Aspect	Cultural Features and Heritage Values
Impact and Risk Assessment	The PAP has the potential to impact cultural features and heritage values through the following ways: ***Intangible Cultural Heritage*** Songlines: Songlines can become lost, fragmented, or broken when there is a loss of Country or forced removal from Country (Neale and Kelly, 2020:30). Physical sites that have been identified as comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. It is noted that oil and gas infrastructure exists in many areas of the North West Shelf, and that songlines are still acknowledged and recognised. It is inferred that if there were to be any impacts to surviving songlines these would be significantly more likely to be described as qualitative (i.e., "weaken" a songline) rather than binary or absolute (i.e., destroy a songline). Creation/dreaming sites; sacred sites; ancestral beings: Activities that physically alter landscape features may be assumed to potentially impact values of creation/dreaming sites, sacred sites or ancestral beings. Cultural obligations to care for Country: Environmental impacts may be assumed to impact rights and obligations to care for Sea Country. Exclusion of Traditional Custodians from Sea Country (e.g., by restricting access) or decision-making processes (e.g., by not conducting ongoing consultation) are other potential sources of impact. Knowledge of Country/customary law and transfer of knowledge: Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population. Therefore, the transmission of these skills is expected to be impacted where there are impacts at the species/population level. Limitations on access to sites or disruption/relocation of First Nations communities may have implications for the preservation of First Nations knowledge. Connection to Country: Where people are displaced or disrupted (e.g., during colonisation) or where there is a loss of technical skills or environmental knowledge this may damage connection to Country (McDonald and Phillips, 2021). Access to Country: Impacts to access to Country may be classified as temporary (e.g., where exclusion zones exist around activities for safety reasons) or permanent (e.g., where infrastructure obstructs access or navigation). Impacts to access to Country can only occur in areas that were traditionally accessed by Traditional Custodians. This is anticipated to be focussed on areas adjacent to the coast. Restrictions on Access to Country: Access to the operational area has not been identified as a cultural issue, however some areas within the EMBA may not be culturally appropriate to access. Impacts to this value may occur where spill response access areas that are not appropriate, or in ways that are not consistent with traditional law. Kinship systems and totemic species: It is assumed that marine species may have kinship/totemic relationships to Traditional Custodians, but it is understood that these relationships do not prohibit people outside of that "skin group" from hunting or eating that same species (Juluwarlu, 2004). It is therefore inferred that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. Resource collection: Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, marine species (as resources) will be impacted where there is an impact at the species/population level. ***Marine Ecosystems and Species*** Marine ecosystems may hold both cultural and environmental value with cultural and environmental values intrinsically linked (DCCEEW, 2023; MAC, 2021 as cited in Woodside, 2023a). It necessarily follows that an impact to marine ecosystems has the potential to impact cultural features where the impact is detectable within Sea Country – the seascape which Traditional Custodians view, interact with or hold knowledge of. ***Coastal Landforms*** Coastal landforms may have cultural values either through association with intangible values described above (e.g., as features of a songline, physical manifestations of ancestor beings) or as archaeologically prospective locations (e.g., water sources with increased habitation/use, dunes used for burials) ***Intangible Values*** <u>Songlines</u> Management of intangible cultural heritage can include reducing impacts and risks to tangible features that are associated with intangible cultural heritage (UNESCO, 2003; ICOMOS, 2013).

Aspect	Cultural Features and Heritage Values
	Impacts to marine plants, animals and other cultural features associated with songlines might impact the intergenerational transmission of knowledge of songlines when individuals can no longer witness or interact with the cultural features tied to songlines on Country. Therefore, managing songlines may require environmental controls to minimise potential impact to marine fauna at a population level, including migratory routes. Refer to species-specific assessment below for further information. Physical features comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. Songlines can become lost, fragmented, or broken when there is a loss of Country or impact to culturally important physical features (Neale and Kelly, 2020:30). No specific details of songlines within the EMBA have been provided by relevant persons during consultation for this Activity, and no landforms typical of songlines (e.g., rocks, mountains, rivers, caves and hills (Higgins, 2021:724)) are anticipated to be impacted by the PAP. <u>Creation/Dreaming Sites; Sacred Sites; Ancestral Beings</u> Woodside has undertaken all reasonable steps to identify creation and dreaming sites, sacred sites, and places associated with ancestral beings within the EMBA. No such sites have been identified. A review of relevant literature has been undertaken which has identified creation, dreaming and ancestral narratives related to the sea more broadly without confirming where (if anywhere) these overlap the EMBA. These references are of a general nature, and do not identify any features or values requiring specific protection or management from the proposed activities. In the literature reviewed, sea serpents or water serpents are common in Aboriginal creation narratives, and several references were identified. The majority of these refer to serpents residing within inland rivers or pools outside of the EMBA (Barber and Jackson, 2011; Hayes v Western Australia [2008] FCA 1487; Juluwarlu, 2004; Water Corporation, 2019). In some versions, the serpent originates from the sea or coast and creates the rivers as it heads inland. Areas of the current coastline and past coastlines at various points along the Ancient Landscape – where the Serpent would have emerged onto the land – are within the EMBA. Areas of the broader ocean where the serpent may have originally lived are not specified. Barber and Jackson (2011) also recount a story where a freshwater serpent pushes a sea serpent back into the ocean where it presumably continues to reside. This does not provide the specificity required to determine the location of sea serpents within the sea, and it is possible that the ocean as a whole (out to and beyond other continents) should be viewed generally as housing the sea serpent(s). Consultation with Traditional Custodians and ethnographic surveys have not identified impacts on sea serpents from the PAP. However, by analogy to other water serpent narratives across Australia, possible impact pathways may include interruption of its path by blocking or reducing flows of water, damaging sacred sites such as Thalu or rock art sites or depleting water sources. No impacts to water flows (either tidal movement or ocean currents) or depletion of water sources are anticipated from this PAP. <u>Cultural Obligations to Care for Country</u> Caring for Country collectively refers to the cultural obligations of individuals and groups, as well as rituals and ceremonies required for the physical and spiritual health of the environment. Lack of access to coastally located cultural sites that carry songlines or remain ceremonially important can impact First Nations people's livelihoods and impact their ability to carry out cultural obligations on Country. <u>Knowledge of Country/Customary Law and Transfer of Knowledge</u> Cultural knowledge about Sea Country/customary law and the intergenerational transmission of knowledge are important values identified through consultation, assessments and the literature review. Transfer of knowledge includes continuing traditional practices to pass on practical skills. Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population – for example, traditional fishing methods require the survival of traditional fish resources. Therefore, ensuring the transmission of cultural knowledge may require environmental controls protecting species and migratory pathways at a population level. Refer to species-specific assessment below for further information. <u>Connection to Country</u> Connection to Country describes the multi-faceted relationship between First Nations people and the landscape, which is envisioned as having personhood and spirit. No impacts to connection to country are anticipated as a result of exclusion or displacement of Aboriginal communities. Access to Country is discussed below. <u>Access to Country</u>

Aspect	Cultural Features and Heritage Values
	Access to Country, including Sea Country, is necessary for the continuation of other values including caring for Country and the transfer of traditional knowledge. Access is also a value in its own right, as a continuation of traditional Sea Country access and use. Access to areas within the Operational Area may be limited where exclusion zones are established around vessels for safety purposes. Further the exclusion zones around drilling activities are temporary and presence of subsea infrastructure are not anticipated to affect navigation, particularly given the water depth. Access to Country within the EMBA is also not expected to be affected in the highly unlikely event of an unplanned hydrocarbon release. However relevant cultural authorities will be engaged in the event of a spill that may affect them. Restrictions on Access to Country No information was received which suggested any part of the Operational Area cannot be accessed in a culturally appropriate way. However, some areas of the EMBA may be subject to cultural restrictions on access or may be culturally dangerous to access in any respect. Access to these areas would only be required in response to an unplanned impact. Kinship Systems and Totemic Species Individuals may have kinship to specific species (Smyth, 2008; Juluwarlu, 2004) and/or a responsibility to care for species (Muller, 2008). These relationships are understood to impose obligations on Traditional Custodians. It is understood that these obligations do not impose restrictions on other people generally, but it is considered that impacts to species at a population level may inhibit Traditional Custodians with kinship relationships' ability to perform their obligations where this results in reduced or displaced populations. It is therefore considered that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. As such, impacts to individual marine fauna is not expected to impact on the totemic or kinship cultural connection. Refer to species-specific assessment below for further information. Resource Collection A number of marine species are identified through consultation and literature as important resources, particularly as food sources. In addition to their immediate value as sustenance, the gathering and preparation of these resources are informed by cultural knowledge, and an inability to use these resources may result in a loss of ability to transfer that knowledge to future generations. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these communities may be impacted where there is an impact at the species/population level. Refer to species-specific assessment below for further information. Relevant cultural authorities will be engaged in the event of a spill that may affect them. ***Marine Species*** Marine Mammals There are increase ceremonies/rituals for species of animals and plants, important to First Nations, to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites were confined to onshore locations, though the values may extend offshore where, for example, the Thalu relates to marine species populations. As Thalu ceremonies are performed to maintain and increase populations of marine species, it is considered that management applies at the species/population level and not to individuals – for example, the Thalu site on Murujuga which "brings in whales to beach" will continue to serve its purpose so long as whales continue to migrate through Mermaid Sound. Related intangible cultural heritage may include the transmission of cultural knowledge about whales and whale behaviour, including birthing areas, whale communication and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021). First Nations groups have expressed interest about whale migratory routes and studies. Inter-generational transmission of cultural knowledge (including songlines) relating to marine mammals may be impacted where changes to population or behaviour at a population level results in reduced sightings (e.g., through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). As described in the relevant environmental impact and risk assessment, potential impacts to whales are limited to behavioural disturbance to transient individuals, which are not considered to be ecologically significant at a population level, and hence not expected to impact the value of marine mammals, including the transmission of cultural knowledge. The Operational Area does overlap the BIAs for migration for the pygmy blue whale and humpback whale. As such, cultural

Aspect	Cultural Features and Heritage Values
	values and intangible cultural heritage associated with these species are expected to be maintained. <u>Marine Reptiles</u> Turtles and their eggs have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. Intangible cultural heritage may also include the transmission of cultural knowledge about marine reptiles, such as nesting areas, hunting areas and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021). First Nations groups have expressed an interest regarding turtle monitoring programs and migration patterns. Activities that impact turtle populations and their marine environment may have an indirect impact on some Aboriginal communities as this can limit access to cultural sites or deplete hunting areas that would threaten local food security (Delisle et al., 2018:251). Inter-generational transmission of cultural knowledge (including songlines) relating to marine reptiles may be impacted where changes results in reduced sightings (e.g., through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). As described in the relevant environmental impact and risk section, potential impacts to marine reptiles are predicted to be at an individual level, which are not considered to be ecologically significant at a population level. Impacts will not occur to significant proportions of the populations of the species, nor result in a decrease of the quality of the habitat such that the extent of these species is likely to decline. Further, the Operational Area and EMBA do not overlap marine turtle BIAs. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. <u>Fish</u> Fish have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. During consultation, fish were identified as important agents in the management of the broader ecosystem in Mermaid Sound, and generally to marine environments. Inter-generational transmission of cultural knowledge relating to fish may be impacted where changes to population/behaviour results in reduced sightings (e.g., through population decline). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). Intangible cultural heritage associated with fish, including inter-generational knowledge regarding fishing techniques and migratory patterns, can be managed by reducing impacts to fish in nearshore marine environments to which this cultural knowledge is intrinsically connected. As described in the relevant environmental impact and risk sections, it is expected that fish, sharks and rays may demonstrate avoidance or attraction behaviour; however, potential impacts are not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. ***Benthic Habitats (Coral, Seagrass)*** Through consultation, First Nations groups identified benthic habitats as valuable for their ecological values, including corals attracting fish and seagrass providing shelters for fauna, as well as an important habitat for dugongs. Additionally, coral is valued by MAC for its aesthetic values. As described in the relevant environmental impact assessments, the potential impacts from the PAP on benthic habitats is assessed to be no lasting effect. In terms of risk, a change in habitat may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, short-term exposure, as well as the response strategies planned to be deployed, an unplanned release is not expected to result in a level of exposure to coral and seagrass that would cause an adverse impact on marine ecosystem functioning or integrity results. As such, cultural values and intangible cultural heritage associated with benthic habitats are expected to be maintained. ***Shoreline Habitats (Coastal Vegetation, Mangroves)*** Through consultation, First Nations groups identified shoreline habitats as valuable for their ecological values, including coastal vegetation such as mangroves which provide shelter to marine

Aspect	Cultural Features and Heritage Values
	invertebrates, which are identified resources, and potential nursery for turtles. Literature also notes that mangroves are also valued for the flora and fauna they are associated with and support (Commonwealth of Australia, 2002), and Smyth (2007) reports that mangrove seeds are used as a resource by Ngarda-Ngarli. There is no overlap between the Operational Area and shoreline habitats, and no planned impacts to shoreline habitats from the PAP. In terms of risk, a change in habitat may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, as well as the response strategies planned to be deployed, an unplanned release is not expected to have a substantial adverse impact on marine ecosystem functioning or integrity. As such, cultural values and intangible cultural heritage associated with shoreline habitats are expected to be maintained. ***Coastal Landforms*** There is no overlap between the Operational Area and coastal landforms, and no planned impacts to coastal landforms from the PAP. For coastal landforms beyond the Operational Area, the EMBA is driven by an unplanned hydrocarbon release. There is no anticipated impact pathway from the presence of marine diesel on the physical existence of coastal landforms such as hills, waterways or dune systems. Access to Country within the EMBA is also not expected to be affected in the highly unlikely event of an unplanned hydrocarbon release. However, relevant cultural authorities will be engaged in the event of a spill that may affect them. As such, cultural values and intangible cultural heritage associated with shoreline habitats are expected to be maintained. ***Conclusion*** The impact and risk assessment has determined that the planned activities are unlikely to result in an impact greater than negligible[147] (F) and unplanned activities are assessed to have a residual risk rating of moderate (or lower). Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process.
Impact and Risk Assessment	The PAP has the potential impact cultural features and heritage values through the following ways: ***Archaeological Heritage*** Places that are identified in the literature for their value as archaeological sites can be assumed to be impacted where there is an impact to the archaeological or scientific values of its tangible elements. This could include damage or disturbance of archaeological material or to the archaeological context. <u>Intangible Cultural Heritage</u> Songlines: Songlines can become lost, fragmented, or broken when there is a loss of Country or forced removal from Country (Neale and Kelly, 2020:30). Physical sites that have been identified as comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. It is noted that oil and gas infrastructure exists in many areas of the North West Shelf, and that songlines are still acknowledged and recognised. It is inferred that if there were to be any impacts to surviving songlines these would be significantly more likely to be described as qualitative (i.e., “weaken” a songline) rather than binary or absolute (i.e., destroy a songline). Creation/dreaming sites; sacred sites; ancestral beings: Activities that physically alter landscape features may be assumed to potentially impact values of creation/dreaming sites, sacred sites or ancestral beings. Ceremonial sites: Activities that prevent the performance of ceremony at these sites will directly impact its values. Cultural obligations to care for Country: Environmental impacts may be assumed to impact rights and obligations to care for Sea Country. Exclusion of Traditional Custodians from Sea Country (e.g., by restricting access) or decision-making processes (e.g., by not conducting ongoing consultation) are other potential sources of impact. Knowledge of Country/customary law and transfer of knowledge: Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population. Therefore, the transmission of these skills is expected to be impacted where there are impacts at the species/population level. Limitations on

[147] Noting that as the receptor sensitivity is high, the impact significance level is Slight (E).

Aspect	Cultural Features and Heritage Values
	access to sites or disruption/relocation of First Nations communities may have implications for the preservation of First Nations knowledge. Cultural Safety refers to respecting local Lore and culturally significant areas to protect individuals from cultural harm. There are many cultural implications for those (Aboriginal and non-Aboriginal) who do not follow cultural advice or access Country in culturally inappropriate ways. Connection to Country: Where people are displaced or disrupted (e.g., during colonisation) or where there is a loss of technical skills or environmental knowledge this may damage connection to Country (McDonald and Phillips, 2021). Access to Country: Impacts to access to Country may be classified as temporary (e.g., where exclusion zones exist around activities for safety reasons) or permanent (e.g., where infrastructure obstructs access or navigation). Impacts to access to Country can only occur in areas that were traditionally accessed by Traditional Custodians. As described in Section 4.9 this is anticipated to be focussed on areas adjacent to the coast. Kinship systems and totemic species: It is assumed that marine species may have kinship/totemic relationships to Traditional Custodians, but it is understood that these relationships do not prohibit people outside of that "skin group" from hunting or eating that same species (Juluwarlu, 2004). It is therefore inferred that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. Resource collection: Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, marine species (as resources) will be impacted where there is an impact at the species/population level. ***Marine Ecosystems and Species*** Marine ecosystems may hold both cultural and environmental value (see Section 4.9), with cultural and environmental values intrinsically linked (DCCEEW, 2023; MAC, 2021 as cited in Woodside, 2023a). It necessarily follows that an impact to marine ecosystems has the potential to impact cultural features where the impact is detectable within Sea Country – the seascape which Traditional Custodians view, interact with or hold knowledge of. ***Archaeological Heritage*** <u>Onshore/Intertidal Archaeological Sites</u> No coastal areas or islands exist within the Operational Area. A review of DPLH's Aboriginal Heritage Inquiry System identified 55 Registered Aboriginal Sites and Other Heritage Places in the EMBA. These were mainly comprised of sites at Barrow Island, the Ningaloo coast, the Pilbara and then north to the Kimberly. These locations do exist within the EMBA boundary, however given the EMBA is driven by an unplanned hydrocarbon spill there is no anticipated impact pathway from this activity to onshore archaeological sites above highest astronomical tide (HAT). Archaeological sites may exist in intertidal landscapes within the EMBA and may be exposed to hydrocarbon from an unplanned spill, however there is no anticipated impact pathway from the presence of hydrocarbons on archaeological values, as this is not expected to impact the fabric or context of sites on an exposed shoreline site. Impacts to the heritage value of fish traps from hydrocarbons in an unplanned spill may occur indirectly through impacts to fish. However, it is expected that continued use of fish traps beyond their archaeological value will be preserved where fish species and distribution are maintained at a population level. With regard to fish, refer to species-specific assessment below for further information. <u>Submerged Archaeological Sites</u> No submerged archaeological sites have been identified beyond terrestrial or intertidal areas, with the exception of two sites at Murujuga in Cape Bruguieres channel and Flying Foam Passage (Benjamin et al., 2020; Benjamin et al., 2023), which are outside of the EMBA. Nevertheless, there is the potential for submerged archaeological sites on the Ancient Landscape. Submerged archaeological sites (locations undefined) may exist on the Ancient Landscape within the broader EMBA. However, given the EMBA is driven by an unplanned hydrocarbon spill, it is not expected to impact the seabed or archaeological material on or within it. Therefore, there is no anticipated impact pathway to submerged archaeological sites in the broader EMBA from the Petroleum Activities Program. <u>Rivers, Waterholes, Tidal Channels and Seeps</u> Oceanographic studies indicate that both the open ocean and coastal zone off Western Australia are well-mixed and saline. Submerged former water sources (e.g., river beds) may exist within the EMBA which are archaeologically prospective or culturally significant. The EMBA is driven by an unplanned hydrocarbon spill, which is not expected to impact the seabed or features on it. As such, there is no anticipated impact pathway from this activity to

Aspect	Cultural Features and Heritage Values
	submerged water sources in the broader EMBA. In the highly unlikely and unmitigated worst case, unplanned hydrocarbons may contact shorelines and receptors such as mangroves, and shoreline habitats. These habitats may contain brackish or fresh water due to runoff from land. Given hydrocarbon characteristics and rapid weathering, an unplanned release is expected to have no lasting effect on any freshwater sources along the shoreline. ***General Intangible Values*** Songlines Management of intangible cultural heritage can include reducing impacts and risks to environmental features that are associated with intangible cultural heritage (UNESCO. 2003; ICOMOS, 2013). Impacts to marine plants, animals and other cultural features associated with songlines might impact the intergenerational transmission of knowledge of songlines when individuals can no longer witness or interact with the cultural features tied to songlines on Country. Therefore, managing songlines may require environmental controls protecting species at a population level, including migratory routes. Refer to species-specific assessment below for further information, in addition to the impact and risk assessment in Sections 6.7 and 6.8, respectively. Energy lines have also been raised during consultation. Energy lines are understood by Woodside to be the same as songlines. Physical features comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. Songlines can become lost, fragmented, or broken when there is a loss of Country or impact to culturally important physical features (Neale and Kelly, 2020:30). No specific details of songlines within the EMBA have been provided by relevant persons during consultation for this Activity, and no landforms typical of songlines (e.g., mountains, rivers, caves and hills (Higgins, 2021)) are anticipated to be impacted by the PAP. In publicly available literature, Murujuga is acknowledged as a starting point for songlines, including the flying fox songline (MAC, 2023a). Precise location of this songline, and features of this songline that might be impacted, are not clearly articulated in the reviewed sources, but it is stated that “the sea is a source of creation for flying foxes” (DEC, 2013). Although this does not provide the specificity required to determine the location of the flying fox songline or associated sites. Consultation with MAC and other Traditional Custodians has not identified the flying fox songline as overlapping the EMBA, and flying foxes do not occur within the EMBA. Kearney et al. (2023) notes a connection between the Kangaroo songline and a pair of submerged waterholes identified through seabed mapping by the Deep History of Sea Country project, which later found submerged artefacts in Flying Foam passage. Noted that due to the water depth it is not expected that active or former freshwater sources that may connect to the Kangaroo or other songlines would be within the Operational Area. Consultation with MAC and other Traditional Custodians has not identified these songlines as overlapping the EMBA, and these species do not occur within the EMBA. In publicly available literature, Murujuga is acknowledged as the starting point for the seven sisters songline (Bainger, 2021). Precise location of this songline, and features of this songline that might be impacted, are not clearly articulated in the reviewed sources. Consultation with MAC and other Traditional Custodians has not identified the seven sisters songline as overlapping the EMBA. While the presence of songlines is generally raised in the literature across several relevant communities, no specific details have been identified. The literature review has also identified culturally important features, which are known to be commonly associated with songlines (e.g., marine species and landforms; Section 4.8), and these have been separately assessed. Further assessment of intangible values and marine species are provided below, in addition to the impact and risk assessment in Sections 6.7 and 6.8, respectively. Creation/Dreaming Sites; Sacred Sites; Ancestral Beings Woodside has undertaken all reasonable steps to identify creation and dreaming sites, and places associated with ancestral beings within the EMBA. No such sites have been identified. A review of relevant literature has been undertaken which has identified creation, dreaming and ancestral narratives related to the sea more broadly without confirming where (if anywhere) these overlap the EMBA. These references are of a general nature, and do not identify any features or values requiring specific protection or management from the proposed activities. Sea serpents or water serpents are common in Aboriginal creation narratives, and several references were identified in the reviewed literature. The majority of these refer to serpents residing within inland rivers or pools outside of the EMBA (Barber and Jackson, 2011; Dury v Western Australia [2018] FCA 1849; Hayes v Western Australia [2008] FCA 1487; Juluwarlu, 2004; Kalbarri Visitor Centre, 2023; Water Corporation, 2019; Zaunmayr, 2016; Department of Parks and Wildlife, 2014; Yu, 1999; DBCA, 2020). In some versions, the serpent originates from

Aspect	Cultural Features and Heritage Values
	the sea or coast and creates the rivers as it heads inland. Barber and Jackson (2011) also recount a story where a freshwater serpent pushes a sea serpent back into the ocean where it presumably continues to reside. This does not provide the specificity required to determine the location of sea serpents within the sea, and it is possible that the ocean as a whole (out to and beyond other continents) should be viewed generally as housing the sea serpent(s). Consultation with Traditional Custodians has not identified activities of this PAP as having an impact on sea serpents. However, by analogy to other water serpent narratives across Australia, possible impact pathways may include interruption of its path by blocking or reducing flows of water, damaging sacred sites such as Thalu or rock art sites or depleting water sources. While there is potential for shoreline accumulation of hydrocarbons within the EMBA, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. No impacts to water flows (either tidal movement or ocean currents) or depletion of water sources are anticipated from this Petroleum Activities Program. Features of the landscape with the potential for connection to creation/dreaming stories and ancestral beings are likely within the EMBA on the Ancient Landscape. However, there are no anticipated impact pathways to submerged landscape features within the broader EMBA from the Petroleum Activities Program. <u>Ceremonial Sites</u> All mentions of active ceremonial sites were confined to onshore locations and no direct impacts to onshore ceremonial sites are anticipated from the Petroleum Activities Program. However, indirect impacts may occur where ceremonies cannot be performed due to limitations on access, loss of knowledge or impacts to the environment, which are further described below. <u>Cultural Obligations to Care for Country</u> Caring for Country collectively refers to the cultural obligations of individuals and groups, as well as rituals and ceremonies required for the physical and spiritual health of the environment. Lack of access to coastally located cultural sites that carry songlines or remain ceremonially important can impact First Nations people's livelihoods and impact their ability to carry out cultural obligations on Country. While there is potential for shoreline accumulation of hydrocarbons within the EMBA, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. <u>Knowledge of Country/Customary Law and Transfer of Knowledge</u> Cultural knowledge about Sea Country/customary law and the intergenerational transmission of knowledge are important values identified through consultation, assessments and the literature review. Transfer of knowledge includes continuing traditional practices to pass on practical skills. Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population – for example, traditional fishing methods require the survival of traditional fish resources. Therefore, ensuring the transmission of cultural knowledge may require environmental controls protecting species and migratory pathways at a population level. Refer to species-specific assessment below for further information, in addition to the impact and risk assessment in Section 6.7 and 6.8 respectively. <u>Connection to Country</u> Connection to Country describes the multi-faceted relationship between First Nations people and the landscape, which is envisioned as having personhood and spirit. Connection to Country may be damaged where people are displaced or disrupted (e.g., during colonisation) or where there is a loss of technical skills or environmental knowledge (McDonald and Phillips, 2021). No impacts of this nature are considered to arise from this Petroleum Activities Program. Access to Country is discussed below. <u>Access to Country</u> Access to Country, including Sea Country, is necessary for the continuation of other values including caring for Country and the transfer of traditional knowledge. Access is also a value in its own right, as a continuation of traditional Sea Country access and use. Access to areas within the Operational Area may be limited where exclusion zones are established around vessels for safety purposes. However, due to the location offshore, this is not expected to impact on Access to Country. Access to Country within the EMBA would be limited to temporary exclusion in areas where there are hydrocarbons present, including shoreline accumulation. However relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. <u>Cultural Safety</u> Cultural Safety refers to respecting local Lore and culturally significant areas to protect individuals from cultural harm. There are many cultural implications for those (Aboriginal and non-Aboriginal)

Aspect	Cultural Features and Heritage Values
	who do not follow cultural advice or access Country in culturally inappropriate ways. Cultural safety may include observing gender restricted areas, respecting significant places and restricted areas as well as following the advice from those with cultural authority. Therefore, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. Kinship Systems and Totemic Species Individuals may have kinship to specific species (Smyth, 2008; Juluwarlu, 2004) and/or a responsibility to care for species (Muller, 2008). These relationships are understood to impose obligations on Traditional Custodians. It is understood that these obligations do not impose restrictions on other people generally, but it is considered that impacts to species at a population level may inhibit Traditional Custodians with kinship relationships' ability to perform their obligations where this results in reduced or displaced populations. It is therefore considered that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. As such, impacts to individual marine fauna is not expected to impact on the totemic or kinship cultural connection. Totemic species identified during consultation include whales, fish, stingrays and octopuses. In the highly unlikely event of a hydrocarbon spill relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. Resource Collection A suite of marine species have been identified through consultation and literature as important resources, particularly as food sources. For example, Sea Country resources of noted relevance to Thalanyji people which may be present in the vicinity of the Montebello Islands include dugongs, majun (marine turtles), turtle eggs, fish and shellfish. Other resource species include marine mammals, fish, molluscs including bivalves, gastropods and cephalopods and seabirds, sea urchins and mangrove seeds. In addition to their immediate value as sustenance, the gathering and preparation of these resources are informed by cultural knowledge, and an inability to use these resources may result in a loss of ability to transfer that knowledge to future generations. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these communities may be impacted where there is an impact at the species/population level. As assessed Section 6.7, impacts from planned activities on the marine environment, including resources important to First Nations people, is expected to be limited to negligible or slight and therefore impacts that result in population effects (e.g., population decline, changes in migration routes) are not expected. Impacts to potential resources within the EMBA, in the highly unlikely event of hydrocarbon spill, are described and risk assessed in Section 6.8 and are not expected to result in species/population level impacts. There may be potential impacts to resource collection along the coastlines where there is shoreline accumulation of hydrocarbons. Given hydrocarbon characteristic and rapid weathering, an unplanned release is not expected to have a substantial adverse impact resulting in population level changes. Therefore, impacts to resource collection would be limited to temporary exclusion in areas where there are hydrocarbons present, including shoreline accumulation. Further relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. ***Marine Ecosystems and Species*** Marine Mammals (Whale, Dolphins, Dugongs) There are increase ceremonies/rituals for species of animals and plants important to First Nations, to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature were confined to onshore locations, though the values may extend offshore where, for example, the Thalu relates to marine species populations. As Thalu ceremonies are performed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals. Reviewed literature (Deloitte, 2020) also includes information that is marked as information that cannot be copied, reproduced or used without consent. The values described in the literature are environmental in nature, apply to marine mammal behaviours at a population level and are managed through existing environmental controls in Sections 6.7, 6.8 and 6.9. Related intangible cultural heritage may include the transmission of cultural knowledge about whales and whale behaviour, including birthing areas, whale communication and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021). Whale symbology expressed through stories, music, and dance can reflect a group's connections with the sea, as well as marine fauna, which then comprise a group's cultural values (Ardler, 2021; Bursill et al., 2007;

Aspect	Cultural Features and Heritage Values
	Cressey, 1998). Whales also speak to a broader connection that exists between First Nation people and their surrounding environment. Beyond mythology and symbolism, whales can be connected with various economic and social functions associated with everyday life. Cultural knowledge of whales, whale migration, behaviour and the related marine environment may all be important in ensuring the continuation of these socio-economic functions and other related activities that remain valuable to First Nations people (Fijn, 2021). No impacts to communities' ability to perform or transmit stories, music or dance are anticipated from the Petroleum Activities Program. Where timing or performance is linked to sighting or engaging with these species, impacts may occur where numbers or migration behaviours are impacted at a population level. First Nations groups have expressed interest about whale migratory routes and studies. Inter-generational transmission of cultural knowledge (including songlines) relating to marine mammals may be impacted where changes to population or behaviour at a population level results in reduced sightings (e.g., through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). As described in the relevant environmental impact and risk assessments in Sections 6.7, 6.8 and 6.9, respectively, potential impacts to cetaceans from planned activities are limited to behavioural impact, which may include temporary and localised deviations from migratory pathways for cetaceans. However, no permanent impacts preventing cetaceans from entering or occupying the areas have been identified. These impacts and risks are not considered to be ecologically significant at a population level, and hence are not expected to impact the value of marine mammals, including the transmission of cultural knowledge. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. <u>Marine Reptiles (Turtles, Sea Snakes, Crocodiles)</u> Turtles and crocodiles have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. Intangible cultural heritage may also include the transmission of cultural knowledge about marine reptiles, such as nesting areas, hunting areas and migratory patterns. Cultural knowledge may also be conveyed through stories, such as the turtle being trapped in the sea as a result of its greed for berries as recounted by Capewell (2020). Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021). First Nations groups have expressed an interest regarding turtle monitoring programs and migration patterns. Activities that impact turtle/crocodile populations and their marine environment may have an indirect impact on some Aboriginal communities, as this can limit access to cultural sites or deplete hunting areas that would threaten local food security (Delisle et al., 2018:251). Inter-generational transmission of cultural knowledge (including songlines) relating to marine reptiles may be impacted where changes to population or behaviour results in reduced sightings (e.g., through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). As described in the relevant environmental impact and risk assessments in Sections 6.7, 6.8 and 6.9, potential impacts to marine reptiles from planned activities are likely to be restricted to temporary behavioural changes, which are not considered to be ecologically significant at a population level, and hence not expected to impact the value of marine reptiles, including the transmission of cultural knowledge or use as a resource. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. <u>Fish and Cephalopods</u> Fish and squid have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. Through consultation, fish were identified as important agents in the management of the broader ecosystem. It may be assumed that inter-generational transmission of cultural knowledge relating to fish may be impacted where changes to population or behaviour results in reduced sightings (e.g., through population decline). In additional MIAC (2019) identified whale sharks as a culturally important species associated with stories which describe them as guardians of the sea. This transfer of knowledge may be integral to managing a group's intangible cultural heritage

Aspect	Cultural Features and Heritage Values
	(UNESCO, 2003). Intangible cultural heritage associated with fish and whale sharks, including inter-generational knowledge regarding fishing techniques and migratory patterns, can be managed by reducing impacts to fish in nearshore marine environments to which this cultural knowledge is intrinsically connected. The octopus is an important totem to Ngarla People and features in the creation story of Solitary Island. There are increase ceremonies/rituals for species of squid and octopus to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature were confined to onshore locations, though the values may extend offshore where, for example, the Thalu relates to marine species populations. As Thalu ceremonies are performed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals. As described in the relevant environmental impact and risk assessments in Sections 6.7, 6.8 and 6.9, respectively, the potential impacts from planned activities on fish[148] are considered to be localised and with slight, short-term (<1 year) impact potential on species (or lower), but not affecting ecosystem function, physical or biological attributes. Impact potential is not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. <u>Seabirds</u> Seabirds, specifically shags, have been identified through literature as a culturally significant species (Malgana Land and Sea Management et al., 2021), as well as a resource (seabird eggs; Smyth, 2007). Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. Intangible cultural heritage may also include the transmission of cultural knowledge about seabirds, such as nesting areas, hunting areas and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021) Inter-generational transmission of cultural knowledge relating to seabirds may be impacted where changes to population or behaviour results in reduced sightings (e.g., through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). As described in the relevant environmental impact assessments in Section 6.7, the potential impacts from the PAP on seabirds is limited to slight. The potential for temporary behavioural disturbance localised around vessels from light is not expected to result in a substantial adverse effect on species' population, and light emissions will not seriously disrupt the lifecycle of an ecologically significant proportion any migratory bird species. In terms of risk, as described in Section 6.8 and 6.9, a change in marine fauna behaviour or injury/mortality to seabirds and migratory shorebirds may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, expected rapid weathering to below impact thresholds, and the mobile transient nature of individuals, unplanned hydrocarbon releases are not expected to substantially modify important habitat for migratory species. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained. <u>Benthic Habitats (Coral, Seagrass)</u> Through consultation, First Nations groups identified benthic habitats as valuable for their ecological values, including corals attracting fish and seagrass providing shelters for fauna, as well as an important habitat for dugongs. There is no overlap between the Operational Area and coral / seagrass habitats as water depth is more than 170 m, and no planned impacts to coral / seagrass habitats from the Petroleum Activities Program. In terms of risk, as described in Section 6.8 and 6.9, a change in habitat may occur following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, short-term exposure, as well as the response strategies planned to be deployed, an unplanned release may result in localised impacts coral and seagrass habitats. As such, cultural values and intangible cultural heritage associated with benthic habitats are expected to be maintained. ***Shoreline Habitats (Mangroves/Salt Marshes)***

[148] Squid and octopus are considered to be impacted through similar impact pathways as fish, and hence the conclusion represented here are considered appropriate for cephalopods.

Aspect	Cultural Features and Heritage Values
	Through consultation, First Nations groups identified shoreline habitats as valuable for their ecological values, including mangroves for providing shelter to marine invertebrates, which are identified resources, and potential nursery for turtles. Literature also notes that mangroves are also valued for the flora and fauna they are associated with and support (Commonwealth of Australia, 2002) and Smyth (2007) reports that mangrove seeds are used as a resource by Ngarda-Ngarli. There is no overlap between the Operational Area and mangrove/salt marsh habitat, and no planned impacts to mangroves from the Petroleum Activities Program. In terms of risk, as described in Section 6.8 and 6.9, a change in habitat may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, as well as the response strategies planned to be deployed, an unplanned release may result in localised impacts coral and seagrass habitats. As such, cultural values and intangible cultural heritage associated with shoreline habitats are expected to be maintained. ***Marine Park/Coastal Reserves*** A number of marine parks (e.g., Barrow Island Marine Park, Montebello Islands Marine Park, Ningaloo Marine Park) are jointly managed with First Nation groups. The groups are responsible for sharing management decisions and also for sharing in the overall responsibility of making sure the marine park fulfils its purpose. There is no overlap between the Operational Area and any marine parks. In terms of risk, as described in Section 6.8 and 6.9, shoreline accumulation may occur in some of these marine parks. The relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. ***Nearshore Islands*** Nearshore islands (including Rosemary Island and Solitary Island) have been raised in consultation as of interest, for cultural values and for their ecological benefit. There is no overlap between the Operational Area and any islands. Solitary Island is outside the EMBA. In terms of risk, as described in Section 6.8 and 6.9, shoreline accumulation may occur on some islands. The relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix I. ***Murujuga*** Cultural features and heritage values associated with Murujuga petroglyphs are outlined in Section 4.9.6 and consideration of potential for indirect impact from atmospheric emissions associated with onshore processing of Pluto gas presented in Section **Error! Reference source not found.**. Onshore processing of LNG from the PAP will occur onshore on Murujuga, which has a high concentration of rock art sites (estimated to exceed a million examples (DBCA & MAC, 2024)) with significant local cultural and spiritual values in addition to their inclusion on Australia's National Heritage List and Tentative World Heritage List. PLP's publicly available Air Quality Management Plan has been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant as described in Section **Error! Reference source not found.**. Woodside onshore operations at Pluto LNG facility and KGP are managed via Cultural Heritage Management Plans as implementation conditions required by EPA Act (Pt IV) Ministerial Conditions. • Ministerial Statement 757 – for the Pluto LNG Development includes Condition 10 for Indigenous Heritage management to develop and implement a CHMP prepared in liaison with the Department of Indigenous Affairs. The Pluto LNG Aboriginal Cultural Heritage Management Plan - Commissioning and Operations Phase (2012) is implemented at the facility. • Ministerial Statement 1233 (North West Shelf Project Extension Proposal) Condition section 4 set out Cultural Heritage Outcomes and Objectives to be achieved including (but not limited to); – allowing traditional owner and custodian access to enable traditional activities and connection to culturally significant heritage areas within the development envelopes – avoid where possible, and otherwise minimise direct impacts to social, cultural, heritage and archaeological values within the development envelopes

Aspect	Cultural Features and Heritage Values
	• Conditions require implementation of the North West Shelf Project Extension Cultural Heritage Management Plan (2021), including further revision in consultation with Murujuga Key Stakeholders. The plan is required to include elements (not limited to); a framework for ongoing consultation, and operational environmental management activities, monitoring, targets, management actions and reporting relevant to cultural heritage. Related air quality management conditions in MS1233 are outlined in Section **Error! Reference source not found.**. • These conditions support the management and recognition of Murujuga Cultural Values related to the NWS Operations. The NWS CHMP (2021) provides management provisions and actions including provide access for Traditional Owners to Aboriginal cultural heritage sites within the Proposal development envelope when requested [MA2], the adoption of technologies to prevent impacts to terrestrial and nearshore vegetation of heritage and conservation value [MA4] and support the implementation of, and participate in, the DWER Murujuga Rock Art Strategy [MA6] (see Section **Error! Reference source not found.**). ***Conclusion*** The impact and risk assessment for cultural features and heritage values has determined that the planned activities are unlikely to result in an impact greater than negligible (F) and unplanned activities are assessed to have a residual risk rating of High (or lower).

Demonstration of ALARP				
As marine ecosystems may hold both cultural and environmental value (see Section 4.9.1), with cultural and environmental values intrinsically linked, in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Sections 6.7 and 6.8 will reduce impacts to cultural features and heritage values, including marine species and habitats.				
Control Considered	***Feasibility (F) and Cost/ Sacrifice (Cs)***	***Benefit in Impact/Risk Reduction***	***Proportionality***	***Adopted***
Apply a 'living heritage'[149] management approach. Woodside seeks advice and incorporates Traditional Custodian cultural knowledges across our activities. Cultural safety considerations are factored for our workforce and the Traditional Custodian community.	F: Yes. CS: Minimal.	Implementation of the 'living heritage' approach pays acknowledgement and respect to Traditional Custodian communities. It supports the transfer of cultural knowledges and is an effective strategy to manage intangible cultural values.	Benefits outweigh cost/ sacrifice.	Yes C 29.1
Project inductions to all relevant marine crew, prior to the individual commencing the activity, will include information on cultural features and heritage values, including tangible and intangible cultural heritage.	F: Yes. CS: Minimal.	Ensures workforce is suitably aware of cultural features and heritage values in the area they are operating.	Benefits outweigh cost/ sacrifice.	Yes C 29.2

[149] Living heritage supports community and individual identity. Intangible cultural heritage is 'living heritage' that is inherited from ancestors and passed on to their descendants. It is comprised of many influences, including oral traditions, art, social practices, rituals and ceremonies, cultural knowledge and practices. It is transmitted from generation to generation, and evolves in response to the environment. Woodside applies a 'living heritage' approach to its cultural heritage management. This includes ensuring that Traditional Custodians are given voice to identify interests, transmit information and express concerns. Woodside works with Traditional Custodians to support and follow appropriate cultural protocols, including calling to Country, conducting smoking ceremonies (in areas where this custom is appropriate) and undertaking cultural awareness. Woodside will collaborate and provide relevant information it holds to groups such as Heritage Management Committees where they are established.

Should it be identified that relevant cultural authorities may be affected in the unlikely event of a spill, Woodside will engage with those parties as appropriate and in alignment with the FSP.	F: Yes. CS: Minimal.	Engaging with relevant cultural authorities that may be impacted by a spill will allow the Traditional Custodians to identify areas of concern.	Benefits outweigh cost/sacrifice.	Yes C 29.3

ALARP Statement

On the basis of the impact and risk assessment outcomes and use of the relevant tools appropriate to the decision type (i.e., Decision Type A, Section 2.6.1), Woodside considers the adopted controls appropriate to manage the potential impacts and risks to cultural features and heritage values. As no reasonable additional/alternative controls were identified that would further reduce the impacts without grossly disproportionate sacrifice, the impacts are considered ALARP.

Acceptability Statement

The impact and risk assessment has determined that, given the adopted controls, planned activities are unlikely to result in an impact greater than negligible and unplanned activities are assessed to have a residual risk rating of moderate (or lower).

The PAP and the EMBA are not expected to have a significant impact (e.g., changes in population levels) on MNES including marine fauna with a First Nations connection with, or traditional use in nearshore areas as defined in Section 4.8. While the EMBA may overlap the Ancient Landscape no impacts are predicted as hydrocarbons are expected to remain within the upper water column.

Woodside has engaged with Traditional Custodians adjacent to the EMBA to understand the cultural features and heritage values that may occur and potential impacts from the activity. In the event of an unplanned loss of hydrocarbons Woodside has committed to engaging with relevant cultural authorities that may be affected (Appendix I).

Woodside supports the ongoing management of heritage values under listings; Murujuga Cultural Landscape, Murujuga National Park and Dampier Archipelago (Including Burrup Peninsula) National Heritage Place. Planned activities under the PAP are not inconsistent with relevant heritage legislation, management plans and agreements under which these values are protected.

Management of risks and impacts related to cultural features and heritage values were noted as material issues for relevant persons consulted in the course of preparing this EP. All feedback, claims or objections from Relevant Persons has been appropriately responded to and addressed (see Appendix F), and controls proposed have been assessed in Sections of this EP as referenced in Table 6-57.

Further opportunities to reduce the impacts have been investigated above. The potential impacts and risks are considered acceptable if the adopted controls are implemented. Therefore, Woodside considers the adopted controls appropriate to manage the impacts and risks to cultural features and heritage values to a level that is acceptable, if ALARP.

Key Environmental Performance Outcomes, Standards and Measurement Criteria Related to Cultural Features and Heritage Values[150]

Environmental Performance Outcomes	***Controls***	***Environmental Performance Standards***	***Measurement Criteria***
EPO 29 No adverse impact to cultural features and heritage values without a permit from the Petroleum Activities Program.	**C 29.1** Apply a 'living heritage' management approach. Woodside seeks advice and incorporates Traditional Custodian cultural knowledge across our activities. Cultural	**PS 29.2.1** Woodside will continue to give voice to Traditional Custodians to identify interests, transmit information and express concern.	**MC 29.2.1** Records demonstrate Change Management and Management of Knowledge processes have been followed where new controls or management measures identified.

[150] As marine ecosystems may hold both cultural and environmental value (see Section 4.9.1), with cultural and environmental values intrinsically linked, in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Sections 6.6 and 6.7 will reduce impacts to cultural features and heritage values including marine species and habitats.

	safety considerations are factored for our workforce and the Traditional Custodian community.	**PS 29.1.2** Woodside will assess and where deemed practicable will implement appropriate cultural protocols where requested by Traditional Custodians.	**MC 29.1.2** Records demonstrate Woodside implemented cultural protocols as requested.
	C 29.2 Project inductions to all relevant marine crew, prior to the individual commencing the activity, will include information on cultural features and heritage values, including tangible and intangible cultural heritage.	**PS 29.2.1** All relevant marine crew have completed Project inductions that include information on cultural values, including tangible and intangible cultural heritage for awareness.	**MC 29.2.1** Records demonstrate all relevant marine crew have completed inductions that include cultural material.
	C 29.3 Should it be identified that relevant cultural authorities may be affected in the unlikely event of a spill, Woodside will engage with those parties as appropriate and in alignment with the FSP	**PS 29.3.1** In the event of an spill, Woodside's emergency response protocols (Section 7.14) include review of potentially impacted stakeholders - which includes Traditional Owners depending on the nature and scale of the event; to support identification and management of potential cultural heritage areas of concern.	**MC 29.3.1** In the event of a spill, emergency response records include Traditional Owner stakeholder engagement for applicable events.
	C 11.3 Implement the PAP in a manner that is not inconsistent with the objectives of the Murujuga National Park Management Plan 78, through execution of the Conservation Agreement and Deep Gorge Joint Statement.	**PS 11.3.1** Comply with relevant commitments and obligations under the Conservation Agreement and Deep Gorge Joint Statement	**MC 11.3.1** Records demonstrate compliance with relevant commitments and obligations under, the Conservation Agreement and 'Deep Gorge' Joint Statement
		PS11.3.2 Ensure Onshore Processing Facilities comply with relevant facility Cultural Heritage Management Plan(s)	**MC11.3.2** Onshore processing facilities Annual Compliance Reports demonstrate compliance with facility Cultural Heritage Management Plan(s).
EPO 30 No adverse impact to Underwater Cultural	**C 30.1** Unexpected finds of potential Underwater Cultural Heritage sites/features, including First Nations UCH are managed in accordance with an Unexpected Finds Procedure set out in Section 7.8.	**PS 30.1** In the event that an Underwater Cultural Heritage site or feature is identified, implement an Unexpected Finds Procedure set out in Section 7.8.	**PS 30.1.1** In the event that an Underwater Cultural Heritage site or feature is identified, implement an Unexpected Finds Procedure set out in Section 7.8.

Heritage[151] without a permit[152].	**C 30.2** Report any potential UCH finds to relevant stakeholders and authorities in accordance with the Unexpected Finds Procedure, Underwater Cultural Heritage Act 2018 and the ATSIHP Act.	**PS 30.2** Report any finds of potential UCH in accordance with the Unexpected Finds Procedure (b) including to the Australasian Underwater Cultural Heritage Database.	**MC 30.2.1** Records of potential UCH finds reported to relevant authorities and stakeholders.
	C 30.3 Relevant vessel crew, USV remote operators and ROV operators will be advised in an induction of the potential to encounter UCH, and of their requirement to follow the Unexpected Finds Procedure.	**PS 30.3** Relevant vessel crew (including ROV operators) are made aware of the requirements of the Unexpected Finds Procedure through an induction.	**MC 30.3.1** Records demonstrate vessel crew are made aware of potential to encounter UCH.

[151] Underwater Cultural Heritage is defined as any trace of human existence that has a cultural, historical or archaeological character and is located under water, in accordance with the UCH Act

[152] Permit for Entry into a Protected Zone or to Impact Underwater Cultural Heritage would be acquired under the UCH Act.

7. IMPLEMENTATION STRATEGY

7.1 Overview

Regulation 22 of the Environment Regulations requires an EP to contain an implementation strategy for the activity. The implementation strategy for the PAP confirms fit for purpose systems, practices and procedures are in place to direct, review and manage the activities so that environmental risks and impacts are continually being reduced to ALARP and are acceptable, and that EPOs and EPSs outlined in this EP are achieved.

Woodside, as Operator, is responsible for ensuring that the PAP is managed in accordance with this implementation strategy and the WMS (see Section 1.8).

7.2 Systems, Practice and Procedures

All operational activities are planned and performed in accordance with relevant legislation and internal environment standards and procedures identified in this EP (Section 6).

Processes are implemented to verify controls to manage environmental impacts and risks to:

- a level that is ALARP and acceptable
- meet EPOs
- comply with EPSs defined in this EP.

The systems, practices and procedures that are implemented are listed in the EPSs contained in this EP. Document names and reference numbers may be subject to change during the statutory duration of this EP and is managed through a Change Register and update process. Further information regarding some of the key systems, practices and procedures relevant to implementation of this EP is provided below.

7.2.1 Woodside Management System Operate Processes

Under the WMS Operate Activity (see Section 1.8 for an overview of the WMS), there are four overarching processes; those directly relevant to the implementation of this EP and environmental management during the PAP are described below (Operate Plant Process and the Maintain Assets Process).

7.2.1.1 Operate Plant

The objective of the Operate Plant Process is for production to be carried out in a safe, efficient, reliable and economic manner, and that all required process variables are within allowable limits. This is so that the potential for unplanned (accident/incident) events that may impact the environment are minimised.

The Operate Plant Process develops key activities to support ongoing production activities so that the facility is operated within the Basis of Design. The process also identifies required production routines, routine execution, recording of data gathered and formulation of remedial activities. The Operate Plant Process includes the Integrated Safe System of Work (ISSoW) system (described below).

In addition, the Operating Practice MSPS (M02) is in place to assure operating practices are in place, such that:

- integrity critical operating procedures are available, accurate, up to date, understood and used
- safe operating and technical integrity limits are defined, understood and the process is managed within these limits.

7.2.1.1.1 Integrated Safe System of Work

The ISSoW Procedure outlines the key activities required to achieve effective management of permit-controlled work on the facility. The ISSoW process is a management system for all work and is a key element in ensuring the safety of personnel, protection of the environment and technical integrity of the facility.

Work within the facility 500 m PSZ and operations within the vicinity of the connected flowlines is controlled in accordance with ISSoW.

The ISSoW system takes a risk-based approach to activities, thus tasks with higher levels of risk are subjected to greater scrutiny and control. The ISSoW system also allows for low-risk, routine tasks to be carried out with adequate but minimal administration. The prime objective of ISSoW is to ensure work other than normal operations is properly planned, risk assessed, controlled, coordinated and safely executed. It provides a methodical approach to identifying hazards, assessing risks, and creating and supporting permits to work and associated certificates.

In keeping with ALARP principles, this system is critical to ensuring the appropriate level of hazard identification and risk assessment is carried out for activities performed on the facility.

In addition, the Safe Work Control MSPS (M04) is in place to assure effective safe work control, permit to work and task risk management arrangements are in place and followed to control the risks arising from work activities.

7.2.1.2 Maintain Assets

The Maintain Assets Process aims to improve the reliability and availability of plant and equipment (which includes that required for safe operation) through well managed and planned execution of maintenance that promotes a proactive maintenance culture.

Maintenance, inspection and testing systems and procedures are in place to safeguard the integrity of the facility. The maintenance strategy for the facility is based on optimising safety, minimising environmental impact and maximising production. Maintenance practices used to establish well managed maintenances strategies, planned execution and improvement are described in the Maintenance of Assets Procedure.

A risk-based approach is used as the basis for establishing and prioritising inspection, maintenance and testing requirements at the facility. Equipment is assessed to establish equipment criticality with respect to the consequences and likelihood of equipment failure. This informs determination of appropriate maintenance and inspection activities. Maintenance activities are allocated risk rankings according to the criticality of equipment, so that high risk maintenance work orders are completed as a priority.

A computerised maintenance management system (CMMS) provides a database called SAP-PM that contains facility registers, equipment details, spare parts data and associated planned maintenance tasks. This system is used to plan, monitor and record maintenance activities. The system provides a variety of reports that enable monitoring and assessment of maintenance activities.

SCE Technical Performance Standards identify SCEs and associated assurance activities. These activities are identified in the CMMS and given the appropriate priority (Technical Integrity status). Refer to Sections 2.7.5 and 7.4 for more detail on SCE Technical Performance Standards and how they differ from EPSs required by the Environment Regulations. SCE Technical Performance Standards form a key component in the processes and systems implemented by Woodside to maintain safety and environment critical plant and equipment.

In addition, the Maintenance and Inspection MSPS (M03) is in place to assure that the necessary inspection and maintenance requirements are identified and carried out to maintain the integrity of SCEs and SCCs.

7.2.2 Process Safety Management

So that Woodside protects the safety, security and health of its employees, contractors, the environment and assets, Woodside has adopted the Energy Institute's Process Safety Management (PSM) framework within its Process Safety Management Procedure which sets out a disciplined framework for managing the integrity of systems and processes that handle hazardous substances over the production (and exploration) lifecycle. It deals with the prevention and control of events that have potential to release hazardous materials and energy.

PSM consists of four main focus areas. Each focus area contains a number of PSM requirements that define key aspects required so that PSM is integrated through the organisation. There are twenty PSM requirements. The focus areas and requirements are shown in Figure 7-1.

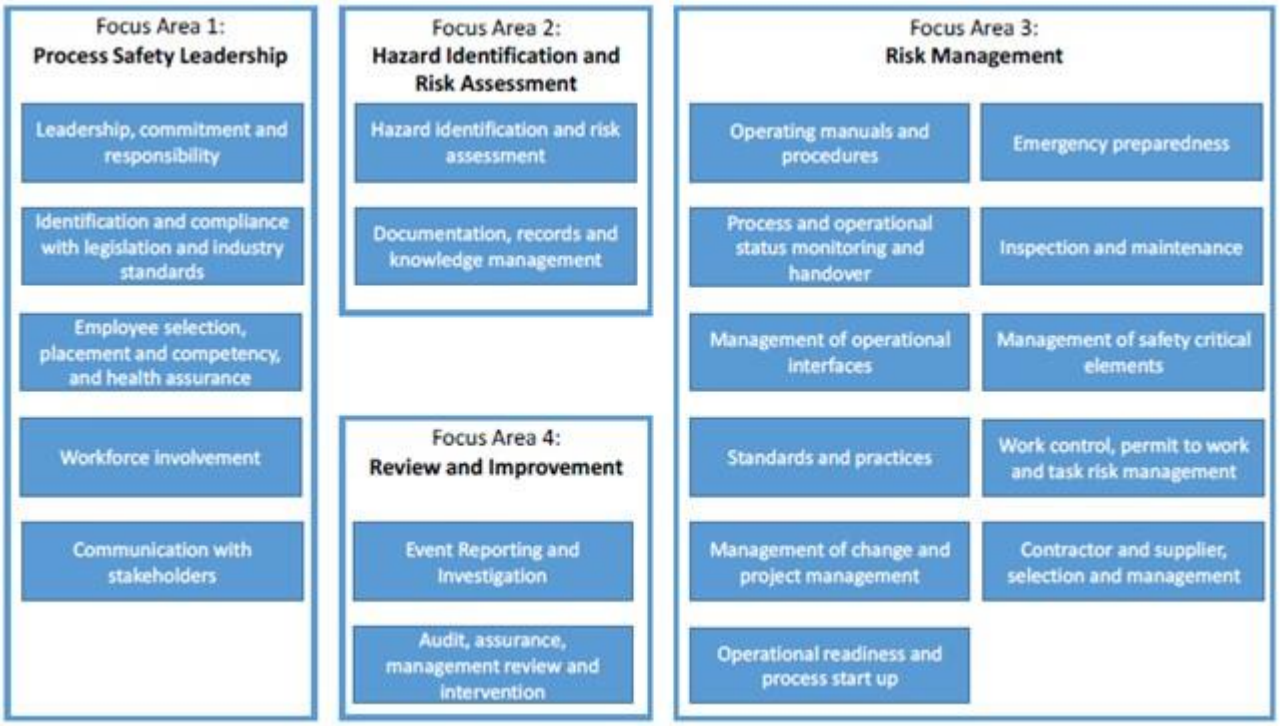

Figure 7-1: Process safety management focus area

7.2.2.1 Woodside Safety Culture Framework

Woodside's 'Our Safety Culture' framework (shown in Figure 7-2) promotes a strong HSE culture and is a key enabler for effective process safety management. This framework outlines the expected behaviours for everyone including supervisors and managers/executives, and is openly discussed as part of inductions, training and development.

Figure 7-2: Woodside 'Our Safety Culture' framework

7.2.3 Offshore Marine Discharge Adaptive Management Plan

7.2.3.1 Overview

The Offshore Marine Discharges Adaptive Management Plan (OMDAMP) has been developed to manage routine discharges to the marine environment from applicable offshore production facilities.

The objectives of the OMDAMP are to:

- Manage marine discharges in a way that reduces the environmental risks and potential environmental impacts to As Low As Reasonably Practicable (ALARP) and of an acceptable level.
- Define monitoring measures to determine whether routine marine discharges comply with regulatory requirements and Woodside's Environmental Performance Procedure.
- Detail verification assessment and non-routine monitoring to be undertaken when routine monitoring identifies a change in discharge characteristics which have the potential to alter existing compliance with the Environmental Performance Procedure or relevant facility Operations Environment Plans (EPs).

The OMDAMP defines a process and rational for management of routine discharges such as produced water (PW), cooling water, and brine to the marine environment. The OMDAMP considers applicable technical guidance (including the Commonwealth ANZG for fresh and marine water quality, National Water Quality Management Strategy and Technical Guidance: Protecting the quality of Western Australia's marine environment (EPA, 2016)) as well as relevant internal procedures and asset specific EP commitments. In addition, the OMDAMP is based on Woodside's experience managing PW at multiple northwest shelf offshore facilities and considers monitoring data collected over 20-30 years; allowing the application of appropriate controls and any lessons learnt to ensure impacts are acceptable and reduced to ALARP.

7.2.3.2 Routine Monitoring and Management

Monitoring changes in water quality as well as investigating potential toxicity via whole effluent toxicity (WET) testing and implementing management to maintain acceptable levels of changes is standard industry practice in Commonwealth and State waters. By limiting the changes to water quality and therefore the pathway to impact sediment quality and biota there is high confidence that no environmental impact has occurred outside the approved mixing zone boundary.

The OMDAMP details DGV's (ANZG 2018), routine monitoring assessment against trigger values, analytical methods and actions when a trigger value is exceeded. The trigger values are applied through a risk-based approach that is intended to capture uncertainty around the level of impact by staging monitoring and management responses according to the degree of risk of environmental impact. This approach provides a level of confidence that management responses are not triggered too early (i.e. when there is no actual impact) or too late after significant or irreversible damage to the surrounding ecosystem (EPA 2016). Changes in discharge contaminants and PW toxicity can be detected early and can indicate the potential for an impact prior to an impact occurring allowing for timely management. WET testing confirms if there is a potential for impact on biota.

PW samples should be representative of normal operations, hence timing of sampling coincides with a period of normal operating circumstances for a facility, as well as also considering when wells have begun to cut water, which formation water producing wells are online and chemicals that may be present in the discharge stream. Ensuring samples are representative of normal operations may require deferring sampling within the calendar year if required. Samples are analysed by a NATA accredited laboratory (where applicable) for key physio-chemical parameters and chemical analytes.

WET tests are undertaken on a broad range of taxa of ecological relevance for which accepted standard test protocols are well established. WET tests mainly focus on the early life stages of test organisms, when organisms are typically most sensitive to contaminants; the tests are designed to represent local trophic level receptors. For WET testing, a range of tropical and temperate Australian marine species were selected based on their ecological relevance, known sensitivity to contaminants, availability of robust test protocols, and known reproducibility and sensitivity as test species. The dilutions required to protect 99% and 95% of species are calculated using the Warne et al. (2018) methodology. If a trigger value is not met, it indicates uncertainty around whether the environmental value is being protected and further investigation is required (Figure 7-3).

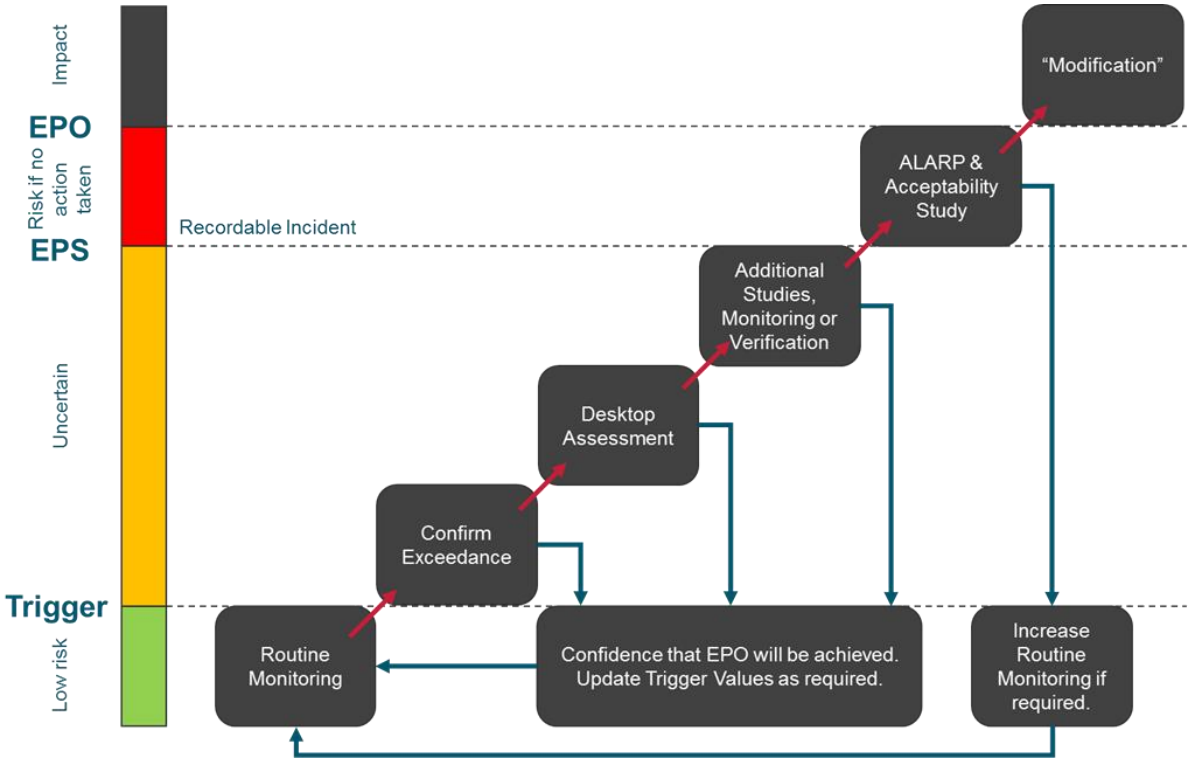

Figure 7-3: Routine monitoring and adaptive management framework for produced water

7.2.3.3 Further Investigations

Detectable exceedances in trigger values may occur without impacting the environment. Once data has been validated to be correct (QA/QC process) operational measures may be action, if appropriate, to limit spatial and temporal impacts based on the nature and scale of potential impact. To provide confidence that environmental impact has not occurred outside the approved mixing zone boundary, further investigation would be required using multiple lines of evidence (Figure 7-3) in the form of a desktop study to initially assess the exceedance in context of available data and confirm if there is potential for impact to the environment. Additional routine sampling may occur at this point to assess for natural variability in the discharge characteristics. A desktop assessment is necessary before undertaking in-field monitoring. This ensures monitoring programs are designed and implemented to provide robust findings based on good survey design.

A range of methods can be used to detect trigger value exceedances (e.g. relative percentage difference, control charts, multivariate analysis, etc.) depending on the dataset available. An appropriate method is selected as described in the OMDAMP due to the variable nature of environmental data. If critical data is not available, the desktop study identifies potential data gaps and may recommend additional non-routine studies and/or monitoring to ensure the assessment is appropriately undertaken. The purpose of the 'further investigations' step is to provide certainty that the EPO has been achieved, if a trigger value has been exceeded. The key investigation steps are described below:

- **Confirm the trigger value has been exceeded** – Review quality assurance and quality control, methodology and possible sources of contamination to determine if the results are reliable, or if any factors have occurred that may compromise the integrity of the monitoring or data.
- **Desktop assessment to understand whether the EPO is at risk** – If a trigger value is confirmed to be exceeded, multiple lines of evidence are considered including historical and current data from routine and non-routine monitoring and studies. This assessment shall consider whether there is adequate evidence to demonstrate that acceptability criteria have been met (EPO not breached) and if the desktop assessment determines that the existing body of evidence is insufficient, it shall outline what additional monitoring or studies are required. Potential additional monitoring/studies may include but is not limited to:
  - single species test (collected annually in parallel with routine chemical characterisation should further investigation be required)
  - dilution modelling and or studies
  - flocculation, sedimentation, settling velocity and/or dispersion analysis
  - metal bioavailability
  - scanning electron microscopy and particle size distribution analyses
  - in-situ monitoring (water quality and/or sediments).

Routine monitoring activities may be required ahead of schedule and additional monitoring not listed may be undertaken as appropriate. Field monitoring is undertaken in accordance with a plan that details timing, locations and objectives of monitoring.

- Conduct additional studies to confirm the EPO is not at risk – Monitoring results provide additional lines of evidence to determine whether there is a risk of environmental impact at the mixing zone boundary due to unacceptable changes in water quality resulting in changes to sediment, or biological indicators. Given the significant health, safety and technical risks, logistics and planning required, monitoring of the receiving environment is typically only considered when all other sources of evidence are insufficient to demonstrate that the EPO is not at risk. The OMDAMP provides detailed guidance on the steps and actions required to be undertaken if a trigger value is exceeded and this may include additional non-routine

monitoring to verify that environmental impacts have not occurred outside the boundary of the mixing zone.

If triggers are being exceeded but no impact on the environment is predicted to occur the desktop assessment may consider development of site-specific guideline values in line with ANZG. For example, if chemical characterisation identified copper as exceeding guideline value - ANZG 99% DGV but further investigations concluded levels observed were consistent with baseline and naturally occurring in the region. If potential impacts to the environment are identified, an ALARP/Acceptability Study is required to determine what additional controls can be implemented to ensure the impacts are not realised.

7.2.3.4 ALARP/Acceptability Study

An ALARP/Acceptability study is conducted once it has been determined, as a result of further investigations, that there is potential for an impact that exceeds the acceptable limits of change. The ALARP/Acceptability study shall be conducted in accordance with the ALARP Demonstration Procedure, to determine additional controls that may be necessary to reduce the potential impacts. Additional management measures (controls) may include technology, process upgrades or reservoir management. Woodside will implement the additional controls identified in the ALARP/Acceptability study that are required to give confidence that the acceptable limits of impact can be achieved.

In the event WET testing identifies a higher-than-expected effluent toxicity the study would need to consider discharge volumes, duration, well line up, potential drivers of toxicity. The ALARP study may recommend the following:

- non routine WET testing,
- operational discharge limits,
- change out of process chemicals if appropriate or reduced dosing rates,
- well management,
- *Insitu* monitoring,
- technology or process upgrades.

7.2.3.5 Review and revision

This OMDAMP is typically reviewed annually to incorporate the following:

- Completion of the annual OMDAMP compliance review – incorporating any recommendations for further assessment and/or updates to the monitoring framework
- Recently accepted EPs – incorporating any new/amended monitoring commitments/triggers
- Regulatory inspections – incorporating any relevant findings or recommendations
- Updates to key guidelines, guideline values or changes to recommended sampling/ methodologies.

7.2.4 Woodside Invasive Marine Species Risk Assessment Process

7.2.4.1 Objective and Scope

To minimise the risk of introducing IMS as a result of the Petroleum Activities Program, all applicable vessels and immersible equipment will be subject to Woodside's IMS risk assessment process (unless exempt as outlined below).

The objective of the risk assessment process is to identify the level of threat a contracted vessel, or immersible equipment poses if no additional risk reduction management measures are implemented.

This allows Woodside (and its contractors) to apply management options that are commensurate to the identified level of risk.

In context of the activities specified in Section 3, the IMS risk assessment process does not apply to:

- vessels or immersible equipment that do not plan to enter the IMS Management Area (IMSMA)[153] or PAAs defined in environmental approvals
- 'new build' vessels launched less than 14 days prior to mobilisation
- vessels or immersible equipment that have been inspected by a suitably qualified IMS inspector who has classified the vessels or immersible equipment as acceptably low risk no more than 14 days prior to mobilisation
- locally sourced vessels or immersible equipment from within the Pilbara locally sourced zone[154]. Vessels and immersible equipment are defined as locally sourced when the same supply facilities/port have been used since their last IMS inspection, full hull clean in dry dock or application of antifouling coating (AFC[155]).

7.2.4.2 Risk Assessment Process

Woodside's IMS risk assessment process was developed with regard to the national biofouling management guidelines for the petroleum production and exploration industry and guidelines for the control and management of a ships' biofouling to minimise the transfer of invasive aquatic species (IMO Guidelines, 2011).

In order to effectively evaluate the potential for vessels and immersible equipment to introduce IMS, a risk assessment process has been developed to score and evaluate the risk posed by each Project vessel, or immersible equipment planning to undertake activities within the IMSMA/PAA. The risk assessment process considers a range of factors, as listed in Table 7-1 and Table 7-2.

The IMS risk assessments will be undertaken by a trained environment adviser who has completed relevant Woodside IMS training or by a qualified and experienced IMS inspector. A QA/QC process is implemented for all Woodside conducted IMS risk assessments where a secondary trained environment adviser verifies the assessment to minimise the risk of misapplication and errors within the risk assessment process.

Table 7-1: Key factors considered as a part of the risk assessment process for vessels

Factors	Details
Vessel type	The risk of IMS infection varies depending on the type of vessel undertaking the activity. A higher risk rating is applied for more complex, slow-moving vessels (e.g., dredges) in comparison to simple vessels (e.g., crew transfer vessel).

[153] MSMA is based on current legal framework and includes all nearshore waters around Australia, extending from the lowest astronomical tide (LAT) mark to 12 nm from land (including Australian territorial islands). The IMSMA also includes all waters within 12 nm from the 50-metre depth contour outside of the 12 nm boundary (i.e. Submerged reefs and atolls).

[154] The Pilbara Zone includes Port, nearshore and offshore movements between Exmouth and Port Hedland (excluding high environmental value areas, World Heritage Areas, Commonwealth Marine Reserve Sanctuary Zones and State Marine Management Areas and Marine Parks).

[155] Vessels and immersible equipment can still be classified as locally sourced even if the AFC application occurred in a different port provided the amount of time between AFC application and departure to the locally sourced area (i.e. period of time in waters <12 nm/50 m water depth) did not exceed a consecutive seven days or the period of time the vessel or immersible equipment has spent within the locally sourced zone exceeds one year (i.e., the risk of introducing a species from a different location has already passed).

Factors	Details
Recent IMS inspection and cleaning history, including for internal niches	In the case of biofouling on external hull niches, different risk ratings are applied dependant on whether out-of-water or in-water IMS inspections by qualified IMS inspectors and cleaning (if required) have been undertaken prior to contract commencement. If an IMS inspection (and clean if required) has not been undertaken in the past six months (from the time of contract commencement), the highest risk factor is applied. The risk factor then lessens for vessels as the time between inspection and mobilisation reduces.
Out-of-water period before mobilisation	A risk reduction factor can be applied for vessels that are hauled out and then mobilised as deck cargo or by road during mobilisation, therefore becoming air dried over an extended period. Risk reduction factor increases with exposure time out of water.
Age and suitability of AFC at mobilisation date	AFC manufacturers provide a range of coatings, each designed to avoid premature coating failure if it is correctly applied and matched to the vessel's normal speeds and activity profile (i.e., proportion of time spent stationary or below three knots), and its main operational region (i.e., tropical, sub-tropical temperate). If the AFC type is deemed to be unknown, unsuited or absent, the highest risk value is applied. If the AFC type is suitable the risk factor applied reduces with age since application.
Internal treatment systems	A risk reduction factor applied if the vessel has an internal biological fouling control system in place at the time of assessment, or evidence of manual dosing.
Vessel origin and proposed area of operation	Differing risk ratings are assigned in relation to the climatic relationship between the vessel's origin and the proposed climatic region of the proposed area of operation. Highest risk rating is applied to similar climatic regions.
Number of stationary/slow speed periods >7 days	A risk factor is calculated based on the number of 7-day periods that the vessel has operated at stationary or at low speed (less than three knots) in port or coastal waters which is any waters less than 50 metres deep outside 12 nautical miles from land or any waters within 12 nautical miles of land. The greater the number of periods the higher the risk factor applied.
Region of stationary or slow periods	A further multiplier is applied depending on the location of the stationary/slow speed periods. The highest risk rating applied if the stationary or slow speed periods occurred within ports or coastal waters of the same climatic region,
Type of activity – contact with seafloor	The potential for the introduction of IMS varies on the planned vessel activity taking place. Those activities that come in contact with sediments and thus have the potential to accumulate and harbour IMS in areas such as hoppers (dredges) and spud cans (drilling rigs) are considered to have a greater risk of infection.

Table 7-2: Key factors considered as a part of the risk assessment process for immersible equipment

Factors	Details
Region of deployment since last thorough clean, particularly coastal locations	Climatic region of use since last overhaul, thorough cleaning or prolonged period out of water (>28 day). Highest risk rating is applied to similar climatic regions. Activities occurring in nearshore areas (less than 50 meters deep and/or within 12 nautical miles from land) are given the highest risk rating.
Duration of deployments	Maximum duration of deployment (maximum time in water) since last overhaul or thorough cleaning. The longer the period of immersion the higher the risk rating applied.
Duration of time out of water since last deployment	A further risk reduction factor can be applied for immersible equipment that has been out of the water for an extended period.
Transport conditions during mobilisation	If the equipment is stored in damp conditions, then a high risk factor is applied, while if equipment is stored in dry and well ventilated (low humidity) conditions, then a low risk factor is applied.
Post-retrieval maintenance regime	A risk reduction factor is applied if the equipment/item of interest is routinely washed, cleaned, checked and/or dissembled between project sites. While a higher risk rating is applied where no routine cleaning occurs.

Following implementation of the risk assessment process, vessels and/or immersible equipment are classified as one of three risk categories, as defined below:

- 'Low'– Low risk of introducing IMS of concern and hence no additional management required, or management options have been applied to reduce the risk.
- 'Uncertain'– Risk of introducing IMS is not apparent and as such the precautionary approach is adopted, and additional management options may be required.
- 'High'– High risk of introducing IMS means additional management options are required prior to this vessel mobilising to the PAA.

Following the allocation of a 'low' risk rating for a vessel or immersible equipment, the information provided by the vessel operator for the purposes of risk assessment must be confirmed prior to mobilisation. For vessels or equipment classified as posing an 'uncertain' or 'high' theoretical risk, a range of management options are presented to reduce this theoretical risk to acceptable levels and achieve a low risk status. These management options have been developed with the intention of reducing IMS risk to levels that are as low as reasonably practicable (i.e., ALARP). It is a flexible approach that allows for a range of management actions to be tailored for a specific vessel movement. These will be assessed on a case-by-case basis and may include, but are not limited to, the following:

- Inspection (desktop, in-water or dry dock) by a suitably qualified and experienced IMS inspector to verify risk status. Where practicable, the inspection shall occur within seven days (but not more than 14 days) prior to final departure to the PAA.
- In-water or dry dock cleaning of the hull and other niche areas. This is typically applied where the risk assessment outcome is High, driven by the age of the AFC on the vessel and its time spent in similar climatic region ports.
- Treatment of vessels internal seawater systems. This is typically applied in isolation for vessels with AFC applied to their hull within the last 12 months and where subsequent assessment through the process achieves a low risk rating.
- Limiting the duration that the vessel spends within the IMSMA to a maximum of 48 hours (cumulative entries). This is applicable for Uncertain risk vessels only.
- The vessel is rejected.
- Project vessels and immersible equipment are required to be a low risk of introducing IMS prior to entering the PAA.

7.2.5 Risk Management

Risk management processes and practices are applied on an ongoing basis to design, production and maintenance activities at the Pluto facility to manage risks to personnel, assets and the environment.

Potential environmental consequences and impacts from the Pluto facility are risk assessed and controlled in accordance with the Woodside risk management processes described in Section 2 of this EP (Environmental Risk Management Methodology).

The results of the Pluto facility ENVID are described in Section 6 and in the facility Environmental Impacts and Risk Register. This register, in conjunction with the EP, provides a demonstration that environmental risks have been identified, and that appropriate controls are in place to manage those risks to a level that is acceptable and ALARP throughout the life of the facility.

A number of other risk management tools and techniques are used by the Pluto facility to manage environmental and other risks on a routine basis during operational, maintenance and inspection tasks. Examples include:

- the processes outlined in Section 2.2
- risk management tools, including ISSoW tools, such as Hazard Identification and Risk Assessments, Level 2 Risk Assessments, Operational Risk Assessments, the technical Management of Change (MoC) system (Section 7.3.2), and Step back 5 × 5.
- integrity review studies, HAZIDs and Hazard Operability studies.

These tools, risk and integrity management practices are described further in the Pluto Facility Safety Case, WOMP, and the Control of Operational Risk Procedure.

In addition, other risk sub-processes and practices are also applied within Woodside on an ongoing basis to manage different types of risk. A summary of those relevant to the PAP is provided below. Woodside's risk management processes (refer to Section 2.2.1), along with the supporting risk sub-processes and practices discussed in the following sections, so that the environmental impacts and risks of the activity continue to be identified and reduced to a level that is ALARP.

7.2.6 Management of Risks – Contracting and Procurement

Suppliers and contractors play a significant role in meeting the resource needs of Woodside's operations, including the facility operations. Effective management of environmental risks in contracts is achieved by setting clear expectations and managing environmental risks throughout the duration of the contract. Environmental risks in contracts are managed under the Contracting and Procurement Procedure supported by the Health, Safety and Environment in Contracting Guideline. The guideline provides a risk-based approach to contractor selection and management and is aligned with 'HSE Management – Guidelines for Working Together in a Contract Environment' (International Association of Oil and Gas Producers, Report No. 423).

The Engineering Standard: Quality Requirements for Supply of Products and Services defines specific quality requirements for engineering contracts and purchase orders. The specified quality control requirements in the Standard are required to be complied with as applicable to the scope of supply.

7.2.7 Management of Risks – Subsea Activities

Subsea activities are managed in line with the Subsea and Pipelines Integrity Management Procedure which defines the practices and technical requirements that must be applied to deliver and safeguard integrity of the subsea equipment and pipelines during the facility lifecycle. It provides the relationship between the PSM Framework (including management of change) and Subsea and Pipelines Group services processes.

IMMR activities are managed under the Manage IMMR Work Procedure. Risk assessments are conducted as required under this procedure.

These requirements are supported by implementation of the Subsea Construction and Inspection, Maintenance and Repair Environment Screening Questionnaire tool. The screening questionnaire is used to understand the scope of the activity, potential environmental impact and if additional regulatory approvals are required. To achieve this, the questionnaire captures key project information such as seabed disturbance, chemical use and waste. This information is used by an environment focal point to determine if further assessment is required. For projects that have the potential for environmental impact, an assessment is undertaken against this EP and other Woodside environmental requirements. If determined by the Subsea and Pipeline Environment Screening Questionnaire process, an EP MoC review (as per Section 7.3.2) is undertaken to confirm if the level of environmental risk warrants revision and resubmission of an EP.

Key environmental requirements and regulatory commitments are communicated to project teams and incorporated into key project documentation where applicable and required (i.e. not addressed via existing Woodside practices).

7.2.8 Management of Risks – Major Projects

Major projects are required to follow the Appraise and Develop Management Procedure and the Investment Management Framework. This procedure defines the requirements to deliver a commercially valuable production facility or modify to an existing facility. The process workflow requires integration of work from various functions utilising their people and processes, including Environment, for example HSE philosophy and regulatory approval requirements.

These requirements are supported by implementation of the Brownfields Environment Screening Questionnaire tool. The screening tool is used to determine if a project has the potential for environmental impact or requires additional regulatory approvals. For projects that have the potential for environmental impact, an environmental focal point is assigned and the risks and impacts assessed against the facility EP and other Woodside environmental requirements.

Key environmental requirements and regulatory commitments are communicated to project teams and incorporated into key project documentation where applicable and required (i.e. not addressed via existing Woodside practices). Where it is identified that the project scope has the potential to result in modification or change to the facility description provided in the EP, or where potential new environmental risks or impacts or increases in an existing environmental risk or impact are identified, an EP MoC review (as per Section 7.3.2) is undertaken to confirm if the level of environmental risk warrants revision and resubmission of an EP.

7.2.9 Management of Risks – Well Integrity

Wells are managed throughout their lifecycle in line with the Well Lifecycle Management Procedure. This procedure provides the basis for ensuring well integrity in accordance with the Process Safety Management Procedure.

In addition, wells are required to have a regulator accepted WOMP to demonstrate that well integrity risks are managed to ALARP levels. Wells tied back to the facility are managed under a WOMP.

7.2.10 Management of Risks – Marine Services

Woodside's Marine Services Function provides a platform for the conduct of safe and efficient Marine Operations across Woodside through the Marine Services Management. A set of procedures that support vessel assurance and management (including HSE and quality [HSEQ] management) are in place to ensure marine operations are conducted in a safe and efficient manner, and in accordance with regulatory requirements.

Vessel masters are required to request clearance from the facility OIM or delegate prior to entering the 500 m PSZ.

7.2.11 Management of Risks – Emissions and Energy Management

Emissions generation and energy use is managed in line with the GHG Emissions and Energy Management Procedure which defines the minimum mandatory requirements to manage and deliver continuous improvement in energy efficiency and reduction in GHG emissions. The procedure supports the implementation of the Climate Policy and aligns with the requirements of Woodside's Environmental Performance Procedure, applicable to assets in Operate phase. It supports the "operate out" component of limiting net emissions, as shown in the Woodside Climate Policy.

Implementation of the GHG Emissions and Energy Management Procedure assists in meeting external expectations, such as Woodside's net equity Scope 1 and 2 greenhouse gas emissions reduction targets of 15% by 2025 and 30% by 2030, and our aspiration for net zero equity Scope 1

and 2 greenhouse gas emissions by 2050 or sooner[156]. These targets apply across Woodside's portfolio and progress against targets are reported in annual corporate disclosures. No specific reduction targets are set for individual assets as part of the corporate target. Meeting these corporate reduction targets may mean additional net voluntary abatement beyond that required by the SGM.

The GHG Emissions and Energy Management Procedure also maintains consistency with the principles of current corporate initiatives, such as the Zero Routine Flaring Initiative for oil assets, the OGMP 2.0, OGCI Near-Zero, and Methane Guiding Principles. These initiatives aim to improve methane emissions inventorisation, methane materiality assessments, evaluation, reduction implementation and increased transparency through reporting. The Woodside Flare Framework is a WMS tool that seeks to improve awareness of flaring-related issues and influence for reduced flaring.

The GHG Emissions and Energy Management Procedure links to the annual review of opportunities to improve energy performance through identification and evaluation as described in the Production Optimisation and Opportunity Management Procedure. It also requires measurement, analysis and communication of energy performance across the Operations Division and consideration of actual or potential impacts to energy efficiency in Woodside decision making, such as management of change, operational decisions, issue resolution options analysis and facility optimisation plans.

The Environmental Performance Procedure requires that assets measure, monitor or estimate direct air and GHG emissions, and that such emissions and energy intensities are minimised to ALARP in design. The requirement to set, measure and track flare and emissions targets for assets, help to manage the emissions to meet the EPS requirements in Section 6.7.10.

7.2.11.1 Production Optimisation and Opportunity Management

Woodside's Production and Opportunity Management Procedure (POOMP) outlines the process for identification, prioritisation and management of production opportunities that maximise production revenue or reduce emissions intensity across Woodside operated assets. Opportunities are identified throughout the year in various meetings, forums and teams. In addition, formal opportunity identification takes place through annual workshops, which complement the identification of improvement opportunities. These opportunities are prioritised and managed according to the workflow shown in Figure 7-4.

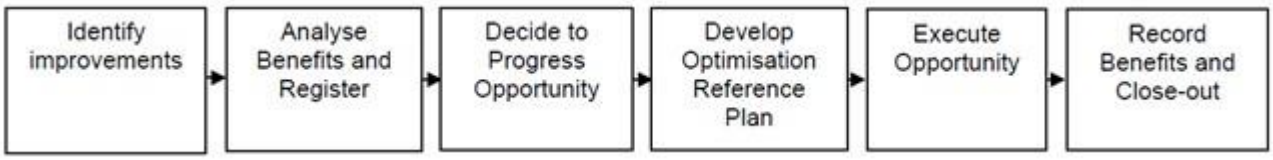

Figure 7-4: Opportunity management workflow

Production opportunities are evaluated and progressed, based on value and confidence of return, within the constraints of technical feasibility, cost and other factors. Implemented opportunities are validated and recorded before close out.

7.2.11.2 Flare and Emissions Target Setting

In demonstrating the risks and impacts relating to flaring have been reduced to ALARP, flare and emissions targets for the Pluto facility are set annually. Targets are estimated based on operating

[156] Targets and aspiration are for net equity Scope 1 and 2 greenhouse gas emissions relative to a starting base of 6.32 Mt CO2 -e which is representative of the gross annual average equity Scope 1 and 2 greenhouse gas emissions over 2016-2020 and which may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021. Net equity emissions include the utilisation of carbon credits as offsets.

experience and forecast activities; e.g., shutdowns. Consideration is also given to the flaring estimates contained within this EP.

The flare target is tracked against flare performance through the year. Where achieving a flare target is in question, an internal flare target deviation is developed, which requires an ALARP justification. A flare target deviation considers the EP flare estimate. If the estimate is likely to be exceeded, an EP MoC assessment (see Section 7.3.2) is undertaken to determine if a revision and resubmission is required.

Annual emissions targets (expressed as tCO2e) are set for the integrated Pluto facility concurrent with annual forecasting practices. Key streams are tracked as provisional values in monthly governance reporting, and are supported by operational energy efficiency monitoring tools such as multi-variate turbine power efficiency curves. Fuel and other emissions intensity values can vary diurnally, and seasonally (associated with ambient environmental operating conditions) and are also highly dependent on facility activity integrated plans, reservoir outcomes, availability, utilisation and reliability across the system. As such, monthly emissions tracking is reviewed in this context to support identification of potential excursions and opportunities.

Values are finalised for financial-year annual regulatory reporting (such as NGERS and NPI submissions), and calendar year tracking.

7.2.11.3 Methane Management

Woodside's methane management strategy aligns with the principles of OGMP 2.0 and OGCI's Aiming for Zero Methane Emissions Initiative, in order to:

- Deliver appropriate and proportional identification and reduction efforts of methane based on facility nature and scale;
- Align with recommended reporting framework levels and timelines; and
- Assess the suitability of best practice proven techniques, technologies, and operational practices (OGMP 2.0).

The methane management strategy is implemented via execution of asset specific Methane Action Plans.

7.2.12 Management of Risks – Indirect Greenhouse Gas Emissions Management

As stated in the Climate Policy, Woodside's objective is to thrive in this energy transition as a low cost, lower carbon energy provider. To support this policy Woodside undertakes the following measures:

- Set science-based[157] near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned[158] scenarios, covering equity Scope 1 and 2 emissions, both operated and non-operated.[159]

[157] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "science-based" (published 2021) which states "targets are considered 'science-based' if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement – limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf.

[158] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "Paris-aligned scenarios" (published 2021) which states "scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf.

[159] Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside's ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside's ownership interest.

- Develop and operate oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Invest in new energy products and lower carbon services to reduce customers' emissions (part of Woodside's Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publish transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Align our advocacy to the principles of this Climate Policy.

Woodside's Scope 3 targets includes the introduction of new products and services into our portfolio, like hydrogen, ammonia, and carbon capture, utilisation and storage (CCUS). These products and services can help our customers avoid or reduce their Scope 1 or 2 emissions and therefore reduce the life cycle (Scopes 1, 2 and 3) emissions intensity of Woodside's portfolio.

Woodside's initial Scope 3 target was an investment target, to invest $5 billion in new energy products and lower carbon services by 2030[160][161]. In 2023, Woodside reviewed our approach to Scope 3 targets in response to investor feedback and supplemented the existing investment target with a new complementary emissions abatement target, to take final investment decisions on new energy products and lower carbon services by 2030, with total abatement capacity of 5 Mtpa CO2-e[162].

The investment target tracks Woodside's work at a corporate level to develop these projects and bring them to market. The emissions abatement target will track the potential impact of these projects on customer emissions. The customers for these products and services may be the same as the customers of our oil and gas business, directly substituting their energy for new products or directly abating the associated emissions. They may also be customers of the new products and services, without also being customers of oil and gas. Progress against these targets is reported annually in Woodsides annual disclosures. Targets are not set for individual projects, including Pluto, but are assessed corporately.

