to Section 6.6 of the EP for further information, and provided examples of some of the potential indirect impacts and risks associated with the EP.
 - **(25)** Referred FARA to information on Woodside's consultation process which, for this EP, included extensive public advertising enabling a person or organisation whose functions, interests or activities may be affected to self-identify.
 - **(3, 10)** Referred FARA to responses outlining Woodside's consultation with Traditional Owners, confirmed Woodside regularly engaged with a number of Traditional Owners, including MAC, on rock art, and confirmed it consulted in accordance with Regulation 25.
 - **(2, 11)** Disagreed with FARA's rejection of the risk analysis and referred FARA to Woodside's response setting out the context for consultation and the differing views held by FARA and Woodside. Woodside confirmed potential impacts of the EP activities on Murujuga rock art, Woodside's review of scientific studies and impact assessments of emissions from onshore processing were topics that had been raised and responded to a number of times.
 - **(19)** Confirmed that, in accordance with the Regulations, the EP provided for appropriate environmental performance outcomes, environmental performance standards and measurement criteria. Regarding available technologies, Woodside noted its letter to FARA on 8 October 2024 included information about scrubber technology, catalytic and electrostatic pollution control equipment, and underground disposal and sequestration of compounds.
 - **(24)** Disagreed with FARA's assertion that state approvals and regulatory instruments were inadequate, and referred FARA to Woodside's previous response regarding the context for consultation and the differing views held by FARA and Woodside.
 - **(2)** Advised there were no planned impacts to National Heritage values and referred FARA to previous responses regarding Woodside's application of "acceptable level" in the OPP and EP, and the context for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (2) Noted the excerpt FARA had used was to be read in its context of the impact assessment which demonstrated there was analysis supporting the statement.
- (2, 18) Disagreed with FARA's assertion around acid gas and Murujuga rock art. Woodside noted the excerpt FARA had highlighted from the MRAMP Monitoring Studies Report 2023 must be read in context. Woodside set out further context from the MRAMP and referred to Woodside's response regarding Woodside and FARA's differing views.
- (2) Advised that if other offshore sources such as Pluto and NWS gas fields declined, the relative proportion of NOx emissions to the Murujuga airshed associated with processing of Scarborough gas may theoretically proportionately increase. However, Woodside does not agree with the logic of FARA's calculation. Emissions and the airshed would continue to be assessed through future revisions of the EP and as external context evolved. Reduction of NOx at the Karratha Gas Plant (which is conditioned in MS1233) is a requirement even in context of Scarborough gas being processed at the Karratha Gas Plant.
- (2) Confirmed there were no planned impacts to Murujuga rock art under the EP. The Aboriginal Heritage Act 1972 (WA) and other legislation which applied to Woodside activities provided for the protection and preservation of Aboriginal sites and objects in WA. Woodside did not have input or oversight of the heritage approvals applied for by the Perdaman urea facility and would not comment on Perdaman matters.
- (20) Noted FARA had referenced the Australian Government publication entitled Matters of National Environmental Significance (2013) and confirmed the regulations enacted by Parliament that governed the content of the EP and also governed consultation for EPs were the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). The EP demonstrated that impacts would be reduced to ALARP and acceptable levels.
- (2, 15, 20) Disagreed with FARA's position on the topic of Murujuga rock art, and advised that there were no planned impacts to National Heritage values. Woodside referred FARA to previous responses regarding the context for consultation with FARA.
- (2, 15, 20) Disagreed with FARA's assertions regarding deposition of acid material and studies and tests on Murujuga rock art. Woodside referred FARA to previous responses regarding the context for consultation with FARA.
- (2, 3, 15, 20) Disagreed with FARA's assertions regarding the National Heritage values of the Dampier Archipelago National Heritage Place and referred FARA to previous responses regarding the context for consultation with FARA.
- (2, 7) Disagreed with FARA's assertions and referred to a previous response which included notes on the applicable regulations governing the content of the EP, with which the EP complied.
- (2, 7, 22) Disagreed with FARA's assertions and referred FARA to previous responses including notes on why Woodside disagreed with FARA's calculations, and the applicable regulations governing the content of the EP.