7.2.12.1 Annual Review

An annual review of the implementation and outcomes associated with Woodside working with the natural gas value chain to reduce emissions in third party systems via corporate activities will be undertaken. Additionally, progress against corporate Scope 3 investment and abatement targets will be reported annually in relevant Woodside annual disclosures. If they are deemed to be effective at a Corporate implementation level, then it will also be deemed that specific impacts and risks at an

[160] Scope 3 targets are subject to commercial arrangements, commercial feasibility, regulatory and Joint Venture approvals, and third party activities (which may or may not proceed). Individual investment decisions are subject to Woodside's investment targets. Not guidance. Potentially includes both organic and inorganic investment. Timing refers to financial investment decision, not start-up/operations.

[161] Includes pre-RFSU spend on new energy products and lower carbon services that can help our customers decarbonise by using these products and services. It is not used to fund reductions of Woodside's net equity Scope 1 and 2 emissions which are managed separately through asset decarbonisation plans.

[162] Includes binding and non-binding opportunities in the portfolio, subject to commercial arrangements, commercial feasibility, regulatory and Joint Venture approvals, and third party activities (which may or may not proceed). Individual investment decisions are subject to Woodside's investment targets. Not guidance.

Asset contribution level (i.e., proportion attributable to Pluto production) is also being managed appropriately.

If the annual review deems the controls are not effective, an EP management of change assessment (see Section 7.3.2) is undertaken to determine if a revision and resubmission is required.

7.2.13 Management of Human Factor Related Risks

The term 'human factors' is used to describe the consideration of people as part of complex systems. Woodside defines 'human factors' as follows: 'human factors uses what we know about people, organisation and work design to influence performance'.

As outlined in Section 6.8.8, human factors can contribute to MEEs, or result in failure or degradation of the controls in place to protect against MEEs. The WMS includes a number of procedures designed to manage human factors related risks and prevent incident causation.

7.3 Change Management

Woodside's Change Management Procedure describes Woodside's requirements for change management at Woodside owned or controlled operations/sites.

Change management is used where there is no existing approved business baseline, such as a process, procedure or accepted practice, or where conformance with an approved baseline is not possible or intended; for example, due to equipment fault or failure or a recently discovered issue which will take time to rectify. Change management is also used when the baseline is changed (e.g., the process is modified). It applies to management of temporary, permanent, planned or unplanned change encompassing one or more of:

- plant (equipment, plant, technology, facilities, operations or materials)
- projects (budget, schedule)
- people (organisation structure, performance, roles)
- process (WMS content, processes, procedures, standards, legislation, information).

Woodside's change management process hierarchy is depicted in Figure 7-5. The hierarchy has been developed with sub-processes to address the different types of change performed at Woodside.

Figure 7-5: Change management hierarchy

To help manage the day-to-day operation of the facility, Woodside has developed a Golden Safety Rules Booklet, which provides a summary of mandatory requirements for safety in the workplace and includes guidance for managing changes that have a Health, Safety, Integrity and/or Environment impact.

7.3.1 Technical Change Management

Technical changes within the Operations Division are managed using the MoC – Assets Procedure. The objective of the procedure is to ensure HSE risks associated with both realised and potential changes, including any failure to meet the facility SCE Technical Performance Standards, are

identified, assessed and reduced to ALARP (Section 7.4 provides further information on management of SCE Technical Performance Standards).

Assessed changes must be recommended, agreed and decided upon based on the assessed current level of risk, as defined by Woodside's Technical Decision Authority matrices.

The MoC requirements contained in the PSM Procedure and Management System Performance Standard M05 MoC are considered when conducting any changes with the potential to impact process safety.

The Engineering Management Procedure specifies key requirements of engineering related changes, and requires that engineering Technical Decisions are agreed, recommended and decided at the appropriate engineering authority level according to the risk. Change management and risk assessment include consideration of applicable legislation/Regulation.

Change is also managed under management system requirements set out as part of major projects (brownfields), wells integrity, subsea and pipelines integrity management and marine management system. Change management includes consideration of regulatory requirements, managed in accordance with the Regulatory Compliance Management Procedure.

In addition, the MoC MSPS (M05) is in place to assure process safety risks arising from change (temporary and permanent) are systematically identified, assessed and managed.

7.3.2 Environment Plan Management of Change and Revision

Management of changes are managed in accordance with Woodside's Environmental Approval Requirements Australia Commonwealth Guideline. Management of changes relevant to this EP, concerning the scope of the activity description (Section 2.10), including: review of advances in technology at stages where new equipment may be selected such as vessel contracting; changes in understanding of the environment, DCCEEW EPBC Act listed threatened and migratory species status, Part 13 statutory instruments (recovery plans, threat abatement plans, conservation advice, wildlife conservation plans) and current requirements for AMPs (Section 4.8); and potential new advice from external stakeholders (Section 5), will be managed in accordance with Regulations 38 and 39 of the Environment Regulations.

Risk will be assessed in accordance with the environmental risk management methodology (Section 2.8) to determine the significance of any potential new environmental impacts or risks not provided for in this EP. Risk assessment outcomes are reviewed in compliance with Regulations 38 and 39 of the Environment Regulations.

Minor changes where a review of the activity and the environmental risks and impacts of the activity do not trigger a requirement for a formal revision under Regulations 38 or 39 of the Environment Regulations, will be considered a 'minor revision'. Minor administrative changes to this EP, where an assessment of the environmental risks and impacts is not required (e.g., document references, phone numbers), will also be considered a 'minor revision'. Minor revisions as defined above will be made to this EP using Woodside's document control process. Minor revisions will be tracked in an MOC Register to ensure visibility of cumulative risk changes, as well as enable internal EP updates/reissuing as required. This document will be made available to NOPSEMA during regulator environment inspections.

7.3.3 Oil Pollution Emergency Plan Management of Change

Relevant documents from the OPEP will be reviewed in the circumstances of:

- implementation of improved preparedness measures
- a change in the availability of equipment stockpiles
- a change in the availability of personnel that reduces or improves preparedness and the capacity to respond

- the introduction of a new or improved technology that may be considered in a response for this activity
- to incorporate, where relevant, lessons learned from exercises or events
- if national or state response frameworks and Woodside's integration with these frameworks changes.

Where changes are required to the OPEP, based on the outcomes of the reviews described above, they will be assessed against Regulations 38 and 39 to determine if EP, including OPEP, resubmission is required (see Section 7.3.2). Matters arising with potential to influence minor or technical changes to the OPEP are tracked in MoC records, project records and incorporated during internal updates of the OPEP or revisions to the EP.

7.4 Management of Safety and Critical Element Technical Performance Standards and Management System Performance Standards

7.4.1 Management System Performance Standards

Woodside ensures safety critical management processes function as required through the application of Management System Performance Standards (MSPS). These standards are developed and owned at non-facility-specific level (i.e., pan-Woodside) and include assurance checks for the key requirements of the applicable management system.

Individual facilities demonstrate conformance against the MSPS through the conduct of reviews. Non-conformances against an MSPS are internally managed in accordance with the WMS.

7.4.2 Safety and Environmental Critical Element Technical Performance Standards

An SCE is defined by Woodside as a hardware barrier, the failure of which could cause or contribute substantially to, and the purpose of which is to prevent or limit the effect of a MAE/MEE, or Process Safety Event.

Woodside identifies/develops, implements, monitors/assures, responds and verifies/optimises SCEs by applying SCE technical Performance Standards as described in the Safety and Environment Critical Element (SCE) Management Procedure and the Management of Hardware Controls in the Operate Phase Procedure. Response to an SCE failure is managed by the Control of Operational Risk Procedure. Key elements of the procedure are summarised in Table 7-3.

Table 7-3: Summary of Safety and Environment Critical Element Management Procedures

Identify/Develop	***Safety and Environment Critical Element Management Procedure*** **Identify SCE** – SCEs must be identified from the facilities PSRAs (e.g. Formal Safety Assessments) (**Section 2.2**). The identification of SCEs for which Performance Standards are required are part of the formal safety and environmental risk assessment processes. Woodside's Global Performance Standards (based on industry and Woodside Standards) should be used for preliminary selection of SCEs. **Complete Engineering Design Studies** – Engineering design studies must be completed to demonstrate that SCE Performance Criteria specified in the global Performance Standard and/or determined by PSRA will be met by the facility design, allowing for normal SCE degradation in operation. The studies must establish the testing and inspection tasks required to assess performance against the criteria. The scope and frequency of SCE Assurance Tasks are guided by the Global Performance Standard and may require designated Engineering Design Studies. Studies should include Reliability Centred Maintenance, Risk Based Inspection and Safety Instrumented Function studies to determine the Assurance Task scope and frequencies, RBI plans, and classification and implementation requirements for instrumented safeguarding. **Develop Performance Standards** – Facilities must develop Performance Standards for all SCEs by: • selecting the applicable Global Performance Standard (including Assurance Tasks) • considering facility specific requirements and applicable regulatory requirements • adding the specific data from the facility Engineering Design Studies and PSRA to compile scope and frequency of SCE assurance activities.

Implement	***Management of Hardware Controls in the Operate Phase Procedure*** **Identify SCE in Asset Register** – SCEs must be uniquely identified on the asset register and assigned Performance Standard flags. **Develop Testing, Inspection and Maintenance Programs** – SCE assurance tasks are developed into maintenance procedures. **Implement Testing, Inspection and Maintenance Programs** – SCE testing, inspection and maintenance requirements must be implemented in the CMMS (**Section 7.2.1.2**).
Maintain/Assure	***Management of Hardware Controls in the Operate Phase Procedure*** **Execute Testing, Inspection and Maintenance Programs** – On completion of SCE assurance tasks, results must be recorded with all relevant detail, assessed for conformance with the Performance Criteria and any follow-on correction work identified. **Conduct Fitness for Service (FFS) Assessment** – In some instances, an engineering FFS assessment may be required to determine whether equipment has failed its performance standard requirements; e.g., assessment of corrosion defects following inspection of piping. Detailed results of FFS assessment may be recorded out of CMMS. **Manage and Analyse Results** – The results from assurance tasks must be accurately recorded to support data analysis. Analysis will enable appropriate action to be taken to minimise future failure recurrences, and enable assessment of overall system performance and reliability to verify SCE effectiveness.
Respond	***Control of Operational Risk Procedure*** **Respond to SCE Failure** – SCE failure (technical Performance Standard non-conformance) is a failure to achieve the given Performance Criteria. SCE failures must be managed in accordance with a structured review process. This process may require the application of the facility MOPO which provides prescriptive guidelines to be followed in the event of a reduction in the performance of an SCE, or managed in accordance with the Management of Change – Assets Procedure (Section 7.3.1). **Management of Hardware Controls in the Operate Phase Procedure** **Report Internally** – SCE failure/damage and SCE demands must be reported in accordance with the Health Safety and Environment Event Reporting and Investigation Procedure (Section 7.13.4). **Report Externally** – External notification obligations for SCE failure/damage must be understood (i.e., based on local regulatory requirements). External communications must be in accordance with the health safety and environment event reporting and investigation procedure (Section 7.13.5).
Verify/Optimise	***Management of Hardware Controls in the Operate Phase Procedure*** **Review SCE Performance** – SCE performance reviews must be conducted to ensure requirements for maintaining SCE performance are being met. **Manage Change** – Any change to the Performance Standards must be conducted in accordance with the MoC Procedure (Section 7.3.1).

SCE Technical Performance Standards are a statement of the performance required of an SCE (e.g., functionality, availability, reliability, survivability), which is used as the basis for establishing agreed assurance tasks and managing the hazard. An assurance task is an activity to confirm that the SCE meets, or will meet, its SCE Performance Standard. Examples of assurance tasks include inspection routines, maintenance activities, test routines, instrumentation calibration and reliability monitoring.

These assurance tasks are identified in the CMMS, flagged against their associated technical Performance Standard, and given the appropriate priority. Management systems are in place to manage the completion of maintenance.

Events where the SCC/SCE have not met their specified performance criteria must be managed in accordance with a structured review process. This process may require the application of the facility Manual of Permitted Operation (MOPO) which provides prescriptive guidelines to be followed in the event of a reduction in the performance of an SCE in specific defined circumstances; or, if the MOPO does not cover the event, according to procedures for the assessment and management of operational risk.

Internal notification of SCC failures must be made in accordance with maintenance management workflows. Failures to meet a Facility Performance Standard occur where SCC events lead to the functional objectives (goal and/or key requirement statements) of the facility Performance Standard for the SCE not being met (i.e., lost or unavailable), taking into account any redundancy inherent

within the SCE. These ‘damage to SCE’ events are reported in the Event Reporting Database as potential SCE Failure to Meet Facility Performance Standard Events.

These are internally reported as Hazard Events. Where ‘Failure to meet a Facility Performance Standard’ leads to a loss of hydrocarbon containment, or a release of energy, it is internally reported (and externally where relevant) as a Loss of Primary Containment or Environmental Spill event, depending on the nature of the release.

Additionally, confirmed “Failure to meet a Facility Performance Standard’’ events for the SCEs identified in the MEE bowties may equate to a breach of EPOs and/or EPSs. The review to identify such events for external reporting considers whether the hazard event is relevant to environmental SCE functional objectives (goal and/or key requirements) of the SCE Facility Performance Standard and whether the event poses a risk to achieving EPOs and EPSs. The WMS Regulator Event Reporting Guideline provides additional information regarding external SCE related reporting obligations.

There may also be planned changes/deviations from SCE Technical Performance Standards, these are managed via procedures for the assessment and management of operational risk, and endorsed in accordance with the engineering management procedures (described further within Section 7.3. This management process ensures risks (including environment) are managed so that the planned change/deviation does not result in unacceptable impact or risk, remains ALARP and regulatory requirements are met.

An additional class of SCE exists to capture environment critical emissions monitoring and control equipment and is also managed under this process. The ‘P31 technical Performance Standard – Environmental Emissions Monitoring and Controls’ includes equipment required to comply with environmental legislation, Regulations, approval conditions or requirements which apply to the facility although not specifically required under the MEE bowtie analysis and SCE groupings.

The scope of P31 includes equipment such as that to maintain and monitor flare ignition, flow metering, and discharge quality of PW. P31 sets out key performance requirements for applicable equipment to meet regulatory requirements as appropriate to the reporting methods (e.g. NGERs Determination and NPI), and meet the functional intent of the system that the equipment supports (e.g. ensuring flare systems can be ignited, with monitoring in place to ensure the flare/pilots are lit). P31 also defines maintenance/assurance tasks for associated equipment (SCC), and is used to support change management, prioritisation and governance.

7.5 Woodside’s Decommissioning Framework

Decommissioning is a routine, planned activity for the offshore oil and gas industry. Current best practice for decommissioning includes:

- designing for decommissioning during the development phase of projects/facilities
- removing property, equipment and infrastructure, such as a facility or a pipeline, and plugging wells associated with a petroleum activities.
- assessing decommissioning options and opportunities during the operational life of the facility leading up to cessation of production
- selecting, developing and planning the selected decommissioning option
- executing decommissioning plans
- restoring the marine environment.

This assists with compliance with section 572 (3) of the OPGGS Act, which requires titleholders to remove property from the title area when it is neither used, nor to be used, in connection with the operations. Under section 572(7) of the OPGGS Act, the property removal requirements under section 572(3) of the OPGGS Act have effect subject to any other provision of the OPGGS Act, the

regulations, directions given by NOPSEMA or the responsible Commonwealth Minister under Chapter 3 or Chapter 6 of the OPGGS Act, and any other law. Under section 270(3) of the OPGGS Act, before title surrender, all property brought into the surrender area by any person engaged or concerned in the operations authorised by the permit, lease or licence must be removed or cause to be removed from the surrender area to the satisfaction of NOPSEMA, or arrangements that are satisfactory to NOPSEMA must be made in relation to the property. Sections 572(7) and 270(3) of the OPGGS Act provide scope for in-situ decommissioning and other arrangements to be made where it can be demonstrated that the risks and impacts are ALARP and acceptable as well as comply with all other Acts and legislation.

7.5.1 Decommissioning in Operations

Asset specific decommissioning plans are typically developed prior to cessation of production. Planning includes redundant infrastructure as well as structures coming to the end of production and decommissioning critical systems to enable removal. Appropriate maintenance plans are developed and implemented to ensure decommissioning critical systems meet the requirements to facilitate removal.

7.5.2 Facility Decommissioning Planning

Decommissioning planning generally commences two (2) to 10 years prior to Cessation of Production (CoP) (Figure 7-6). The timeframe selected for decommissioning planning depends on the complexity of the facility and infrastructure requiring decommissioning.

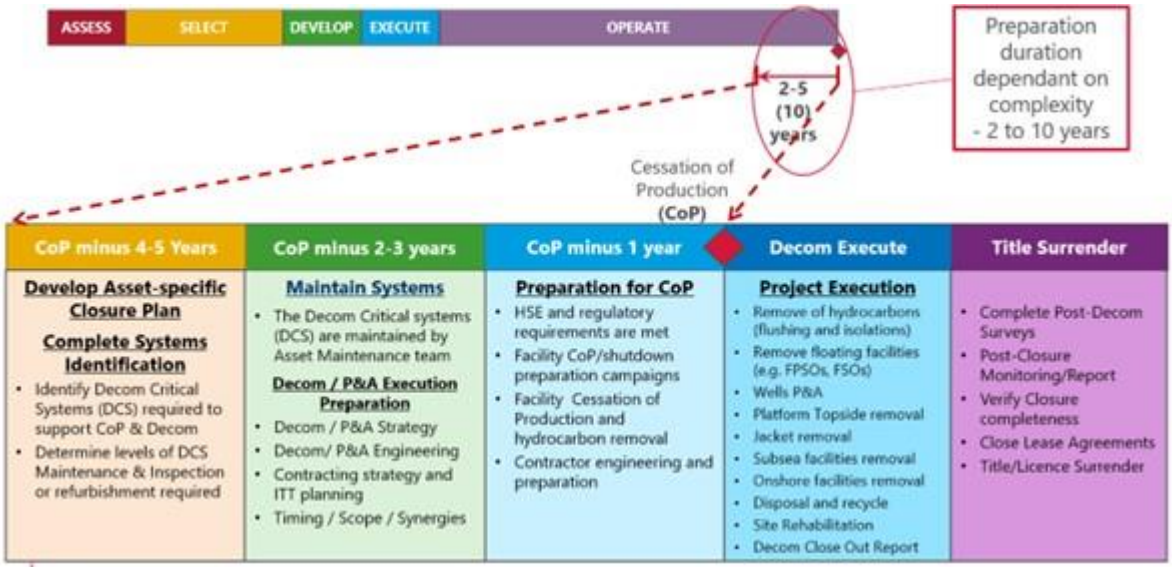

Figure 7-6: Woodside's process for decommissioning planning

7.5.3 Pluto Decommissioning Strategy

Decommissioning of Pluto offshore assets is being considered in a single stage, with all infrastructure anticipated to remain in service through to EoFL.

In line with Woodside's decommissioning planning process outlined above, an Asset Closure Management Plan has been prepared for the Pluto asset.

The plan for decommissioning consists of permanent plugging and abandonment (P&A) of wells, removal of trees, wellheads and other subsea equipment (e.g., xmas trees, manifolds, valve stations) by cleaning and flushing and removal from the title area. End state decisions and execution methodologies for other infrastructure including Pluto topsides, jackets and rigid pipelines will be finalised at EOFL.

The decommissioning strategy will be matured over the time through various studies and data gathering targeted to support that the final proposed Pluto decommissioning plan represents an ALARP position in respect of the environmental, safety and the socio-economic outcomes.

7.5.4 Pluto Decommissioning Phasing

Decommissioning of the Pluto facilities has been planned in two phases:

- Phase 1 – Plan for decommissioning/P&A of the Pluto offshore facilities
- Phase 2 – Execute decommissioning/P&A of the Pluto offshore facilities.

The expected CoP for the Pluto offshore facilities is around 2033.

Currently Woodside is commencing early studies at a portfolio level in support of the preparations for the future decommissioning activities to optimise the scope and strategy to deliver safe and effective decommissioning outcomes. These studies will assess removal options, timing of removal and synergies with other planned decommissioning activity. The decommissioning activities will be subject to separate EP(s).

The key envisaged activities related to the decommissioning are outlined in the indicative Pluto Decommissioning Planning Lifecycle Schedule shown in Figure 7-7. Timing is indicative, subject to reservoir performance outcomes through the remaining field life.

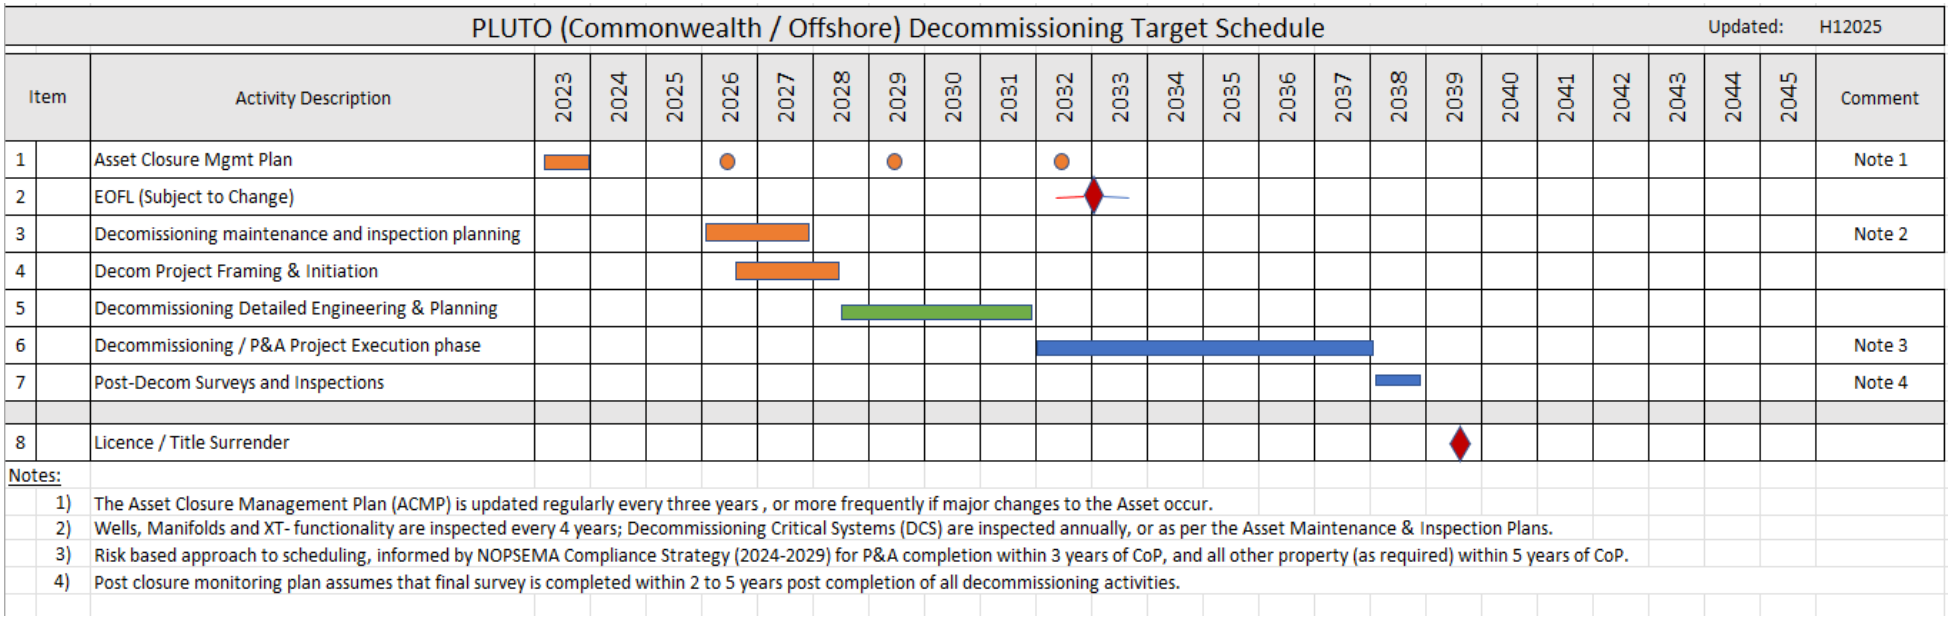

Figure 7-7: Indicative Pluto decommissioning planning lifecycle and schedule

7.5.4.1 Phase 1: Planning for Decommissioning – Key Activities

As outlined in Section 7.5.3, the asset has developed an asset-specific Closure Management Plan (CMP). The CMP is intended to be updated regularly to reflect changes to the asset infrastructure, or to address major changes in Regulator requirements.

As reflected in Figure 7-6, the following are planned to be completed during 2-10 years prior to CoP. Planning execution activities are expected to adopt a risk-based approach that is informed by NOPSEMA's Decommissioning Compliance Strategy 2024-2029 (NOPSEMA, 2023):

- Identify decommissioning critical systems (DCS), define DCS maintenance and inspection requirements and update the Asset Maintenance and Inspection Plans (if required).
- Progress Define/FEED Phase works for decommissioning/P&A of the Pluto offshore facilities.

Submit the EP(s) for the activities related to flushing of the subsea systems and for isolations/separation of the wells from the flushed subsea infrastructure.

Commence Pluto offshore asset CoP activities.

7.5.4.2 Phase 2: Execute Decommissioning and Plug and Abandonment – Key Activities

Post CoP: Decommissioning execution activities are intended to be executed in line with Phase 1 planning for decommissioning. This risk-based approach includes consideration of NOPSEMA's expectations to execute P&A of the wells targeting within three years from the CoP date, and decommissioning/removal of the PLA platform and the subsea equipment targeting within five years from the CoP date.

7.6 Organisation Structure

The following Woodside organisational structure provides leadership and direction for operation of the Pluto facility and environmental performance:

- The Executive Vice President (EVP) Australian Operations reports to the Chief Executive Officer.
- The Pluto and Scarborough Vice President (VP) reports to the EVP.
- The Asset Manager reports to the Pluto and Scarborough VP.
- The Reliability and Integrity Manager reports to the Pluto and Scarborough VP.
- The PLA Superintendent reports to the Asset Manager.
- The functional support teams report to the corresponding Functional VP.

Production facilities are supported by a team of environmental professionals who report to the Environment and Sustainability Manager – Australian Operations.

All facilities are supported by other Woodside functional teams, including:

- HSE – provides specific guidance and access to specialist HSE resources including assistance for governance and training, as well as guidance on Woodside HSE standards
- Subsea – responsible for the installation and IMMR activities on subsea infrastructure including facility structures, flowlines, manifolds and subsea isolation valves to ensure integrity
- Global Wells and Seismic – ensures the safe planning and execution of drilling, completion and work over operations

- Projects – responsible for the engineering, construction and execution of small projects on operational facilities to ensure ongoing integrity and safe operation
- Marine Group – responsible for chartering vessels to support Woodside's offshore production facilities including vessels to aid emergency response
- Aviation Group – provides personnel transport, material transport, emergency evacuation and search and rescue capabilities.

7.7 Roles and Responsibilities

Key roles and responsibilities for Woodside and contractor personnel in relation to implementing, managing and reviewing this EP are described in Table 7-4. Roles and responsibilities for hydrocarbon spill preparation and response are outlined in Table 7-4 and the Woodside Oil Pollution Emergency Arrangements (Australia).

It is the responsibility of all Woodside employees and contractors to apply the Woodside's Health and Safety Policy, and Environment and Biodiversity Policy in their areas of responsibility and that the personnel are suitably trained and competent in their respective roles.

Table 7-4: Roles and responsibilities

Title (Role)	Environmental Responsibilities
All Personnel	
All onshore and offshore personnel	Understand the Woodside standards and procedures that apply to their area of work. Understand the environmental risks and control measures that apply to their area of work. Carry out assigned activities in accordance with approved procedures and the EP. follow instructions from relevant supervisor with respect to environmental protection. Cease operations which are deemed to present an unacceptable risk to the environment. Participate in environmental assurance activities and inspections as required. Prompt reporting of environmental hazards/incidents to their supervisor and assist in event investigation. Attend HSE meetings, training and drills when required.
Office-based Personnel	
Woodside Project Manager	Monitor and manage the activity so it is undertaken as per the relevant standards and commitments in this EP. Notify the Woodside Environment Adviser of any scope changes in a timely manner. Liaise with regulatory authorities as required. Review this EP as necessary and manage change requests. Ensure all project and support vessel crew members complete an HSE induction. Verify that contractors meet environmental related contractual obligations. Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's Health, Safety and Environment Reporting and Investigation Procedure. Monitor and close out corrective actions identified during environmental monitoring or audits.
Woodside Head of Projects/Region (Global Wells and Seismic)	Ensure drilling operations are undertaken as per this EP and approval conditions. Provide sufficient resources to implement the drilling-related management measures (i.e. controls, EPOs, EPSs and MC) in this EP. Confirm controls and performance standards in this EP are actioned, as required, before drilling commences. Ensure the MODU start-up meets the requirements of the Drilling and Managing Rig Operations Process.

Title (Role)	Environmental Responsibilities
Subsea Delivery Lead	Ensure the subsea installation activities are undertaken as per this EP and approval conditions. Provide sufficient resources to implement the subsea installation-related management measures (i.e., controls, EPOs, PSs and MC) in this EP. Ensure installation vessel personnel are given an Environmental Induction as per Section 7.9.1 this EP at the start of the installation activities. Confirm controls and performance standards in this EP are actioned, as required, before installation activities commence. Ensure relevant vessels meet the requirements of Woodside's Marine Operations Operating Standard. Manage change requests for the activity and notify the Woodside Environment Adviser of any scope changes in a timely manner. Confirm that site-based personnel are given an Environmental Induction as per Section 7.9.1 of this EP at the start of the activity. Ensure all chemicals and drill fluids proposed to be discharged are assessed and approved as per the requirements of the EP.
Woodside Drilling Superintendent	Ensure the drilling program meets the requirements detailed in this EP. Ensure changes to the drilling program are communicated to the Woodside Environmental Adviser. Ensure the Woodside's Well Site Manager is provided with the resources required to ensure the management measures (i.e., controls, EPOs, EPs and MC) in this EP are undertaken. Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's Health, Safety and Environment Reporting and Investigation Procedure. Monitor and close out corrective actions identified during environmental monitoring or audits. Ensure MODU and project vessel personnel are given an Environmental Induction as per Section 7.9.1 of this EP at the start of the drilling programs.
Woodside Drilling Engineers	Ensure changes to the drilling program are communicated to the Woodside Environmental Adviser. Ensure all drill and completions fluid chemical components and other fluids that may be used downhole have been reviewed by the Drilling and Completions Environmental Adviser.
Woodside Projects/GWS Environmental Adviser	Verify relevant Environmental Approvals for the activities exist prior to commencing activity. Track compliance with performance outcomes and performance standards as per the requirements of this EP. Prepare environmental component of relevant Induction Package. Assist with the review, investigation and reporting of environmental incidents. Ensure environmental monitoring and inspections/audits are undertaken as per the requirements of this EP. Liaise with relevant regulatory authorities as required. Assist in preparing external regulatory reports required, in line with environmental approval requirements and Woodside incident reporting procedures. Monitor and close out corrective actions (Campaign Action Register (CAR)) identified during environmental monitoring or audits. Provide advice to relevant Woodside personnel and contractors to assist them to understand their environment responsibilities. Liaise with primary installation contractors to ensure communication and understanding of environment requirements as outlined in this EP and in line with Woodside's Compass values and management systems.

Title (Role)	Environmental Responsibilities
Asset Manager	Be accountable for ensuring all necessary regulatory approvals are in place to operate. Approve (decides on) the content to be contained in the Environment Plan. Be accountable for managing the asset throughout its operations in accordance with legislative/regulatory requirements (including this EP) and WMS requirements. Agree facility key performance indicators (KPIs), including environment KPIs, and be accountable for their achievement. Be responsible for continuous improvement of operations of the facility, including environmental performance. Decide on technical decisions where required based on assessed current level of risk. Be accountable for incident notification, reporting and investigation in line with regulatory requirements, the WMS and EP requirements
PLA Superintendent	Be responsible for the safe conduct of all activities within the facility 500 m PSZ and within the vicinity of the connected pipelines, through the facility team of coordinators, technicians and specialist resources. Be accountable for aspects of integrity management including the evaluation and reporting of conditions against performance standard, integrity envelope, reviewing post-incident/ legislative or joint venture requirements and planning and executing planned inspections. Be accountable for conformance to operations processes including ISSoW. Be accountable for compliance with all legislative and regulatory requirements including Safety Case and Environment Plan. Be accountable for ensuring all teams operate on the facility in a safe and reliable manner within the defined technical integrity envelope. Be responsible for making safe, repairing and raising technical deviations where necessary for abnormal situations. Be accountable and responsible for updating changes to production information in site-controlled documents. Be accountable for the performance and development of direct reports, ensuring operator and maintainer capability and competency across all shifts and ensuring the skill requirements are being met. Be accountable for effective handovers between shifts and swings. Be the decider for high risk MOC decisions associated with PLA and pipelines. Be custodian of and therefore responsible for ensuring the facility remains in compliance with PLA Safety Case and Environment Plan. Ensure offshore personnel comply with regulatory/legislative requirements (including the EP) and the WMS. Communicate changes relevant to the EP to the Production Environment team. Implement relevant offshore environment initiatives and review environmental performance to drive continuous improvement. Ensure effective communication with workforce on environmental performance. Ensure incidents are reported and investigated in line with WMS and EP requirements, with appropriate actions initiated and closed out.
Technical Support Lead	Champion technology and new ways of working to explore and implement new and efficient ways for managing performance and maintenance for equipment. Champion and embed risk thinking with Engineers and TICs so that effective and proportionate controls are implemented.

Title (Role)	Environmental Responsibilities
Reliability and Integrity Manager	Steward reliability and integrity for the business unit. Lead a team that expertly ensures strategies for equipment maintenance and operation are set to meet Reliability, Performance and Integrity goals. Ensure the Safety Case, Performance Standard, Regulatory and Reliability driven maintenance tasks for all equipment are known and implemented in the most efficient maintenance strategy possible. Ensure Very High and Severe risks are assessed and controlled when they appear, and that the right technical expertise, including technical authorities, is engaged to understand, communicate and manage the risk, as part of the 'Agree' role in the Engineering Management Procedure. Ensure refresh of facility baseline risk assessments is completed upon trigger of re-assessment. Assure that reliability and integrity delivery processes in the assets is being done to correct standard and engaging with relevant process owners.
Integrity Authorities (Technical Integrity Custodians, Technical Authorities and Engineering Authorities)	Manage technical integrity within their designated discipline by ensuring the safe and consistent application of integrity management processes and systems, discipline standards and good engineering practices. Agree technical integrity decisions based on assessed current level of risk. Agree to facility specific Performance Standards and confirm that Performance Standard requirements are met.
Subsea and Pipelines (IMMR) Activity Manager	Ensure IMMR activities undertaken in line with EP commitments. Manage IMMR change requests for the activity and notify the Subsea and Pipelines Environment Adviser of any scope changes in a timely manner. Be responsible for governance of IMMR related activities for subsea support vessels. Provide sufficient resources to implement the EP requirements. Monitor and close out corrective actions raised from IMMR environmental inspections/audits or incidents.
Environment Manager Australian Operations	Facilitate operations environmental approval documentation and timely submission in accordance with regulatory requirements. Ensure asset and supporting personnel understand and adhere to legislative and regulatory environment requirements, EP requirements and the environmental requirements of the WMS. Develop and maintain appropriate Production environmental processes and procedures. Monitor and communicate to internal stakeholders all relevant changes to legislation, policies, regulator organisation that may impact the EP or business. Facilitate review of the EP, including five-yearly revision and in relation to any technical decisions or proposed changes to operations.
Environment Adviser Australian Operations	Manage change relevant to the EP in accordance with the Regulations and the EP. Ensure environmental monitoring, offshore inspections, and reporting is undertaken as per the requirements of this EP. Coordinate and monitor closeout of corrective actions. Ensure environmental inspections/audits are undertaken as per the requirements of the EP. Ensure environmental incident reporting meets regulatory requirements (as described within the EP) and WMS.
Corporate Affairs Adviser	Prepare and implement the Consultation Plan for the Petroleum Activities Program. Report on consultation. Perform ongoing liaison and notification as required.
Woodside Marine Assurance Superintendent	Conduct relevant audit and inspection to confirm vessels comply with relevant Marine Orders and Woodside Marine Charters Instructions requirements to meet safety, navigation and emergency response requirements.

Title (Role)	Environmental Responsibilities
Woodside CIMT Deputy Incident Commander	On receiving notification of an incident: • establish and take control of the IMT and establish an appropriate command structure for the incident • assess situation, identify risks and actions to minimise the risk • communicate incident progress to relevant persons within the organisation • develop the incident action plan (IAP) including setting objectives for action • approve, implement and manage the IAP • communicate within and beyond the incident management structure • manage and review safety of responders • address the broader public safety considerations • conclude and review activities.
Contractor Sponsors	Ensure implementation of EP for the contractor's scope of work. Ensure contractors have adequate environmental capability in order to execute their respective scopes of work. Review contractor environmental performance as required.
PLP-based Personnel	
Frontline Superintendent	Onshore roles at Pluto LNG Park which are responsible for ensuring offshore work scopes are conducted in safe manner when platform is not crewed. Other responsibilities associated with onshore gas plant are described in the Pluto LNG Park Safety Case. Issuing Authority in ISSoW Permit to Work system when platform is uncrewed and/or subsea scope that does not involve work execution on PLA platform and is outside the facility 500m Safety Zone. Responsible for emergency response at or near PLA when platform is uncrewed.
Onshore Installation Manager (OIM)	Normally Site Controller in ISSoW process. Other responsibilities associated with onshore gas plant are described in the Pluto LNG Park Safety Case. Accountable for Permit to Work governance, processes and permit requirements. The OIM, supported by Frontline Superintendent, is the single point responsible person for the coordination of SIMOPS for activities that have ability to impact onshore or its operations.
Environment Advisor	Liaise with managers/supervisors on day-to-day management of environmental risks and issues. Assist in the ongoing promotion of environmental performance at the facilities and day-to-day management HSE risks and issues. Identify opportunities for continuous improvement and communicate these to the PLA Superintendent and Environment Team. Implement environmental improvement plans. Support operational personnel to understand the EP requirements applicable to their role. Communicate environmental performance information and training material to offshore personnel and maintain associated records.

Title (Role)	Environmental Responsibilities
PLA-based Personnel (in crewed mode)	
Person in Charge (PIC) (offshore crewed mode)	Offshore roles at PLA which are responsible for ensuring that offshore work scopes are conducted in a safe manner when platform is crewed. Be accountable for the day-to-day operations of the platform when crewed including, SIMOPS affecting PLA, effective shift handover; completion and logging of operator routine. Be responsible for operations shift compliance to all legislative and regulatory requirements as defined in the Safety Case and Environmental Plan. Be the Issuing Authority in ISSoW Permit to Work system when platform is crewed. Be responsible for auditing and maintaining maintenance procedures. Be responsible for leading and coordinating a multi-disciplined team that is responsible for the duties required to support the facility, including helicopter operations, vessel movements and consumable controls. Be responsible for emergency response at or near PLA when platform is crewed, including ensuring exercises and drills are carried out such that the facility's ability to respond effectively to an emergency is assured.
Production and Maintenance Technicians	Be responsible for daily operations on the facility within their operational control. Undertake daily operational and maintenance tasks in accordance with approved standards and procedures to ensure compliance with the EP. Manage day-to-day environmental risks through use of ISSoW and other risk management tools. Identify opportunities for continuous improvement and communicate these to their Supervisor. Complete training requirements to maintain competence and knowledge in operating and maintaining equipment and manage environmental risks and impacts. Participate in environmental assurance activities and inspections as required. Report all environmental hazards and incidents and assist in investigations.
MODU-based Personnel	
MODU Offshore Installation Manager (OIM)	Ensure the MODU's management system and procedures are implemented. Ensure personnel starting work on the MODU receive an environmental induction that meets the requirements specified in this EP. Ensure personnel are competent to undertake the work they have been assigned. Verify that emergency drills are conducted as per the MODU's schedule. Ensure the MODU's Emergency Response Team has been given sufficient training to implement the MODU's SOPEP. Ensure any environmental incidents or breaches of outcomes or standards are reported immediately to the Well Site Manager. Ensure corrective actions for incidents or breaches are developed, communicated to the Well Site Manager, and tracked to close out in a timely manner. Ensure close out of actions is communicated to the Well Site Manager.
Woodside Well Site Manager	Ensure the drilling program is undertaken as detailed in this EP. Ensure the management measures (i.e., controls, EPOs, PSs and MC) detailed in this EP (relevant to offshore activities) are implemented on the MODU (other controls will be implemented onshore). Ensure environmental incidents or breaches of outcomes or standards are reported as per the Woodside Corporate Event Notification Matrix. Corrective actions for incidents and breaches are developed, tracked and closed out in a timely manner. Ensure actions in the Drilling and Completions HSE Improvement Plan are undertaken. Ensure periodic environmental inspections/reviews are completed. Corrective actions from inspections are developed, tracked and closed out in a timely manner.

Title (Role)	Environmental Responsibilities
Woodside Offshore HSE Adviser	Support the Well Site Manager to ensure the controls detailed in this EP relevant to offshore activities are implemented on the MODU and help collect and record evidence of implementation (other controls are implemented, and evidence collected onshore). Support the Well Site Manager to ensure the Environmental Performance Outcomes are met and the performance standards detailed in this EP are implemented on the MODU. Confirm actions in the Drilling and Completions HSE Improvement Plan are undertaken. Support the Well Site Manager to ensure environmental incidents or breaches of outcomes or standards outlined in this EP, are reported, and corrective actions for incidents and breaches are developed, tracked and closed out in a timely manner. Ensure periodic environmental inspections/reviews are completed and corrective actions from inspections are developed, tracked and closed out in a timely manner. Review Contractors procedures, input into Toolbox talks and JSAs. Provide day to day environmental support for activities in consultation with the Woodside Environment Adviser.
Drilling Logistics Coordinator	Ensure waste is managed on the MODU and sent to shore as per the Drilling and Completions Waste Management Plan.
Vessel-based Personnel	
Vessel Master (Installation Vessel Master, Activity Support Vessel Master, Support Vessel (Platform and Subsea Support Vessels)	Ensure the vessel management system and procedures are implemented. Ensure personnel commencing work on the vessel receive an environmental induction that meets the relevant requirements specified in this EP. Ensure personnel are competent to undertake the work they have been assigned. Verify SOPEP drills are conducted as per the vessel's schedule. Ensure the vessel Emergency Response Team (ERT) has been given sufficient training to implement the SOPEP. Ensure any environmental incidents or breaches of relevant Environmental Performance Outcomes or performance standards detailed in this EP are reported immediately to the Woodside Representative. Ensure corrective actions for incidents or breaches are developed, communicated to the Woodside Representative, and tracked to close out in a timely manner. Close out of actions is communicated to the Woodside Representative.
Vessel Logistics Coordinators	Ensure waste is managed on the relevant support vessels or installation vessel and sent to shore as per the relevant Waste Management Plan.
Vessel HSE Advisers	Refer to Woodside HSE Offshore Adviser responsibilities detailed above under MODU-based personnel.
Contractor Project Manager	Confirm activities are undertaken in accordance with this EP, as detailed in the Woodside approved Contactor Environmental Management Plan Ensure personnel commencing work on the project receive a relevant environmental induction that meets the requirements specified in this EP. Ensure personnel are competent to undertake the work they have been assigned. Ensure any environmental incidents or breaches of objectives, standards or criteria outlined in this EP, are reported immediately to the Woodside Responsible Engineer or Vessel Master.
Woodside Site Representative/ Resident Engineer	Ensure activities are undertaken as detailed in this EP. Ensure the management measures made in this EP are implemented on the vessel. Ensure environmental incidents or breaches of objectives, standards or criteria outlined in this EP, are reported as per the Woodside Corporate Event Notification Matrix. Verify HSE improvement actions identified during the project are implemented where practicable. Ensure periodic environmental inspections are completed.

7.8 Unexpected Finds Procedure

In the event of the discovery of what appears to be Underwater Cultural Heritage (defined as 'any trace of human existence that has a cultural, historical or archaeological character and is located under water'); the following Unexpected Finds Procedure will apply:

- All activities with the potential to impact the suspected Underwater Cultural Heritage must cease immediately. Retain all records of the potential Underwater Cultural Heritage, including any imagery, description and location.
- Person who discovers the heritage object must inform the Activity Supervisor.
- Activity Supervisor must notify Woodside's Global Heritage Manager.

Woodside will specify an appropriate buffer around the potential Underwater Cultural Heritage, taking into consideration the nature and scale of the potential Underwater Cultural Heritage and the activities to be managed.

No seabed disturbance may occur within the buffer area around the potential Underwater Cultural Heritage until approved by Woodside's Global Heritage Manager. Woodside's Global Heritage Manager must notify a qualified underwater archaeologist and provide all available documentation of the potential Underwater Cultural Heritage. If the potential Underwater Cultural Heritage appears to be Aboriginal, Woodside's Global Heritage Manager must notify the appropriate Traditional Custodians to determine whether it is a heritage site and, if so, how the site should be managed.

If the potential Underwater Cultural Heritage appears to be a shipwreck or aircraft that has been wrecked for more than 75 years or is otherwise reportable under Section 40 of the UCH Act, Woodside's Global Heritage Manager must notify the Minister responsible for the UCH Act, the DCCEEW underwater archaeology section through the Australasian Underwater Cultural Heritage Database, and the Western Australian Museum.

If the suspected heritage object includes human remains, Woodside's Global Heritage Manager must also notify:

- the Australian Federal Police (phone: 131 444) of the location of the remains, that the remains are likely to be historic or Aboriginal in origin, and that it may be appropriate that Traditional Custodians and a maritime archaeologist are present during any handling of the remains
- the Office of the Federal Environment Minister in accordance with Section 20 of the ATSIHP Act.

Work must not recommence in the vicinity of the potential heritage object until Woodside's Principal Heritage Adviser provides written approval. Woodside's Global Heritage Manager must only provide written approval once agreed management measures are implemented consistent with approvals and legislation or where the potential Underwater Cultural Heritage is confirmed to not be Underwater Cultural Heritage.

7.9 Training and Competency

Woodside as part of its contracting process undertakes assessments of a proposed Contractor's environmental management system to determine the level of compliance with the standard AS/NZS ISO 14001. This assessment is undertaken for the PAP as part of the pre-mobilisation process. The assessment determines whether there is a clearly defined organisational structure that outlines the roles and responsibilities for key positions. The assessment also considers whether there is an up-to-date training matrix that defines any corporate and site/activity-specific environmental training and competency requirements.

As a minimum, environmental awareness during inductions is required for all Pluto facility and MODU personnel, detailing awareness and compliance with the Pluto facility, MODU and project vessel Contractor's environmental policy and environmental management system.

Impacts to training roll-out have arisen in the last five years due to major external disruptions beyond Woodside's control, namely associated with the COVID-19 pandemic. In the event of similar future disruptions, the adequacy of training and competency processes and procedures will be subject to Woodside's MoC process for ongoing safe operations of its facilities.

7.9.1 Inductions and Training

Inductions are provided to all relevant personnel (e.g., contractors and Company representatives) before mobilising to or on arrival at the activity location. The induction covers the HSE requirements and environmental information specific to the activity location. Attendance records will be maintained.

The PAP induction may cover information about:

- description of the activity
- ecological and socio-economic values of the activity location (including Underwater Cultural Heritage)
- Regulations relevant to the activity
- Woodside's Environmental Management System – Health and Safety, and Environment and Biodiversity Policies
- EP importance/structure/implementation/roles and responsibilities
- main environmental aspects/hazards and potential environmental impacts and related performance outcomes
- oil spill preparedness and response
- monitoring and reporting on performance outcomes and standards using MC
- incident reporting
- inductions for offshore facility workers and visitors
- operations competency framework training
- permit to work training (ISSoW)
- production environmental leadership training and environment awareness training
- emergency and hydrocarbon spill response training
- inductions for subsea IMMR (vessel based) personnel
- Unexpected Finds Procedure and reporting requirements (Section 7.8)
- records for Woodside operations personnel, in relation to the above listed training, are maintained in Woodside's learning management system. Contractor training records are also maintained
- competence of operations personnel can be reviewed via online dashboards.

7.9.2 Activities Program Specific Environmental Awareness

Before petroleum activities begin, a pre-activity meeting will be held on-board the MODU and project vessels with all relevant personnel. The pre-activity meeting provides an opportunity to reiterate specific environmental sensitivities or commitments associated with the activity. Relevant sections of the pre-activity meeting will also be communicated through to the support vessel personnel. Attendance lists are recorded and retained.

During operations, regular HSE meetings will be held on the Pluto facility, MODU and project vessels which cover all crew. During these meetings, recent environmental incidents are regularly reviewed, and awareness material presented.

7.9.3 Inductions for Offshore Facility Workers and Visitors

A comprehensive induction process is in place for personnel working on or visiting Woodside's offshore production facilities. The induction process is designed to equip personnel with the HSE awareness and skills necessary for them to manage their own safety and environmental performance and contribute to others working around them. The induction process includes:

- Common Production Induction – All employees and contractors who have not accessed a production facility within twelve months are required to undertake this induction prior to mobilisation. It includes Woodside's values, HSEQ and Process Safety, continuous improvement, risk management and ISSoW.
- Facility Specific Induction – All employees and contractors that have not accessed the production facility within twelve months are required to undertake this induction on arrival at the facility. This induction covers the HSE and emergency response issues specific to each facility. For environment, this induction covers the EP, prevention of spills, waste management, fauna interactions, hazard identification and risk assessment, and incident reporting.
- Production Offshore Environmental Leadership Training – Key operations leadership roles (as specified within the Operations Competency Framework) are required to complete this competency on commencement of the new role and three yearly thereafter. The training covers Woodside's policies and standards, environmental legislative requirements, the EP, key environmental risk and impacts, environmental reporting, environmental management tools (e.g., improvement planning, compliance reviews and audits), hydrocarbon spill response and environmental accountabilities.
- Production Offshore Environmental Awareness Training – All new offshore operational personnel are required to undertake this online training on commencement of the new role and two yearly thereafter. This training covers environmental legislative requirements, the facility EP, key environmental hazards and control measures (including waste management, spill prevention, chemical storage, wildlife interactions), environmental management tools, hazard and incident reporting, spill response, and environmental responsibilities.

7.9.4 Operations Competency Framework Training

The Operations Competency Guideline defines a framework to make sure all personnel on operating facilities are competent to perform their work and that competency is managed. By doing this, the potential for unplanned (accident/incident) type events that could result in environmental impact is minimised.

Operational Area Licence to Operate (LTO) roles are those roles related to oil and gas processing, equipment maintenance, marine Regulations, emergency response and any other roles involved with safeguarding the facility integrity, including all roles where high-risk work licenses are required. Additionally, roles mandated by Woodside such as HSEC and helicopter landing officer are included in the LTO roles process.

The requisite competency and training for each LTO role has been defined. Competencies for these LTO roles are stipulated by the governance group for each respective position and are based on the relevant Australian or International standards which apply. In cases where no Australian or International standards are available or applicable, training is based on the relevant Woodside Standard as determined by the respective governance group.

Contractors working on Woodside facilities are required to verify the competency of their personnel through the contractor's own verification systems. Additionally, contractor personnel working on Woodside facilities are required to be registered in Woodside's Contractor Verification Service (CVS) beforehand. Personnel registered in CVS have had their skills and qualifications independently verified on behalf of Woodside, thereby confirming that contractor personnel hold the required competencies before mobilisation to the facility.

The LTO Roles Report (available online on the Woodside Competency Reporting Dashboard on the Production Academy Intranet page) provides the conformance status of the facility against the LTO roles requirements.

7.9.5 Permit to Work System Training

The ISSoW permit to work (i.e., participation in crisis or emergency management exercises) roles-based training is further described in Section 7.14.

An overview of Woodside's hydrocarbon spill response training and competency requirements are provided in dashboards for key responder roles. The roles are consistent with Woodside's crisis and emergency management incident control structure. system (see Section 7.2.1) is a key element in ensuring that all necessary steps are taken for the safety of personnel, protection of the environment and technical integrity of the facility. The ISSoW system takes a risk-based approach to all activities, thus tasks with higher levels of risk are subjected to greater scrutiny and control.

All members of the workforce that are required to work with ISSoW (Section 7.2.1) receive training commensurate with the level of authority and responsibility they hold in ISSoW.

7.9.6 Emergency and Hydrocarbon Spill Response Training

All operations personnel involved in crisis and emergency management are required to commit to ongoing training, process improvement and participation in emergency and crisis response (both real and simulated), including emergency drills specific to potential incidents at the Pluto facility. Training includes task-specific training and role-based training and 'on the job' experience.

Woodside Hydrocarbon Spill Preparedness Advisor(s) are responsible for maintaining hydrocarbon spill preparedness competency. For more information see Section 7.14.

7.9.7 Subsea Inspection, Monitoring, Maintenance and Repair Activity Environmental Awareness

At the beginning of, and during a new Subsea IMMR activity, the Subsea Support Vessel crew including contractor crew, Woodside representatives and other relevant personnel are required to undertake a vessel induction before commencing work. This induction covers HSE requirements for the vessel and IMMR activities, and as required environmental information specific to the activity location. The induction may cover environmental information about:

- adherence to standards and procedures, and the use of Job Safety Analysis and permit to work hazard identification and management process
- spill management including prevention, response and clean-up, location of spill kits and reporting requirements
- waste management requirements and location of bins
- reporting of marine fauna, location of forms and charts
- chemical management requirements.

All personnel who undertake the project induction are required to sign an attendance sheet which is retained.

Regular HSE meetings are held on subsea support vessels with crew. During these meetings, any environmental incidents are reviewed and environmental awareness material is presented.

7.9.8 Management of Training Requirements

All personnel on the Pluto facility, MODU and project vessels are required to be competent to perform their assigned positions. This may be in the form of external or 'on the job' training. The vessel Safety Training Coordinator (or equivalent) is responsible for identifying training needs, keeping records of training performed and identifying minimum training requirements.

7.9.9 Cetacean and Whale Shark Sightings Reporting

All Project vessels and the MODU will be provided with sighting recording sheets which will be posted on notice boards for opportunistic reporting of cetacean and whale shark sightings. Awareness of sightings reporting will also be included in project inductions. When crewed sighting recording sheets will be posted on the noticeboards on the riser platform and awareness provided in the facility induction. These sightings reports will be collated and summarised on an annual basis during this activity (Regulation 29 notifications) and submitted to the Australian Antarctic Division of the DCCEEW to satisfy condition 1(c)(vi) of EPBC Approval Decision 2006/2968.

7.9.10 Marine Fauna Observation Training

The Marine Fauna Observer (MFO) role may be completed by Project vessel crew who are appropriately trained prior to the activity commencing. Vessel crew trained to undertake the MFO role will complete training that will include information specific to Pygmy Blue Whale (PBW) identification given migration/distribution BIAs overlap the Operational Areas. Woodside and Contractor personnel will be trained to deliver the MFO training ('train-the-trainer' model) by an external organisation specialising in marine environmental training, with expertise in marine fauna observations. The bespoke training package will cover:

- An overview of the Project
- An overview of the potential impacts and risks to marine megafauna, including PBWs
- An overview of marine megafauna that may be present during activities
- An overview of EP controls and management procedures relevant to marine megafauna (including PBW) presence
- Precautionary approach to identification i.e. assume PBW if positive ID of different species type not possible
- The role and responsibilities of MFOs
- The observation and reporting requirements
- When trained crew are undertaking observations, expectations are that:
  - Observation equipment / tools are used as required (i.e. range-finding binoculars, marine megafauna ID prompts etc.)
  - Escalation process carried out if cetaceans / PBWs are identified to allow for implementation of adaptive management as required by controls throughout EP
  - Make and maintain records including the date, time and approximate distance from the vessel, and the action taken to comply with relevant controls and management procedures
- Records will be maintained as evidence of the vessel crew who have completed the MFO training.

Completion of MFO Training (focusing on PBWs) is a minimum requirement for those performing observations relevant to PBW mitigation/adaptive management measures in this EP. For any trained crew who have not conducted MFO training for greater than 12 months, refresher training is required prior to undertaking the role.

7.10 Monitoring, Auditing, Management of Non-conformance and Review

Regulation 22(5) states that the implementation strategy is to provide for the monitoring, audit, management of non-conformance and review of operator's environmental performance and the implementation strategy itself.

Regulation 22(6) further states that the implementation strategy is to provide for sufficient monitoring of, and maintaining a quantitative record of, emissions and discharges (whether occurring during normal operations or otherwise).

This section of the EP outlines the measures undertaken by Woodside to regularly monitor the management of environmental risks and impacts of the Pluto facility against the EPOs, EPSs and MC, with a view to continuous improvement of environmental performance. The section also outlines records that are to be used to assess whether the EPOs and EPSs in the EP are being met.

The effectiveness of the implementation strategy is also reviewed periodically as part of the monitoring and assurance process.

7.10.1 Monitoring

Woodside and its contractors will perform a program of periodic monitoring during the PAP – starting at mobilisation of each activity and continuing through the duration of the Program. This information will be collected using the tools and systems outlined below, developed based on the EPOs, EPSs and MC in this EP. The tools and systems will collect, as a minimum, the data (evidence) referred to in the relevant measurement criteria in Section 6 and Appendix D.

The collection of this data will form part of the permanent record of compliance maintained by Woodside and will form the basis for demonstrating that the EPOs and EPSs are met, which will be summarised in a series of routine reporting documents.

7.10.1.1 Source-based Impacts and Risks

The tools and systems to monitor environmental performance, where relevant, will include:

- daily reports that include leading indicator compliance
- periodic review of waste management and recycling records
- use of contractor's risk identification program that requires recording and submitting safety and environment risk observation cards routinely (frequency varies with contractor)
- collection of evidence of compliance with the controls detailed in the EP relevant to offshore activities by the Woodside Offshore HSE Adviser (other compliance evidence is collected onshore)
- environmental discharge reports that record volumes of planned overboard discharges to the ocean

monitoring of progress against the Global Wells and Seismic and Operations Division scorecards for KPIs.

7.10.1.2 Internal Auditing and Assurance Program

A summary of ongoing monitoring and quantitative records of emissions and discharges that will be kept and used to assess environmental performance during operations are provided in Table 7-5.

Further details on assurance associated with the Xena 03 tieback activities is described in Sections 7.10.2.1 and 7.10.2.2

Table 7-5: Summary of operations emissions and discharges monitoring for the PAP

Category	Parameter to be Monitored/Reported	Monitoring Frequency	Monitoring Equipment/ Methodology	EP Reference
Planned Emissions				
Atmospheric emissions	Greenhouse, energy and criteria pollutants	Normally continuous process metering/annual reporting	NGERS and NPI reporting estimation methods (e.g., fuel/flare flow meters, throughput meters, process estimation)	Section 6.7.10
	Fuel gas and flare intensity	Normally continuous process metering/monthly reviews	Fuel and flare flowmeters inform intensity profiles – tracked against optimisation targets	Section 6.7.10
Planned Discharges				
Discharge of subsea control fluids during valve actuations	Subsea control fluid consumption	Normally continuous process indication/monthly review	Subsea control fluid consumption surveillance. Process indication for gross leaks/ruptures	Section 6.7.5
Discharge of hydrocarbons and chemicals during subsea IMMR activities	Volumes of hydrocarbons and chemicals released subsea	As required, during IMMR activities (activity specific)	Estimates based on known volumes pumped and ROV observation	Section 6.7.5
Discharge of produced water	Volume discharged overboard	Normally continuous process indication/monthly review	PW flow meter(s), process estimation	Section 6.7.7
	OIW concentration of discharged PW	Normally continuous process indication/monthly review	Online analyser(s) and/or manual sampling	
	Chemical characterisation	Annually	Characterisation of end of pipe sample	
	WET testing	Three yearly	PW ecotoxicity testing	
Waste recycling and disposal	Quantities of solid and liquid wastes disposed of onshore	Ongoing	Facility waste manifest	Section 6.7.6
Unplanned Emissions and Discharges				
Unplanned emissions and discharges	Nature of release	As required	HSEQ Event Reporting System (First Priority)	Sections 6.8 and 6.9

Throughout this activity, Woodside will continuously identify new source-based risks and impacts through the Monitoring and Auditing systems and tools described above.

Other examples of assurance tasks implemented through the EP include:

- start of shift operations meetings
- permit to work hazard, risk management check list, area sign-on, and permit audits (ISSoW – Section 7.2.1)
- technical integrity SCE performance reviews (daily, weekly, monthly) (Section 2.7.5)

- maintenance performance assurance (e.g., conformance dashboards)
- management system performance audits reviews (e.g., MSPSs)
- data gathering and governance dashboard presentations (e.g., Woodside Integrated Risk and Compliance System).

7.10.1.3 Management of Knowledge

Review of knowledge relevant to the existing environment is undertaken in order to identify changes relating to the understanding of the environment or legislation that supports the risk and impact assessments for EPs (in-force and in-preparation). New knowledge checks take place both routinely primarily via quarterly and annual knowledge reviews and ad hoc (as information is obtained), and encompasses the following topics:

- Environmental science – update checks conducted via desktop reviews: scientific literature, government publications and Woodside supported publications and studies relating to existing environment topics (including but not limited to species and habitats) as well as EPBC Act Matters of National Environmental Significance (Part 3) and Part 13 statutory instruments.
- Cultural features and heritage values science and information – update checks conducted via desktop reviews: scientific literature, government publications and Woodside consultation as well as reporting progress for the Murujuga Rock Art Monitoring Program.
- Socio-economic environment and stakeholder information – update checks conducted via desktop reviews: scientific literature, government publications and Woodside consultation.
- Environmental legislation – monitoring conducted of emerging regulatory changes and the subsequent management of regulatory change (as outlined in the WMS Regulatory Compliance Management Procedure).

A management of knowledge tracker is maintained to record reviews and updates. New knowledge identified will prompt a consideration of MoC, which is actioned and documented appropriately.

The frequency and documentation of reviews, communication of relevant new knowledge and consideration of management of change are documented in the WMS Environment Plan Guideline.

Any relevant new information on cultural values and heritage will be assessed using the EP MoC Process (refer to Section 7.3.2).

Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to the environmental baseline studies database is completed and documented. Periodic location-focused environmental studies and baseline data gap analyses are completed and documented. Any subsequent studies scoped and executed as a result of such gap analysis are managed by the Environment Science Team and tracked via the Corporate Environment Baseline Database.

7.10.1.4 Management of Newly Identified Impacts and Risks

New sources of impacts and risks identified through monitoring and auditing systems and tools and the Woodside Environment Knowledge Management System are assessed using the MoC Process (Section 7.3).

7.10.2 Auditing

Environmental performance auditing will be performed to:

- identify potential new or changes to existing environmental impacts and risk, and methods for reducing those to ALARP

- confirm mitigation measures detailed in this EP are effectively reducing environmental impacts and risk, that mitigation measures proposed are practicable and provide appropriate information to verify compliance
- confirm compliance with the Performance Outcomes, Controls and Standards detailed in this EP.

Internal environmental auditing will be performed to cover each key project activity as summarised.

7.10.2.1 Mobile Offshore Drilling Unit Activities

Internal auditing is performed on a MODU-specific schedule, rather than a schedule to align with the well. This enables continuous review and improvement of environmental performance over the term of the MODU contract. The following internal audits, inspections and reviews will be performed to review the environmental performance of the activities:

- Survey environment rig equipment for a newly contracted MODU (if not previously contracted to Woodside within the last two years) against Woodside's Engineering Standard – Rig Equipment. This standard covers functional and technical requirements for Woodside contracted rigs and their associated equipment. An environment rig equipment survey scope typically includes mud and solids control systems, environmental discharge control (including drainage management), and loss of containment management.
- Complete a minimum of monthly environmental inspection (conducted by offshore Woodside personnel or a delegate) which may include verifying:
  - bunkering/transfers between support vessels and MODU/project vessels
  - environment containment including chemical storage, spill response equipment and housekeeping
  - general MODU environment risks including waste management, drilling fluids oil/water separation, and inspection of subsea and moonpool areas.
- Perform at least one environment audit during or within 6 months, while the MODU is on location (by a Woodside Environment Adviser or delegate), which may include:
  - operational compliance audits relevant to environmental risk of activities which may include compliance with training commitments, discharge requirements, bunkering activities, verification of use of approved chemicals, and satisfactory close out of items from previous audits
  - inspection of selected risk areas/activities (which may include shaker house, drill floor and mud management while commencing riser drilling or reservoir interception) during routine MODU visits throughout the MODU campaign, determined by risk, previous incidents or operation specification requirements.
  - audit findings relevant to continuous improvement of environmental performance will be tracked through the MODU or vessel compliance action register, a contractor register between the MODU operator or vessel contractor and Woodside.

7.10.2.2 Project Subsea Scope Activities

The following internal assurance will be performed for the subsea scope activities:

- Pre-mobilisation inspection/audit report will be conducted by a relevant person (before commencing). The scope of the audits are risk-based and specific to the relevant activity, but will generally focus on aspects relating to ensuring appropriate understanding of environmental commitments and the operational readiness of the activity scope, including appropriate environmental controls in place. All installation vessels associated with the above

scopes will be audited by Woodside. Support or transport vessels will be assessed on a risk-based approach, but will be audited via the primary subsea installation contractor's process.

- At least one compliance audit relevant to applicable EP commitments will be conducted by a Woodside Environment Adviser for the subsea campaign. The audit may be conducted offshore or office-based, subject to the duration of the activity and logistics of performing the audit offshore for short duration scopes (e.g., pipelay).
- Contractor-specific HSE audits will also be conducted of the associated support vessels. The audits will consider the implementation of HSE management, risk management, as well as pre-mobilisation and offshore readiness.
- Vessel based HSE inspections will be conducted fortnightly by vessel HSE personnel. Each inspection will focus on a specific risk area relevant to the project activity and a formal report will be issued (for example, bunkering controls, chemical and discharge management, cetacean reporting).
- Annual inspection of Woodside's long term hire subsea support vessels are undertaken for compliance with both the EP and the approved Contractor Management system.
- The internal audits and reviews, combined with the ongoing monitoring described in Section 7.10.1, and collection of evidence for MC are used to assess EPOs and standards.
- As part of Woodside's EMS and/or assurances processes, activities may also be periodically selected for environmental audits as per Woodside's internal auditing process. Audit, inspection and review findings relevant to continuous improvement of environmental performance are tracked through the Environmental Commitments and Actions Register.
- This Environmental Commitments and Actions Register is used to track subsea support vessel and subsea activity compliance with EP commitments, including any findings and corrective actions.

Non-conformances identified will be reported and/or tracked in accordance with Section 7.10.3.

7.10.2.3 Operations Assurance

To provide confidence, based on evidence commensurate with risk, that business objectives are met, business activities are performed and risks are managed, assurance is performed as described in the Provide Assurance Procedure and the Provide Assurance Guideline. The Guideline aims to explain how the Operations Division Assurance Team implement WMS Assurance requirements, while concurrently satisfying the Operations Division's specific objectives.

Operations Assurance Assignments are contained within the Operations Division Integrated Assurance Assignment Plan.

Environmental assurance activities are conducted on a regular basis to help:

- verify environmental risks and potential impacts are being managed in accordance with the EPOs and EPSs detailed in this EP
- monitor, review and evaluate the effectiveness of the performance outcomes and standards detailed in this EP
- verify effectiveness of the EP implementation strategy
- identify potential non-conformances.

The outputs of the assurance process are corrective actions that feed the improvement process. Therefore, assurance is a key driver of continuous improvement.

7.10.2.4 Annual Offshore Inspection/Desktop Review

An inspection/review of the Pluto offshore facility is undertaken every calendar year by the Australian Operations Environment Team, via either an offshore inspection or desktop review. Selected risk areas/activities are inspected to review environmental performance against the EPOs and EPSs and verify that control measures are effective in reducing the environmental risks and impacts of the activity to an ALARP and acceptable level.

The inspection/review also includes review of conformance with selected aspects of the EP implementation strategy. All risk sources/activities applicable to the offshore facility will be reviewed over a three-year rolling period. Records of findings and records of close-out of any corrective or improvement actions are maintained (close-out is tracked in Woodside's action tracking system).

7.10.2.5 Marine Assurance

Woodside's marine assurance is managed by the Marine Assurance Team of the Logistics Function in accordance with Woodside's Marine Offshore Vessel Assurance Procedure. The Woodside process is based on industry standards and consideration of guidelines and recommendations from recognised industry organisations such as Oil Companies International Marine Forum and International Maritime Contractors Association.

Woodside's Marine Offshore Assurance process is mandatory for all vessels (other than Tankers and Floating Production Storage and Offloading vessels) that are chartered directly by or on behalf of Woodside, including for short term hires (i.e., more than three months in duration). It defines applicable marine offshore assurance activities, ensuring all vessel operators operate seaworthy vessels that meet the requirements for a defined scope of work and are managed with a robust Safety Management System.

The process is multi-faceted and encompasses the marine assurance activities of:

- safety management system assessment
- dynamic positioning (DP) system verification
- vessel inspections
- project support for tender review, evaluation and pre/post contract award.

Vessel inspections are used to verify actual levels of compliance with the company's Safety Management System, the overall condition of the vessel and the status of the planned maintenance system onboard. Woodside Marine Assurance Specialist will conduct a risk assessment on the vessel to determine the level of assurance applied and the type of vessel inspection required.

Methods of vessel inspection may include:

- Woodside Marine Vessel Inspection
- Oil Companies International Marine Forum (OCIMF) Offshore Vessel Inspection Database (OVID) Inspection
- IMCA CMID Inspection
- Marine Warranty Survey.

Upon completion of the marine assurance process, to confirm that identified concerns are addressed appropriately and conditions imposed are managed, the Woodside Marine Assurance Team will issue the vessel a statement of approval. Should a vessel not meet the requirements of the Woodside Marine Offshore Vessel Assurance Process and be rejected, there does exist an opportunity to further scrutinise the proposed vessel.

Where a vessel inspection and/or OVMSA Verification Review is not available and all reasonable efforts based on time and resource availability to complete an vessel inspection and/or OVMSA

Verification Review are performed (i.e. short term vessel hire), the Marine Assurance Specialist Offshore may approve the use of an alternate means of inspection, known as a risk assessment (Section 7.10.2.6).

Environmental requirements specific to offshore facility support vessel contractors are communicated via Woodside marine charterers instructions. This document provides the Master of a vessel on hire to Woodside, with a clearly defined set of requirements and procedures for operating the vessel in the vicinity of the Woodside's operating facilities. This includes the management of environmental risks and impacts from the Pluto facility. The document includes information on:

- applicable legislation and guidelines
- roles and responsibilities
- marine fauna interaction guidance
- incident reporting requirements.

Environmental requirements specific to Subsea Support Vessels are communicated via the Subsea Environmental Compliance Package. This document outlines mandatory environmental management requirements for Subsea Support Vessels and associated contractors.

7.10.2.6 Vessel Risk Assessment

Woodside conducts a risk assessment of vessels where either an OVMSA Verification Review and/or vessel inspection cannot be completed. This is not a regular occurrence and is typically used when the requirements of the assurance process are unable to be met or the processes detailed are not applicable to a proposed vessel(s). The Marine Vessel Risk Assessment will be conducted by the Marine Assurance Specialist, where the vessel meets the short-term hire prerequisites.

The risk assessment is a semi-quantitative method of determining what further assurance process activity, if any, is required to assure a vessel for a particular task or role. The process compares the level of management control a vessel is subject to against the risk factors associated with the activity or role.

Several factors are assessed as part of a vessel risk assessment, including:

- management control factors:
  - company audit score (i.e., management system)
  - vessel HSE incidents
  - vessel Port State Control deficiencies
  - instances of Port State Control vessel detainment
  - years since previous satisfactory vessel inspection
  - age of vessel
  - contractors' prior experience operating for Woodside.
- activity risk factors:
  - people health and safety risks (a function of the nature of the work and the area of operation)
  - environmental risks (a function of environmental sensitivity, activity type and magnitude of potential environment damage (e.g., largest credible oil spill scenario))
  - value risk (likely time and cost consequence to Woodside if the vessel becomes unusable)
  - reputation risk

- exposure (i.e., exposure to risk based on duration of project)
- industrial relations risk.

The acceptability of the vessel or requirement for further vessel inspections or audits is based on the ratio of vessel score to activity risk. If the vessel management control is not deemed to appropriately manage activity risk, a satisfactory company audit and/or vessel inspection may be required before awarding work.

The risk assessment is valid for the period a vessel is on hire and for the defined scope of work.

7.10.3 Management of Non-conformance

Woodside classifies non-conformances with EPOs and standards in this EP as environmental incidents. Woodside employees and contractors are required to report all environmental incidents, and these are managed as per Woodside's internal event recording, investigation and learning requirements.

An internal computerised database called First Priority is used to record and report these incidents. Details of the event, immediate action taken to control the situation, investigation outcomes and corrective actions to prevent reoccurrence are all recorded. Corrective actions are monitored using First Priority and closed out in a timely manner.

Woodside uses a consequence matrix for classification of environmental incidents, with the significant categories being A, B and C (as detailed in Section 2.3). Detailed investigations are completed for all categories A, B, C and high potential environmental incidents.

7.10.4 Review

7.10.4.1 Management Review

Within the Australian Operations Environment Team, senior management regularly monitor and review environmental performance and the effectiveness of managing environmental risks and performance. Within each Function and Business Unit Leadership Team (e.g., Drilling and Completions, Subsea and Developments/Projects), managers review environmental performance regularly, including through quarterly HSE review meetings.

Woodside's Global, Wells and Seismic Environment Team will perform six-monthly reviews of the effectiveness of the implementation strategy and associated tools. This will involve reviewing the:

- Drilling and Completions environment KPIs (leading and lagging).
- tools and systems to monitor environmental performance
- lessons learned about implementation tools and throughout each campaign.

Reviews of oil spill arrangements and testing are performed in accordance with Section 7.14.10.

Woodside's Operations Division Environment Team will perform routine reviews of the effectiveness of the implementation strategy and associated tools. This will involve reviewing the:

- Operations Division environment KPIs (leading and lagging)
- tools and systems to monitor environmental performance.

Reviews of oil spill arrangements and testing are performed in accordance with Section 7.14.10.

7.10.4.2 Program of Ongoing Engagement with Traditional Custodians

Woodside will undertake an annual review of the Program of Ongoing Engagement with Traditional Custodians to determine its effectiveness and adapt the program accordingly. The annual review will

also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians (Appendix G).

7.10.4.3 Learning and Knowledge Sharing

Learning and knowledge sharing occurs via different methods, including:

- event investigations
- event bulletins
- after-action review conducted at the end of each well, including review of environmental incidents as relevant
- ongoing communication with MODU and facility operators
- formal and informal industry benchmarking
- cross asset learnings
- engineering and technical authorities discipline communications and sharing
- review of impacts, risks and controls across the life of the EP.

7.10.4.4 Continuous Improvement

Continuous Improvement Projects to improve production or environmental performance that involve refurbishment, modification or major maintenance on the facility are typically managed by Brownfields engineering, and required to follow appraise and develop management procedures. Currently, the Procedure requires that all projects be managed in accordance with the Opportunity Management Framework which supports the progressive maturation of an opportunity through value creation in the Assess and Select Phases and the maintenance of value in the Develop and Execute phases.

To support the accountable executive to make a decision on whether a project should proceed to the next phase in the Opportunity Management Framework, it is sometimes necessary to conduct a trial of the modification to determine the outcomes that can be expected if the modification is implemented. Due to prioritisation of resources, the phased progress of opportunities, competition between different solutions and long-term strategic and financial considerations, it is not possible to set quantitative success criteria to determine whether a modification will be implemented based on the results of trials. Instead, the results of a trial are used to inform a decision on whether to progress the project to the next phase in the Opportunity Management Framework. Decisions are typically made with two key considerations; whether the business is ready to proceed which has a technical/functional focus and whether there is a business case for progressing to the next phase. The business case may consider the ALARP position for the project, if relevant.

7.11 Record Keeping

Compliance records (outlined in MCs in Section 6) are maintained.

Record keeping is in accordance with Regulation 22(6) that addresses maintaining records of emissions and discharges. See also Table 7-5.

7.12 Ongoing Consultation

Although consultation for the purpose of Regulation 25 is complete, in accordance with Regulation 22(15) of the Environment Regulations, the implementation strategy must provide for appropriate consultation with relevant authorities of the Commonwealth, a State or Territory and other relevant interested persons or organisations.

Woodside proposes to undertake the engagements with directly impacted relevant persons and additional persons listed in Table 7-6. Relevant new information identified during ongoing consultation will be assessed using the EP Management of Knowledge (refer to Section 7.10 and Management of Change Process (refer to Section 7.3).

Woodside hosts community forums at which members are provided updates on Woodside activities on a regular basis (for example community reference group meetings). Representatives who present at those meetings are from community and industry and include Woodside, State Government (for instance relevant Regional Development Commissions), Local Government, Indigenous Groups, industry representative bodies, Community and industry organisations.

Relevant persons and those who are simply interested in the activities, can otherwise remain up to date on this activity through subscribing to our website the Woodside website, or by reading the publicly available version of the EP on NOPSEMA's website, where available.

Should consultation feedback be received following EP acceptance that identifies relevant new information or a measure or control that requires implementation or update to meet the intended outcome of consultation (see Section 5.2), Woodside will apply its EP Management of Knowledge process (refer to Section 7.10) and MoC process (refer to Section 7.3), as appropriate.

Woodside has developed a Program of Ongoing Engagement with Traditional Custodians (Appendix G), which is compliant with Corporate Woodside Policies Strategies and procedures and directly informed by feedback from Traditional Custodians. It provides a mechanism for ongoing dialogue so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the activity and in relation to caring for and managing country, including Sea Country. The Program will be tailored to each Traditional Custodian group and may include, as agreed with relevant Traditional Custodians:

- social investment to support Indigenous ranger programs
- support for Indigenous oil spill response capabilities
- support for recording Sea Country values
- support to Traditional Custodian groups to build capabilities and capacity with respect to ability to engage with Woodside and the broader oil and gas industry on activities
- development of ongoing relationships with Traditional Custodian groups
- any other initiatives proposed for the purpose of protecting Country including cultural values.

At the time of EP submission, a number of activities related to ongoing consultation regarding the activity are planned with Traditional Custodian Relevant Persons. These are described in Appendix G. Where Traditional Custodian relevant persons have requested information or further engagement considered as ongoing consultation, but have not requested a consultation agreement, these requests have been captured in Table 7-6. However, a consultation agreement may still be initiated by these groups at any time.

Table 7-6: Ongoing consultation engagements

Report/ Information	Recipient	Purpose	Frequency	Content
Program of Ongoing Engagement with Traditional Custodians	Relevant cultural authorities	Identification, assessment and consideration of cultural values relevant to the PAA and EMBA	Ongoing	Assessment of cultural values Any relevant new information on cultural values will be assessed using the EP Management of Knowledge and Management of Change Process (refer to Section 7.3.2)
Notification (email)	AHO	As requested by AMSA during consultation	No less than 4 weeks prior to commencement	PS 1.9 Date of activity start
Updates (email)			As required.	Changes to planned activities
Notification (email)	AMSA	As requested by AMSA during consultation	At least 24–48 hours before operations commence	PS 1.10 Date of activity start
Update (email)			As required	Changes to planned activities
Notification (email)	Other relevant persons	Notification of significant change	As required	Notification of significant change
Notification (email)	AFMA WAFIC CFA DAFF – Fisheries KUFPEC		No less than 10 days prior to commencement and following completion of activities	PS 1.13 Date of activity start and end
Emails/ Meetings	Persons or organisations who provide feedback to Woodside post EP submission	Identification, assessment and consideration of feedback, claims and/or objections	As appropriate	Assessment of claims and/ or objections Relevant new information will be assessed using the EP Management of Knowledge and MoC Process (refer to Section 7.3.2)
Notification (email)	Australasian Underwater Cultural Heritage Database Any other stakeholders as required in the Unexpected Finds Procedure	Report any unexpected finds of potential Underwater Cultural Heritage	If triggered by Unexpected Finds Procedure	Refer to Unexpected Finds Procedure

7.13 Reporting

7.13.1 Overview

To meet the EPOs and EPSs outlined in this EP, Woodside reports at a number of levels, as outlined in the next sections.

7.13.2 Routine Reporting (Internal)

7.13.2.1 Daily Progress Reports and Meetings

The following daily reports, containing environmental performance information, are issued:

- Daily reports for drilling activities provide performance information about drilling activities, heath, safety and environment, and current and planned work activities.
- Pan-Woodside Daily Production Report – The report includes facility performance information on production and a log of any HSE events.
- Subsea support vessel Daily Progress Report(s) – During subsea IMMR activities, daily reports are issued by the Woodside Site Representative. The reports provide performance information on HSE events, diesel use, together with equipment information, current and planned work activities.

Meetings between key personnel are used to transfer information, discuss incidents, agree plans for future activities and develop plans and accountabilities for resolving issues.

7.13.2.2 Regular Health, Safety and Environment Meetings

Regular dedicated HSE meetings are held with the offshore and Perth-based management and advisers to address targeted HSE incidents and initiatives. Minutes of these meetings are produced and distributed as appropriate.

7.13.2.3 Performance Reporting

Monthly and quarterly performance reports are developed and reviewed by the Function and Business Unit Leadership Teams (e.g., Drilling and Completions, Operations). These reports cover a number of subject matters, including:

- HSE incidents (including high potential incidents and those related to this EP) and recent activities
- corporate KPI targets, which include environmental metrics
- outstanding actions as a result of audits or incident investigations
- technical high and low lights
- status of subsea IMMR activities.

7.13.3 Routine Reporting (External)

7.13.3.1 Start and End Notifications of the Petroleum Activities Program

7.13.3.1.1 Pluto Operations

In accordance with Regulation 54, Woodside will notify NOPSEMA within 10 days of the completion of the Petroleum Activities Program.

The EP will end when Woodside notifies NOPSEMA that the PAP has ended, all the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with Regulation 46 of the Environment Regulations.

The PAP is not expected to end within the five-year life of this EP.

7.13.3.1.2 Xena-03 Drilling and Tie-back

In accordance with Regulation 54, Woodside will notify NOPSEMA of the commencement of the PAP at least ten days before the activity commences, and will notify NOPSEMA within 10 days of completing the activity.

7.13.3.2 Cetacean and Whale Shark Sightings Reporting

In accordance with EPBC Act approval conditions for the activity (refer Table 1-4), Woodside will keep a record of any cetacean and whale shark sightings for the life of this EP. A sightings report will be submitted to the Australian Antarctic Division annually with the reporting period being by calendar year (see also Table 7-7).

7.13.3.3 Environmental Performance Review and Reporting

In accordance with applicable environmental legislation for the activity, Woodside is required to report information on environmental performance to the appropriate regulator. Regulatory reporting requirements are summarised in Table 7-7.

Table 7-7: Routine external reporting requirements

Report	Recipient	Frequency	Content
Monthly Recordable Incident Reports	NOPSEMA	Monthly, by 15th of each month	Details of recordable incidents that have occurred during the PAP for previous month (if applicable).
Annual EP Performance Report	NOPSEMA	Annual, by 30 April of the year following reporting period	Compliance with EPOs, controls and standards outlined in this EP, in accordance with the Environment Regulations (Regulation 22(7)).
NPI Report	DCCEEW	Annual, by 30 September each year	Summary of the emissions to land, air and water including those from the facility. Reporting period 1 July to 30 June each year.
National Greenhouse and Energy Reporting (NGERS)	Clean Energy Regulator	Annual, by 31 October each year	Summary of energy use and greenhouse gas emissions including those from the facility. Reporting period is 1 July to 30 June each year.
Cetacean and Whale Shark Sightings Report	Australian Antarctic Division	Annually, by 31 January each year	Summary of any sightings of cetaceans or whale sharks. Reporting period is 1 January to 31 December.

7.13.3.4 End of the PAP Notification

In accordance with Regulation 54, Woodside will notify NOPSEMA within ten days of the completion of the Petroleum Activities Program.

7.13.3.5 End of the Environment Plan

The EP will end when Woodside notifies NOPSEMA that the PAP has ended, all of the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with Regulation 46 of the Environment Regulations. As noted above, the PAP is not expected to end within the five-year life of this EP.

7.13.4 Incident Reporting (Internal)

All Woodside employees and contractors are required to report environmental incidents and non-conformances with this EP. Incidents are reported using an Event Report Form which includes details of the event, immediate action taken to control the situation, and corrective actions to prevent reoccurrence.

7.13.5 Incident Reporting (External) – Reportable and Recordable

7.13.5.1 Reportable Incidents

A reportable incident is defined under Regulation 5 of the Environment Regulations as:

- 'an incident relating to the activity that has caused, or has the potential to cause, moderate to significant environmental damage'.

A reportable incident for the PAP is:

- an incident that has caused environmental damage with a Consequence Level of Moderate C+ or above (as defined under Woodside's Risk Table; refer to Section 2.2)
- an incident that has the potential to cause environmental damage with a Consequence Level of Moderate C+ or above (as defined under Woodside's Risk Table – refer to Section 2.6).

The environmental risk assessment (Section 6) for the PAP identifies those risks with a potential consequence level of C+ for environment. The incidents that have the potential to cause this level of impact include hydrocarbon loss of containment events to ocean resulting from either:

- well loss of containment (MEE-01)
- subsea equipment loss of containment (MEE-02)
- loss of structural integrity (MEE-03)
- loss of marine vessel separation with platform (MEE-04)
- loss of control of suspended load from platform (MEE-05)
- unplanned hydrocarbon release: loss of well integrity during drilling operations.

Any such incidents represent potential events which would be reportable incidents. Reporting of incidents is undertaken with consideration of NOPSEMA (2014) guidance, stating 'if in doubt, notify NOPSEMA', and assessed on a case-by-case basis to determine if they trigger a Reportable incident as defined in this EP and by the Regulations.

7.13.5.1.1 Notification

NOPSEMA will be notified of all reportable incidents, according to the requirements of Regulations 47, 48 and 49 of the Environment Regulations. Woodside will:

- report all reportable incidents to the regulator (orally) as soon as practicable (ASAP), but within two hours of the incident or of its detection by Woodside
- provide a written record of the reported incident to NOPSEMA, the National Offshore Petroleum Titles Administrator (NOPTA) and the Department of the responsible State Minister (DMIRS) ASAP after orally reporting the incident
- complete a written report for all reportable incidents using a format consistent with the NOPSEMA Form FM0831 – Reportable Environmental Incident which must be submitted to NOPSEMA ASAP, but within three days of the incident or of its detection by Woodside
- provide a copy of the written report to the NOPTA and DMIRS, within seven days of the written report being provided to NOPSEMA.

AMSA will be notified of oil spill incidents ASAP after their occurrence, and DCCEEW notified if MNES are to be affected by the oil spill incident.

7.13.5.2 Recordable Incidents

A recordable incident is defined under Regulation 5 of the Environment Regulations as a 'breach of an EPO or EPS, in the EP that applies to the activity, that is not a reportable incident'.

Any breach of the EPOs or EPSs (as presented within Section 6) will be raised as a recordable incident and managed as per the notification and reporting requirements outlined below and internal requirements outlined in Section 7.13.4.

7.13.5.2.1 Notification

NOPSEMA will be notified of all recordable incidents, according to the requirements of Regulation 50(2), no later than 15 days after the end of the calendar month using the NOPSEMA Form – Recordable Environmental Incident Monthly Summary Report detailing:

- all recordable incidents that occurred during the calendar month
- all material facts and circumstances concerning the recordable incidents that the operator knows or is able, by reasonable search or enquiry, to find out
- any action taken to avoid or mitigate any adverse environment impacts of the recordable incidents
- the corrective action that has been taken, or is proposed to be taken, to prevent similar recordable incidents
- the action that has been taken, or is proposed to be taken, to prevent a similar incident occurring in the future.

7.13.5.3 Other External Reporting Requirements and Notifications

In addition to the notification and reporting of environmental incidents defined under the Environment Regulations and Woodside requirements, Table 7-8 describes the incident reporting requirements that also apply in the PAA if a spill originates from a vessel.

Table 7-8: External incident reporting requirements

Event	Responsibility	Notifiable party	Notification requirements	Contact	Contact detail
Any marine incidents during Petroleum Activities Program	Vessel Master	AMSA	Incident Alert Form 18 as soon as reasonably practicable* Within 72 hours after becoming aware of the incident, submit Incident Report Form 19	AMSA	reports@amsa.gov.au
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA Rescue Coordination Centre (RCC)	As per Article 8 and Protocol I of MARPOL within two hours via the national emergency 24-hour notification contacts and a written report within 24 hours of the request by AMSA	AMSA RCC Australia	If the ship is at sea, reports are to be made to: Free call: 1800 641 792 Phone: 08 9430 2100 (Fremantle)
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA	Without delay as per Protection of the Sea Act, part II, section 11(1), AMSA RCC notified verbally via the national emergency 24-hour notification contact of the hydrocarbon spill; follow up with a written Pollution Report ASAP after verbal notification	RCC Australia	Phone: 1800 641 792 or +61 2 6230 6811 AFTN: YSARYCYX
Any oil pollution incident which has the potential to enter a National Park or requires oil spill response activities to be conducted within a National Park	Vessel Master	DCCEEW	Reported verbally, ASAP	Director of National Parks	Phone: 02 6274 2220
Activity causes unintentional death of or injury to fauna species listed as Threatened or Migratory under the EPBC Act	Vessel Master	DCCEEW	Within seven days of becoming aware	Secretary of the DCCEEW	Phone: 1800 803 772 Email: protected.species@environment.gov.au

7.14 Emergency Preparedness and Response

7.14.1 Overview

Under Regulation 22(8), the implementation strategy must contain an oil pollution emergency plan (OPEP) and provide for the updating of the OPEP. Regulation 22(9) outlines the requirements for the OPEP which must include adequate arrangements for responding to and monitoring of oil pollution.

A summary of how this EP and supporting documents address the various requirements of Environment Regulations relating to oil pollution response arrangements is shown in Table 7-9.

Table 7-9: Oil pollution preparedness and response overview

Content	Environment Regulations Reference	Document/Section Reference
Details (oil pollution response) control measures that will be used to reduce the impacts and risks of the activity to ALARP and an acceptable level	Regulation 21 (5), (6), 22 (2)	Oil Spill Preparedness and Response Mitigation Assessment
Describes the OPEP	Regulation 22 (8)	EP: Section 7.9. Woodside's oil pollution emergency plan has the following components: • Woodside Oil Pollution Emergency Arrangements (Australia) • Pluto Operations Oil Pollution First Strike Plan • Xena-03 Tie-Back Oil Pollution First Strike Plan • Oil Spill Preparedness and Response Mitigation Assessment
Details the arrangements for responding to and monitoring oil pollution (to inform response activities), including control measures	Regulation 22 (9)	Oil Spill Preparedness and Response Mitigation Assessment Pluto Operations Oil Pollution First Strike Plan Xena-03 Tie-back Oil Pollution First Strike Plan
Details the arrangements for updating and testing the oil pollution response arrangements	Regulation 22 (8)(12)(13)(14)	EP: Section 7.3.3 Oil Spill Preparedness and Response Mitigation Assessment
Details provisions for monitoring impacts to the environment from oil pollution and response activities	Regulation 22(10)	Oil Spill Preparedness and Response Mitigation Assessment
Demonstrates that the oil pollution response arrangements are consistent with the national system for oil pollution preparedness and control	Regulation 22(11)	Oil Pollution Emergency Arrangements (Australia).

7.14.2 Emergency Response Training

Regulation 22(4) requires that the implementation strategy includes measures to ensure that employees and contractors have the appropriate competencies and training. Woodside has conducted a risk-based training needs analysis on positions required for effective emergency response (Table 7-10).

Table 7-10: Emergency response training requirements

IMT Position	Minimum Competency
Corporate Incident Management Team (CIMT) Incident Commander and Deputy Incident Commander	• IMT Fundamentals Course (internal course) or equivalent • ICS 100/200 • IMO3 or equivalent spill response specialist level with an oil spill response organisation (OSRO) • Participation in L2 activation, exercise or skills maintenance
Operations, Planning, Logistics and Finance Sections, and other rostered members of the CIMT	• IMT Fundamentals Course or equivalent • ICS 100/200 • Oil spill theory • Participation in L2 activation, exercise or skills maintenance
Environment Unit Leader	• IMT Fundamentals Course • ICS 100/200 • IMO2 or equivalent spill response specialist level with an OSRO • Participation in L2 activation, exercise or skills maintenance
Note on Competency/Equivalency	
In 2023, Woodside undertook a review of incident and crisis systems, processes and tools to assess whether these were fit-for purpose and has rolled out a change to the Crisis and Emergency Management training and the oil spill response training requirements for IMT roles. The revised IMT Fundamentals training Program aligns with the performance requirements of the PMAOMIR320 – Manage Incident Response Information and PMAOM0R418 - Coordinate Incident Response. In 2023, Woodside took the decision to align its global incident command arrangements to the Incident Command System (ICS). As such, all rostered members of the Incident Management Team are trained up to ICS 200. In addition to baseline incident management training, all rostered members of the CIMT undertake a level of hydrocarbon spill response training. Depending upon the role, this may take the form of IMO training or completion of Woodside's internal oil spill training course (OSREC) which involves the completion of two online AMSA Modules (Introduction to National Plan and Incident Management; and Introduction to Oil Spills) and face-to-face training. Woodside Learning Services (WLS) are responsible for collating and maintaining personnel training records. The HSP Dashboard reflects the competencies required for each oil spill role (IMT/operational).	

7.14.3 Emergency Response Preparation

The Corporate Incident Management Team, based in Woodside's head office in Perth, is the onshore coordination point for an offshore emergency. The CIMT is staffed by a roster of appropriately skilled personnel available on call 24 hours a day. The CIMT, under the leadership of the CIMT Leader, supports the site-based Incident Management Team by providing additional support in areas such as operations, logistics, planning, people management and public information (corporate affairs). A description of Woodside's Incident Command Structure and arrangements is further detailed in the Woodside Oil Pollution Emergency Arrangements (Australia).

Woodside will have a number of Emergency Response Plans (ERP) in place relevant to the PAP. The ERP provides procedural guidance specific to the asset and location of operations to control, coordinate and respond to an emergency or incident.

For the tie-back activity, the ERP will be a bridging document to the contracted rig's emergency documentation. This document summarises the emergency command, control and communications processes for the integrated operation and management of an emergency. It is developed in collaboration with the contracted rig so that roles and responsibilities between the contracted rig and Woodside personnel are identified and understood. The ERPs will contain instructions for vessel emergency, medical emergency, search and rescue, reportable incidents, incident notification, contact information and activation of the contractor's emergency centre and Woodside Communication Centre (WCC). Electronic copies of the ERPs are available on the facility Virtual

Bookshelves and the Security and Emergency Management intranet page. Hard controlled copies are available on the facilities.

In addition, the Emergency Preparedness MSPS (M06) is in place to assure that in the event of an incident, the organisation is appropriately prepared for all necessary actions which may be required for the protection of People, Environment, Asset, Reputation and Livelihood.

7.14.4 Emergency Event During Tie-back Activity

In the event of an emergency of any type:

- On the MODU, the OIM will assume overall onsite command and act as the Incident Controller (IC). All persons aboard the MODU will be required to act under the IC's directions. The MODU/vessels will maintain communications with the onshore Drilling Superintendent and/or other emergency services in the event of an emergency. Emergency response support can be provided by the contractor's emergency centre or WCC if requested by the IC.
- Vessel Master (depending on the location of the emergency) will assume overall onsite command and act as the IC. All persons will be required to act under the IC's directions. The vessels will maintain communications with the onshore project manager and/or other emergency services in the event of an emergency. Emergency response support can be provided by the contractor's emergency centre or WCC if requested by the IC.
- The MODU and project vessels will have on-board equipment for responding to emergencies including medical equipment, fire-fighting equipment and oil spill response equipment.

7.14.5 Initial Response to Facility Incident

The facility is equipped with emergency shutdown systems designed to protect personnel, the facility and the environment from unsafe operating conditions and catastrophic situations.

Emergency shutdown systems are provided as a means of isolation in response to process upsets and facility conditions (including associated flowlines and risers) that could result in loss of hydrocarbon inventories, or to reduce the potential impact from a hydrocarbon loss of containment event on the facility. Provision has been made for process and facility alarm systems to provide early indication of any process upset conditions and potential hazardous events, including fire and gas alarms.

The key ERP relevant to the facility and subsea infrastructure (excluding the export pipeline) is the Pluto Emergency Response Plan. This plan covers health, safety, asset and environmental risks (including fire, structural integrity, sabotage) so that the range of occupational, asset and environmental risk exposures from incidents have been considered and plans are in place for their management. The plan provides specific details on the initial response required during events with potential significant environmental consequences such as a hydrocarbon spill, subsea hydrocarbon leak or potential collision.

The Pipelines Emergency Response Plan covers key ERP relevant to the export pipeline, as well as other major pipelines on Woodside's NWS facilities. The Pluto. Vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from vessel activities. The Pluto Operations Oil Pollution First Strike Plan is intended to work in conjunction with the SOPEPs, if hydrocarbons are released to the marine environment from a vessel.

Woodside has established EPOs, EPSs and MC to be used for hydrocarbon spill response during the Petroleum Activities Program.

7.14.6 Oil and Other Hazardous Materials Spill

A significant hydrocarbon spill during the PAP is unlikely, but should such an event occur, it has the potential to cause serious environmental and reputational damage if not managed properly. The Woodside Oil Pollution Emergency Arrangements (Australia) document, supported by the Oil Pollution First Strike Plan which provides tactical response guidance to the activity/area and Oil Spill Preparedness and Response Strategy Selection and Evaluation of this EP, cover spill response for this Petroleum Activities Program.

The Crisis and Emergency Management Team manages Woodside's hydrocarbon spill response equipment stockpile. Woodside also maintains a suite of contracts for access to additional specialist response equipment and trained personnel as required via Australian and international spill response organisations and labour supply companies. In the event of a major spill, Woodside will enact first strike response actions, in liaison with the relevant Control Agency, as detailed in the activity-specific Oil Pollution First Strike Plan.

The MODU and project vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from vessel activities. The Oil Pollution First Strike Plan is intended to work in conjunction with the SOPEPs, if hydrocarbons are released to the marine environment from a vessel.

Woodside has established EPOs, performance standards and MC to be used for oil spill response during the Petroleum Activities Program.

7.14.7 Emergency and Spill Response

Woodside categorises incidents in relation to response requirements as follows:

7.14.7.1 Level 1 Incident

A Level 1 incident can be resolved through the use of existing resources, equipment and personnel. A Level 1 incident is contained, controlled and resolved by site/regionally based teams using existing resources and functional support services.

7.14.7.2 Level 2 Incident

A Level 2 incident is characterised by a response that requires external operational support to manage the incident. It is triggered in the event the capabilities of the tactical level response are exceeded. This support is provided to the activity via the activation of all, or part of, the responsible CIMT.

7.14.7.3 Level 3 Incident

A Level 3 incident or crisis is identified as a critical event that seriously threatens the organisation's People, the Environment, company Assets, Reputation, or Livelihood. At Woodside, the Crisis Management Team (CMT) manages the strategic impacts in order to respond to and recover from the threat to the company (material impacts, litigation, legal and commercial, reputation etc.). The CIMT may also be activated as required to manage the operational incident response.

7.14.8 Source Control Response Capability

Source Control IMT Structure

Woodside source control incident classification levels are defined in the Woodside *Well Control Procedure*. Level 1 and Level 2 Source Control events will be managed by Global Wells and Seismic (GWS) without activation of the Corporate Incident Management Team (CIMT).

A Level 3 Source Control incident requires the activation of the CIMT and Crisis Management Team (CMT). The CIMT organisation includes a Source Control Section Chief position on the core roster reporting to the CIMT Incident Commander (IC). Following activation, the Source Control Section Chief will assemble a Source Control Section comprising multiple Functional Support Teams (FST) appropriate to the magnitude and complexity of the situation. The make-up of the Source Control Section may change as the well control incident progresses. An example Source Control Section showing FST structures is shown in Figure 7-8. For clarity the Source Control Section can be considered a like for like replacement for the "Well Control Incident Team" which is referred to in some legacy documentation.

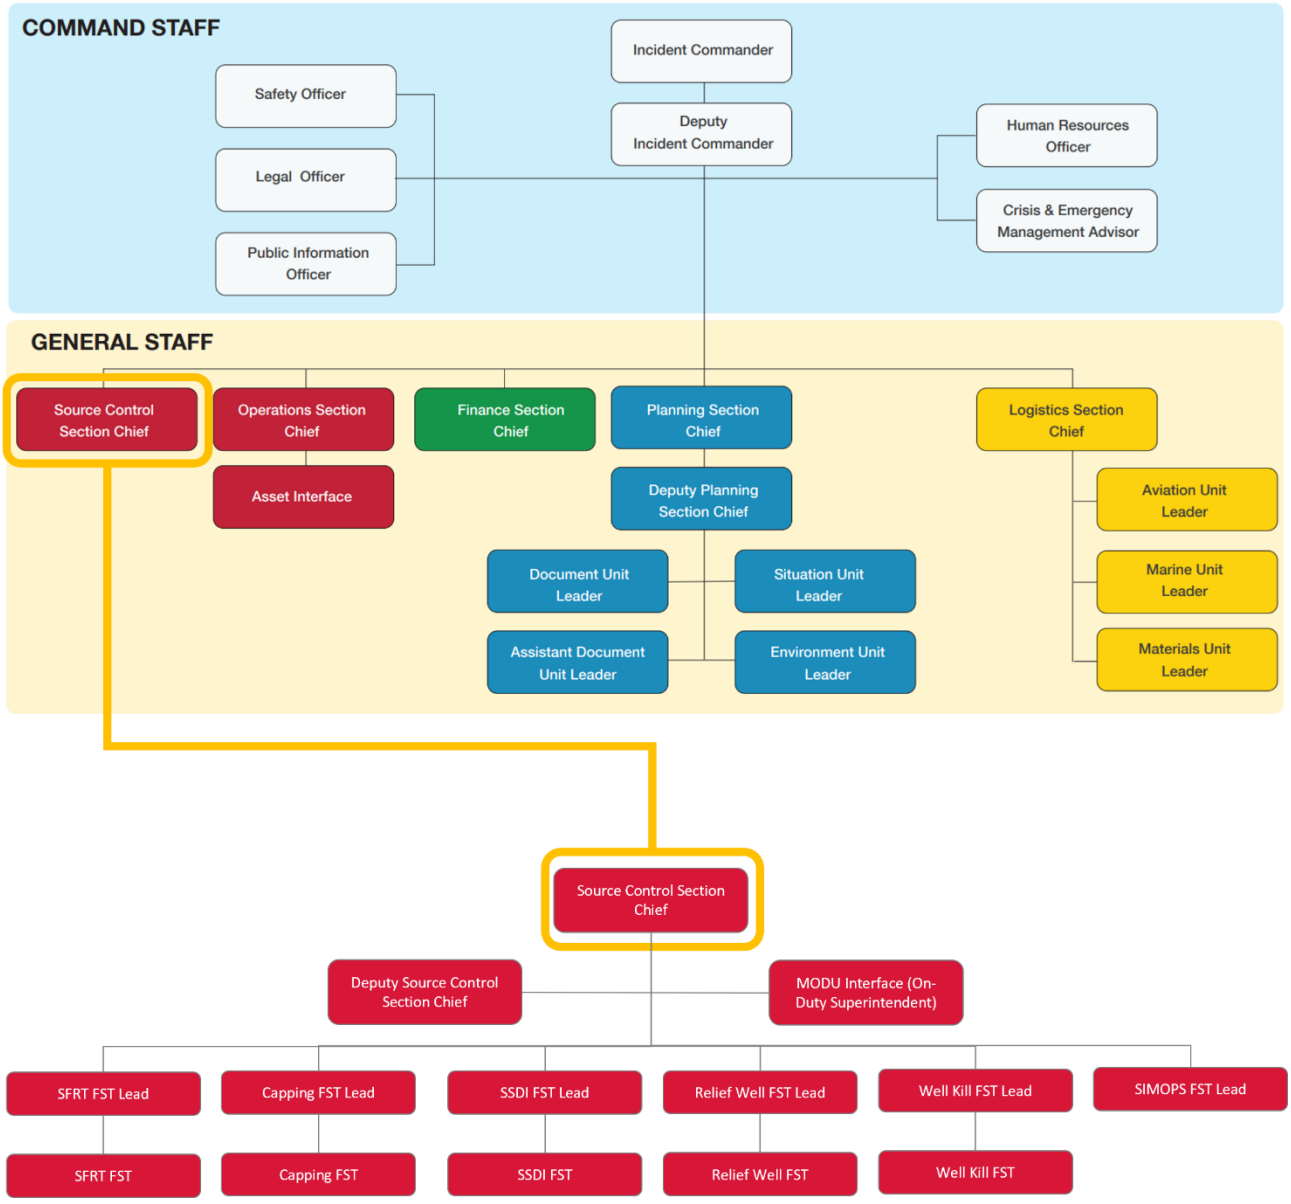

Figure 7-8: Source Control Section organisation structure

For complex source control events, the Source Control Section may be required to be in existence for an extended period. Suitable arrangements must be made to establish shifts and duty roster cycles for Source Control Section members.

Table 7-11: Source Control Section roles and responsibilities

Role	Key Responsibilities
Source Control Section Chief (SCSC)	The SCSC, a member of the CIMT, is responsible for managing, implementing, and coordinating operations and plans directly related to source control. The SCSC activates and supervises organizational elements per the Incident Action Plan (IAP) and directs its execution. The SCSC directs dedicated source control equipment, requests or releases resources, approves group operational plans, approves source control changes to the IAP, as necessary, and is aligned with the CIMT Operations Section Chief. The SCSC might have one or more Deputy SCSCs to coordinate SC Branch activities.
Deputy Source Control Section Chief	The Deputy Source Control Section Chief (Deputy SCSC) provides support and relief to the SCSC. The Deputy has the same training and expertise as the Section Chief. The Deputy-SCSC serves as the delegate of authority for the SCSC when the SCSC is unavailable. The number of Deputy-SCSCs varies as a function of proficiency and the support level required.
MODU Interface	The active Woodside Superintendent or delegate fulfills the role of MODU interface. The MODU interface assists the SCSC and Operations Section Chief in communications with the MODU and Associated Drilling Contractor. The MODU interface provides specialist knowledge of operations leading up to the event to the wider WICT.
Subsea First Response Toolkit (SFRT) FST Lead	The SFRT FST Lead is responsible for planning, organizing, and conducting operations that utilize the Subsea First Response kit. This includes site survey and assessment, debris removal and BOP intervention. The SFRT FST Lead reports directly to the SCSC and coordinates with the Capping, SSDI and SIMOPS FST Leads.
Capping FST Lead	The Capping FST Lead is responsible for planning, organizing, mobilising and conducting Capping Stack Installation and operations to shut-in the well. The Capping Stack FST Lead reports to the SCSC and coordinates its operations with the SFRT and Relief Well FST Leads. After the well is capped, the Capping Stack FST Lead's team monitors the well and cap integrity.
Subsea Dispersant Injection (SSDI) FST Lead	The Subsea Dispersant FST Lead coordinates the use of subsea dispersant equipment at or near the incident source. The Subsea Dispersant FST Lead manages subsea dispersant operations, encompassing subsea dispersant equipment operations, including setup, determination of flow rates and application techniques. The Subsea Dispersant FST Lead also coordinates the procurement and transportation of dispersant materials and works with the surface spill team to ensure the proper dispersant resource allocation. The Subsea Dispersant FST Lead also coordinates with the SIMOPS FST Lead.
Relief Well FST Lead	The Relief Well FST Lead is responsible for managing and coordinating the relief well design, relief well operation, coordinating the development of the drilling plan and drilling procedures, securing resources, and managing relief well operations. The Relief Well FST Lead coordinates their operations with the SIMOPS FST Lead. The Relief Well FST Lead reports to the SCSC for source control matters and the GWS Drilling Engineering Manager for drilling matters.
Well Kill FST Lead	The Well Kill FST Lead is responsible for planning and coordinating the Well Kill operation. This includes providing the best estimate of well-discharge rates and evaluation of well integrity to support capping and relief well operations. The Well Kill FST Lead coordinates gathering current reservoir and geologic models, wellbore diagram and directional surveys, well fluid surveys, performance predictions, wellbore stability, and mechanical condition of the well. The well kill FST provides recommendations on chemical injection programs (hydrate inhibitors) and proposed subsea flow equipment. The Well Kill FST Lead reports directly to the SCSC and coordinates with the Relief Well, Capping, SSDI and SIMOPS FST Leads.
SIMOPS FST Lead	The Simultaneous Operations (SIMOPS) Function Support Team Lead plans, organizes, and monitors subsea and surface operations within the designated SIMOPS area. The Supervisor manages the access to the subsea areas for all simultaneous activities, including remotely operated vehicle (ROV) operations, relief well operations, debris removal operations, capping operations, subsea dispersant operations, and containment operations, including frequency management. The SIMOPS FST Lead ensures coordination of all Source Control operations with other associated Response Operations. The Lead also works with the SCSC to develop operational plans for the IAP. The SIMOPS FST Lead reports directly to the SCSC.

The Source Control Section may include:

- GWS Head of Region
- GWS Engineering Manager/s
- GWS Superintendent/s
- Subsea Vessel Superintendent/s
- GWS Engineering support, as required
- Subsea Engineering support, as required
- Rig Contractor Representatives
- Service Company and Vendor Representatives
- Source Control Contractors
- HSE Adviser/s
- Logistics Coordinator/s
- Fluids Coordinator
- Sub-surface Pore Pressure Prediction Focal Point
- Operations Geologists
- Geomatics Representative

Woodside has a contract with Integrity Management and Response LLC, based in Houston, for the provision of source control emergency response services and personnel. This service can be called off on an "as-required" basis to supplement the Perth-based Source Control Response team.

7.14.8.1 Source Control IMT personnel and resourcing

A source control response is managed by the Source Control Section Chief (SCSC). This is a rostered position with role specific training requirements. The SCSC will initially draw upon personnel within the GWS Australia organisation for form the necessary Functional Support Teams (FSTs). To ensure the FSTs are staffed by the appropriate personnel, a map of FST positions against current role descriptions has been developed and can be found below in Table 7-12. For example the "Senior Drilling Engineer" role is mapped as being a primary candidate to fill the "Relief Well Unit Lead" FST position. In this example the competencies required to drill a relief well are deemed to be analogous to the competences required to drill a development or exploration well. As such, any individual currently performing in the Senior Drilling Engineer role, and subject to the existing Woodside performance management process including the completion of annual performance reviews, is deemed to be competent to perform the mapped FST role.

Table 7-12: Role Descriptions Mapped to Source Control Team Roles

	Functional Support Team							
Role Description	***Deputy SCSC***	***SFRT Unit***	***Capping Unit***	***SSDI Unit***	***Relief Well Unit***	***Well Kill Unit***	***SIMOPs Unit***	***RWIS Unit (SCA)***
Eng Manager / SME	Primary	Backup	Backup	Backup	Backup	Backup	Backup	Backup

Sen Drilling Engineer	Primary	Backup	Backup	Backup	Primary	Primary	Primary	Backup
Drilling Engineer	Backup		Backup	Backup	Backup	Backup	Backup	Backup

Sen Completions Engr	Primary	Backup	Backup	Backup		Primary	Primary	Backup
Completions Engr	Backup		Backup	Backup		Backup	Backup	Backup
Sen Subsea Engineer	Primary	Primary	Primary	Primary			Primary	Primary
Subsea Engineer	Backup	Backup	Backup	Backup			Backup	Backup

The Source Control IMT response structure indicated in Figure 7-8 is estimated to require from four to 14 personnel per shift, varying with the scale of response (eight to 28 personnel for 24-hour coverage). For a prolonged response, including resources to provide on/off weekly cycles, an additional 28 personnel may be required. These numbers are indicative and will vary, depending on scale and complexity of operations.

The current organisational review indicates Woodside has more than 80 internal staff members to support the Source Control IMT positions. In the event of a Level 3 incident, response activities will be given priority and other projects may be reduced or suspended, allowing reallocation of significant additional resources. Woodside would require access to external resources primarily for Specialist Services and Expertise in Source Control and Well Control operations.

Additional personnel to support the Source Control FST will be filled through the following avenues:

- Source Control Specialists through existing contracts, for example Wild Well Control, AGR.
- Secondment of personnel from other Titleholders through AEP Industry Memorandum of Understanding (2021).
- Engineering support through call-off frame agreements.

7.14.9 Emergency and Spill Response Drills and Exercises

Woodside's capability to respond to incidents will be tested periodically, in accordance with the Emergency and Crisis Management Procedure. The scope, frequency and objective of these tests is described in Table 7-13. Emergency response testing is aligned to existing or developing risks associated with Woodside's operations and activities. Corporate hazards/risks outlined in the corporate risk register, respective Safety Cases or project Risk Registers, are reference points developing and scheduling emergency and crisis management exercises. External participants may be invited to attend exercises (e.g., government agencies, specialist service providers, oil spill response organisations, or industry members with which Woodside has mutual aid arrangements).

The overall objective of exercises is to test procedures, skills and the teamwork of the Emergency Response and Command Teams in their ability to respond to major accident / major environment events. After each exercise, the team holds a debriefing session, during which the exercise is reviewed. Any lessons learned or areas for improvement are identified and incorporated into revised procedures, where appropriate.

Table 7-13: Testing of response capability

Response Category	Scope	Response Testing Frequency – tie-back activities	Response Testing Frequency – Operations	Response Testing Objective
Level 1 Response	Exercises are project-/ activity-specific	One Level 1 'First Strike' drill conducted within two weeks of commencing activity*. For campaigns with an operational duration of greater than one month this will occur within the first two weeks of commencing the	Two Level 1 'First Strike' drills conducted per year, per asset. Additional Level 1 emergency drills routinely conducted (approximately one per fortnight).	Operations: Drills test elements of the Pluto Facility Operations Oil Pollution First Strike Plan. Tie-back activities: Drills test elements of the Xena-03 Drilling and

Response Category	Scope	Response Testing Frequency – tie-back activities	Response Testing Frequency – Operations	Response Testing Objective
		activity and then at least every 6-month hire period thereafter.		Tie-back Oil Pollution First Strike Plan. Emergency drills are scheduled to test other aspects of the Emergency Response Plan.
Level 2 Response	Exercises are facility-specific	Level 2 Emergency Management exercises are relevant to activities with an operational duration of one month or greater. At least one Emergency Management exercise per MODU per campaign must be conducted within the first month of commencing the activity and then at every 6-month hire period thereafter, where applicable based on duration.	A minimum of one Emergency Management exercise is conducted biennially.	Testing both the facility IMT response and/or that of the CIMT following handover of incident control.
Level 3 Response	Exercises are relevant to all Woodside assets	The number of CMT exercises conducted each year is determined by the Chief Executive Officer, in consultation with the Vice President of Security and Emergency Management.		Test Woodside's ability to respond to and manage a crisis level incident.

** For drilling and tie-back activities, this applies to the project installation vessel (PIV) and MODU only.*

7.14.10 Hydrocarbon Spill Response Testing of Arrangements

There are a number of arrangements which, in the event of a spill, will underpin Woodside's ability to implement a response across its petroleum activities. So that these arrangements are adequately tested, the Capability Development Team within Security and Emergency Management ensures tests are conducted in alignment with the Hydrocarbon Spill Testing of Arrangements Schedule.

Woodside's arrangements for spill response are common across its Australian operating assets and activities so that the controls are consistent. The overall objective of testing these arrangements is so that Woodside maintains an ability to respond to a hydrocarbon spill, specifically so:

- relevant responders, contractors and key personnel understand and practise their assigned roles and responsibilities
- response arrangements and actions to validate response plans are tested
- lessons learned are incorporated into Woodside's processes and procedures and improvements are made where required.

If new response arrangements are introduced, or existing arrangements significantly amended, additional testing is undertaken accordingly. Additional activities or activity locations are not anticipated to occur; however, if they do, testing of relevant response arrangements will be undertaken as soon as practicable.

In addition to the testing of response capability described in Table 7-13, up to eight formal exercises are planned annually, across Woodside, to specifically test arrangements for responding to a hydrocarbon spill to the marine environment.

7.14.10.1 Testing of Arrangements Schedule

Woodside's Testing of Arrangements Schedule (Figure 7-9) aligns with international good practice for spill preparedness and response management; the testing is compatible with the IPIECA Good Practice Guide and the Australian Institute for Disaster Resilience's Australian Emergency Management Arrangements Handbook. If a spill occurs, enacting these arrangements will underpin Woodside's ability to implement a response across its petroleum activities.

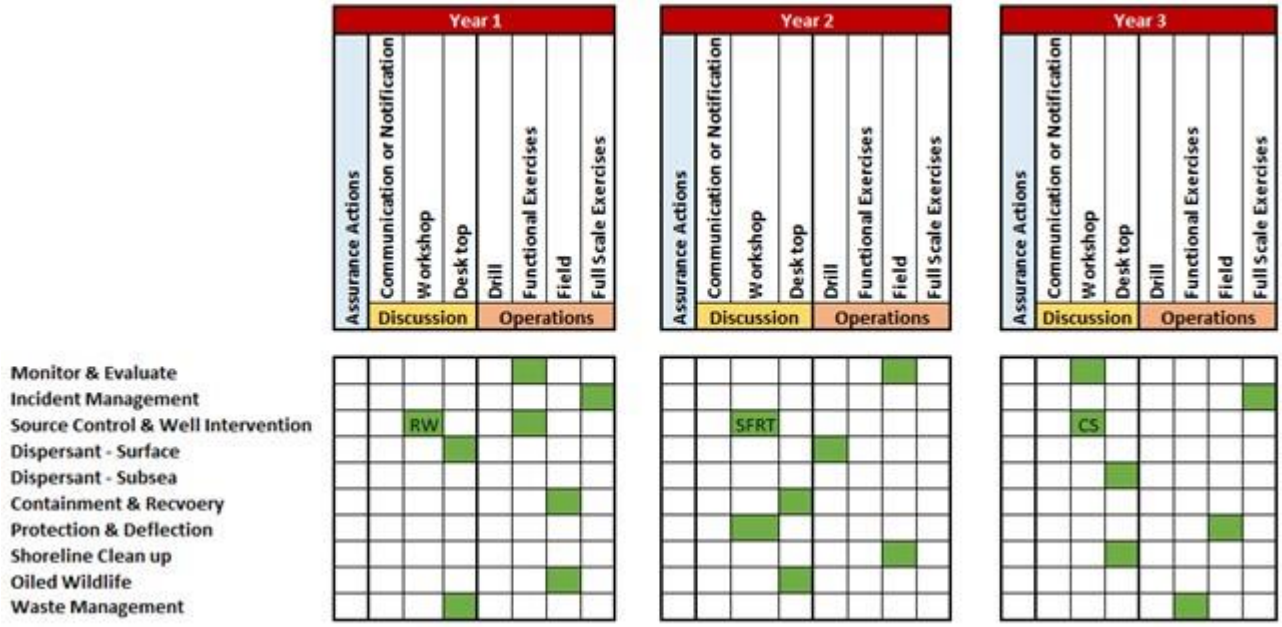

Figure 7-9: Indicative three-yearly testing of arrangements schedule

The hydrocarbon spill arrangements shown in the rows of the schedule are tested against Woodside's regulatory commitments. Each arrangement has a support agency/company and an area to be tested (e.g., capability, equipment and personnel). For example, an arrangement could be to test Woodside's personnel capability for conducting scientific monitoring, or the ability of the Australian Marine Oil Spill Centre to provide response personnel and equipment.

The vertical columns relate to how hydrocarbon spill arrangements will be tested over the three-year rolling schedule. The sub-heading for the column describes the standard method of testing likely to be undertaken (e.g., discussion exercise, desktop exercise), and the green cells indicate the arrangements that could be tested for each method.

Some arrangements may be tested across multiple exercises (e.g., critical arrangements) or via other 'additional assurance' methods outside the formal Testing of Arrangements Schedule that also constitute sufficient evidence of testing of arrangements (e.g., audits, no-notice drills, internal exercises, assurance drills).

7.14.10.2 Source Control testing and exercise arrangements

This section aims to present the testing and exercise arrangements for Source Control techniques as recommended in the recent industry guidelines such as the AEP Australian Offshore Titleholders Source Control Guideline (issued June 2021) and the NOPSEMA Information Paper: Source Control Planning and Procedures (issued June 2021)

The paragraphs below elaborate on the scope, testing frequency, objectives and close-out processes applicable to testing/ exercises for Source Control techniques.

*7.14.10.2.1 **Scope, objectives and KPIs***

- The objective of tests/exercises is to verify the capability of Woodside and/or contractors to manage and deliver elements of the Source Control Plans presented in OPEP.
- Tests may include specific elements of the response cycle for source control strategy, e.g. activation of arrangements, mobilisation of equipment and personnel and if relevant, testing of specific operational plans (e.g. SFRT, capping and relief well).
- Objectives typically include; testing of IMT capabilities, communications requirements, testing of source control response plans and evaluating specific aspects of source control arrangements, e.g. number of personnel, equipment, mobilisation plans and timeframes for response.
- An example of test objectives from recent exercise are presented below for reference –
  - Objective 1 – Exercising Source Control IMT against worst case credible loss of containment scenario
  - Objective 2 – Sourcing of relief well MODU
  - Objective 3 – Verify key equipment and services availability to support relief well operations.
  - Objective 4 – Delivery of ‘xx day’ relief well specific to activity.
- KPIs are taken from the ALARP commitments as stated in the OSPRMA (Appendix H: Oil Spill Preparedness and Response Mitigation Assessment).
- The exercises are planned utilising SMEs from the function with independent observers/ agencies as available (e.g. AMOSC, OSRL) along with Industry collaboration as available/ permitted.
- Formal exercise plans are produced prior to tests and exercises to document the scope, objectives, allocate resources and select relevant plans and previous lessons learnt for the test or exercise.
- Table 7-13 provides indicative scope, testing frequency and objectives of the emergency and spill response drills and exercises which includes Source Control response techniques.

*7.14.10.2.2 **Frequency of tests***

In addition to Testing of Arrangements for all responses listed in the schedule, source control techniques are tested on an annual basis; at least one technique per year. The schedule for testing of Source Control techniques is described in Section 7.14.10.1.

Woodside has tested the below response techniques in last three years:

- Capping stack deployment in 2021
- Subsea well kill spool in 2022 (discussion exercise)
- Subsea first response toolkit (SFRT), capping stack, relief well and well kill, and well intervention in 2023
- SFRT, relief well, capping stack, and well kill in 2024 during the Level 3 Crisis Management Exercise.

In addition, Woodside Source Control team members participate in joint industry exercises on source control as available for continuous improvements to response plans.

*7.14.10.2.3 **Close out Processes***

Post-exercise debriefs are held with the exercise team to identify gaps and capture learnings. The recommendations and actions are documented and assigned to the relevant function within the organisation and tracked until close-out. Close-out reports are distributed to relevant function leads and captured under Woodside's document management systems and relevant processes. Lessons learned are incorporated into Woodside's processes and procedures and improvements are made where required.

7.14.11 Cyclone and Dangerous Weather Preparation

Tropical cyclones and other severe weather events are a potential risk to the safety and health of personnel and can potentially cause spills of hazardous materials into the environment from infrastructure and/or damaged vessels.

Facilities and relevant support vessels on hire to Woodside receive regular forecasts from Woodside Meteorologists, who liaise closely with the Bureau of Meteorology (BoM). If a cyclone (or severe weather event) is forecast, the path and its development is plotted and monitored using the BoM data. If there is the potential for the cyclone (severe weather event) to affect the Petroleum Activities Program, the asset Cyclone Contingency Plan and the vessel's Cyclone Contingency Plan will be actioned. If required, vessels can transit from the proposed track of the cyclone (severe weather event).

9. GLOSSARY AND ABBREVIATIONS

Acronym	Description
1TL	first trunkline
ABARES	Australian Bureau of Agricultural and Resource Economics and Sciences
ABN	Australian business number
AEP	Australian Energy Producers
AFMA	Australian Fisheries Management Authority
AHS	Australian Hydrographic Service
AHV	anchor handling vessel
AHO	Australian Hydrographic Office
AIMS	Australian Institute of Marine Science
AIS	Automatic Identification System
ALARP	as low as reasonably practicable
AMOSC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
ARMCANZ	Agriculture and Resource Management Council of Australia and New Zealand
ANZECC	Australian and New Zealand Environment and Conservation Council
ASV	accommodation support vessel
AUSREP	Australian Ship Reporting System
AUV	autonomous underwater vehicles
bbl	barrel unit
BDV	blowdown valve
BIA	biologically important area
BoM	Bureau of Meteorology
BOP	blowout preventer
BP	boiling point
BTAC	Buurabalayji Thalanyji Aboriginal Corporation
BTEX	benzene, toluene, ethylbenzene and xylenes
BWCMP	Blue Whale Conservation Management Plan
CAES	catch and effort system
CCE	common cause effect
CCR	central control room
CEFAS	Centre for Environment, Fisheries and Aquaculture Science
CFA	Commonwealth Fisheries Association
CHARM	chemical hazard and risk management
CIMT	Corporate Incident Management Team
CITV	chemical injection throttle valve
cm	centimetres

Acronym	Description
CMMS	Computerised Maintenance Management System
CMT	Crisis Management Team
CoP	cessation of production
CP	cathodic protection
CS	cost sacrifice
CSIRO	Commonwealth Scientific and Industrial Research Organisation
Cth	Commonwealth
CV	company values
CVI	close visual inspections
CVS	Contractor Verification Service
DAA	Department of Aboriginal Affairs
DAWE	Department of Agriculture, Water and the Environment
dB	decibel
DCCEEW	Department of Climate Change, Energy, the Environment and Water
DCLM	Department of Conservation and Land Management
DEC	Department of Environment and Conservation
DEWHA	Department of the Environment, Water, Heritage and the Arts
DGPS	differential global surface positioning system
DISER	Department of Industry, Science, Energy and Resources
DMIRS	Department of Mining, Industry Regulation and Safety
DNP	Director of National Parks
DoD	Department of Defence
DoEE	Department of the Environment and Energy
DoT	Department of Transport
DP	dynamic positioning
DPIRD	Department of Primary Industry and Regional Development
DPLH	Department of Planning, Lands and Heritage
DSEWPaC	Department of Sustainability, Environment, Water, Population and Communities
DWT	dead weight tonnage
EDS	emergency disconnect sequences
EET	emission estimation techniques
EEZ	Exclusive Economic Zone
EFL	electrical flying lead
EIO	East Indian Ocean
EMBA	environment that may be affected
ENVID	environmental risk identification studies
EP	Environment Plan
EPBC Act	Environment Protection and Biodiversity Conservation Act
EPOs	environmental performance outcomes

Acronym	Description
EPS	environment performance standards
EoFL	end of field life
ERP	Emergency Response Plan
ESD	emergency shutdown
ESDev	ecologically sustainable development
EVP	Executive Vice President
FEED	front end engineering and design
FEWD	formation evaluation while drilling
FFS	fit for services
FPSO	floating production, storage and offloading
FRC	fast rescue craft
GHG	greenhouse gas
GP	good industry practice
GSM	grid stability module
GVI	general visual inspections
GWA	Goodwyn Alpha
HAT	highest astronomical tide
HAZID/ENVID	hazard identification studies
HFL	hydraulic flying lead
HIGF	horizontal induced gas floatation
HIPPS	high integrity pressure protection system
HP	high pressure
HPU	hydraulic power unit
HQ	hazard quotient
HSE	health, safety and environment
HSEC	Health, Safety and Environment Coordinator
HSEQ	health, safety, environment and quality
HVAC	heating, ventilation and air conditioning
ICLDP	Incident and Crisis Leaders Development Program
ILUAs	Indigenous Land Use Agreements
IUCN	International Union for the Conservation of Nature
IMCRA	Integrated Marine and Coastal Regionalisation of Australia
IMMR	inspection, monitoring, maintenance and repair
IMS	invasive marine species
IMSMP	Invasive Marine Species Management Plan
IPIECA	International Petroleum Industry Environmental Conservation Association
ISO	International Organization for Standardization
ISSoW	integrated safe system of work
ISV	IMMR support vessel

Acronym	Description
JRCC	Joint Rescue Coordination Centre
KEF	key ecological feature
Kg	kilogram
KGP	Karratha Gas Plant
km	kilometre
KPI	key performance indicator
L	litres
LAT	lowest astronomical tide
LBL	long baseline
LCS	legislation, codes and standards
LNG	liquefied natural gas
LOA	length overall
LP	low pressure
LTO	licence to operate
LW	Lambert West
m^3	cubic metres
MAEs	major accident events
MAH	monocyclic aromatic hydrocarbons
MBES	multibeam echo sounder
MC	measurement criteria
MCS	master control station
MEEs	major environmental events
MEG	monoethylene glycol
MFO	marine fauna observer
MLCS	mid-line connector system
MNES	matters of environmental significance
MoC	management of change
MODU	mobile offshore drilling unit
MOPO	Manual of Permitted Operation
MoU	Memorandum of Understanding
MPAs	Marine Protected Areas
MPPE	macro porous polymer extraction
MSIN	Maritime Safety Information Notifications
MSPS	Management System Performance Standards
MW	megawatts
NAC	Nanda Aboriginal Corporation
NCVA	National Conservation Values Atlas
NDT	non-destructive testing
NGA	Nganhurra

Acronym	Description
NGERS	National Greenhouse and Energy Reporting
NIMS	non-indigenous marine species
NLPG	National Light Pollution Guidelines
NMFS	National Marine Fisheries Service
nm	nautical miles
NNC	not normally crewed
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NOPTA	National Offshore Petroleum Titles Administrator
NORM	naturally occurring radioactive material
NPI	National Pollutant Inventory
NRV	non-return valve
NTA	Native Title Act 1993 (Cth)
NTGAC	Nganhurra Thanardi Garrbu Aboriginal Corporation
NTM	Notice to Mariners
NW	north-west
NWBM	non-water-based muds
NWMR	North West Marine Region
NWS	North West Shelf
NWSP	North West Shelf Province
NZE	net zero emissions
OCIMF	Oil Companies International Marine Forum
OCNS	Offshore Chemical Notification Scheme
OIM	Offshore Installation Manager
OIW	oil in water
OMDAMP	Offshore Marine Discharges Adaptive Management Plan
OPEP	Oil Pollution Emergency Plan
OPEX	operational expenditure
OPGGS Act	Offshore Petroleum and Greenhouse Gas Storage Act 2006 (Cth)
OPP	Offshore Project Proposal
OSPAR Convention	Convention for the Protection of the Marine Environment of the North-East Atlantic
OSREC	Oil Spill Response Skills Enhancement Course
OSRO	Oil Spill Response Organisation
OVID	Offshore Vessel Inspection Database
OWS	oily water separator
PAA	Petroleum Activities Area
PAP	Petroleum Activities Program
PAH	polycyclic aromatic hydrocarbon
PBA	pre-emptive baseline areas

Acronym	Description
PBC	Prescribed Bodies Corporates
PER	Public Environment Report
PFW	produced formation water
PHD	process historian database
PIC	person in charge
PJ	professional judgement
PLA	Pluto Alpha platform
PLET	pipeline end termination
PLONOR	pose little or no risk
PLP	Pluto LNG Park
PMST	Protected Matters Search Tool
PNEC	predicted no-effect concentration
POB	personnel on board
PoW	octanol-water partition
ppb	parts per billion
PROC	Pluto Remote Operations Centre
PSM	process safety management
PSRA	process safety risk assessment
PSV	pressure safety valves
PSZ	Petroleum Safety Zone
PTS	permanent threshold shift
PTW	Permit to Work
PW	produced water
PWCS	primary water/condensate separators
RAR	rig anchor release
RATSIB	Representative Aboriginal/Torres Strait Islander Bodies
RBA	risk based analysis
RBI	risk based inspection
RCC	AMSA Rescue Coordination Centre
rms SPL	root mean square sound pressure level
ROV	remotely operated vehicle
SBP	sub-bottom profiling
SBV	standby vessel
SCC	safety and environment critical component
SCE	safety and environmental critical element
SCEW	Standing Council on Environment and Water
SCM	subsea control module
SCSSSV	surface controlled sub-surface safety valves
SEL	sound exposure level

Acronym	Description
SEZ	Safety Exclusion Zone
SIMAP	spill impact mapping and analysis program
SIMOPS	simultaneous operations
SMP	scientific monitoring program
SOPEP	Ship Oil Pollution Emergency Plan
SPL	sound pressure level
SSPL	subsea pipeline
SSS	side scan sonar
SV	societal values
TAP	Threat Abatement Plan
TD	total depth
THS	tubing head spool
TPH	total petroleum hydrocarbon
TSS	total suspended solids
TTS	temporary threshold shift
UK	United Kingdom
µm	micrometre
UPS	uninterruptable power system
USBL	ultra-short baseline
USEPA	United States Environmental Protection Agency
UTA	umbilical termination assemblies
VLS	vertical lay system
VOC	volatile organic compound
VP	Vice President
WA	Western Australia
WAC	Wirrawandi Aboriginal Corporation
WAFIC	Western Australian Fishing Industry Council
WALGA	Western Australia Local Government Association
WBM	water based mud
WHA	World Heritage Area
WLS	Woodside Learning Services
WLSADS	Well Location and Site Appraisal Data Sheet
WMS	Woodside Management System
WOMP	Well Operations Management Plan
YAC	Yindjibarndi Aboriginal Corporation

APPENDIX A: WOODSIDE POLICIES

Climate Policy

BACKGROUND

The Intergovernmental Panel on Climate Change has stated that "it is unequivocal that human influence has warmed the atmosphere, ocean and land". An objective of the Paris Agreement is to hold "the increase in the global average temperature to well below 2ºC above pre-industrial levels" and to pursue "efforts to limit the temperature increase to 1.5ºC". Many countries have set targets to reduce greenhouse gas emissions, including by changing the way they produce and consume energy.

OBJECTIVE

Woodside's objective is to thrive in this energy transition as a low cost, lower carbon energy provider.

PRINCIPLES

Woodside aims to achieve the objective by:

- Setting science-based[1] near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned[2] scenarios, covering equity scope 1 and 2 emissions, both operated and non-operated.[3]
- Developing and operating oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Investing in new energy products and lower carbon services to reduce customers' emissions (part of Woodside's Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publishing transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Aligning our advocacy to the principles of this Climate Policy.

[1] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "science-based" (published 2021) which states "targets are considered 'science-based' if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement—limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.". See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[2] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "Paris-aligned scenarios" (published 2021) which states "scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[3] Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside's ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside's ownership interest.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venture participants engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

Risk Management Policy

OBJECTIVES

Woodside recognises that risk is inherent in our business and the effective management of risk is vital to deliver our strategic objectives, continued growth and success. We are committed to managing risks in a proactive and effective manner as a source of competitive advantage.

Our approach protects us against potential negative impacts, enables us to take risk for reward and improves our resilience against emerging risks. The objective of our risk management framework is to provide a single consolidated view of risks across the company to understand our full risk exposure and prioritise risk management and governance.

The success of our approach lies in the responsibility placed on everyone at all levels to proactively identify, assess and treat risks relating to the objectives they are accountable for delivering.

PRINCIPLES

Woodside achieves these objectives by:

- Applying a structured and comprehensive framework for the identification, assessment and treatment of current risks and response to emerging risks;
- Ensuring line of sight of financial and non-financial risks at appropriate levels of the organisation;
- Demonstrating leadership and commitment to integrating risk management into our business activities and governance practices;
- Recognising the value of stakeholder engagement, best available information and proactive identification of potential changes in external and internal context;
- Embedding risk management into our critical business processes and control framework;
- Understanding our exposure to risk and tolerance for uncertainty to inform our decision making and assure that Woodside is operating with due regard to the risk appetite endorsed by the Board; and
- Evaluating and improving the effectiveness and efficiency our approach.

APPLICABILITY

The Managing Director of Woodside is accountable to the Board of Directors for ensuring this Policy is effectively implemented.

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

Environment and Biodiversity Policy

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision-making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new activities[1] within the boundaries of natural sites on the UNESCO World Heritage List.[2]
- Not undertaking new activities within IUCN Protected Areas[3] unless compatible with management plans in place for the area.
- Achieving net zero deforestation[4] for new activities.
- Developing Biodiversity Management Plans for all new major projects (CAPEX >US$2 billion).
- Supporting positive biodiversity outcomes in regions and areas in which we undertake activities.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Revised by the Woodside Energy Group Ltd Board in December 2024.

[1] Does not include non-industrial and existing activities that are compatible with maintenance of the listed outstanding universal values.

[2] New UNESCO World Heritage Listings that overlap existing activities will be assessed at the time of listing.

[3] New IUCN Protected Areas that overlap existing activities will be assessed at the time of listing.

[4] Definition of Forest: 'native trees higher than 5 metres and a canopy cover of more than 10 percent on the land to be cleared'.

APPENDIX B: RELEVANT REQUIREMENTS

Legislation or Regulation	Description	Relevant
Corporations Act 2001	This Act is the principal legislation regulating matters of Australian companies, such as the formation and operation of companies, duties of officers, takeovers and fundraising.	The titleholder has provided ACN details within the meaning of the Act.
Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) Environment Protection and Biodiversity Conservation Regulations 2000	Commonwealth Department of Sustainability, Environment, Water, Population & Communities administers Act that provides legal framework to protect and manage nationally and internationally important flora, fauna, ecological communities and heritage places—defined in the EPBC Act as matters of national environmental significance (NES). These include nationally threatened species and ecological communities, migratory species and Commonwealth marine areas. The Act regulates assessment and approval of proposed actions likely to have a significant impact on a matter of NES. The approval decision is made by a delegate of the Australian Government Environment Minister. Regulations provide for a wide range of detail essential for the operation of the Act, including regulations relating to management of Commonwealth reserves, information requirements for assessment processes, enforcement, granting of various permits, publication requirements and criteria that need to be met in relation to a wide variety of decision-making processes provided for under the Act.	This Act applies to all aspects of the activity that have the potential to impact MNES. NOPSEMA manages compliance with the relevant regulations and plans under the Act for this EP. Where activities have existing approvals under the Act, these will continue to apply.
Environment Protection (Sea Dumping) Act 1981 Environment Protection (Sea Dumping) Regulations 1983	The Act regulates the dumping at sea of controlled material (including certain wastes and other matter), the incineration at sea of controlled material, loading for the purpose of dumping or incineration, export for the purpose of dumping or incineration, and the placement of artificial reefs. Permits are required for any sea dumping activities. Operational discharges from vessels are not defined as 'dumping' under the 1996 Protocol to the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, 1972 and therefore not regulated under the Act.	Prior to permanently leaving any structure in-situ, BHP will obtain a Sea Dumping Permit in accordance with the requirements of the Sea Dumping Act.
Offshore Petroleum and Greenhouse Gas Storage Act 2006	Legislation concerning Australian offshore petroleum exploration & production in Commonwealth Waters. National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is an independent safety and environmental management Authority funded by levies on industry participants and regulates matters with powers conferred directly from OPGGS Act and via Regulations concerned with: occupational health & safety law at facilities and offshore operations under Schedule 3 environmental management structural integrity of Wells under Resource management regulations.	Applies to all aspects of petroleum activities.

Legislation or Regulation	Description	Relevant
Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009	Regulations administered by NOPSEMA to ensure offshore petroleum activity is carried out in a manner consistent with the principles of ecologically sustainable development and in accordance with an accepted environment plan, in particular: assessment of EPs, including associated OPEPs (previously oil spill contingency plans) investigation of accidents, occurrences and circumstances with regard to deficiencies in environmental management.	Applies to environmental maangement of petroleum activities.
Offshore Petroleum and Greenhouse Gas Storage (Regulatory Levies) Act 2003	Act to impose levies relating to the regulation of offshore petroleum activities, including well levies and environment plan levy.	A levy will be applied to the petroleum activities under this EP.

Industry Standards, Codes of Practice, Guidelines and Commonwealth Guidance Material
NOPSEMA (2012). Control Measures and Performance Standards Guidance Note. N040300-GN0271 Revision No. 4. December 2012
NOPSEMA Guidance note: Environment plan content requirements – (GN1344) 11.9.2020
NOPSEMA Guidance note: Notification and reporting of environmental incidents – (GN0926) 8.6.2020
NOPSEMA Guidance note: ALARP – Rev 6 (GN0166) (2015)
NOPSEMA Policy: Environment plan assessment - (PL1347) 19.5.2020
NOPSEMA Guideline: Environment plan decision making – Rev 7 (GL1721) (2021)
NOPSEMA Guideline: Making submissions to NOPSEMA – (GL0255) 4.5.2020
NOPSEMA Guideline: Consultation with Commonwealth agencies with responsibilities in the marine area
NOPSEMA Bulletin #2: Clarifying Statutory Requirements and Good Practice Consultation – Rev 0 (A696998) (2019)

APPENDIX C: EPBC ACT PROTECTED MATTERS SEARCH TOOL REPORTS

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 04-Dec-2023

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Caveat
Acknowledgements

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	23
Listed Migratory Species:	38

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	67
Whales and Other Cetaceans:	28
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	34
Key Ecological Features (Marine):	2
Biologically Important Areas:	8
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
FISH		
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Breeding known to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat may occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
SHARK		
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat may occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]		Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat may occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area overfly marine area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat may occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Ephalophis greyi Mangrove Sea Snake [1127]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat known to occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platurus as Pelamis platurus Yellow-bellied Sea Snake [93517]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas		
Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Natator depressus		
Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardenna pacifica		
Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sharks		
Rhincodon typus		
Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Migration	Known to occur

Scientific Name	Behaviour	Presence
Megaptera novaeangliae		
Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	24
Listed Migratory Species:	41

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	74
Whales and Other Cetaceans:	28
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	37
Key Ecological Features (Marine):	2
Biologically Important Areas:	11
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

BIRD		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
FISH		

Scientific Name	Threatened Category	Presence Text
Thunnus maccoyii Southern Bluefin Tuna [69402]	Conservation Dependent	Breeding known to occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Congregation or aggregation known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Congregation or aggregation known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Congregation or aggregation known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
SHARK		

Scientific Name	Threatened Category	Presence Text
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Congregation or aggregation known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Congregation or aggregation known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Congregation or aggregation known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]		Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Fish		

Scientific Name	Threatened Category	Presence Text
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 20-Feb-2024

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	2
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	53
Listed Migratory Species:	62

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	2
Listed Marine Species:	103
Whales and Other Cetaceans:	32
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	9
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	24
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	190
Key Ecological Features (Marine):	6
Biologically Important Areas:	37
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Malurus leucopterus edouardi White-winged Fairy-wren (Barrow Island), Barrow Island Black-and-white Fairy-wren [26194]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Phaethon rubricauda westralis](#) Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat known to occur within area
[Pterodroma mollis](#) Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Rostratula australis](#) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
[Sternula nereis nereis](#) Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
[Thalassarche carteri](#) Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
[Thalassarche impavida](#) Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
FISH		
[Milyeringa veritas](#) Cape Range Cave Gudgeon, Blind Gudgeon [66676]	Vulnerable	Species or species habitat known to occur within area
[Ophisternon candidum](#) Blind Cave Eel [66678]	Vulnerable	Species or species habitat known to occur within area
[Thunnus maccoyii](#) Southern Bluefin Tuna [69402]	Conservation Dependent	Breeding known to occur within area
MAMMAL		
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur Barrow and Boodie Islands subspecies Boodie, Burrowing Bettong (Barrow and Boodie Islands) [88021]	Vulnerable	Translocated population known to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat known to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isoodon auratus barrowensis Golden Bandicoot (Barrow Island) [66666]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes conspicillatus conspicillatus Spectacled Hare-wallaby (Barrow Island) [66661]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes hirsutus Central Australian subspecies Mala, Rufous Hare-Wallaby (Central Australia) [88019]	Endangered	Translocated population known to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Osphranter robustus isabellinus Barrow Island Wallaroo, Barrow Island Euro [89262]	Vulnerable	Species or species habitat likely to occur within area
Petrogale lateralis lateralis Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhinonicteris aurantia (Pilbara form)		
Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Ctenotus zastictus		
Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Liasis olivaceus barroni		
Pilbara Olive Python [66699]	Vulnerable	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
SHARK		
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]		Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica		
Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat may occur within area
[Charadrius leschenaultii](#) Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
[Charadrius veredus](#) Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
[Glareola maldivarum](#) Oriental Pratincole [840]		Species or species habitat may occur within area
[Limnodromus semipalmatus](#) Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
[Limosa lapponica](#) Bar-tailed Godwit [844]		Species or species habitat known to occur within area
[Numenius madagascariensis](#) Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
[Pandion haliaetus](#) Osprey [952]		Breeding known to occur within area
[Thalasseus bergii](#) Greater Crested Tern [83000]		Breeding known to occur within area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Unknown	
Commonwealth Land - [52236]	WA

Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platurus as Pelamis platurus Yellow-bellied Sea Snake [93517]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Sousa sahulensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]

Wetland Name	State
Cape Range Subterranean Waterways	WA

EPBC Act Referrals

[Resource Information]

Title of referral	Reference	Referral Outcome	Assessment Status
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
Gorgon Gas Development	2003/1294		Post-Approval
North West Shelf Project Extension, Carnarvon Basin, WA	2018/8335		Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Project Highclere Cable Lay and Operation	2022/09203		Completed
Action clearly unacceptable			
Highlands 3D Marine Seismic Survey	2012/6680	Action Clearly Unacceptable	Completed
Controlled action			
'Van Gogh' Petroleum Field Development	2007/3213	Controlled Action	Post-Approval
Construct and operate LNG & domestic gas plant including onshore and offshore facilities - Wheatston	2008/4469	Controlled Action	Post-Approval
Develop Jansz-Io deepwater gas field in Permit Areas WA-18-R, WA-25-R and WA-26-	2005/2184	Controlled Action	Post-Approval
Development of Angel gas and condensate field, North West Shelf	2004/1805	Controlled Action	Post-Approval
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed
Development of Coniston/Novara fields within the Exmouth Sub-basin	2011/5995	Controlled Action	Post-Approval
Development of Stybarrow petroleum field incl drilling and facility installation	2004/1469	Controlled Action	Post-Approval
Echo-Yodel Production Wells	2000/11	Controlled Action	Post-Approval
Enfield full field development	2001/257	Controlled Action	Post-Approval
Equus Gas Fields Development Project, Carnarvon Basin	2012/6301	Controlled Action	Completed
Eramurra Industrial Salt Project	2021/9027	Controlled Action	Assessment Approach
Eramurra Industrial Salt Project, near Karratha, WA	2019/8448	Controlled Action	Completed
Gorgon Gas Development 4th Train Proposal	2011/5942	Controlled Action	Post-Approval
Greater Enfield (Vincent) Development	2005/2110	Controlled Action	Post-Approval
Light Crude Oil Production	2001/365	Controlled Action	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Perdaman Urea Project, near Karratha, WA	2018/8383	Controlled Action	Post-Approval
Pluto Gas Project	2005/2258	Controlled Action	Completed
Pluto Gas Project Including Site B	2006/2968	Controlled Action	Post-Approval
Pyrenees Oil Fields Development	2005/2034	Controlled Action	Post-Approval
The Scarborough Project - FLNG & assoc subsea infrastructure, Carnarvon Basin	2013/6811	Controlled Action	Post-Approval
Vincent Appraisal Well	2000/22	Controlled Action	Post-Approval
Not controlled action			
'Goodwyn A' Low Pressure Train Project	2003/914	Not Controlled Action	Completed
'Van Gogh' Oil Appraisal Drilling Program, Exploration Permit Area WA-155-P(1)	2006/3148	Not Controlled Action	Completed
Bollinger 2D Seismic Survey 200km North of North West Cape WA	2004/1868	Not Controlled Action	Completed
Bultaco-2, Laverda-2, Laverda-3 and Montesa-2 Appraisal Wells	2000/103	Not Controlled Action	Completed
Carnarvon 3D Marine Seismic Survey	2004/1890	Not Controlled Action	Completed
Cazadores 2D seismic survey	2004/1720	Not Controlled Action	Completed
Construction and operation of an unmanned sea platform and connecting pipeline to Varanus Island for	2004/1703	Not Controlled Action	Completed
Controlled Source Electromagnetic Survey	2007/3262	Not Controlled Action	Completed
Development of Halyard Field off the west coast of WA	2010/5611	Not Controlled Action	Completed
Development of Mutineer and Exeter petroleum fields for oil production, Permit	2003/1033	Not Controlled Action	Completed
Drilling of an exploration well Gats-1 in Permit Area WA-261-P	2004/1701	Not Controlled Action	Completed

Title of referral	Reference	Referral Outcome	Assessment Status
Not controlled action			
Eagle-1 Exploration Drilling, North West Shelf, WA	2019/8578	Not Controlled Action	Completed
Echo A Development WA-23-L, WA-24-L	2005/2042	Not Controlled Action	Completed
Exploration drilling well WA-155-P(1)	2003/971	Not Controlled Action	Completed
Exploration of appraisal wells	2006/3065	Not Controlled Action	Completed
Exploration Well in Permit Area WA-155-P(1)	2002/759	Not Controlled Action	Completed
Exploratory drilling in permit area WA-225-P	2001/490	Not Controlled Action	Completed
HCA05X Macedon Experimental Survey	2004/1926	Not Controlled Action	Completed
Hess Exploration Drilling Programme	2007/3566	Not Controlled Action	Completed
Improving rabbit biocontrol: releasing another strain of RHDV, sthrn two thirds of Australia	2015/7522	Not Controlled Action	Completed
Infill Production Well (Griffin-9)	2001/417	Not Controlled Action	Completed
Jansz-2 and 3 Appraisal Wells	2002/754	Not Controlled Action	Completed
Klammer 2D Seismic Survey	2002/868	Not Controlled Action	Completed
Maia-Gaea Exploration wells	2000/17	Not Controlled Action	Completed
Manaslu - 1 and Huascaran - 1 Offshore Exploration Wells	2001/235	Not Controlled Action	Completed
Montesa-1 and Bultaco-1 Exploration Wells	2000/102	Not Controlled Action	Completed
Murujuga archaeological excavation, collection and sampling, Dampier Archipelago, WA	2014/7160	Not Controlled Action	Completed
North Rankin B gas compression facility	2005/2500	Not Controlled Action	Completed
Pipeline System Modifications Project	2000/3	Not Controlled Action	Completed

Title of referral	Reference	Referral Outcome	Assessment Status
Not controlled action			
Port Expansion and Dredging	2003/1265	Not Controlled Action	Completed
Project Highclere Geophysical Survey	2021/9023	Not Controlled Action	Completed
Searipple gas and condensate field development	2000/89	Not Controlled Action	Completed
Spool Base Facility	2001/263	Not Controlled Action	Completed
Subsea Gas Pipeline From Stybarrow Field to Griffin Venture Gas Export Pipeline	2005/2033	Not Controlled Action	Completed
sub-sea tieback of Perseus field wells	2004/1326	Not Controlled Action	Completed
Telstra North Rankin Spur Fibre Optic Cable	2016/7836	Not Controlled Action	Completed
Thevenard Island Retirement Project	2015/7423	Not Controlled Action	Completed
To construct and operate an offshore submarine fibre optic cable, WA	2014/7373	Not Controlled Action	Completed
WA-295-P Kerr-McGee Exploration Wells	2001/152	Not Controlled Action	Completed
Wanda Offshore Research Project, 80 km north-east of Exmouth, WA	2018/8293	Not Controlled Action	Completed
Western Flank Gas Development	2005/2464	Not Controlled Action	Completed
Wheatstone 3D seismic survey, 70km north of Barrow Island	2004/1761	Not Controlled Action	Completed
Not controlled action (particular manner)			
'Kate' 3D marine seismic survey, exploration permits WA-320-P and WA-345-P, 60km	2005/2037	Not Controlled Action (Particular Manner)	Post-Approval
'Tourmaline' 2D marine seismic survey, permit areas WA-323-P, WA-330-P and WA-32	2005/2282	Not Controlled Action (Particular Manner)	Post-Approval
"Leanne" offshore 3D seismic exploration, WA-356-P	2005/1938	Not Controlled Action (Particular Manner)	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Not controlled action (particular manner)			
2D and 3D seismic surveys	2005/2151	Not Controlled Action (Particular Manner)	Post-Approval

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west
Glomar Shoals	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Breeding	Known to occur
Dugong dugon Dugong [28]	Calving	Known to occur
Dugong dugon Dugong [28]	Foraging (high density seagrass beds)	Known to occur
Dugong dugon Dugong [28]	Nursing	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Caretta caretta Loggerhead Turtle [1763]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Aggregation	Known to occur
Chelonia mydas Green Turtle [1765]	Basking	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Mating	Known to occur
Chelonia mydas Green Turtle [1765]	Migration corridor	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Mating	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Migration corridor	Known to occur

Scientific Name	Behaviour	Presence
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur
Natator depressus Flatback Turtle [59257]	Aggregation	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Mating	Known to occur
Natator depressus Flatback Turtle [59257]	Migration corridor	Known to occur
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Rhincodon typus Whale Shark [66680]	Foraging (high density	Known to occur

Scientific Name	Behaviour	Presence
	prey)	
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales
-Department of Environment and Primary Industries, Victoria
-Department of Primary Industries, Parks, Water and Environment, Tasmania
-Department of Environment, Water and Natural Resources, South Australia
-Department of Land and Resource Management, Northern Territory

APPENDIX D: CULTURAL HERITAGE SEARCHES

Aboriginal Cultural Heritage Inquiry System

List of Aboriginal Cultural Heritage (ACH) Register

Search Criteria

No Aboriginal Cultural Heritage (ACH) Register in Shapefile - Pluto Operations and Drilling - Petroleum Activities Area. Warning: Search area complex so results may be inaccurate. Contact DPLH for assistance.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- Boundary Reliable (Yes/No): Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- Boundary Restricted = No: Represents the actual location of the ACH as understood by the Department..
- Boundary Restricted = Yes: To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- Culturally Sensitive = No: Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- Culturally Sensitive = Yes: Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- Culturally Sensitive Nature:
  - No Gender / Initiation Restrictions: Anyone can view the information.
  - Men only: Only males can view restricted information.
  - Women only: Only females can view restricted information.

Status:

- Register: Aboriginal cultural heritage places that are assessed as meeting Section 5 of the Aboriginal Heritage Act 1972.
- Lodged: Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the Aboriginal Heritage Act 1972.
- Historic: Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the Aboriginal Heritage Act 1972. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Coordinates

Map coordinates are based on the GDA 94 Datum.

CONSULTATION APPROACH

Consultation under regulation 25 of the OPGGS(E) Regulations provides that a titleholder must consult each relevant person (regulation 25(1)), must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person (regulation 25(2)), and must allow a relevant person a reasonable period for consultation (regulation 25(3)).

A titleholder must also give a relevant person a reasonable opportunity to consult – this means that a titleholder will need to demonstrate that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant person (see Tipakalippa Full Court paragraph 104). The EP must contain a report that contains an assessment of the merits of any objection or claim about the adverse impact of each activity to which the EP relates and a statement of the titleholder's response, or proposed response, if any, to each objection or claim (regulation 24(b)).

The criteria for acceptance of an EP includes that the EP demonstrates that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate (regulation 34(g)).

For the Pluto Facility Operations Environment Plan, Woodside has taken a broad and proactive tiered consultation approach over a period of up to 13 months.

This approach was aimed at raising public awareness of the consultation opportunity and enable self-identification. It included a social media campaign and advertising in national, state, regional and Indigenous newspapers.

The tiered consultation approach discharges regulation 25 of the Environment Regulations' requirements. The approach is proactive, extended, has enabled self-identification, and has raised broad awareness of Woodside's activities related to this EP.

Consultation Tiered Approach

Regulation 25	Woodside's consultation approach assessed and identified relevant persons, enabled two-way dialogue and engagement, and included email and phone call follow up. The approach taken satisfies the requirements of regulation 25 to give relevant persons sufficient information and allow a reasonable period of time for consultation (see Section 5 of this EP).
Proactive	To raise awareness of the consultation process, and to enable grass-roots consultation, Woodside undertook advertised regional consultation roadshows and facilitated consultation at regional community events.
Extended	A reasonable consultation period was provided to enable an informed assessment of possible consequences on functions, interests or activities. Consultation with stakeholders extended beyond the initial period as required.
Self-Identification	Broad communication activities were undertaken to build awareness of consultation and enable self-identification, supported by targeted education materials.
Broad Understanding	Broad proactive communication activities were undertaken with the public to raise awareness of Woodside's activities.

Building on the Existing Consultation Approach

For this EP, Woodside has built on its consultation methodology and undertaken additional consultation activities throughout the consultation period to ensure a reasonable period of time and sufficient information has been provided to relevant persons so that they can make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

The approach included:

- A consultation period of up to 13 months
- Undertaking proactive consultation activities to provide sufficient information to relevant persons
- Raising awareness of the consultation process and opportunity to provide feedback
- Driving participation in the consultation process.

An overview of this approach is shown below:

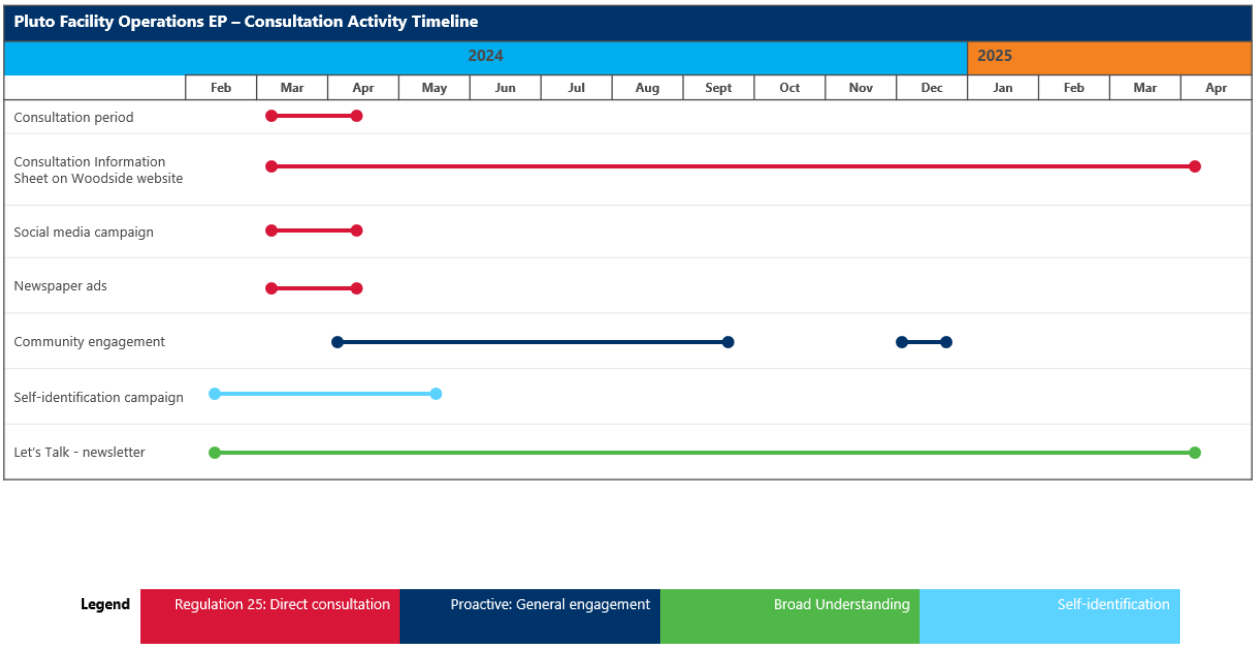

Figure 1: Pluto Facility Operations Consultation Activity

Traditional Custodian Consultation Approach

Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.

To this end, consultation on any particular EP, including the Pluto Facility Operations EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians based on availability, cultural protocols and the preferred method of consultation for each relevant person.

Since February 2024, when requested, Woodside has been working with nominated representative bodies to develop Consultation Agreement Frameworks which aim to enable each group to be consulted in a manner requested by the group on how they would like to be consulted (eg what is sufficient information; what is a reasonable period for consultation) so as to enable each group to be consulted in a manner appropriately adapted to their interests. While the Consultation Agreements have been useful in prompting conversations with groups about how they wish to be consulted, there has been limited interest from groups in finalising the detail in the Consultation Agreements. Generally, feedback is that groups have higher order priority matters to focus on. Consultation on this EP therefore progressed in parallel to discussions on the Consultation Agreements and Woodside will remain open to progressing Consultation Agreements should groups seek them.

NGO Consultation Approach

Woodside has an established history of consulting with environmental non-government organisations (NGOs) as part of its EP consultation. In its methodology **(Section 5.3.4, Table 5-2)**, NGOs are considered "Other non-government groups or organisations" and "Research institutes and local conservation groups or organisations". Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside:

- Advertised the consultation period (social and traditional media)
- Directly consulted NGOs
- Participated in regional community events (which were advertised) in the Pilbara which could be attended by any NGOs including local groups (if NGOs attended these sessions, they did not identify themselves).

NGO Response

Woodside witnessed a pattern in NGO responses to the consultation process and information provided. Woodside received feedback and request for further information on the last day of consultation. The delayed responses followed an initial four week consultation period, and generally assert that Woodside has not met regulatory requirements as it has not provided sufficient information or a reasonable period of time for consultation. One further NGO self-identified a month following consultation closing.

RELEVANCY ASSESSMENT

Assessment of Relevant Persons for the Proposed Activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25 (1) of the Environment Regulations is outlined below at **Table 1** and **Table 2**.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion in accordance with **Section 5.3.4** in the EP or self-identified and Woodside assessed as not relevant are summarised below at **Table 1** and **Table 3**.

As per Woodside's methodology (Section 5), assessment of relevant persons is based on the EMBA (Figure 2 and 3). Figure 2 also shows the revised Operational Area for this activity, which has been updated to reflect the Operational Area described in the EP. Woodside re-assessed relevant persons based on the revised Operational Area. No additional relevant persons were identified.

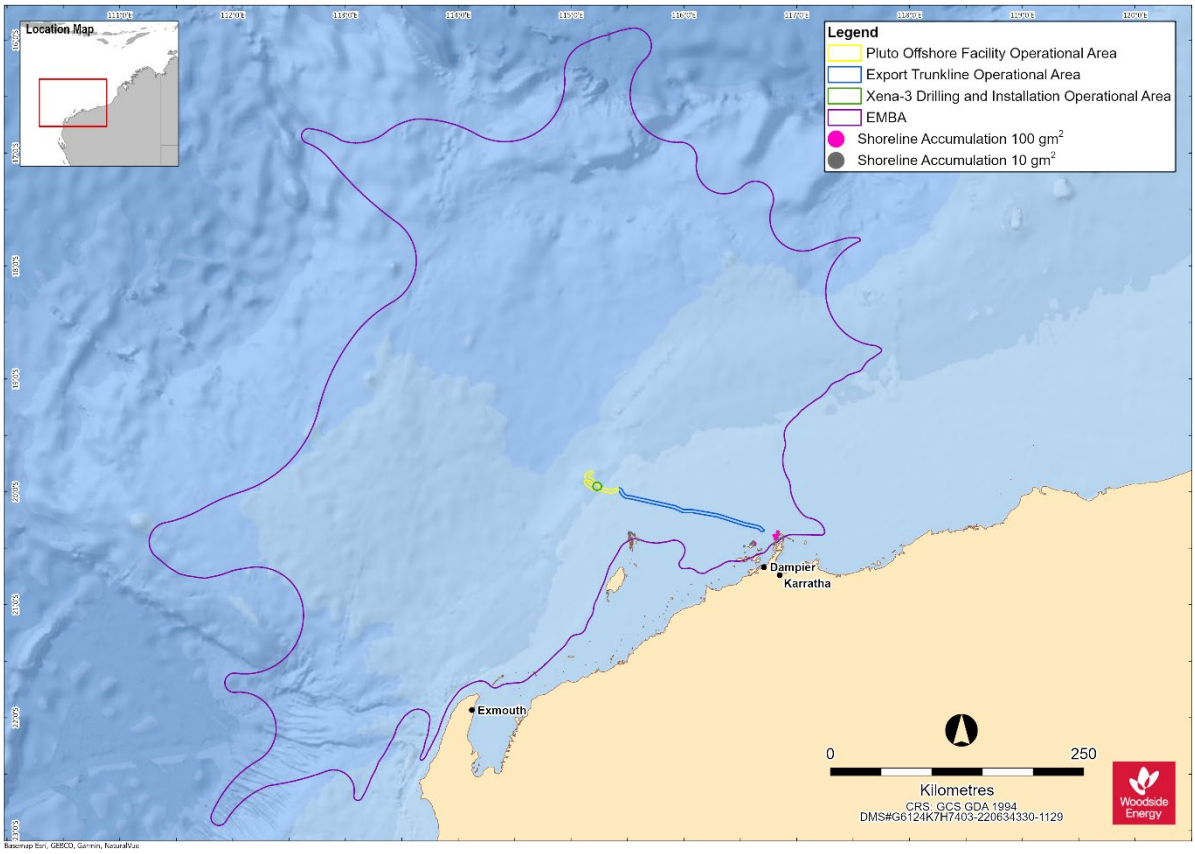

Figure 2: Revised Operational Area and EMBA for this EP

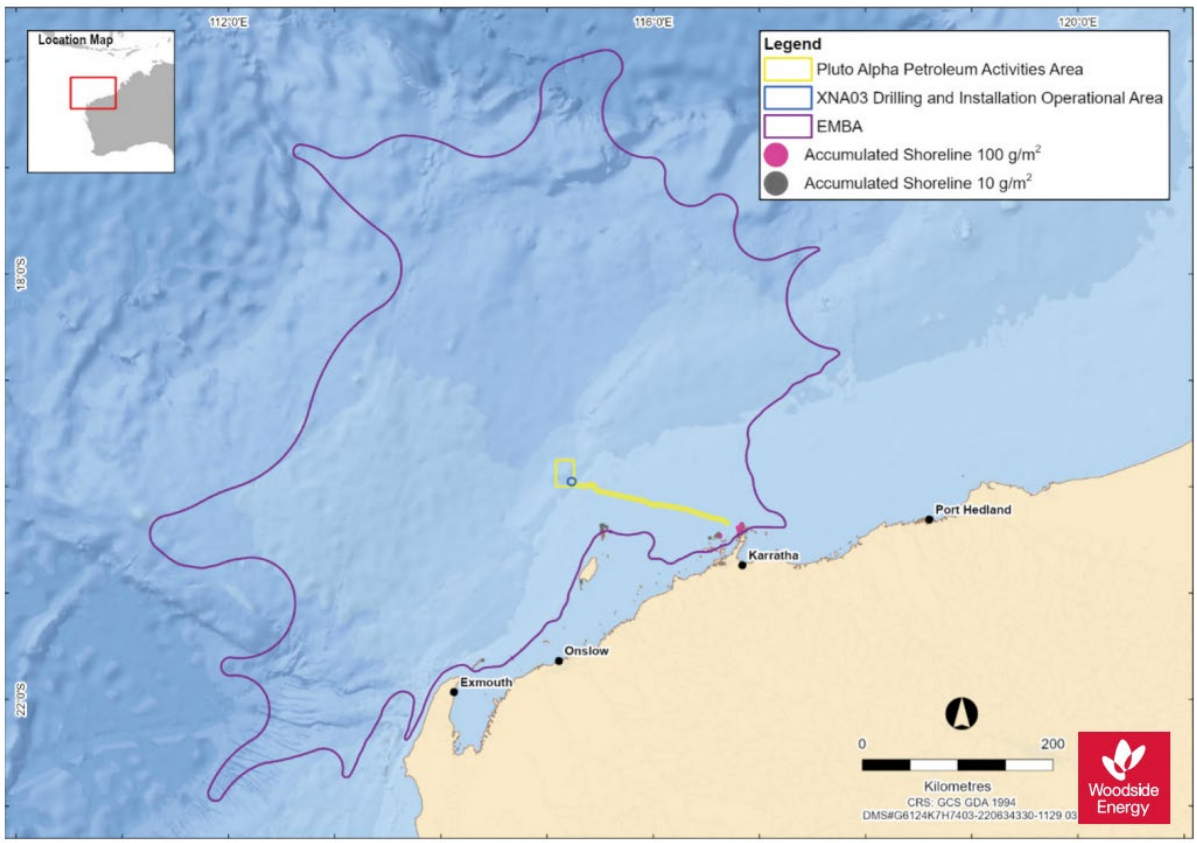

Figure 3: Original Operational Area and EMBA for this EP

Table 1: Assessment of Relevance

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there may be telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Safety	Statutory agency for vessel safety and navigation	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. DAFF – Fisheries' responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery are active in the Operational Area. The Exmouth Gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Fishery, Specimen Shell Managed Fishery, West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the last 5 years. DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	Yes
Department of Transport (DoT)	Legislated responsibility for oil pollution response in State waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DoT response in State waters.	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	cultural heritage and built heritage matters		
Western Australian Museum	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast	Woodside has applied its methodology for 'Historical cultural heritage groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is known shipwrecks overlapping the EMBA which the Western Australian Museum may be responsible for.	Yes
Pilbara Ports Authority	Responsible for the operation of the Port of Dampier	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has the potential to impact Pilbara Ports Authority's responsibilities as the EMBA overlaps the Pilbara Ports Authority's area of responsibility.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	DAFF administers, implements and enforces the Biosecurity Act 2015. The Department requests to be consulted where an activity has the potential to transfer marine pests. DAFF also has inspection and reporting requirements to ensure that all conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health regulations and that any biosecurity risk is managed. The Dept requests to be consulted where an activity	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.		
Department of Climate Change, Energy, the Environment and Water (DCCEEW)	Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage. Administers the *Underwater Cultural Heritage Act 2018* in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within AMPs, and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		consult DNP on offshore petroleum and greenhouse gas exploration activities if they occur in, or may impact on the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The NCWHAC's responsibilities may be relevant to the activity as the EMBA overlaps the Ningaloo Marine Park.	Yes
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The DBCA's responsibilities may be relevant to the activity as EMBA overlaps WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Clean Energy Regulator (CER) The Clean Energy Regulator administers schemes legislated by the Australian Government for measuring, managing, reducing or offsetting Australia's carbon emissions.	The CER administers schemes legislated by the Australian Government (e.g. National Greenhouse and Energy Reporting Scheme, Emissions Reduction Fund, Renewable Energy Target and Australian National Registry of Emissions Units) for measuring, managing, reducing or offsetting Australia's carbon emissions, determined by climate change law.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. CER's responsibilities will be relevant to operational EPs in relation to emissions and climate related matters.	Yes
Commonwealth and State Government Departments or Agencies – Industry			

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)	Department of relevant State Minister.	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes
Commonwealth Commercial fisheries and representative bodies			
North West Slope Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	Yes
Southern Bluefin Tuna Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the proposed activity will present a risk to licence holders, given since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). In addition, given fishing methods by licence holders for species fished in this fishery (Australia has a 35% share of total global allowable catch of Southern Bluefin Tuna, which is value-added through tuna ranching near Port Lincoln (South Australia), or fishing effort in New South Wales (Australian Southern Bluefin Tuna Industry Association).	No
Western Deepwater Trawl Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps EMBA and has been active in the EMBA within the last 5 years.	Yes
Western Skipjack Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given the fishery spans the Australian Fishing Zone west of Victoria and the Torres Strait. The Fishery is not currently active and no fishing has occurred since 2009 (Patterson et al., 2022). In addition, interactions are not expected given the species' pelagic distribution fishing methods for species fished by licence holders.	
Western Tuna and Billfish Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the last 5 years.	No
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA. CFA's functions may be relevant to the activity as the North West Slope Trawl Fishery is active in the Operational Area and the North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	Represents the interests of the Southern Bluefin Tuna Fishery and Western Skipjack Fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Southern Bluefin Tuna Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Southern Bluefin Tuna Fishery, the ASBTIA has also been assessed as not relevant. The Southern Bluefin Tuna Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Southern Bluefin Tuna Fishery, the ASBTIA has also been assessed as not relevant. Woodside has provided information to the ASBTIA at its discretion in line with Section 5.3.4 on AFMA advice that it expects all Commonwealth fishers who have entitlements to fish within the proposed area to be consulted, which can be through the relevant fishing industry associations.	No
Tuna Australia	Represents the interests of the Western Tuna and	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	Billfish Fishery	The Western Tuna and Billfish Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Western Tuna and Billfish Fishery, Tuna Australia has also been assessed as not relevant. The Western Tuna and Billfish Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Western Tuna and Billfish Fishery, Tuna Australia has also been assessed as not relevant. Woodside has provided information to Tuna Australia at its discretion in line with Section 5.3.4 on AFMA advice that it expects all Commonwealth fishers who have entitlements to fish within the proposed area to be consulted, which can be through the relevant fishing industry associations.	
Pearl Producers Association (PPA)	Peak representative organisation of The Australian South Sea Pearling Industry, with members in Western Australia and the Northern Territory	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Pearl Oyster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Pearl Oyster Managed Fishery, the PPA has also been assessed as not relevant.	No
State Commercial fisheries and representative bodies			
Marine Aquarium Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area, WAFIC has advised there is no need to consult this fishery given the proposed activities operate in depths~180-850m which is outside the depth of the hand collection and diving methods used by this fishery. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
South West Coast Salmon Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		the Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	
Mackerel Managed Fishery (Area 2)	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
Pilbara Crab Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
West Coast Deep Sea Crustacean Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area, it has not been active in the Operational Area within the last 5 years. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Specimen Shell Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Abalone Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years.	No
Pearl Oyster Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years.	No
Land Hermit Crab Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Onslow Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
Western Australian Sea Cucumber Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Exmouth Gulf Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the	No

		EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Gascoyne Demersal Scalefish Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No
West Coast Demersal Scalefish Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No
West Coast Rock Lobster Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. Although the fishery overlaps the EMBA, the fishery has not been active in the EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	No
Nickol Bay Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Exmouth Gulf Beach Seine and Mesh Net Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
WA North Coast Shark Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	No
Demersal Scalefish Fishery: Pilbara Trawl Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
Pilbara Trap Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. 		The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Western Australian Fishing Industry Council (WAFIC)	Represents the interests of commercial fishers with licences in State waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Trawl Managed Fishery, Pilbara Line Fishery and Specimen Shell Managed Fishery have been active in the Operational Area within the last 5 years. The Exmouth gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Trawl Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery and West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the last 5 years. WAFIC's functions may be relevant to the activity as the peak representative body for State fisheries. WAFIC issued consultation materials to relevant commercial fisheries licence holders. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would be undertaken only in the event of an unplanned emergency scenario.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Western Rock Lobster Council	Represents the interests of the Western Rock Lobster Managed Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d). The West Coast Rock Lobster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the West Coast Rock Lobster Managed Fishery, the Western Rock Lobster Council has also been assessed as not relevant.	No
Recreational marine users and representative bodies

JX Nippon O&G Exploration (Australia)	Titleholder or Operator	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit areas overlaps the EMBA.	Yes
Peak Industry Representative bodies			
Australian Energy Producers (AEP)	Represents the interests of oil and gas explorers and producers in Australia.	Woodside has applied its methodology for 'Peak Industry Representative bodies' under regulation 25(1)(d) of the Environment Regulations. AEP's responsibilities are identified as having an intersect with Woodside's planned activities in the EMBA.	Yes
Traditional Custodians and nominated representative corporations			
Murujuga Aboriginal Corporation (MAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA), which is coastally adjacent to the EMBA. The EMBA does not overlap the Murujuga National Park. MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no native title being found over the lands subject to the BMIEA or below the low water mark. MAC also owns and co-manages the Murujuga National Park, is responsible for the Dampier Archipelago National Heritage Place and is progressing the World Heritage nomination of the Murujuga Cultural Landscape.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and YAC are the Registered Native Title Bodies Corporate holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. NTGAC is also party to the Ningaloo Conservation Estate Indigenous Land Use Agreement (the ILUA), which is coastally adjacent to the EMBA. The NTGAC is responsible for the joint management of the inner Ningaloo Marine Park (State Waters), the Cape Range National Park and new conservation areas extending along the Ningaloo Coast, which runs in parallel to the outer Ningaloo Marine Park in Commonwealth waters. The NTGAC's nominated representative is the Yamatji Marlpa Aboriginal Corporation (YMAC) and the NTGAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside has therefore consulted the NTGAC, via YMAC.	Yes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Thalanyji native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which BTAC is the Registered Native Title Body Corporate. BTAC is also party to the Macedon ILUA which is coastally adjacent to the EMBA.	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and YAC are the Registered Native Title Bodies Corporate holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. The Yinggarda Aboriginal Corporation's nominated representative is Gumala Aboriginal Corporation.	Yes
Kariyarra Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Kariyarra native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the Kariyarra Aboriginal Corporation is the Registered Native Title Body	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		Corporate. The Kariyarra Aboriginal Corporation is also party to the Kariyarra and State ILUA, which is coastally adjacent to the EMBA.	
Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Yaburara & Mardudhunera People native title claim, for which WAC is the Registered Native Title Body Corporate, overlaps the EMBA. WAC is party to the Cape Preston Project Deed (YM Mardie ILUA), which overlaps the EMBA.	Yes
Robe River Kuruma Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Robe River Kuruma Aboriginal Corporation is party to the Cape Preston West Export Facility ILUA and the RTIO Kuruma Marthudunera People ILUA, which are coastally adjacent to the EMBA.	Yes
Ngarluma Aboriginal Corporation (NAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/Yindjibarndi People native title claim, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA. NAC is also party to the Anketell Port, Infrastructure Corridor and Industrial Estates ILUA and the RTIO Ngarluma Indigenous Land Use Agreement (Body Corporate Agreement), which are coastally adjacent to the EMBA.	Yes
Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/Yindjibarndi People native title claim, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA.	Yes
Wanparta Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Wanparta Aboriginal Corporation jointly manages 80 Mile Beach Marine Park which is adjacent to the EMBA.	Yes
Native Title Representative Bodies			

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Yamatji Marlpa Aboriginal Corporation (YMAC)	Native Title Representative Body (NTRB)	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. YMAC is the NTRB for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders. The NTGAC's nominated representative is YMAC. Woodside has therefore consulted the NTGAC via YMAC. Woodside contacted YMAC to seek guidance with respect to the appropriate Traditional Custodian group(s) to engage with respect to the proposed activity where this was not clear. YMAC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a NTRB under applicable federal legislation.	Yes
Self-identified First Nations groups			
Ngarluma Yindjibarndi Foundation Ltd (NYFL)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. In 1998 [prior to resolution of the Ngarluma and Yinjibarndi native title claim], Elders of the Ngarluma and Yindjibarndi people [native title claimants] signed an Agreement with the North West Shelf JV partners covering a number of matters including how payment would be made for land use on the Burrup Peninsula. The Ngarluma Yindjibarndi Foundation Ltd (NYFL) was formed and incorporated in 2000 to receive those payments. Subsequent to that, the Ngarluma people settled their native title claim and established their nominated representative corporation, the Ngarluma Aboriginal Corporation (NAC). The Yindjibarndi people also settled their native title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation (Yindjibarndi). The Ngarluma Aboriginal Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests. While the NYFL's members have been assessed as being relevant persons (and have been consulted on this EP), NYFL's own functions interests and activities were not considered to overlap with the EMBA for this EP and NYFL was therefore not assessed as being relevant for this EP. In the course of consultation, NYFL self-identified and has advised it is relevant for this EP. Woodside has therefore consulted with NYFL on this EP.	Yes

Local government and community representative groups or organisations			
Shire of Exmouth	Local government governed by the *Local Government Act 1995* representing the suburbs and localities of Exmouth, Learmonth and North West Cape.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Exmouth's area of responsibility overlaps the EMBA.	Yes
Shire of Ashburton	Local government governed by the *Local Government Act 1995* representing the suburbs and localities of Onslow, Pannawonica, Paraburdoo and Tom Price.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Ashburton's area of responsibility overlaps the EMBA.	Yes
City of Karratha	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Baynton, Baynton West, Bulgarra, Cossack, Dampier, Gap Ridge, Karratha, Karratha Industrial Estate, Jingarri, Madigan, Millars Well, Nickol, Pegs Creek, Point Samson, Roebourne, Whim Creek and Wickham.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The City of Karratha's area of responsibility overlaps the EMBA.	Yes
Town of Port Hedland	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Cooke Point, Port Hedland, Pretty Pool, Redbank, South Hedland, Wedgefield and Yandeyarra.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Town of Port Hedland's area of responsibility does not overlap the EMBA.	No
Shire of Shark Bay	Local government governed by the Local Government	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations.	No

	Act 1995 representing the suburbs and localities of Billabong, Denham, Monkey Mia, Nanga, Overlander, Useless Loop	The Shire of Shark Bay's area of responsibility does not overlap the EMBA.	
Exmouth Community Liaison Group (CLG)	The Exmouth CLG represents the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth region.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Base Marine, Bgahwan Marine, Cape Conservation Group Inc., DBCA, Department of Defence, Department of Transport, Exmouth Bus Charter, Exmouth Chamber of Commerce and Industry, Exmouth District High School, Exmouth Freight and Logistics, Exmouth Game Fishing Club, Exmouth Tackle and Camping Supplies, Exmouth Visitors Centre, Exmouth Volunteer Marine Rescue, Fat Marine, Gascoyne Development Commission, Gun Marine Services, Ningaloo Lodge, Offshore Unlimited, Shire of Exmouth, BHP Petroleum, Santos, Community Member The Exmouth CLG's area of responsibility under its terms of reference overlaps the EMBA.	Yes
Karratha Community Liaison Group (CLG)	The Karratha CLG is the recognised community group that represents the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Pilbara region.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Karratha CLG's area of responsibility under its terms of reference does not overlap the EMBA. WA Police, Karratha Health Care, Development WA, Ngarluma Yindjibarndi Foundation Ltd (NYFL)*, Department of Education, Pilbara Ports Authority, Regional Development Australia, Pilbara Development Commission, Dampier Community Association, City of Karratha, Karratha & Districts Chamber of Commerce and Industry, Horizon Power, Murujuga Aboriginal Corporation (MAC)*, Department of Local Government, Sport and Cultural Industries **NFYL and MAC were consulted directly as described above.* The Karratha CLG's area of responsibility under its terms of reference overlaps the EMBA.	Yes
Onslow Chamber of Commerce and Industry	Independent not-for-profit organisation responsible for promoting the interests of its members in the business community in the town of Onslow and surrounding areas.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Onslow Chamber of Commerce and Industry's interests have the potential to be impacted by the proposed activities.	Yes

Port Hedland Chamber of Commerce and Industry	Independent not-for-profit organisation responsible for promoting the interests of its members in the business community in the town of Port Hedland and surrounding areas.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Port Hedland Chamber of Commerce and Industry's interests do not have the potential to be impacted by the proposed activities.	No
Other non-government groups or organisations			
Australian Conservation Foundation (ACF)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that ACF's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside acknowledges the reference to the Pluto onshore processing facility in the context of the Scarborough Project and chose to contact ACF at its discretion in line with Section 5.3.7 of the EP.	No
Australian Marine Conservation Society (AMCS)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that AMCS's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact AMCS at its discretion in line with Section 5.3.7 of the EP.	No
Conservation Council of Western Australia (CCWA)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that CCWA's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact CCWA at its discretion in line with Section 5.3.7 of the EP.	No
Greenpeace Australia Pacific (GAP)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that GAP's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact GAP at its discretion in line with Section 5.3.7 of the EP.	No

350 Australia (350A)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that 350A's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact 350A at its discretion in line with Section 5.3.7 of the EP.	No
Australasian Centre for Corporate Responsibility (ACCR)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that ACCR's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact ACCR at its discretion in line with Section 5.3.7 of the EP.	No
Friends of Australian Rock Art. Inc (FARA)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that FARA's public website material demonstrates an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP).	Yes
Market Forces	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that Market Forces' public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact Market Forces at its discretion in line with Section 5.3.7 of the EP.	No
Telstra	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under Regulation 25(1)(d) of the Environment Regulations to determine Telstra's relevance for the proposed activity. There are known Telstra communication cables that intersect within the Operational Area.	Yes
Vocus	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under Regulation 25(1)(d) of the Environment Regulations to determine Vocus' relevance for the proposed activity. There are known Vocus communication cables that intersect within the Operational Area.	Yes

Doctors for the Environment Australia (DEA)	Non-government organisation	During the course of preparing this EP, DEA self-identified, provided comment on another EP and requested to receive more information about the activities under this EP. Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that DEA's feedback demonstrates an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4).	Yes
Research institutes and local conservation groups or organisations			
Cape Conservation Group (CCG)	Local conservation group focused on protecting the terrestrial and marine environment of the North West Cape	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. CCG's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape.	Yes
Protect Ningaloo	Local conservation group focused on protecting the Exmouth Gulf and Ningaloo Reef and Cape Range	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Protect Ningaloo's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape and Ningaloo Reef.	Yes
University of Western Australia (UWA)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by UWA that intersects within the EMBA. Woodside chose to contact UWA at its discretion in line with Section 5.3.7 of the EP.	No
Curtin University	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by Curtin University that intersects within the EMBA. Woodside chose to contact Curtin University at its discretion in line with Section 5.3.7 of the EP.	No
Edith Cowan University (ECU)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by ECU that intersects within the EMBA. Woodside chose to contact ECU at its discretion in line with Section 5.3.7 of the EP.	No
Murdoch University	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by Murdoch University that intersects within the EMBA.	No

		Woodside chose to contact Murdoch University at its discretion in line with Section 5.3.7 of the EP.	
Commonwealth Scientific and Industrial Research Organisation (CSIRO)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by CSIRO that intersects within the EMBA. Woodside chose to contact CSIRO at its discretion in line with Section 5.3.7 of the EP.	No
Australian Institute of Marine Science (AIMS)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by AIMS that intersects within the EMBA. Woodside chose to contact AIMS at its discretion in line with Section 5.3.7 of the EP.	No
Other			
Save Our Songlines (SOS) and/ or [Individual 1]	Representatives of Non-Government Organisation Save Our Songlines and/ or [Individual 1]	Woodside has applied its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) to determine Save Our Songlines (SOS) and/ or [Individual 1] relevance for the proposed activity. As [Individual 1] is a founder of SOS and now appears to be its primary spokesperson, Woodside understands that the views of SOS and [Individual 1] are the same. On this basis Woodside has consulted [Individual 1] and SOS as one entity. Correspondence has been via [Individual 1's] legal representative in this capacity. Save Our Songlines and/ or [Individual 1] stated interest is to stop or pause Scarborough gas and to stop new industry on the Burrup; and oppose planned expansion of the Burrup Hub industry by Woodside, Perdaman and Yara. In addition, their stated interests also include the protection of Murujuga rock art. As Save Our Songlines have raised concerns relating to the processing of greenhouse gases on Murujuga, Woodside considers that Save Our Songlines and/ or [Individual 1] are relevant for this activity.	Yes

CONSULTATION ACTIVITIES

Pluto Facility Operations EP Consultation Activities

Woodside has been conducting extensive consultation with relevant persons and other parties for this EP since February 2024 when consultation commenced with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside's proposed activities.

A broad consultation process has been undertaken with relevant persons for the Pluto Facility Operations EP. Consultation aims to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken by email, letter, phone calls (where required), meetings (where required), and through advertising.

Discharging Regulation 25 of the Environment Regulations

Woodside advertised the planned activities proposed for this EP in national, state and relevant local newspapers (see Record of Consultation, reference 4). Regional newspapers do not require subscription and are available (and in some cases delivered) directly to households. All communities within or adjacent to the EMBA had access to this information via this media. No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Publication dates
The Australian	National	28 February 2024
The West Australian	Regional (WA)	28 February 2024
Pilbara News	Local (WA)	28 February 2024
North West Telegraph	Local (WA)	28 February 2024
Koori Mail	Indigenous	28 February 2024
National Indigenous Times	Indigenous	26 February 2024

A Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.7 in the EP), which included details such as an activity overview, maps, a summary of key risks and/or impacts and management measures (Record of Consultation, reference 1.1).

An updated Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.7), which included an update regarding planned activities (Record of Consultation, reference 1.3).

Since the commencement of the initial consultation period in February 2024, the Consultation Information Sheet has been available on Woodside's website and the updated Consultation Information Sheet since March 2024. The Woodside Consultation Information Sheets include a toll-free 1800 phone number and Woodside's feedback email address (feedback@woodside.com.au).

The Woodside Consultation Activities webpage (that is accessible on the Consultation Information Sheet, via a QR code, banners at community events, and via social media content and advertisements) includes Consultation Information Sheets for the EPs on which Woodside is currently consulting, including this EP. The website page also features a subscribe field for EP-focussed communications from Woodside.

Additional targeted information was provided to relevant persons. This information included maps and additional information relevant to the specific category of persons. The relevant persons had a 30-day period in which to provide feedback.

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

Where appropriate, targeted follow-up emails were sent to relevant persons who had not provided a response prior to the close of the target feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.2 in the EP).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement undertaken with persons or organisations Woodside assessed as not relevant but chose to contact (see Section 5.3.7 in the EP) or self-identified and Woodside assessed as not relevant are summarised at Appendix F, Table 3.

From February 2024, Woodside commenced a geotargeted sponsored social media campaign (Record of Consultation, reference 4.9) to various local government authorities within or coastally adjacent to the EMBA for the proposed activities. The campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they can find out about Woodside's proposed activities by visiting Woodside's website.

Proactive Consultation

Community engagement

From March 2024, Woodside held a number of Community information sessions where this EP Consultation Information Sheet was available and discussed. See tables in Record of Consultation, reference 5.1 and 5.2. Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media to support attendance.

Date	Location	Event (if applicable)
22 March 2024	Roebourne Woodside office	Community Consultation Roadshow
23 March 2024	Karratha Shopping Centre	Community Consultation Roadshow
24 March 2024	Dampier	Dampier Beachside Markets
3 and 10 April 2024	North West Shelf Visitor Centre	Community Information Session
5 May 2024	Dampier	Dampier Beachside Markets
15 June 2024	Karratha	WA Day Festival
26 and 27 June 2024	Karratha	Pilbara Summit
26 July 2024	Karratha	Community pop-up at Lo's Café
3–4 August 2024	Karratha	FeNaClNg Festival
26–28 August 2024	Karratha	Developing Northern Australian Conference
12 October 2024	Dampier	Dampier Beachside Markets
2 November 2024	Dampier	Dampier Beachside Markets
14 November 2024	Exmouth	Community Pop-up Exmouth Mall
18 March 2025	Dampier	Dampier Community Association

Community Liaison Group Engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha region. Woodside regularly meets with the two CLGs to discuss a range of issues including consultation of specific EPs.

Let's Talk – EP Newsletter

In March 2024, Woodside launched its first EP-focussed newsletter as a new communication avenue to reach existing and potential stakeholders. Subsequent editions were released in

April 2024, July 2024, November 2024 and March 2025. Woodside is building on its existing consultation approach, providing additional resources to inform relevant persons about its EP consultation. The newsletter aims to provide periodic updates to relevant persons about EP consultation activities, case studies on effective consultation with relevant persons and other EP focussed updates such as upcoming events where Woodside personnel will be consulting with the local community. It is distributed in a variety of locations as well as across digital platforms including on woodside.com, and social media platforms. People can also subscribe to receive it (Record of Consultation, reference 5.6).

Social Media Platform	Geotargeted Reach	Let's Talk Social Media Campaign Dates	Impact
Facebook and Instagram	18-70 year olds Pilbara – Karratha, Dampier, Roebourne Regional Fishing Marine users Traditional Custodians Local communities	18 March – 3 April 2024	Reach: 158,167 Frequency: 3.94 Impressions: 623,845 Link clicks: 854 CTR%: 0.14%

Let's Talk Newsletter – Social Media Campaign

Woodside also publishes the Karratha Community Update newsletter which includes a QR code and encourages people to go to the Woodside Consultation Activities webpage to subscribe and find information about EPs (Record of Consultation, reference 5.8).

Extended Consultation

In addition to the initial 30 day consultation period, Woodside continues to receive, assess and respond to feedback and comments from relevant persons during preparation of the EP.

For this EP, Woodside addressed and responded to relevant persons for a period of up to 13 months.

Self-Identification

Social media campaign - Are you a relevant person?

In October 2023, Woodside commenced a targeted social media campaign, both organic and sponsored, aimed at community members of key towns within the Kimberley, Pilbara, Gascoyne and Murchison regions. The campaign delivered targeted information to several profiled relevant person groups via story and feed content with text and a short accessible video (Record of Consultation, reference 4.10).

The campaign aims to support self-identification and provides information about Woodside's consultation with relevant persons when preparing EPs and encourages participation in the consultation process.

Six different videos with specific information to potential relevant persons groups were launched on Facebook and Instagram:

- Local communities – volunteering
- Local communities - apprentices/trainees

- Commercial fishing
- Recreational fishing
- Recreational marine users
- Traditional Owners.

Results as at April 2024 are as follows:

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	389,383	4.37	1,701,418	2,298	0.14%
Commercial Fisheries Demersal	297,701	2.84	846,530	853	0.10%
Commercial Fisheries Crab	207,104	2.54	526,472	484	0.09%
Volunteering	172,750	2.11	364,635	373	0.10%
Apprentices & trainees	97,083	2.21	214,324	311	0.15%
Traditional Owner Groups	92,209	1.56	143,965	212	0.15%

Are you a Relevant Person campaign – October 2023 to March 2024

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	251,096	3.48	873,689	1,342	0.15%
Commercial Fisheries Demersal	208,759	2.53	529,021	540	0.10%
Commercial Fisheries Crab	71,468	1.65	118,068	152	0.13%
Volunteering	46,354	1.54	71,335	114	0.16%
Apprentices & trainees	50,776	1.43	72,363	101	0.14%
Traditional Owner Groups	192,257	2.47	475,112	566	0.12%

Are you a Relevant Person campaign – March to April 2024

The commercial fisheries, recreational fisheries and Traditional Owners videos are available on the Woodside Consultation Activities webpage.

Traditional Custodian Specific Consultation

In addition to the approaches above, including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (Section 5.5 in the EP). Consultation undertaken specifically with Traditional Custodians for this Environment Plan includes:

- Direct engagement with nominated representative bodies via the contact listed on the ORIC website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:
  - Meetings with directors, elders and any nominated representatives, on country or in Perth
  - Requests and offers of resourcing to enable and support consultation
  - Exchange of written feedback and correspondence
  - Summary Consultation Information Sheet, developed and reviewed by Indigenous representatives in collaboration with technical experts to ensure content is appropriate to the intended recipients, was provided to relevant Traditional Custodian groups (Record of Consultation, reference 1.2) and phone calls to provide context to the consultation made.

Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and in some cases physical visits.

Consultation meetings with attendees decided by Traditional Custodian groups, supported by senior Woodside representatives, subject matter experts, First Nations Relations advisers with skills and experience in community engagement. Meetings are developed through a two-way consultation process to enable effective information sharing via:

- Mutually agreed agenda
- Encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback
- Visual aids such as posters, presentations, simplified technical videos and real-world pictures and footage
- Emphasis on potential planned and unplanned risks and impacts of the activity
- Ample opportunity for questions and feedback
- Discussion about ongoing relationship development and opportunities
- Distribution of hard-copy Consultation Information Sheets (Record of Consultation, reference 1.1) and Summary Consultation Information Sheets (Record of Consultation, reference 1.2)
- Meeting all costs such as sitting fees, travel, legal support and executive support and other support required
- Advertising in Indigenous publications such as the National Indigenous Times and Koori Mail (Record of Consultation, reference 4.1 and 4.2).

Woodside ran a geotargeted sponsored social media campaign (Record of Consultation, reference 4.9) to various communities that are coastally adjacent to the EMBA for the proposed activities.

The wide-reaching campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can find out about Woodside's proposed activities by visiting Woodside's website, which details the intent of consultation with relevant persons under the *Offshore Petroleum and Greenhouse Gas*

Storage (Environment) Regulations 2023 (Cth). The campaign reached more than two million people across various regions as shown in Record of Consultation, reference 4.9.

These social media posts were developed with input from Indigenous representatives. Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life (Professor Carlson, 2021). Advertisements used language and information appropriate to Indigenous audiences. Feedback from community engagements indicates a high level of penetration for this technique.

Woodside has employed a diverse range of techniques to allow relevant persons to become aware of the proposed activity and how it may affect their functions, interests or activities, and to understand their ability to provide feedback. The combination of PBC engagement meetings, traditional print media, social media and face-to face community interaction was designed with input from Indigenous representatives and adapted to the audience, so that it provides a wide-ranging opportunity to consult.

The black numbering **(N)** in Table 2 and Table 3 denotes an item raised by persons and organisations. The green numbering **(N)** denotes Woodside's response to that item.

Table 2: Consultation Report with Relevant Persons and Organisations

Commonwealth and WA State Government Departments or Agencies – Marine

Australian Border Force (ABF)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed ABF advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to ABF, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ABF regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with ABF for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ABF sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to ABF on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ABF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ABF advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ABF 30 days for consultation. For consultation on EPs, 30 days is the usual period for ABF.
- In this context, Woodside allowed ABF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ABF is appropriate and adapted to the nature of interests of ABF:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with ABF.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding ABF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ABF did not provide feedback for this EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ABF's functions, interests or activities.

Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, a map of the Submarine Communication Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 27 February 2024, ACMA responded and thanked Woodside for the opportunity to comment on this EP (SI Report, reference 3.1) and:
  - **(1)** confirmed the operational areas are not in the vicinity of existing protection zones.
  - **(2)** noted Woodside is aware of submarine cables in the area operated by Telstra and recently installed cables operated by Vocus.
  - **(3)** recommended that Woodside contact the AHO for further assistance identifying submarine cables that may be impacted by the proposed activities.
  - **(4)** advised no additional consultation is required for this activity.
- On 29 February 2024, Woodside emailed ACMA (SI Report 3.2) and:
  - **(1)** acknowledged the advice regarding the protection zones.
  - **(2)** confirmed consultation information was provided to Telstra and Vocus.
  - **(3)** noted that AHO can be contacted for further assistance identifying submarine cables.
  - **(4)** noted that ACMA does not require additional consultation for this activity.
- On 27 March 2024, Woodside provided an activity update to ACMA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Operational areas are not in the vicinity of any existing protection zones.	**(1)** **Woodside assessment:** Woodside noted ACMA's confirmation that the operational areas was not in the vicinity of existing protection zones. **Woodside response:** Woodside acknowledged the advice regarding existing protection zones.	**(1)** Not required.

(2) Operational areas are in the vicinity of submarine cables.	**(2)** **Woodside assessment:** Woodside noted ACMA's advice that the operational areas was in the vicinity of submarine cables. **Woodside response:** Woodside confirmed it consulted with Telstra and Vocus.	**(2)** As referenced in Section 4.10.6 of the EP..
(3) Contact the AHO for further assistance identifying cables.	**(3)** **Woodside assessment:** Woodside noted ACMA's recommendation to contact the AHO for further assistance identifying cables. **Woodside response:** Woodside confirmed that the AHO could be contacted should further assistance be required to identify submarine cables.	**(3)** Not required.
(4) No further consultation required for this activity.	**(4)** **Woodside assessment:** Woodside accepts that ACMA does not require further consultation. **Woodside response:** Woodside noted that ACMA does not require further consultation.	**(4)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACMA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given ACMA sufficient information to allow ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to ACMA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided ACMA with information tailored to ACMA by including a map of submarine communication cables.
- On 27 February 2024, ACMA consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided ACMA with further information in response to ACMA's feedback (email of 29 February 2024).

Reasonable Period

Woodside allowed ACMA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACMA 30 days for consultation.
- In this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP ad evidenced by its response on 27 February 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACMA is appropriate and adapted to the nature of interests of ACMA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with ACMA.
- Woodside considers a reasonable opportunity was provided to ACMA as evidenced by its response on 27 February 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from ACMA.
  - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 2.3), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 4 March 2024, AFMA emailed to thank Woodside and:
  - **(1)** Advised it had no specific comments on the proposal
  - **(2)** Encouraged Woodside to consult directly with potentially impacted stakeholders: North West Slope Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA) and Western Australia Fishing Industry Council (WAFIC) (SI Report, reference 1.1).
- **(1,2)** On 6 March 2024, Woodside responded thanking AFMA for its email and confirmed it had provided information to relevant fishery licence holders and representative organisations (SI Report, reference 1.2).
- On 6 March 2024, AFMA emailed to thank Woodside (SI Report, reference 1.3).
- On 27 March 2024, Woodside provided an activity update to AFMA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AFMA advised it had no specific comment on the proposal.	**(1)** **Woodside assessment:** Woodside noted AFMA had no comments on the proposal. **Woodside response:** Woodside thanked AFMA for its feedback.	**(1)** Not required.
(2) Woodside to consult directly with potentially impacted stakeholders.	**(2)** **Woodside assessment:** Woodside recognises AFMA's recommendation to consult with relevant fishing operators. **Woodside response:** Woodside confirmed it had consulted individual Commonwealth fishing operators in the area, as well as relevant representative bodies. Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders.	**(2)** Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AFMA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to AFMA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 4 March 2024, AFMA consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided AFMA with further information in response to AFMA's feedback (email of 6 March 2024).

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AFMA 30 days for consultation.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP as evidenced by its response on 4 March 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AFMA is appropriate and adapted to the nature of interests of AFMA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AFMA.
- Woodside considers a reasonable opportunity was provided to AFMA as evidenced by its response on 27 February 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AFMA.
  - Made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP, but as standard practice will notify AFMA as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 2.4), provided a Consultation Information Sheet, shipping lanes map, submarine cables map and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to AHO, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AHO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with AHO for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to AHO on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AHO with information tailored to AHO by including a map of shipping lanes and submarine cables relevant to the activity.

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AHO advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AHO 30 days for consultation. For consultation on EPs, 30 days is the usual period for AHO.

- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AHO is appropriate and adapted to the nature of interests of AHO:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AHO.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding AHO of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AHO did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AHO's functions, interests or activities.

Australian Maritime Safety Authority (AMSA) – Marine Safety

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AMSA – Marine Safety advising of the proposed activity (Record of Consultation, reference 2.4), provided a Consultation Information Sheet, a map of the Submarine Communication Cables, a map of the shipping lanes and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to AMSA – Marine Safety, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMSA – Marine Safety regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 22 April 2024, AMSA – Marine Safety emailed Woodside (SI Report, reference 35.1) and:
  - **(1)** provided a map of vessel traffic plot for the area.
  - **(2)** requested Woodside notify AMSA's Response Centre (ARC) 24-48 hours before operations commence.
  - **(3)** reminded Woodside to contact the AHO no less than four working weeks before operations commence.
  - **(4)** reminded Woodside that vessels should exhibit appropriate lights and shapes to reflect the nature of operation.

- **(5)** advised that Woodside should evaluate and implement adequate anti-collision measures, which may include but are not limited to:
  - additional warnings and/or lights to attract attention.
  - installation of Automatic Identification System (AIS) units.
  - offshore guard vessel/s that can monitor traffic and take early action to alert a vessel approaching the area of operations.
- **(1)** provided contact details to obtain shipping data.

- On 22 April 2024, Woodside thanked AMSA- Marine Safety for its feedback (SI Report, reference 35.2) and:
  - **(1)** noted the map provided and the contact details to obtain shipping data.
  - **(2)** confirmed it will notify AMSA's Response Centre (ARC) 24-48 hours before operations commence.
  - **(3)** it will notify the AHO no less than 4 weeks before operations commence.
  - **(4)** confirmed that vessels should exhibit appropriate lights and shapes to reflect the nature of operation.
  - **(5)** confirmed it will evaluate and implement adequate anti-collision measures.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Provided a map of vessel traffic and contact details for obtaining shipping data.	**(1)** **Woodside assessment:** Woodside noted AMSA's spatial data gateway and the map provided. **Woodside response:** Woodside thanked AMSA for providing the map.	**(1)** Not required.
(2) Requested the ARC be notified 24-48 hours before operations commence.	**(2)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-6 of this EP. **Woodside response:** Woodside confirmed it will notify the ARC 24-48 hours before operations commence.	**(2)** Woodside will notify the ARC at least 24–48 hours before operations commence, as referenced as PS 1.10 in this EP.
(3) Requested the AHO be contacted no less than 4 weeks before operations commence.	**(3)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-6 of this EP.	**(3)** Woodside will notify the AHO no less than four working weeks before operations commence, as referenced as PS 1.9 in this EP.

	Woodside response: Woodside confirmed it will notify the AHO 4 weeks before operations commence.	
(4) Vessels should exhibit appropriate lights and shapes to reflect nature of operations.	**(4)** **Woodside assessment:** Woodside complies with the International Rules for Preventing Collisions at Sea. **Woodside response:** Woodside confirmed vessels would exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea.	**(4)** Section 6 of the EP contains a number of controls that address AMSA's feedback on lighting and compliance with the international rule for preventing collisions at sea, specifically safety zones are established, vessels are required to comply with marine orders and the facility's collision prevention system will be implemented.
(5) Woodside to evaluate and implement adequate anti-collision measures.	**(5)** **Woodside assessment:** Woodside complies with the International Rules for Preventing Collisions at Sea. **Woodside response:** Woodside confirmed vessels would exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea.	**(5)** Section 6 of the EP contains a number of controls that address AMSA's feedback on lighting and compliance with the international rule for preventing collisions at sea, specifically safety zones are established, vessels are required to comply with marine orders and the facility's collision prevention system will be implemented.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given AMSA sufficient information to allow AMSA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to AMSA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided AMSA with information tailored to AMSA by including a map of submarine communication cables and shipping lanes.
- On 22 Avril 2024, AMSA consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AMSA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided AMSA with further information in response to AMSA's feedback (email of 22 April 2024).

Reasonable Period

Woodside allowed AMSA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to AMSA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- In this context, Woodside allowed AMSA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA is appropriate and adapted to the nature of interests of AMSA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AMSA.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding AMSA of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to AMSA as evidenced by its response on 22 April 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AMSA.
  - As standard practice (and as requested by AMSA during consultation), Woodside will provide activity notifications to AHO and AMSA's ARC as referenced at PS 1.9 and PS 1.10.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to AMSA – Marine Pollution, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMSA – Marine Pollution regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 3 May 2024, Woodside emailed AMSA – Marine Pollution and provided copies of the two oil Pollution First Strike Plans: the revised Pluto Facility Operations and the new Xena-03 Tie-Back (SI Report, reference 40.1). Woodside received an out of office message and forwarded the correspondence to the contact provided (SI Report, reference 40.2).
- On 5 May 2024, AMSA acknowledged the email and advised it will submit comments should it have any (SI Report, reference 40.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given AMSA sufficient information to allow AMSA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to AMSA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information in the Consultation Information Sheet, Woodside provided AMSA – Marine Pollution with the Oil Pollution First Strike Plan for the EP and reminded AMSA of the opportunity to provide feedback on the EP (email of 3 May 2024).

Reasonable Period

Woodside allowed AMSA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to AMSA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA 30 days for consultation.
- In this context, Woodside allowed AMSA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA is appropriate and adapted to the nature of interests of AMSA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with AMSA.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding AMSA of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to AMSA as evidenced by its response on 5 May 2024 when it acknowledged the email.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution's functions, interests or activities.

Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DAFF - Fisheries advising of the proposed activity (Record of Consultation, reference 2.5), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.

- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DAFF – Fisheries, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DAFF – Fisheries regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DAFF for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF sufficient information to allow DAFF to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DAFF on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DAFF advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF 30 days for consultation. For consultation on EPs, 30 days is the usual period for DAFF.
- In this context, Woodside allowed DAFF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF is appropriate and adapted to the nature of interests of DAFF:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DAFF.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DAFF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF did not provide feedback for these EP. Appropriate measures are already included in the EP, and as standard practice Woodside will notify DAFF as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF's functions, interests or activities.

Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 2.6), provided a Consultation Information Sheet, a map of the defence zones and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.

- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DoD, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DoD regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DoD for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DoD on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DoD with information tailored to DoD by including a map of defence zones relevant to the activity.

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DoD advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days for consultation. For consultation on EPs, 30 days is the usual period for DoD.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DoD.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DoD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP. Appropriate measures are already included in the EP, but as standard practice Woodside will notify DoD as per PS 1.12.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 2.3), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DPIRD, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.

- On 27 March 2024, Woodside provided an activity update to DPIRD regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 28 March 2024, DPIRD thanked Woodside for the update (SI Report, reference 28.1).
- On 2 April 2024, Woodside emailed DPIRD acknowledging its response (SI Report, reference 28.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPIRD for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DPIRD on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 March 2024, DPIRD consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for consultation.
- As DPIRD responded to Woodside within the timeframe provided, in this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DPIRD of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to DPIRD as evidenced by its response on 28 March 2024..

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPIRD provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DPIRD.
  - Made no changes or inclusions to the EP as a result of consultation with DPIRD because appropriate measures are already included in the EP but as standard practice will notify DPIRD as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Transport (DoT)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DoT advising of the proposed activity (Record of Consultation, reference 2.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- **(1)** On 6 March 2024, DoT responded thanking Woodside for the update (SI Report, reference 7.1).
- (1) On 6 March 2024, Woodside thanked DoT for their response (SI Report, reference 7.2).
- On 27 March 2024, Woodside provided an activity update to DoT regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 15 April 2024, DoT responded, thanking Woodside for the update (SI Report, reference 7.3).
- On 3 May 2024, Woodside emailed DoT and provided copies of the two oil Pollution First Strike Plans: the revised Pluto Facility Operations and the new Xena-03 Tie-Back (SI Report, reference 7.4).
- **(2)** On 14 June 2024, DoT emailed Woodside regarding the First Strike Plans (FSP) and requested clarification regarding a mention of Pilbara Ports Authority (PPA) being the control agency in Dampier Port Limits (SI Report, reference 7.5).
- On 26 June 2024, Woodside responded thanking DoT for its review of the FSPs (SI Report, reference 7.6). Woodside:
  - (2) Advised that as the Pluto Operations trunkline hydrocarbon spill scenario arose at the State/Commonwealth boundary and therefore had the potential to contact port waters, Woodside would add PPA into the notifications table of the FSP and retain a mention of PPA being the control agency in Dampier Port Limits. However, the spill scenario was not applicable to the Xena-03 Tie-Back FSP, therefore Woodside would remove the mention for that FSP.
- **(2)** On 27 June 2024, DoT emailed to thank Woodside for the clarification and confirmed it had no further queries (SI Report, reference 7.7).
- (2) On 27 June 2024, Woodside emailed to thank DoT for confirming it was comfortable with the amendments (SI Report, reference 7.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) DoT thanked Woodside for the update.	**(1)** **Woodside assessment:** Woodside noted DoT's response. **Woodside response:** Woodside thanked DoT for its feedback.	**(1)** Not required.
(2)	**(2)**	**(2)**

DoT asked for clarification regarding the control agency for Dampier Port Limits in the FSPs.	**Woodside assessment:** Woodside acknowledged DoT's clarification request and amended the mention of PPA in relation to the Xena-03 Tie-Back FSP. **Woodside response:** Woodside advised it had removed mention of PPA as the control agency in Dampier Port Limits from the Xena-03 Tie-Back FSP and confirmed that DoT was comfortable with the amendment.	Woodside has updated the Xena-03 Tie-Back Oil Pollution First Strike Plan (Appendix J).
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside will consult DoT if there is a spill impacting State water from the proposed activity, as referenced in the OSPRMA (Appendix H). Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan, as referenced in the OSPRMA (Appendix H). No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoT for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given DoT sufficient information to allow DoT to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DoT on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 6 March 2024, DoT consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DoT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided DoT with further information in response to DoT's feedback (email of 26 June 2024).

Reasonable Period

Woodside allowed DoT a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to DoT advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoT 30 days for consultation.
- In this context, Woodside allowed DoT a reasonable period for consultation in preparation of the EP as evidenced by DoT's response on 26 June 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoT is appropriate and adapted to the nature of interests of DoT:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DoT as evidenced by its response on 6 March 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DoT provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DoT.
  - As a result of DoT's feedback, updated the Xena-03 Tie-Back Oil Pollution First Strike Plan as referenced at Appendix J.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 2.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 29 February 2024, Woodside emailed DLPH a list of the State Shipwrecks relevant to this activity (Record of Consultation, reference 2.8.1).
- **(1)** On 6 March 2024, DPLH emailed Woodside and confirmed the Land Use Management Division had no comments or feedback on the activities under this EP (SI Report, reference 6.1).
- (1) On 6 March 2024, Woodside thanked DPLH for its feedback and noted the Land Use Management Division had no comment on the activities under this EP (SI Report, reference 6.2).
- On 27 March 2024, Woodside provided an activity update to DPLH regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) The Land Use Management Division had no comments or feedback on the activities.	**(1)** **Woodside assessment:** Woodside noted DPLH Land Use Management Division had no comment or feedback. **Woodside response:** Woodside thanked DPLH for its feedback and noted the Land Use Management Division had no comment.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the PAP and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Section 4.9.8 of this EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as

		demonstrated in Section 6.8.2 and Section 6.8.3 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPLH for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DPLH on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DPLH with information tailored to DPLH by including a list of shipwrecks relevant to the EP in State waters.
- On 6 March 2024, DPLH consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DoT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for consultation.

- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP as evidenced by DPLH's response on 6 March 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DPLH as evidenced by its response on 6 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPLH provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DPLH.
  - Made no changes or inclusions to the EP as a result of consultation with DPLH because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Western Australian Museum advising of the proposed activity (Record of Consultation, reference 2.9), provided a Consultation Information Sheet, a list of State Shipwrecks and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to WAM, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to WAM regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with WAM for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to WAM on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided WAM with information tailored to WAM by including a list of shipwrecks relevant to the EP in State waters.

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WAM advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for consultation. For consultation on EPs, 30 days is the usual period for WAM.

- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding WAM of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAM did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAM's functions, interests or activities.

Pilbara Ports Authority

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Pilbara Ports Authority advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Pilbara Ports Authority, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 20 March 2024, Pilbara Ports Authority emailed Woodside (SI Report, reference 24.1) and:
  - **(1)** confirmed it has no comment on this EP.
  - **(2)** noted the EMBA encroaches on port waters at the Port of Dampier and is adjacent to port waters of Port of Ashburton, Port of Varanus Island, Port of Cape Preston East and Port of Cape Preston West.
- On 22 March 2024, Woodside thanked Pilbara Ports Authority for its response (SI Report, reference 24.2). and:
  - **(1)** noted that Pilbara Ports Authority has no comment on this EP
  - **(2)** confirmed the EMBA overlaps Port of Dampier and notes the advice from Pilbara Ports Authority regarding ports in waters adjacent to the EMBA.
- On 27 March 2024, Woodside provided an activity update to Pilbara Ports Authority regarding wells location coordinates and included an updated Consultation

Information Sheet (Record of Consultation, reference 3.5).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Pilbara Ports Authority advised it had no comment on the activities.	**(1)** **Woodside assessment:** Woodside noted Pilbara Ports Authority had no comment. **Woodside response:** Woodside thanked Pilbara Ports Authority for its feedback and noted it had no comment.	**(1)** Not required.
(2) The EMBA overlaps Port Dampier port waters and is adjacent to other port waters.	**(2)** **Woodside assessment:** Woodside noted Pilbara Ports Authority's advice regarding port waters adjacent to the EMBA. **Woodside response:** Woodside confirmed the EMBA overlaps Port of Dampier and noted the advice from Pilbara Ports Authority regarding ports in waters adjacent to the EMBA.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Ports Authority for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:		

Sufficient information

Woodside has given Pilbara Ports Authority sufficient information to allow Pilbara Ports Authority to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Pilbara Ports Authority on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 20 March 2024, Pilbara Ports Authority consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Pilbara Ports Authority to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Pilbara Ports Authority a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to Pilbara Ports Authority advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Ports Authority 30 days for consultation.
- **In this context, Woodside allowed Pilbara Ports Authority a reasonable period for consultation in preparation of the EP as evidenced by Pilbara Ports Authority's response on 20 March 2024. Reasonable Opportunity**

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Ports Authority is appropriate and adapted to the nature of interests of Pilbara Ports Authority:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Pilbara Ports Authority as evidenced by its response on 20 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Pilbara Ports Authority.
  - Made no changes or inclusions to the EP as a result of consultation with Pilbara Ports Authority because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Commonwealth and WA State Government Departments or Agencies – Environment

Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DAFF advising of the proposed activity (Record of Consultation, reference 2.5), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DAFF, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DAFF regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DAFF for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF sufficient information to allow DAFF to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DAFF on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DAFF advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF 30 days for consultation. For consultation on EPs, 30 days is the usual period for DAFF.
- In this context, Woodside allowed DAFF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF is appropriate and adapted to the nature of interests of DAFF:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DAFF.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DAFF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF's functions, interests or activities.

Department of Climate Change, Energy, the Environment (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DECCEW advising of the proposed activity (Record of Consultation, reference 2.10), provided a Consultation Information Sheet, a list of Commonwealth Shipwrecks and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DCCEEW, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DCCEEW regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DCCEEW for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DCCEEW on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided DCCEEW with information tailored to DCCEEW by including a list of shipwrecks relevant to the EP in Commonwealth waters.

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to DCCEEW advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DCCEEW 30 days for consultation. For consultation on EPs, 30 days is the usual period for DCCEEW.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DCCEEW.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DCCEEW of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities.

Director of National Parks (DNP)

Historical Engagement:

- On 17 March 2022, Woodside emailed DNP a copy of the Pluto Baseline Offshore Water Quality and Sediment Sampling Report, as per previous correspondence request (SI Report, reference 33.1).
- On 13 September 2022, Woodside emailed DNP requesting feedback on the report provided (SI Report, reference 33.2).
- On 9 November 2022, Woodside emailed DNP to follow up (SI Report, reference 33.3).
- On 30 November 2022, DNP emailed Woodside to organise a meeting to discuss the Offshore Water Quality and Sediment Sampling Report (SI Report, reference 33.4).
- On 13 December 2022, Woodside met virtually with Parks Australia Authorisation and Assessments team under the DNP and talked through the results of the Pluto Baseline Offshore Water Quality and Sediment Sampling Report (SI Report, reference 33.5)
- On 19 December 2022, Woodside emailed DNP following the meeting regarding the Pluto Baseline Offshore Water Quality and Sediment Sampling Report with a summary of the discussion. It also provided information about the 5 year revision of this EP and submission timeframes. Woodside acknowledged the revised guidance for consultation on activities within Marine Parks (SI Report, reference 33.6).

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 2.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DNP, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DNP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 13 July 2024, DNP emailed Woodside and confirmed the operational area overlaps the Montebello Marine Park (MP) but the well locations are outside of the MP (SI report, reference 33.7). DNP noted:
  - **(2)** To assist in the preparation of an EP for petroleum activities, NOPSEMA has worked closely with Parks Australia to develop and publish a guidance note that outlines what titleholders need to consider and evaluate. Titleholders should ensure the EP:

- Identifies and manages all impacts and risks on Australian marine park values (including ecosystem values) and had considered all options to avoid or reduce them to as low as reasonably practicable.
- Clearly demonstrates the activity would not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

- **(3)** Class approval for the Multiple Use Zone of the Montebello MP required an accepted EP.
- **(2)** The specific values for the Montebello MP.
- **(4)** The requirements for emergency responses .

- On 17 July 2024, Woodside responded thanking DNP for its email (SI Report, reference 33.8) and:
  - **(2)** Confirmed Woodside had taken into consideration the Petroleum Activities and Australian Marine Parks guidance note to ensure the EP:
    - Identified and managed all impacts and risks on AMP values (including ecosystem values) to an acceptable level.
    - Clearly demonstrated that the activities would not be inconsistent with the North-west Marine Parks Network Management Plan 2018.
  - **(1)** Confirmed a small portion of the Pluto facility operational area overlaps the Montebello MP and the wells are located outside of the MP.
  - **(3)** Noted the class approval for the Multiple Use Zone of the Montebello MP requires an accepted EP.
  - **(2)** Noted the specific values for the Montebello MP.
- **(4)** Noted the emergency response requirements and confirmed it will notify DNP if details regarding the activities change.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) The operational area overlaps the Montebello MP.	**(1)** **Woodside assessment:** A small portion of the Pluto facility Operational Area overlaps the Montebello MP, and the export pipeline Operational Area is 13 km east of the Dampier MP. **Woodside response:** Woodside confirmed the overlap and the wells are located outside the Montebello MP.	**(1)** Not required.
(2) Ensure the EP identify and manage all impacts and risks on AMP values, and clearly demonstrate that activities will not be inconsistent with the management plan.	**(2)** **Woodside assessment:** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values. **Woodside response:** Woodside confirmed it had taken into consideration the Petroleum Activities and Marine Parks guidance note to ensure the EP identified and	**(2)** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.8 of the EP).

	managed all risks on AMP values, and clearly demonstrated that activities will not be inconsistent with the management plan.	
(3) The class approval requires an accepted EP.	**(3)** **Woodside assessment:** Woodside is aware of its obligations under the class approval for the Multiple Use Zone of the Montebello MP. **Woodside response:** Woodside noted the class approval requires an accepted EP.	**(3)** Not required.
(4) Emergency response requirements.	**(4)** **Woodside assessment:** Woodside noted the requirements. **Woodside response:** Woodside will notify DNP if details regarding the activities change and noted the emergency response requirements.	**(4)** Woodside will provide notification of significant change, as appropriate, to relevant persons as referenced in Table 7-6 in the EP. Woodside will ensure DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix I).
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DNP for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:		

Sufficient information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DNP on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 13 July 2024, DNP consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided DNP with further information in response to DNP's feedback (email of 17 July 2024).

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 30 days for consultation.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP as evidenced by DNP's response on 13 July 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DNP is appropriate and adapted to the nature of interests of DNP:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with DNP.

- Woodside considers a reasonable opportunity was provided to DNP as evidenced by its response on 13 July 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DNP.
  - Made no changes or inclusions to the EP as a result of consultation with DNP because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 2.12), provided a Consultation Information Sheet, a list of Commonwealth Shipwrecks and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to NCWHAC, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to NCWHAC regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with NCWHAC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to NCWHAC on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to NCWHAC advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed NCWHAC 30 days for consultation. For consultation on EPs, 30 days is the usual period for NCWHAC.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding NCWHAC of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC's functions, interests or activities.

Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 2.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 1 March 2024, DBCA responded thanking Woodside for providing information on this EP (SI Report, reference 5.1). DBCA noted:
  - **(1)** the operations were in the vicinity of reserves managed by DBCA and given the ecological importance of areas potentially affected by a hydrocarbon release from the proposed activities, it was considered important that the baseline values and state of the potentially affected environment are appropriately understood and documented prior to operations commencing.
  - **(2)** it would like to have confidence that Woodside has established appropriate baseline survey data on the current state of areas supporting important ecological values and any current contamination if present within the area of potential impact of hydrocarbon releases.
  - **(3)** it undertakes monitoring in marine parks and reserves and published monitoring reports which are available on its website, however Woodside should be aware this monitoring is targeted to inform DBCA's values and objectives and is not necessarily suitable to provide baseline information for oil spill risk assessment and management planning.
  - **(4)** it recommends Woodside refer to the Department of Climate Change, Energy, the Environment and Water's *National Light Pollution Guidelines for Wildlife* as a best-practice industry standard for managing potential impacts of light pollution on marine fauna.
  - **(5)** in the event of a hydrocarbon release, it is requested that Woodside notify DBCA's Pilbara regional office as soon as practicable on (08) 9182 2000.
  - **(6)** it will not implement an oiled wildlife management response on behalf of a petroleum operator except as part of a whole of government response mandated by regulatory decision makers.
  - **(7)** Woodside should refer to the Department of Transport's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled *Marine Oil Pollution: Response and Consultation Arrangements*. **(7)** Not required. Woodside noted and referred to DoT's web content.
- On 14 March 2024, Woodside responded thanking DBCA for its feedback (SI Report, reference 5.2). Woodside:
  - **(1)** Confirmed it maintained knowledge and an understanding of areas of ecological importance within and adjacent to operational areas.
  - **(2,3)** Advised its oil spill scientific monitoring program would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release.
  - **(4)** Confirmed it had considered DCCEEW's National Light Pollution Guidelines with respect to vessel activities. The impact assessment determined that the impacts of lighting were as low as reasonably practicable.
  - **(5)** Advised it had incorporated the DBCA Pilbara regional office telephone number as part of the notifications listed in the Oil Pollution First Strike Plan.
  - **(6)** Noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.

• On 27 March 2024, Woodside provided an activity update to DBCA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Baseline values are understood and documented prior to commencement of activities.	**(1)** **Woodside assessment:** Woodside determined that areas of ecological importance, including marine parks and island conservation reserves, would not be impacted by planned activities. **Woodside response:** Woodside reaffirmed that areas of ecological importance in the proximity of the EP Operational Areas would be not impacted by planned activities.	**(1)** The EP demonstrates that the proposed activities are outside the boundaries of a proclaimed State Marine Park and identifies that there are no credible impacts to the values of any State Marine Parks as a result of planned activities (Section 4.8 and Section 6.7 of the EP). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.9 of the EP.
(2) Establish the appropriate baseline survey data on the current state of the areas.	**(2)** **Woodside assessment:** Woodside confirmed it maintained knowledge and an understanding of areas of ecological importance adjacent to Operational Areas and its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release. **Woodside response:** Woodside responded that it utilises an information system to track current existing environment knowledge that is regularly updated. Woodside advised its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release.	**(2)** Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in this EP.
(3)	**(3)**	**(3)**

Acquire the necessary information to implement a Before-After Control Impact (BACI) framework.	**Woodside assessment:** Woodside reviewed the request about implementing a BACI framework and noted its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release. **Woodside response:** Woodside advised its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors.	Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in this EP.
(4) Refer to DCCEEW's National Light Pollution Guidelines for Wildlife.	**(4)** **Woodside assessment:** Woodside noted DCCEEW's National Light Pollution Guidelines for Wildlife and that its impact assessment for light emissions is based on these recommendations. **Woodside response:** Woodside confirmed it had considered DCCEEW's National Light Pollution Guidelines for Wildlife and that lighting associated with this EP is required as a priority for safe operation.	**(4)** Woodside's impact assessment for light emissions is based on recommendations of the National Light Pollution Guidelines for Wildlife (see Section 6.7.12).
(5) Notify DBCA's Pilbara office as soon as practicable in the event of a hydrocarbon release.	**(5)** **Woodside assessment:** Woodside noted DBCA's 'Incidents and Emergency Response' process and need to include DBCA's Pilbara's contact information in Oil Pollution First Strike Plan. **Woodside response:** Woodside confirmed the DBCA Pilbara number had been incorporated as part of the Oil Pollution First Strike Plan.	**(5)** DBCA's Pilbara phone number has been incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix I).
(6)	**(6)** **Woodside assessment:** Woodside accepts that DBCA would not implement an oiled wildlife management response and notes its own Oiled Wildlife Response is	**(6)**

No oiled wildlife management response will be implemented except as part of a mandated government response.	included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP. **Woodside response:** Woodside confirmed that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.	Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix H).
(7) Refer to the Department of Transport's guidance note: Marine Oil Pollution: Response and Consultation Arrangements.	**(7)** **Woodside assessment:** Woodside appreciated the recommendation to refer to DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements. **Woodside response:** Woodside noted the DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.	**(7)** Not required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DBCA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DBCA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 1 March 2024, DBCA consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided DBCA with further information in response to DBCA's feedback (email of 14 March 2024).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for consultation.
- Woodside considers a reasonable opportunity was provided to DBCA as evidenced by its response on 1 March 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DDBCA is appropriate and adapted to the nature of interests of DBCA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DBCA as evidenced by its response on 1 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DBCA.
  - Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Clean Energy Regulator (CER)

Summary of information provided and record of consultation for this EP:

- On 9 December 2024, Woodside emailed CER advising of the proposed activity (SI Report, reference 43.1), and offered to meet to go through the information.
- On 16 December 2024, CER responded (SI Report, reference 43.2) and:
  - **(1)** Advised it cannot provide general comments on EPs.
  - **(2)** Offered to meet to discuss specific issues relating to the Safeguard and NGER frameworks.
- On 16 December 2024, Woodside thanked CER for its response (SI Report, reference 43.3) and:
  - **(1)** Noted CER had no comments on this EP and sought clarification on CER's position regarding consultation on operations EPs.
  - **(2)** Confirmed it will continue meeting all Safeguard and NGER frameworks for the Pluto LNG facility at the appropriate time and do not require a meeting at this time.
- On 16 December 2024, CER responded (SI Report, reference 43.4) and:
  - **(1)** Confirmed it provides comments on matters that fall within its remit.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) No comments on this EP.	**(1)** **Woodside assessment:** Woodside accepts that CER has no comments on the EP at this time and it provides feedback on matters that falls within its remit. **Woodside response:** Woodside noted CER's advice and confirmed it will continue sending consultation information when CER is identified as a relevant person.	**(1)** Not required.

(2) Discuss issues specific to Safeguard and NGER frameworks.	**(2)** **Woodside assessment:** Woodside acknowledges CER's interest is primarily in compliance and reporting. **Woodside response:** Woodside confirmed it will continue meeting all Safeguard and NGER frameworks for the Pluto LNG facility at the appropriate time and do not require a meeting at this time.	**(2)** Not required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with CER for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CER sufficient information to allow CER to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided a link to the Consultation Information Sheet to CER on 9 December 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CER a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CER advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CER 30 days for consultation.
- In this context, Woodside allowed CER a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CER is appropriate and adapted to the nature of interests of CER:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- CER provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from CER.
  - Made no changes or inclusions to the EP as a result of consultation with CER because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Commonwealth and State Government Departments or Agencies – Industry

Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 2.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DISR, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DISR regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DISR for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DISR on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DISR 30 days for consultation. For consultation on EPs, 30 days is the usual period for DISR.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DEMIRS advising of the proposed activity (Record of Consultation, reference 2.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to DEMIRS, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DEMIRS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with DEMIRS for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DEMIRS sufficient information to allow DEMIRS to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to DEMIRS on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DEMIRS a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DEMIRS 30 days for consultation. For consultation on EPs, 30 days is the usual period for DEMIRS.

- In this context, Woodside allowed DEMIRS a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DEMIRS is appropriate and adapted to the nature of interests of DEMIRS:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding DEMIRS of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DEMIRS did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DEMIRS's functions, interests or activities.

Commonwealth commercial fisheries and representative bodies

North West Slope and Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed North West Slope and Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to North West Slope and Trawl Fishery individual licence holders, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to North West Slope and Trawl Fishery individual licence holders regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with North West Slope and Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given North West Slope and Trawl Fishery sufficient information to allow North West Slope and Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to North West Slope and Trawl Fishery on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed North West Slope and Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to North West Slope and Trawl Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed North West Slope and Trawl Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for North West Slope and Trawl Fishery.
- In this context, Woodside allowed North West Slope and Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with North West Slope and Trawl Fishery is appropriate and adapted to the nature of interests of North West Slope and Trawl Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding North West Slope and Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as North West Slope and Trawl Fishery did not provide feedback for this EP, but as standard practice will notify North West Slope and Trawl Fishery as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on North West Slope and Trawl Fishery's functions, interests or activities.

Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Western Deepwater Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Western Deepwater Trawl Fishery individual licence holders, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Western Deepwater Trawl Fishery individual licence holders regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Deepwater Trawl Fishery sufficient information to allow Western Deepwater Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Western Deepwater and Trawl Fishery on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Deepwater Trawl Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Deepwater Trawl Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Western Deepwater Trawl Fishery.
- In this context, Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Deepwater Trawl Fishery is appropriate and adapted to the nature of interests of Western Deepwater Trawl Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Western Deepwater Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Deepwater Trawl Fishery did not provide feedback for this EP, but as standard practice will notify Western Deepwater Trawl Fishery as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Deepwater Trawl Fishery's functions, interests or activities.

Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to CFA, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.

- On 27 March 2024, Woodside provided an activity update to CFA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with CFA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to CFA on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CFA 30 days for consultation. For consultation on EPs, 30 days is the usual period for CFA.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP, but as standard practice will notify CFA as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

State commercial fisheries and representative bodies

Mackerel Managed Fishery (Area 2)

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Mackerel Managed Fishery (Area 2) individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual

licence holders (SI Report, reference 12.5).

- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Mackerel Managed Fishery (Area 2) for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Mackerel Managed Fishery (Area 2) sufficient information to allow Mackerel Managed Fishery (Area 2) to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information, via WAFIC, to Mackerel Managed Fishery (Area 2) on 29 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Mackerel Managed Fishery (Area 2) a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Mackerel Managed Fishery (Area 2) advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Mackerel Managed Fishery (Area 2) 30 days for consultation. For consultation on EPs, 30 days is the usual period for Mackerel Managed Fishery (Area 2).
- In this context, Woodside allowed Mackerel Managed Fishery (Area 2) a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Mackerel Managed Fishery (Area 2) is appropriate and adapted to the nature of interests of Mackerel Managed Fishery (Area 2):

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Mackerel Managed Fishery (Area 2) did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Mackerel Managed Fishery (Area 2)'s functions, interests or activities.

Pilbara Crab Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Crab Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual

licence holders (SI Report, reference 12.5).

- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Pilbara Crab Managed Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara Crab Managed Fishery sufficient information to allow Pilbara Crab Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information, via WAFIC, to Pilbara Crab Managed Fishery on 29 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Crab Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Crab Managed Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Crab Managed Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Pilbara Crab Managed Fishery.
- In this context, Woodside allowed Pilbara Crab Managed Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Crab Managed Fishery is appropriate and adapted to the nature of interests of Pilbara Crab Managed Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Crab Managed Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Crab Managed Fishery's functions, interests or activities.

Onslow Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Onslow Prawn Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual

licence holders (SI Report, reference 12.5).

- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Onslow Prawn Managed Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow Prawn Managed Fishery sufficient information to allow Onslow Prawn Managed Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information, via WAFIC, to Onslow Prawn Managed Fishery on 29 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow Prawn Managed Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Onslow Prawn Managed Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow Prawn Managed Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Onslow Prawn Managed Fishery.
- In this context, Woodside allowed Onslow Prawn Managed Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow Prawn Managed Fishery is appropriate and adapted to the nature of interests of Onslow Prawn Managed Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Onslow Prawn Managed Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow Prawn Managed Fishery's functions, interests or activities.

Pilbara Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Trawl Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual

licence holders (SI Report, reference 12.5).

- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Pilbara Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara Trawl Fishery sufficient information to allow Pilbara Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information, via WAFIC, to Pilbara Trawl Fishery on 29 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Trawl Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Trawl Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Pilbara Trawl Fishery.
- In this context, Woodside allowed Pilbara Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Trawl Fishery is appropriate and adapted to the nature of interests of Pilbara Trawl Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Trawl Fishery's functions, interests or activities.

Pilbara Line Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Line Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).

- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Pilbara Line Fishery for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara Line Fishery sufficient information to allow Pilbara Line Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information, via WAFIC, to Pilbara Line Fishery on 29 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Line Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara Line Fishery advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara Line Fishery 30 days for consultation. For consultation on EPs, 30 days is the usual period for Pilbara Line Fishery.
- In this context, Woodside allowed Pilbara Line Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Line Fishery is appropriate and adapted to the nature of interests of Pilbara Line Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Line Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Line Fishery's functions, interests or activities.

Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 2.15), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 28 February 2024, Woodside emailed WAFIC to initiate consultation with relevant individual licence holders for this activity (SI Report, reference 12.1).
- **(1)** On 28 February 2024, Woodside telephoned WAFIC to review the list of relevant fisheries identified by Woodside.

- **(1)** On 28 February 2024, Woodside emailed WAFIC with the agreed list of relevant fisheries for this activity and an updated consultation email for individual licence holders (SI Report, reference 12.2).
- **(1)** On 29 February 2024, WAFIC emailed Woodside advising the consultation information had been sent to five relevant fisheries and confirmed it will provide feedback after the consultation period closes (SI Report, reference 12.3).
- **(1)** On 29 February 2024, Woodside emailed WAFIC to acknowledge the distribution of information (SI Report, reference 12.4).
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- **(2)** On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).
- **(2)** On 3 April 2024, Woodside thanked WAFIC for the feedback and noted the advice regarding the update to relevant fisheries (SI Report, reference 12.8).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Consultation material delivered to relevant fisheries.	**(1)** **Woodside assessment:** Woodside reviewed WAFIC's update on outreach to relevant fisheries which gave them sufficient information to make an informed assessment of possible consequences of the activity on their functions, interests or activities per regulation 25 of the Environment Regulations. **Woodside response:** Woodside noted consultation information had been distributed to relevant fisheries via WAFIC.	**(1)** Not required.
(2) No feedback received from licence holders for this activity.	**(2)** **Woodside assessment:** Woodside accepted WAFIC's advice that there was no feedback on the activity and that it was not necessary to distribute the update to licence holders.	**(2)** Not required.

	Woodside response: Woodside noted WAFIC had no further comments and its advice regarding the update distribution.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-6 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.13 in this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAFIC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to WAFIC on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 2 April 2024, WAFIC consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAFIC 30 days for consultation.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP as evidenced by WAFIC's response on 2 April 2024

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAFIC is appropriate and adapted to the nature of interests of WAFIC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to WAFIC as evidenced by its response on 2 April 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from WAFIC.
  - Made no changes or inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP, but as standard practice will notify WAFIC as per PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Recreational marine users and representative bodies

Gascoyne Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside sent a letter to individual Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference

2.16), provided a Consultation Information Sheet, and a QR code to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 28 February 2024, Woodside emailed individual Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- **(1)** On 28 February 2024, an individual Recreational Marine User emailed Woodside (SI Report, reference 13.1) and confirmed they would maintain safe distances as per their operations and AMSA regulations.
- On 18 March 2024, as no response had been received, Woodside proactively sent a letter reminder to individual Gascoyne Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a QR code to the Consultation Information Sheet on Woodside's website.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to individual Gascoyne Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- **(1)** On 25 March 2024, Woodside emailed the individual Recreational Marine User confirming that exclusion zones would be communicated by AMSA and marine notices prior to activities commencing.
- On 27 March 2024, Woodside emailed an activity update to individual Gascoyne Recreational Marine Users regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 28 March 2024, Woodside mailed an activity update to individual Gascoyne Recreational Marine Users regarding wells location coordinates and included a QR code to the updated Consultation Information Sheet (Record of Consultation, reference 3.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) An individual Recreational Marine User advised they would maintain safe navigation as per AMSA regulations	**(1)** **Woodside assessment:** Woodside acknowledges that the individual Recreational Marine User has the information it needs to maintain safe navigation. **Woodside response:** Woodside confirmed exclusion zones will be communicated by AMSA and marine notices prior to activities commencing.	**(1)** Woodside will notify AHO prior to activities commencing, as referenced as PS 1.9 in this EP.
While feedback has been received, there were no objections or claims.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24.	No additional measures or controls are required.

	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Gascoyne Recreational Marine Users sufficient information to allow Gascoyne Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Gascoyne Recreational Marine Users on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Gascoyne Recreational Marine Users advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Gascoyne Recreational Marine Users 30 days for consultation. For consultation on EPs, 30 days is the usual period for Gascoyne Recreational Marine Users.

- In this context, Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Gascoyne Recreational Marine Users is appropriate and adapted to the nature of interests of Gascoyne Recreational Marine Users:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Gascoyne Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Gascoyne Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Gascoyne Recreational Marine Users' functions, interests or activities.

Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside sent a letter to individual Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 2.16), provided a Consultation Information Sheet, and a QR code to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent a letter reminder to individual Pilbara/Kimberley Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a QR code to the Consultation Information Sheet on Woodside's website.
- On 28 March 2024, Woodside provided an activity update to individual Pilbara/Kimberley Recreational Marine Users regarding wells location coordinates and included a QR code to the updated Consultation Information Sheet (Record of Consultation, reference 3.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Pilbara/Kimberley Recreational Marine Users on 26 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation. For consultation on EPs, 30 days is the usual period for Pilbara/Kimberley Recreational Marine Users.
- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara/Kimberley Recreational Marine Users is appropriate and adapted to the nature of interests of Pilbara/Kimberley Recreational Marine Users:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation letter on 18 March 2024, reminding Pilbara/Kimberley Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara/Kimberley Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara/Kimberley Recreational Marine Users' functions, interests or activities.

Recfishwest

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Recfishwest, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- **(1)** On 26 March 2024, Recfishwest emailed to thank Woodside for the consultation information (SI Report, reference 27.1) and requested to be kept informed as activities progress, given the proximity to areas accessed by the charter industry and recreational fishers.

- **(1)** On 27 March 2024, Woodside thanked Recfishwest for its response (SI Report, reference 27.2) and confirmed it will keep Recfishwest informed prior to and on completion of activities.
- On 27 March 2024, Woodside provided an activity update to Recfishwest regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(2)** On 28 March 2024, Recfishwest emailed Woodside and confirmed having no further comments following the update received (SI Report, reference 27.3).
- **(2)** On 2 April 2024, Woodside thanked Recfishwest for its feedback (SI Report, reference 27.4).
- On 15 April 2024, Woodside met with Recfishwest to provide an update on its activities. While the presentation was centred on decommissioning, it included information about this EP and Woodside's consultation approach (SI Report, reference 27.5). No feedback was provided on this EP.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Recfishwest requested to be kept informed as activities progress.	**(1)** **Woodside assessment:** Woodside acknowledges Recfishwest's request to be informed as activities progress and agrees to keep Recfishwest informed prior to and on completion of activities. **Woodside response:** Woodside confirmed it would keep Recfishwest informed prior to and on completion of activities, given that the areas surrounding the operation is accessed by recreational fishers and the charter industry.	**(1)** Woodside will provide notifications to Recfishwest (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP.
(2) Recfishwest confirmed having no further comments for this activity.	**(2)** **Woodside assessment:** Woodside noted Recfishwest had no further comments. **Woodside response:** Woodside thanked Recfishwest for its feedback.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	No additional measures or controls are required.

	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Recfishwest for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Recfishwest on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 March 2024, Recfishwest consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed Recfishwest 30 days for consultation.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Recfishwest is appropriate and adapted to the nature of interests of Recfishwest:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Recfishwest as evidenced by its response on 26 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Recfishwest.
  - As requested by Recfishwest during consultation, Woodside will provide activity notifications as referenced at PS 1.13.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Marine Tourism WA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Marine Tourism WA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Marine Tourism WA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Marine Tourism WA on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Tourism WA 30 days for consultation. For consultation on EPs, 30 days is the usual period for Marine Tourism WA.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In absence of feedback. Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Marine Tourism WA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside sent an email to individual WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to WA Game Fishing Association, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to WA Game Fishing Association regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with WA Game Fishing Association for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to WA Game Fishing Association on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WA Game Fishing Association 30 days for consultation. For consultation on EPs, 30 days is the usual period for WA Game Fishing Association.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding WA Game Fishing Association of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

Titleholders and operators

Chevron Australia / Osaka Gas Gorgon / Tokyo Gas Gorgon / JERA Gorgon

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Chevron Australia advising of the proposed activity (Record of Consultation, reference 2.18), provided a Consultation Information Sheet, GIS shape files and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*. Woodside asked that the consultation information be forwarded to Chevron's Joint Venture participants Osaka Gas Gorgon, Tokyo Gas Gorgon and Jera Gorgon for feedback.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Chevron Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Chevron regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 9 April 2024, Chevron emailed Woodside (SI Report, reference 36.1) and:
  - **(1)** confirmed it has no issues with the planned activities.
  - **(2)** requested Woodside to provide additional information should the activities be undertaken during cyclone season, including cyclone anchor configuration, mooring design, anchor analysis and risk mitigation.
- On 2 May 2024, Woodside emailed Chevron (SI Report, reference 36.2) and:
  - **(1)** thanked Chevron for its feedback.
  - **(2)** advised drilling is not currently planned to occur in cyclone season.
- On 21 October 2024, Woodside proposed an ingress agreement with Chevron regarding mooring line activities within Production Lease WA-48-L during the drilling of the Xena-03 well. The agreement was accepted by Chevron on 14 November 2024.
- On 26 November 2024, in addition to the ingress agreement, Woodside emailed Chevron Australia advising that it was providing further clarity to adjacent titleholders on the Operational Area for the EP (SI Report, reference 36.3). Woodside attached a map of adjacent titleholders. Woodside noted that:
  - The Operational Area included a radius of 4000m from the Xena-03 well to allow for movement and positioning of vessels. This meant that vessel surface activities covered under the EP may temporarily extend into Chevron's permit area WA-48-L adjacent to Woodside permits WA-34-L and WA-536-P.
  - Woodside confirmed it would notify AHO at least four weeks prior to activities where vessels would be in the Operational Area for more than three weeks at a time to enable AHO to issue maritime notices.
  - To reduce impact on adjacent titleholders, Woodside was proposing to include Chevron in additional activity notifications related to vessel activities and was seeking feedback on any other control measures Chevron may have related to vessel movements on the periphery of its titles. Chevron did not provide further feedback or request additional activity notifications.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Chevron confirmed it has no issues regarding the activities.	**(1)** **Woodside assessment:** Woodside noted Chevron had no issues with the activities. **Woodside response:** Woodside thanked Chevron for its feedback and confirming it has no issues with the activities.	**(1)** Not required.
(2) Requested further information should activities be undertaken during cyclone season	**(2)** **Woodside assessment:** Woodside noted that drilling is not currently planned to occur in cyclone season and will notify Chevron with mooring design information in the form of the mooring analysis if required. **Woodside response:** Woodside advised that should drilling occur with a moored MODU during cyclone season, it will provide Chevron with mooring design information.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Chevron for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:		

Sufficient information

Woodside has given Chevron sufficient information to allow Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Chevron on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided Chevron with information tailored to Chevron by GIS shape files relevant to the activity.
- On 9 April 2024, Chevron consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the Consultation Information Sheet, Woodside provided Chevron with additional tailored information regarding the potential impacts of the project on its functions, interests and activities (email of 2 May 2024).

Reasonable Period

Woodside allowed Chevron a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to Chevron advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Chevron 30 days for consultation.
- In this context, Woodside allowed Chevron a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Chevron is appropriate and adapted to the nature of interests of Chevron:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

- Woodside considers a reasonable opportunity was provided to Chevron as evidenced by its response on 9 April 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Chevron.
  - Made no changes or inclusions to the EP as a result of consultation with Chevron because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Western Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Western Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Western Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Western Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Western Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Gas sufficient information to allow Western Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Western Gas on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Gas a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Gas advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Western Gas.
- In this context, Woodside allowed Western Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Gas is appropriate and adapted to the nature of interests of Western Gas:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Western Gas of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Gas' functions, interests or activities.

Exxon Mobil Australia Resources

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Exxon Mobil Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Exxon Mobil Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Exxon Mobil Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Exxon Mobil Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exxon Mobil Australia sufficient information to allow Exxon Mobil Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Exxon Mobil Australia on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

- A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exxon Mobil Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exxon Mobil Australia advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exxon Mobil Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for Exxon Mobil Australia.
- In this context, Woodside allowed Exxon Mobil Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exxon Mobil Australia is appropriate and adapted to the nature of interests of Exxon Mobil Australia:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback , Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Exxon Mobil Australia of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exxon Mobil Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exxon Mobil Australia's functions, interests or activities.

Shell Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Shell Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Shell Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shell Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Shell Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shell Australia sufficient information to allow Shell Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Shell Australia on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shell Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shell Australia advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shell Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for Shell Australia.
- In this context, Woodside allowed Shell Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shell Australia is appropriate and adapted to the nature of interests of Shell Australia:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Shell Australia of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shell Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shell Australia's functions, interests or activities.

BP Developments Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed BP Developments Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to BP Developments Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to BP Developments regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 5 April 2024, BP Developments Australia emailed Woodside to acknowledge the consultation information received and confirmed it had no objections to the activities (SI Report, reference 31.1).
- **(1)** On 8 April 2024, Woodside thanked BP Developments Australia for its feedback and confirming it had no objections to the activities (SI Report, reference 31.2).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) BP Developments Australia confirmed it had no objections to the activities.	**(1)** **Woodside assessment:** Woodside noted BP Developments Australia had no objections to this EP. **Woodside response:** Woodside thanked BP Developments Australia for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with BP Developments Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shell Australia sufficient information to allow BP Developments Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to BP Developments Australia on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 5 April 2024, BP Developments Australia consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable BP Developments Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed BP Developments Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to BP Developments Australia advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed BP Developments Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for BP Developments Australia.
- In this context, Woodside allowed BP Developments Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with BP Developments Australia is appropriate and adapted to the nature of interests of BP Developments Australia:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding BP Developments Australia of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to BP Developments Australia as evidenced by its response on 5 April 2024 when it provided feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BP Developments Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from BP Developments Australia.
  - Made no changes or inclusions to the EP as a result of consultation with BP Developments because appropriate measures are already included in the EP.
- The measures and controls described in this EP address the potential impact from the proposed activity on BP Developments Australia's functions, interests or activities.

Carnarvon Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Carnarvon Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Carnarvon Energy, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Carnarvon Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Carnarvon Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Carnarvon Energy sufficient information to allow Carnarvon Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Carnarvon Energy on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Carnarvon Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Carnarvon Energy advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Carnarvon Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for Carnarvon Energy.
- In this context, Woodside allowed Carnarvon Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Carnarvon Energy is appropriate and adapted to the nature of interests of Carnarvon Energy:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Carnarvon Energy of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Carnarvon Energy did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Carnarvon Energy's functions, interests or activities.

PE Wheatstone

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed PE Wheatstone advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to PE Wheatstone, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to PE Wheatstone regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with PE Wheatstone for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PE Wheatstone sufficient information to allow PE Wheatstone to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to PE Wheatstone on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed PE Wheatstone a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to PE Wheatstone advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed PE Wheatstone 30 days for consultation. For consultation on EPs, 30 days is the usual period for PE Wheatstone.
- In this context, Woodside allowed PE Wheatstone a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with PE Wheatstone is appropriate and adapted to the nature of interests of PE Wheatstone:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding PE Wheatstone of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as PE Wheatstone did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

- The measures and controls described in this EP address the potential impact from the proposed activity on PE Wheatstone's functions, interests or activities.

Kyushu Electric Wheatstone

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Kyushu Electric Wheatstone advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Kyushu Electric Wheatstone, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Kyushu Electric Wheatstone regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Kyushu Electric Wheatstone for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Kyushu Electric Wheatstone sufficient information to allow Kyushu Electric Wheatstone to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Kyushu Electric Wheatstone on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Kyushu Electric Wheatstone a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Kyushu Electric Wheatstone advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Kyushu Electric Wheatstone 30 days for consultation. For consultation on EPs, 30 days is the usual period for Kyushu Electric Wheatstone.
- In this context, Woodside allowed Kyushu Electric Wheatstone a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Kyushu Electric Wheatstone is appropriate and adapted to the nature of interests of Kyushu Electric Wheatstone:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Kyushu Electric Wheatstone of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Kyushu Electric Wheatstone did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Kyushu Electric Wheatstone's functions, interests or activities.

Eni Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Eni Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Eni Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Eni Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 19 April 2024, Eni Australia emailed Woodside to advise it has no concerns regarding the activity (SI Report, reference 34.1).
- **(2)** Requested to be updated of any material changes (SI Report, reference 34.1).
- **(1,2)** On 22 April 2024, Woodside thanked Eni Australia for its feedback and confirmed it will provide Eni Australia with significant updates with respect to the proposed activities when relevant (SI Report, reference 34.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Eni Australia advised it has no concerns regarding this activity.	**(1)** **Woodside assessment:** Woodside noted Eni Australia had no concerns regarding this activity. **Woodside response:** Woodside thanked Eni Australia for its feedback.	**(1)** Not required.
(2) Requested to be updated of any material changes.	**(2)** **Woodside assessment:** Woodside will provide notifications to Eni and relevant stakeholders as outlined in Table 7-6 of this EP. **Woodside response:** Woodside confirmed it will contact Eni Australia with activity updates when relevant.	**(2)** Woodside will provide notification of significant change, as appropriate, to Eni Australia, as referenced in Table 7-6 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	No additional measures or controls are required.

	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Eni Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Eni Australia sufficient information to allow Eni Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Eni Australia on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 19 April 2024, Eni Australia consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Eni Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Eni Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Eni Australia advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed Eni Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for Eni Australia.
- In this context, Woodside allowed Eni Australia a reasonable period for consultation in preparation of the EP as evidenced by its response on 19 April 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Eni Australia is appropriate and adapted to the nature of interests of Eni Australia:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Eni Australia of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to Eni Australia as evidenced by its response on 19 April 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Eni Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Eni Australia.
  - Made no changes or inclusions to the EP as a result of consultation with Eni because appropriate measures are already included in the EP.
- The measures and controls described in this EP address the potential impact from the proposed activity on Eni Australia's functions, interests or activities.

Finder Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Finder Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 1 March 2024, Finder Energy emailed Woodside and advised it had no objections or feedback for this activity (SI Report, reference 8.1).
- (1) On 6 March 2024, Woodside thanked Finder Energy for its feedback (SI Report, reference 8.2).
- On 27 March 2024, Woodside provided an activity update to Finder Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 28 March 2024, Finder Energy emailed Woodside and confirmed it had no objections or comments following the update received (SI Report, reference 8.3).

- **(1)** On 2 April 2024, Woodside thanked Finder Energy for its feedback (SI Report, reference 8.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Finder Energy advised it had no objections or feedback for this activity.	**(1)** **Woodside assessment:** Woodside noted Finder Energy had no objections or feedback for this activity. **Woodside response:** Woodside thanked Finder Energy for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Finder Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Finder Energy sufficient information to allow Finder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Finder Energy on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 1 March 2024, Finder Energy consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Eni Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Finder Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Finder Energy advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Finder Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for Finder Energy.
- In this context, Woodside allowed Finder Energy a reasonable period for consultation in preparation of the EP as evidenced by its response on 1 March 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Finder Energy is appropriate and adapted to the nature of interests of Finder Energy:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Finder Energy as evidenced by its response on 1 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Finder Energy provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Finder Energy.
  - Made no changes or inclusions to the EP as a result of consultation with Finder Energy because appropriate measures are already included in the EP.
- The measures and controls described in this EP address the potential impact from the proposed activity on Finder Energy's functions, interests or activities.

Jadestone Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Jadestone Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Jadestone Energy, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Jadestone Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Jadestone Energy for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Jadestone Energy sufficient information to allow Jadestone Energy to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Jadestone Energy on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Jadestone Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Jadestone Energy advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Jadestone Energy 30 days for consultation. For consultation on EPs, 30 days is the usual period for Jadestone Energy.
- In this context, Woodside allowed Jadestone Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Jadestone Energy is appropriate and adapted to the nature of interests of Jadestone Energy:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Jadestone Energy of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Jadestone Energy did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Jadestone Energy's functions, interests or activities.

KUFPEC

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed KUFPEC advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to KUFPEC, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to KUFPEC regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 26 March 2024, KUFPEC emailed Woodside (SI Report, reference 25.1) and:
  - **(1)** asked Woodside to confirm the location coordinates of Xena-03 well.
  - **(2)** requested to be kept informed of any planned offshore interactions.
- On 27 March 2024, Woodside emailed KUFPEC (SI Report, reference 25.2) and:
  - **(1)** advised of an update to 4 well coordinates, including the Xena-03 well.
  - **(2)** confirmed it will inform KUFPEC prior to and on completion of activities.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) KUFPEC asked for confirmation on the Xena-03 well location.	**(1)** **Woodside assessment:** Woodside reviewed the information provided on the Consultation Information Sheet and the planned well locations to answer KUFPEC's question. **Woodside response:** Woodside provided KUFPEC with an update on 4 well locations, including Xena-03.	**(1)** Not required.
(2) KUFPEC requested to be kept informed of offshore activities as part of this EP.	**(2)** **Woodside assessment:** Woodside will provide notifications to KUFPEC and relevant stakeholders as outlined in Table 7-6 of this EP. **Woodside response:** Woodside confirmed it will inform KUFPEC prior to and on completion of activities.	**(2)** Woodside will provide notifications to KUFPEC (see Table 7-6 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.13 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	No additional measures or controls are required.

	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with KUFPEC for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given KUFPEC sufficient information to allow KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to KUFPEC on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 26 March 2024, KUFPEC consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable KUFPEC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed KUFPEC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to KUFPEC advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed KUFPEC 30 days for consultation. For consultation on EPs, 30 days is the usual period for KUFPEC.
- In this context, Woodside allowed KUFPEC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KUFPEC is appropriate and adapted to the nature of interests of KUFPEC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding KUFPEC of the opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to KUFPEC as evidenced by its response on 26 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KUFPEC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from KUFPEC.
  - Made no changes or inclusions to the EP as a result of consultation with KUFPEC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable. .

Santos NA Energy Holdings / Santos Ltd / Santos WA Northwest / Santos Offshore / Santos WA Southwest / Santos (BOL) / Santos WA PVG

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- **(1)** On 8 March 2024, Santos emailed Woodside and advised it had no comments for this EP (SI Report, reference 9.1).
- **(1)** On 1 March 2024, Woodside thanked Santos for its feedback (SI Report, reference 9.2).
- On 27 March 2024, Woodside provided an activity update to Santos regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Santos advised it had no comments on this EP.	**(1)** **Woodside assessment:** Woodside noted Santos had no comments for this EP. **Woodside response:** Woodside thanked Santos for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Santos for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Santos on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 8 March 2024, Santos consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation. For consultation on EPs, 30 days is the usual period for Santos.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Santos is appropriate and adapted to the nature of interests of Santos:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Santos as evidenced by its response on 8 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable. .

Coastal Oil and Gas / Fox Resources

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Coastal Oil and Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 29 February 2024, Woodside received a system generated email notification advising the email address used is not working. Woodside attempted to find new contact details for Coastal Oil and Gas.
- On 11 March 2024, Woodside emailed Fox Resources (Record of Consultation, reference 2.20) as the key Principal of Coastal Oil and Gas advising of the proposed activity, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Fox Resources, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Fox Resources regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Coastal Oil and Gas / Fox Resources for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Coastal Oil and Gas / Fox Resources sufficient information to allow Coastal Oil and Gas / Fox Resources to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Coastal Oil and Gas / Fox Resources on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Coastal Oil and Gas / Fox Resources a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Coastal Oil and Gas / Fox Resources advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Coastal Oil and Gas / Fox Resources 30 days for consultation. For consultation on EPs, 30 days is the usual period for Coastal Oil and Gas / Fox Resources.
- In this context, Woodside allowed Coastal Oil and Gas / Fox Resources a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Coastal Oil and Gas / Fox Resources is appropriate and adapted to the nature of interests of Coastal Oil and Gas / Fox Resources:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Coastal Oil and Gas / Fox Resources of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Coastal Oil and Gas / Fox Resources did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Coastal Oil and Gas / Fox Resources' functions, interests or activities.

Bounty Oil and Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Bounty Oil and Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Bounty Oil and Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Bounty Oil and Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Bounty Oil and Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Bounty Oil and Gas sufficient information to allow Bounty Oil and Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Bounty Oil and Gas on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Bounty Oil and Gas a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Bounty Oil and Gas advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Bounty Oil and Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Bounty Oil and Gas.
- In this context, Woodside allowed Bounty Oil and Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Bounty Oil and Gas is appropriate and adapted to the nature of interests of Bounty Oil and Gas:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Bounty Oil and Gas of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Bounty Oil and Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Bounty Oil and Gas' functions, interests or activities.

OMV Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed OMV Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to OMV Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to OMV Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with OMV Australia for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given OMV Australia sufficient information to allow OMV Australia to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to OMV Australia on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed OMV Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to OMV Australia advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed OMV Australia 30 days for consultation. For consultation on EPs, 30 days is the usual period for OMV Australia.
- In this context, Woodside allowed OMV Australia a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with OMV Australia is appropriate and adapted to the nature of interests of OMV Australia:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding OMV Australia of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as OMV Australia did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on OMV Australia's functions, interests or activities.

KATO Energy / KATO Corowa

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed KATO advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to KATO, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to KATO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with KATO for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given KATO sufficient information to allow KATO to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to KATO on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed KATO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to KATO advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed KATO 30 days for consultation. For consultation on EPs, 30 days is the usual period for KATO.

- In this context, Woodside allowed KATO a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KATO is appropriate and adapted to the nature of interests of KATO:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding KATO of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as KATO did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on KATO's functions, interests or activities.

INPEX Alpha

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed INPEX advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to INPEX, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to INPEX regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

	Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with INPEX for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given INPEX sufficient information to allow INPEX to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to INPEX on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed INPEX a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to INPEX advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed INPEX 30 days for consultation. For consultation on EPs, 30 days is the usual period for INPEX.
- In this context, Woodside allowed INPEX a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with INPEX is appropriate and adapted to the nature of interests of INPEX:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding INPEX of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as INPEX did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on INPEX's functions, interests or activities.

JX Nippon O&G Exploration (Australia)

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed JX Nippon O&G Exploration advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to JX Nippon O&G Exploration, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to JX Nippon O&G Exploration regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with JX Nippon O&G Exploration for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given JX Nippon O&G Exploration sufficient information to allow JX Nippon O&G Exploration to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to JX Nippon O&G Exploration on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed JX Nippon O&G Exploration a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to JX Nippon O&G Exploration advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed JX Nippon O&G Exploration 30 days for consultation. For consultation on EPs, 30 days is the usual period for JX Nippon O&G Exploration.
- In this context, Woodside allowed JX Nippon O&G Exploration a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with JX Nippon O&G Exploration is appropriate and adapted to the nature of interests of JX Nippon O&G Exploration:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding JX Nippon O&G Exploration of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as JX Nippon O&G Exploration did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on JX Nippon O&G Exploration's functions, interests or activities.

Vermilion Oil and Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Vermilion Oil and Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Vermilion Oil and Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Vermilion Oil and Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Vermilion Oil and Gas for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vermilion Oil and Gas sufficient information to allow Vermilion Oil and Gas to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Vermilion Oil and Gas on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Vermilion Oil and Gas a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Vermilion Oil and Gas advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Vermilion Oil and Gas 30 days for consultation. For consultation on EPs, 30 days is the usual period for Vermilion Oil and Gas.
- In this context, Woodside allowed Vermilion Oil and Gas a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vermilion Oil and Gas is appropriate and adapted to the nature of interests of Vermilion Oil and Gas:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Vermilion Oil and Gas of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Vermilion Oil and Gas did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Vermilion Oil and Gas' functions, interests or activities.

Beagle No.1

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Beagle No.1 advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to Beagle No.1, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Beagle No.1 regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Beagle No.1 for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Beagle No.1 sufficient information to allow Beagle No.1 to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Beagle No.1 on 28 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Beagle No.1 a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Beagle No.1 advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Beagle No.1 30 days for consultation. For consultation on EPs, 30 days is the usual period for Beagle No.1.
- In this context, Woodside allowed Beagle No.1 a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Beagle No.1 is appropriate and adapted to the nature of interests of Beagle No.1:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding Beagle No.1 of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Beagle No.1 did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

- The measures and controls described in this EP address the potential impact from the proposed activity on Beagle No.1's functions, interests or activities.

Peak Industry representative bodies

Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 2.21), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, as no response had been received, Woodside proactively sent an email reminder to AEP, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AEP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with AEP for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Beagle No.1 sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to AEP on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

- A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AEP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AEP advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AEP 30 days for consultation. For consultation on EPs, 30 days is the usual period for AEP.
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 18 March 2024, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

Traditional Custodians and nominated representative corporations

Murujuga Aboriginal Corporation (MAC)

MAC is established under the BMIEA and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Woodside has an existing relationship with MAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to MAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with MAC who is responsible for building a consultative relationship and is readily available to provide information and take feedback.

On 27 August 2018, MAC and the WA Government announced it was pursuing World Heritage Listing for the Murujuga Cultural Landscape. As such, Woodside considers MAC the appropriate body to consult with about matters relating to Murujuga as a potential World Heritage site.

For consultation on this EP, Woodside contacted MAC and offered to present to members and the MAC Board. Woodside asked MAC how it wished to be consulted, if it required support to participate in consultation, if there were any additional groups that MAC believed should be consulted and requested that all information shared with MAC be cascaded to its members.

Aside from regular consultation about EPs, Woodside invites MAC to Woodside's Quarterly Heritage Meetings and monthly Community Luncheons. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs during its engagement with MAC.

This context and process demonstrates that Woodside's consultation approach with MAC is appropriate and adapted to the nature and interests of MAC.

Historical Engagement:

- On 18 July 2023, Woodside emailed MAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. Woodside requested that MAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed MAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.
- On 21 August 2023, Woodside emailed MAC seeking MAC's cultural clarifications about information in relation to Elder status and whether cultural information about Murujuga can be held by individuals and not known to others.
- **(1)** On 1 September 2023, MAC emailed a letter to Woodside noting the following:
  - The women in its Circle of Elders are the right people to consult with.
  - MAC notes that it would be extremely unusual for knowledge to be held by an individual without surrounding groups knowing about it.
  - The Circle of Elders represent the Ngarda-Ngarli; the collective term for the Traditional Custodians who look after Murujuga Country.
- **(1)** On 14 December 2023, Woodside met with the MAC Board, Circle of Elders and CEO in Karratha. During the meeting MAC reconfirmed it was the cultural authority over Murujuga.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 2.27), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that MAC and its members may have within the EMBA, information on how MAC would like to engage, and requested that MAC provide information to other individuals as required. Woodside requested MAC provide feedback by 29 March 2024.
- On 23 April 2024, Woodside emailed MAC to follow up on this activity, to offer further information, answer queries or attend a meeting if required (SI Report, reference 14.1).
- On 23 April 2024, MAC and Woodside exchanged emails. MAC indicated it would refer the matter to an appropriate person to respond and Woodside again offered to support MAC through the consultation process (SI Report, references 14.2, 14.3).
- On 23 April 2024, MAC emailed Woodside (SI Report, reference 14.4) and raised the following:
  - **(2)** The lack of broader-scale bathymetric information on the submerged landscape and the potential for impact on jinna (songlines).
  - **(3)** That MAC had no specific knowledge of tangible or intangible heritage that may be impacted.
  - **(4)** The size of the EMBA and management procedures in place to protect cultural values in addition to environmental values.
  - **(5)** That the EP capture a process for engaging with MAC to protect cultural, heritage and Outstanding Universal Values in the event of an incident.
  - **(6)** That it recommended Woodside also consult Ngarluma Aboriginal Corporation.
- On 26 April 2024, Woodside emailed MAC advising it would seek information to respond to MAC's feedback (SI Report, reference 14.5).
- On 8 May 2024, Woodside emailed MAC to provide further information (SI Report, reference 14.6) including:
  - **(2)** Woodside's continued support to work with MAC to undertake mapping of areas significant to MAC.
  - **(2)** Woodside's continued support to undertake further ethnographic surveys focussed on jinna at MAC's convenience.
  - **(3)** That Woodside welcomed MAC's advice on identifying cultural features and values in the absence of information from further surveys and mapping.
  - **(4)** How the EMBA is determined.
  - **(5)** How Woodside uses modelling to develop response plans in the unlikely event of an incident, including notification requirements to Traditional Custodians.
  - **(6)** That Woodside has also consulted with Ngarluma Aboriginal Corporation on this activity.

Ongoing Engagement:

- On 2 August 2024, MAC emailed Woodside a letter relating to another EP (SI Report, reference 14.7). Matters relating to this EP include:
  - **(7)** MAC's advice that activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values.
  - **(8)** MAC's request that the protection of environmental values be assessed separately from the protection of cultural values.
  - **(9)** That MAC expects to be consulted about any activity located near Murujuga and informed if there is an environmental incident whereby Murujuga falls within the possible impact zone.
- **(9)** On 2 August 2024, Woodside responded to MAC's email confirming it would inform MAC of all projects located near Murujuga and in the very unlikely case of an

environment incident (SI Report, reference 14.8).

- On 9 September 2024, Woodside invited MAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 14.9).
- On 17 September 2024, Woodside emailed MAC responses to matters raised in correspondence on 2 August 2024 (SI Report, reference 14.10). The letter stated:
  - **(7,8)** Woodside assesses potential cultural impacts on marine species including controls for mammal migration paths and behaviour collaboratively with environmental impacts.
  - **(9)** Woodside actively seeks ongoing engagement and consultation with MAC on its cultural interests, activities and functions.
  - Woodside is available to meet with MAC.
- On 25 September 2024, MAC attended Woodside's monthly luncheon for Traditional Owners (SI Report, reference 14.11). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 3 October 2024, Woodside invited MAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 14.12).
- On 23 October 2024, Traditional Owner members from MAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 14.13).
- On 21 November 2024, NYFL emailed Woodside a letter advising that due to the passing of a Senior Elder, Sorry Business was underway in the Roebourne area (SI Report, reference 14.14).
- On 4 March 2025, Woodside invited MAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 5 March 2025 (SI Report, reference 14.15).
- On 5 March 2025, Traditional Owner members from MAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 14.16).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) On 1 September 2023, MAC advised that it was the appropriate body corporate and cultural authority over Murujuga.	**(1)** **Woodside assessment:** Woodside accepts and respects MAC's position as the appropriate body corporate and cultural authority over Murujuga. **Woodside response:** Woodside continues to consult and engage with MAC as the appropriate body corporate and cultural authority over Murujuga.	**(1)** Not required.
(2) On 23 April 2024, MAC raised that there was a lack of broader-scale bathymetric information for the trunkline	**(2)** **Woodside Assessment:** Woodside acknowledges MAC's position that there is a lack of bathymetric information. Woodside	**(2)** Cultural features and heritage values including jinna (songlines) are identified and assessed in

area and the impact on jinna (songlines).	notes that this EP is for continued operation of existing infrastructure. The EP includes the Unexpected Finds Procedure (Section 7.8) which addresses the risk of discovery of potential underwater cultural material. **Woodside Response:** Woodside has previously proposed to MAC that MAC work to determine a scope of works to determine further bathymetric information on the area. This proposal is under consideration by MAC and Woodside remains supportive of undertaking this work. Woodside also remains supportive of conducting further ethnographic surveys with MAC, following the initial phase of works in 2020 which focussed on jinna and their connection from Murujuga to inland areas.	Sections 4.9 and 6.11 of the EP.
(3) On 23 April 2024, MAC advised it had no specific knowledge of tangible or intangible heritage that might be impacted.	**(3)** **Woodside Assessment:** Woodside uses multiple sources of information including publicly available literature, heritage databases and feedback from consultation in order to identify tangible and intangible cultural features of the environment, as described in Sections 4.9 and 6.11. **Woodside Response:** Woodside recognises the difficulty MAC faces in identifying tangible and intangible heritage on the submerged continental shelf in the absence of bathymetric mapping and ethnographic assessment of the results. In June 2023 Woodside proposed a project to MAC that would undertake mapping of areas identified by MAC as a priority in understanding this landscape. MAC has not accepted this proposal and through several meetings with MAC between July 2023 and February 2024 Woodside understands that MAC intends to issue a modified proposal to conduct this work.	**(3)** Cultural features and heritage values are identified and assessed in Sections 4.9 and 6.11 of the EP.
(4) On 23 April 2024, MAC noted the size of the EMBA and management procedures in place to protect cultural values.	**(4)** **Woodside Assessment**: Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside welcomes any advice MAC provides on identifying cultural	**(4)** Woodside has addressed oil spill preparedness and response strategy in Appendix H.

	features or heritage values within the EMBA. **Woodside Response:** The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.9 of the EP, and Appendix I.	
(5) On 23 April 2024, MAC advocated for a process for engagement to protect cultural heritage and Outstanding Universal values in the event of an incident.	**(5)** **Woodside Assessment:** Woodside accepts MAC's advice on the need for engagement in the event of an incident. **Woodside Response:** Consultation with relevant Traditional Custodian representatives, including MAC, in the event of an incident is already anticipated under our oil spill response plan.	**(5)** Woodside has addressed oil spill preparedness and response strategy in Appendix H.
(6) On 23 April 2024, MAC advised that Woodside should consult with Ngarluma Aboriginal Corporation.	**(5)** **Woodside Assessment:** Woodside accepts MAC's advice on the need to consult with NAC. **Woodside Response:** Woodside has consulted with NAC as a relevant person for this EP.	**(5)** Woodside has consulted with NAC as outlined in Appendix F.
(7) During ongoing engagement, MAC advised Woodside that any activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values.	**(7)** **Woodside assessment:** When developing EPs, Woodside considers potential cultural impacts on marine species including impacts and associated controls for marine mammal migration paths and behaviour. **Woodside response:** Woodside recognises that whales and other species of totemic importance need to be protected, including their populations and migration patterns. As assessed in Section 6, Woodside considers that when the impacts and risks to marine species, including potential totemic species, have been reduced to ALARP and an acceptable level in offshore areas, the potential impacts and risks to cultural values associated with coastal Indigenous connection with, or traditional uses of marine species and associated ecosystems in nearshore coastal waters	**(7)** Woodside has assessed impacts and risks to marine species in Section 6 of the EP. Items relating to MAC appear in section 4.9.

	are also reduced to ALARP and an acceptable level.	
(8) During ongoing engagement, MAC stated that the protection of environmental values should be assessed separately from the protection of cultural values in EPs.	**(8)** **Woodside assessment:** Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively. **Woodside response:** Woodside has responded to MAC and informed it that environmental and cultural impacts have been assessed both individually and collaboratively**.**	**(8)** Woodside's First Nations Cultural Features and Heritage Values Assessment is in section 6.11.
(9) During ongoing engagement MAC stated that it expects to be consulted about any activity located near Murujuga and contacted in the event of an environmental incident whereby Murujuga falls within the possible impact zone.	**(9)** **Woodside assessment:** Woodside acknowledges MAC's advice that it should be consulted about any activity located near Murujuga and in the unlikely case of an environmental incident. **Woodside response:** Woodside has advised MAC that it will inform MAC of projects proposed on Murujuga.	**(9)** Under Woodside's methodology for identifying relevant persons, MAC is considered a relevant person for EPs with an EMBA covering/in proximity to Murujuga. Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H of the EP. Woodside's Oil Pollution First Strike Plan is in Appendix I of the EP Woodside's emergency response protocols (Section 7.14) include a review of potentially impacted stakeholders, including Traditional Owners. Woodside engages with Traditional Owners for applicable events.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2)	Based on the engagement to date, no additional measures or controls are required.
Summary Report: Consultation Complete		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with MAC for the purpose of regulation 25 is		

complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given MAC sufficient information to allow MAC to make an informed assessment of the possible consequences of the activity on MAC's functions, interests and activities because:

- Woodside has been consulting with MAC generally since 2018. There have been numerous meetings with MAC and the Circle of Elders since that time.
- Woodside has given MAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- Woodside provided information to MAC on 1 March 2024 (when Woodside commenced consulting with MAC on this EP) and subsequently on 23 April 2024. Woodside provided MAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing
    - Maps showing the location and EMBA
    - A summary of the risks and impacts of the activity
    - Diagrams
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of MAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked MAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to MAC if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

Woodside allowed MAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with MAC in March 2024 and provided information the EP on that date. Since then, Woodside and MAC have engaged in consultation for 14 months demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to MAC during Woodside's initial email on 1 March 2024. MAC was asked to provide feedback by 29 March 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.

- Woodside provided MAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside notes that during consultation, it also respectfully paused consultation in periods when MAC was observing Sorry Business or cultural matters.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for MAC's input into how MAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 1 March 2024:
  - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with MAC members as well as the MAC Board.
  - Asked MAC to advise how it would like Woodside to engage and whether MAC required further information.
- Woodside offered to meet MAC on a number of occasions.
- Woodside asked MAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. MAC identified Ngarluma Aboriginal Corporation (NAC) as a relevant group to consult. Woodside is already consulting with NAC on this EP.
- Woodside has provided a reasonable opportunity for input as evidenced by its initial email to MAC about the activity on 1 March 2024 and follow-up email on 23 April 2024. A genuine two-way dialogue has occurred via written exchanges to further understand the environment in which the activity will take place. Woodside's ongoing relationship with MAC is evidenced by MAC's emails to Woodside on 23 April and 2 August 2024 in which MAC provided relevant information about cultural values and consultation requirements. Woodside has accepted this feedback and has incorporated it in the EP.

Outcomes of consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- MAC raised that there was a lack of broader-scale bathymetric information for the trunkline area and the impact on jinna (songlines). Woodside notes that this EP is for continued operation of existing infrastructure. The EP includes the Unexpected Finds Procedure (Section 7.8) which addresses the risk of discovery of potential underwater cultural material. Cultural features and heritage values including jinna (songlines) are identified and assessed in Sections 4.9 and 6.11 of the EP.
- MAC advised it had no specific knowledge of tangible or intangible heritage that might be impacted. Woodside uses multiple sources of information including publicly available literature, heritage databases and feedback from consultation in order to identify tangible and intangible cultural features of the environment, as described in Sections 4.9 and 6.11.
- MAC noted the size of the EMBA and management procedures in place to protect cultural values. MAC advocated for a process for engagement to protect cultural heritage and Outstanding Universal values in the event of an incident. Woodside has addressed oil spill preparedness and response strategy in Appendix H.

- MAC advised Woodside that any activities that could potentially affect the natural movement or behaviour of marine species may impact cultural values. Woodside has assessed impacts and risks to marine species in Section 6 of the EP. Items relating to MAC appear in section 4.9.
- MAC stated that the protection of environmental values should be assessed separately from the protection of cultural values in EPs. Woodside undertakes assessments for both environmental and cultural values. These are considered both individually and collaboratively. Woodside's First Nations Cultural Features and Heritage Values Assessment is in section 6.11.
- MAC stated that it expects to be consulted about any activity located near Murujuga and contacted in the event of an environmental incident whereby Murujuga falls within the possible impact zone. Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H of the EP. Woodside's Oil Pollution First Strike Plan is in Appendix I of the EP. Woodside engages with Traditional Owners for applicable events.
- Woodside engages with ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of the EP). Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on MAC's functions, interests or activities.

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the Native Title Act 1993 by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NTGAC that extends to a period prior to consultation for this EP. Woodside's consultation approach for NTGAC and Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NTGAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with NTGAC who is responsible for building a relationship and is available to provide information and take feedback.

Aside from regular consultation about EPs, Woodside invites NTGAC to Woodside's Quarterly Heritage Meetings and monthly Community Luncheons. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs during its engagement with NTGAC, including on this EP. Woodside made multiple offers during consultation for this EP to meet with NTGAC. This led to a half-day meeting in Carnarvon, a location of NTGAC's choice (see 12 September 2024). YMAC is the NTRB for the Aboriginal corporations in the Yamatji and Pilbara regions, including NTGAC. NTRBs exist to provide assistance to native title claimants and holders in relation to their native title rights.

As part of its ongoing consultation and relationship building, Woodside provided NTGAC via YMAC a 7-page consultation framework agreement in February which sought from NTGAC, confirmation as to how NTGAC would like to be consulted, including NTGAC's views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. During consultation for this EP, Woodside agreed to pay reasonable costs for YMAC to review this draft agreement. While an agreement like this is useful to outline consultation norms for NTGAC, Woodside has noticed that there appears to be limited appetite from groups like NTGAC to enter in a framework agreement that sets this position out in an agreement form. While Woodside has continued to attempt to progress the framework agreement, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation on this EP from progressing in parallel to discussions on the framework agreement.

This context and process demonstrates that Woodside's consultation approach with NTGAC is appropriate and adapted to the nature of and interests of NTGAC.

Historical Engagement:

- On 19 July 2023, Woodside emailed NTGAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NTGAC via YMAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*, noting that Woodside's Program would complement what is proposed in NTGAC's proposed Framework.

  Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 20 March 2024, Woodside emailed NTGAC via YMAC advising of the proposed activity (Record of Consultation, reference 2.28), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required. Woodside asked NTGAC/YMAC to provide feedback before 18 April 2024.
- On 26 March 2024, NTGAC/YMAC emailed Woodside with an out of office message advising the recipient was on leave until 2 April 2024 and providing a contact for urgent queries (SI Report, reference 15.1).
- On 12 April 2024, Woodside emailed NTGAC/YMAC to offer further information and any assistance required including a meeting or discussion (SI Report, reference 15.2).
- Between 16 May and 19 June 2024, Woodside and NTGAC/YMAC exchanged emails about a request by Woodside to meet with the NTGAC Board to discuss EPs (SI Report, references 15.3, 15.4, 15.5 15.6, 15.7) While the possibility of Woodside attending NTGAC's July Board meeting was briefly mentioned, this meeting did not go ahead. Woodside and NTGAC instead met in September 2024.

Ongoing Engagement

- Between 27 June and 10 July 2024, Woodside and NTGAC/YMAC exchanged emails about a draft consultation agreement provided by Woodside in February. **(1)** NTGAC/YMAC requested Woodside pay costs associated with reviewing the agreement. **(1)** During the exchange Woodside agreed to pay costs quoted by NTGAC/YMAC to review the agreement (SI Report 15.8, 15.9, 15.10, 15.11).
- Between 30 July and 20 August 2024, NTGAC via YMAC and Woodside exchanged emails to arrange a half day meeting on 12 September 2024 in Carnarvon (SI Report, references 15.12, 15.13, 15.14).
- On 6 September 2024, Woodside spoke to NTGAC on the phone (SI Report, reference 15.15). Matters discussed relevant to this EP include:
  - The agenda for the 12 September 2024 meeting including EPs intended to be presented.
  - NTGAC thanked Woodside for efforts in making a personal connection.
- Between 10 September and 11 September 2024, Woodside and NTGAC via YMAC exchanged emails about meeting on 12 September 2024 (SI Report, references 15.16, 15.17, 15.18, 15.19, 15.20, 15.21, 15.22.
- On 12 September 2024, Woodside and NTGAC/YMAC met (SI Report, reference 15.23). Matters discussed that were relevant to this EP include:

- Woodside confirmed attendees were familiar with EPs and NOPSEMA. Attendees acknowledged they were.
- Woodside displayed a map of its activities in WA.
- Woodside explained the EP consultation process.

- On 3 October 2024, Woodside emailed NTGAC an invitation to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 15.24).
- On 5 December 2024, Woodside emailed NTGAC/YMAC an update on this activity (SI Report, reference 15.25). Woodside:
  - Informed NTGAC/YMAC that Woodside would resubmit this EP for further assessment by NOPSEMA.
  - Notified NTGAC/YMAC that consultation for this EP would close on 19 December 2024 and that feedback provided by that date would be reflected in the EP and considered by NOPSEMA.
  - Acknowledged discussions relating to framework agreements had been ongoing since August 2023 but consultation had occurred in parallel for this EP.
  - Provided an attachment (Attachment A) outlining:
    - **(2)** NTGAC had requested information about whale sightings and response
    - **(2)** Woodside provided an EP reference to potential impacts to marine fauna.
    - **(3)** NTGAC had requested information about ballast water discharges.
    - **(3)** Woodside provided an EP reference to potential impacts from ballast water transfer.
  - Woodside stated:
    - That NTGAC/YMAC was welcome to state its preferred method of consultation including whether it would like to meet face-to-face.
    - That Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.
- On 10 March 2025, Woodside emailed NTGAC/YMAC to correct EP references provided in its email on 5 December 2024 (SI Report 15.26). Woodside:
  - Directed NTGAC/YMAC to the published Pluto Operations EP on NOPSEMA's website and provided correct references to:
    - **(2)** Whale sighting reporting and controls.
    - **(3)** Woodside's assessment of potential impacts from ballast water transfer.
  - Explained that there could be slight changes to the numbering of these references when Woodside submits an updated version of the EP to NOPSEMA.
  - Explained that while consultation had closed for the purposes of preparing the EP, feedback could continue to be provided during the life of the EP.
  - Invited NTGAC/YMAC to contact Woodside for more information.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**

(1) NTGAC/YMAC has requested Woodside pay costs associated with reviewing a consultation agreement draft	**(1)** **Woodside assessment:** Woodside is supportive of a sustainable consultation framework and has a commitment to ongoing consultation with Traditional Custodians for the life of an EP. Woodside pays reasonable costs for consultation. **Woodside response:** Separate from consultation for this activity under regulation 25 of the Environment Regulations, Woodside has sent a draft agreement to NTGAC via YMAC in February 2024. This would be used to frame ongoing consultation to occur as part of Woodside's commitment to consultation post regulation 25 of the Environment Regulations. The draft agreement is under review by NTGAC/YMAC and Woodside has agreed to pay reasonable costs associated with this.	**(1)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs (Appendix G). This includes continued engagement regarding NTGAC and Woodside's proposed draft Consultation Agreement and potential opportunities for alignment with NTGAC's Strategic Plan. Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as required by the implementation strategy as set out in regulation 35(7) of the Environment Regulations.
(2) During consultation about previous EPs, NTGAC requested information about whale sightings and response.	**(2)** **Woodside assessment:** Woodside has incorporated NTGAC's feedback into this EP. **Woodside response:** Woodside has informed NTGAC about how this feedback has been incorporated into the EP. On 10 March 2025, Woodside directed NTGAC to the published EP on NOPSEMA's website and provided correct references to whale sighting reporting and controls.	**(2)** Woodside has described whale sighting reporting in Section 7.13.3.2 in the published EP on the NOPSEMA website and 7.13.3.2 in this submission to NOPSEMA. Controls in response to whale sightings are listed in Section 6.7.3 in the published EP on the NOPSEMA website and 6.7.3 in this submission to NOPSEMA.
(3) During consultation about previous EPs, NTGAC requested information about ballast water discharges.	**(3)** **Woodside assessment:** Woodside has incorporated NTGAC's feedback into this EP. **Woodside response:** Woodside has informed NTGAC about how this feedback has been incorporated into the EP. On 10 March 2025, Woodside directed NTGAC to the published EP on NOPSEMA's website and provided correct references to potential impacts from ballast water transfer.	**(3)** Woodside has addressed potential impacts from ballast water transfer in Section 6.9.10 of the published EP on the NOPSEMA website and 6.9.10 in this submission to NOPSEMA.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Based on the engagement to date, no additional measures or controls are required.
Summary Report: Consultation Complete		

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside provided NTGAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 20 March 2024, Woodside commenced consultation with NTGAC on this EP. Woodside provided NTGAC:
  - A Summary Information sheet. developed specifically for First Nations groups and reviewed by a Woodside First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing
    - Maps showing the location and EMBA
    - A summary of the risks and impacts of the activity
    - Diagrams
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NTGAC's interests and how the activity could potentially impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked NTGAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to NTGAC if required.
- Woodside followed-up with NTGAC on 12 April 2024 and made repeated offers to meet to discuss this EP and others. This led to a meeting in Carnarvon on 12 September 2024.
- On 5 December 2024, Woodside advised NTGAC/YMAC that it would resubmit the EP. Woodside again provided NTGAC/YMAC with information relating to this EP and invited NTGAC/YMAC to provide feedback no later than 19 December 2024. Woodside also advised that consultation for this EP had run in parallel to discussions about consultation framework agreements.
- On 10 March 2025, Woodside emailed NTGAC/YMAC a correction to EP reference numbers provided in the 5 December 2024 email.

Reasonable Period

Woodside allowed NTGAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with NTGAC in March 2024 and provided further information on the EP on that date. Since then, Woodside and NTGAC have engaged in consultation for 14 months demonstrating a “reasonable period” of consultation, where a genuine two-way dialogue has occurred during both written and face-to-face exchanges on this EP.
- A consultation period was communicated to NTGAC during Woodside’s initial email on 20 March 2024. NTGAC was asked to provide feedback by 18 April 2024 in-line with Woodside’s methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided NTGAC with two months to consult ahead of Woodside preparing the EP and continues to take feedback in relation to the EP.
- Woodside provided NTGAC/YMAC an additional two-weeks in December to provide feedback ahead of the EP being resubmitted to NOPSEMA.

Reasonable Opportunity

Woodside allowed NTGAC a reasonable period for consultation in the preparation of this EP because:

- Woodside asked for NTGAC’s input into how NTGAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for NTGAC and First Nations groups more generally.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside has an existing relationship with NTGAC and both Woodside and NTGAC commonly use email to consult and correspond. Woodside also engages with NTGAC in face-to-face meetings, at forums and in phone calls.
- Woodside’s initial email about this EP on 20 March 2024:
  - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a focal person from Woodside’s First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NTGAC members as well as the NTGAC Board.
  - Asked NTGAC to advise how it would like Woodside to engage and whether NTGAC required further information.
- Woodside met with NTGAC on 12 September 2024. The meeting was attended by Woodside’s First Nations Engagement team focal person and environmental subject matter experts who were available to answer questions and provide specialist information. This was done deliberately so that information could be provided to NTGAC in a way that enabled NTGAC to understand the information (in a time frame and with questions controlled by NTGAC).
- Woodside asked NTGAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside provided NTGAC/YMAC a further opportunity in December 2024 to provide feedback ahead of resubmitting this EP to NOPSEMA.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 14 months NTGAC has not provided feedback about this EP.

- During consultation about previous EPs, NTGAC has sought information about whale sightings and response and ballast water discharges. Woodside has addressed these matters in the EP and provided references to NTGAC.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NTGAC's functions, interests or activities.

Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the Native Title Act 1993 by the Thalanjyi people to represent the Thalanjyi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has been working with BTAC for more than two years. Woodside's consultation approach for Traditional Custodians has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to BTAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with BTAC who is responsible for building a consultative relationship and is available to provide information and take feedback from BTAC.

On 13 October 2023, BTAC appointed a legal representative and requested that Woodside correspond with both the CEO and BTAC's legal representative moving forward. In some instances, during the course of consultation, BTAC's legal representative raised items in relation to legal fees and indemnity agreements. Woodside confirmed it would not action these requests as they did not fall within Woodside's policies and procedures. BTAC's legal representative also maintained a strong focus on agreements rather than consultation. Despite this, Woodside remained open to consult on this EP and consultation for this EP did not cease during this period and was not impeded during this process.

As part of its ongoing consultation and relationship building, Woodside provided BTAC with a 7-page consultation framework agreement which sought from BTAC, confirmation as to how BTAC would like to be consulted, including BTAC's views of what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While an agreement like this is useful to outline consultation norms for BTAC, Woodside has noticed that there appears to be limited appetite from groups like BTAC to enter in a framework agreement that sets this position out in an agreement form. We note, however, that this has not prevented consultation progressing in parallel to discussions on the framework agreement.

Woodside has offered BTAC financial support for Sea Country mapping. Woodside is still working with BTAC for the scope of this mapping (most recently in July 2024).

Historical Engagement:

- On 20 February 2023, BTAC emailed Woodside a letter in relation to another project but relevant to all Woodside activities in the Pilbara including the footprint of this activity. BTAC stated that :

- **(1)** BTAC on behalf of the Thalanyji people had an enduring deep connection to Sea Country north of Onslow, extending out to islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel islands.
- **(2)** BTAC sought support from Woodside to enable it to define and articulate is Sea Country values in a manner that could be more clearly understood by the offshore sector.

- On 19 July 2023, Woodside emailed BTAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that BTAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed BTAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.
- **(1, 2)** On 31 July 2023, in response to BTAC's request for support, Woodside emailed 3 letters to BTAC, one of which outlined support for an ethnographic assessment to:
  - Identify Sea Country values generally sufficient to inform all Woodside EPs.
  - Identify any work necessary to clarify or define the offshore areas that are relevant to the Thalanyji People.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) and Scarborough Offshore Facility and Trunkline (Operations) EP (Appendix F and SI Report currently under assessment by NOPSEMA) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed BTAC via its legal representative advising of the proposed activity (Record of Consultation, reference 2.29), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that BTAC and its members may have within the EMBA, information on how BTAC would like to engage, and requested that BTAC provide information to other individuals as required Woodside requested feedback by 29 March 2024.
- On 5 March 2024, BTAC via its legal representative emailed Woodside to request a face-to-face meeting for consultation on this activity (SI Report reference 16.1).
- On 6 March 2024, Woodside emailed BTAC (via its legal representative) to indicate its willingness to meet face-to-face and to request a suitable meeting date (SI Report reference 16.2).
- On 11 March 2024, BTAC via a legal representative emailed Woodside to advise it had appointed a Woodside NOPSEMA Engagement Committee (SI Report reference 16.3).
- On 26 March 2024, Woodside emailed BTAC another notification of this activity and attached a Summary Information Sheet (SI Report reference 16.4).
- On 27 March 2024, BTAC via a legal representative emailed Woodside in response to another activity but attaching the initial email and response from this activity, advising BTAC wished to consult in a face-to-face meeting (SI Report reference 16.5).
- On 27 March 2024, Woodside emailed BTAC via a legal representative thanking BTAC for its email and indicating it would await BTAC's advice on a suitable meeting date (SI Report, reference 16.6).
- Between 15 – 22 April 2024, BTAC and Woodside exchanged emails (SI Report, references 16.7, 16.8, 16.9, 16.10, 16.11) to confirm Woodside would attend a meeting with BTAC Directors on 22 May 2024.

- On 22 May 2024, Woodside and BTAC met for the purpose of consulting on EPs, including this activity (SI Report, reference 16.12). Matters discussed included:
  - An overview of the Pluto Operations activity including the EMBA and possible impacts. No questions were raised.
  - **(3)** BTAC queried support to engage a third-party independent expert to interpret EPs due to an internal lack of expertise.
  - **(2)** Woodside's ongoing commitment to support BTAC to articulate their Sea Country values.
  - Woodside's interest in understanding BTAC's thoughts on any additional steps for the management of heritage.

Ongoing Engagement

- **(2, 3)** On 13 June 2024, Woodside emailed BTAC to request an update on how Woodside can assist BTAC to articulate Sea Country values, and offering continued support for this work and an ethnographic survey (SI Report, reference 16.13).
- **(2)** Between 19 June and 31 July 2024, Woodside and BTAC exchanged emails BTAC's proposed scope for Sea Country mapping (SI Report, references 16.14, 16.15, 16.16, 16.17, 16.18, 16.19)
- On 9 September 2024, Woodside invited BTAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 16.20).
- On 3 October 2024, Woodside invited BTAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 16.21).
- On 18 November 2024, Woodside emailed BTAC in relation to a meeting that had occurred on 15 November 2024 about a matter not related to this EP (SI Report, reference 16.22). Matters relating to this EP included:
  - **(3)** Woodside and BTAC would finalise a sea country mapping scope.
  - **(4)** BTAC would send a ranger program proposal to Woodside. **(4)** Woodside would consider the proposal.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) BTAC stated that its interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Mackerel Islands.	**(1)** **Woodside Assessment:** Given the EMBA overlaps some of this area these values may be relevant in the event of an unplanned hydrocarbon release. Woodside will engage with Traditional Custodians whose interests may be affected in the event of a hydrocarbon release, as outlined in Appendix H. **Woodside Response:** Woodside has sought to engage BTAC in further assessments of sea country values. BTAC has not provided further detail regarding heritage value of places or cultural features of the Operational Area or the EMBA.	**(1)** Existing controls considered sufficient as described in Section 6.11 and Appendix H.
(2)	**(2)**	**(2)**

BTAC has a cultural obligation to care for the environmental values of sea country but needed support to articulate these in a format suitable for consultation.	**Woodside Assessment:** Woodside assessed BTAC's cultural obligation to care for the environmental values of sea country to represent potential cultural values. **Woodside Response:** Woodside updated relevant sections in the EP to record BTAC's interests and potential cultural values, assessed the potential impact on these and included controls. Woodside agreed to support the articulation and recording of sea country values and offered financial support. Woodside is still working with BTAC to finalise the scope..	Woodside updated Section 4.9 to record BTAC's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11. The proposed Consultation Agreement **(5)** enables an ethnographic survey to be undertaken at a later date but is not required to discharge regulation 25 of the Environment Regulations requirements. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2).
(3) Requested Woodside supports BTAC in obtaining technical advice relating to proposed activities.	**(3)** **Woodside Assessment:** Woodside considers it beneficial for Thalanyji to have technical advice to ensure the delivery of an outcome that does justice to the work involved to record the sea country values. **Woodside Response:** Woodside has offered support for sea country mapping and is working with BTAC to finalise the scope.	**(3)** Not required
(4) BTAC will send a ranger proposal to Woodside.	**(4)** **Woodside Assessment:** Woodside is supportive of ongoing engagement with Traditional Custodians through ranger programs. **Woodside Response:** Woodside will assess BTAC's ranger proposal.	**(4)** Ranger programs are able to be addressed as part of Woodside's Program of Ongoing Engagement (Appendix G)
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after	Based on the engagement to date, no additional measures or controls are required.

	the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.**5** of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

- Woodside has provided BTAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 1 March 2024, Woodside commenced consultation with BTAC on this EP. Woodside provided BTAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of BTAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked BTAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to BTAC if required.
- Further information was provided to BTAC on 26 March when Woodside emailed BTAC another notification of this activity and attached a summary information sheet and on 22 May when Woodside met BTAC face-to-face to discuss this EP and others. This meeting was attended by the BTAC CEO, directors and legal representatives. Members from Woodside's First Nations Team (including BTAC's assigned focal person for EP consultation) and environmental subject matters experts were available to answer all questions and provide specialist information on this EP.

Reasonable Period

Woodside allowed BTAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation with BTAC in March 2024 and provided information on the EP on that date. Since then, Woodside and BTAC have engaged in

consultation for 14 months, demonstrating a “reasonable period” of consultation, where a genuine two-way dialogue has occurred through both written and face-to-face exchanges on this activity.

- A consultation period was communicated to BTAC during Woodside’s initial email on 1 March 2024. BTAC was asked to provide feedback by 29 March 2024 in line with Woodside’s methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided BTAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside commenced consultation with BTAC in March 2024. Woodside has addressed and responded to BTAC queries over 14 months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for BTAC’s input into how BTAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside’s initial email about this EP on 1 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with BTAC members as well as the BTAC Board.
- Asked BTAC to advise how it would like Woodside to engage and whether BTAC required further information.
  - Woodside asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Throughout the consultation period (and following submission of the EP for assessment), Woodside and BTAC have exchanged multiple emails, had phone calls and met on a number of occasions. BTAC also has a legal representative who is able to support BTAC through the consultation process.
- Woodside met with BTAC on 22 May 2024 This meeting was attended by Woodside’s First Nations Team and environmental subject matter experts who were available to answer all questions and provide specialist information this EP.
- Woodside invites BTAC to monthly luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- BTAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has assessed potential impact on these, including controls, in Section 6.9.

- Woodside continues to work with BTAC on the scope of a Sea Country mapping proposal. Woodside has conducted desktop research to inform its understanding of the cultural features and heritage values of the environment. Woodside updated Section 4.9 to record BTAC's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on BTAC's functions, interests or activities

Yinggarda Aboriginal Corporation (YAC)

YAC is established under the Native Title Act 1993 by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside's consultation approach for Traditional Custodians has a focus on building and maintaining long-term relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to YAC on 26 July 2023). Woodside assigns an individual from the First Nations team to act as a relationship focal person for each group to provide a personalised experience. In August 2023 YAC retained a legal representative to engage with Woodside on NOPSEMA matters. Woodside has adapted its consultation processes to YAC's requirements by sending all correspondence relating to this EP to the legal representative, as requested by YAC. YAC is also assisted by Gumala Aboriginal Corporation (GAC)with administrative matters.

As part of its ongoing consultation and relationship building, Woodside provided YAC with a 7-page consultation framework agreement which sought from YAC, confirmation as to how YAC would like to be consulted, including YAC's views of what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While an agreement like this is useful for Woodside to understand consultation norms for YAC, Woodside has noticed that there appears to be limited appetite from groups like YAC to enter into a framework agreement that sets this position out in an agreement form. While Woodside has continued to attempt to progress the framework agreement, despite numerous attempts, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation progressing in parallel to discussions on the framework agreement.

This context and process demonstrates that Woodside's consultation approach with YAC is appropriate and adapted to the nature and interests of YAC.

Historical Engagement:

- On 5 July 2023, Woodside met YAC and gave a presentation about several EPs. Matters relevant to this EP included:
  - **(1)** YAC stated that plants, animals and the environment are inexorably linked to its culture and asked whether Woodside had undertaken environmental studies, whether these studies were ongoing and what environmental monitoring occurred after EPs were approved.
  - **(1)** Woodside responded that it had undertaken numerous environmental studies that form part of EPs and had an ongoing commitment to environmental studies and research. Woodside also explained that environmental monitoring was an ongoing activity and was committed to ongoing consultation with YAC and would take feedback if any new information in relation to risks came to light.
  - **(2)** YAC expressed concern about potential impacts to patterns of whales and potential collisions.

- **(2)** Woodside responded by explaining controls that would be put in place to minimise impacts and risks to whales.

- On 19 July 2023, Woodside emailed YAC via GAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information.* This email also reiterated Woodside's request that YAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed YAC via GAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 26 March 2024, Woodside emailed YAC via its legal representative advising of the proposed activity (Record of Consultation, reference 2.30), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that YAC and its members may have within the EMBA, information on how YAC would like to engage, and requested that YAC provide information to other individuals as required. Woodside requested feedback by 25 April 2024.
- On 27 March 2024, YAC via its legal representative emailed Woodside confirming YAC wished to consult on the EP. Woodside responded, acknowledging the email (SI Report, references 17.1, 17.2).
- On 4 April 2024, Woodside emailed YAC via its legal representative about an administrative matter relating to legal fees and requested the date of the next YAC Board meeting (SI Report, reference 17.3).
- On 8 April 2024, YAC via its legal representative emailed Woodside (SI Report, reference 17.4) advising the next YAC Board meeting would be held on 9 May 2024.
- On 10 May 2024, Woodside emailed YAC via its legal representative (SI Report, reference 17.5) a request to meet with YAC either during or outside of a Board meeting, for 3 hours at YAC's preferred location. Woodside agreed to fund the meeting and requested a cost estimate. Proposed matters for discussion included:
  - EP consultation: overview and EPs current at the time of meeting.
  - Upcoming consultation.
  - Matters Yinggarda would like to discuss.
  - Actions arising and next steps.

Ongoing Engagement

- Between 20 June and 16 July 2024, Woodside and YAC via its legal representative and GAC exchanged emails and phone calls to arrange a meeting on 18 July 2024 (SI Report, references 17.6, 17.7, 17.8, 17.9, 17.10, 17.11, 17.12).
- On 18 July 2024, Woodside met with the YAC Board (SI Report, reference 17.28). Matters discussed relating to this EP included:
  - **(3)** Support for education and training including ranger programs.
  - **(4)** Possibility of setting up workshops to discuss the formalisation of an agreement between Woodside and YAC.
- On 26 July 2024, Woodside emailed YAC via its legal representative a letter (SI Report, reference 17.14). Matters relevant to this EP included:
  - **(3)** Woodside would keep YAC informed about Woodside's consideration of ranger initiatives.
  - **(4)** Woodside looked forward to receiving YAC's feedback on the consultation framework and to hearing when YAC would like to meet again.

- Woodside was committed to continuing consultation with Traditional Custodians beyond the submission of EPs and this would not be YAC's only opportunity to engage with Woodside.
- Woodside invited YAC to share information with other organisations and individuals.

- On 2 November 2024, Woodside attended the Dampier Markets and engaged with relevant persons from Yinggarda. Woodside discussed EPs generally (SI Report, reference 17.15).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) YAC stated that plants, animals and the environment are inexorably linked to its culture and asked whether Woodside had undertaken environmental studies, whether these studies were ongoing and what environmental monitoring occurred after EPs were approved.	**(1)** **Woodside assessment:** Woodside acknowledges YAC's feedback that plants, animals and the environment are inexorably linked to its culture. Woodside has undertaken numerous environmental studies, has an ongoing commitment to research and conducts environmental monitoring after EPs are accepted. **Woodside response:** Woodside has advised YAC that it has undertaken numerous environmental studies, has an ongoing commitment to research and conducts environmental monitoring after EPs are accepted. Woodside has also advised YAC that it continues to take feedback for the life on an EP and will inform YAC of any new information in relation to risks.	**(1)** Woodside has updated Section 4.9.4 to record YAC's interests and potential cultural values. Potential impact on these, including controls are detailed in Section 4.9.4. Woodside's commitment to ongoing engagement with YAC including informing YAC if new information becomes available about potential risks is detailed in Section 5.7. Woodside's environmental controls are described in Section 6.

(2) YAC expressed concern about potential impacts to patterns of whales and potential collisions.	**(2)** **Woodside assessment:** Woodside has noted YAC's interest in whales and has controls in place to minimise impacts and risks to whales. **Woodside response:** Woodside has advised YAC that controls are put in place to minimise impacts and risks to whales**.**	**(2)** Woodside has updated Section 4.9.4 to record YAC's interests and potential cultural values. Information about whales and migration patterns is recorded in Sections 4.6.3 and 4.6.5. Potential impact on these, including controls are detailed in Section 6.
(3) YAC enquired about support for education and training including ranger programs.	**(3)** **Woodside assessment:** Woodside considers value in having rangers on the ground trained up in the highly unlikely event of an oil spill. It would be beneficial to an immediate response in an emergency situation. **Woodside response:** Woodside looks forward to hearing about YAC's plans for a ranger program and will keep YAC informed about Woodside's consideration of ranger initiatives.	**(3)** The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes consideration of programs to support Indigenous Rangers, and support for Indigenous oil spill response capabilities.
(4) YAC is seeking the formalisation of a Consultation Framework Agreement.	**(4)** **Woodside assessment:** An agreement with YAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. **Woodside response:** Woodside will finalise an agreement with YAC, although Woodside does not consider YAC's request for a consultation agreement as a pre-requisite for consultation under regulation 25 of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has also provided a reasonable period and opportunity for consultation.	**(4)** Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with YAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians (Appendix G).
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with YAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside provided YAC with NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 26 March 2024, Woodside commenced consultation with YAC on this EP. Woodside provided YAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked YAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to YAC if required.
- Woodside sought direction on YAC's preferred method of consultation. This resulted in a face-to-face meeting in the Pilbara between YAC and Woodside on 18 July 2024.

Reasonable Period

Woodside allowed YAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with YAC on 26 March 2024 and provided information on the EP on that date. Woodside and YAC have engaged in consultation for 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to YAC via its legal representative during Woodside's initial email on 26 March 2024. YAC was asked to provide feedback by 25 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided YAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for YAC's input into how YAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for YAC and First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 26 March 2024:
  - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YAC members as well as the YAC Board.
  - Asked YAC to advise how it would like Woodside to engage and whether YAC required further information.
  - Woodside asked YAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invited YAC to monthly Community Luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- YAC raised relevant cultural heritage matters ahead of consultation for this EP These matters have been incorporated into this EP (see 1 and 2).
- Woodside engages in ongoing consultation once an EP is submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YAC's functions, interests or activities

Kariyarra Aboriginal Corporation (Kariyarra)

Kariyarra is established under the Native Title Act 1993 by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with KAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to KAC on 26 July 2023). Woodside has

assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with KAC who is responsible for building a consultative relationship and ii readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites KAC to monthly luncheons.

For consultation on this EP, Woodside contacted KAC's legal representative offering an opportunity to present to KAC Elders, office holders and other interested parties. Woodside asked KAC how it wished to be consulted, if it required support to participate in consultation, if there were other relevant persons or groups that KAC considered should be consulted and requested that all information shared with KAC be cascaded to its members.

Woodside notes that during the course of consultation for this EP, there were a number of administrative changes at KAC. Woodside was advised by KAC in August 2024 that it had appointed a new CEO and Woodside updated its contact details to engage with the new CEO. KAC also advised that it changed legal representation during the consultation.

Woodside continues to work with KAC to finalise a consultation framework agreement. This agreement seeks confirmation from KAC as to how it would like to be consulted, including KAC's views on what constitutes sufficient information, a reasonable period of time and a reasonable opportunity for consultation, While an agreement like this is useful to outline consultation norms for KAC, Woodside has noticed that there appears to be limited appetite from groups like KAC to enter in a framework agreement that sets this position out in an agreement form. We note that while the agreement remains in draft form, this has not prevented consultation progressing in parallel to discussions on the framework agreement. We also note that in August 2024, following administrative changes and a change of legal advisor, KAC has requested discussions "start fresh" on the consultation framework agreement.

This context and process demonstrates that Woodside's consultation approach with KAC is appropriate and adapted to the nature and interests of KAC.

Historical Engagement:

- On 18 July 2023 Woodside emailed KAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* This email also requested that KAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed KAC Woodside's *Program of Ongoing Engagement with Traditional Custodians*.
- On 5 December 2023, Woodside and KAC met in Port Hedland. Matters relating to this EP included:
  - **(1)** KAC gave a presentation about its Sea Country Rights and Duties. This included:
    - Having access to Sea Country for fishing, trapping, crabbing, catching turtle and collecting shellfish.
    - Visiting offshore islands at low tide.
    - Hunting dugong and taking stingray barbs for spears
    - Having duties to look after and protect Sea Country, noting Yinta is associated with Sea Country and can be dangerous.
- On 20 December 2023, Woodside emailed KAC via its legal representative Matters relating to this EP included:
  - **(1)** Woodside confirmed the cultural values raised by KAC.
- On 20 December 2023, KAC via its legal representative emailed Woodside about another EP. Matters relevant to this EP included:
  - **(2)** KAC asked Woodside to add a reference to its EPs to avoid impacts to coastal landforms, coastal native vegetation, tangible Aboriginal cultural heritage sites and places and intangible Aboriginal heritage associated with the coast and ocean. **(2)** Woodside acknowledged this information.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed Kariyarra via a legal representative advising of the proposed activity (Record of Consultation, reference 2.31), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Kariyarra and its members may have within the EMBA, information on how Kariyarra would like to engage, and requested that Kariyarra provide information to other individuals as required. Woodside requested feedback by 3 April 2024.
- **(3)** On 10 March 2024, KAC via legal representative emailed Woodside (SI Report, reference 37.1) a draft consultation agreement for Woodside to review.
- **(3)** On 12 March 2024, Woodside emailed KAC via its legal representative (SI Report, reference 37.2) to acknowledge receipt of the draft agreement and note it would review and return to KAC in the future.
- **(3)** On 4 April 2024, Woodside and KAC's legal representative exchanged emails about the content of the draft agreement. (SI Report, references 37.3, 37.4).
- On 5 April 2024, Woodside emailed KAC via legal representative with a reminder of consultation for this activity and notification of an unrelated activity (SI Report, reference 37.5).

Ongoing Engagement

- On 26 June 2024, Woodside emailed KAC via legal representative to ask if there were further instructions from KAC on the draft agreement and proposed amendments (SI Report, reference 37.6).
- **(3)** On 3 July 2024, KAC's legal representative emailed Woodside and advised that the consultation agreement and recent Woodside EPs would be addressed by KAC's in-house counsel. The in-house counsel would revert to Woodside about the proposed agreement and EP consultation (SI Report, reference 37.7).
- On 3 July 2024, Woodside emailed KAC's legal representative and requested contact details for KAC's in-house counsel (SI report, reference 37.8).
- On 28 August 2024, KAC's in-house counsel emailed Woodside about a different EP, in the email KAC confirmed it was no longer represented by its former legal representative. The in-house counsel enquired about Woodside's availability for a phone call or online meeting to discuss and plan next steps (SI Report, reference 37.9).
- On 28 August 2024, Woodside emailed KAC and offered to speak on the phone or meet in person (SI Report, reference 37.10)
- On 29 August 2024, Woodside spoke to KAC on the phone (SI Report, reference 37.11). During the conversation:
  - Woodside confirmed its commitment to building meaningful relationships with First Nations groups.
  - KAC confirmed it had recruited a new CEO.
  - KAC expressed interest in negotiating a consultation agreement.
  - Woodside advised that negotiation of the consultation agreement work would run in parallel with EP consultation.
  - Woodside confirmed availability to consult and willingness to travel for meetings.
  - KAC confirmed it wanted to "start fresh" and requested a copy of the draft agreement.
  - KAC requested an online meeting on 3 September 2024.
  - Woodside offered to provide a copy of its presentation ahead of time to allow KAC to review and distribute it to its Board prior to the meeting.
  - KAC requested information about Woodside assets and Woodside advised it has no assets within the determination.

- Woodside explained how EMBAs are used as part of the methodology to ascertain and contact relevant people.

- On 3 September 2024, Woodside emailed its presentation to KAC for a meeting that day (SI Report, reference 37.12). Matters relevant to this EP that were discussed included:
  - Woodside's current projects including Pluto.
  - Woodside's commitment to working with First Nations communities.
  - How Woodside consults with First Nations communities, including ongoing consultation on EPs.

- On 3 September 2024, Woodside and KAC met virtually (SI Report, reference 37.13). Matters discussed included the following:
  - KAC wanted to build a valuable relationship with Woodside.
  - KAC advised it had undergone a recent internal restructure resulting in a new CEO, General Counsel and Native Title Representative.

- **(2)** On 3 September 2024, Woodside provided KAC with a copy of the draft consultation agreement originally provided in February 2024. KAC acknowledged receipt of the email. (SI Report, references 37.14, 37.15).
- On 4 September 2024, Woodside travelled from Karratha to South Hedland to meet KAC in-person (SI Report, reference 37.16). Matters discussed that were relevant to this EP included:
  - **(3)** KAC expressed a desire to finalise the consultation agreement.
  - **(3)** Woodside confirmed that consultation agreement negotiations run in parallel to EP consultations and it was important KAC provide feedback before the closure of consultation for each EP.
  - Woodside confirmed feedback deadlines are in consultation emails.
  - Woodside also confirmed that feedback is open for the life of an EP.
  - **(4)** KAC advised it would like to discuss opportunities with Woodside to support its ranger program. **(4)** Woodside replied that it was looking into a ranger assistance program.

- On 9 September 2024, Woodside invited KAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners for September (SI Report, reference 37.17).
- On 3 October 2024, Woodside invited KAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners for October 2024 (SI Report, reference 37.18).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) KAC has outlined its Sea Country rights and duties, including: Looking after and protecting sea country, mentioning fishing, trapping, crabbing, catching turtle, hunting	**(1)** **Woodside assessment:** Woodside recognises that KAC may have Sea Country values within the EMBA for this EP. **Woodside response:** Woodside understands cultural and environmental values are intrinsically linked; in addition to the	**(1)** Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.

dugong, and using stingray barbs for spears and collecting shellfish.	specific controls for cultural features and heritage values outlined in Section 6.11, the controls and performance standards in Section 6.7, 6.8 and 6.9 will ensure impacts to cultural features and heritage values, including marine species and habitats, are acceptable and ALARP.	
(2) KAC asked Woodside to add a reference to its EPs to avoid impacts to coastal landforms, coastal native vegetation, tangible Aboriginal cultural heritage sites and places and intangible Aboriginal heritage associated with the coast and ocean.	**(2)** **Woodside assessment:** Woodside accepts that KAC has an interest in the impacts on coastal landforms and coastal native vegetation. Woodside seeks to avoid damage or disturbance to cultural heritage (including intangible heritage) and assesses cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs. Mitigation can include any measure or control aimed at ensuring the viability of the intangible cultural heritage and its intergenerational transmission. **Woodside response:** Assessment of the impacts and risks associated with coastal landforms and coastal native vegetation have been captured in Section 4.9 and Section 6.11. Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural features and heritage values, the controls and performance standards in section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats.	**(2)** Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.
(3) KAC has requested a consultation agreement with Woodside	**(3)** **Woodside assessment:** A consultation agreement with KAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians. **Woodside response:** Woodside is working to finalise a draft agreement with KAC. Woodside does not consider KAC's request for a consultation agreement as a pre-requisite for consultation under regulation 25 of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has also provided a reasonable period and opportunity	**(3)** Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. The draft agreement with KAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.12 of the EP

	for consultation.	
(4) KAC would like to discuss opportunities for Woodside to support its ranger program	**(4)** **Woodside assessment:** Woodside acknowledges the value in having trained rangers available in the highly unlikely event of an oil spill and agrees it would be beneficial to an immediate response in an emergency situation. **Woodside response:** Woodside is reviewing a ranger assistance program and will provide details to KAC once this has matured and notes a ranger program is not relevant to the activity under this EP.	**(4)** The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes commitments to social investment to support Indigenous Ranger programs, and support for Indigenous oil spill response capabilities.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with KAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given KAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 6 March 2024, Woodside commenced consultation with KAC on this EP. Woodside gave KAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:

  - An overview of the activity and proposed timing.
  - Maps showing the location and EMBA.
  - A summary of the risks and impacts of the activity.
  - Diagrams.
  - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of KAC's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked KAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to KAC if required.

- Woodside followed-up with KAC on this activity on 5 April 2024.
- Woodside sought direction on KAC's preferred method of consultation. This resulted in a phone call on 29 August 2024, an online meeting on 3 September 2024 and a face-to-face meeting on 4 September 2024.

Reasonable Period:

Woodside allowed KAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with KAC in March 2024 and provided information on the EP on that date. Since then, Woodside and KAC have engaged in consultation for 14 months, demonstrating a "reasonable period" of consultation, where a two-way dialogue has occurred.
- A consultation period was communicated to KAC during Woodside's initial email on 6 March 2024. KAC was asked to provide feedback by 3 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided KAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for KAC's input into how KAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 6 March 2024:
  - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with KAC members as well as the KAC Board.

- Asked KAC to advise how it would like Woodside to engage and whether KAC required further information.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KAC has outlined its Sea Country rights and duties, including looking after and protecting Sea Country, mentioning fishing, trapping, crabbing, catching turtle, hunting dugong, and using stingray barbs for spears and collecting shellfish. KAC has also asked Woodside to add a reference to its EPs to avoid impacts to coastal landforms, coastal native vegetation, tangible Aboriginal cultural heritage sites and places and intangible Aboriginal heritage associated with the coast and ocean. Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on KAC's functions, interests or activities.

Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the Native Title Act 1993 by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Wanparta jointly manages the 80 Mile Beach Marine Park which is adjacent to the EMBA. Woodside has a sound relationship with Wanparta. Woodside has assigned a First Nations Engagement team member as a dedicated focal point for EP consultation with Wanparta who is responsible for building a consultative relationship and is available to provide information and take feedback. This team member meets with Wanparta regularly. Woodside also attends Wanparta's Board Meetings when invited.

On 31 August 2023, Woodside met with the Wanparta Board and members in South Hedland. Woodside and Wanparta discussed the project and exchanged information. Following consultation, Wanpara's lawyer provided verbal confirmation that Wanparta supported the activity and confirmed Wanparta's commitment to continuing its relationship with Woodside.

Historical Engagement:

- On 18 July 2023 Woodside emailed Wanparta *NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* This email also requested that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed Wanparta Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.
- **(1)** On 31 August 2023, Woodside met with the Wanparta Board and members in South Hedland. During the meeting Wanparta stated that water is extremely important to Ngarla people and they feel a responsibility to look after the ocean and lore.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 2.36), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to other individuals as required.
- Between 16-22 April 2024, Woodside and Wanparta exchanged emails regarding logistics and funding for a meeting about this EP (SI Report, references, 21.1, 21.2, 21.3, 21.4, 21.5, 21.6, 21.7, 21.8, 21.9, 21.10).
- On 24 April 2024, Woodside met with Wanparta at Murujuga. Matters discussed relevant to this EP included:
  - Woodside provided an overview about the EP and asked for questions and feedback.
  - **(2)** Wanparta asked about the potential of vessel collision with seals, dolphins and turtles. **(2)** Woodside responded that it avoids migration times and has controls in place to manage marine fauna.
  - Woodside provided an update about the Pluto train 2 module, no questions were asked by the group.
  - Wanparta informed Woodside that the meeting had gone well and there were no issues.
- On 7 May 2024, Wanparta emailed Woodside a letter in relation to its meeting on 24 April 2024 (SI Report, reference 21.12). Wanparta advised:
  - **(3)** The Ngarla People have a deep connection to Sea Country.
  - **(4)** Octopus, stingray, spiny bream fish and kestrel are significant totem species.
  - **(5)** Wanparta would require further consultation with Woodside should the parameters of this EP change.
- On 30 May 2024, Woodside emailed Wanparta (SI Report, reference 21.13). Woodisde:
  - **(4)** Acknowledged the significance of the Ngarla People's totem species.
  - **(3)** Acknowledged the Ngarla People's right to exercise native title rights and interests on a well managed Sea Country.
  - **(5)** Woodside would provide timely updates on any changes to the Pluto Facility Operations.
- On 5 June 2024, Wanparta emailed Woodside in response to information provided by Woodside about other EPs (SI Report, reference 21.14). Wanparta shared details of a proposed meeting in August.
- On 28 August 2024, Woodside and Wanparta met in Port Hedland (SI Report, reference 21.15). Matters discussed relating to this EP:
  - **(6)** Wanparta asked for an update about Woodside's Ranger Program.
  - **(6)** Woodside said the Ranger Program was under assessment and it would respond soon.
- On 29 August 2024, Wanparta emailed Woodside a letter (SI Report, reference 21.16). Matters relevant to this EP included:
  - Wanparta requested Woodside attend its annual Board meeting for the purposes of consultation

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

(1) During face-to-face engagement related to other activities Wanparta provided feedback on the importance of water and the ocean.	(**1**) **Woodside Assessment:** Woodside assessed Wanparta's interest in water to represent potential cultural values. **Woodside Response:** Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.	**(1)** Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11.
(2) Wanparta has asked about the potential of vessel collision with seals, dolphins and turtles.	**(2)** **Woodside Assessment:** Woodside has mitigation measures in place to address potential risks to marine fauna. **Woodside Response:** Woodside has informed Wanparta that it avoids activity during migration periods and has controls in place to manage marine fauna.	**(2)** Information about interactions with marine fauna is contained in Section 6.9.9.
(3) On 7 May 2024, Wanparta advised of its connection to sea country.	**(3)** **Woodside Assessment:** Woodside assessed Wanparta's connection to sea country to represent potential cultural values. **Woodside Response:** Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.	**(3)** Woodside recognises that Wanparta holds Sea Country rights and interests that need to be protected (Section 4.9).
(4) On 7 May 2024, Wanparta advised of the significance of their totem species including the octopus, stingray, spiny bream fish and kestrel.	**(4)** **Woodside assessment:** Woodside respects Wanparta's cultural connections and knowledge, including their totem species. **Woodside response:** Woodside has noted the Wanparta's values and interests in their totem species in Section 4.9.4.	**(4)** Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values.
(5) On 7 May 2024, Wanparta requested it be advised on any change in activity parameters.	**(5)** **Woodside assessment:** Woodside will provide notification to Wanparta in the event of significant change. **Woodside response:** Woodside has outlined this requirement in Table 7-6 of the EP.	**(5)** Woodside will provide notification of significant change, as appropriate, to Wanparta, as referenced in Table 7-6 of the EP.
(6) Wanparta has expressed an interest in Woodside's Ranger Program.	**(6)** **Woodside assessment:** Woodside considers value in having rangers on the ground trained up in the highly unlikely event of an oil spill. It	**(6)** The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes consideration of programs to

	would be beneficial to an immediate response in an emergency situation. **Woodside response:** Woodside will keep Wanparta updated about its ranger program.	support Indigenous Rangers, and support for Indigenous oil spill response capabilities.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and considers consultation with Wanparta for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given Wanparta relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 28 February 2024, Woodside commenced consulting with Wanparta on this EP. Woodside provided Wanparta:
  - A Summary Information sheet developed specifically for First Nations groups. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of WAC's interests and how the

activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside invited Wanparta to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided Wanparta NOPSEMA's contact information.
- Woodside asked Wanparta to forward the information to its members
- Woodside offered to provide more specific information, maps and images to Wanparta if required.

- On 24 April 2024, Woodside met with Wanparta at Murujuga. Woodside made cultural heritage, First Nations engagement and marine specialists available to answer questions during the meeting. Wanparta informed Woodside that the meeting went well and there were no issues.
- Following the April meeting, Wanparta emailed Woodside and provided information about cultural values, demonstrating an understanding of the information provided by Woodside.

Reasonable Period

Woodside allowed Wanparta a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with Wanparta on 28 February 2024 and provided information on the EP on that date. Since then, Woodside and Wanparta have engaged in consultation for a period of over 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to Wanparta during Woodside's initial email on 28 February 2024. Wanparta was asked to provide feedback by 29 March 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided Wanparta with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for Wanparta's input into how Wanparta would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 28 February 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with Wanparta members as well as the Wanparta Board.
  - Asked Wanparta to advise how it would like Woodside to engage and whether Wanparta required further information.

- On 26 July 2023, Woodside emailed Wanparta Woodside's planned Program of Ongoing Engagement with Traditional Custodians providing information on how

Woodside supports ongoing consultation with First Nations groups.

Outcomes of Consultation:

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- Wanparta stated that water and the ocean are extremely important, and that members have a responsibility to look after the ocean and their law. Bream, octopus, stingray and kestrel were noted as totemic species. Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Wanparta's functions, interests or activities.

Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the Native Title Act 1993 by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with WAC prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program on Ongoing Engagement (sent to WAC on 26 July 2023). Woodside has assigned First Nations Engagement team member as a focal person for WAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

For consultation on this EP, Woodside contacted WAC offering an opportunity to present to the WAC Board. Woodside asked WAC how it wished to be consulted, if it required support to participate in consultation, whether there were additional groups that WAC believed should be consulted and requested that all information shared with WAC be cascaded to its members.

During consultation for this EP, WAC underwent organisational restructures. By way of courtesy, Woodside respectfully engaged with various representatives from the group including a General Manager, three Acting Director/Chairs, a CEO and an Operations Manager. Woodside understands that WAC currently has one employee who Woodside understands is focussed on supporting the Board with its AGM and Director elections (November 2024). Woodside's focus has been on supporting WAC through its period of change so it is informed about Woodside's activities and is enabled to engage in consultation. This has included Woodside's focal person visiting the WAC office each week, facilitating Quarterly Heritage Meetings and running monthly community meetings over lunch.

It should also be noted that, Woodside provided WAC (on a number of occasions) with a draft 7-page framework agreement for consultation. This agreement proposes to obtain WAC's input regarding how WAC would like consultation to occur (what is sufficient information, how much time is a reasonable period etc). It has become clear during engagements that this framework agreement is not a priority. Consultation for this EP has occurred in parallel to discussions around the framework consultation agreement (which remain ongoing).

Aside from regular consultation about EPs relevant to WAC, Woodside meets WAC regularly during Quarterly Heritage Meetings, monthly community luncheons and monthly relationship building meetings. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs at those meetings.

This context and process demonstrates that Woodside's consultation approach with WAC is appropriate and adapted to the nature of interests of WAC.

Historical Engagement:

- On 18 July 2023, Woodside emailed WAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that WAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed WAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 5 March 2024, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 2.32), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that WAC and its members may have within the EMBA, information on how WAC would like to engage, and requested that WAC provide information to other individuals as required.
- On 6 March 2024, Woodside emailed WAC a letter setting out the draft terms of an agreement between WAC and Woodside and offered to meet to discuss the document further (SI Report, reference 18.1). This draft agreement had been sent to two previous CEOs. The purpose of the agreement was to seek input from WAC on its preferred method of consultation. The agreement (among other things) included the following:
  - Confirmation of what is sufficient information for WAC for consultation.
  - Confirmation of what is a reasonable period for WAC for consultation.
  - WAC's preferred method for provision of information.
  - WAC's preferred method for providing objections or claims.
  - How information is to be published in the EP
  - Cost and termination of the agreement.
- On 6 March 2024, WAC and Woodside exchanged emails about the draft consultation agreement (SI Report, references 18.2, 18.3)
- On 5 April 2024, Woodside emailed WAC to follow up on whether WAC required more information about this EP, and to offer a meeting or a discussion on this activity and another activity (SI Report, reference 18.4).

Ongoing Engagement

- On 25 June 2024, WAC attended Woodside's Quarterly Heritage Meeting. There was general discussion about EPs (SI Report, reference 18.5).
- On 15 July 2024, Woodside and WAC met (SI Report, reference 18.6). Matters relevant to this EP include:
  - WAC is appointing a casual manager to attend to daily operations until a permanent manager is recruited.
- On 9 September 2024, Woodside invited WAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 18.7).

- On 25 September 2024, WAC attended Woodside's Monthly Luncheon for Traditional Owners. During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 18.8).
- On 30 September 2024, Woodside met WAC (SI Report, reference 18.9). During the meeting:
  - WAC confirmed it has one employee who is attending to consultation.
  - WAC confirmed its priority was appointing a new Board at its AGM in November.
- On 1 October 2024, WAC emailed Woodside and suggested Woodside attend its next Board meeting to discuss EPs (SI Report, reference 18.10).
- On 3 October 2024, Woodside invited WAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 18.11).
- On 10 October 2024, WAC attended Woodside's Quarter 3 Heritage Meeting in Roebourne (SI Report, reference 18.12). Matters relevant to this EP included:
  - Consultation for Woodside EPs including an explanation of State and Commonwealth regulatory requirements.
  - An explanation of EMBAs and the process Woodside undertakes to identify Traditional Owners groups.
  - How Traditional Owners could provide information to Woodside about cultural values, interests and activities.
- On 14 October 2024, Woodside was notified that Sorry Business was taking place in the Roebourne and Karratha area (SI Report, reference 18.13).
- On 18 October 2024, Woodside emailed WAC to discuss Woodside's attendance at the next WAC Board meeting (SI Report, reference 18.14).
- On 28 October 2024, Woodside attended WAC's Board meeting (SI Report, reference 18.15). Matters discussed that were relevant to this EP include:
  - Woodside's consultation processes.
  - **(1)** WAC asked about oil spill reporting. **(1)** Woodside responded that Woodside conducts an internal investigation and abides by an Oil Spill Management Plan.
- On 21 November 2024, NYFL emailed Woodside to advise that Sorry Business was taking place in the Roebourne Community (SI Report, reference 18.16)
- On 5 December 2024, WAC attended Woodside's Quarter 4 Heritage Meeting in Karratha (SI Report, reference 18.17). Matters discussed relevant to this EP included:
  - Woodside provided an update on the Pluto Project.
  - Woodside reminded the meeting about ongoing consultation.
- On 11 December 2024, Woodside became aware via a social media post from RRKAC that due to the recent passings of two significant Elders cultural grieving protocols were underway (SI Report, reference 18.18).
- On 22 January 2025, Woodside emailed WAC a schedule for the 2025 Quarterly Heritage Meetings. WAC replied to acknowledge the email (SI Report, references 18.19, 18.20).
- On 4 March 2025, Woodside emailed WAC a reminder for the Quarterly Heritage meeting on 13 March 2025 (SI Report, reference 18.21).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1)	**(1)**	**(1)**

During ongoing consultation, WAC asked Woodside about oil spill reporting.	**Woodside assessment:** Woodside aligns with industry guidance about oil spill reporting. **Woodside response:** Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.9 of the EP, and Appendix I.	Woodside's Oil Spill Preparedness and Response Mitigation Assessment is in Appendix H and its Pluto Offshore Operations First Strike Plan is in Appendix I.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and considers consultation with WAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given WAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 5 March 2024 Woodside commenced consulting with WAC on this EP. Woodside provided WAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.

    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of WAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.

- Woodside invited WAC to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided WAC NOPSEMA's contact information.
- Woodside asked WAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to WAC if required.
- Woodside followed up with WAC to request their feedback on this EP via email on 5 April 2024.

Reasonable Period

Woodside allowed WAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with WAC on 5 March 2024 and provided information on the EP on that date. Since then, Woodside and WAC have engaged in consultation for a period of 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to WAC during Woodside's initial email on 5 March 2024. WAC was asked to provide feedback by 5 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided WAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside notes that, during consultation, it has also respectfully paused consultation in periods when WAC was observing sorry time or cultural matters (see October and November 2024) and has been sensitive to WAC's structural and other changes (see July 2024).

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for WAC's input into how WAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 5 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with WAC members as well as the WAC Board.

- Asked WAC to advise how it would like Woodside to engage and whether WAC required further information.

- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians providing information on how Woodside supports ongoing consultation with First Nations groups. Woodside's commitment to ongoing consultation is demonstrated by its Quarterly Heritage Meetings with WAC. To this end, Woodside invites WAC to Quarterly Heritage Meetings, monthly luncheons, and weekly visits by Woodside's focal point to WAC's office.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or pr

poses to adopt because of consultation are appropriate because:

- During the past 14 months WAC has provided feedback but has not raised objections or claims about the adverse impact of each activity to which this EP relates.
- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on WAC's functions, interests or activities

Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the Native Title Act 1993 by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.
Woodside had an existing relationship with RRKAC which extends prior to consulting on this EP. Woodside has assigned a First Nations Engagement team member as a focal point to RRKAC who is responsible for building a consultative relationship and is available to provide information and take feedback.
During consultation for this EP, RRKAC has asked for assistance with resourcing and has taken time to recruit subject matter experts to assist with consultation. Woodside's focus has been on supporting RRKAC through this period whilst enabling RRKAC to remain informed about Woodside's activities, including activities proposed to be undertaken for this EP. Aside from regular consultation about EPs, Woodside invites RRKAC to monthly luncheons.

Historical Engagement:

- On 18 July 2023, Woodside emailed WAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that WAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed WAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 5 March 2024, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 2.33), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that RRKAC and its members may have within the EMBA, information on how RRKAC would like to engage, and requested that RRKAC provide information to other individuals as required. Woodside requested feedback by 2 April 2024.
- On 5 March 2024, RRKAC and Woodside exchanged emails about EP consultation and staffing at RRKAC (SI Report, references 19.1 and 19,2).
- On 18 March 2024, Woodside emailed RRKAC to follow up on this EP and request a meeting to discuss the activity (SI Report, reference 19.3).
- On 20 March 2024, Woodside and RRKAC held an online meeting (SI Report, reference 19.4). Matters discussed included:
  - Staffing at RRKAC.
  - An overview of EPs and the importance of consultation with Traditional Owners.
  - Woodside explained the purpose of meeting with First Nations groups to provide opportunities for feedback.
  - Woodside requested to meet the RRKAC Board and other interested persons and groups.
  - Woodside's availability if RRKAC would like to pursue subsea mapping.
- On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 19.5) to follow up on the meeting, and to outline current EPs for consultation including this one. Woodside informed RRKAC that it would provide reasonable financial support for meetings and provided a copy of the Program of Ongoing Engagement.
- On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 19.6) Woodside resent information about this activity and included the Summary Information Sheet.
- On 5 April 2024, Woodside emailed RRKAC to follow up on previous emails relating to this activity and to ask if RRKAC required more information (SI Report, reference 19.7).

Ongoing Engagement

- On 5 July 2024, RRKAC emailed Woodside (SI Report, reference 19.8) in response to another activity and raised:
  - **(1)** Its lack of resourcing as an issue for consultation
  - **(2)** the potential for a bathymetric survey of the coastal shelf as a large-scale project with all affected groups
- On 5 July 2024, Woodside replied to RRKAC's email (SI report, reference 19.9). Woodside:
  - **(1)** Offered to meet RRKAC to discuss RRKAC's challenges.
  - Enquired how RRKAC would prefer to be informed about EPs.

- **(2)** Noted Woodside would make enquires about RRKAC's proposed bathymetric survey.

- On 29 July 2024, Woodside emailed RRKAC regarding bathymetric surveys and suggested that RRKAC and Woodside meet to discuss opportunities to use publicly available data to assist in generating information that might be useful to RRKAC (SI Report, reference 19.10)
- On 9 September 2024, Woodside invited RRKAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 19.11).
- On 3 October 2024, Woodside invited RRKAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners (SI Report, reference 19.12).
- On 5 December 2024, Woodside emailed RRKAC and update on this EP (SI Report, reference 19.13). Woodside:
  - Informed that Woodside would resubmit this EP for further assessment by NOPSEMA.
  - Notified RRKAC that consultation for this EP would close on 19 December 2024 and that feedback provided by that date would be reflected in the EP and considered by NOPSEMA.
  - Woodside stated:
    - That RRKAC was welcome to state its preferred method of consultation including whether it would like to meet face-to-face.
    - That Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.
- On 11 December 2024, RRKAC emailed Woodside a response to its letter of 5 December 2024 (SI Report, reference 19.14). In the email RRKAC stated:
  - **(1)** Due to capacity limitations, it was not in a position to consult on this EP, RRKAC may be in a position to engage in consultation the future.
  - **(3)** RRKAC does not consider emails or meetings to constitute formal consultation.
  - **(4)** RRKAC requests that any reference to consultation with RRKAC be removed from Woodside's register.
- On 18 December 2024, Woodside emailed RRKAC a response to its email of 11 December 2024 (SI Report, reference 19.15). In the email:
  - **(3)** Woodside confirmed it had consulted with RRKAC in relation to the preparation of this EP in accordance with Commonwealth regulations.
  - **(3)** Woodside summarised its correspondence to RRKAC about this EP.
  - **(4)** It is a requirement that Woodside provide full copies of all consultation correspondence to NOPSEMA.
  - **(1)** Woodside acknowledged RRKAC's capacity limitations and offered to discuss how Woodside might be able to further support RRKAC with the consultation process.
  - **(3)** Woodside offered to meet RRKAC to discuss the EP.
  - **(3)** Woodside explained that feedback could be provided for the life of the EP, including after consultation for the EP had closed, during EP assessment and after an EP had been accepted by NOPSEMA.
- On 18 December 2024, Woodside received an 'out-of-office' reply from RRKAC to its email sent that day (SI Report, reference 19.16).

- On 19 December 2024 RRKAC emailed Woodside (SI Report, reference 19.17). RRKAC stated:
  - **(3)** RRKAC does not consider emails or meetings to constitute formal consultation.
  - **(5)** Under the regulations, a relevant person must be provided with sufficient information and a reasonable period for consultation. RRKAC considers the 'relevant person' in this matter to be the RRKAC Heritage Advisory Committee (HAC). RRKAC invited Woodside to the next HAC meeting on 18 February 2025.
  - **(4)** RRKAC requested Woodside remove any reference to 'consultation' with RRKAC in the EP.
  - **(2)** RRKAC is keen to discuss a seascape scale approach to heritage values.
  - **(1)** RRKAC has capacity limitations but will be in a position to engage in consultation in 2025.
- On 14 January 2024, Woodside replied to RRKAC's email of 19 December 2024 (SI Report, reference 19.18). Woodside stated:
  - **(3, 5)** Woodside disagrees that formal consultation has not occurred in relation to the EP and has complied with regulations by providing RRKAC with sufficient information, a reasonable opportunity and reasonable time to provide feedback.
  - **(5)** In accordance with Woodside's methodology, Woodside contacted RRKAC as a relevant person and requested it forward information to its members and other relevant people and organisations. Woodside reiterated its availability to meet RRKAC and other interested members.
  - **(3, 5)** Woodside communicated clear dates for RRKAC to submit feedback for consideration ahead of submitting the EP.
  - **(5)** Woodside accepts RRKAC's invitation to the HAC meeting on 18 February 2025, noting consultation has closed for the purposes of preparation of this EP and its attendance at the HAC meeting would form part of ongoing consultation.
  - **(1)** Woodside welcomes an opportunity to meet with RRKAC to discuss reasonable ways to adapt its consultation process for consultation with RRKAC moving forward.
  - **(1)** Woodside requests a quote for its attendance at the HAC meeting.
  - **(4)** Woodside has assessed RRKAC as a relevant person for this EP and as such, has a regulatory obligation to provide full copies of all consultation correspondence to NOPSEMA.
  - **(2)** With regard to seascape mapping, Woodside does not have plans to conduct bathymetric surveys but is open to meeting with RRKAC to discuss publicly available datasets and Woodside's own mapping of deeper water areas that may support RRKAC's request.
  - **(1)** Woodside again acknowledges RRKAC's capacity limitations and as previously discussed is willing to provide reasonable funding for consultation activities relating to EPs.
- **(5)** On 15 January 2024, RRKAC emailed Woodside a response to its email on 14 January 2025 (SI Report, reference 19.19) RRKAC provided details relating to the planned HAC meeting.
- **(5)** On 22 January 2025, Woodside phoned RRKAC to discuss the upcoming HAC meeting, RRKAC did not answer the call (SI Report, reference 19.20).
- **(5)** On 29 January 2025, following a call between Woodside and RRKAC, Woodside emailed RRKAC confirming that Woodside would not attend the 18 February HAC meeting and would instead attend the HAC meeting in May 2025. Woodside confirmed that it consulted for the life of EPs and welcomed further feedback in relation to this EP (SI Report, reference 19.21)
- On 4 March 2025, Woodside invited RRKAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 5 March 2025 (SI Report, reference 19.22).

• On 5 March 2025, Traditional Owner members from RRKAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 19.23)		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) RRKAC noted it is insufficiently resourced to fully engage and respond regarding EPs.	**(1)** **Woodside assessment:** Woodside supports ongoing engagement for the life of an EP. **Woodside response:** Woodside supports reasonable requests for resourcing and has provided support for meetings for the purpose of consultation.	**(1)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).
(2) RRKAC raised the potential of a bathymetric survey of the coastline, working with all relevant coastal groups.	**(2)** **Woodside Assessment:** Woodside does not have plans to conduct regional bathymetric surveys but there are publicly available datasets covering coastal regions. **Woodside Response:** Woodside is seeking a meeting with RRKAC to find ways to interpret existing data sets to generate information which may be useful to RRKAC.	**(2)** Not required.
(3) RRKAC does not consider emails or meetings to constitute formal consultation.	**Woodside Assessment:** Woodside rejects RRKAC's assertion that emails or meetings do not constitute formal consultation. Woodside has consulted with RRKAC in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) (Regulations)*. Woodside has provided RRKAC sufficient information, a reasonable period and reasonable opportunity to provide feedback about this EP. **Woodside Response:** Woodside has informed RRKAC that it has consulted with RRKAC in accordance with the Regulations. Woodside has provided RRKAC a summary of the consultation that has occurred for this EP and offered to discuss the EP further.	**(3)** Not required

(4) RRKAC has requested that Woodside remove any reference to consultation in its register.	**(4)** **Woodside Assessment:** Woodside rejects RRKAC'S assertion that consultation has not occurred on this EP. **Woodside Response:** Woodside has provided a summary to RRKAC of consultation that has occurred and has informed RRKAC that Woodside is required to provide a record of this correspondence to NOPSEMA.	**(4)** Not required
(5) Under the regulations, a relevant person must be provided with sufficient information and a reasonable period for consultation. RRKAC considers the 'relevant person' in this matter to be the RRKAC Heritage Advisory Committee (HAC). RRKAC invited Woodside to the next HAC meeting on 18 February 2025.	**(5)** **Woodside Assessment:** In accordance with Woodside's consultation methodology, Woodside assessed RRKAC in its capacity as a nominated representative corporation as a 'relevant person' for this EP. Woodside initially contacted RRKAC about this EP on 5 March 2024 and requested RRKAC to forward information to its members and other relevant people and organisations. Woodside provided sufficient information, a reasonable period and reasonable opportunity for consultation on this EP. **Woodside Response:** Woodside has accepted RRKAC's invitation to the HAC meeting on 18 February 2025. Woodside has reminded RRKAC that consultation for the purposes of preparing this EP has closed and attendance at the HAC meeting will form part of ongoing consultation.	**(5)** Not required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report: Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with RRKAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

Sufficient information has been provided because:

- On 19 July 2023, Woodside emailed RRKAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- On 26 July 2023, Woodside emailed RRKAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians, providing information on how Woodside supports ongoing consultation with First Nations groups.
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 5 March 2024, Woodside commenced consulting with RRKAC on this EP. Woodside's email to RRKAC included:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity
    - Maps showing the location and EMBA
    - Diagrams
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of RRKAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside invited RRKAC to speak to Woodside. Woodside provided contact details including a general email address and telephone number for Woodside as well as the direct email address and telephone number of the assigned Woodside focal person. Woodside also provided AC NOPSEMA's contact information.
  - Woodside asked RRKAC to forward the information to its members and offered to speak to RRKAC members as well as the RRKAC Board.
  - Woodside offered to provide more specific information, maps and images to RRKAC if required.
  - Woodside advised RRKAC that reasonable financial support was available for meetings for the purpose of consultation.
- On 5 December 2024, Woodside again provided information to RRKAC about this EP and advised Woodside would resubmit this EP for further assessment by NOPSEMA. Woodside informed RRKAC that feedback received by 19 December would be reflected in the EP and considered by NOPSEMA.
- On 18 December 2024, Woodside again offered to meet RRKAC to discuss the EP.

Reasonable Period:

Woodside allowed RRKAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation with RRKAC in March 2024. Woodside has responded to RRKAC over 14 months, demonstrating a "reasonable period" of consultation, where a genuine two-way dialogue has occurred on this activity.

- A clear consultation period was communicated to RRKAC during Woodside's initial email on 5 March 2024. RRKAC was asked to provide feedback by 2 April 2024, in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided RRKAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside commenced consultation with RRKAC in March 2024. Woodside has addressed and responded to RRKAC queries over 14 months, demonstrating a "reasonable period" of consultation.
- Woodside emailed RRKAC on 5 December and invited it to provide further feedback by 19 December ahead of Woodside resubmitting this EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for WAC's input into how RRKAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside sent the initial email about this EP on 5 March 2024:
  - Included email addresses and telephone numbers for a Woodside focal point and NOPSEMA.
  - Offered for Woodside to speak with RRKAC members as well as the RRKAC Board.
  - Asked RRKAC to advise how it would like Woodside to engage and whether RRKAC required further information.
  - Woodside asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invited RRKAC to monthly luncheons.
- Woodside provided RRKAC an additional opportunity to provide feedback ahead of resubmitting this EP. Woodside emailed RRKAC on 5 December 2025 and requested feedback by 19 December 2024.

Outcomes of Consultation

- During the past 14 months, RRKAC has not raised matters relevant to this EP.
- Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on RRKAC's functions, interests or activities.

Ngarluma Aboriginal Corporation (NAC)

NAC is established under the Native Title Act 1993 by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NAC which extends prior to consulting on this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NAC on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a dedicated focal point for EP consultation with NAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

For consultation on this EP, Woodside contacted NAC offering an opportunity to present to the NAC Board. Woodside asked NAC how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that NAC believed should be consulted and requested that all information shared with NAC be cascaded to its members.

During consultation for this EP, Woodside became aware that NAC was experiencing staff turnover and structural change. Woodside understands that NAC has fewer than five staff members and that NAC engages consultants and contractors to engage in EP consultation and conduct other business activities on NAC's behalf. During the consultation period (and following), Woodside's focus has been on supporting NAC through the period of change whilst enabling NAC to consult and remain informed about Woodside's, activities including activities proposed to be undertaken for this EP.

As part of its ongoing consultation and relationship building, Woodside provided NAC with a consultation framework agreement which sought from NAC, confirmation as to how NAC would like to be consulted, including NAC's views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. It has become clear during engagements with NAC that this framework agreement is not a priority and negotiation of it will likely continue into the future. Consultation for this EP has occurred in parallel to discussions around the framework consultation agreement (which remain ongoing).

In April and November 2024, Woodside was notified that the cultural protocols associated with Sorry Business were in place. Woodside understood that this would impact NAC and, out of respect, did not contact NAC during these periods.

In addition to consultation for specific EPs relevant to NAC, Woodside meets NAC regularly during Quarterly Heritage Meetings, monthly community luncheons and monthly relationship meetings. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs at these meetings.

This context and process demonstrates that Woodside's consultation approach with NAC is appropriate and adapted to the nature and interests of NAC.

Historical Engagement:

- On 18 July 2023, Woodside emailed NAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also requested NAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NAC Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 2.34), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NAC and its members may have within the EMBA, information on how NAC would like to engage, and requested that NAC provide information to other individuals as required. Woodside requested feedback by 29 March 2024.

- On 1 March 2024, Woodside emailed NAC a draft consultation agreement for review (SI Report, reference 38.1).
- On 17 April 2024, Woodside received an email from NYFL informing it that there had been a tragic passing in the Roebourne community and that Sorry Business was underway (SI Report, reference 38.2).
- On 26 April 2024, Woodside emailed NAC to follow up on the draft consultation agreement and asked for an update from NAC on its review of the agreement (SI Report, reference 38.3).
- On 20 May 2024, Woodside emailed NAC to follow up on the status of the draft consultation agreement review, to request feedback and offered to meet to discuss EPs. (SI Report, reference 38.4).

Ongoing Engagement

- On 5 September 2024, Woodside emailed NAC after meeting its newly appointed acting CEO. Woodside invited NAC to its Quarterly Heritage Meetings, included proposed dates for the meetings, information about attendance fees and requested NAC confirm a list of attendees prior to each meeting (SI Report, reference 38.5).
- On 9 September 2024, Woodside invited NAC to share stories and receive updates from Woodside at its Monthly Luncheon for Traditional Owners (SI Report, reference 38.6).
- On 22 September 2024, Woodside emailed NAC about an administrative matter relating to the Quarterly Heritage Meetings (SI Report, reference 38.7)
- On 25 September 2024, NAC attended Woodside's Monthly Luncheon for Traditional Owners (SI Report, reference 38.8). During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process.
- On 3 October 2024, Woodside invited NAC to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners (SI Report, reference 38.9).
- On 23 October 2024, Traditional Owner members from NAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 38.10).
- On 21 November 2024, NYFL emailed Woodside a letter advising that due to the passing of a Senior Elder, Sorry Business was underway in the Roebourne area (SI Report, reference 38.11).
- On 5 December 2024, Woodside emailed NAC an update on this EP (SI Report, reference 38.12). Woodside:
  - Informed that Woodside would resubmit this EP for further assessment by NOPSEMA.
  - Notified NAC that consultation for this EP would close on 19 December 2024 and that feedback provided by that date would be reflected in the EP and considered by NOPSEMA.
  - Acknowledged discussions relating to framework agreements were ongoing but consultation had occurred in parallel for this EP.
  - Woodside stated:
    - That NAC was welcome to state its preferred method of consultation including whether it would like to meet face-to-face.
    - That feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and

Review process as appropriate.

- On 11 December 2024, Woodside became aware through social media about the passing of two significant Elders. This news was relevant to NAC (SI Report, reference 38.13).
- On 22 January 2025, Woodside emailed NAC information about Quarterly Heritage meetings scheduled for 2025 (SI Report, reference 38.14).
- On 4 March 2025, Woodside emailed NAC a reminder about the Quarterly Heritage meeting scheduled for 13 March 2025 (SI Report, reference 38.15).
- On 4 March 2025, Woodside invited NAC to share stories and receive updates from Woodside at its monthly community luncheon for Traditional Owners to be held in Roebourne on 5 March 2025(SI Report, reference 38.16).
- On 5 March 2025, Traditional Owner members from NAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 38.17).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given NAC relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 1 March 2024, Woodside commenced consultation with NAC on this EP. Woodside provided NAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.

  - Diagrams.
  - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NAC's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked NAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to NAC if required.

- On 20 May 2024, Woodside offered to meet NAC to discuss EPs.
- On 5 December 2024, Woodside again provided information to NAC about this EP and advised Woodside would resubmit this EP for further assessment by NOPSEMA. Woodside informed NAC that feedback received by 19 December would be reflected in the EP and considered by NOPSEMA.

Reasonable Period

Woodside allowed NAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with NAC in March 2024 and provided information on the EP on that date. Since then, Woodside and NAC have engaged in consultation for over 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to NAC during Woodside's initial email on 1 March 2024. NAC was asked to provide feedback by 29 March in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided NAC with two months to consult ahead of preparing the EP for submission and continues to take feedback in relation to the EP.
- Woodside emailed NAC on 5 December and invited it to provide further feedback by 19 December ahead of Woodside resubmitting this EP.
- Woodside notes that, during consultation, it has also respectfully paused consultation in periods when NAC was observing sorry time or cultural matters (see April and November 2024) and has been sensitive to NAC's structural and other changes.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside asked for NAC's input into how NAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 1 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.

- Offered for Woodside to speak with NAC members as well as the NAC Board.
- Asked NAC to advise how it would like Woodside to engage and whether NAC required further information.

- Throughout the consultation period (and following submission of the EP for assessment), Woodside has emailed NAC, met members during community luncheons and have otherwise had direct contact lines to each other during the period.
- Woodside invites NAC to Quarterly Heritage Meetings, and monthly relationship meetings and luncheons.
- Woodside provided NAC an additional opportunity to provide feedback ahead of resubmitting this EP. Woodside emailed NAC on 5 December 2025 and requested feedback by 19 December 2024.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 14 months NAC has not provided feedback about this EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NAC's functions, interests or activities.

Yindjibarndi Aboriginal Corporation

Yindjibarndi Aboriginal Corporation (Yindjibarndi) is established under the Native Title Act 1993 by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to Yindjibarndi on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with Yindjibarndi who is responsible for building a consultative relationship and is available to provide information and take feedback from Yinjibarndi.

For this consultation, Woodside asked Yindjibarndi how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that Yindjibarndi believed should be consulted and requested that all information shared with Yindjibarndi be cascaded to its members.

Yindjibarndi has informed Woodside that it will not be providing comment on oil and gas matters. Yindjibarndi requested Woodside refer all correspondence about EPs to the Ngarluma Yindjibarndi Foundation Ltd (NYFL).

Historical Engagement:

- On 18 July 2023, Woodside emailed Yindjibarndi NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that Yindjibarndi advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.

- On 26 July 2023, Woodside emailed Yindjibarndi Woodside's planned *Program of Ongoing Engagement with Traditional Custodians* (SI Report, reference 20.2).

(1) On 1 August 2023, Yindjibarndi emailed Woodside advising Ngarluma Yindjibarndi Foundation Ltd (NYFL) would manage oil and gas matters on its behalf. **(1)** Woodside directed future correspondence to NYFL as requested.

P*lease see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.*

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed Yindjibarndi via NYFL advising of the proposed activity (Record of Consultation, reference 2.35), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Yindjibarndi and its members may have within the EMBA, information on how Yindjibarndi would like to engage, and requested that Yindjibarndi provide information to other individuals as required. Woodside requested feedback by 3 April 2024.

See NYFL on behalf of Yindjibarndi below for record of further engagement.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Yindjibarndi has instructed Woodside that it will be represented by NYFL in ongoing discussion about EPs.	**(1)** **Woodside assessment:** Woodside accepts Yindjibarndi's right to be represented at their own choosing. **Woodside response:** Woodside will engage with NYFL on behalf of Yindjibarndi for ongoing consultation related to this activity.	**(1)** Ongoing consultation will be undertaken as set out in Section 7.12 of the EP.
No feedback, objections or claims received despite follow up.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional controls or measure required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Yindjibarndi for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5.5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has given Yindjibarndi relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information* (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 18 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 6 March 2024, Woodside commenced consulting with Yindjibarndi via NYFL on this EP. Woodside's provided Yindjibarndi via NYFL:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of Yindjibarndi's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked Yindjibarndi to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to Yindjibarndi if required.

Reasonable Period

Woodside allowed Yindjibarndi a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with Yindjibarndi in March 2024 and provided information via NYFL on that date. Woodside has corresponded with NYFL over 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to Yindjibarndi via NYFL during Woodside's initial email on 6 March 2024. Yindjibarndi was asked to provide feedback by 3 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided Yindjibarndi with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside has asked for Yindjibarndi's input into how it would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.

- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 6 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from Woodside's First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with Yindjibarndi members as well as the Yindjibarndi Board.
  - Asked Yindjibarndi to advise how it would like Woodside to engage and whether Yindjibarndi required further information.
  - Woodside asked Yindjibarndi if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 14 months Yindjibarndi has not raised matters relevant to this EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Yindjibarndi's functions, interests or activities.

Native Title representative bodies

Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the NTRB for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders.

In March 2023, YMAC notified Woodside that it was a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a NTRB under applicable federal legislation. YMAC confirmed it did not intend to provide substantive comment on the content of EPs.

YMAC provides administrative and legal assistance to NTGAC, a group identified as a relevant person for this EP. Woodside has consulted with YMAC in this capacity.

Woodside has an existing relationship with YMAC that extends to a period prior to consulting on this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to YMAC on 25 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with YMAC who is responsible for building a consultative relationship and is available to provide information and take feedback.

In June 2023, YMAC requested Woodside enter into a draft consultation framework and fund an in-house position to assist YMAC's clients including NTGAC in consultation on EPs. In response to this request, Woodside provided YMAC with a 7-page draft consultation framework in February 2024 which sought confirmation from YMAC as to how it would like to be consulted, including its views on what constituted sufficient information, a reasonable period of time and a reasonable opportunity for consultation. While

Woodside has continued to attempt to progress the framework agreement, despite numerous attempts, it remains in a draft form and has not been progressed. We note, however, that this has not prevented consultation on this EP from progressing in parallel to discussions on the framework agreement.

For consultation on this EP, Woodside contacted YMAC offering an opportunity to present to the YMAC Board. Woodside asked YMAC how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that YMAC believed should be consulted and requested that all information shared with YMAC be cascaded to its members.

This context and process demonstrates that Woodside's consultation approach with YMAC is appropriate and adapted to the nature and interests of YMAC.

Historical Engagement:

- **(1)** On 20 March 2023, YMAC responded to an earlier email from Woodside to confirm that in its view YMAC is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a NTRB under applicable federal legislation. YMAC confirmed that its role is limited and that it does not intend to provide substantive comment on the content of EPs. **(1)** Woodside acknowledged YMAC's feedback.
- On 19 July 2023, Woodside emailed YMAC and NTGAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also reiterated Woodside's request that YMAC/NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 25 July 2023, Woodside emailed YMAC ***Woodside's Program for Ongoing Engagement with Traditional Custodians***.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 20 March 2024, Woodside emailed YMAC as the representative for NTGAC, advising of the proposed activity (Record of Consultation, reference 2.37), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required.
- On 5 December 2024, Woodside emailed NTGAC/YMAC an update on this activity (SI Report, reference 15.25). Woodside:
- On 10 March 2025, Woodside emailed NTGAC/YMAC to correct EP references provided in its email on 5 December 2024 (SI Report 15.26). Woodside:

Please see NTGAC for further details of the above correspondence.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) YMAC has provided feedback that in its view it is a 'relevant person' under regulation 25 of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a	**(1)** **Woodside assessment:** Woodside accepts YMAC's feedback that it is a relevant person only in relations to its facilitation and coordination function as a representative body. **Woodside response:** Woodside has consulted with YMAC in relation to its facilitation and coordination as a NTRB under applicable federal legislation and	**(1)** Not required

NTRB under applicable federal legislation and does not intend to provide substantive comment on the content of EPs.	has accepted YMAC's advice that it does not intend to provide substantive comment on the content of EPs.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report: Consultation Complete

YMAC has informed Woodside it will not provide substantiative comments on EPs and YMAC has therefore not provided substantive feedback, claims or objections on the content of this EP. Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with YMAC for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity have been provided, as described in Section 5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided YMAC/NTGAC with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 20 March 2024, Woodside commenced consultation with YMAC/NTGAC on this EP. Woodside provided YMAC/NTGAC:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing
    - Maps showing the location and EMBA
    - A summary of the risks and impacts of the activity
    - Diagrams
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YMAC/NTGAC's interests and how the activity could impact those interests.

- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked YMAC to forward the information to NTGAC and its members.
- Woodside offered to provide more specific information, maps and images to YMAC/NTGAC if required.

Reasonable Period

Woodside allowed YMAC a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with YMAC/NTGAC in March 2024 and provided information on the EP on that date. Since then, Woodside and YMAC/NTGAC have engaged in consultation for 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to YMAC/NTGAC during Woodside's initial email on 20 March 2024. YMAC/NTGAC was asked to provide feedback by 18 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided YMAC/NTGAC with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside and YMAC have a history of consulting and engaging. A primary means of consultation is by email. Consultation for this EP therefore commenced via email.
- Woodside asked for YMAC's input into how YMAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for YMAC and First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 20 March 2024:
  - Included a general email address and telephone number for Woodside as well as direct email and telephone number for a focal person from Woodside's First Nations Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YMAC/NTGAC members as well as the YMAC/NTGAC Board.
  - Asked YMAC to advise how it would like Woodside to engage and whether YMAC/NTGAC required further information.
  - Woodside asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside has consulted in the way that YMAC has asked and in the capacity that YMAC has asked it consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of consultation are appropriate because:

- During the past 14 months, consistent with its purpose and aims, YMAC has not provided feedback or raised objections or claims about the content of the EP or the adverse impact of each activity to which this EP relates.

- Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Yindjibarndi's functions, interests or activities.

Self-identified First Nations Groups

Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the Northwest Shelf Agreement 1998 struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation (YAC) as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and YAC as relevant persons in the course of preparing this EP. NYFL self-identified and has advised it is relevant for this EP.

Woodside had an existing relationship with NYFL on other matters and consultations prior to consulting on this EP. Consultation on previous EPs has primarily occurred by email and face to face meetings – there is a history and pattern of consultation in this manner being undertaken by, and being acceptable to NYFL.

Woodside's consultation approach for Traditional Owners has a focus on building and maintaining relationships with each group. This is underpinned by Woodside's Program of Ongoing Engagement (sent to NYFL on 26 July 2023). Woodside has assigned a First Nations Engagement team member as a focal point for EP consultation with NYFL who is responsible for building a relationship and is available to provide information and take feedback.

Woodside and NYFL are in the process of finalising a draft consultation agreement. Woodside regarded initial quotes by NYFL to review the agreement as excessive and outside of Woodside's policies and procedures. Woodside and NYFL have since agreed on funding for review and close out of the consultation agreement.

Woodside provides reasonable funding for consultation and has provided NYFL with further information about amounts available and processes to be followed. Woodside disagrees with NYFL's assertion that a consultation agreement is required for consultation to occur. It has been made clear to NYFL that consultation for this EP has occurred in parallel to discussions about the consultation agreement (which remains ongoing).

Historical Engagement:

- On 19 July 2023, Woodside emailed NYFL NOPSEMA's *Consultation Guideline, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*. This email also requested that NYFL advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed NYFL Woodside's planned *Program of Ongoing Engagement with Traditional Custodians*.

Please see Scarborough Seabed Intervention and Trunkline Installation EP (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 2.38), providing a Summary Information Sheet (including

a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required. Woodside asked NYFL to provide feedback by 3 April 2024.

- **(1)** On 6 March 2024, NYFL emailed Woodside a letter about consultation on this EP (SI Report, reference 23.1). The letter stated NYFL:
  - Required advice about:
    - Technical information contained in the EP (an independent expert would be required).
    - An assessment of the potential environmental implications of the proposal (an independent expert would be required).
    - An assessment of the potential impact of the EP on cultural heritage.
  - Was under resourced and sought costs to complete this work.
- On 6 March 2024, Woodside emailed NYFL with a letter setting out the draft terms of a 7-page consultation agreement between NYFL and Woodside (SI Report, reference 23.2). The agreement (among other things) sought NYFL's input on the following:
  - Confirmation of what is sufficient information for NYFL for consultation.
  - Confirmation of what is a reasonable period for consultation.
  - NYFL's preferred method for provision of information.
  - NYFL's preferred method for providing objection or claims.
  - Cost and termination of the agreement.
- Between 14 and 19 March 2024, NYFL emailed Woodside regarding administrative matters relating to the draft consultation agreement (SI Report, references 23.3, 23.4).
- On 5 April 2024, Woodside emailed NYFL to follow-up on consultation information sent to NYFL about this EP and offered to provide further information if required (SI Report, reference 23.5).
- Between 5 April and 12 April 2024, NYFL and Woodside exchanged emails about the draft consultation agreement (SI Report, reference 23.6, 23.7, 23.8, 23.9).
- On 17 April 2024, NYFL emailed Woodside noting it was attending to Sorry Business and as per cultural protocols would require time within the community and engagement would be delayed until appropriate to re-commence (SI Report, reference 23.10).
- Between 10 May and 3 July 2024, Woodside and NYFL exchanged emails about the draft consultation agreement. Woodside offered to meet NYFL however NYFL declined the invitation (SI Report, references 23.11, 23.12, 23.13).

Ongoing Engagement

- On 9 September 2024, Woodside invited NYFL to share stories and receives updates from Woodside at its Monthly Community Luncheon for Traditional Owners on 25 September 2024 (SI Report, reference 23.14).
- On 25 September 2024, Traditional Owner members from NYFL attended Woodside's Monthly Community Luncheon for Traditional Owners. During the luncheon Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 23.15).
- On 3 October 2024, Woodside emailed NYFL an invitation to share stories and receives updates from Woodside at its Monthly Community Luncheon for Traditional

Owners on 23 October 2024 (SI Report, reference 23.16).

- On 21 October 2024, NYFL emailed Woodside (SI Report, reference 23.17). In the email NYFL stated:
  - **(2)** No formal consultation had taken place between NYFL and Woodside on this EP and others.
  - **(3)** Woodside has provided NYFL with a draft consultation agreement.
  - **(3)** NYFL would progress consultation on this EP and others once the consultation agreement had been formalised.
- On 23 October 2024, Traditional Owner members from NYFL attended Woodside's Monthly Community Lunch for Traditional Owners. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 23.18).
- On 4 November 2024, Woodside emailed NYFL in response to statements made in NYFL's email on 21 October 2024 (SI Report, reference 23.19). The email:
  - **(2)** Confirmed Woodside had consulted with NYFL via email as this appeared to be NYFL's primary method of communicating with Woodside on EPs and offered to meet as part of ongoing consultation. Woodside also confirmed that consultation had closed for this EP.
  - **(3)** Reiterated that the ongoing negotiation of a consultation framework agreement can and continues to occur in parallel to consultation for EPs.
- On 8 November 2024, NYFL emailed Woodside requesting to meet on 20 November 2024 (SI Report, reference 23:20).
- On 15 November 2024, Woodside and NYFL exchanged emails confirming the invitation to meet on 20 November 2024. Woodside stated it would separately email NYFL about the remaining EPs outlined in the 21 October 2024 correspondence (SI Report, references 23.21, 23.22).
- On 20 November 2024, Woodside met with NYFL. Woodside emailed NYFL a summary of its meeting earlier that day (SI Report, reference 23.23). Matters relevant to this EP included:
  - Administrative matters relating to NYFL's review of the draft consultation agreement.
  - Woodside seeking time to present to the NYFL Board on EPs.
- On 21 November 2024, NYFL advised Woodside about the passing of a Senior Yindjibarndi Elder and founding member of NYFL. The NYFL Board advised that Sorry Business was underway, and the community was commencing a period of mourning (SI Report, reference 23.24).
- On 5 December 2024, Woodside emailed NYFL a response to its letter of 21 October 2024 (SI Report, reference 23.25). In the letter Woodside:
  - Invited NYFL to provide further feedback about this EP no later than 19 December 2024 and that any feedback, opinions and comments provided by that date would be reflected in the EP and considered by NOPSEMA
  - Attached a summary of consultation that had occurred for this EP.
  - Woodside stated:
    - **(2)** It did not agree that consultation had not occurred for this EP and others. Woodside had consulted NYFL in accordance with regulations.
    - **(3)** that discussions about a draft consultation agreement had occurred in parallel to consultation on EPs.
    - NYFL was welcome to state its preferred method of consultation including whether it would like to meet face-to-face.
    - Woodside welcomed the opportunity to speak with Elders, office holders and other interested parties about this activity.
    - Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.
    - Woodside manages gender-restricted or other culturally sensitive information carefully and would work with NYFL to understand how it would like its information

to be managed.
- Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.
- NYFL could forward this email and the attached document to members of the NYFL, Traditional Owners and other people and organisations who may be interested.
- NYFL was welcome to call or email Woodside if it would like to discuss consultation for this EP and other EPs further.

- On 6 December 2024, NYFL emailed Woodside acknowledging its correspondence on 5 December 2024. Woodside replied to this acknowledgement (SI Report, references 23.26, 23.27).
- On 4 March 2025, Woodside invited NYFL to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 5 March 2025 (SI Report, reference 23.28).
- On 5 March 2025, Traditional Owner members from NYFL attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report, reference 23.29).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
NYFL self-identified and advised Woodside they are a relevant person for activities.	**Woodside assessment:** NYFL was created to act as Trustee for the Northwest Shelf Agreement 1998. NYFL's membership is made up of Ngarluma people and Yindjibarndi people, membership is not open to any person who is not accepted as Ngarluma or Yindjibarndi. Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations individually. Ngarluma and Yindjibarndi Aboriginal Corporations were appointed by the Federal Court, at the request of the Ngarluma and Yindjibarndi common law native title holders as PBCs to represent the communal interests of the Ngarluma and Yindjibarndi people respectively. Ngarluma and Yindjibarndi Aboriginal Corporations are representative of all Ngarluma and Yindjibarndi people regardless of membership. **Woodside response:** Woodside has responded to NYFL's self-identification and consulted with them as a relevant person.	NYFL has been consulted with in accordance with the methodology described in Section 5 of the EP.
(1) NYFL has stated it is under resourced and requires expert advice about	**(1)** **Woodside assessment:** Woodside has provided NYFL with a draft consultation agreement. This agreement would be an effective mechanism to address	**(1)** Woodside is implementing a program to actively

technical and environmental matters relating to this EP.	resourcing for expert advice as agreed between NYFL and Woodside. Woodside supports reasonable requests for resourcing to support consultation. **Woodside response:** Woodside supports reasonable requests to engage experts. Woodside sought a meeting with NYFL to discuss how Woodside can reasonably ensure NYFL is adequately resourced for consultation.	support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes continued engagement regarding the proposed Framework Agreement which would be applied to ongoing consultation for this activity. Woodside will continue to consult following acceptance of the EP, as set out in Section 7.12 of the EP. The proposed draft consultation agreement may address any reasonable requests for funding.
(2) NYFL stated no formal consultation had taken place on this EP and others.	**Woodside assessment:** Woodside rejects NYFL's assertion that has not been consulted on this EP. Woodside began consulting NYFL on 6 March 2024 and has provided sufficient information, a reasonable period of time, and reasonable opportunity for NYFL to provide feedback. Woodside has clearly communicated to NYFL that consultation for this EP and others has occurred in parallel to negotiations about the draft consultation agreement. Woodside notes that the consultation agreement is not required to undertake and/or consult with NYFL on EPs. **Woodside response:** The information provided by Woodside meets the requirements of regulation 25 of the Environment Regulations for the reasons set out above.	**(2)** Not required
(3) NYFL will progress consultation on this EP and others once a draft consultation agreement provided by Woodside had been formalised	**(3)** **Woodside assessment:** Separate from consultation under Regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required to undertake and/or complete consultation in the course of preparing this EP. Consultation has occurred in parallel to discussions about the draft agreement. Sufficient information to allow informed assessment has already been provided by other means. Woodside has an existing engagement framework in place with NYFL which enables regular (quarterly) communication about Woodside activities.	**(3)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes continued engagement regarding the proposed Framework Agreement which would be applied to ongoing consultation for this activity. Woodside will continue to consult

	Woodside Response: Woodside has reiterated to NYFL that consultation has occurred in parallel to discussions about the draft consultation agreement.	following acceptance of the EP, as set out in Section 7.12 of the EP.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the objections or claims raised by NYFL. No additional measures or controls are required.

Summary Report: Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NYFL for the purpose of Regulation 25 is complete. Sufficient information, a reasonable period and reasonable opportunity to provide feedback have been provided, as described in Section 5 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NYFL sufficient information to allow NYFL to make an informed assessment of the possible consequence of the activity on the functions, interests or activities of NYFL because:

- NYFL was established in order to receive payments relating to the Northwest Shelf Agreement 1998 (not this EP) on behalf of its members.
- NYFL is not assessed as a relevant person under Woodside's methodology. Never-the-less, NYFL self-identified and Woodside has provided NYFL with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure and Draft Policy for Managing Gender-Restricted Information (informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters) (see 19 July 2023).
- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- Woodside provided information to NYFL on 28 August 2023 (when Woodside commenced consulting with NYFL on this EP). Woodside provided NYFL:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NYFL's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked NYFL to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to NYFL if required.
  - Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

Woodside allowed NYFL a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation on this EP with NYFL in March 2024 and provided information on the EP on that date. Since then, Woodside and NYFL have engaged in consultation for 14 months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to NYFL during Woodside's initial email on 6 March 2024. NYFL was asked to provide feedback by 3 April 2024 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside ultimately provided NYFL with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside provided a further opportunity for NYFL to provide feedback ahead of resubmitting this EP. Woodside advised NYFL that feedback received by 19 December 2024 would be reflected in the EP and considered by NOPSEMA

Reasonable Opportunity

- Woodside has given NYFL a reasonable opportunity to provide feedback and Woodside's approach to consultation is appropriate and adapted to the nature of the interests of NYFL because:
- NYFL was established in order to receive payments relating to the Northwest Shelf Agreement 1998 (not this EP) on behalf of its members.
- Woodside has consulted NYFL's membership on this EP.
- Woodside asked for NYFL's input into how NYFL would like to engage in consultation. In accordance with previous consultations and communications which have occurred via emails and meetings, Woodside and has consulted in a way that Woodside understands is appropriate for NYFL and First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside's initial email about this EP on 6 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with NYFL members as well as the NYFL Board/Office holders.
  - Asked NYFL to advise how it would like Woodside to engage and whether NYFL required further information.
  - Throughout the consultation period (and following submission of the EP for assessment), Woodside and NYFL have exchanged multiple emails, and met and have otherwise had direct contact lines to each other during the period.
- Woodside invites NYFL to Quarterly Heritage Meetings and monthly luncheons.
- Woodside and NYFL continue to negotiate a framework consultation agreement. Despite this negotiation going on in the background, Woodside has made it clear that consultation for this EP can and has occurred in parallel with the ongoing negotiations relating to the framework consultation agreement.

- Woodside provided a further opportunity to NYFL to provide feedback ahead of resubmitting this EP. Woodside emailed NYFL on 5 December 2024 and advised that feedback received by 19 December 2024 would be reflected in the EP and considered by NOPSEMA

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- The nature of NYFL's feedback has meant that Woodside has not been required to assess the merits of any claim or objection about the adverse impact of the activity to which this EP relates.
- NYFL was established in order to receive payments on behalf of its members relating to the Northwest Shelf Agreement 1998. That Agreement relates to a number of matters including payment for land use on the Burrup Peninsula by the North West Shelf Joint Venture (not for this EP). NYFL was assessed as not being a relevant person for this EP because NYFL's functions, interests or activities are not assessed as potentially being affected by the activities to be carried out under the EP. NYFL's members have been consulted on this EP. Consultation with NYFL's members has given Woodside the opportunity to receive information and better understand how NYFL's members perceive environmental impacts and risks of the activities under the EP. Those consultations have enabled Woodside to refine or change measures it proposes to address those impacts and risks by taking into account the information acquired from NYFL's members during consultation. In the context of NYFL's role and the consultations undertaken by Woodside for this EP, the purpose of consultation has been achieved despite NYFL not raising any objections or claims about the adverse impact of the activities to which this EP relates. Consultation is complete.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).

Other First Nations groups

Save our Songlines (SoS) and/or [Individual 1]

SoS and [Individual 1] do not squarely fall within the consultation categories in the current Woodside methodology and are therefore considered in their own category.

SoS is an organisation formed by [Individual 1] who we currently understand is the group's primary spokesperson. The views expressed by SoS are the views expressed by [Individual 1]. In addition, Individual 1 and SOS are together represented by lawyers from the Environment Defenders Office (EDO). For all intents and purposes, communication with [Individual 1] is communication with SoS and that is why Woodside has consulted them as one.

Woodside notes that in its initial consultation email to [Individual 1] via EDO, Woodside stated it was "seeking to understand the nature of the interests that Save Our Songlines (SoS) and its members may have in the environment that may be affected (EMBA) by this activity". EDO acknowledged this email and did not dispute Woodside's reference to both SoS and [Individual 1] in this or any other correspondence from Woodside. Woodside also invited [Individual 1] to advise her preferred method of consultation. [Individual 1] did not raise issues about Woodside communicating with SoS and herself in this manner.

[Individual 1] and SoS have stated an interest in opposing the expansion on the Burrup by Woodside and others. In addition, their stated interests include the protection of Murujuga rock art.

It is noted that [Individual 1] has been a member of Aboriginal corporations who have been separately consulted as relevant persons by Woodside. This is relevant because it confirms that cultural values or interests of those groups have been consulted on and assessed in preparing this EP.

Historical Engagement:

- On 25 July 2023, Woodside met with EDO, SoS, and/or [Individual 1] and/or [Individual 2] about an activity not relevant to this activity (SI Report reference 26.1). During the meeting, SoS and/or [Individual 1] and/or [Individual 2] stated that they are broadly concerned about:
  - **(1)** impact on the whales and other animals.
  - **(2)** the Songlines (unspecified) and the energy lines (unspecified).
- **(3)** On 25 July 2023, EDO on behalf of SoS, and/or [Individual 1] and/or [Individual 2] emailed Woodside in response to another activity not related to this activity (SI Report, reference 26.2) requesting a response to questions relating to the depth of wells, freshwater, migratory patterns of whales, dugongs and turtles, and seagrass distribution.
- **(1,2, 3)** On 27 July 2023, Woodside responded to EDO's email of 25 July 2023 in relation to another activity (SI Report, reference 26.3) providing information in response to the interest SoS, and/or [Individual 1], and/or [Individual 2] had in marine mammals, seagrass, and the meeting of saltwater and freshwater.
- On 13 December 2023, Woodside emailed EDO in relation to another activity, and also requested EDO respond as to who their client was (SI Report, reference 26.4).
- On 18 December 2023, the EDO emailed Woodside, confirming that the EDO was currently acting only for [Individual 1], not [Individual 2] or SoS (SI Report, reference 26.5).

Summary of information provided and record of consultation for this EP:

- On 26 March 2024, Woodside emailed SoS and/or [Individual 1] advising of the proposed activity (Record of Consultation, reference 2.39), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that SoS and its members may have within the EMBA, information on how SoS would like to engage, and requested that SoS provide information to other individuals as required. Woodside requested feedback by 26 April 2024.
- On 26 March 2024, EDO on behalf of SoS and/or [Individual 1] emailed Woodside acknowledging the information for this activity and noting they would obtain instructions (SI Report, reference 26.6).
- On 10 April 2024, EDO emailed Woodside about another EP (26.7). Matters relevant to this EP include:
  - **(4)** [Individual 1] intended consulting in written format going forward and would not include culturally sensitive information as they did not trust that this information would not be shared.
- **(5)** On 29 April 2024, EDO emailed Woodside to confirm SoS and/or [Individual 1] would like to consult on this activity and that a written comment would be provided (SI Report, 26.7).
- **(5)** On 2 May 2024, Woodside emailed EDO to advise the consultation period for SoS and/or [Individual 1] would be extended until 9 May 2024 to enable them to provide a written response to the activity (SI Report, reference 26.8).
- On 2 May 2024, EDO on behalf of SoS and/or [Individual 1] emailed Woodside (SI Report, reference 26.9) to clarify they understood 26 April 2024 to be the date to confirm interest in consultation, rather than the end of consultation, and confirmed they would provide a written response as soon as possible.
- On 9 May 2024, SoS and/or [Individual 1] emailed Woodside (SI Report, reference 26.10) with comments relating to this activity and another unrelated activity and noted there was no culturally sensitive information included. The letter outlined [Individual 1] feedback including:

- **(6)** An overview of [Individual 1] function interests and activities including:
    - [Individual 1] connection to Murujuga and cultural responsibilities.
    - [Individual 1] opposition to all industry on Murujuga.
    - That [Individual 1] holds information that is critical for Woodside to understand the impacts of the activity and that [Individual 1] may also have feedback on proposed mitigation measures.
- (7) [Individual 1] concern that the sacred rock art at Murujuga is at risk from emissions from the Pluto and Scarborough facilities
- (8) That [Individual 1] would like Woodside to consider GHG emissions as a potential impact or risk in the EP.
- (9) [Individual 1] is concerned about the cumulative impacts of any industry on Murujuga which:
    - restricts access to Murujuga.
    - affects cultural practices.
    - contributes to cultural genocide by creating irreplaceable, irreversible cultural damage.
    - Affects the environment.
- **(10)** That climate change should be considered as an impact.
- **(11)** That [Individual 1] is concerned about drilling a new well and seabed disturbance and specifically:
    - The disturbance of underwater cultural heritage, what surveys Woodside has conducted and how these aspects will be managed.
    - The impacts of drilling noise and pollution on marine life, songlines, the seabed and the ecosystem.
    - That mitigation measures are not strong enough.
- **(12)** That activities are offshore from culturally significant islands, including Rosemary Island which is a women's island to which [Individual 1] has a major connection and that Rosemary Island:
    - holds a connection to songlines.
    - Is a main breeding ground and habitat for turtles, which are culturally significant.
    - That erosion on the island caused by climate change, vessel traffic and fishing prevent turtles laying eggs and incubating properly.
    - Can only be protected by stopping use of the Pluto facility, and asks how Woodside will protect the island and the species reliant on the island.
- **(13)** That consultation of relevant persons needs to be consistent. Specifically:
    - Offering the same level of support.
    - Consulting in two stages, information provision, then response.
    - Providing assurance that culturally sensitive information will not be shared.
- **(14)** That the environment and cultural values are one, that Dreaming stories come from the animals depicted on the rock art and will live forever, that the connection and songlines are being disrupted.
- **(15)** That there are other individuals that Woodside should speak to about these activities but [Individual 1] is not comfortable identifying these people.

- On 14 May 2024, Woodside emailed SoS and/or [Individual 1] to thank them for their feedback, confirm that Woodside would reply shortly, and request an attachment that was missing from the original email (SI Report, reference 26.11).

- On 16 May 2024, EDO emailed Woodside to attach the Border Affidavit as requested (SI Report, reference 26.12).
- On 29 May 2024, Woodside emailed EDO a response to its 9 May 2024 letter (SI Report, reference 26.13). The letter stated:
  - **(6)** that Woodside acknowledged [Individual 1] was a Mardudhunera person, a Traditional Custodian of Murujuga and opposed to industry at Murujuga
  - **(4)** Woodside does not agree with assertions regarding culturally sensitive information. Woodside has followed protocols.
  - **(7)** the management of emissions under a range of Federal and State legislation and Woodside's support of the monitoring of emissions in relation to rock art.
  - **(8)** the assessment of emissions and the controls in the EP to reduce GHG emissions to ALARP and acceptable levels.
  - **(9)** the commitment to facilitating access to Murujuga to Traditional Custodians.
  - **(10)** the consideration of climate change impacts through the assessment of GHG emissions.
  - **(11)** the consideration of tangible and intangible heritage in the EP.
  - **(12)** that Woodside notes [Individual 1]'s connection to Rosemary Island.
  - **(13)** Woodside's methodology in identifying relevant persons for the purpose of consultation and commitment to engaging with Traditional Custodians through their preferred method of engagement.
  - **(14)** Woodside's efforts to understand and record the nature of the cultural values provided through consultation.
  - **(15)** Woodside's willingness to consult with Traditional Custodians, including those who self-identify as relevant.
- On 7 October 2024, EDO emailed Woodside about an administrative matter relating to email correspondence about EPs (SI Report, reference 26.14).
- **(5)** On 5 December 2024, Woodside emailed [Individual 1] and copied EDO an update about this EP (SI Report, reference 26.15). Woodside Informed [Individual 1] that Woodside would resubmit this EP for further assessment by NOPSEMA.
  - Notified [Individual 1] that consultation for this EP would close on 19 December 2024 and that feedback provided by that date would be reflected in the EP and considered by NOPSEMA.
  - Woodside stated that [Individual 1]
    - Was welcome to state her preferred method of consultation including whether she would like to meet face-to-face or speak over the phone.
    - Could provide feedback during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) In a previous unrelated EP, cultural features associated with whales were raised.	**(1)** **Woodside Assessment:** Woodside understands that some species hold spiritual and cultural importance to SoS and/or [Individual 1] . **Woodside Response:** During consultation on a previous EP, Woodside discussed controls put in place to manage impacts and risks relating to their	**(1)** Assessment of potential impacts to cultural values are described in section 6 of the EP.

	spiritual and cultural connection to the environment. Woodside has implemented controls to reduce potential risks and impacts to ecological and cultural values to ALARP and to an acceptable level.	
(2) In a previous unrelated EP, it was noted there were cultural features associated with Songlines, dreaming and energy lines.	**(2)** **Woodside Assessment:** Woodside understands that Songlines and energy lines to hold personal spiritual and cultural value individually (rather than communally) to SoS and/or [Individual 1]. Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels.	**(2)** Woodside has considered SoS's and/or [Individual 1] feedback and updated Section 4.9 to record topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.11 with appropriate controls implemented. At this stage, Woodside has not been provided with specific information on these potential values to enable a more fulsome assessment.
(3) In a previously unrelated EP, an interest in marine mammals, seagrass, and the meeting of freshwater and saltwater was demonstrated.	**(3)** **Woodside Assessment:** SoS and/or [Individual 1] has not expressly confirmed their interests, rather, have raised topics of interest to them during consultation for another activity. Woodside has considered SoS's and/or [Individual 1] topics of interest and shared relevant information in relation to a previous EP, with SoS and/or [Individual 1] relating to these interests, including controls put in place to manage risks and impacts to them. **Woodside Response:** Woodside has updated Section 4.9 to record the interests and assessed them in Section 6 implementing appropriate controls.	**(3)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9 to record these. These are assessed in 6.11 with appropriate controls implemented.
(4) In an unrelated EP, SoS and/or [Individual 1] advised that consultation would occur in written format going forward and would not include culturally sensitive information as they did not trust that this information would not be shared.	**(4)** **Woodside Assessment:** Woodside acknowledges that consultation will occur in written format going forward. **Woodside Response:** Woodside disagrees with assertions regarding culturally sensitive information. Woodside has followed protocols for handling this information as agreed during consultation with SoS [Individual 1].	**(4)** Not required
(5) A representative for SoS and/or [Individual 1] has confirmed they wish to consult on this activity and will do so in	**(5)** **Woodside Assessment:** Woodside understands that SoS and/or [Individual 1] will provide feedback in writing for this activity.	**(5)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it

writing.	**Woodside Response:** Woodside extended the consultation period for SoS and/or [Individual 1] until 9 May 2024 to enable them to provide their written response.	will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
(6) In a letter on 9 May 2024, SoS and/or [Individual 1] advised of cultural responsibilities and a connection to Murujuga and that they held critical information for Woodside.	**(6)** **Woodside Assessment:** SoS and/or [Individual 1] refer to an affidavit filed in September 2023 which articulates the connection and some of the cultural responsibilities. The content of this affidavit has been considered in Section 4.9.4 of this EP. SoS and/or [Individual 1] also refer to other cultural responsibilities, but these are not specified. Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** Woodside has considered the connection and cultural responsibilities articulated in the referenced affidavit in Section 4.9.4**,** and assessed these in Section 6.11 implementing appropriate controls.	**(6)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).
(7) In a letter on 9 May 2024, SoS and/or [Individual 1] advised that rock art is at risk from the emissions by the activity.	**(7)** **Woodside Assessment:** The presence of industry on the Burrup Peninsula has generated concerns that emissions may lead to an accelerated weathering of rocks on which rock art is present which may reduce the visibility or destroy the rock art. Research to date on the impacts of emissions on rock art has not been conclusive, and there are currently no set air quality thresholds for the protection of rock art. The WA Government is currently implementing the Murujuga Rock Art Strategy, which plans to develop a long-term framework to guide the management and protection of the rock art located on the Dampier Archipelago and the Burrup Peninsula. Woodside actively supports the implementation of the Murujuga Rock Art Strategy through membership of the Murujuga Rock Art Reference Group and provides funding associated with the Murujuga Rock Art Monitoring Program. **Woodside Response:** Woodside has considered the potential risks to rock art from the activity in Section 6.11.	**(7)** Woodside has considered potential risks to rock art in Section 6.11 with appropriate controls implemented.
(8) In a letter on 9 May 2024, SoS and/or [Individual 1] asked Woodside to	**(8)** **Woodside Assessment:** GHG emissions are considered in Section 6.7.10 of the EP. No new information regarding GHG emissions has been provided in	**(8)** Woodside has addressed the topic raised by SoS and/or [Individual 1] in Section 6.7.10.

consider GHG emissions as a potential impact or risk in the EP.	this letter. **Woodside Response:** Woodside has considered GHG emissions and potential impacts or risks in Section 6.7.10.	
(9) In a letter on 9 May 2024, SoS and/or [Individual 1] listed concerns regarding the cumulative impact of all industry on Murujuga, including restricted access to Murujuga, affected cultural practices, and industry's contribution to cultural genocide by creating irreplaceable, irreversible cultural damage.	**(9)** **Woodside Assessment:** Intangible heritage such as cultural practices and Traditional Custodian access to significant areas are addressed in Section 4.9. of this EP. No additional or new information is provided in this letter. Through the management measures adopted in Section 6 of this EP the activities subject to this EP will avoid any potential irreplaceable, irreversible cultural damage that Woodside has been advised of. **Woodside Response:** Woodside has considered cultural practices and access to country in Section 4.9.	**(9)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9 to record these. These are assessed in 6.11 with appropriate controls implemented.
(10) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined concerns with climate change and asked that climate change be considered as an impact.	**(10)** **Woodside Assessment:** Potential climate change impacts are considered in Section 6.7.10 of the EP. **Woodside Response:** Woodside has considered potential climate change impacts in Section 6.7.10 of the EP.	**(10)** Woodside has considered potential climate change impacts in Section 6.7.10.
(11) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined concerns with drilling and seabed disturbance including the disturbance of underwater cultural heritage, the impacts of drilling noise and pollution, and the strength of mitigation measures. SoS and/or [Individual 1] asked what surveys Woodside has conducted for underwater cultural heritage and how these aspects will be managed.	**(11)** **Woodside Assessment:** Drilling and seabed disturbance is located at approximately 177 m water depth. The ancient landscape, which was exposed to human habitation during the periods of occupation of the Australian continent extends to a depth of 125 m below current sea level. Therefore, no potential for impacts to tangible underwater cultural heritage is anticipated. Intangible heritage including sea country values is considered in Section 4.9.4 of this EP. This letter does not include any additional values of the environment not already addressed. **Woodside Response:** Woodside has considered intangible cultural heritage in Section 4.9.4. Due to the water depth of seabed disturbance, no impacts to tangible cultural heritage are anticipated.	**(11)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9.4 to record these. These are assessed in Section 6.11 with appropriate controls implemented.
(12) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined the significance of offshore islands, including Rosemary	**(12)** **Woodside Assessment:** Rosemary Island is within the EMBA. Rosemary Island provides nesting habitat for turtles. Rosemary Island also has a number of rock art sites.	**(12)** Woodside has updated the EP to capture feedback regarding the significance of Rosemary Island in Section 4.9.4.

Island, and asked how Woodside will protect the island and the species reliant on the island.	**Woodside Response:** Woodside has updated Section 4.9.4 to capture the significance of Rosemary Island. Consideration of risk, impacts and mitigations to Rosemary Island and the receptors associated with the island are addressed in Sections 6.7, 6.8, 6.9 and 6.11.	Assessment of risks and mitigation measures to islands and associated species, including Rosemary Island and turtles are addressed in Section 6.7, 6.8, 6.9, 6.11.
(13) In a letter on 9 May 2024, SoS and/or [Individual 1] advised that consultation should be consistent with all relevant persons.	**(13)** **Woodside Assessment:** Woodside applies its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine relevant persons for consultation. **Woodside Response:** Woodside consults with all relevant persons for each activity. Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.	**(13)** Woodside outlines its Consultation Approach and assessment of relevant persons in Appendix F.
(14) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined that the environment and cultural values are one, and the connection and songlines are being disrupted.	**(14)** **Woodside Assessment:** Woodside understands that SoS and/or [Individual 1] references to Songlines and energy lines relate to personal spiritual value individually (rather than communally) to SoS and/or [Individual 1] . Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels.	**(14)** Section 4.9 records topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.11.
(15) In a letter on 9 May 2024, SoS and/or [Individual 1] advised there were other individuals who should be consulted but states that they are not comfortable to identify them.	**(15)** **Woodside Assessment:** Woodside has applied its process for the identification of relevant persons. It is unclear if the other individuals mentioned by SoS and/or [Individual 1] have been identified through this process. Woodside has also advertised publicly to invite comment from relevant persons. **Woodside Response:** Woodside has sought to engage with all of the relevant persons it has identified, or who have self-identified as such for this EP. Woodside welcomes any person who wishes to provide feedback on this EP to do so through the means provided on the consultation factsheet.	**(15)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received from additional parties after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).

Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside has assessed the objections or claims raised by SoS and/or [Individual 1] . No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with SoS and/or [Individual 1] for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information

Woodside has given SOS and [Individual 1] sufficient information to allow them to make an informed assessment of the possible consequences of the activity on their functions, interests or activities because:

- In February 2024, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. The EP was published on the NOPSEMA website in May 2024.
- On 26 March 2024, Woodside commenced consultation with SoS and/or [Individual 1] on this EP. Woodside provided SoS/[Individual 1]:
  - A Summary Information sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of SoS and/or [Individual 1]'s interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked SoS and/or [Individual 1] to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images if required.
- SoS and/or [Individual 1] provided Woodside with comments about the activity, demonstrating that they had sufficient information in order to do so.
- Woodside emailed SoS and/or [Individual 1] on 5 December 2024 advising that the EP would be resubmitted. Woodside provided a link to the EP on the NOPSEMA website.

Reasonable Period

Woodside allowed a reasonable period for consultation in the preparation of this EP because:

- Woodside commenced consultation with SoS and/or [Individual 1] in March 2024. Woodside has responded to SoS and/or [Individual 1] over 14 months, demonstrating a “reasonable period” of consultation, where a genuine two-way dialogue has occurred on this activity.
- A clear consultation period was communicated to SoS and/or [Individual 1] during Woodside’s initial email on 26 March 2024. SoS and/or [Individual 1] was asked to provide feedback by 26 2024, in line with Woodside’s methodology of a 30-day consultation period. Woodside extended this period to 9 May 2024 after SoS and/or [Individual 1] expressed an interest in providing a written response to the activity. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside provided SoS and/or [Individual 1] with two months to consult ahead of preparing the EP and continues to take feedback in relation to the EP.
- Woodside commenced consultation with SoS and/or [Individual 1] in March 2024. Woodside has addressed and responded to SoS and/or [Individual 1’s] queries over 14 months, demonstrating a “reasonable period” of consultation.
- Woodside emailed SoS and/or [Individual 1] on 5 December and invited it to provide further feedback by 19 December 2024 ahead of Woodside resubmitting this EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside asked for SoS and/or [Individual 1]’s input into how SoS and/or [Individual 1] would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on this EP publicly available for 14 months. This has included publishing advertisements in Indigenous, regional, state and national, newspapers including Indigenous publications the National Indigenous Times (26 February 2024) and the Koori Mail advising of the proposed activities and requesting feedback.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP.
- Woodside’s initial email about this EP on 26 March 2024:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with SoS and/or [Individual 1] further and enquired about SoS and/or [Individual 1]’s preferred method of consultation.
  - Asked if SoS and/or [Individual 1] required further information.
- Woodside provided SoS and/or [Individual 1] with an additional opportunity to provide feedback ahead of resubmitting this EP. Woodside emailed SoS and/or [Individual 1] on 5 December 2025 and requested feedback by 19 December 2024.
- Woodside notes that SoS and/or [Individual 1] is represented by EDO, an organisation that understands and has experience with the EP consultation process.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

During consultation about other EPs and this EP, SOS and/or [Individual 1] advised:

- Whales have cultural significance - Woodside puts controls in place to manage impacts and risks to whales. These controls are described in Section 6 of the EP.

- Cultural features associated with Songlines, dreaming and energy lines - Woodside has considered this feedback and updated Section 4.9 to record topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.11 with appropriate controls implemented. At this stage, Woodside has not been provided with specific information on these potential values to enable a more fulsome assessment.
- An interest in marine mammals, seagrass and the meeting of freshwater and saltwater - Woodside has updated Section 4.9 to record these. These are assessed in 6.11 with appropriate controls implemented.
- Significance of offshore islands, Including Rosemary Island and the species reliant on the island - Woodside has updated the EP to capture feedback regarding the significance of Rosemary Island in Section 4.9.4. Assessment of risks and mitigation measures to islands and associated species, including Rosemary Island and turtles are addressed in Section 6.8, 6.9, 6.11.
- Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on SoS and/or [Individual 1]'s functions, interests or activities.

Local government and community representative groups or organisations

Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Shire of Exmouth, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shire of Exmouth regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

	Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Shire of Exmouth for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Exmouth sufficient information to allow Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Shire of Exmouth on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shire of Exmouth advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Exmouth 30 days for consultation. For consultation on EPs, 30 days is the usual period for Shire of Exmouth.
- In this context, Woodside allowed Shire of Exmouth a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of interests of Shire of Exmouth:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Shire of Exmouth of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

City of Karratha

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to City of Karratha, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to City of Karratha regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with City of Karratha for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given City of Karratha sufficient information to allow City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to City of Karratha on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed City of Karratha a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to City of Karratha advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed City of Karratha 30 days for consultation. For consultation on EPs, 30 days is the usual period for City of Karratha.
- In this context, Woodside allowed City of Karratha a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with City of Karratha is appropriate and adapted to the nature of interests of City of Karratha:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding City of Karratha of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as City of Karratha did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on City of Karratha's functions, interests or activities.

Exmouth Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Exmouth CLG advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder Exmouth CLG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 6 March 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide that listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 32.1). No feedback was provided on this EP. 12 individuals attended the meeting representing:
  - Exmouth Volunteer Marine Rescue
  - Gascoyne Development Commission
  - Shire of Exmouth
  - PHI Helicopters
  - Exmouth Freight and Logistics
  - Exmouth Chamber of Commerce and Industry
  - Ningaloo Coast World Heritage Advisory Council
  - WA Country Health Service
  - Santos.
- On 27 March 2024, Woodside provided an activity update to Exmouth CLG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 2 April 2024, Woodside's presentation was emailed to all Exmouth CLG members, regardless of their attendance at the meeting.
- On 17July 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide listing EPs on which the CLG

members had recently been consulted and EPs currently under consultation (SI report, reference 32.3).

- No feedback was provided on this EP.
- 13 individuals attended the meeting representing:
  - Exmouth Volunteer Marine Rescue
  - Gascoyne Development Commission
  - Shire of Exmouth
  - PHI Helicopters
  - Exmouth Chamber of Commerce and Industry
  - Ningaloo Coast World Heritage Advisory Council / NOPSEMA Community and Environment Reference Group
  - Santos
  - AIMS
  - Department of Health
- No questions were raised by CLG members in attendance at the meeting.

- On 12 November 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide listing EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI report, reference 32.4).
  - 13 individuals attended the meeting representing:
    - Shire of Exmouth
    - Gascoyne Development Commission
    - Exmouth Chamber of Commerce and Industry
    - Ningaloo Coast World Heritage Advisory Council / NOPSEMA Community and Environment Reference Group
    - West Australian Country Health Service
    - Bhagwan Marine
    - PHI Helicopters
    - Exmouth Volunteer Marine Rescue
    - CSIRO
    - Santos.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Exmouth CLG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG sufficient information to allow Exmouth CLG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Exmouth CLG on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CLG advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CLG 30 days for consultation. For consultation on EPs, 30 days is the usual period for Exmouth CLG.
- In this context, Woodside allowed Exmouth CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG is appropriate and adapted to the nature of interests of Exmouth CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback. Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Exmouth CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CLG's functions, interests or activities.

Karratha Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder Karratha CLG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 22 March 2024, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 32.1). Woodside also presented on how Woodside consults relevant persons in the course of preparing our EPs and provided information on relevant persons and EMBAs. The slides included a QR and URL to Consultation Activities page of the Woodside website, and upcoming consultation opportunities in Roebourne, Karratha and Dampier from the 22 March to 24 March 2024. No feedback was provided on this EP. Seven Karratha CLG members attended the meeting representing:
  - City of Karratha
  - Dampier Community Association
  - Department of Education
  - Murujuga Aboriginal Corporation
  - Karratha and Districts Chamber of Commerce and Industry
  - Karratha Central Health.
- On 27 March 2024, Woodside provided an activity update to Karratha CLG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 21 June 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities (SI report, reference 32.5).

- No feedback was provided on this EP.
- Woodside also presented on how Woodside consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. The slides included a QR code and a URL to the Consultation Activities page of the Woodside website. Copies of the latest edition of *Let's Talk* were provided in hard copy and also sent electronically with the minutes and pack.
- 7 CLG members attended the meeting representing:
  - City of Karratha – Council representatives and staff representatives
  - Karratha Central Health Care
  - Dampier Community Association
  - Pilbara Development Commission
  - Department of Education – staff representatives

- On 20 September 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities (SI report, reference 32.6).
  - No feedback was provided on this EP.
  - Woodside also presented on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. The slides included a QR code and a URL to the Consultation Activities page of the Woodside website. Copies of the latest edition of *Let's Talk* were provided in hard copy and sent electronically with the minutes and pack.
  - 8 CLG members attended the meeting representing:
    - City of Karratha – staff representatives
    - Dampier Community Association
    - Pilbara Development Commission
    - Department of Education – staff representatives
    - Karratha and Districts Chamber of Commerce and Industry
    - Pilbara Ports Authority.
- On 29 November 2024, Woodside presented to the Karratha CLG on EP consultation requirements and provided an update on upcoming Woodside activities, (SI report, reference 32.7).
  - No feedback was provided on this EP.
  - Woodside also presented on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. The slides included a QR code and a URL to the Consultation Activities page of the Woodside website. Copies of the latest edition of *Let's Talk* were provided in hard copy and sent electronically with the minutes and pack.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has	No additional measures or controls are required.

	been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Karratha CLG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG sufficient information to allow Karratha CLG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Karratha CLG on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Karratha CLG advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Karratha CLG 30 days for consultation. For consultation on EPs, 30 days is the usual period for Karratha CLG.
- In this context, Woodside allowed Karratha CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG is appropriate and adapted to the nature of interests of Karratha CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Karratha CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha CLG's functions, interests or activities.

Onslow Chamber of Commerce and Industry (CCI)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Onslow CCI advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Onslow CCI, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Onslow CCI regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Onslow CCI for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow CCI sufficient information to allow Onslow CCI to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Onslow CCI on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Onslow CCI advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow CCI 30 days for consultation. For consultation on EPs, 30 days is the usual period for Onslow CCI.
- In this context, Woodside allowed Onslow CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow CCI is appropriate and adapted to the nature of interests of Onslow CCI:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Onslow CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Onslow CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow CCI's functions, interests or activities.

Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 2.23), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Shire of Ashburton, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shire of Ashburton regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 28 March 2024, Shire of Ashburton emailed Woodside its standard response letter (SI Report, reference 30.1) and:
  - **(1)** confirmed it has no objections to the activities under this EP.
  - **(2)** the Shire expects that Woodside will identify, manage and mitigate all possible impacts and risks in line with relevant regulatory frameworks.
  - **(3)** the Shire requires Woodside to brief the Shire's Local and District Emergency Management Committees on its planned responses to such events before any activities commence.
  - **(4)** asked that Woodside has communicated with appropriate emergency management agencies at either/or National, State, District and Local levels on potential hazards and risks around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability and sustainability of response activities and escalation triggers.
  - **(5)** the Shire anticipates that Woodside has undertaken their own emergency management planning to mitigate risk and recover from a risk related incident, has engaged with external emergency management agencies to ensure emergency management plans are aligned with outcomes to respond and/or recovery from the incident.
  - **(6)** the Shire anticipates that Woodside has engaged with the community regarding what may happen in areas that are affected by the proposed activities.
  - **(7)** asked that Woodside considers the Shire operated Pilbara Regional Waste Management Facility (PRWMF) for its decommissioning, recycling and waste disposal purposes.
  - **(8)** the Shire appreciates the opportunity to comment on the proposed activities and requests that Woodside provide the Shire with further updates as the proposal progresses.

- On 2 April 2024, Woodside responded thanking the Shire of Ashburton for its comments (SI Report, reference 30.2) and noted:
  - **(1)** the Shire raised no objections to the proposed activities.
  - **(2)** Woodside is required to manage environmental impacts and risks to the environment that may be affected (EMBA) by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023, through the implementation of the EP. Woodside's proposed EP will be submitted to the National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA) for assessment and acceptance.
  - **(3)** Woodside confirmed it will provide notifications to relevant stakeholders as required as per its oil spill response arrangements.
  - **(4,5)** Woodside has an Oil Pollution First Strike Plan in place for all EPs which details potential impacts, notifications and response mitigations that may be executed to manage an emergency event.
  - **(6)** Woodside consults relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP.
  - **(7)** the Shire's interest in ongoing local content opportunities.
  - **(8)** Woodside will continue to provide the Shire with updates on the proposed activities when relevant.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) The Shire confirmed it has no objections to the activities.	**(1)** **Woodside assessment:** Woodside acknowledges the Shire of Ashburton had no objections to the activities covered under this EP. **Woodside response:** Woodside thanked the Shire of Ashburton and acknowledged its feedback.	**(1)** Not required.
(2) Identify, manage and mitigate all possible impacts and risks.	**(2)** **Woodside assessment:** Woodside is required to manage environmental impacts and risks in accordance with the Environment Regulations. **Woodside response:** Woodside confirmed it is required to manage environmental impacts and risks to the environment by the proposed activities to ALARP, as per the Environment Regulations.	**(2)** Existing controls considered sufficient as described in Section 6 of this EP.
(3) Brief the Shire's Local and District Emergency Management Committee.	**(3)**	**(3)** Not required.

	Woodside assessment: Woodside briefed the Shire's Local and District Emergency Management Committee on 21 November 2023. **Woodside response:** Woodside confirmed it will provide notifications to relevant stakeholders as required as per its oil spill response arrangements.	
(4) Communicate with appropriate national and state emergency management agencies.	**(4)** **Woodside assessment:** Woodside had undertaken emergency management planning and consults with relevant emergency management agencies to ensure alignment of its emergency management plans. **Woodside response:** Woodside has an Oil Pollution First Strike Plan in place for this EP which details potential impacts, notifications and response mitigations that may be executed to manage an emergency event.	**(4)** In the course of developing this EP, Woodside has developed oil spill preparedness and response positions (see Appendix H of this EP).
(5) Undertake emergency management planning.	**(5)** **Woodside assessment:** Woodside has considered emergency planning for EPs. **Woodside response:** Woodside develops oil spill preparedness and response positions tailored for individual projects. Woodside consults with the relevant external management agencies to ensure all emergency management plans are aligned with effective outcomes.	**(5)** In the course of developing this EP, Woodside has developed oil spill preparedness and response positions (see Appendix H of this EP).
(6) Engage with the community.	**(6)** **Woodside assessment:** Woodside consults relevant persons in the course of preparing an EP, as required by the Environment Regulations. **Woodside response:** Woodside consults relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP.	**(6)** Woodside consults relevant persons in the course of developing an EP as described in Section 5.3 of this EP.
(7)	**(7)**	**(7)** Not required.

Consider the PRWMF for future decommissioning works.	**Woodside assessment:** Woodside noted the Shire's interest in ongoing local content opportunities. **Woodside response:** Woodside noted the Shire's interest in ongoing local content opportunities.	
(8) Provide updates as proposal progresses.	**(8)** **Woodside assessment:** Woodside will provide the Shire of Ashburton with updates on the activities. **Woodside response:** Woodside will continue to provide the Shire with updates on the proposed activities when relevant.	**(8)** Woodside engages in ongoing consultation and will provide notifications of significant change, as appropriate, to relevant persons as referenced at Section 7.12 in this EP.
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shire of Ashburton for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Ashburton sufficient information to allow Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since February 2024. Woodside provided this information directly to Shire of Ashburton on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 28 March 2024, Shire of Ashburton shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Shire of Ashburton to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside provided further information to Shire of Ashburton in its response on 2 April 2024 which addressed Shire of Ashburton's topics of interest in response to feedback from Shire of Ashburton.

Reasonable Period

Woodside allowed Shire of Ashburton a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shire of Ashburton advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Shire of Ashburton with 30 days for consultation. Shire of Ashburton engaged in consultation and provided feedback within this period.
- In this context, Woodside allowed Shire of Ashburton a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Ashburton is appropriate and adapted to the nature of interests of Shire of Ashburton:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Shire of Ashburton as evidenced in their response on 28 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Shire of Ashburton provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Shire of Ashburton.

- Made no changes or inclusions to the EP as a result of consultation with Shire of Ashburton because appropriate measures are already included in the EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Other non-government groups or organisations

Friends of Australian Rock Art Inc. (FARA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed FARA advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to FARA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to FARA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 29 March 2024, FARA emailed a letter to Woodside referencing 19 March 2024 correspondence (Record of Consultation, reference 2.40 and SI Report, reference 39.1) and noted:
  - **(1)** receipt of correspondence on 19 March 2024 regarding this EP with response needed by 29 March 2024.
  - **(2)** its functions, interests and activities including the protection and preservation of rock art and the impacts of industrial development and climate change on this and physical and cultural heritage landscape.
  - **(3)** its current objectives and activities include support of the Murujuga Aboriginal Corporation Cultural Management Plan to protect the cultural heritage landscape and reduce the industrial footprint on Murujuga and secure a World Heritage Listing for the Burrup; and ongoing gas production counters its objectives.
  - **(4)** the gas processed on the Burrup Peninsula is the primary cause of industrial air emissions which harms Murujuga rock art, disrupts the cultural heritage landscape and contributes to climate change.
  - **(5)** Woodside is required to address the indirect consequences of the operations in the EP, according to the Environment Regulations and the EPBC Act Indirect Consequences Policy.
  - **(1,2)** its functions, interests and activities are affected by the indirect consequences, therefore, is a relevant person for this EP.
  - **(1)** Woodside is required to provide sufficient information and a reasonable period for consultation.
  - **(1)** Woodside only provided a 10-day consultation period which does not meet the requirements.
  - **(4,5)** the Consultation Information Sheet does not address the impacts, risks and consequences of processing gas or indirect consequences, nor does it evaluate these.
  - **(6)** it has a list of information required to assess possible consequences of activity related to Pluto Operations EP, including:
    - **(4, 5)** the impacts on Murujuga rock art and what Woodside determines as ALARP and acceptable level of impact.
    - **(7)** how Woodside is meeting its statutory obligations under the WA Aboriginal Heritage Act.

    - **(4)** disclosure of rock art monitoring or studies commissioned by Woodside to investigate the impact of industrial pollution on rock art.
    - **(4)** evidence of Woodside's engagement with peer-reviewed scientific research provided by FARA and consultation with experts tied to this research.
    - **(4)** what actions Woodside will take if scientific monitoring shows industrial pollution, including Pluto gas processing, is damaging rock art.
    - **(4)** if regulatory regimes for Pluto and North West Shelf LNG facilities will include measures that prevent impacts on the Burrup.
    - **(8)** information on climate scenarios expected to occur if Pluto operations continue.
    - **(9)** what Woodside considers to be acceptable climate impact scenarios and measures it will take to ensure impacts are ALARP.
    - **(10)** what other stakeholders with interests similar to FARA have been consulted and how their matters have been considered and addressed.
    - **(11)** how Traditional Owners and Custodians have had opportunities to exercise rights to Free Prior and Informed Consent related to Pluto Operations.
    - **(4,5)** the impact on the Murujuga cultural heritage landscape due to the processing of Pluto gas.
    - **(12)** how FARA's prior concerns and requests have been addressed by Woodside and what changes have been considered.
  - **(4,5)** it needs the information on the impacts that may occur on Murujuga rock art and broader Burrup landscape and what Woodside has determined as ALARP.
  - **(13)** it wants to know how Woodside made determinations and how it will manage operations as required by the Regulations.
  - **(14)** FARA requires additional consultation time to engage qualified experts to review EP and advise it.
  - **(15)** the peer-reviewed scientific reports previously provided to Woodside demonstrate the impact of atmospheric pollution on rock art and are relevant for this EP as Pluto Operations will extend the duration of pollution and potentially increase the intensity.
  - **(16)** it has not received a satisfactory response on information previously provided to Woodside and there is an expectation that it will be addressed in EP and made publicly available to support transparency.
  - **(17)** FARA wants further consultation prior to another EP submission along with the expectation that feedback in this email and previous submissions is included in the public section of the EP.
  - **(1,2)** it looks forward to Woodside providing sufficient information and time for FARA to assess consequences as part of relevant person consultation process.

- On 14 May 2024, Woodside sent an email to thank FARA for consulting on the Pluto Facility Operations EP and provided response to its claims, objections and additional information request (SI Report, reference 39.2).
  - Woodside acknowledged FARA specifically requested information on climate scenarios related to Pluto operations and noted current correspondence is undated and received on 29 March 2024.
  - **(1)** affirmed that initial consultation information and Consultation Information Sheet was sent to FARA on 27 February 2024 with follow-up on 19 March 2024 and activity update on 27 March 2024. Feedback was requested to be provided by 29 March 2024.
  - **(2)** noted FARA's assessment of its functions, interests and activities but also recognised the statement provided is broader than FARA's published statement: "FARA works to protect, preserve and promote Australian rock art in general, and in particular the petroglyphs found in the Dampier Archipelago (including Murujuga/Burrup Peninsula) in the Pilbara region of Western Australia" (FARA website, FARA - Friends of Australian Rock Art - FARA | Friends of Australian Rock Art accessed May 2024).
  - **(3)** noted FARA's statement on its current objectives and activities, and shared that some of the statements appear to be broader than those on FARA's website, some lack specificity and not all have been accurately verified.
  - **(4)** provided that the statutory regime related to offshore emissions includes both State and Commonwealth legislation which is applied to the relevant proponents for onshore processing facilities.
    - atmospheric emissions tied to onshore processing and nearby domestic gas users are managed under requirements of the *WA Environmental Protection Act*

1986, State and Federal Aboriginal Heritage legislation and the Federal EPBC Act.
  - for Pluto LNG Gas Plant, approvals include Ministerial Conditions and associated management plans addressing greenhouse gas emissions, air quality and cultural heritage which are approved by EPA or Minister of Environment on EPA's advice.
  - approvals related to the Pluto LNG Gas Plant and Karratha Gas Plant publicly report compliance against those approvals.
  - approval documents for the aforementioned plants are generally available and existing, so they are not new for this 5 yearly Operations EP review.
  - Woodside is involved with the monitoring of industrial emissions and strategies related to Murujuga rock art and supports the Murujuga Rock Art Strategy through membership of the Murujuga Rock Art Reference Group and funding for Murujuga Rock Art Monitoring Program.
  - it supports the establishment of and coordinated approach for an atmospheric deposition monitoring program under the Strategy and provides data to the effort from the Woodside Atmospheric and Ambient Air Quality Monitoring Programs.
  - expects findings of the Murujuga Rock Art Strategy to be implemented if required by appropriate regulatory measures.
  - there is State and Federal legislation to manage onshore processing facilities, including environment and cultural heritage.
  - noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.

- **(5)** Indirect impacts from the petroleum activities program are considered and addressed in the Pluto Operations EP which will be publicly available on NOPSEMA website during assessment.
- **(6)** Noted FARA's request for additional information to assess gas processing activities on its functions, interests or activities.
- **(7)** referred FARA to Woodside website for its approach to Aboriginal cultural heritage management, including the pluto-construction-phase-cultural-heritage-management-plan.pdf (woodside.com).
- **(8)** for climate scenario tied to Pluto Operations, Woodside referred FARA to its Woodside's Climate Transition Action Plan and 2023 Progress Report noting pages 44 and 45 regarding global demand for oil and gas, pages 46 and 47 for the evolving role of natural gas in domestic and international markets and pages 52 and 53 for scenario analysis of Woodside's portfolio.
- **(9)** for acceptable climate impact scenarios, Woodside referred to Climate Transition Action Plan and 2023 Progress Report to provide information on Decarbonisation Strategy (pages 13-41), and specifically page 24 to 25 regarding large scale abatement and the vision for Pluto net zero.
- **(10)** noted undertaking a relevancy assessment for every EP to determine who is a relevant person and provided additional consultation activities including the advertising of the Operations EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers as well as a social media campaign across Facebook and Instagram.
- **(11)** confirmed that Woodside consulted with First National relevant persons for Pluto Operations, including Traditional Custodians of Murujuga.
- **(12)** recognised there is previous correspondence between Woodside and FARA and referred FARA to previous responses.
- **(13)** noted that the Operations EP and relevant appendices including relevant person consultation, reports, analyses and modelling, will be public on NOPSEMA website after submission and assessment.
- **(14)** confirmed that feedback can continue to be provided during the life of an EP, including after consultation has closed on the EP, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to feedback and comments from relevant persons throughout the life of the EP.
- **(15)** noted that emissions associated with Operations EP relate to the existing Pluto LNG Gas Plant approvals and referred back to first reference of **(4)** for review of Ministerial conditions and commitments and assessment of indirect impacts to rock art and cultural heritage values. Research to date on impacts of industrial emissions on rock art is inconclusive and additional research is underway by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. Woodside is a member of the Murujuga Rock Art Stakeholder Reference Group and noted it expects findings of Murujuga Rock Art

Strategy to be implemented if required via appropriate regulatory measures. It also provided a link to Woodside's consideration of publications related to Murujuga rock art, referencing section 4, page 311 Appendices - North West Shelf Project Extension Environmental Review Document (woodside.com)
  - **(16)** confirmed peer-reviewed scientific reports related to potential emission impacts on Murujuga's rock art have been considered and referred back to points covered above in first reference to **(4)** and **(5)**. The Operations EP will be made available on NOPSEMA website during assessment.
  - **(17)** noted assumption that reference to another EP was a typo and that FARA was consulted with for the Pluto Facility Operations EP in line with Regulation 25. Per FARA's request, Woodside will publish FARA's feedback in full in the Operations EP.

- On 24 May 2024, Woodside received an email, letter and paper from FARA in relation to this EP and another EP (SI Report, reference 39.3). The letter reiterated points raised in previous letters including:
  - **(1, 2)** FARA is a relevant person and has raised concerns regarding indirect impacts of this EP on Murujuga rock art as a result of LNG processing and gas use on the Burrup Peninsula.
  - **(6)** Woodside has not yet provided sufficient information to FARA to make an informed assessment.
  - **(15)** Attached the April 2024 report entitled The Effects of Acidic Pollution on the Rock Art of Murujuga by Benjamin Smith and the Murujuga Rock Art Conservation Project which contains an analysis of the MRAMP campaign. Combined with other reports and studies it shows that atmospheric emissions are causing conditions which are harmful to rock art and increased emissions will increase harmful levels. FARA looks forward to Woodside's response. A lack of scientific certainty should not prevent the adoption of precautionary avoidance and mitigation measures.
  - FARA reiterates its opposition to the proposed activities.

- **(1, 16)** On 28 May 2024, Woodside emailed FARA thanking it for the new information and stating it would assess it (SI Report, reference 39.4). Furthermore, it stated:
  - FARA has been assessed as being a relevant person for both this EP and another EP. Woodside has consulted with FARA in accordance with section 25 of the Regulations and FARA has been provided with consultation information for both EPs.

- On 12 September 2024, NOPSEMA provided Woodside with correspondence from FARA, sent to NOPSEMA on 1 July 2024, regarding information FARA considered relevant to the NWS Project Extension appeals (SI Report, reference 39.5). Woodside notes the information provided by FARA relates to the NWS Project Extension, however, considered the use of SCR in Section 6.7.11 of the EP. Woodside did not respond to FARA in the context of the Pluto Operations EP, however, Woodside provided a response to FARA in the context of another EP on 25 October 2024.
- On 31 January 2025, Woodside advised FARA it had further assessed the merits of a number of objections and claims raised by FARA (SI Report, reference 39.6). Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
  - **(4, 6)** Provided background on the Department of Water and Environmental Regulation (DWER)-commissioned Ramboll Australia Pty Ltd Study on air emissions in the Murujuga airshed. Ramboll (2021) indicated that NOx loads from industrial sources were estimated to be 13,937 tonnes per year and were forecast to reduce to 12,052 tonnes per year by 2030. Processing of gas from Pluto was not anticipated to cause an increase of NOx within the airshed beyond historical maximum levels and the impact assessment in the EP concludes that indirect atmospheric emissions from the onshore processing of Pluto gas contribute only a minor portion to the overall industrial emission airshed load on the Burrup Peninsula. The EP confirmed that climate science understands climate change to be caused by the net (cumulative) global concentration of GHG in the atmosphere. Noting that climate change was recognised as a global issue, Woodside advised a contextual evaluation of climate change impacts was included in Section 6.7.10 of the EP.

- **(5)** Confirmed the regulations enacted by Parliament that governed the content of the EP were the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)*. The content of the EP complied with those regulations and in particular references in the Regulations to direct and indirect impacts. Woodside confirmed relevant indirect consequences were addressed and assessed in the EP.
- **(6, 7)** Confirmed it had provided sufficient information in accordance with Regulation 25. In addition, the full EP was publicly available on NOPSEMA's website. Woodside referred FARA to specific sections of the EP which contained further information on indirect impacts.
- **(4, 6)** Advised there was inconclusive evidence of a causal link between industrial air emissions and anthropogenic change to rock art on Murujuga. Nevertheless, there were precautionary measures in place that reduced risk of impact to Murujuga rock art. Woodside provided information on relevant controls in the EP. Woodside also provided information on the NWS Extension Environment Review Document.
- **(5, 6)** Advised the design of onshore processing facilities was outside the scope of the activity described in the EP.
- **(15)** Confirmed it had considered and assessed the scientific studies and other literature provided by FARA during consultation. Woodside provided information on MRAS/MRAMP, including an excerpt from MRAS. Woodside confirmed it continued to monitor the outcomes of MRAMP as part of the implementation strategy of the EP. Woodside also noted the Woodside Atmospheric Deposition Monitoring Program (WADMP) which commenced operations in 2021.
- **(7)** Provided an overview of regulatory frameworks for onshore processing facilities, including updates to the State Government's GHG emissions policy. Woodside confirmed these regulatory frameworks ensured GHG emissions from onshore processing of Pluto gas were managed consistent with Australia's emissions reduction targets and were ALARP and Acceptable.
- **(8, 9)** Confirmed changes in global atmospheric GHG concentration cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the start of the industrial revolution. Woodside does not accept that the Pluto Operations will contribute to the exacerbation of climate change impacts in Western Australia. Regardless, a hypothetical assumption where GHG emissions associated with the Pluto operations are treated as additive is considered in the latest version of the EP, and the amount is de minimis.
- **(10, 11)** Noted further information on Woodside's approach to consultation and engagement, including with First Nations groups, was available in Section 5 of the EP and Appendix F.
- **(12)** Confirmed Woodside reviewed, assessed and responded to FARA's feedback, objections or claims about the adverse impact of the activity to which the EP relates in accordance with the Regulations. Woodside noted the EP had been updated to include information on topics of interest to FARA.
- **(15)** Confirmed it had reviewed, assessed and responded in relation to information provided by FARA.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Consultation information received on the 19 March 2024.	**(1)** **Woodside assessment:** Woodside confirms initial consultation information and Consultation Information Sheet was sent to FARA on 27 February 2024 with follow-up on 19 March 2024 and activity update on 27 March 2024. **Woodside response:** Woodside provided FARA with background dates to demonstrate 30-day consultation period was provided. FARA has been provided with	**(1)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.

	sufficient information and a reasonable period for consultation.	
(2) Dedicated to protection and preservation of rock art and impact caused by industrial development.	**(2)** **Woodside assessment:** Woodside is aware of FARA's work to preserve rock art and physical and cultural heritage landscape but notes the FARA-provided statement is broader than its published statement. **Woodside response:** Woodside noted FARA's functions, interests and activities and issues of concern, but also recognised its statement tied to these is broader than its published statement.	**(2)** Not required.
(3) Supports plan to protect cultural heritage from industry as part of objectives and activities and continued gas processing counters this.	**(3)** **Woodside assessment:** Woodside noted FARA's current objectives and activities, but also recognised some statements are broader than what is covered on FARA's website, some lack specificity and not all have been verified as accurate. **Woodside response:** Woodside notes FARA's statement on its current objectives and activities, but also notes use of broader statements compared to the FARA website and that some statements lack specificity and not all have been verified as accurate.	**(3)** Not required.
(4) Gas processing at Pluto LNG facility harms rock art, cultural heritage landscape and affects climate change.	**(4)** **Woodside assessment:** Research to date on the impacts of emissions on rock art has not been conclusive. Woodside will continue to assess science on this topic and provide information to MRAS. Woodside acknowledges that climate science understands climate change to be caused by the net cumulative global concentration of GHG emissions in the atmosphere, and changes in the global atmospheric GHG concentration cannot be attributed to any one activity or project, including Pluto operations. Woodside's view is that LNG can have a role in displacing higher carbon intensity fuels and lowering carbon intensity of existing	**(4)** Not required.

	energy mixes. Therefore, Woodside does not accept Pluto Operations will contribute to the exacerbation of climate change impacts in Western Australia. Woodside acknowledges its involvement with monitoring of industrial emissions and the Murujuga Rock Art Strategy as a member of the Murujuga Rock Art Reference Group. **Woodside response:** Woodside referenced existing State and Commonwealth legislation that manages atmospheric emissions tied to onshore processing and approvals related to Pluto LNG Gas Plant. It also noted its historic and present work to support the Murujuga Rock Art Strategy and monitor industrial emissions. Woodside confirmed there was no planned increase to the existing disturbance footprint associated with current or future operational activities described within the EP. Noting climate change was a global issue, Woodside confirmed the EP included a contextual evaluation of climate change impacts.	
(5) Indirect consequences of Pluto operations must be addressed in the EP.	**(5)** **Woodside assessment:** Woodside considers and addresses indirect consequences in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (the Regulations). **Woodside response:** Woodside confirmed the regulations enacted by Parliament that governed the content of the EP were the O*ffshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)*. Woodside confirmed relevant indirect consequences were addressed and assessed in the EP.	**(5)** Consideration of indirect emissions associated with the activity is described in Section 6.7.10 of the EP.
(6) Requires additional information to assess consequences of Pluto Operations activity, on topics including precautionary principles, pollution control measures and technology, airborne pollution concentrations, long-term physical consequences on rock art, acceptable	**(6)** **Woodside assessment:** Woodside has given FARA sufficient information to make an informed assessment of the adverse impacts of the activity on its functions, interests or activities. Woodside had assessed and responded to FARA's feedback regarding this EP.	**(6)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP. A summary of existing research on Murujuga rock art is set out in Section 4.9.6 of the EP. Section 6.7.11

levels of impact.	**Woodside response:** Woodside provided a response to each information request, including precautionary measures in place to reduce the risk of impact to Murujuga rock art, Woodside's consideration of scientific studies and other evidence, support for MRAS and MRAMP, and regulatory frameworks for onshore processing.	discusses the onshore processing of Pluto gas.
(7) Wants to know how Woodside meets statutory requirements under WA Aboriginal Heritage Act.	**(7)** **Woodside assessment:** Woodside has information about its approach to Aboriginal cultural heritage management on Woodside.com. **Woodside response**. Woodside provided FARA with link to the Cultural Heritage Management Plan for Pluto LNG. Woodside also provided FARA with an overview of regulatory frameworks for onshore processing.	**(7)** Not required.
(8) What are climate scenarios tied to continuing Pluto Operations.	**(8)** **Woodside assessment:** To facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the operations are hypothetically treated as additive is considered in the EP. The contribution is de minimis. **Woodside response:** Woodside set out its view on LNG's role in the energy transition and the de-minimis contribution to carbon budgets of GHG emissions associated with Pluto operations. Woodside referred to its Climate Transition Action Plan and 2023 Progress Report for further information.	**(8)** Comparisons against carbon budgets are set out in Section 6.7.10 of the EP.
(9) What are acceptable climate impact scenarios and measures for ALARP impact.	**(9)** **Woodside assessment:** Woodside acknowledges that climate science understands climate change to be caused by the net cumulative global concentration of GHG emissions in the atmosphere, and changes in the global atmospheric GHG concentration cannot be attributed to any one activity or project, including Pluto operations. To	**(9)** Not required.

	facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the operations are treated as additive is considered in the EP. The contribution is de minimis. **Woodside response:** Woodside confirmed it acknowledged climate science and that climate change was understood to be caused by the net (cumulative) global concentration of GHG emissions in the atmosphere. Woodside set out details of the comparisons against carbon budgets included in the EP. Woodside referred to its Climate Transition Action Plan and 2023 Progress Report to provide information on Decarbonisation Strategy (pages 13-41), and specifically page 24 to 25 regarding large scale abatement and the vision for Pluto net zero.	
(10) Request for information on dealings with similar-interest stakeholders.	**(10)** **Woodside assessment:** Woodside conducts a relevancy assessment for every EP to determine who is a relevant person and has a planned outreach effort to contact relevant persons and organisations. **Woodside response:** Woodside confirmed that beyond directly contracting relevant persons and organisations, including FARA, it advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran a social media campaign across Facebook and Instagram. Matters raised during consultation are addressed in this EP.	**(10)** Assessment of relevant persons is described in Appendix F, Table 1 of the EP.
(11) How Traditional Owners and Custodians exercise rights related to Pluto Operations.	**(11)** **Woodside assessment:** Woodside consults with First Nations relevant persons for all EPs. **Woodside response:** Woodside confirmed it has consulted with First Nations relevant persons for Pluto Operations, including Traditional Custodians of Murujuga and in the broader environment that may be affected by the EP activity to understand their functions, interests or actions. Woodside	**(11)** Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.

	also noted that under the *United Nations Declaration on the Rights of Indigenous Persons* that cultural heritage and other communal rights of Indigenous people must be managed through consultation with representative institutions. Direct consultation with individual First Nations persons outside of this process has the potential to undermine the cultural authority of recognised elders and democratically elected representatives. This process of understanding communally held beliefs has recently been confirmed by the Federal Court in the *Munkara v Santos* matter.	
(12) How its past concern and requests have been addressed.	**(12)** **Woodside assessment:** Woodside recognises there is previous correspondence with FARA for reference. Woodside has assessed and responded to feedback, claims and objections from FARA in relation to this EP. **Woodside response:** Woodside referred FARA to its previous responses to FARA's previous correspondence.	**(12)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(13) Requires information on what Woodside considers ALARP and its management.	**(13)** **Woodside assessment:** Woodside has given FARA sufficient information to allow FARA to make an informed assessment of the adverse impacts of the activity on its functions, interests or activities. **Woodside response:** Woodside confirmed the EP was publicly available on the NOPSEMA website. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and Acceptable levels.	**(13)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(14) Requests additional consultation time to engage qualified experts.	**(14)** **Woodside assessment:** Woodside notes that feedback can be provided throughout the life of an EP, including after consultation period has closed. **Woodside response:** Woodside advised that feedback can continue to be provided during the life of an EP, including after consultation has closed on the EP, during EP	**(14)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP. Woodside engages in ongoing consultation with stakeholders, as described in Section 7.10 of the EP.

	assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to feedback and comments from relevant persons throughout the life of the EP. Should feedback be received following the acceptance of an EP that identifies a measure or control that requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.	
(15) Peer-reviewed scientific reports show impact of atmospheric pollution on rock art.	**(15)** **Woodside assessment:** Woodside notes that research to date on industrial emissions impacts on rock art has not been conclusive, but further research is being led by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. It expects future findings of the Murujuga Rock Art Strategy will be implemented if required via appropriate regulatory measures. **Woodside response:** Woodside responded that emissions tied to the Operations EP relate to emissions within the scope and duration of existing Pluto LNG Gas Plant approval and the Ministerial conditions and commitments in place are included in point **(4)** above in correspondence summary. It noted that research to date on industrial emissions impacts on rock art has not been conclusive, but further research is being led by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. As a member of the Murujuga Rock Art Stakeholder Reference Group, it expects future findings of the Murujuga Rock Art Strategy will be implemented if required via appropriate regulatory measures. For additional information on Woodside's consideration of publications relating to Murujuga rock art, it recommended page 311 Appendices - North West Shelf Project Extension Environmental Review Document	**(15)** Consideration of indirect emissions associated with the activity is described in Section 6.7.10 of the EP.

	(woodside.com)	
(16) Expects a satisfactory response on information provided and wants it addressed publicly in EP.	**(16)** **Woodside assessment:** Woodside noted consideration of peer-reviewed scientific reports related to potential emission impacts on Murujuga's rock art. **Woodside response:** Woodside confirmed that peer-reviewed scientific reports of which it is aware relating to potential emissions impacts on Murujuga's rock art have been considered in Woodside's assessments for the Operations EP. The Operations EP which is currently being prepared and which will be made available on the NOPSEMA website during assessment. It also referred back to first references of points **(4)** and **(5)** in email summary above.	**(16)** Not required.
(17) Expects further consultation and FARA feedback to be included in public section of EP.	**(17)** **Woodside assessment:** Woodside complies with Regulation 25 of the Environment Regulations and consulted FARA in accordance with that. **Woodside response:** For the Operations EP, Woodside has complied with Regulation 25 of the Environment Regulations in its consultation with FARA and Woodside will publish FARA's feedback in the EP.	**(17)** Woodside engages in ongoing consultation with stakeholders as described in Section 7.10 of the EP.
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with FARA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given FARA sufficient information to allow FARA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since February 2024. Woodside provided this information directly to FARA on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 29 March 2024, FARA claimed it had not been provided with sufficient information to allow it to make an informed assessment of consequences on its functions, interests or activities. Woodside disagrees with this assertion because FARA responded to Woodside's email with questions specific to the activity indicating the information provided was sufficient to enable FARA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. FARA shared its feedback, claims and objections based on its understanding of the activities, which Woodside assessed and responded to as demonstrated in the summary of consultation above. FARA continues to reiterate the same or similar topics that Woodside has provided responses to.
- Woodside provided FARA with further detailed information which addressed FARA's specific feedback, objections or claims (see information given on 14 May 2024, 28 May 2024, and 31 January 2025).

Reasonable Period

Woodside allowed FARA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to FARA advising when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed FARA with 30 days for consultation. FARA engaged in consultation and provided feedback within this period.
- In this context, Woodside allowed FARA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with FARA is appropriate and adapted to the nature of interests of FARA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This is appropriate and adapted to FARA because Woodside notes FARA regularly uses social media as a means to share its views. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside engaged with FARA in the manner that FARA has consulted in previous consultations, that is, by email.
- Woodside considers a reasonable opportunity was provided to FARA as evidenced in their response on 29 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- FARA provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from FARA and has assessed the merits of any objection or claim about the adverse impact of the proposed activities to which this EP relates.
  - Based on FARA's feedback, assessed the feasibility of SCR in section 6.7.11. of the EP. No new measures were adopted as a result of FARA's feedback.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Doctors for the Environment (DEA)

Summary of information provided and record of consultation for this EP:

- On 24 April 2024, during the course of preparing the EP, DEA self-identified by emailing NOPSEMA and including a feedback letter addressed to Woodside regarding this EP (SI Report, reference 41.1) and:
  - **(1)** referred to another EP and Woodside's intention to seek 5-year extension to Pluto Facility Operations EP.
  - **(2)** understood Woodside was undertaking consultation with relevant persons for both EPs under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) prior to NOPSEMA assessment.
  - **(2)** considered itself to be a relevant person and Woodside is required to consult it.

    - DEA provided statements related to its interests, functions, activities and resources including:
    - background on DEA as an independent, non-government organisation of medical doctors and students in Australian States and Territories that has a voice in the sphere of environmental health.
    - reference to annual reports that articulate its strategy and impact goals to reducing fossil fuel combustion and cutting global greenhouse gas emissions this decade.

  - resources including health reports, fact sheets and submissions.
  - consultation-relevant fact sheets “How Climate Change Affects Your Health: The Facts, How Climate Change Affects Mental Health in Australia” and “Asthma and Indoor Gas Appliances.”
  - submissions including the Senate Inquiry Duty of Care Intergenerational Equity Bill and Protecting the Spirit of Sea Country Bill 2023.
  - support of phasing-out gas in households and policies and programs to phase out use of Gas in Australia.
  - Support of global emissions reduction aligned with the Paris Agreement with DEA arguments found in its Future Gas Strategy consultation paper.
- **(3)** noted that Woodside is required by the environment regulations to provide relevant persons with “sufficient information” to assess the possible consequences of the activities on its functions, interests or activities and provide “reasonable period” for consultation.
- **(4)** understands a range of different pathways and energy scenarios may be considered to align with globally agreed temperature goals and each has different levels of certainty, risk profiles and public health outcomes, so DEA supports position of the United Nations, IEA and other authorities that there should be no new fossil fuel resource developments that are not already under production. It considers that Woodside projects are not consistent with findings and wants more information to understand and evaluate health implications.
- **(5)** noted the consultation helps the proponent and environment in improving an EP’s content and it looks forward to receiving more information and opportunity to comment.
- **(3, 5)** noted that consultation required under regulation 11A of the Environment Regulations, a proponent is required to provide DEA with “sufficient information” to make an informed assessment and provide a “reasonable period” for consultation.
- **(6)** referenced NOPSEMA’s “Guidance Note: Environment Plan content requirements” dated September 2020 (EP Content Guidance) and “Guideline: Consultation in the course of preparing an environment plan” dated 12 May 2023 (Consultation Guideline) state that consultation in relation to any EP for development activities should assist the proponent to understand the external context, define “acceptable levels" of environmental impact and risk, and inform appropriate control measures.
- **(7)** did not feel that Woodside’s published consultation material for another EP or this EP provided “sufficient information” as it did not address indirect impacts related to greenhouse gas emissions, climate change impacts and health impacts associated with gas usage. Nor did it sufficiently address local air pollution impacts from Woodside’s gas processing facilities.
- **(7)** cited Woodside’s estimate of total lifecycle emissions from the development – 878m tonnes – and that indirect consequences on climate change and health impacts of air pollution from fuel combustion are significant.
- **(2)** described itself as an environmental organisation and provided background on how its functions, interests and activities are directed:
  - protecting the natural environment so that human health may be protected
  - understanding the intimate relationship between health of the environment and human health
  - drawing attention to health impacts of global warming from GHG emissions, air pollution from fossil fuel combustion as well as direct health impacts associated with use of gas in household and industrial settings.
- **(8)** believed its interests and objective would be impacted by the Operation EP in at least the following ways:
  - health impacts in Australia and elsewhere as a consequence of climate change
  - health impacts for workers and the local community as a result of Woodside’s LNG processing operations
  - health and wellbeing impacts for Aboriginal peoples who experience impacts to cultural heritage and Sea Country as a result of Woodside’s gas processing operations and climate change and ocean acidification more generally
  - health and wellbeing impacts associated with the use of gas in domestic and commercial settings, both in Western Australia and elsewhere where the gas is

exported
  - health considerations arising from carbon pollution mitigation options such as the use of offsets, carbon capture and storage, direct mitigation, or other abatement methods
  - impacts and implications for healthcare professionals and health care systems arising from the health impacts mentioned above.
- **(4, 5, 6)** noted that regulation 11A of the Environment Regulations requires proponents to provide DEA with sufficient information to make informed assessment of the project and possible negative consequences to the above interests and activities.
- noted indirect impacts from GHG emissions from another activity and climate change and air pollution from burning fossil fuels were not considered or provided.
- **(9)** noted that climate change impacts, including from Scope 3 emissions that will result from another activity, fall under the scope of indirect consequences which must be assessed in accord with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(3,4, 7)** considered that Woodside has not provided DEA with sufficient information to make an informed assessment of consequences on its functions, interests and activities.
- **(10)** provided examples of information DEA requires to make an assessment including:

  - Woodside's analysis of impacts
  - Woodside's analysis of impacts including independent health impact assessments, baseline health studies or other analysis including:
  - health impacts from use of gas produced by Australian and overseas projects
  - health impacts arising from climate impacts that are attributable to emissions from these projects
  - health impacts from climate change and other effects
  - identification of groups or communities disproportionately affected by impacts
  - health and wellbeing effects of both direct and indirect impacts of the projects to sea country and cultural heritage
  - health and wellbeing impacts for the local community and others who may be exposed to, or impacted by airborne emissions and other effects of Woodside's gas processing and export facilities, or other infrastructure associated with the projects
  - health impact on workers involved in the construction and production phase of the projects and the gas processing facilities over the period they will be utilised for these projects
  - Information regarding mitigation measures
  - Information about what mitigation measures are proposed (if any) by Woodside to address impacts that have been identified, including what effects these mitigation measures are likely to have, how they will be implemented
  - Details the implementation strategy and monitoring, recording and reporting arrangements in relation to the described indirect and direct environmental impacts and risks of the activities, including how they will be reviewed and evaluated.
  - Details on how the proposed mitigation measures and implementation strategy will be subject to enforceable regulatory requirements or otherwise regulated.
  - Information about what other mitigation options have been considered by Woodside (if any) but are not proposed for implementation.
  - Information regarding Woodside's evaluation and selection process for mitigation measures, including how decisions have been made and what criteria have been applied to the consideration by Woodside of what mitigation measures will be implemented.
  - Information to demonstrate how the chosen mitigation measures will achieve the required outcome of 'as low as reasonably practicable and acceptable' residual impacts.
  - Information on residual impacts and risks
  - Information to specify what residual health risks, impacts and outcomes Woodside believes will occur as a result of the projects after the application of proposed

mitigation measures
  - Details of what residual impacts Woodside considers to be acceptable, in the context of the regulatory requirement for 'as low as reasonably practicable and acceptable'
  - Information on relevant person consultation in relation to health impacts and effects
  - What efforts Woodside has made to identify and consult with persons or organisations who may be impacted by health effects of the activities as relevant persons under the regulations.
  - What relevant persons Woodside has consulted with who may be impacted by health effects of the activities and what concerns or issues have been raised in the process of such consultation to date.
- **(3, 4 ,7, 10)** shared why the above information is needed for DEA to make an informed assessment as it wants to respond in an evidenced-based manner and direct its activities to better protect the health of communities from such impacts and prepare the health sector for climate change impacts.
- **(3, 4, 7, 10)** requested the above information as part of consultation and it should include reports, analyses, assessments, modelling and/or other documents used by Woodside.
- **(11)** noted that Woodside has made general statements related to its Climate Transaction Action Plan and 2023 Progress Report (the Report) and given majority of this project's emissions will be from Scope 3 emissions which the Report sets only a 5 Mtpa abatement target. It does not describe the health outcomes or impacts from its proposed activities.
- **(3)** noted Regulation 11A of the Environment Regulations requires a "reasonable period" for consultation.
- **(3, 5, 7)** noted Woodside has not provided "sufficient information" to DEA and further time will be needed to review information when provided.
- **(3)** referenced EP Content Guidance note that specifies consultation time should be based on complexity and volume of information provided and practicalities of DEA's available personnel and resources. After receiving requested information, it can determine the length of time needed for consultation. It noted that the 30 day period for public exhibition of certain EPs specified under Regulation 11B(1)(a) of the Environment Regulations is unlikely to be sufficient for the purposes of consultation under Regulation 11A. This is because the consultation envisaged by Regulation 11A is required to be more rigorous than public exhibitions.
- **(3)** noted the EP Content Guidance and Consultation Guidelines state that under Regulation 11A, consultation should demonstrate two-way communication, transparency, collaboration and inclusiveness. It continued that Regulation 16(b) requires proponents to provide feedback to DEA on its comments.
- **(12)** reiterated that any EP for the project should not be accepted until the requirements of Regulation 11A are met, including consultation requirements with DEA identified in this document.
- **(3,4,5,7,12)** noted it looked forward to receiving more information so consultation can commence in accordance with Regulation 11A of the Environment Regulations.

- On 14 May 2024, Woodside responded to DEA's email from 24 April 2024 (SI Report, reference 41.2) and:
  - **(1)** noted receipt of DEA's letter which related to this EP and another EP.
  - **(2)** Woodside consulted DEA for the other EP starting in August 2023. Consultation for this EP closed on 29 March 2024. Woodside outlined its EP feedback process and Management of Change and Review process. Based on feedback for the Pluto Operations EP, DEA has been assessed as being a relevant person for the Pluto Operations EP.
  - **(3)** confirmed it consults relevant persons during EP preparation in accordance with Regulation 25 of the Environment Regulations.
  - **(2)** noted DEA's statements and document reference but makes no comment as to the factual accuracy or otherwise of these documents.
  - **(4)** referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. Woodside referred DEA to publicly available information and noted that more

granular detail relating to GHG emissions will be set out and assessed in the respective EPs. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).

- **(5)** provided background on consultation activities including advertisements in The Australian, The West Australian, regional newspapers and Indigenous newspapers between 26 – 28 February 2024, a social media campaign across Facebook and Instagram in February 2024, community events with subject matter experts and information and tailored roadshow in the Pilbara during March and April 2024. The Pluto Operations EP consultation information sheet was published 26 February 2024.
- **(6)** confirmed it refers to NOPSEMA's guidance materials when undertaking consultation.
- **(7)** noted that GHG information for another EP is already publicly published. The statutory regime relating to onshore emissions includes various State and Commonwealth legislation which manages potential impacts and risks to environment and cultural features, and legislation is applied to the relevant proponents for the onshore processing facilities.
- **(9)** recommended review of Section 3.1 Climate strategy (on page 14), Section 3.5 Scope 3 emissions (on page 32 and 33) and Section 3.6 Scope 3 targets (on pages 34 - 40) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. The EPs will assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct and indirect emissions with the potential to result in climate change impacts will be considered.
- **(10)** noted that emissions associated with onshore gas processing are subject to a range of legislative requirements including those which consider and manage potential to impact on human health (for example Part IV environmental impact assessment and associated air quality monitoring management (refer to summary point **(5)** above), as well as broader World Health Organisation requirements and National Environment Protection Measure limits and specific health and safety related regulations.). Woodside does not provide drafts of EPs while in development or under assessment for a number of reasons, including the potential for content to change. Allowing access to publicly available versions enables stakeholders to access and comment on the same information, assists with version control and removes potential for confusion. The EP will be made publicly available on NOPSEMA's website once it has been submitted and is under assessment.
- **(11)** noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with Scarborough and Pluto cannot be linked to climate change impacts to the environment, a contextual evaluation of climate change impacts will be provided in the EPs. Encouraged DEA to read Woodside's suite of climate disclosures including Woodside's Climate Report 2021, Climate Report 2022 and Climate Transition Action Plan and 2023 Progress Report.
- **(12)** Woodside disagreed with the assertion that the Project should not be accepted as Woodside had engaged in consultation with DEA in accordance with Regulation 25.

- On 12 June 2024, DEA emailed Woodside in response to Woodside's letter dated 14 May 2024 (SI Report, reference 41.3). DEA:
  - **(1)** Welcomed Woodside's acknowledgement that DEA is a relevant person for this EP and another Woodside EP.
  - **(3)** Did not consider that information provided to date was sufficient in terms of consultation, in particular regarding climate and health impacts. DEA stated that consultation requirements of the Regulations have not been met.
  - **(13)** Further stated that given the limited information provided by Woodside, and DEA's voluntary capacity, the information in the letter should not be taken to reflect DEA's complete position or complete submissions on the proposal and that DEA reserved the right to make further submissions as capacity and information became available.

- **(14)** Claimed that as well as climate change harming human health:
    - Oil and gas developments result in direct health harms from pollution including cancer, reproductive harms, impairment of normal human growth and development, birth defects, respiratory and cardiovascular disease and deaths as well as interference with the body's communication system of hormones regulating growth, behaviour, metabolism and reproductive function; and
    - The destruction of sites of spiritual significance to First Nations people by fossil fuel developments compounds psychosocial harms.
- **(15)** Advised that any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum:
    - Woodside's assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100 year period and preferably longer;
    - Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable measures must be imposed by the regulator to ensure this takes place.
- **(16)** Claimed Woodside's CTAP and 2023 Progress Report (and climate plans in general) could not be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because:
    - The plans and targets are unenforceable;
    - The CTAP and 2023 Progress Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero;
    - The plans have repeatedly been rejected as insufficient by a majority of Woodside's shareholders.
- **(17)** Asserted that reliance on the Federal safeguarding mechanism as a means to align with Australian national emissions goals is inappropriate because of:
    - Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement;
    - Ongoing project emissions beyond 2030 reduction targets;
    - Emissions that will result from these projects in other countries outside of Australia;
    - Potential use of low integrity undisclosed offsets.
- **(18)** Claimed that if comparisons to Australia's emissions reduction targets and budget are to be used, then the total emissions from the proposed activities (not just domestic emissions) should be compared with Australia's abatement efforts and policies.
- **(19)** Stated it did not accept the argument that the total emissions from the proposals are an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable as if this were true, Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant.
- **(20)** Stated that Woodside must adhere to the UN and ISO's guidelines in relation to its proposed activities as part of any assessment on the impacts on the climate and on DEA's activities and interests under the Regulations.
- **(21)** Stated that it looked forward to Woodside providing further information to address DEA's concerns and demonstrating that the impacts of the proposed activities will be managed to a level that is acceptable to DEA.
- **(22)** Stated that Woodside had not provided information to DEA to show that its net zero plans for the proposed activities complied with the regulations, and that Woodside's abatement activities and net zero plans amounted to greenwash.
- **(23)** Stated the Pluto GGAP could be considered an example of greenwash as it did not adhere to the UN and ISO standards, and that, in any case, the Western

Australian EPA had formally advised the WA Minister for Environment that the plan was no longer adequate.

- On 4 July 2024, Woodside emailed DEA (SI Report, reference 41.4). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with DEA over the next month. Woodside also acknowledged receipt of DEA's letter dated 12 June 2024 and advised it would be responding shortly.
- On 9 July 2024, Woodside responded to DEA's letter dated 12 June 2024 (SI Report, reference 41.5). Woodside:
  - **(1)** noted DEA's comments regarding relevant person status.
  - **(3)** noted further information on emissions will be included in the revised EP and reiterated that in accordance with regulation 25 of the Environment Regulations, Woodside's consultation process provided relevant persons with sufficient information to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. Woodside assesses any objections or claims received and adopts appropriate measures so that the activity is carried out in a manner whereby environmental impacts and risks are reduced to as low as reasonably practicable (ALARP).
  - Noted that DEA's public position is that all new coal, oil and gas projects should be banned, and provided public statements from DEA that indicate that is it fundamentally opposed to fossil fuels. Woodside also noted connections between DEA and other NGOs who have campaigns against Woodside.
  - **(4)** advised that in terms of climate and health impacts associated with this EP, climate change impacts are the result of global GHGs and cannot be attributed to any one activity or project. Emissions associated with the projects are negligible in the context of existing and future anticipated global GHG emissions. In addition, gas can play a role towards the energy transition.
  - Directed DEA to the IPCC's Sixth Assessment Report (AR6) in 2023 and Woodside's approach to climate change (Section 5.3 'Managing Physical Risk' and Section 6.3 'A Just Transition' of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report) for information on GHG emissions in a global and Australian context.
  - **(13)** Noted that, based on DEA's website, DEA's members cite a significant volume of studies, scientific research and videos to inform its position on human impacts from climate change demonstrating that DEA has access to information, and capacity and understanding of that information. Woodside also noted that a number of DEA's members attended Woodside's 2024 AGM.
  - **(14)** Reiterated that climate change impacts are the result of global GHG emissions and cannot be attributed to any one project.
  - Gas can play a role in the energy transition.
  - Stated that the proposed petroleum activities were not anticipated to result in the destruction of sites of spiritual significance to First Nations people.
  - **(15)** Noted DEA's comments regarding the need for emissions produced from now on needing to be removed at a later date, and advised DEA that additional information was also available within Woodside's CTAP and 2023 Progress Report regarding decarbonisation technology development and the role of removal credits over time in support of our net zero aspiration (pages 28 and 29).
  - **(16, 17)** Stated it does not agree with DEA's position that the Federal Safeguarding Mechanism is misaligned with the goals of the Paris Agreement and that scope 3 international emissions should be considered against Australia's targets, as they are subject (where relevant) to customer nations' Paris NDCs
  - **(18)** Advised that emissions arising from the consumption of Scarborough gas along with other feed sources in customer markets will be considered under domestic and international emissions control frameworks. Anticipated customers of gas from the Scarborough Project are in countries that have ratified the Paris Agreement. Under the Paris Agreement and global GHG accounting conventions, each country is responsible for accounting for, reporting and reducing emissions that physically occur in its jurisdiction.
  - **(19)** Stated it did not accept the position that if the emissions associated with the project are insignificant, so too are Australia's national abatement efforts.
  - **(20)** Stated it does not agree with DEA's position that ISO net zero guidelines must be applied to the proposed activities. Section 2.3.6 of the EP defines criteria for

demonstration of acceptability.
  - **(21)** Stated it does not agree with DEA's position that impacts of the proposed activity must be acceptable to DEA, referring to the purpose of consultation and that acceptability is determined by NOPSEMA under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth).
  - **(21)** Advised the acceptability of the proposed activities will be determined by NOPSEMA pursuant to the OPGGS (E) Regulations.

- On 10 July 2024, DEA thanked Woodside for the clarification and for Woodside's complete, considered and prompt response to DEA's request (SI Report, reference 41.6).
- On 31 January 2025, Woodside emailed DEA to advise that Woodside had further assessed the merits of a number of objections or claims raised by DEA (SI Report, reference 41.7). Woodside noted that feedback from relevant persons could continue to be provided including after consultation for the EP had closed, during EP assessment and after an EP had been accepted by NOPSEMA. Woodside:
  - **(3, 5, 8, 13)** Confirmed Woodside had given DEA sufficient information in accordance with the regulations, including information regarding climate and health. For example, as set out in the EP, Woodside understands climate change to be caused by the net (cumulative) global concentration of GHG in the atmosphere. However, changes in global atmospheric GHG concentration cannot be attributed to any one activity or one project. Woodside set out its view on LNG's role in the energy transition and that Woodside did not accept that the Pluto Operations would contribute to the exacerbation of climate impacts in Western Australia. Woodside advised that, regardless, a hypothetical assumption where GHG emissions associated with the activity were treated as additive had been considered in the latest version of the EP and the contribution to carbon budgets was de minimis. For reference, Woodside provided a summary of the contextual evaluation of climate changes impacts included in the EP.
  - **(2)** Noted the additional documents mentioned by DEA included information relevant to DEA's topics of interest and were further examples of sufficient information given to DEA.
  - **(8, 14)** Confirmed the EP included a section entitled "Potential impacts to human health" and that in response to feedback, an EPO that considered human health had been added to the EP. Woodside advised the EP noted that the AR6-WGII contained information about projected impacts to health and wellbeing for the Australasian region. Woodside advised impacts on human health can not be specifically be attributed to GHG emissions associated with the activities under this EP.
  - **(23)** Did not agree with DEA's assertion regarding greenwashing and noted the seriousness of the allegation. Woodside advised the UN standards mentioned were not intended to apply as requirements of a facility operator's management plans for a specific activity.
  - **(23)** For clarification, provided an update from the latest version of the EP regarding regulatory frameworks for onshore hydrocarbon processing, including updates on the WA State Government's GHG emissions policy, assessment of the North West Shelf Project Extension Proposal, and the EPA's environmental factor guideline.
  - **(15)** Noted the potential impacts of GHG emissions associated with the operations and carbon budgets estimated to achieve the goals of the Paris Agreement were assessed in the EP. Woodside advised removal of GHG from the atmosphere at a later date was outside the scope of the activity under the EP, and Woodside did not comment on technology or projects that may be utilised between 2050 and 2100 for carbon drawdown. Woodside confirmed GHG emissions associated with Pluto had been assessed and were ALARP and acceptable.
  - **(16)** Noted the CTAP provided broad business context and internal plans and targets. Woodside further noted DEA made a serious allegation regarding greenwashing which Woodside understood to be an allegation Woodside had engaged in misleading or deceptive conduct. Woodside does not agree. Woodside confirmed it was otherwise aware of the UN High Level Expert Group on Net Zero Integrity Matters as well as a range of other forums, public dialogues and reports regarding purported greenwashing. Woodside confirmed it had recently participated in the Australian Senate Inquiry into Greenwashing and as per its statements at the Inquiry, Woodside took great care with its statements especially in relation to climate to change, so these statements were accurate and not misleading.
  - **(17)** Confirmed the Federal SGM implemented the Australian Government's policy for reducing emissions at Australian industrial facilities, including the Pluto offshore

facility and Woodside's onshore gas processing plants. Woodside confirmed avoiding and reducing GHG emissions was its priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology plans were matured and implemented. Woodside set out further information on its carbon business and position on carbon credits.

- **(19)** Confirmed the contribution of GHG emissions associated with the Pluto activity to net global GHG concentrations was de minimis, and that it was inappropriate to compare total emissions of Scarborough and Pluto operations over their lifetime to a shorter-term Australian emission reduction goal. Woodside confirmed it did not comment on the significance of Australia's emission reduction targets.
- **(20)** In addition to information set out in its previous response regarding the UN High Level Expert Group on Net Zero Integrity Matters, Woodside set out responses to each of the examples of what non-state actors must include in net zero policies as suggested by DEA.
- **(22)** Disagreed with DEA's characterisation and referred DEA to previous responses on the topic of alleged greenwashing.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Referred to another EP and Pluto Operations EP.	**(1)** **Woodside Assessment:** Acknowledged DEA's reference to another EP and Pluto Operations EP and that it had previously responded to issues raised by DEA on another EP. **Woodside Response:** Noted that DEA letter related to another EP and Pluto Operations EP.	**(1)** Not required.
(2) Understood Woodside is consulting on both EPs and that DEA considered itself to be a relevant person. DEA provided statements relating to its functions, interests and activities.	**(2)** **Woodside Assessment:** Woodside reviewed previous consultation with DEA for another EP and that consultation closed on Pluto Operations EP on 29 March 2024. Woodside acknowledges DEA's statements and document references regarding its functions, interests or activities but makes no comment as to the factual accuracy or otherwise of these documents. **Woodside Response:** Woodside noted previous consultation with DEA took place for another EP and that consultation closed on Pluto Operations EP on 29 March 2024. It also noted that consultation continues during the life of an EP and has a Management of Change and Review process in place should any feedback be received after EP acceptance identifies a measure or control that requires implementation or updates to meet intended outcome of	**(2)** Assessment of relevant persons is described in Appendix F, Table 1 of the EP.

	consultation. Based on feedback for this EP, DEA has been assessed as being a relevant person.	
(3) Woodside must provide relevant persons with sufficient information and reasonable period for consultation, and concerns raised by DEA so far have been inadequately addressed.	**(3)** **Woodside Assessment:** Woodside consults relevant persons in accordance with Regulation 25 of the Environment Regulations and assessed DEA as a relevant person for this EP after receiving feedback. Woodside has addressed concerns raised by DEA via direct responses provided on 14 May 2024, 9 July 2024 and 29 January 2025. **Woodside Response:** Woodside confirmed it consults relevant persons in accordance with Regulation 25 of the Environment Regulations to provide sufficient information and a reasonable period allowing them to make an informed assessment on their functions, interests or activities. Woodside assessed DEA as a relevant person for this EP after receiving feedback.	**(3)** DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(4) Supports position of no development of new fossil fuel resources.	**(4)** **Woodside Assessment:** Woodside recognises there is global demand for oil and gas and natural gas. **Woodside Response:** Woodside referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. It noted that more granular detail relating to GHG emissions will be set out and assessed in the EP.	**(4)** Not required.

(5) Wants further information and opportunity to comment.	**(5)** **Woodside Assessment:** Woodside had consultation efforts in place including newspaper advertising campaign, social media campaign, community events and a tailored roadshow to support consulting relevant persons in the course of preparing this EP. **Woodside Response:** Woodside provided sufficient information and reasonable period of time for relevant persons to make an informed assessment of the proposed activities. Consultation activities included advertisements in The Australian, The West Australian, regional newspapers and Indigenous newspapers between 26 – 28 February 2024, a social media campaign across Facebook and Instagram in February 2024, community events with subject matter experts and information and tailored roadshow in the Pilbara during March and April 2024. The Pluto Operations EP consultation information sheet was published 26 February 2024.	**(5)** DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(6) Noted usage of NOPSEMA guidance materials to support consultation.	**(6)** **Woodside Assessment:** Woodside refers to NOPSEMA's guidance materials. **Woodside Response:** Woodside confirmed it refers to NOPSEMA's guidance material for its consultation methodology.	**(6)** Woodside's consultation methodology is described in Section 5 of the EP.
(7) Consultation materials do not address indirect impacts of GHG emissions, climate change impacts and health impacts.	**(7)** **Woodside Assessment:** Woodside noted information related to these concerns is available across a number of mostly publicly available sources; Commonwealth and State legislation which manages potential environment and culture features impacts and risks; Ministerial Conditions and associated management plans which address GHG emissions, air quality and cultural heritage and are approved by EPA or Minister for Environment; and generally publicly available approval documents for Pluto LNG and Karratha	**(7)** Not required.

	Gas Plant which are not new as they've been in place for existing operations. State and Federal legislation also manages the physical presence of onshore processing facilities, including in relation to environment and cultural heritage. For anthropogenic climate change, Woodside noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. **Woodside Response:** Woodside referenced Commonwealth and State legislation which manages potential environment and culture features impacts and risks that is applied to onshore processing facilities. Atmospheric emissions tied to onshore processing, including the Pluto LNG and Karratha Gas Plant, are managed under the *WA Environmental Protection Act 1986,* State and Federal Aboriginal Heritage Legislation and the Federal EPBC Act. Pluto LNG is subject to approvals including relevant Ministerial Conditions and associated management plans (mostly publicly available) which address GHG emissions, air quality and cultural heritage and are approved by EPA or Minister for Environment. Approval documents for Pluto LNG and Karratha Gas Plant are generally publicly available and are not new as it has been in place for existing operations. State and Federal legislation also manages the physical presence of onshore processing facilities, including in relation to environment and cultural heritage. For anthropogenic climate change, Woodside noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.	
(8) Concerns about health and wellbeing impacts of	**(8)** **Woodside Assessment:** Woodside does not consider that	**(8)** Potential impacts on human health are considered in

climate change and GHG emissions.	impacts on human health can be attributed to GHG emissions associated with the operations. Woodside has conducted an impact assessment of GHG emissions from the Pluto operations and measures to reduce emissions have been undertaken. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels. **Woodside Response:** Woodside advised it does not consider that impacts on human health can be attributed to GHG emissions associated with the operations. Woodside noted in the EP that the AR6-WGII contained information about projected impacts to health and wellbeing for the Australasian region. An EPO that considers health has also been included in section 6.7.11 of the EP. This section of the EP considers human health impacts from the release of atmospheric emissions from the Pluto project and the risk is assessed as Negligible.	sections 6.7.10 and 6.7.11 of the EP.
(9) Climate change impacts, including those resulting from Scope 3 emissions, must be assessed in accordance with approved NOPSEMA program.	**(9)** **Woodside Assessment:** Woodside acknowledges climate science that states climate change is understood to be caused by the net cumulative global concentration of GHG in the atmosphere and changes in GHG concentration could not be attributed to any one activity or project. Therefore, Woodside does not accept the operations will contribute to the exacerbation of climate change impacts in Western Australia. **Woodside Response:** Woodside confirmed its view was that LNG could have a role in the energy transition, however, to facilitate a comparison against carbon budgets, a hypothetical assumption had been used in the EP where GHG emissions associated with the operations were hypothetically treated as additive, and the contribution was de minimis. Woodside confirmed climate change was recognised as a global issue, and, for reference, a contextual evaluation of climate change impacts was set out	**(9)** A contextual evaluation of climate change impacts is included in Section 6.7.10 of the EP.

	in detail in the EP. Woodside provided a list of relevant projections for climate change in Australia.	
(10) Provided list of needed information to make assessment.	**(10)** **Woodside Assessment:** Woodside has given DEA sufficient information in accordance with Regulation 25. In addition to the publicly available five-year revision of the EP and Woodside's previous responses, Woodside acknowledges there are publicly available documents to provide DEA with information it is seeking and noted the legislative requirements as well as broader requirements including those of the World Health Organisation that onshore gas processing is subject to. **Woodside Response:** Woodside confirmed the five-year revision of the EP was publicly available on NOPSEMA's website. Woodside noted that emissions associated with onshore gas processing were subject to a range of legislative requirements including those which consider and manage potential to impact on human health.	**(10)** Not required.
(11) Woodside only makes general statements around health, safety and environment.	**(11)** **Woodside Assessment:** Woodside notes that it has a suite of climate disclosures available for DEA to read and that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. **Woodside Response:** Woodside responded that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with Scarborough and Pluto cannot be linked to climate change impacts to the environment, a contextual evaluation	**(11)** GHG emissions are considered in Section 6.7.10 of the EP.

	of climate change impacts will be provided in the EPs. It encouraged DEA to read Woodside's suite of climate disclosures including Woodside's Climate Report 2021, Climate Report 2022 and Climate Transition Action Plan and 2023 Progress Report.	
(12) EP should not be accepted until Regulation 25 requirements are met.	**(12)** **Woodside Assessment:** Woodside disagrees with this assertion. Woodside has consulted DEA in accordance with Regulation 25. **Woodside Response:** Woodside responded that it disagreed with this assertion and that DEA had engaged in consultation with Woodside in accordance with Regulation 25.	**(12)** Not required.
(13) Due to the limited information provided by Woodside, and DEA's voluntary capacity, the information in DEA's consultation responses should not be taken to reflect its complete position or complete submissions on this EP. DEA reserves the right to make further submissions as capacity and information become available.	**(13)** **Woodside assessment:** Woodside has provided DEA with sufficient information. Woodside does not accept DEA's comments regarding capacity as its members appear to have had at their disposal a significant amount of information and DEA members also attended Woodside's AGM. **Woodside response:** Based on DEA's website, its members cite a significant volume of studies, scientific research and videos which demonstrate that DEA has access to information, and capacity and understanding of the information. A number of DEA members also attended Woodside's 2024 Annual General Meeting.	**(13)** Not required.
(14) As well as climate change harming human health: Oil and gas developments result in direct health harms from pollution including cancer, reproductive and human growth harms, disease and deaths etc; The destruction of sites of spiritual significance to First Nations people by fossil fuel developments	**(14)** **Woodside assessment:** Climate change impacts cannot be attributed to any one project and proposed activities are not anticipated to result in the destruction of sites of spiritual significance to First Nations people. **Woodside response:** Climate change impacts are the result of global GHG emissions and cannot be attributed to any one project.	**(14)** Potential impacts of climate change are described in Section 6.7.10 of the EP, and potential impacts of atmospheric emissions are assessed in Section 6.7.11 of the EP. Potential impacts on cultural features and heritage values are assessed in Section 4.9 of the EP.

compounds psychosocial harms.	Gas can play a role in the energy transition. The proposed petroleum activities for this EP are not anticipated to result in the destruction of sites of spiritual significance to First Nations people.	
(15) Any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum: Woodside's assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100-year period and preferably longer; Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable measures must be imposed by the regulator to ensure this takes place.	**(15)** **Woodside assessment:** Woodside does not agree with DEA's assertions. The impacts of GHG emissions associated with the operations and carbon budgets estimated to achieve the goals of the Paris Agreement are assessed in the EP **Woodside response:** Woodside advised removal of GHG from the atmosphere at a later date, and technology or projects that may be utilised between 2050 and 2100 for carbon drawdown, were outside the scope of this EP. Woodside advised the additional information was available in Woodside's CTAP and 2023 Progress Report, and the impact of GHG emissions associated with the operations and the demonstration of ALARP and Acceptability were set out in the EP.	**(15)** GHG emissions are considered in Section 6.7.10 of the EP.
(16) The CTAP and 2023 Progress Report (and climate plans in general) cannot be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because: The plans and targets are unenforceable; The Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero; The plans have repeatedly been rejected by Woodside's shareholders.	**(16)** **Woodside assessment:** Woodside does not agree with DEA's position. Woodside's Climate Transition Action Plan and 2023 Progress Report provides business context and internal plans and targets – it is not enforceable by NOPSEMA. Commitments required to meet the OPGGS(E)R are contained in the Scarborough Operations EP - enforceable by NOPSEMA. **Woodside response:** Woodside advised it was targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner; referred DEA to section 3.3 of Woodside's CTAP and 2023 Progress Report; and confirmed it does not agree with DEA's claim regarding greenwash.	**(16)** Not required.

(17) Reliance on the Federal SGM as a means to align with Australian national emissions goals is inappropriate because of: Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement; Ongoing project emissions beyond 2030 reduction targets; Emissions that will result from these projects in other countries outside of Australia; Potential use of low integrity undisclosed offsets.	**(17)** **Woodside assessment:** Woodside does not agree with DEA's position. The Safeguard Mechanism is the Australian Government's policy for reducing emissions at Australia's largest industrial facilities. **Woodside response:** Woodside provided information on its approach to climate strategy and carbon offsets. Woodside noted emissions associated with anticipated third-party consumption of Scarborough gas outside Australia were subject (where relevant) to the relevant customer nations' Paris NDCs.	**(17)** Information on the SGM is set out in Section 6.7.10 of the EP.
(18) If comparisons to Australia's emissions reduction targets and budget are to be used, then the total emissions from the proposed activities (not just domestic emissions) should be compared with Australia's abatement efforts and policies.	**(18)** **Woodside's assessment:** Woodside does not agree with DEA's comments. Emissions arising from the consumption of Pluto along with other feed sources in customer markets will be considered under domestic and international emissions control frameworks. **Woodside's response:** Woodside advised anticipated customers of gas from Pluto were in countries that had ratified the Paris Agreement. Under the Paris Agreement and global GHG accounting conventions, each country is responsible for accounting for, reporting and reducing emissions that physically occur in its jurisdiction.	**(18)** Not required
(19) DEA does not accept the argument that the total emissions from the proposals (i.e. this EP and another Woodside EP) is an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable as, if this were true, Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant.	**(19)** **Woodside assessment:** Woodside does not agree with DEA's comments as while Woodside acknowledges climate change is understood to be caused by the net (cumulative) global concentration of GHG in the atmosphere, changes in global atmospheric GHG concentration cannot be attributed to any one project. **Woodside response:** Woodside confirmed the contribution of GHG emissions associated with the Pluto activity to net global GHG concentrations was de minimis, and it was not	**(19)** Not required

	appropriate to conflate emissions associated with the project's lifecycle, including those originating internationally, with Australia's abatement efforts or targets.	
(20) Woodside must adhere to the UN's and the ISO's guidelines in relation to its proposed activities as part of any assessment on the impacts on the climate and on DEA's activities and interests under the Regulations.	**(20)** **Woodside assessment:** Woodside does not agree with DEA's position. There are no regulatory requirements to apply the frameworks mentioned by DEA. **Woodside response:** Woodside acknowledged DEA's comments but does not agree with DEA's position and referred DEA to Section 2.3.6 of the EP which defines criteria for demonstration of acceptability.	**(20)** Section 2.3.6 of the EP defines criteria for demonstration of acceptability.
(21) Woodside should provide further information to address DEA's concerns and demonstrate that the impacts of the proposed activities will be managed to a level that is acceptable to DEA.	**(21)** **Woodside assessment:** Woodside is required to manage impacts of the proposed activities in accordance with the OPGGS (Environment) Regulations and determined by NOPSEMA. **Woodside response:** The acceptability of the proposed activities will be determined by NOPSEMA pursuant to the OPGGS (Environment) Regulations.	**(21)** Section 2.3.6 of the EP defines criteria for demonstration of acceptability.
(22) Claims Woodside had not provided information that shows its net zero plans were compliant and its abatement activities and net zero plans amounted to greenwash.	**(22)** **Woodside assessment:** Woodside does not agree with DEA's characterisation and notes DEA makes a serious allegation towards Woodside. Woodside does not claim to be net zero but has an aspiration for net zero net equity emissions by 2050. **Woodside response:** Woodside confirmed it carefully considered and verified its statements. Woodside provided DEA with a link to the fact checker on Woodside's website, as well as information on the recent Australian Senate Inquiry into Greenwashing and Woodside's corporate emissions reduction targets.	**(22)** Not required.
(23)	**(23)**	**(23)**

Claims the Pluto GGAP is an example of greenwash and the EPA had informed the WA Minister for Environment that the plan was no longer adequate.	**Woodside assessment:** Woodside does not agree with DEA's position. The guidelines mentioned are not intended to apply as requirements of a facility operator's management plans for a specific activity. GHG emissions associated with onshore hydrocarbon processing are regulated under both Commonwealth and State legislation. **Woodside response:** Woodside provided an overview of regulatory frameworks for onshore processing, including updates on the WA Government's GHG policy and the EPA's environmental factors guideline. Woodside noted amendments were anticipated to Ministerial Statement 1208 to align with conditions of other major projects.	Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with FARA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DEA sufficient information to allow DEA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since February 2024. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 24 April 2024, DEA self-identified for this EP.
- Woodside provided DEA with further detailed information which addressed DEA's specific feedback, objections or claims (see information given on 14 May 2024, 9 July 2024, and 31 January 2025.

Reasonable Period

Woodside allowed DEA a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- DEA self identified for this EP on 24 April 2024.
- In this context, Woodside allowed DEA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DEA is appropriate and adapted to the nature of interests of DEA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This is appropriate and adapted to DEA because Woodside notes DEA regularly uses social media as a means to share its views. This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside engaged with DEA in the manner that DEA has consulted in previous consultations, that is, by email.
- Woodside considers a reasonable opportunity was provided to DEA as evidenced by the self-identification on 24 April 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DEA provided feedback or objections or claims about the adverse impact of the activity to which the EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DEA and has assessed the merits of any objection or claim about the adverse impact of the proposed activities to which this EP relates.
  - In response to feedback, an EPO that considered human health had been added to the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Telstra

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Telstra advising of the proposed activity (Record of Consultation, reference 2.25), provided a Consultation Information Sheet, a map of the Submarine Communications Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 12 March 2024, Telstra emailed Woodside requesting to be contacted regarding an email received (SI Report, reference 10.1).
- On 12 March 2024, Woodside asked Telstra to confirm which activity its email related to (SI Report, reference 10.2).
- On 13 March 2024, Telstra confirmed contacting Woodside in relation to this EP (SI Report, reference 10.3).
- On 13 March 2024, Woodside enquired about Telstra's request (SI Report, reference 10.4).
- **(1)** On 14 March 2024, Telstra requested to be contacted to understand the impact of the activities on its network (SI Report, reference 10.5).
- **(1)** On 25 March 2024, Woodside advised the North West Shelf cable operated by Telstra is in the vicinity of the operational area and the new activities are located approximately 12km from the nearest cable (SI Report, reference 10.6). A map of the Submarine Communications Cables was attached, as previously provided to Telstra.
- **(2)** On 2 April 2024, Telstra forwarded its Duty of Care brochure and requested Woodside contact Telstra should the network be impacted by the activities (SI Report, reference 10.7).
- **(2)** On 3 April 2024, Woodside confirmed it will contact Telstra should the network be impacted by the activities covered under this EP (SI Report, reference 10.8).
- On 27 March 2024, Woodside provided an activity update to Telstra regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Impact of activities on Telstra's network.	**(1)** **Woodside assessment:** Woodside reviewed the map of the Submarine Communications Cables to provide a detailed response. **Woodside response:** Woodside provided another copy of the map and advised the North West Shelf cable operated by Telstra is in the vicinity of the operational area and the new activities are located approximately 12km from the nearest cable.	**(1)** Not required.

(2) Telstra requested to be notified.	**(2)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-6 of this EP. **Woodside response:** Woodside confirmed it will contact Telstra should the network be impacted by the activities.	**(2)** Woodside will provide notification of significant change, as appropriate, to Telstra, as referenced in Table 7-6 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Telstra for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Telstra on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- On 14 March 2024, Telstra consulted and shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information provided in the Consultation Information Sheet, Woodside provided Telstra with a map of submarine cables and further information in response to Telstra's feedback (email of 25 March 2024).

Reasonable Period

Woodside allowed Telstra a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commended 13 months ago in February 2024.
- A consultation period was stated in the initial correspondence to Telstra advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Telstra 30 days for consultation.
- In this context, Woodside allowed Telstra a reasonable period for consultation in preparation of the EP as evidenced by its response on 14 March 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Telstra is appropriate and adapted to the nature of interests of Telstra:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Telstra as evidenced by its response on 14 March 2024.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Telstra provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Telstra.
  - Made no changes or inclusions to the EP as a result of consultation with Telstra because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Vocus

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 2.25), provided a Consultation Information Sheet, a map of the Submarine Communications Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Vocus, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Vocus regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Vocus for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vocus sufficient information to allow Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Vocus on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Vocus a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Vocus advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Vocus 30 days for consultation. For consultation on EPs, 30 days is the usual period for Vocus.
- In this context, Woodside allowed Vocus a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Vocus is appropriate and adapted to the nature of interests of Vocus:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback. Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Vocus of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Vocus did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Vocus' functions, interests or activities.

Research institutes and local conservation groups or organisations

Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed CCG advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet,

and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to CCG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CCG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with CCG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to CCG on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CCG advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCG 30 days for consultation. For consultation on EPs, 30 days is the usual period for CCG.
- In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of interests of CCG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This is appropriate and adapted to CCG because Woodside notes CCG regularly uses social media as a means to share its views. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding CCG of the opportunity to provide feedback.
- Woodside acknowledges CCG is a member of the Exmouth CLG, which was consulted for the preparation of this EP.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, as no response had been received, Woodside proactively sent an email reminder to Protect Ningaloo, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Protect Ningaloo regarding wells location coordinates and included an updated Consultation Information

Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Protect Ningaloo for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since Friday 23 February 2024. Woodside provided this information to Protect Ningaloo on 27 February 2024, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Protect Ningaloo a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Protect Ningaloo advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commended 13 months ago in February 2024.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed Protect Ningaloo 30 days for consultation. For consultation on EPs, 30 days is the usual period for Protect Ningaloo.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of interests of Protect Ningaloo:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 1 targeted social media campaign (see Consultation Activities). This is appropriate and adapted to Protect Ningaloo because Woodside notes Protect Ningaloo regularly uses social media as a means to share its views. This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback. Woodside proactively sent a follow-up consultation email on 19 March 2024, reminding Protect Ningaloo of the opportunity to provide feedback.
- Protect Ningaloo is a joint project of the CCG, CCWA and AMCS which was consulted for the preparation of this EP.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

Table 3: Engagement Report with Persons and Organisations Assessed as Not Relevant

Commonwealth commercial fisheries and representative bodies

Australian Southern Bluefin Tuna Industry Association (ASBTIA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed ASBTIA advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to ASBTIA, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ASBTIA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While ASBTIA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ASBTIA to provide feedback during the consultation process.

Tuna Australia

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 28 February 2024, Tuna Australia emailed Woodside (SI Report, reference 11.1) and:

- **(1)** provided its industry position statement.
- **(2)** requested a service agreement to assist Woodside meeting its consultation requirements. **(2)** The consultation regulations do not require Woodside to enter into service agreements in order to engage in consultation or for an EP to be complete.

- **(1)** On 3 April 2024, Woodside thanked Tuna Australia for providing its position statement and provided an activity update regarding wells location coordinates and included an updated Consultation Information Sheet (SI Report, reference 11.2).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Provided its industry position statement.	**(1)** **Woodside assessment:** Woodside previously received and reviewed the position statement. **Woodside response:** Woodside thanked Tuna Australia for sending its position statement.	**(1)** Not required.
(2) Recommended entering into a Service Agreement to support consultation.	**(2)** **Woodside assessment:** The Environment Regulations do not require the entry into a fee for service agreement in order to meet Environment Plan consultation requirements. **Woodside response:** Woodside responded to Tuna Australia during consultation on another EP. Woodside respects that, for a relevant person, consultation is voluntary. Woodside advised Tuna Australia the level of feedback provided by an organisation, if any, was at the person or organisation's discretion, and Woodside was open to suggestions from Tuna Australia on ways to improve efficiency and simplicity for feedback.	**(2)** Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While Tuna Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Tuna Australia to provide feedback during the consultation process.

Other non-government groups or organisations

350 Australia (350A)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed 350A advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to 350A, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to 350A regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 28 March 2024, 350A emailed Woodside stating it had not been consulted adequately on the Scarborough Offshore Facility and Trunkline (Operations) EP (SI Report, reference 29.1).
- **(1)** On 2 April 2024, Woodside responded to 350A seeking clarification as to whether it was providing feedback on this EP as it had already consulted 350A on the Scarborough Operations EP (SI Report, reference 29.2).
- On 10 May 2024, Woodside emailed 350A to advise consultation for this EP has closed (SI Report, reference 29.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) 350A stated it has not been consulted adequately on Scarborough Offshore Facility and Trunkline (Operations) EP.	**(1)** **Woodside assessment:** The activities covered under the Scarborough Offshore Facility and Trunkline (Operations) EP are not relevant for this EP. Woodside consulted 350A for the Scarborough Offshore Facility and Trunkline (Operations) EP separately. **Woodside response:** Woodside sought clarification from 350A on which EP the feedback relates to.	**(1)** Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While 350A is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable		

period outside of regulatory requirements for 350A to provide feedback during the consultation process.

Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to ACF, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ACF regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.

Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to AMCS, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMCS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AMCS to provide feedback during the consultation process.		

Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to CCWA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CCWA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While CCWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CCWA to provide feedback during the consultation process.		

Greenpeace Australia Pacific (GAP)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to GAP, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to GAP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While GAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GAP to provide feedback during the consultation process.

Australasian Centre for Corporate Responsibility (ACCR)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed ACCR advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to ACCR, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ACCR regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete
While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback during the consultation process.

Market Forces

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Market Forces advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to Market Forces, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Market Forces regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete
While Market Forces is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Market Forces to provide feedback during the consultation process.

Research institutes and local conservation groups or organisations

University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to UWA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the

Consultation Information Sheet on Woodside's website.

- On 27 March 2024, Woodside provided an activity update to UWA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While UWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for UWA to provide feedback during the consultation process.

Curtin University

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Curtin University advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to Curtin University, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Curtin University regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While Curtin University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Curtin University to provide feedback during the consultation process.

Edith Cowan University (ECU)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed ECU advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to ECU, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ECU regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While ECU is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ECU to provide feedback during the consultation process.

Murdoch University

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Murdoch University advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Murdoch University, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Murdoch University regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and,	No additional measures or controls are required.

	where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	
Summary Report – Consultation Complete		
While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.		

Western Australian Marine Science Institution (WAMSI)

Summary of information provided and record of consultation for this EP:

- On 18 March 2024, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 2 April 2024, Woodside sent an email reminder to WAMSI, following up on the proposed activity and provided an activity update regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.		

Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to CSIRO, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CSIRO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While CSIRO is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CSIRO to provide feedback during the consultation process.		

Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 8 March 2024, AIMS emailed Woodside (SI Report, reference 4.1) and:
  - **(1)** confirmed it has no operations occurring in the area.
  - **(2)** requested to be informed if the activity location changes.
- **(1,2)** On 12 March 2024, Woodside thanked AIMS for its feedback and confirmed it will provide AIMS with updates (SI Report, reference 4.2).
- On 27 March 2024, Woodside provided an activity update to AIMS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 8 April 2024, AIMS emailed Woodside and confirmed the activities will not disrupt AIMS operations (SI Report, reference 4.3).
- **(1)** On 9 April 2024, Woodside thanked AIMS for reviewing the information (SI Report, reference 4.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AIMS confirmed the activities will not disrupt its operations.	**(1)** **Woodside assessment:** Woodside noted AIMS feedback. **Woodside response:** Woodside thanked AIMS for confirming it has no operations in the area.	**(1)** Not required.
(2)	**(2)**	**(2)**

AIMS requested to be notified.	**Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-6 of this EP. **Woodside response:** Woodside confirmed it will contact AIMS should the activity location change.	Woodside will provide notification of significant change, as appropriate, to AIMS, as referenced in Table 7-6 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.3.2 of this EP).	Woodside considers the measures and controls in the EP are appropriate.
Summary Report – Consultation Complete		
While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.

1. INFORMATION SHEETS

1.1 Consultation Information Sheet

Woodside Energy

CONSULTATION

INFORMATION SHEET

February 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside wants relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside will submit a five-year revision of the Operations EP for the Pluto Facility (Pluto) located in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (regulations). The Operations EP currently covers the operation of a fixed platform (Pluto) and subsea infrastructure connected to the Pluto, Xena and Pyxis reservoirs. The Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Location and Operations

The Pluto platform and associated subsea infrastructure is located in Production Licenses WA-1-IL and WA-34-L. The export pipeline and flowline are within Pipeline Licenses WA-17-PL and WA 16 PL, respectively (see **Figure 1**).

The Xena-03 well is located in Production Licence WA 34 L, around 15km from the Pluto Platform and around 190km west north-west of Dampier. The Xena-03 well will be located around 2 km from the existing Xena-02 well and tied back to the existing Pluto production systems.

The Pluto facility commenced production in 2012. The facility produces wet gas and condensate, which is transported for processing at the onshore Pluto LNG Plant via a 180km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from a fixed operator console at the Pluto onshore Central Control Room (CCR), which is constantly manned.

Installation of a water handling module on the platform is underway to enable the processing and discharge of produced water at the platform. Wet gas will be processed through the water handling module and transported onshore, with treated water discharged overboard.

Table 1 summarises the activities, which will be managed under the Operations EP.

Proposed Activity Overview – Production / Operations

The production scope includes the following activities to be undertaken during the next five-year period:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) activities
- Commissioning and operation of the water handling module
- Non-routine and unplanned activities and incidents associated with the above.

Future decommissioning of infrastructure will be subject to separate future EPs.

Production

Production commenced from the Pluto facility in 2012 and is currently expected to continue until at least 2031. Production is planned to commence from the Xena-03 well around Q3 2025.

Inspection

Inspection of infrastructure is the process of physical verification and assessment of subsea components to detect changes compared to its installed state. Typical site inspection activities include visual surveys via a remotely operated vehicle, side scan sonar surveillance, cathodic protection measurements and ultrasonic pipe condition checks.

Monitoring

Monitoring is the surveillance of the physical and chemical environment around subsea infrastructure. Monitoring activities may include process composition, corrosion probes, corrosion mitigation checks, and metocean and geological monitoring.

Maintenance

Maintenance of infrastructure is required at regular and/or planned intervals to maintain performance reliability and prevent deterioration or failure of equipment. Maintenance activities may include cycling of valves and leak pressure testing.

Repair

Repair activities are those required when a subsea system or component is degraded or damaged as defined by design codes.

Vessels

Operations support vessels will be used to undertake IMMR of subsea infrastructure. The vessel size and type will be dependent on the work scope. The vessels will not anchor during IMMR activities unless there is an unexpected event or an emergency. An Accommodation Support Vessel (ASV) may be required for short periods (typically less than 1 month) to support planned maintenance campaigns, shutdown maintenance or major projects.

Proposed Activity Overview – Drilling and Tie-Back

The scope for this EP includes drilling, completion, subsea installation (including minor changes to existing infrastructure) along with commissioning activities to bring in gas from the Xena-03 well to the Pluto platform. This includes directly installing infrastructure from the installation vessel in the relevant location.

Other contingent activities that Woodside may need to perform include well abandonment, re-spud, side-track, well suspension, well intervention, wireline logging, leaving wellhead assembly in situ, sediment mobilisation and relocation, venting, well test/unload and emergency disconnect sequence.

Drilling, subsea installation and commissioning activities

Woodside plans to drill one new well in the Xena field (Xena-03) and to install an associated wellhead and Xmas tree. Xena-03 will be connected to the existing Pyxis Hub subsea infrastructure. The well will be located at approximately 177 m water depth. Other activities include:

- Pre-commissioning and cold-commissioning (non-hydrocarbon) activities associated with subsea infrastructure including leak testing of the flexibles, subsea control systems verification and function-testing of valves to verify the production system and electric and hydraulic flying leads are ready for entry into the commissioning phase; and
- Well start-up and commissioning (initial start-up) of the Xena 03 well involving slow and gradual build up to maximum well gas production rates and then well performance testing such as Multi-Rate Testing, simulated emergency shut down (ESD) of the well followed by Pressure Build-Up Testing.

Drilling activities are currently anticipated to commence around Q2 2025, subsea installation and commissioning activities are currently anticipated around Q3 2025.

The timing and duration of the proposed activities is subject to approvals, project schedule requirements, vessel availability, weather or unforeseen circumstances.

Project vessels

Activities will be completed using a range of vessels. Operations will use support vessels to undertake inspection, monitor, maintenance and repair of subsea infrastructure. The vessel size and type will be dependent on the work scope.

The proposed Xena-03 drilling and tie-back will be performed using a moored, dynamically positioned (DP) or hybrid (DP/moored) mobile offshore drilling unit (MODU). During the subsea installation campaign, a construction/primary installation vessel will perform installation activities.

The project will be supported by other vessels, such as general support vessels, cargo vessels, anchor handling vessels and multiservice construction vessels during drilling activities. Support vessels will be used to transport equipment and materials between the MODU/installation vessel and port.

Drilling operations for the production well are currently expected to take around 60 days to complete.

Installation of subsea infrastructure and pre-commissioning is anticipated to commence when the relevant new production well has been drilled and is expected to have a cumulative duration of about three weeks. Drilling and installation of subsea infrastructure may be performed over multiple campaigns.

The support and installation vessels will operate on DP and will not anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of drilling and tie-back activities.

Communications with mariners

The location of Pluto is marked on nautical charts and the platform is surrounded by a 500 m radius petroleum safety zone (PSZ). A 4 km radius Operational Area will be applied around the Xena-03 drill centre.

A temporary 500 m safety exclusion zone will apply around the MODU and subsea installation vessel to manage vessel movements.

Commercial fishers and other marine users are permitted to use the Operational Area but should take care when entering and remain clear of the safety exclusion zones. The wells will continue to be marked on navigational charts.

Assessment

Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant persons, considering timing, duration, location and potential impacts arising from the planned activities. Mitigation and management measures will be implemented and are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental and social impacts associated with the proposed activities. Woodside is seeking any interest or comments you may have to inform Woodside's decision making.

Joint Venture

Woodside Burrup Ltd is the Titleholder for this activity on behalf of the Pluto LNG joint venture partners, Tokyo Gas Pluto Pty Ltd and Kansai Electric Power Australia Pty Ltd.

We welcome your feedback by 29 March 2024.

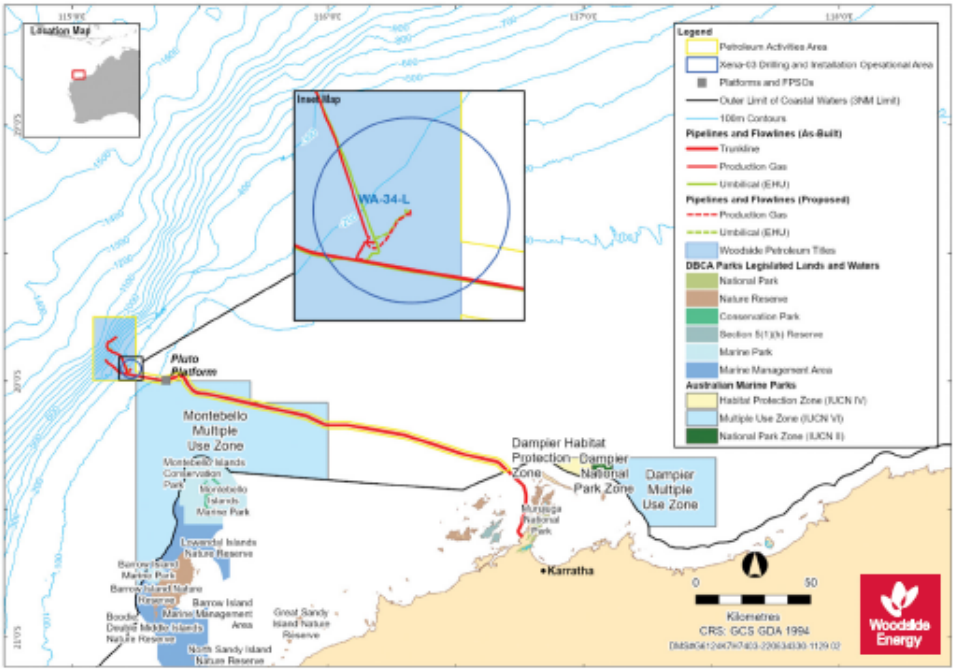

Figure 1. Pluto Facility and Operational Areas.

Table 1. Activity summary

Pluto Operations Facility Environment Plan	
Facility type	• Fixed platform, processing equipment, pipelines
Production License Areas	• WA-1-IL, WA-34-L
Pipeline Licenses	• WA-16-PL, WA-17-PL
Approximate water depth	• ~80–960 m
Activities Summary	Routine Operations: • routine production • routine IMMR of the platform and associated subsea infrastructure including pigging of the flowlines and pipeline • well unloading and clean-up • installation and use of the water handling unit • non-routine and unplanned activities and incidents associated with the above • supporting activities associated with the activities (e.g. vessel operations, helicopter transfers, etc.) Xena-03 Drilling and Tie-back: • drill one new well (Xena-03) in the Xena field • tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform • pre-commissioning and commissioning activities
Infrastructure	• Platform, wells, Xmas trees, umbilicals, spools, jumpers, manifolds, flowlines, riser, chemical supply lines and the export pipeline (see **Table 2** for their approximate location)
Vessels	• MODU type could be Moored, Dynamically Positioned (DP) or hybrid moored/DP (required for Xena-03 drilling activity) • Primary Installation Vessel (required for Xena-03 subsea installation activity) • Vessel for routine IMMR and Xmas tree installation, isolation testing or contingent activities • Support vessels including heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and other general supply/support vessels appropriate to the nature of petroleum activities

Pluto Operations Facility Environment Plan	
Key dates	Routine Operations: • Ongoing
Approximate duration of Xena-03 Drilling and Tie-back	• Drilling: Activities are currently anticipated to take around 60 days to complete • Subsea installation: Activities are currently anticipated to have a cumulative duration of around three weeks (including mobilisation, demobilisation and contingency) • Timing and duration of activities is subject to change due to project schedule requirements, MODU/vessel availability, unforeseen circumstances and weather constraints
Operational Areas and Exclusion zones	The Operational Area for Routine Operations comprises: • The platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform • The export pipeline (PITL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline • Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure Xena-03 Drilling and Tie-Back: • The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities • Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
Distance to nearest town	• ~ 160 km north-west of Dampier
Distance to nearest marine park/ nature reserve	• The Operational Area overlaps the Montebello Australian Marine Park Multiple Use Zone (IUCN category VI)

Table 2. Approximate locations of key infrastructure related to the Pluto Facility Operations Petroleum Activities Program

Structure	Approximate Water Depth (m)	Latitude	Longitude	Petroleum Titles
Existing infrastructure

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

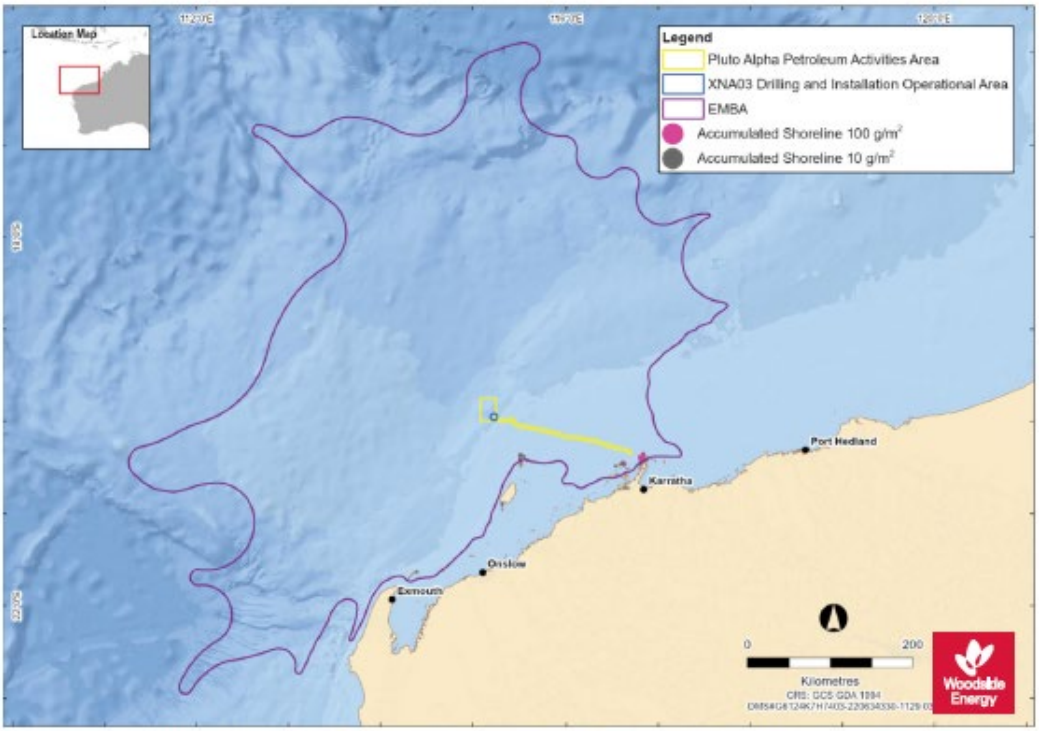

Figure 2: Environment that May Be Affected by the Pluto Facility Operations Petroleum Activities Program including Xena-03 drilling and tie-back

Mitigation and Management Measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the proposed activities considering timing, duration, location. Mitigation and management measures for proposed activities are outlined in **Table 3**. Further details will be provided in the EP.

Table 3. Summary of key risks and/or impacts and management measures associated with Pluto Facility Operations, including Xena-03 drilling and tie-back.

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Planned Activities (Routine and Non-routine)			

Physical Presence: Interaction with Other Marine Users	**Operations**
	Presence of the Pluto facility, subsea infrastructure and routine IMMR activities excluding and/or displacing other users from the Petroleum Safety Zone (PSZ) and Operational Area respectively.
	
	Drilling and Tie-back Activities
	Physical presence of anchor system, mobile offshore drilling unit (MODU), support vessels, anchor handling vessels, installation vessels, and associated safety exclusion zones.
		Operations
		Potential isolated social impact resulting from interaction with other sea users such as:
		• Commercial fisheries
		• Tourism and recreation
		• Commercial vessels/ shipping
		
		Drilling and Tie-back Activities
		Temporary displacement of commercial fishing activities.
			• Implement a 500 m PSZ around the platform.
			• Establish a 500 m safety exclusion zone around MODU and the installation vessel which is communicated to marine users
			• Notifying the Australian Hydrographic Office (AHO) of location of permanent new infrastructure to enable update of maritime charts
			• Continued consultation relating to the Petroleum Activities Program
			• Implement Pluto's collision prevention system to alert marine vessels of the facility location which reduces the likelihood of adverse interaction with other marine users
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			  • Activity support vessel surveillance

Physical Presence: Disturbance to Seabed	**Operations** Presence of Pluto facility and subsea infrastructure modifying marine habitats. Subsea operations, IMMR activities resulting in disturbance to seabed. **Drilling and Tie-back Activities** Disturbance to seabed during drilling operations. Disturbance to seabed during subsea installation.	**Operations** Localised modification of seabed habitat (formation of artificial reef) within Operational Area. Potential minor, localised modification of seabed habitat within the Operational Areas. **Drilling and Tie-back Activities** Loss or damage to benthic habitats and communities.	• Monitoring and maintenance of subsea infrastructure to manage scour and flowline movement within integrity envelope • Monitoring and maintenance of redundant infrastructure in accordance with the IMMR process • Vessels used for IMMR will not anchor under routine operations • Reasonable attempt(s) at removal of wellhead will be undertaken in the event of a re-spud • Positioning technology used to place seabed infrastructure within the design footprint to reduce seabed disturbance • Project-specific Basis of Well Design, which includes an assessment of seabed sensitivity • Wet parked items will be tracked and removed from the seabed • Pre-lay survey undertaken prior to installation of flowlines
Routine Acoustic Emissions: Generation of Noise during Routine Operations	Noise generated from operational activities from: • facility and associated infrastructure • vessels • helicopters • IMMR activities • Positioning equipment	Localised behavioural impacts to marine fauna around vessels and Pluto platform.	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Acoustic Emissions: Generation of Noise during Tie-back Activities	Noise during Tie-back Activities generated from: • drilling, (hybrid MODU and DP) • vessels and helicopters • positioning equipment	Potential impacts to marine mammals, reptiles and fish, varying from behavioural responses to physiological impact (TTS).	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions • Implement adaptive management procedures as required

Routine and Non-Routine Discharges: Discharge of Hydrocarbons and Chemicals	**Operations**
	Discharge of subsea control fluids.
	Potential non-routine hydraulic fluid discharge.
	Discharge of hydrocarbons remaining in subsea pipelines/ flowlines and equipment as a result of subsea intervention works.
	Discharge of chemicals remaining in subsea infrastructure and equipment or the use of chemicals for subsea IMMR activities.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
	Drilling and Tie-back Activities
	Discharge of flexible jumper and flying leads precommissioning fluids to the marine environment.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
		Operations
		Potential slight short-term, localised decrease in water quality at release location during IMMR activities.
		Drilling and Tie-back Activities
		Potential short-term impacts on marine biota.
		Potential slight short-term, localised decrease in water quality at release location during installation activities.
			• Marine discharges managed according to regulatory requirements
			• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Flushing and isolation of subsea infrastructure where practicable during IMMR disconnection activities to reduce releases to the environment
			• Monitoring subsea control fluid use, investigating material discrepancies to identify potential integrity failures
			• Other controls include:
			  • Chemical Selection and Assessment
			  • Development and application of robust procedures

Routine and Non-Routine Discharges: Produced Water (PW)	Discharge of PW during routine and non-routine operations.	Potential minor, short term impact to water quality, marine sediments and marine biota.	• Marine discharges managed according to regulatory requirements • Online monitoring and procedural controls in place for PW discharge • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Woodside internal guidance and procedures are adhered to • Implement adaptive monitoring and management
Routine and Non-Routine Marine Wastewater Discharges: Discharge of Sewage, Putrescible Waste, Grey Water, Bilge Water, Drain Water, Cooling Water and Brine	**Operations** Discharge of sewage, grey water and putrescible waste from the platform and support vessels to the marine environment. Discharge of deck, bilge and drain water from the platform and support vessels to the marine environment. Discharge brine and cooling water from platform and support vessels to the marine environment. **Drilling and Tie-back Activities** Routine offshore discharge from MODU and vessels of sewage, grey water, waste, bilge water and deck drainage.	**Operations** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location. **Drilling and Tie-back Activities** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location.	• Marine discharges managed according to regulatory requirements • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Where there is the potential for loss of primary containment of oil and chemicals on the platform, MODU or vessels, bunding or closed drainage systems are in place to contain spills

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-routine Atmospheric Emissions	**Operations** Operational fuel combustion, flaring and fugitive emissions. Operational emissions associated with energy generation, onshore processing of Pluto gas, third party transportation, regassification and combustion by end users. **Drilling and Tie-back Activities** Contingent venting of gas during drilling (e.g. well kick). Vessel and helicopter emissions.	Potential slight short-term, localised air quality changes, limited to the airshed local to the facility.	• Comply with legislative and regulatory requirements for marine air pollution and emissions reporting • Robust well control procedures to minimise risk of well kick during drilling • Maintain flare to maximise efficiency of combustion
Routine Light Emissions: Light Emissions from the Platform and Project Vessels	**Operations** Light emissions from facility, MODU and support vessels. Light emissions from facility during flaring. **Drilling and Tie-back Activities** Light emissions during drilling including flaring, from support vessels, primary installation vessel as well as subsea vehicles.	Negligible, localised potential for behavioural disturbance of species near Pluto platform and vessels including fish, marine reptiles and seabirds.	• Lighting limited to the minimum required for navigational and safety requirements, except for emergency events • Well unloading acceptance criteria that define the well objectives will be established, minimising light from flaring • Implementation of a Seabird Management Plan

Routine and Non-Routine Discharges: Drill Cuttings, Drilling Fluids and Well Removal Fluids during drilling and tie-back activities	Routine discharge of water-based muds (WBM) drill cuttings to the seabed and the marine environment.
	Non-routine discharge of treated non-water-based muds (NWBM) drill cuttings to the marine environment.
	Non-routine discharge of wash water from mud pits and vessel tank wash fluids during drilling and tie-back.
	Routine discharge of well clean-out fluids during drilling and tie-back.
	Non-routine discharge of well annular fluids during drilling and tie-back.
	Non-routine discharge of WBM and cement cuttings to the marine environment during drilling out of a cement plug.
	Non-routine discharge of grit and flocculant during removal of well infrastructure.
		Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• NWBM base oils selected based on expected toxicity
			• NWBM will be used where written justification process has been followed and bulk NWBM will be retained for disposal onshore or maintained on rig for re-use
			• Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met the fluid will be returned to shore
			• Drill cuttings returned to the MODU will be discharged below the water line to reduce carriage and dispersion to other areas
			• Other controls include:
			  ◦ Restrict overboard discharge of NWBM
			  ◦ Measure oil content in displacement, brine, workover or intervention fluids, pit and tank wash
			  ◦ Permit to Work system
			  ◦ Solid Control Equipment
			  ◦ Woodside Engineering Standard for Rig Equipment

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-Routine Discharges: Cement, Cementing Fluids, Subsea Well Fluids, Unused Bulk Product and Subsea Chemicals during drilling and tie-back activities	Routine discharge of cement and cementing fluids, to the seabed and the marine environment during drilling and tie-back. Routine discharge of subsea well fluids (inc. blow-out preventer (BOP)) and well construction activity control fluids) during drilling and tie-back. Non-routine discharge of unused bulk products during drilling and tie-back.	Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met, fluids will be returned to shore • During well unloading and completion activities, if produced water is not flared, it will be processed through a water treatment package prior to discharge to the environment • Options for use of excess bulk cement, bentonite or barite will be managed and only discharged to the marine environment as a last option
Unplanned Events (Accidents / Incidents) – Routine Operations (i.e. no drilling or subsea installation activities)			
Unplanned Hydrocarbon Release: Loss of Well Containment	Release of hydrocarbons resulting from loss of subsea well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Well operated in compliance with the accepted well operation management plan (WOMP) including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity **Spill response arrangements** • Arrangements supporting the Oil Pollution Emergency Plan (OPEP) will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Pipeline and Riser Loss of Containment	Release of hydrocarbons resulting from loss of export pipeline containment. Release of hydrocarbons resulting from loss of containment of subsea flowlines and infrastructure.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of pipeline and riser containment** • The pipeline, flowline and riser design include a range of measures that specifically aid in minimising the risk of external damage • Maintain well integrity to contain reservoir fluids within the well envelope to avoid an incident • Maintain emergency shutdown (ESD) system and critical external and internal communication systems to facilitate prevention and response to accidents and emergencies **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Loss of Structural Integrity	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of structural integrity** • Maintain structural integrity to ensure availability of critical systems during a major accident or environment event and prevent structural failures from contributing to escalation • Maintain control of ignition sources and passive fire protection to prevent loss of structural integrity • Maintain topsides hydrocarbon-containing infrastructure integrity **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Unplanned Hydrocarbon Release: Loss of Structural Integrity	A loss of marine vessel separation between a vessel and the platform may result in a loss of hydrocarbon containment from the Pluto facility and/or the release of fuel from the vessel.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of marine vessel separation** • Maintaining collision warning systems and navigational aids to alert facility of a potential collision with a vessel, and to alert vessels so that they may avoid collisions with the facility **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Topsides Loss of Containment	Hydrocarbon release from topsides process equipment o the marine environment and atmosphere.	Potential moderate short-term impacts to the marine environment: • Disruption to marine fauna, including protected species and/or impacts to water quality	**Preventing topsides loss of containment** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP are raised for unplanned releases within event reporting system
Unplanned Hydrocarbon Release: Loss of Control of Suspended Load from Platform	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of control of suspended load** • Maintain platform lifting equipment to prevent failure or dropped/swinging loads that could result in an incident
Unplanned Events (Accidents / Incidents) – Drilling and subsea installation			
Unplanned Hydrocarbon Release: Loss of Well Integrity During Drilling Operations	Loss of hydrocarbons to marine environment due to loss of well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Hydrocarbon Release: Vessel Collision	Loss of hydrocarbons to marine environment due to a vessel collision (e.g. project vessels or other marine users).	Potential minor, short-term impact on marine species, habitats and protected areas.	**Preventing vessel collision**
			• Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements
			• Establish temporary safety exclusion zones around vessels which are communicated to marine users to reduce the likelihood of collision
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			Spill response arrangements
			• Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned
			• Emergency response activities would be implemented in line with the OPEP

Unplanned Discharges: Release of Hydrocarbons During Bunkering, Transfer, Storage and Use	Accidental discharge of marine diesel to the marine environment during bunkering, transfer, storage or use on the facility, MODU or vessels.	Potential slight, short-term local impacts to marine species and habitats.	**Preventing unplanned hydrocarbon release due to bunkering** • Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas bunded or secondarily contained when they are not being handled or temporarily moved • Appropriate bunkering equipment kept and maintained • Compliance with Contractor procedures for the management of bunkering/helicopter operations to reduce the likelihood and potential severity of a spill **Spill response arrangements** • Maintain and locate spill kits in proximity to hydrocarbon storage and deck areas for use to contain and recover deck spills • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP • Incident reports are raised for unplanned releases within event reporting system
Unplanned Discharges: Deck and Subsea Spills	Accidental discharge of hydrocarbons/ chemicals from MODU, installation vessel and project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/moved temporarily • Spill kits positioned in high-risk locations around vessels and the MODU (near potential spill points such as transfer stations) • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Installation vessels have self-containing hydraulic oil drip tray management system • Woodside Engineering Standard for Rig Equipment (incl third party equipment such as ROVs) **Spill response arrangements** • First strike plan • Shipboard Oil Pollution Emergency Plan (SOPEP)

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Discharge: Drilling/ Project Fluids	Accidental discharge of project fluids (WBM/NWBM/ base oil) and cement to marine environment due to failure of slip joint packers, bulk transfer hose/fitting, emergency disconnect system or from drilling and installation operations.	Potential slight, short-term local impacts to marine species and habitats.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Marine riser's telescopic joint to be comprised of a minimum of two packers (one hydraulic and one pneumatic) and pressure tested
			• No overboard disposal of bulk NWBM
			• Compliance with Contractor procedures for the transfer and management of drilling fluids to reduce the likelihood and severity of a spill
			• Other controls include:
			  • Oil % content in displacement, brine, workover or intervention fluids, pit and tank wash
			  • PTW system
			  • Solid Control Equipment

Unplanned Discharges: Loss of Hazardous and Non-Hazardous Waste	Incorrect disposal or accidental discharge of non hazardous and hazardous waste to the marine environment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes • Implement Waste Management Plan, which provides for safe handling and transportation, segregation and storage and appropriate classification of waste generated • Solid waste/equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Incident reports are raised for unplanned releases within event reporting system
Physical Presence: Seabed disturbance from dropped objects or loss of station keeping leading to anchor drag	Dropped objects resulting in the disturbance of benthic habitat. Loss of station keeping of the MODU leading to anchor drag and the disturbance of benthic habitat. Dropped objects over live infrastructure. Dropped objects during vessel transfers or installation activities.	Potential slight, short-term local impacts to marine species and habitats.	• MODU/installation vessel inductions include control measures for dropped object prevention • Equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Implement project-specific mooring design, with sufficient capability, testing and inspection
Physical Presence: Interactions with Marine Fauna	Physical presence of project/ support vessels resulting in collision with marine fauna.	Potential injury or death of marine fauna (single animal), including protected species.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring
Physical Presence: Introduction of Invasive Marine Species (IMS)	Invasive species in vessel ballast tanks or on vessels/ submersible equipment.	Potential introduction of IMS possibly resulting in an alteration of the localised environment and potential reduction in native species through predation, competition or interspecies breeding.	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable • Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **29 March 2024** via:

E: Feedback@woodside.com.au

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

http://www.woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

1.2 Summary Information Sheet

Woodside Energy

CONSULTATION

SUMMARY INFORMATION SHEET

Februrary 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

When preparing an environment plan (EP), Woodside needs to notify relevant persons and obtain their input. This helps confirm current measures or identify additional measures that may need to be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. Woodside wants to give relevant persons whose functions, interests or activities may be affected by the proposed activity the opportunity to identify themselves and provide feedback on our proposed activity.

This summary information sheet provides a high-level overview of the Pluto Facility Operations environment plan. Further details, including an assessment of the potential impacts and risks to the environment, as well as mitigation and management measures, are available within the Pluto Facility Operations Environment Plan Consultation Information Sheet (February 2024) which can be found at:

http://www.woodside.com/what-we-do/consultation-activities

Overview

Woodside plans to submit a five-year revision of the Operations EP for the Pluto Facility. Operations commenced in 2012.

The Pluto platform is located in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.

The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

A map showing the location of the activities is provided below.

Work Method

Key features of the Pluto Facilities include:

- A fixed platform with five decks, separated by two major vertical trusses. The platform has a pedestal crane, a flare boom, helideck and accommodation facilities. A water handling module is currently being installed to enable overboard discharge of treated produced water.
- The export pipeline and associated 6-inch chemical supply line, extending from the offshore platform to the onshore LNG Plant.
- Subsea infrastructure connecting wells at the Pluto, Xena and Pyxis reservoirs to the platform via production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers.

Summary of key activities includes:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
- The Xena-03 Drilling and Tie-Back project, which includes:
  - drilling one new well (Xena-03) in the Xena field
  - tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform
  - pre-commissioning and commissioning activities.

During normal operations, vessels will typically be limited to supply/support vessels and IMMR vessels. It is anticipated vessels will operate 24 hours per day for the duration of activities.

The Xena-03 Drilling and Tie-Back project is anticipated to commence with drilling in Q2 2025 and installation in Q3 2025.

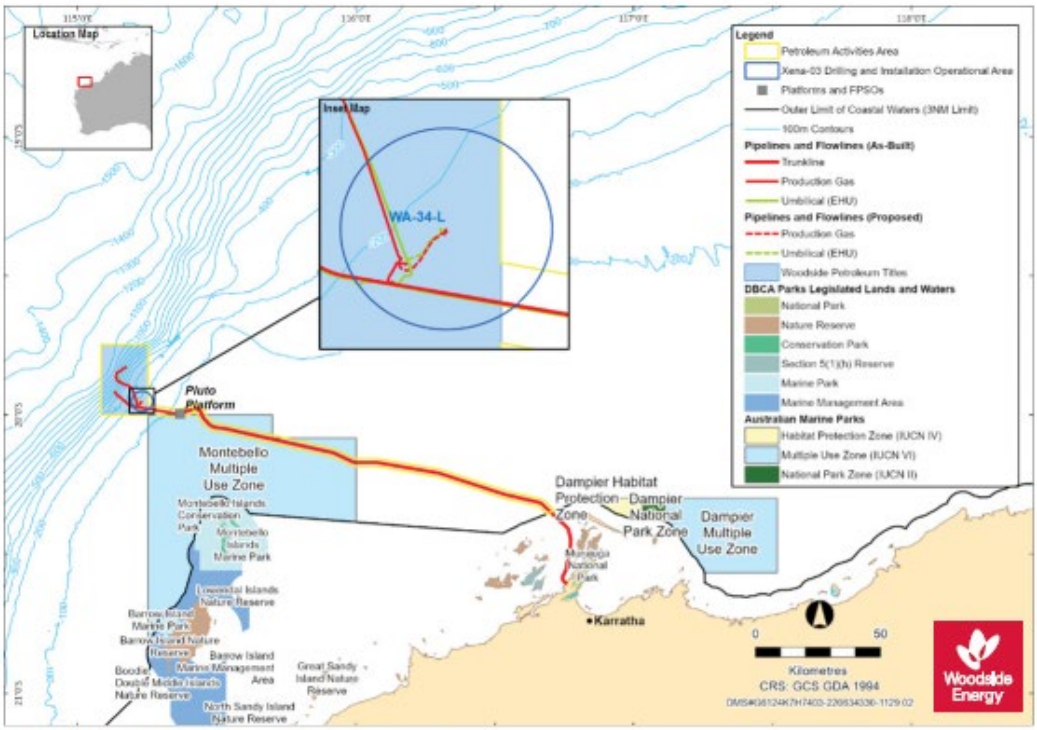

Figure 1 Pluto Facility Operational Area and Drilling Operational Area.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

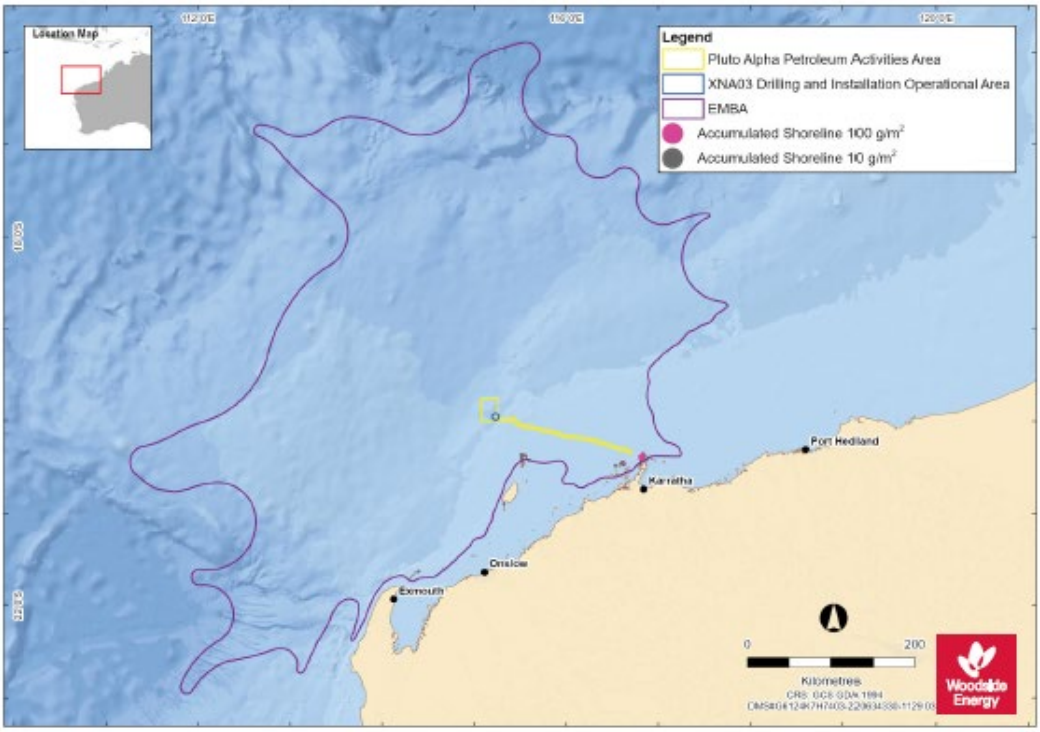

Figure 2. Environment that May Be Affected (EMBA) by the Pluto Facility operations Petroleum Activities Program including Xena-03 drilling and tie-back.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activities, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)* and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

1.3 Updated Consultation Information Sheet

Woodside Energy

CONSULTATION

INFORMATION SHEET

February 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside wants relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside will submit a five-year revision of the Operations EP for the Pluto Facility (Pluto) located in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (regulations). The Operations EP currently covers the operation of a fixed platform (Pluto) and subsea infrastructure connected to the Pluto, Xena and Pyxis reservoirs. The Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Location and Operations

The Pluto platform and associated subsea infrastructure is located in Production Licenses WA-1-IL and WA-34-L. The export pipeline and flowline are within Pipeline Licenses WA-17-PL and WA 16 PL, respectively (see **Figure 1**).

The Xena-03 well is located in Production Licence WA 34 L, around 15km from the Pluto Platform and around 190km west north-west of Dampier. The Xena-03 well will be located around 2 km from the existing Xena-02 well and tied back to the existing Pluto production systems.

The Pluto facility commenced production in 2012. The facility produces wet gas and condensate, which is transported for processing at the onshore Pluto LNG Plant via a 180km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from a fixed operator console at the Pluto onshore Central Control Room (CCR), which is constantly manned.

Installation of a water handling module on the platform is underway to enable the processing and discharge of produced water at the platform. Wet gas will be processed through the water handling module and transported onshore, with treated water discharged overboard.

Table 1 summarises the activities, which will be managed under the Operations EP.

Proposed Activity Overview – Production / Operations

The production scope includes the following activities to be undertaken during the next five-year period:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) activities
- Commissioning and operation of the water handling module
- Non-routine and unplanned activities and incidents associated with the above.

Future decommissioning of infrastructure will be subject to separate future EPs.

Production

Production commenced from the Pluto facility in 2012 and is currently expected to continue until at least 2031. Production is planned to commence from the Xena-03 well around Q3 2025.

Inspection

Inspection of infrastructure is the process of physical verification and assessment of subsea components to detect changes compared to its installed state. Typical site inspection activities include visual surveys via a remotely operated vehicle, side scan sonar surveillance, cathodic protection measurements and ultrasonic pipe condition checks.

Monitoring

Monitoring is the surveillance of the physical and chemical environment around subsea infrastructure. Monitoring activities may include process composition, corrosion probes, corrosion mitigation checks, and metocean and geological monitoring.

Maintenance

Maintenance of infrastructure is required at regular and/or planned intervals to maintain performance reliability and prevent deterioration or failure of equipment. Maintenance activities may include cycling of valves and leak pressure testing.

Repair

Repair activities are those required when a subsea system or component is degraded or damaged as defined by design codes.

Vessels

Operations support vessels will be used to undertake IMMR of subsea infrastructure. The vessel size and type will be dependent on the work scope. The vessels will not anchor during IMMR activities unless there is an unexpected event or an emergency. An Accommodation Support Vessel (ASV) may be required for short periods (typically less than 1 month) to support planned maintenance campaigns, shutdown maintenance or major projects.

Proposed Activity Overview – Drilling and Tie-Back

The scope for this EP includes drilling, completion, subsea installation (including minor changes to existing infrastructure) along with commissioning activities to bring in gas from the Xena-03 well to the Pluto platform. This includes directly installing infrastructure from the installation vessel in the relevant location.

Other contingent activities that Woodside may need to perform include well abandonment, re-spud, side-track, well suspension, well intervention, wireline logging, leaving wellhead assembly in situ, sediment mobilisation and relocation, venting, well test/unload and emergency disconnect sequence.

Drilling, subsea installation and commissioning activities

Woodside plans to drill one new well in the Xena field (Xena-03) and to install an associated wellhead and Xmas tree. Xena-03 will be connected to the existing Pyxis Hub subsea infrastructure. The well will be located at approximately 177 m water depth. Other activities include:

- Pre-commissioning and cold-commissioning (non-hydrocarbon) activities associated with subsea infrastructure including leak testing of the flexibles, subsea control systems verification and function-testing of valves to verify the production system and electric and hydraulic flying leads are ready for entry into the commissioning phase; and
- Well start-up and commissioning (initial start-up) of the Xena 03 well involving slow and gradual build up to maximum well gas production rates and then well performance testing such as Multi-Rate Testing, simulated emergency shut down (ESD) of the well followed by Pressure Build-Up Testing.

Drilling activities are currently anticipated to commence around Q2 2025, subsea installation and commissioning activities are currently anticipated around Q3 2025.

The timing and duration of the proposed activities is subject to approvals, project schedule requirements, vessel availability, weather or unforeseen circumstances.

Project vessels

Activities will be completed using a range of vessels. Operations will use support vessels to undertake inspection, monitor, maintenance and repair of subsea infrastructure. The vessel size and type will be dependent on the work scope.

The proposed Xena-03 drilling and tie-back will be performed using a moored, dynamically positioned (DP) or hybrid (DP/moored) mobile offshore drilling unit (MODU). During the subsea installation campaign, a construction/primary installation vessel will perform installation activities.

The project will be supported by other vessels, such as general support vessels, cargo vessels, anchor handling vessels and multiservice construction vessels during drilling activities. Support vessels will be used to transport equipment and materials between the MODU/installation vessel and port.

Drilling operations for the production well are currently expected to take around 60 days to complete.

Installation of subsea infrastructure and pre-commissioning is anticipated to commence when the relevant new production well has been drilled and is expected to have a cumulative duration of about three weeks. Drilling and installation of subsea infrastructure may be performed over multiple campaigns.

The support and installation vessels will operate on DP and will not anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of drilling and tie-back activities.

Communications with mariners

The location of Pluto is marked on nautical charts and the platform is surrounded by a 500 m radius petroleum safety zone (PSZ). A 4 km radius Operational Area will be applied around the Xena-03 drill centre.

A temporary 500 m safety exclusion zone will apply around the MODU and subsea installation vessel to manage vessel movements.

Commercial fishers and other marine users are permitted to use the Operational Area but should take care when entering and remain clear of the safety exclusion zones. The wells will continue to be marked on navigational charts.

Assessment

Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant persons, considering timing, duration, location and potential impacts arising from the planned activities. Mitigation and management measures will be implemented and are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental and social impacts associated with the proposed activities. Woodside is seeking any interest or comments you may have to inform Woodside's decision making.

Joint Venture

Woodside Burrup Ltd is the Titleholder for this activity on behalf of the Pluto LNG joint venture partners, Tokyo Gas Pluto Pty Ltd and Kansai Electric Power Australia Pty Ltd.

We welcome your feedback by 29 March 2024.

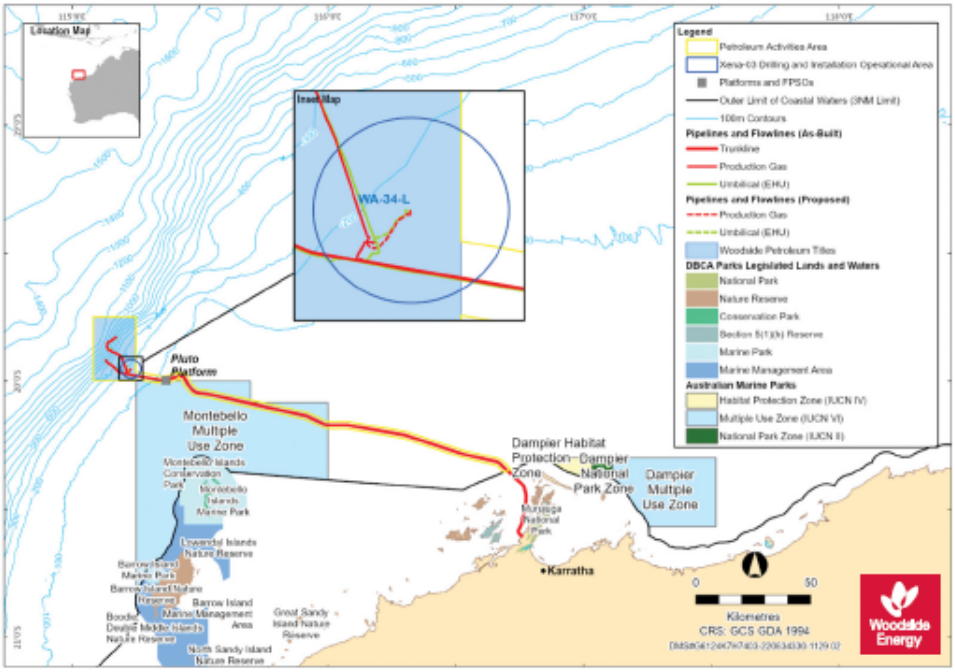

Figure 1. Pluto Facility and Operational Areas.

Table 1. Activity summary

Pluto Operations Facility Environment Plan	
Facility type	• Fixed platform, processing equipment, pipelines
Production License Areas	• WA-1-IL, WA-34-L
Pipeline Licenses	• WA-16-PL, WA-17-PL
Approximate water depth	• ~80–960 m
Activities Summary	Routine Operations: • routine production • routine IMMR of the platform and associated subsea infrastructure including pigging of the flowlines and pipeline • well unloading and clean-up • installation and use of the water handling unit • non-routine and unplanned activities and incidents associated with the above • supporting activities associated with the activities (e.g. vessel operations, helicopter transfers, etc.) Xena-03 Drilling and Tie-back: • drill one new well (Xena-03) in the Xena field • tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform • pre-commissioning and commissioning activities
Infrastructure	• Platform, wells, Xmas trees, umbilicals, spools, jumpers, manifolds, flowlines, riser, chemical supply lines and the export pipeline (see **Table 2** for their approximate location)
Vessels	• MODU type could be Moored, Dynamically Positioned (DP) or hybrid moored/DP (required for Xena-03 drilling activity) • Primary Installation Vessel (required for Xena-03 subsea installation activity) • Vessel for routine IMMR and Xmas tree installation, isolation testing or contingent activities • Support vessels including heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and other general supply/support vessels appropriate to the nature of petroleum activities

Pluto Operations Facility Environment Plan	
Key dates	Routine Operations: • Ongoing
Approximate duration of Xena-03 Drilling and Tie-back	• Drilling: Activities are currently anticipated to take around 60 days to complete • Subsea installation: Activities are currently anticipated to have a cumulative duration of around three weeks (including mobilisation, demobilisation and contingency) • Timing and duration of activities is subject to change due to project schedule requirements, MODU/vessel availability, unforeseen circumstances and weather constraints
Operational Areas and Exclusion zones	The Operational Area for Routine Operations comprises: • The platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform • The export pipeline (PITL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline • Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure Xena-03 Drilling and Tie-Back: • The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities • Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
Distance to nearest town	• ~ 160 km north-west of Dampier
Distance to nearest marine park/ nature reserve	• The Operational Area overlaps the Montebello Australian Marine Park Multiple Use Zone (IUCN category VI)

Table 2. Approximate locations of key infrastructure related to the Pluto Facility Operations Petroleum Activities Program

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

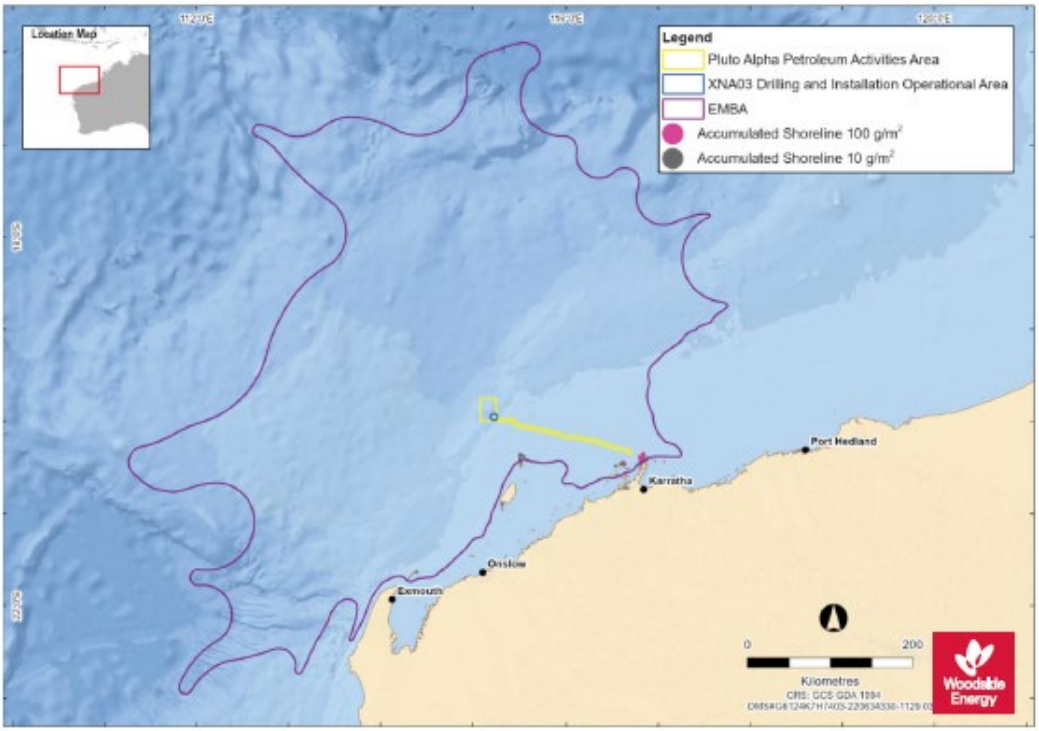

Figure 2: Environment that May Be Affected by the Pluto Facility Operations Petroleum Activities Program including Xena-03 drilling and tie-back

Mitigation and Management Measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the proposed activities considering timing, duration, location. Mitigation and management measures for proposed activities are outlined in **Table 3**. Further details will be provided in the EP.

Table 3. Summary of key risks and/or impacts and management measures associated with Pluto Facility Operations, including Xena-03 drilling and tie-back.

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Planned Activities (Routine and Non-routine)			

Physical Presence: Interaction with Other Marine Users	**Operations**
	Presence of the Pluto facility, subsea infrastructure and routine IMMR activities excluding and/or displacing other users from the Petroleum Safety Zone (PSZ) and Operational Area respectively.
	
	Drilling and Tie-back Activities
	Physical presence of anchor system, mobile offshore drilling unit (MODU), support vessels, anchor handling vessels, installation vessels, and associated safety exclusion zones.
		Operations
		Potential isolated social impact resulting from interaction with other sea users such as:
		• Commercial fisheries
		• Tourism and recreation
		• Commercial vessels/ shipping
		
		Drilling and Tie-back Activities
		Temporary displacement of commercial fishing activities.
			• Implement a 500 m PSZ around the platform.
			• Establish a 500 m safety exclusion zone around MODU and the installation vessel which is communicated to marine users
			• Notifying the Australian Hydrographic Office (AHO) of location of permanent new infrastructure to enable update of maritime charts
			• Continued consultation relating to the Petroleum Activities Program
			• Implement Pluto's collision prevention system to alert marine vessels of the facility location which reduces the likelihood of adverse interaction with other marine users
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			  • Activity support vessel surveillance

Physical Presence: Disturbance to Seabed	**Operations** Presence of Pluto facility and subsea infrastructure modifying marine habitats. Subsea operations, IMMR activities resulting in disturbance to seabed. **Drilling and Tie-back Activities** Disturbance to seabed during drilling operations. Disturbance to seabed during subsea installation.	**Operations** Localised modification of seabed habitat (formation of artificial reef) within Operational Area. Potential minor, localised modification of seabed habitat within the Operational Areas. **Drilling and Tie-back Activities** Loss or damage to benthic habitats and communities.	• Monitoring and maintenance of subsea infrastructure to manage scour and flowline movement within integrity envelope • Monitoring and maintenance of redundant infrastructure in accordance with the IMMR process • Vessels used for IMMR will not anchor under routine operations • Reasonable attempt(s) at removal of wellhead will be undertaken in the event of a re-spud • Positioning technology used to place seabed infrastructure within the design footprint to reduce seabed disturbance • Project-specific Basis of Well Design, which includes an assessment of seabed sensitivity • Wet parked items will be tracked and removed from the seabed • Pre-lay survey undertaken prior to installation of flowlines
Routine Acoustic Emissions: Generation of Noise during Routine Operations	Noise generated from operational activities from: • facility and associated infrastructure • vessels • helicopters • IMMR activities • Positioning equipment	Localised behavioural impacts to marine fauna around vessels and Pluto platform.	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Acoustic Emissions: Generation of Noise during Tie-back Activities	Noise during Tie-back Activities generated from: • drilling, (hybrid MODU and DP) • vessels and helicopters • positioning equipment	Potential impacts to marine mammals, reptiles and fish, varying from behavioural responses to physiological impact (TTS).	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions • Implement adaptive management procedures as required

Routine and Non-Routine Discharges: Discharge of Hydrocarbons and Chemicals	**Operations**
	Discharge of subsea control fluids.
	Potential non-routine hydraulic fluid discharge.
	Discharge of hydrocarbons remaining in subsea pipelines/ flowlines and equipment as a result of subsea intervention works.
	Discharge of chemicals remaining in subsea infrastructure and equipment or the use of chemicals for subsea IMMR activities.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
	Drilling and Tie-back Activities
	Discharge of flexible jumper and flying leads precommissioning fluids to the marine environment.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
		Operations
		Potential slight short-term, localised decrease in water quality at release location during IMMR activities.
		Drilling and Tie-back Activities
		Potential short-term impacts on marine biota.
		Potential slight short-term, localised decrease in water quality at release location during installation activities.
			• Marine discharges managed according to regulatory requirements
			• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Flushing and isolation of subsea infrastructure where practicable during IMMR disconnection activities to reduce releases to the environment
			• Monitoring subsea control fluid use, investigating material discrepancies to identify potential integrity failures
			• Other controls include:
			  • Chemical Selection and Assessment
			  • Development and application of robust procedures

Routine and Non-Routine Discharges: Produced Water (PW)	Discharge of PW during routine and non-routine operations.	Potential minor, short term impact to water quality, marine sediments and marine biota.	• Marine discharges managed according to regulatory requirements • Online monitoring and procedural controls in place for PW discharge • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Woodside internal guidance and procedures are adhered to • Implement adaptive monitoring and management
Routine and Non-Routine Marine Wastewater Discharges: Discharge of Sewage, Putrescible Waste, Grey Water, Bilge Water, Drain Water, Cooling Water and Brine	**Operations** Discharge of sewage, grey water and putrescible waste from the platform and support vessels to the marine environment. Discharge of deck, bilge and drain water from the platform and support vessels to the marine environment. Discharge brine and cooling water from platform and support vessels to the marine environment. **Drilling and Tie-back Activities** Routine offshore discharge from MODU and vessels of sewage, grey water, waste, bilge water and deck drainage.	**Operations** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location. **Drilling and Tie-back Activities** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location.	• Marine discharges managed according to regulatory requirements • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Where there is the potential for loss of primary containment of oil and chemicals on the platform, MODU or vessels, bunding or closed drainage systems are in place to contain spills

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-routine Atmospheric Emissions	**Operations** Operational fuel combustion, flaring and fugitive emissions. Operational emissions associated with energy generation, onshore processing of Pluto gas, third party transportation, regassification and combustion by end users. **Drilling and Tie-back Activities** Contingent venting of gas during drilling (e.g. well kick). Vessel and helicopter emissions.	Potential slight short-term, localised air quality changes, limited to the airshed local to the facility.	• Comply with legislative and regulatory requirements for marine air pollution and emissions reporting • Robust well control procedures to minimise risk of well kick during drilling • Maintain flare to maximise efficiency of combustion
Routine Light Emissions: Light Emissions from the Platform and Project Vessels	**Operations** Light emissions from facility, MODU and support vessels. Light emissions from facility during flaring. **Drilling and Tie-back Activities** Light emissions during drilling including flaring, from support vessels, primary installation vessel as well as subsea vehicles.	Negligible, localised potential for behavioural disturbance of species near Pluto platform and vessels including fish, marine reptiles and seabirds.	• Lighting limited to the minimum required for navigational and safety requirements, except for emergency events • Well unloading acceptance criteria that define the well objectives will be established, minimising light from flaring • Implementation of a Seabird Management Plan

Routine and Non-Routine Discharges: Drill Cuttings, Drilling Fluids and Well Removal Fluids during drilling and tie-back activities	Routine discharge of water-based muds (WBM) drill cuttings to the seabed and the marine environment.
	Non-routine discharge of treated non-water-based muds (NWBM) drill cuttings to the marine environment.
	Non-routine discharge of wash water from mud pits and vessel tank wash fluids during drilling and tie-back.
	Routine discharge of well clean-out fluids during drilling and tie-back.
	Non-routine discharge of well annular fluids during drilling and tie-back.
	Non-routine discharge of WBM and cement cuttings to the marine environment during drilling out of a cement plug.
	Non-routine discharge of grit and flocculant during removal of well infrastructure.
		Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• NWBM base oils selected based on expected toxicity
			• NWBM will be used where written justification process has been followed and bulk NWBM will be retained for disposal onshore or maintained on rig for re-use
			• Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met the fluid will be returned to shore
			• Drill cuttings returned to the MODU will be discharged below the water line to reduce carriage and dispersion to other areas
			• Other controls include:
			  ◦ Restrict overboard discharge of NWBM
			  ◦ Measure oil content in displacement, brine, workover or intervention fluids, pit and tank wash
			  ◦ Permit to Work system
			  ◦ Solid Control Equipment
			  ◦ Woodside Engineering Standard for Rig Equipment

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-Routine Discharges: Cement, Cementing Fluids, Subsea Well Fluids, Unused Bulk Product and Subsea Chemicals during drilling and tie-back activities	Routine discharge of cement and cementing fluids, to the seabed and the marine environment during drilling and tie-back. Routine discharge of subsea well fluids (inc. blow-out preventer (BOP)) and well construction activity control fluids) during drilling and tie-back. Non-routine discharge of unused bulk products during drilling and tie-back.	Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met, fluids will be returned to shore • During well unloading and completion activities, if produced water is not flared, it will be processed through a water treatment package prior to discharge to the environment • Options for use of excess bulk cement, bentonite or barite will be managed and only discharged to the marine environment as a last option
Unplanned Events (Accidents / Incidents) – Routine Operations (i.e. no drilling or subsea installation activities)			
Unplanned Hydrocarbon Release: Loss of Well Containment	Release of hydrocarbons resulting from loss of subsea well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Well operated in compliance with the accepted well operation management plan (WOMP) including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity **Spill response arrangements** • Arrangements supporting the Oil Pollution Emergency Plan (OPEP) will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Pipeline and Riser Loss of Containment	Release of hydrocarbons resulting from loss of export pipeline containment. Release of hydrocarbons resulting from loss of containment of subsea flowlines and infrastructure.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of pipeline and riser containment** • The pipeline, flowline and riser design include a range of measures that specifically aid in minimising the risk of external damage • Maintain well integrity to contain reservoir fluids within the well envelope to avoid an incident • Maintain emergency shutdown (ESD) system and critical external and internal communication systems to facilitate prevention and response to accidents and emergencies **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Loss of Structural Integrity	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of structural integrity** • Maintain structural integrity to ensure availability of critical systems during a major accident or environment event and prevent structural failures from contributing to escalation • Maintain control of ignition sources and passive fire protection to prevent loss of structural integrity • Maintain topsides hydrocarbon-containing infrastructure integrity **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Unplanned Hydrocarbon Release: Loss of Structural Integrity	A loss of marine vessel separation between a vessel and the platform may result in a loss of hydrocarbon containment from the Pluto facility and/or the release of fuel from the vessel.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of marine vessel separation** • Maintaining collision warning systems and navigational aids to alert facility of a potential collision with a vessel, and to alert vessels so that they may avoid collisions with the facility **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Topsides Loss of Containment	Hydrocarbon release from topsides process equipment o the marine environment and atmosphere.	Potential moderate short-term impacts to the marine environment: • Disruption to marine fauna, including protected species and/or impacts to water quality	**Preventing topsides loss of containment** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP are raised for unplanned releases within event reporting system
Unplanned Hydrocarbon Release: Loss of Control of Suspended Load from Platform	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of control of suspended load** • Maintain platform lifting equipment to prevent failure or dropped/swinging loads that could result in an incident
Unplanned Events (Accidents / Incidents) – Drilling and subsea installation			
Unplanned Hydrocarbon Release: Loss of Well Integrity During Drilling Operations	Loss of hydrocarbons to marine environment due to loss of well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Hydrocarbon Release: Vessel Collision	Loss of hydrocarbons to marine environment due to a vessel collision (e.g. project vessels or other marine users).	Potential minor, short-term impact on marine species, habitats and protected areas.	**Preventing vessel collision**
			• Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements
			• Establish temporary safety exclusion zones around vessels which are communicated to marine users to reduce the likelihood of collision
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			Spill response arrangements
			• Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned
			• Emergency response activities would be implemented in line with the OPEP

Unplanned Discharges: Release of Hydrocarbons During Bunkering, Transfer, Storage and Use	Accidental discharge of marine diesel to the marine environment during bunkering, transfer, storage or use on the facility, MODU or vessels.	Potential slight, short-term local impacts to marine species and habitats.	**Preventing unplanned hydrocarbon release due to bunkering** • Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas bunded or secondarily contained when they are not being handled or temporarily moved • Appropriate bunkering equipment kept and maintained • Compliance with Contractor procedures for the management of bunkering/helicopter operations to reduce the likelihood and potential severity of a spill **Spill response arrangements** • Maintain and locate spill kits in proximity to hydrocarbon storage and deck areas for use to contain and recover deck spills • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP • Incident reports are raised for unplanned releases within event reporting system
Unplanned Discharges: Deck and Subsea Spills	Accidental discharge of hydrocarbons/ chemicals from MODU, installation vessel and project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/moved temporarily • Spill kits positioned in high-risk locations around vessels and the MODU (near potential spill points such as transfer stations) • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Installation vessels have self-containing hydraulic oil drip tray management system • Woodside Engineering Standard for Rig Equipment (incl third party equipment such as ROVs) **Spill response arrangements** • First strike plan • Shipboard Oil Pollution Emergency Plan (SOPEP)

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Discharge: Drilling/ Project Fluids	Accidental discharge of project fluids (WBM/NWBM/ base oil) and cement to marine environment due to failure of slip joint packers, bulk transfer hose/fitting, emergency disconnect system or from drilling and installation operations.	Potential slight, short-term local impacts to marine species and habitats.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Marine riser's telescopic joint to be comprised of a minimum of two packers (one hydraulic and one pneumatic) and pressure tested
			• No overboard disposal of bulk NWBM
			• Compliance with Contractor procedures for the transfer and management of drilling fluids to reduce the likelihood and severity of a spill
			• Other controls include:
			  • Oil % content in displacement, brine, workover or intervention fluids, pit and tank wash
			  • PTW system
			  • Solid Control Equipment

Unplanned Discharges: Loss of Hazardous and Non-Hazardous Waste	Incorrect disposal or accidental discharge of non hazardous and hazardous waste to the marine environment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes • Implement Waste Management Plan, which provides for safe handling and transportation, segregation and storage and appropriate classification of waste generated • Solid waste/equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Incident reports are raised for unplanned releases within event reporting system
Physical Presence: Seabed disturbance from dropped objects or loss of station keeping leading to anchor drag	Dropped objects resulting in the disturbance of benthic habitat. Loss of station keeping of the MODU leading to anchor drag and the disturbance of benthic habitat. Dropped objects over live infrastructure. Dropped objects during vessel transfers or installation activities.	Potential slight, short-term local impacts to marine species and habitats.	• MODU/installation vessel inductions include control measures for dropped object prevention • Equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Implement project-specific mooring design, with sufficient capability, testing and inspection
Physical Presence: Interactions with Marine Fauna	Physical presence of project/ support vessels resulting in collision with marine fauna.	Potential injury or death of marine fauna (single animal), including protected species.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring
Physical Presence: Introduction of Invasive Marine Species (IMS)	Invasive species in vessel ballast tanks or on vessels/ submersible equipment.	Potential introduction of IMS possibly resulting in an alteration of the localised environment and potential reduction in native species through predation, competition or interspecies breeding.	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable • Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **29 March 2024** via:

E: Feedback@woodside.com.au

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

http://www.woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

Woodside Energy

2. INITIAL CONSULTATION

2.1 Email sent to Australian Border Force (ABF), Australian Maritime Safety Authority (AMSA) Marine Pollution, Pilbara Ports Authority (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems

Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.2 Email sent to Australian Communications and Media Authority (ACMA) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. Also attached is a map of the submarine communications cables in the operational area. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	Pluto Facility Operations Environment Plan

Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: x. Xena tie-in x. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback

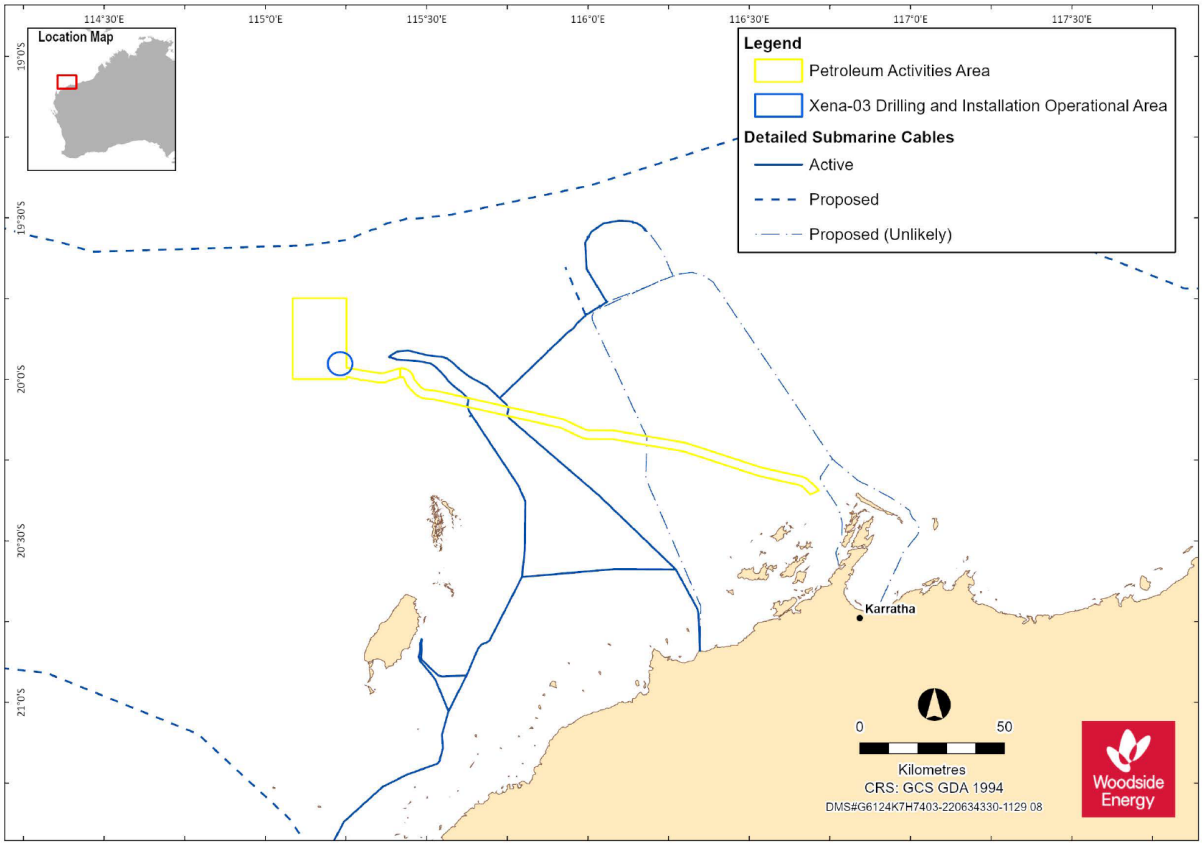
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.2.1 Submarine Communications Cables



2.3 Email sent to Australian Fisheries Management Authority (AFMA), Department of Primary Industries and Regional Development (DPIRD) (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

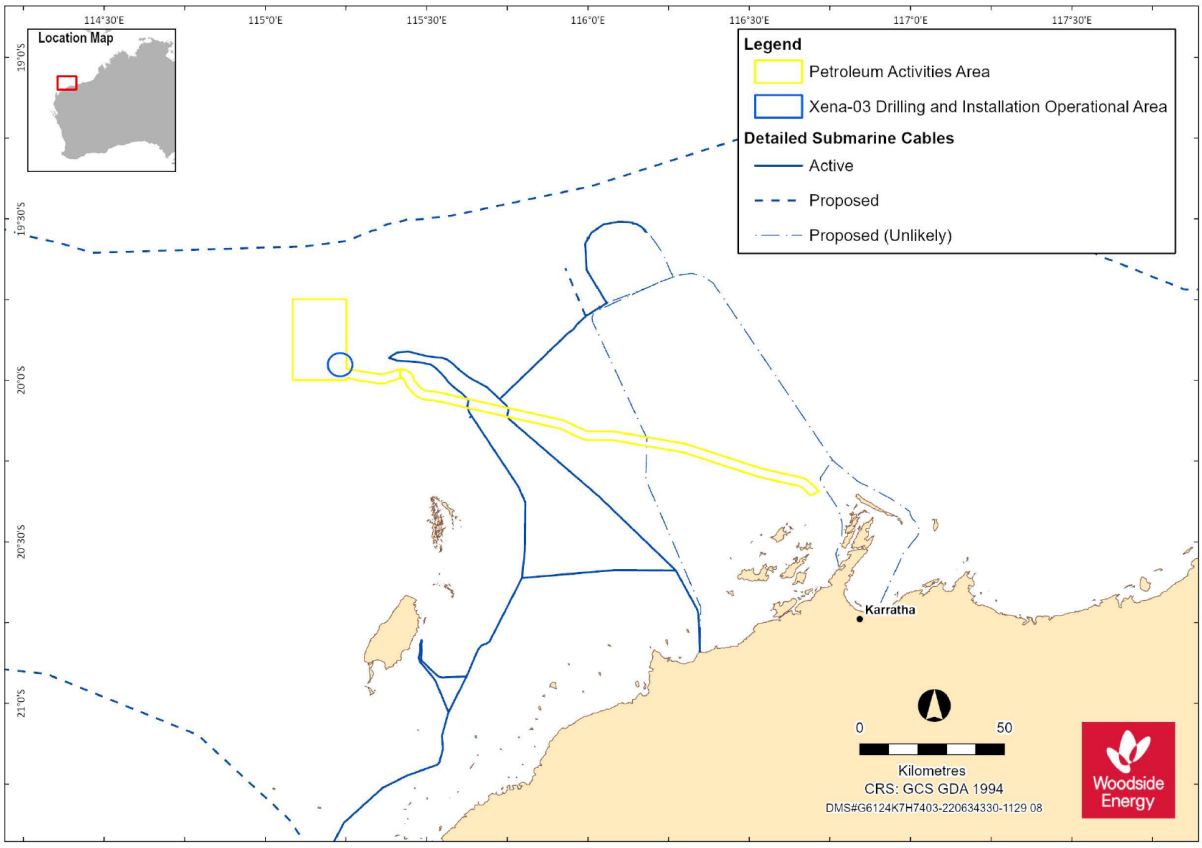
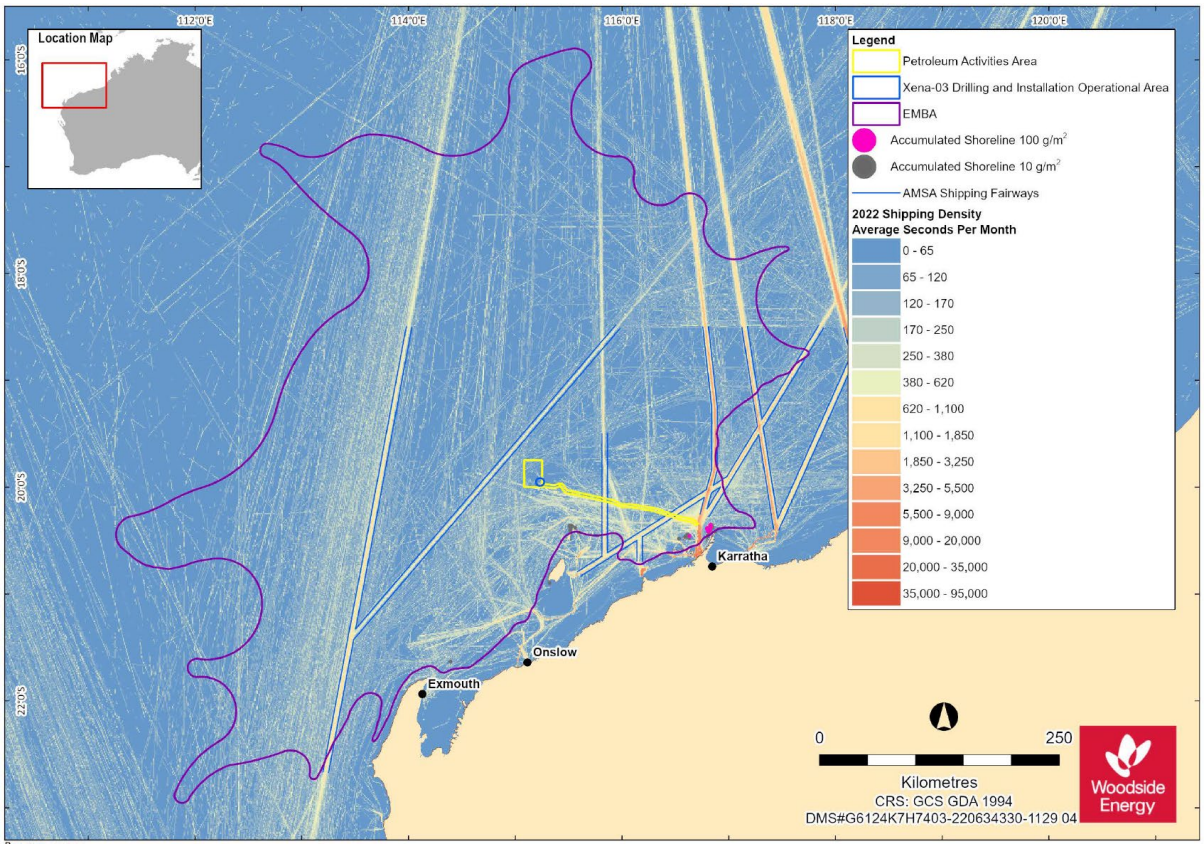
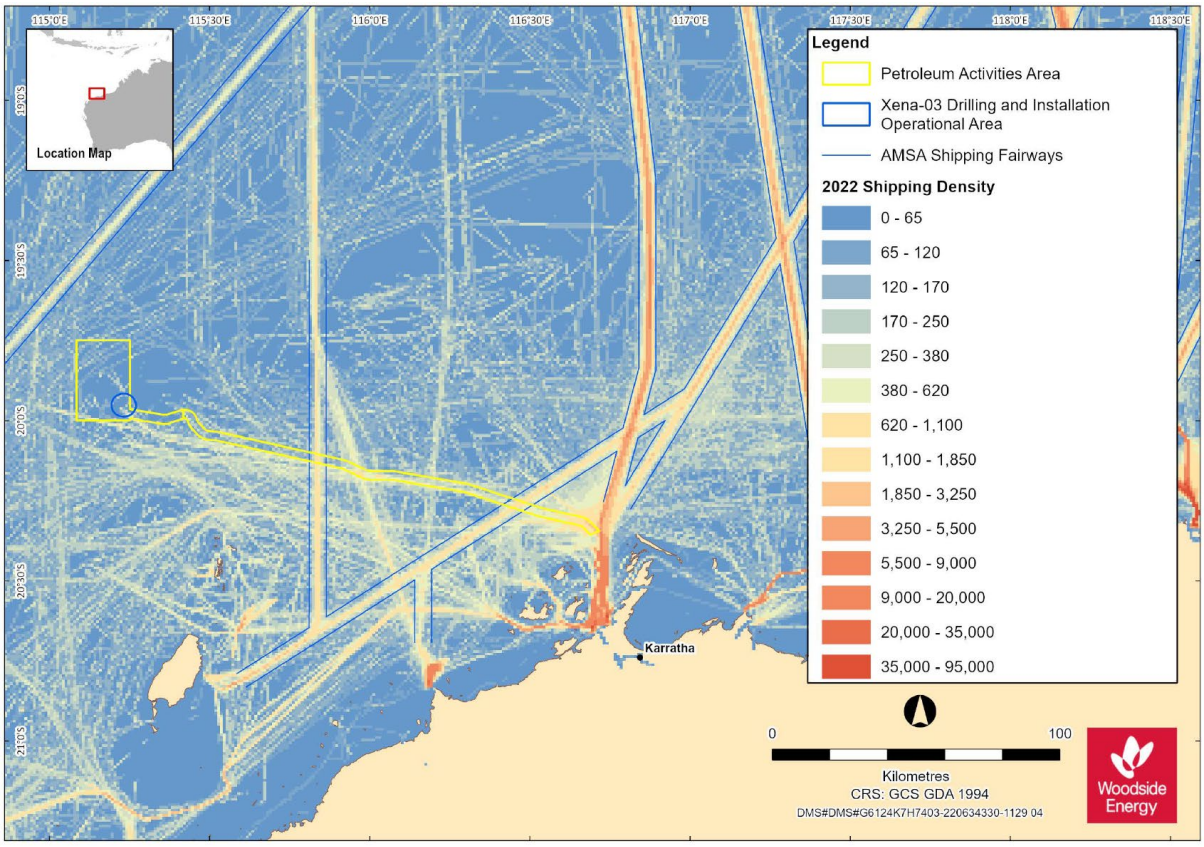
2.4.1 Submarine Communications Cables



2.4.2 Shipping Lanes





2.5 Email sent to Department of Agriculture, Fisheries and Forestry (DAFF) Fisheries and Biosecurity (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Area described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Biosecurity

With respect to biosecurity matters, please note the following information below:

Environment description:	
The operational areas for Pluto routine operations and Xena-03 drilling and tie-back are located in water depths of approximately 80-960 m within the North-West Marine Region (NWMR). Within the NWMR, the Pluto export pipeline lies within the North West Shelf Province, while the platform and subsea infrastructure lie across the boundary of the North West Shelf Province and the deeper waters of the Northwest Province.	
Potential biosecurity risk	***Biosecurity risk mitigation and/or management***
Accidental introduction and establishment of non-indigenous species	All vessels will manage their ballast water in compliance with Australian Ballast Water Management Requirements under the *Biosecurity Act 2015*) to prevent the introduction of IMS. Internationally sourced project vessels will manage their biosecurity risk associated with biofouling in compliance with Australian Biofouling Management Requirements. Woodside's IMS risk assessment process will be applied to MODU, project vessels and relevant immersible equipment undertaking the Petroleum Activities Program. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced. Woodside recognises the requirement to manage biosecurity risk to domestic conveyances, the requirements under the Biosecurity

Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.

Woodside notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".

Woodside works closely with our suppliers and contractors to address the risks and assure awareness of the obligations outlined above.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.6 Email sent to Department of Defence (DoD) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. Also attached is a map of the defence zones. You can also subscribe to receive updates on our consultation activities by subscribing here.

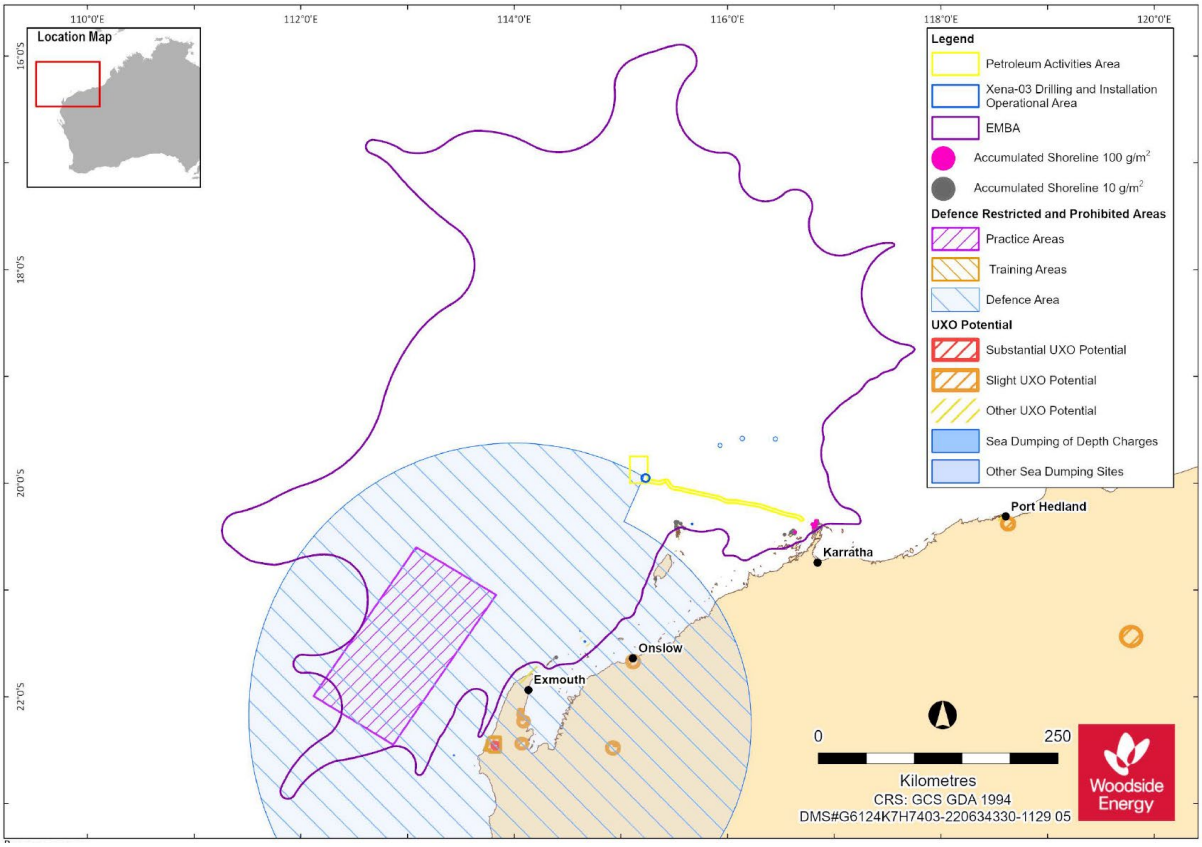
2.6.1 Defence Zones



2.7 Email sent to Department of Transport (DoT) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could

potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

If there is a risk of a spill impacting State waters, Woodside will further consult the Department of Transport as outlined in the Department of Transport Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements (July 2020).

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

2.8 Email sent to Department of Planning, Lands and Heritage (DPLH) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Given the proximity of the proposed activities with Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for this EP. Woodside is also consulting with the Western Australian Museum and provided relevant shipwreck information for this EP.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m

Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: k. Xena tie-in l. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.9 Email sent to Western Australian Museum (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

As per the Underwater Cultural Heritage Act 2018 (Cwth), Woodside will contact the Commonwealth regulator – the Department of Climate Change, Energy, the Environment and Water (DCCEEW) regarding this EP.

Woodside also refers to the Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance document regarding assessments and the draft Guidelines for Working in Near and Offshore Environment to Protect Underwater Cultural Heritage.

Any additional identification for non-Aboriginal UCH within the project areas will be done during EP development if not previously completed within the project areas during ongoing operations.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. Also attached is a list of shipwrecks in State waters within the EMBA. You can also subscribe to receive updates on our consultation activities by subscribing here.

2.10 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. Also attached is a list of shipwrecks in Commonwealth waters within the EMBA. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.11 Email sent to Director of National Parks (DNP) (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Australian Marine Parks

We note Australian Government Guidance on consultation activities and confirm that:

- A small portion of the facility Operational Area overlaps the Montebello AMP, and
- The export pipeline Operational Area is 13 km east of the Dampier AMP.
- We have assessed potential impacts to AMPs in the development of the proposed EP revisions and believe that planned activities have no potential to impact the values of the Marine Parks.
- For this EP, the worst-case credible spill scenario is a hydrocarbon release from a loss of well control, or a vessel collision, releasing crude oil to the environment. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb dissolved and 100 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
  - Montebello AMP
  - Dampier AMP
  - Argo-Rowley Terrace AMP
  - Gascoyne AMP
  - Ningaloo AMP
- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact on the values of any Marine Park.

Woodside is aware of and will consider the 'Petroleum Activities and Australian Marine Parks' guidance note developed and published jointly by DNP and NOPSEMA, while preparing this EP to ensure that the EP:

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP),
- Clearly demonstrates that the activities will not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park Woodside will notify DNP.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations whom are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.12 Email sent to Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025

Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.14 Email sent to North West Slope Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA),

Australian Southern Bluefin Tuna Industry Association (ASBTIA), Tuna Australia (26 and 27 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could

potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.15 Email sent to Western Australian Fishing Industry Council (WAFIC) (28 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

www.woodside.com

Dear Stakeholder

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones
Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can also choose to receive updates on our consultation activities by subscribing on our website woodside.com.

2.17 Email sent to Gascoyne Recreational Marine Users, Recfishwest, Marine Tourism WA, WA Game Fishing Association (28 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly

unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback
Should you require notification prior to, and on completion of, the proposed activities, or have feedback specific to the proposed activities described, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Friday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.18 Email sent to Chevron, Osaka Gas Gorgon, Tokyo Gas Gorgon and JERA Gorgon (28 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. Also attached are the GIS shape files. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia

Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: x. Xena tie-in c. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.20 Email sent to Fox Resources (11 March 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP). As we've been unable to reach Coastal Oil and Gas NL via email, we are reaching out to you, given your role as the key Principal of Coastal Oil and Gas NL.

Please let us know if fxr@foxresources.com.au should be used moving forward for outreach to Coastal Oil and Gas NL for consultation, or if another email is preferred.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.22 Email sent to Shire of Exmouth, City of Karratha, Exmouth Community Liaison Group, Karratha Community Liaison Group, Onslow Chamber of Commerce and Industry (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and

associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.23 Email sent to Shire of Ashburton (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could

potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response

In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport (DoT), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage

Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback:

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

As per Woodside's ongoing consultation approach, feedback and comments received from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP, including during its assessment and once accepted, in accordance with the intended outcome of consultation.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Please let us know if the Shire would like to receive start and end of activity notifications.

2.24 Email sent to Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Conservation Council of Western Australia (CCWA), Greenpeace Australia Pacific (GAP), 350 Australia (350A), Australasian Centre for Corporate Responsibility (ACCR), Friends of Australian Rock Art (FARA), Market Forces (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. 2.25 Email sent to Telstra, Vocus (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly

unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. Also attached is a map of the submarine communications cables in the operational area. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.

Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: x. Xena tie-in x. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

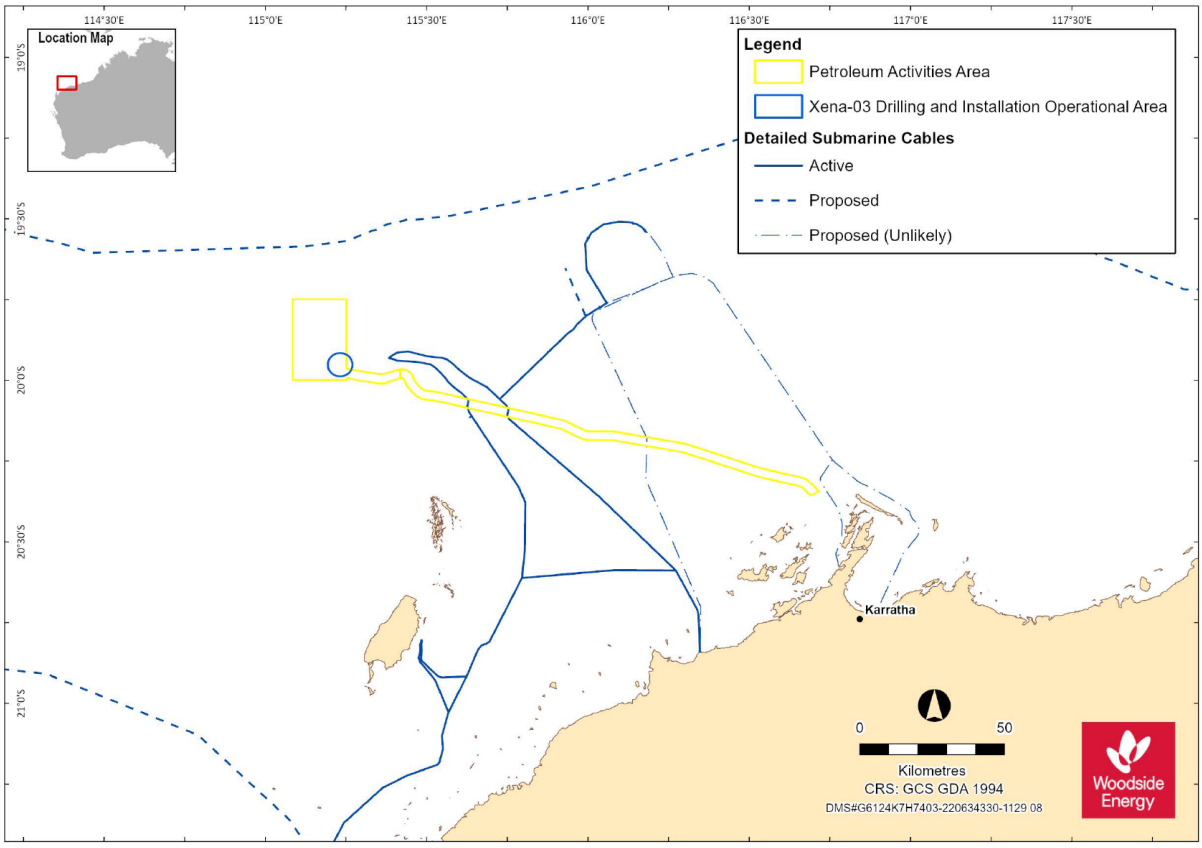
Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.25.1 Submarine Communications Cables



2.26 Email sent to Cape Conservation Group (CCG), Protect Ningaloo, University of Western Australia (UWA), Curtin University, Edith Cowan University (ECU), Murdoch University, Commonwealth Scientific and Industrial Research Organisation (CSIRO), Australian Institute of Marine Science (AIMS) (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **17 April 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.27 Email sent to Murujuga Aboriginal Corporation (1 March 2024)

Hi there [Individual 3]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Murujuga Aboriginal Corporation (MAC) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from MAC in relation to the following:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.
NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.
Please also feel free to forward this email and the attached documents to MAC members and other people and/or organisations who you think may be interested. As you are aware, Woodside would be happy to speak with MAC members, the MAC Board, Circle of Elders, office holders and other interested parties with your guidance.
I look forward to hearing from you.

Kind regards

2.28 Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (20 March 2024)

Good afternoon

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field. tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Nganhurra Thanardi Garrbu Aboriginal Corporation. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 18th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me on the details below:

Woodside Energy Feedback@woodside.com or by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Nganhurra Thanardi Garrbu Aboriginal Corporation, Traditional Owners and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.29 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (1 March 2024)

Hi [Individual 4]

I hope this email finds you well.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that BTAC and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum

environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to Jo Lanagan (Included in this email):

Woodside Energy – Feedback@woodside.com by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to BTAC Members and other people and organisations who you think may be interested as required. Woodside would be happy to speak with BTAC Members, the BTAC Board, elders and office holders and other interested parties.

I will be away on annual leave until 28-March-24, hence including Jo Lanagan in this email.

Kind regards,

2.30 Email sent to Yinggarda Aboriginal Corporation (26 March 2024)

Dear [Individual 5] and [Individual 6] I hope all is travelling well for you both.

I am writing to notify you that Woodside is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012. Please see further information in this link: Pluto Facility Operations EP

Overview:

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) of the platform and associated subsea infrastructure
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
  - The Xena-03 Drilling and Tie-Back project, which includes:
  - drilling one new well (Xena-03) in the Xena field

- tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform
- pre-commissioning and commissioning activities

With reference to Yinggarda Aboriginal Corporation (YAC), Woodside is seeking to understand the nature of the interests that YAC Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 25 April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement please also let me know.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. - Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

In addition to contacting me directly, you can also provide feedback directly to:

Woodside Energy Feedback@woodside.com or by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and the attached documents to Yinggarda Traditional Owners and other people and organisations who you think may be interested as required.

Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.31 Email sent to Kariyarra Aboriginal Corporation (6 March 2024)

Good morning [Individual 7]

By way of Introductions. My name is [Individual 8] and am the First Nations Engagement Adviser with Woodside Energy and am emailing updates whilst [Individual 9] is on Leave.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Kariyarra Aboriginal Corporation and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Wednesday 3rd April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please also feel free to forward this email and the attached documents to WAC Members and other people and organisations who you think may be interested as required. Woodside would be happy to speak with the WAC, elders and office holders and other interested parties.

I look forward to hearing from you.

Kind regards

2.33 Email sent to Robe River Kuruma Aboriginal Corporation (5 March 2024)

Good morning [Individual 10]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Robe River Kuruma Aboriginal Corporation and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Tuesday 2nd April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me on the details below:

Woodside Energy - Feedback@woodside.com.au, by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Robe River Kuruma Aboriginal Corporation Members and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Robe River Kuruma Aboriginal Corporation Members, the Robe River Kuruma Aboriginal Corporation Board, elders and office holders and other interested parties.

I look forward to hearing from you.

Kind regards

2.34 Email sent to Ngarluma Aboriginal Corporation (1 March 2024)

Wayiba [Individual 11]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Ngarluma Aboriginal Corporation (NAC) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from NAC in relation to the following:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024. We sent you a draft consultation agreement today for your review. Jeff has mentioned previously that NAC do not wish for any consultation to take place until this agreement is in place. That being said we will be guided by NAC as to how consultation may proceed in the interim. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Please note, Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.
NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.
Please also feel free to forward this email and the attached documents to NAC members and other people and organisations who you think may be interested. Woodside would be happy to speak with NAC members, the NAC Board, Elders and office holders and other interested parties.
I look forward to hearing from you.

Kind regards

2.35 Email sent to Yindjibarndi Aboriginal Corporation (6 March 2024)

Good morning [Individual 12]

By way of Introductions. My name is [Individual 8] and am the First Nations Engagement Adviser with Woodside Energy and will be sending through Environment Plans whilst [Individual 13] and [Individual 9] are on Leave.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Ngarluma Yindjibarndi Foundation Ltd. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Wednesday 3rd April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Ngarluma and Yindjibarndi Traditional Owners and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.36 Email sent to Wanparta Aboriginal Corporation (28 February 2024)

Hi [Individual 14]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate fromthe Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Wanparta Aboriginal Corporation and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

I look forward to hearing from you.

Kind regards

2.37 Email sent to Yamatji Marlpa Aboriginal Corporation (20 March 2024)

Good afternoon

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field. tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Nganhurra Thanardi Garrbu Aboriginal Corporation. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 18th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. 2.39 Email sent to Save our Songlines (26 March 2024)

Hi there [Individual 16] and [Individual 17]

I'm forwarding this information as I understand all communication for [Individual 1] should be directed to you.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Save Our Songlines (SoS) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from SoS in relation to the following:

1. How could these activities impact your members cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 26th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to SoS members and other people and/or organisations who you think may be interested.

I look forward to hearing from you.

Kind regards

2.40 Email from FARA – 29 March 2024

fara
Friends of Australian Rock Art

Feedback@woodside.com

cc. communications@nopsema.gov.au

RE: FARA Relevant Person Consultation on Pluto Facility Operations Environment Plan

1) We refer to your correspondence received on 19 March 2024 regarding Woodside's intention to seek a 5-year extension to the Pluto Facility Operations Environment Plan (Pluto Operations EP) and your request for comment to be. received by 29 March 2024.

FARA's Functions, Interests and Activities

2) As you are aware, FARA's functions, interests and activities relate to the protection and preservation of the rock art and surrounding physical and cultural heritage landscape from the impacts of industrial development, including; direct impacts from industrial development; indirect impacts from industrial emissions; impacts on visitors to the area (including Aboriginal peoples, researchers, and recreational visitors); and future impacts of climate change to this heritage landscape.

3) FARA's current objectives and activities include support for:
   a) the Murujuga Aboriginal Corporation Cultural Management Plan action of "reducing the industrial footprint with an ultimate goal of zero industry on Murujuga";
   b) more recent calls from Traditional Custodians for a moratorium on further industrial development on Murujuga;
   c) urgent protection of the Murujuga cultural heritage landscape under the *Aboriginal and Tores Strait Islander Heritage Protection Act*;
   d) World Heritage Listing of the whole of the Burrup; and
   e) Traditional Custodians to exercise rights to Free, Prior and Informed Consent (FPIC) in relation to industrial development.

   FARA considers the ongoing operation of gas processing facilities, including the processing of Pluto gas contemplated by the Pluto Operations EP to be inconsistent with these objectives.

www.fara.com.au
c/o Conservation Council of W.A. Inc
1186 Hay St, West Perth WA 6005
email: contact@fara.com.au ABN 34 754 730 929

Indirect consequences of the Pluto Operations EP

4) While it is not clear from Woodside's consultation documents, FARA understands that gas and other hydrocarbons produced from the Pluto gas field will be processed at the Pluto LNG facility and North West Shelf LNG facilities on the Burrup Peninsula. Gas processing at these facilities is the primary cause of industrial air emissions on the Burrup Peninsula which FARA believes is causing irreversible harm to the Murujuga rock art. The physical presence of these facilities presents a significant and ongoing disruption to the cultural heritage landscape and its National and World heritage values. Fugitive emissions of methane, and downstream combustion emissions from gas produced from the Pluto field also contribute to anthropogenic climate change. These are examples of indirect consequences of the Pluto Operations EP.

5) Woodside is required, according to the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (the Regulations) and the EPBC Act Indirect Consequences Policy, to consider and address the indirect consequences of the Pluto Operations in the EP.

Relevant person consultation with FARA on the Pluto Operations EP

6) As FARA's functions, interests and activities as described above and elsewhere are affected by these indirect consequences, FARA is a 'Relevant Person' for the purposes of consultation in accordance with regulations (Regulations). As such, FARA has a right to be consulted on the Operations EP for the Pluto Operations EP and seeks to exercise that right.

7) Woodside is required by regs 11A(2) and (3) of the Environment Regulations to:
   a. provide FARA with "sufficient information" to allow it to make an informed assessment of the possible consequences of the activities on its functions, interests or activities; and
   b. provide a "reasonable period" for consultation.

8) The information that has been provided to FARA on the Pluto Operations EP, and the 10-day period provided for feedback do not meet these requirements.

Information requirements for Relevant Person consultation with FARA

9) The Consultation Information Sheet on the Pluto Operations EP provided to FARA and other parties does not mention the impacts and consequences of processing gas and other hydrocarbons from the Pluto gas field on the Burrup Peninsula, or other indirect consequences of the proposed operations. There is no evaluation of the impacts or risks in the consultation document and no indication of what mitigation measures Woodside proposes in respect of these impacts.

10) FARA has previously described to Woodside the nature of information that FARA requires to assess possible consequences of Woodside's gas processing operations on its functions, activities and interests. The following list provides examples of the kinds of information that FARA requires in relation to the Pluto Operations EP.

a) Information on **how the precautionary principle has been applied** by Woodside in the assessment of impacts on the rock art and in developing and applying management responses
b) Information on what **pollution control measures and technology** will be utilised by Woodside at the Pluto and North West Shelf LNG facilities and how this has been selected, including independent feasibility studies and analysis relating to the application of best-available pollution control technology to Woodside's operations;
c) Information on what the **results and outcomes** of these measures will be on the pollution entering the Burrup airshed, including information on what the duration, concentration, and chemical composition of pollution entering to the air shed will be from Pluto gas processed at each facility.
d) Information on the **resultant airborne pollution concentrations** that Woodside expects will occur in the vicinity of petroglyphs which are potentially affected by this pollution, **and relevant exposure levels and duration**, taking into consideration cumulative and synergistic effects where this pollution is combined with pollution from other sources, and prevailing environmental conditions in the airshed.
e) Information detailing what Woodside believes or understands will be the **long-term physical consequences** of its operations on the Murujuga rock art, including the processing of Pluto gas on the Burrup **over the full duration of the proposed Pluto operations.**
f) Description of **what level of impact on the rock art Woodside considers to be as low as reasonably practicable and acceptable**, for the purpose of meeting the regulatory requirement, and how this level of acceptable impact has been determined by Woodside.
g) Information regarding **how Woodside is meeting or intends to meet its statutory obligations** under the WA Aboriginal Heritage Act for the Pluto and North West Shelf LNG facilities, and what authorisations exist under that Act for Woodside's indirect impacts on the Murujuga rock art as a consequence of industrial pollution.
h) Information and disclosure of **rock art monitoring or other studies** undertaken or commissioned by Woodside to investigate the impacts of industrial pollution on petroglyphs, and **any other scientific or technical information** which is relied upon by Woodside to reach the conclusion that ongoing Pluto operations will not have adverse consequences for the rock art.
i) Evidence of Woodside's **understanding and engagement with** peer-reviewed scientific research previously provided to Woodside by FARA and other parties demonstrating impacts of industrial pollution on rock art, and **evidence of consultation** with experts who have undertaken this research, including as Relevant Persons under the regulations.
j) Information on **what specific action will be taken** by Woodside if ongoing scientific monitoring of the rock art demonstrates that industrial pollution, including from the processing of Pluto gas on the Burrup is adversely impacting the rock art, and what the **outcome of this action** will be for the rock art.

k) Information on how current and proposed regulatory regimes for the Pluto and North West Shelf LNG facilities will include **enforceable measures that prevent impacts** from the processing of Pluto gas and other hydrocarbons on the Burrup.
l) Information on the **global and local climate scenarios Woodside expects to occur** if the Pluto operations continue as proposed.
m) Information on what **climate impact scenarios Woodside considers to be acceptable, and what specific verifiable and additional abatement measures** Woodside will take to meet emissions reduction targets to ensure that Woodside's climate impacts are managed to as low as reasonably practicable and acceptable levels.
n) Information on what other stakeholders with similar or overlapping functions, interests or activities to FARA's have been consulted and **how matters raised by such parties have been considered and addressed** by Woodside.
o) Information about how Traditional Owners and Custodians have been provided with opportunities to **exercise rights to Free Prior and Informed Consent** regarding the ongoing Pluto Operations.
p) Information on how ongoing processing of Pluto gas will occur in a way that does not **continue or perpetuate the physical disruption of the Murujuga cultural heritage landscape** (including National and World heritage values) which is currently occurring due to the presence and ongoing operation of Woodside's gas processing operations on the Burrup.
q) Information about **how concerns previously raised by FARA's have been addressed by Woodside** and what operational or other changes have been considered or contemplated in responding to those concerns and requests.

11) This information is required to enable FARA to be consulted as a Relevant Person under the Regulations, because it is essential to understanding the nature of impacts that may occur on the Murujuga rock art and broader physical and cultural landscape of the Burrup, what Woodside has determined are reasonably practicable and acceptable levels of impact, how Woodside has made these determinations, and how Woodside intends to manage its operations to ensure that these outcomes are met as required under the Regulations.

Reasonable period for Relevant Person consultation with FARA

12) In addition to these information requirements, once they are met FARA requires additional time to engage suitably qualified experts to analyse the information and advise FARA on the nature of impacts on FARA's functions, activities and interests. Because this area is a specialist field of science requiring interpretation of specific technical information, it is not reasonable to expect that informed assessment of the possible consequences of the activities on FARA's functions, interests or activities can have occurred within the timeframes that Woodside has stipulated for this EP, even if all information needs were met.

Information previously provided to Woodside by FARA

13) FARA has previously provided Woodside with a number of peer-reviewed scientific reports and other evidence demonstrating impacts on the Murujuga rock art resulting from atmospheric air pollution. Woodside's LNG processing

facilities are the primary source of this atmospheric pollution that is impacting the rock art, and the Pluto Operations EP will cause this pollution to continue for a longer duration and potentially a greater intensity. As such, the information previously provided by FARA to Woodside is relevant to the Pluto Operations EP.

14) FARA has not received satisfactory response to this information and evidence from Woodside in the context of other Relevant Person consultation processes. As such, it is our expectation that previously supplied information and evidence will be addressed by Woodside in the Pluto Operations EP, and that this information and Woodside's response will be made publicly available.

Next Steps

15) FARA reiterates that further consultation must be undertaken by Woodside prior to submitting a draft Scarborough Operations EP to NOPSEMA for approval. If a draft EP is submitted by Woodside, then it is FARA's expectation that the feedback contained in this document and previous submissions from FARA is included in full in the public section of the EP to allow for transparency regarding the inadequacy of consultation with FARA.

16) We look forward to Woodside providing FARA with sufficient information and a reasonable period of time to enable FARA to assess the possible consequences of the Pluto Operations EP on our functions, activities and interests, as part of the relevant person consultation process.

Yours sincerely,

Judith Hugo and

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing and operating LNG and oil projects in Australia. Our focus is the safety, reliability, efficiency and environmental performance of our operations and activities.

Woodside consults so that feedback from relevant persons is considered and used to inform the revision of the Pluto Facility Operations Environment Plan.

Our activities

The Pluto facility is a not-normally-crewed facility that has been in production since 2012 and is located offshore in Commonwealth waters approximately 160 km north west of Dampier.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs and is submitting a five-year revision to the operational Environment Plan. The Environment Plan for the Pluto facility will cover routine operations and integrate drilling, subsea installation, commissioning (drilling and tieback) and production from the Xena-03 well into the existing Pluto production systems.

We are seeking input from relevant persons whose functions, interests or activities may be affected by continued operations.

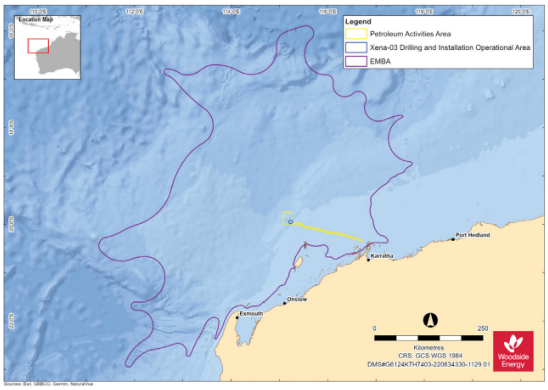
The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environmental Plan, is determined by modelling a highly unlikely event of a hydrocarbon release to the environment.

The EMBA represents the merged area of many possible modelled paths that a highly unlikely hydrocarbon release could travel if left unmitigated and depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by our activities, we would like to hear from you by **Wednesday, 29 March 2024.**



Want to know more or provide input?

4.1 The National Indigenous Times (26 February 2024)

Professor Andrew Gunstone.

Allies must be brave & push back

ANDREW GUNSTONE

On January 26, I had my most confronting speaking experience in more than three decades.

I had accepted an invitation from the Anglesea Lions Club to be a keynote speaker at their event.

I advised I would speak on "truth-telling" and provided information on my roles — including co-chair of Reconciliation Victoria and associate deputy vice- chancellor reconciliation at Federation University — and sent links to some of my publications written over several decades.

It was very clear what I would speak about.

I arrived looking forward to having some engaging conversations about truth-telling and reconciliation. Instead, midway through my speech, when I mentioned the word "invasion", many in the audience started aggressively booing and heckling me. These comments included "p... off", "shut up", and "f... off", and were so loud I was forced to halt my speech.

I was even more shocked, though, at the complete lack of support from the club. Rather than explaining to the audience I was an invited speaker, speaking on my area of expertise, and that they could either listen to me or leave, the club's president instead told me I could not continue my speech.

Even more concerningly, he pulled me from the microphone.

As I walked off the stage, I continued to be loudly booed and heckled. I was concerned for my personal safety, with people screaming at me from close quarters.

At no time during this ordeal did anyone from the club intervene to protect me by telling the audience to stop their appalling behaviour.

While several people approached me later, including members of the Anglesea Lions Club, to privately apologise for the actions of the crowd and the club's president, the only person who made a public apology was Peter Yates AM, the other keynote speaker. It was disappointing, though, that none of these people who apologised to me afterwards supported me at the time the crowd and organisers were preventing me from speaking. The club president also later came up to me to apologise for grabbing my arm, but then criticised me for being "political" by using the word "invasion".

This claim was repeated by him, and also made by the local Liberal MP, in news articles. What they both failed to understand, though, was I was not being "political", but simply stating the truth.

"Political", along with "woke", is often used to try to shut down discussions on truth-telling. There have been three news articles about this event. Only the first reached out to me for comment. Of the other two, one included several quotes from the local Liberal State MP, and the second was written by a journalist.

Despite both being at the event, neither talked to me, but instead made hurtful and inaccurate claims, minimised the crowd and organisers' behaviour, and sensationalised rather than sought understanding.

It is important to position this specific event in Anglesea within a broader context.

Several behaviours demonstrated at this event — racism, exclusion, silencing, violence, bystander apathy, white privilege, and white fragility — are directed towards Indigenous peoples every day of the year, very often in far, far worse circumstances.

Non-Indigenous allies must genuinely increase our efforts to strongly advocate against these disgusting, appalling practices. Further, these disgraceful behaviours have considerably worsened following the First Nations Voice to Parliament referendum in October. The Anglesea event is but one example of a clearly observable trend whereby many non-Indigenous opponents of the Voice are trying to create momentum from the referendum defeat to push back against hard-won transformational gains made over the past several decades in reconciliation, truth, and justice.

Local governments are abolishing Welcomes to Country and Acknowledgements of Country.

State political parties are backflipping on previous commitments to engage with treaties and truth-telling.

Patriotic fervour is being whipped up against any organisations that fail to jingoistically support "Australia Day".

Appalling levels of structural and individual racism towards Indigenous peoples, both online and in person, continue to increase.

Indigenous peoples across the country are undertaking inspirational and transformational work on Voice, Treaty, and Truth, including the First Peoples Assembly of Victoria with Treaty, and the Yoorrook Justice Commission with truth-telling.

This extraordinary work, though, along with our ongoing national reconciliation journey, is under considerable threat from these racist and divisive practices.

I strongly urge all non-Indigenous allies to genuinely help push back against these practices, and continue to have brave conversations about reconciliation, truth, and justice.

Professor Andrew Gunstone is a leading authority on reconciliation. He is associate deputy vice-chancellor reconciliation and Professor of Indigenous Studies at Federation University, where he established and leads the National Centre for Reconciliation, Truth, and Justice. He is also co-chair of Reconciliation Victoria and sits on several national reconciliation committees.

Aurukun honours top citizens

KOOLKAN Aurukun State School principal Baressa Frazer was awarded the Aurukun Citizen of the Year and Police Liaison Officer Chantelle Walmbeng was awarded Junior Citizen of the Year at a ceremony in the community on February 17.

Aurukun Mayor Keri Tamwoy said the annual Aurukun Shire Council awards recognised people who had shown community leadership for the Wik, Wik Waya and Kugu people.

"I congratulate Baressa and Chantelle who are outstanding role models for the youth of Aurukun and are determined that our younger generation will have a better future on their homelands," Mayor Tamwoy said.

"Baressa is a strong, elegant and passionate Wik woman who is a tireless advocate for Aurukun's children.

"She has returned to her community to lead local education as the principal of Koolkan Aurukun State School where she connects teachers and employees to culture and community.

Koolkan Aurukun State School principal Baressa Frazer.

Aurukun's Young Citizen of the Year Chanelle Walmbeng receives her award from Deputy Mayor Craig Koomeeta.

Passion

"Her passion and knowledge of culture, language and community is invaluable, and she teaches both children and adults with a gentle strength.

"Baressa has researched, designed and is implementing a Wik pedagogy at Koolkan Aurukun State School, collaborating with the Language Group, Elders and the APN Rangers to bring this theory into action.

"The work is monumental and is creating a pathway for Aurukun students to successfully learn while keeping their culture alive.

"Chantelle was an active founding member of the PCYC Kang Kang Youth Leadership team where she volunteered her time and was a part of many community initiatives.

"She became the Police Liaison Officer for PCYC Aurukun in March 2023 while completing Year 12, becoming the youngest PLO in Queensland.

"In this role Chantelle has demonstrated a commitment to learn and shows up every day for work on time.

"In her free time she has been attending Koolkan Aurukun State School to assist in the mornings and to support the young people of Aurukun in achieving an education.

"The young leader is speaking at the Say NO to Domestic Violence conference in Cairns this month about her life experiences and the support to reduce domestic violence in the community.

"Chantelle's leadership and willingness to take on new challenges such as the Bronze Duke of Edinburgh Award will ensure she is a force for change in the Aurukun community for years to come."

AMA backing for Kimberley stance on drink register

SARAH CRAWFORD

WA's peak body for doctors has backed the Kimberley's biggest primary healthcare provider that has decided to not refer patients to the Banned Drinkers Register against their will.

Australian Medical Association WA president Michael Page said he supported, "in general" the stance by Kimberley Aboriginal Medical Service to not refer patients to the BDR.

"Fundamentally our view is that the role of the doctor is to provide judgment-free care and patients should be safe in the knowledge that anything they share with the doctors will be kept confidential," Dr Page said.

"If patients are not secure in the knowledge that the relationship they have with their doctor is sacrosanct it undermines our practice. I think that would be bad for the health of the community."

A revamped BDR was introduced to parts of regional WA in December and gave new powers to police, medical practitioners and social workers to refer people on to the BDR which prohibits them from purchasing takeaway alcohol for three months or more.

Latest figures show 843 people have been placed on the BDR in the Kimberley, Goldfields, Pilbara, Carnarvon and Gascoyne Junction.

Police have placed 586 people on the BDR for alcohol-related offences while a further 257 Banned Drinking Orders have been issued by the Director of Liquor Licensing through barring notices, prohibition orders and voluntary referrals. However, no doctor or social worker has so far referred a patient to Liquor Licensing for a BDO.

Dr Page said there had been "very little to no consultation" with the medical profession before the legislation was introduced. "There are very few if any genuine medical reasons that someone would need to go on a register like that. It is a very heavy-handed way of treating what is a medical problem," he said.

Meanwhile KAMS medical director Dr Lorraine Anderson questioned if Aboriginal people were being disproportionately targeted by the BDR because they were more likely to socialise and drink in public and therefore attract the attention of police.

Dr Anderson stopped short of saying the BDR was racist but said it did not reflect the real nature of problem drinking.

"We are talking about banned drinkers being a reflection of the population of the Kimberley, but we know that's not right. This is targeting the people who are sitting outside and drinking where people can see them and that's, on average, that is the Aboriginal people of the Kimberley."

Dr Anderson said KAMS did not oppose alcohol restriction but that alone was not the answer.

"If if there's a Banned Drinkers Register, it needs to be backed up with a whole pile of infrastructure and a whole pile of money that goes with preventing people from having withdrawals from alcohol," she said.

Kimberley Aboriginal Medical Service director Dr Lorraine Anderson.

Dr Anderson said current alcohol and drug services were already over-stretched including Broome-based Milliya Rumurra, which has 22 beds but needs 12 more to keep up with demand.

"Forget about the Banned Drinkers Register they are already operating at capacity," she said.

"They need funding for more beds, they need capital funding for a bigger building and ongoing funding to run the rehab and provide wrap-around support. They are well-placed to be able to provide low to medium-level detox services but they need the funding to do it."

The Broome Advertiser recently reported on a woman placed on the BDR who had resorted to drinking hand sanitiser because she not buy alcohol.

Minister for Racing and Gaming Paul Papalia said the Government was working on a suite of strategies to combat the problem.

New digital newspaper, out Nightly

Seven West Media has this week launched Australia's new national digital newspaper, The Nightly.

With a focus on politics and business, The Nightly will be free and publish each weeknight at 6pm AEDT. It will also have a 24/7 news website and app with breaking news alerts and subscriber emails.

SWM WA chief executive Maryna Fewster said the landmark digital news platform would bring quality journalism to Australians for free.

Run from WA and using our time difference, it will have the full backing of the media company, with contributors including Seven stars such as David Koch, Mark Riley, Michael Usher and Gemma Acton.

Sporting stars including AFL great Leigh Matthews and cricketing icons Justin Langer and Mitchell Johnson, will also write for The Nightly.

In an Australian first, every edition of The Nightly's evening digital newspaper will feature two pages of content produced by editors of The New York Times International Report, a branded publication featuring the best articles from The New York Times. Ms Fewster said the free publication had been developed in response to a clear need.

Previous Roebourne post shop licensee Garry Bailey retired after more than three decades at the helm. Picture: Pilbara News

NBAC bid to save service

SAM JONES

In a move aimed at preserving essential services for locals, Ngarliyarndu Bindirri Aboriginal Corporation has announced plans to take over the Roebourne post office service effective March 5.

The decision comes in the wake of the post shop's closure on February 28 due to the retirement of its licensee, leaving a void in vital services for Roebourne residents.

NBAC chief executive Francois Langlois told Ngaarda Media the post shop was a vital service for many in the community. "Our plan is to co-locate the post office counter next to our Centrelink offices in the front office and our office," he said.

"We need to do a little bit of refurbishment and redo some work to our premises before that can start.

"Australia Post has been very kind to us in relocating what they call a mobile van which will be able to operate the post office services for the next eight weeks or so until we're finalised and finish all the refurbishment we need to do in preparation for having everything within our premises."

The closure of the post office raised concerns in the community, given its role as a hub for various essential services.

Roebourne residents relied on the post office for banking services, purchasing pay-as-you-go electricity cards, mobile phone transactions, bill payments and receiving crucial government communications.

With the closure, many residents, particularly those less tech savvy, faced challenges accessing these services locally. The transition extends beyond preserving essential services.

NBAC, a 98 per cent self-funded organisation, aims to not only sustain the post office but also contribute to the local economy.

Through its social enterprises, Brida and Handy Hands, NBAC has created more than 200 local jobs, with Indigenous employees making up more than 55 per cent of the workforce. In the last eight years, NBAC has injected more than $60 million in wages directly into the City of Karratha.

Putin 'ordered Navalny killed to prevent swap'

THOMAS GROVE

Russian opposition leader Alexei Navalny's death in an Arctic penal colony followed a proposal to trade him and two unnamed American citizens held by Moscow for a Russian hit man imprisoned in Germany, Navalny's foundation said on Monday.

In a video posted on the official YouTube channel of Navalny's Anti-Corruption Foundation, Maria Pevchikh, the group's head of investigations, said he was killed after Russian President Vladimir Putin became aware of the potential swap and acted to prevent it.

Ms Pevchikh said the foundation had been involved in efforts to win Navalny's freedom but didn't provide evidence to back her assertions in her seven-minute statement.

Among the US citizens being held in Russia are Wall Street Journal reporter Evan Gershkovich and former US marine Paul Whelan, both of whom have been designated as wrongfully detained by the US government, which has said it is working to negotiate their release.

Ms Pevchikh said Putin couldn't "tolerate Navalny being free". Navalny, who died on February 16, was Putin's most ardent critic and spent years investigating and exposing alleged corruption by the Kremlin elite. He had a large following across Russia.

US President Joe Biden has said Putin was responsible for Navalny's death, but the Kremlin has denied state involvement.

Kremlin spokesman Dmitry Peskov told the Financial Times that he wasn't aware of any swap agreement. Privately, US and German officials said they made no offer to Putin.

The Journal said in a statement: "We know the US government is taking the efforts to free Evan seriously, and we cannot comment further."

A Whelan family spokesman said he didn't have enough information to comment on what Navalny's foundation had said.

In an interview with former Fox News host Tucker Carlson earlier this month, Putin indicated that he was seeking a swap deal that would allow the repatriation of Vadim Krasikov, an agent of Russia's Federal Security Service, or FSB, who was convicted in 2021 of killing a Chechen dissident in Berlin. After Carlson asked about the possible return of Gershkovich, who was detained by FSB officers last year, Putin said he would consider a swap for an unnamed "patriot" who had killed "a bandit" in a European capital, widely seen as describing Krasikov.

Gershkovich, who was accredited as a foreign correspondent by Russia's Foreign Ministry at the time he was detained, has been held for nearly a year on an FSB allegation that he was engaged in espionage – an accusation the Journal, the US government and his family vehemently deny.

Mr Whelan, a corporate security executive has been held in Russia since late 2018 on espionage charges that he, his family and the US government also vehemently deny. He was convicted in 2020 and sentenced to serve 16 years in a penal colony.

"Putin was clearly told that the only way to get Krasikov is to exchange him for Navalny," Pevchikh said.

She said Putin decided "Since they are willing to offer Krasikov in principle, then I just need to get rid of the bargaining chip. Then offer someone else when the time comes." She said possible deals were being discussed since last year, and referenced a report in the Journal that said Navalny could be part of hostage-exchange talks with the Kremlin.

Pevchikh said she had information that on February 15, talks were in "their final stage". The next day, Russia's prison service said Navalny lost consciousness and later died after he had been let out of his cell in the prison known as Polar Wolf. Authorities later said he had died of natural causes.

On Monday, Navalny spokeswoman Kira Yarmysh said they were in the process of arranging a public memorial event for the politician. After Navalny's body was returned to his mother at the weekend, the question remains whether the Kremlin will allow a public outpouring of sentiment.

Navalny's foundation said the proposal to swap the opposition leader for Krasikov was taken to Putin by Roman Abramovich, a sanctioned Russian oligarch who has acted as a middleman in other prisoner exchanges between Russia and Ukraine.

Hungarian Prime Minister Viktor Orban in parliament in Budapest; and Swedish leader Ulf Kristersson after the vote

ANNE BEADE
ANDRAS ROSTOVANYI
STOCKHOLM AND BUDAPEST

Hungary has ratified Sweden's bid to join NATO, clearing the final obstacle for an enlargement of the military alliance spurred by Russia's invasion of Ukraine.

The parliamentary vote ends more than a year of delays that left fellow NATO partners furious as Ukraine battled Russian troops.

Swedish Prime Minister Ulf Kristersson hailed a "historic day", while NATO chief Jens Stoltenberg said Sweden would make the alliance "stronger and safer".

Russia's invasion two years ago prompted Sweden and neighbouring Finland to apply to join the bloc, ending a longstanding stance of non-alignment in both countries.

Speaking about Russia's potential reaction at a press conference, Mr Kristersson said: "The only thing we can expect with any certainty is that they don't like Sweden becoming a member of NATO, nor Finland."

While Finland became the 31st member of the alliance last April, Sweden's bid had been held up. Turkey only ratified it last month. Overnight on Monday, Hungary finally followed, with 188 members of parliament voting in favour and six against Sweden's accession.

"Today is a historic day ... Sweden stands ready to shoulder its responsibility for Euro-Atlantic security," Mr Kristersson said on X. Mr Stoltenberg welcomed Sweden as the 32nd NATO ally, saying its "membership will make us all stronger and safer".

People in Sweden also cheered the approval. Jimmy Dahlfof, 35, said Sweden would be "safer ... bringing us closer to our European neighbours".

Earlier on Monday, Hungarian Prime Minister Viktor Orban had asked MPs to approve Sweden's bid. "The Swedish-Hungarian military co-operation and Sweden's accession to NATO will strengthen Hungary's security," he told parliament.

Only the far-right Our Homeland movement was against the ratification. Now that parliament has approved the Nordic nation's bid, the President is expected to sign it in the coming days. Sweden will then be invited to accede to the Washington Treaty and officially become NATO's 32nd member.

"Nordic countries will have a common defence for the first time in 500 years ... we remain friends, and we become allies", Mr Kristersson said.

Though repeatedly saying it supported Swedish membership in principle, Hungary kept prolonging the process by asking Stockholm to stop "vilifying" the Hungarian government. Budapest accused Swedish officials of being "keen to bash Hungary" on rule-of-law issues. After a meeting on Friday between Mr Orban and Mr Kristersson in Budapest, the nationalist Hungarian leader announced that the two had clarified "our mutual good intentions".

Hungary also signed a deal to acquire four Swedish-made fighter jets, expanding its existing fleet of 14 Jas-39 Gripen fighters.

After Russia's invasion of Ukraine, most NATO members were keen to quickly approve the membership bids of both Finland and Sweden. For Sweden, Ankara cited security concerns, before moving ahead with the ratification.

In Hungary's delay, some experts saw a strategy to wring concessions from Brussels to unlock billions of euros in frozen funds.

Others argued it underlined Mr Orban's closeness to the presidents of Russia and Turkey.

AFP

Macron doesn't exclude sending troops to Ukraine

PARIS: French President Emmanuel Macron on Monday announced new steps to boost Ukraine in its fight against the Russian invasion, saying not even the sending of Western ground troops was ruled out to achieve Europe's goal of defeating Moscow.

Speaking after hosting a meeting of two dozen European leaders to discuss Ukraine, Mr Macron painted a grim picture of a Russia whose positions he said were "hardening" both at home and on the battlefield.

"We are convinced that the defeat of Russia is indispensable to security and stability in Europe," he said.

Russia, he said, was showing a "more aggressive attitude not just in Ukraine but in general".

While there was "no consensus" on the sending of Western ground troops to Ukraine, "nothing should be excluded. We will do whatever it takes to ensure that Russia cannot win this war," he said.

Mr Macron said the new coalition would be set up to supply Ukraine with "missiles and bombs of medium and long range to carry out deep strikes".

There was a "broad consensus to do more and quicker", he added. "Nothing can be excluded to achieve our objective. Russia cannot win that war."

German Chancellor Olaf Scholz and Polish President Andrzej Duda were among some 25 European heads of state and government at the conference. Other states sent ministers, with Foreign Secretary David Cameron in Paris for Britain.

AFP

Milei bans they-them from military

BUENOS AIRES: The government of President Javier Milei, a conservative libertarian, has banned gender-inclusive language in Argentina's armed forces.

The purpose of the ban was to "eliminate incorrect language use which can lead to misinterpretation ... affecting the execution of orders and the conduct of military operations," said a resolution published on the defence ministry's X account.

So-called inclusive language was never officially approved in the military, but in 2020 then defence minister Agustin Rossi vowed the government would not disregard "cultural changes in gender relations." This led to such unofficial distinctions as "soldado" for male members of the military and "soldada" for female ones, in line with the Spanish language rule of attaching a gender to every noun – with words ending in "o" generally masculine and in "a" feminine.

There has been a recent trend in Spanish-speaking countries towards more gender inclusive language, for example in the use of plural nouns which are masculine even if a group is composed of mixed genders – think "amigos" (friends) now often referred to as "amig@s" or "amigxs."

The new government directive states that in the military, Spanish must be used "according to the rules fixed by the Royal Spanish Academy and the regulations and manuals in force in the armed forces".

Mr Milei who has described himself as an ultra-libertarian "anarcho-capitalist", holds conservative stances on issues such as abortion and climate change.

He has railed against so-called "gender ideology", a term loosely used by conservatives worldwide to oppose same-sex social rights, abortion and transgender rights. His government has shut down its anti-discrimination agency.

Anger as Dior runs from HK catwalk

RICHARD LLOYD PARRY

Christian Dior has cancelled a catwalk show in Hong Kong, in another blow to the territory's efforts to re-establish itself as a business and cultural destination following anti-government protests, the arrest of democracy activists and economic difficulties in China.

The fashion show to be held on March 23 at the site of Hong Kong's old airport, Kai Tak, was "indefinitely postponed" on Friday.

"We have just received notification from the organiser that the event will be postponed," a government spokesperson told Reuters. "Postponements of large-scale events often happen. We continue to welcome large-scale events to be held in Hong Kong."

But with no new date set, the abrupt change of plan suggests a loss of confidence by a major luxury brand at a time when Hong Kong's pro-Beijing government is trying to return to normal after five years of political tumult and the pandemic.

Although no reason was given for the cancellation, Dior has had a chequered past with China. Last year it was accused of being racially insensitive after a model using her fingers to pull back her left eye, which was widely interpreted as a "slanted-eye pose".

"If Dior truly respects the Asia market, it should have the basic respect and humbleness, instead of trying to weather publicity crises by pretending it didn't know," state newspaper Global Times said in an editorial. "Such an attitude will eventually cause irreparable damage to its reputation. We hope Dior can face the mistake and give a sincere apology and response to the Asian society and make some clear explanations how it would prevent similar mistakes in the future."

'It's like Hong Kong is being fooled. This will generate a lot of speculation'

DOREEN KONG
HONG KONG POLITICIAN

The crisis came less than two years after Dior angered the Chinese market by running a photo featuring a stern-looking Asian woman with a Dior bag. Critics said then the woman had "spooky eyes" and a "gloomy face". Chinese photographer Chen Man apologised for her "lack of consideration", and Dior, which removed the photo, said it had always respected the feelings of the Chinese people.

Dior was also accused of cultural appropriation when it introduced a skirt and claimed it was an original creation even though it resembled a traditional Chinese design, drawing protests from Chinese consumers.

In November, Louis Vuitton held a similar show for 1000 guests. The Dior show was meant to have been on a similar scale, and to have presented the brand's men's autumn collection designed by Kim Jones, its artistic director.

It had been presented by the government as one of 80 "mega events" intended to impart "joy and pride" to Hongkongers and to increase the territory's prominence as a business and tourist destination, following the pandemic and the suppression of political opposition under the National Security Law.

This month another event in the program, a friendly match featuring Inter Miami football team, ended in anger and controversy after Lionel Messi, the team's main attraction, failed to take part in a match.

Fans paid as much as $HK4880 ($955) for tickets for the game, which was promoted using Messi's image. But after he was ruled out on ground of injury the club's owner, David Beckham, was booed by a jeering crowd.

"Why would there be a delay at such a critical moment?" Hong Kong politician Doreen Kong said to the South China Morning Post of the Dior show.

"The lack of an explanation is not good for Hong Kong. It's like Hong Kong is being fooled. This will generate a lot of speculation. If Hong Kong wants to be a hub of mega events but they are all postponed or the stars don't make an appearance, who will visit Hong Kong for its events?"

WHY NEW BUILDING BOOST IS A GRAN SLAM

EXCLUSIVE JAKE DIETSCH

Interest in granny flats has exploded, with inquiries increasing 500 per cent since the State Government relaxed rules about building them in a bid to tackle Perth's housing shortage.

Planning Minister John Carey last month announced granny flats will, from April, no longer require council planning approval, can be built on blocks smaller than 350sqm and will be allowed on homes with strata titles.

Council-issued building permits to ensure safety must still be obtained.

Granny Flats WA managing director Mike Nicholls said there had already been uptick of "at least 500 per cent" in inquiries, with 300 per cent the usual number of people signing contracts.

"People who had expressed interest but were concerned about the approval process time, have now been buoyed by the thought that it could be a much faster turnaround," Mr Nicholls said.

"There were perceived barriers and those announcements did spur people towards making the decision to build a granny flat where previously they thought they couldn't."

Mr Nicholls said his company was looking at increasing builds from 80 to 250 a year in the next 12 months — and would hire more staff to do so.

The changes allowing homes with strata to have granny flats and rent them out had especially fuelled demand, he said.

"There has also been a lot of inquiries from people looking

5. COMMUNITY ENGAGEMENT

5.1 Roebourne, Karratha and Dampier Roadshow (22 March – 24 March 2024)

Location	Roebourne, Karratha and Dampier Roadshow
Activity	Community information sessions
Location	22 March 2024 - Woodside Roebourne office 23 March 2024 - Karratha Shopping Centre 24 March 2024 - Dampier Beachside Markets
Date	22 - 24 March 2024
Description of the consultation	Woodside hosted community consultation sessions in Roebourne, Karratha and Dampier to enable community members to understand Woodside's proposed activities and how it may affect them, ask questions, and provide their feedback. Woodside Corporate Affairs, First Nations and Environment representatives were available to answer questions. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations Environmental Plan Consultation Information Sheet. An iPad with consultation/feedback subscription prompt was made available with approximately 12 signs people subscribing.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the Pilbara News on 13 March and 20 March (Record of Consultation, reference 5.1.1). • Social - Geotargeted social media campaign advertising in Karratha (Reach 22,095), Port Hedland (reach 26,487), and Roebourne (reach 22,134) (+80 kms) from 6 to 16 September 2023 (Record of Consultation, reference 5.1.3). • Social - organic • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website), Scarborough Project banner were displayed stand along with current EP factsheets. • Hard copy posters were also put up at high traffic areas including Lo's Café in Karratha and the Ieramugadu Store Maya in Roebourne. (Record of Consultation, reference 5.1.2 and 5.1.5).
Estimated number of individuals / organisations consulted	Woodside spoke to many community members, recording 32 meaningful conversations. Over 500 community members (Dampier Community Association) attended the event
Summary of Feedback, Objection or Claim	
• General queries about employment and local content opportunities. • General interest in Pluto Train 2 progress and Scarborough project and trunkline location. • Comments on Red Dog Village accommodation. Woodside staff discussed that the average local economy spend was $120 per person, per week. • Positive commentary to see Woodside active in the community and good sentiment toward the company as a respected local employer. • Interest in taking further information such as the Karratha Community Update (newsletter) and EP newsletter (Let's Talk). Approximately 25 copies of each were distributed over the 3 days. • Woodside social investment activities and community funding opportunities. • Environment Plan awareness building with multiple conversations on "What is an Environment Plan?" and "What is an EMBA?".	

- Query around impacts to whales due to noise from drilling and seismic surveys. Woodside staff discussed whale migration research, vessel whale spotters and the controls that Woodside puts in place during drilling and seismic activities. Community member took consultation information sheets and was referred to the consultation page on the Woodside website for further information and opportunity to provide feedback.
- Query on the location of the Scarborough Energy Project and proximity to the Montebello Islands. Woodside staff discussed that the FPU would be located 201 km from the Montebello Marine Park using the potential risks and controls as per the Scarborough Trunkline Operations (State Waters) Environment Plan consultation information sheet.
- General comment on climate change and the impacts from fossil fuels. Woodside staff advised that Woodside are working on emissions reduction and new energy options including solar power and carbon capture.
- Comment from a Woodside employee partner about Karratha Gas Plant hosting a family day for employees.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims.
The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

5.1.1 Pilbara News (13 and 20 March 2024)

Chance to argue case in political processes

The duo at WA's Parliament House.

KATYA MINNS

Young people in the Pilbara are being called to become the next generation of youth leaders in an opportunity to represent their electorate and participate in democratic processes.

In its 29th year, the 2024 Y WA Youth Parliament program has opened applications for people aged 15-25 who wish to gain experience in government and policy development.

Participants will have the opportunity to draft, debate and advocate for mock youth-focused legislation on topics they're passionate about and present to Members of Parliament.

In 2022, Port Hedland local Erin Hayes joined Karratha's Emer O'Brien to represent the Pilbara electorate, travelling to Perth to present their Bill focusing on sex-based discrimination. "I was in the women's committee and we wrote a Bill on education and health reform talking about menstrual justice, such as providing free period products at a higher standard than what we currently have, and menstrual leave," Ms Hayes said.

"It's an apolitical program so you don't have to express what side of politics you're on, you're more focused on the issues that you're passionate about.

"It's kind of like a really respectful way to have debates."

After first hearing about the program through a teacher's forum at the school where she taught politics, Ms Hayes applied for the 2023 Y WA Youth Parliament and encourages other young people to do the same.

"It was amazing, I got to meet people that were like-minded and got to talk about things we're really passionate about," she said.

"It's given me more experience as I still want to work in politics in some aspects. I think it would be really great if more local people from the Pilbara could participate." More information on how to apply can be found on the Y's Youth Parliament website.

Applications close on March 24.

Emer O'Brien and Erin Hayes during the 2023 Y WA Youth Parliament.

Monitoring upped at KHC

The Karratha Health Campus is among the hospitals trialling new security measures.

New 24/7 security support at campus

ROSS MCRAE

The Karratha Health Campus has been selected as one of the pilot sites for the WA Government's $434,000 investment in a state-of-the-art security hub for regional hospitals.

The new security hub, operating out of a State-wide CCTV operations room co-located within the WA Country Health Service Command Centre in Perth, will provide 24/7 real-time monitoring and support for some of the most isolated hospitals in regional WA, including Karratha.

It aims to enhance safety, deter anti-social behaviour, and provide greater support for frontline healthcare staff.

"Any kind of aggressive behaviour towards healthcare staff is completely unacceptable, and the State Government remains committed to doing all we can to keep staff safe at work," WA Health Minister Amber-Jade Sanderson said.

WACHS chief executive Jeff Moffet acknowledged the concerning rise in violence and aggressive incidents against healthcare workers in regional areas, with an average of two assaults a day occurring.

"It's important we continue to do all we can to keep staff and patients safe," he said.

WACHS noted that the pilot sites, such as Karratha, were chosen based on their overall risk profile for incidents at the site, local crime rates, proximity to immediate police response and isolation.

"This specialised technology will be operated around the clock by security specialists and will provide another layer of security for our frontline healthcare workers," Ms Sanderson said.

Mr Moffet said the new advanced security monitoring will complement existing measures such as on-the-ground CCTV, security personnel, duress alarms and access control systems.

Other pilot sites include Hedland, Kununurra, Meekatharra, Collie, Bridgetown and Halls Creek with further sites to be added throughout 2024.

The inclusion of Hedland Health Campus comes in the wake of a high-profile incident in July 2022, when an Aboriginal woman, who was a known suicide risk and had been receiving mental health treatment, took her own life inside the hospital after being left alone in a room, despite staff being aware of her high risk.

Woodside North West
March 30 at 7:00 AM ·

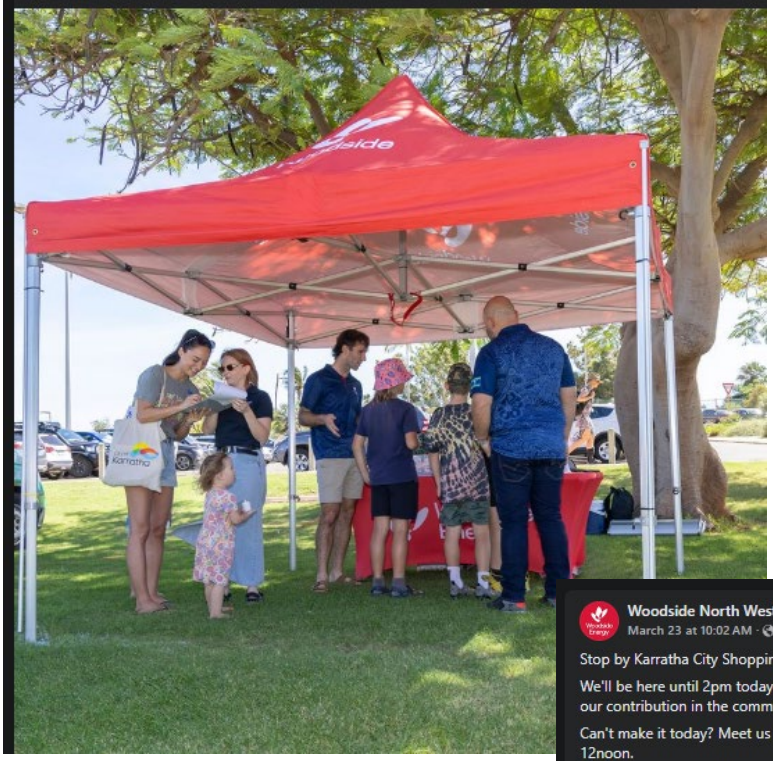
👀 Did you see us out and about last weekend?

We enjoyed chatting with many locals about our planned and proposed activities and operations, our community contribution and employment pathways.

If you have questions about our activities on land and sea, we will be at the North West Shelf Visitor Centre on Wednesday, April 3.

We welcome your input and wish to provide you with opportunities to share information and discuss your functions, activities or interests which may be affected by our proposed activities. Your information could assist us in developing our Environment Plans.

The North West Shelf Visitor Centre will be open from 10am - 2pm Tuesday to Friday these school holidays.



Woodside North West
March 23 at 10:02 AM ·

Stop by Karratha City Shopping Centre and say hello to our friendly team.

We'll be here until 2pm today to share information about our planned and proposed activities, our contribution in the community and employment pathways.

Can't make it today? Meet us at Dampier Beachside Markets tomorrow, Sunday 24 March 9am - 12noon.

We'd like to consult relevant persons in the course of preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity on the environment.

We welcome your input and wish to provide you with the opportunity to share information and discuss your functions, activities or interests which may be affected by our proposed projects.

Woolies admits to underpaying

EMILY WOODS

Woolworths has lauded itself as an "exemplary employer" and "a model accused" in court as the supermarket giant admitted underpaying more than $1 million to about 1200 workers.

Two days after Woolworths' boss was threatened with jail for holding the Senate in contempt, the company faced Melbourne Magistrates Court where it pleaded guilty to more than 1000 charges.

Woolworths is facing a maximum penalty of more than $10 billion over the offending, prosecutors said last week. Barrister Kathleen Crennan, acting for the Wage Inspectorate Victoria, said the regulator was contacted in February 2022 by lawyers for Woolworths after it undertook a review of its payroll systems.

The supermarket chain discovered it was not paying some employees their long service leave entitlements after they left Woolworths, due to discrepancies in how those payments were being calculated.

Ms Crennan said the inspectorate investigated and found the underpayments occurred for former Woolworths and Woolstar workers on 3617 occasions between January 2020 and July 2022. The regulator took the case to court and charged Woolworths for those who were underpaid sums of more than $250, which resulted in about $1m in unpaid leave for 1237 former Victorian staff.

Woolworths' barrister Saul Holt KC admitted it was an "interesting week" to be discussing the supermarket in open court. "But Woolworths is much more than some headlines and a senate inquiry," he said.

He said Woolworths was described as "a model accused" by the prosecution, as it had self-reported and self-investigated the underpayments to the regulator.

"Woolworths is an exemplary employer," he said, adding it was a major employer of young people aged under 25.

Mr Holt said the proposed $10b maximum penalty was "extraordinary" and asked the magistrate not to dole out such a penalty as it could discourage other employers from self-reporting.

Woolworths has since paid back most of the underpaid after alerting them via text message, email and post, and paid those they could not get in contact with into their last known bank account, he said.

Magistrate Nahrain Warda asked why it took so long for Woolworths to discover the payroll issues, given it had changed systems in 2016. "Why is it not until 2020 that the testing is, in essence, to ensure there are no anomalies? One would think that would be ongoing," she said.

"Woolworths can't escape from the fact that over that period those anomalies were not picked up, that should not have occurred and would not have occurred now because we know more," Mr Holt replied. Woolworths will be sentenced April 24.

Gerry Georgatos.

Campaign to let children in care tell their stories

NATASHA CLARK

Suicide prevention expert Gerry Georgatos says it is critical that children in State care are allowed to share their stories with the public through the media.

The death by suicide of a 10-year-old Indigenous boy from the Kimberley in State care earlier this month has prompted Mr Georgatos to pioneer the Let Them Speak campaign.

"The power of the media is second to none; without it, we can't effect change," Mr Georgatos said.

"Governments cannot be swayed unless the narrative is in the public domain."

Under the Children and Community Services Act (2004), it is illegal to broadcast or publish anything that could identify any child who is, or has been, the subject of a protection order.

Though the 10-year-old's death has been widely reported, critical details, such as the child's name, cannot be revealed.

"We can't have deaths happening that we can't speak to, and we skirted the line with this one," Mr Georgatos said.

"We've come close to breaking the law by speaking with publications."

He has been working with the boy's grieving family every day since the loss of their beloved brother and son.

Mr Georgatos said the child's parents had returned clean drug and alcohol samples over the past year. Despite this, he had no contact with his parents for eight months before his death.

"As a suicide prevention researcher, I can argue that a year clean is a powerful protective factor," he said.

"The usual practice is to return kids to their families after the parents have returned clean drug and alcohol testing samples for three to six months.

> My focus is on keeping children safely at home, where this is possible. A recommendation to bring a child into the care of the State is only made as a last resort.
> Sabine Winton

"If that had happened in this case, at the six-month mark, that boy would still be alive today."

However, Early Child Protection and Prevention of Family and Domestic Violence Minister Sabine Winton said it would be inappropriate for a minister to provide comment on an individual case.

"The safety and wellbeing of children is always the highest priority of the Cook Government," she said.

"My focus is on keeping children safely at home, where this is possible.

"A recommendation to bring a child into the care of the State is only made as a last resort and a final decision rests with the Children's Court of Western Australia."

When asked for a response to demands by advocates that the Children and Community Services Act be reformed, Ms Winton said: "It is reviewed every five years."

For Mr Georgatos, the minister's response is unacceptable. He knows the ripple effect that publishing such stories can have.

In 2019, Mr Georgatos obtained permission from the then director-general of the Department of Communities, Michelle Andrews, for a young woman he was supporting, Tah-Shae, to share her experience of being placed in 72 foster homes in a 12-year period with the West Australian.

Tah-Shae detailed the sexual abuse, bullying and neglect she experienced while in State care.

The impact of her story sparked a wider public conversation about the merits of placing children, specifically Indigenous children, in State care.

"The impact of her telling her experiences while in care was an eye-opener to the dire circumstances many endure," Mr Georgatos said.

"Public consciousness gained insight. Without the public understanding (regarding) the gaps and unmet needs, there is less likelihood of addressing systemic disarray."

Mr Georgatos remains optimistic about his campaign to open up the State care system to more public scrutiny but admits it needs more support from powerful figures to gain traction.

"The Let Them Speak campaign is in its infancy but has begun," he said. "The next steps must be backed by a multitude of voices across the nation, calling for every State and Territory to reform their laws and guarantee unfettered rights for those affected to speak to the media.

"Everyone should be able to tell their story if they want to. I refuse to accept censorship by omission."

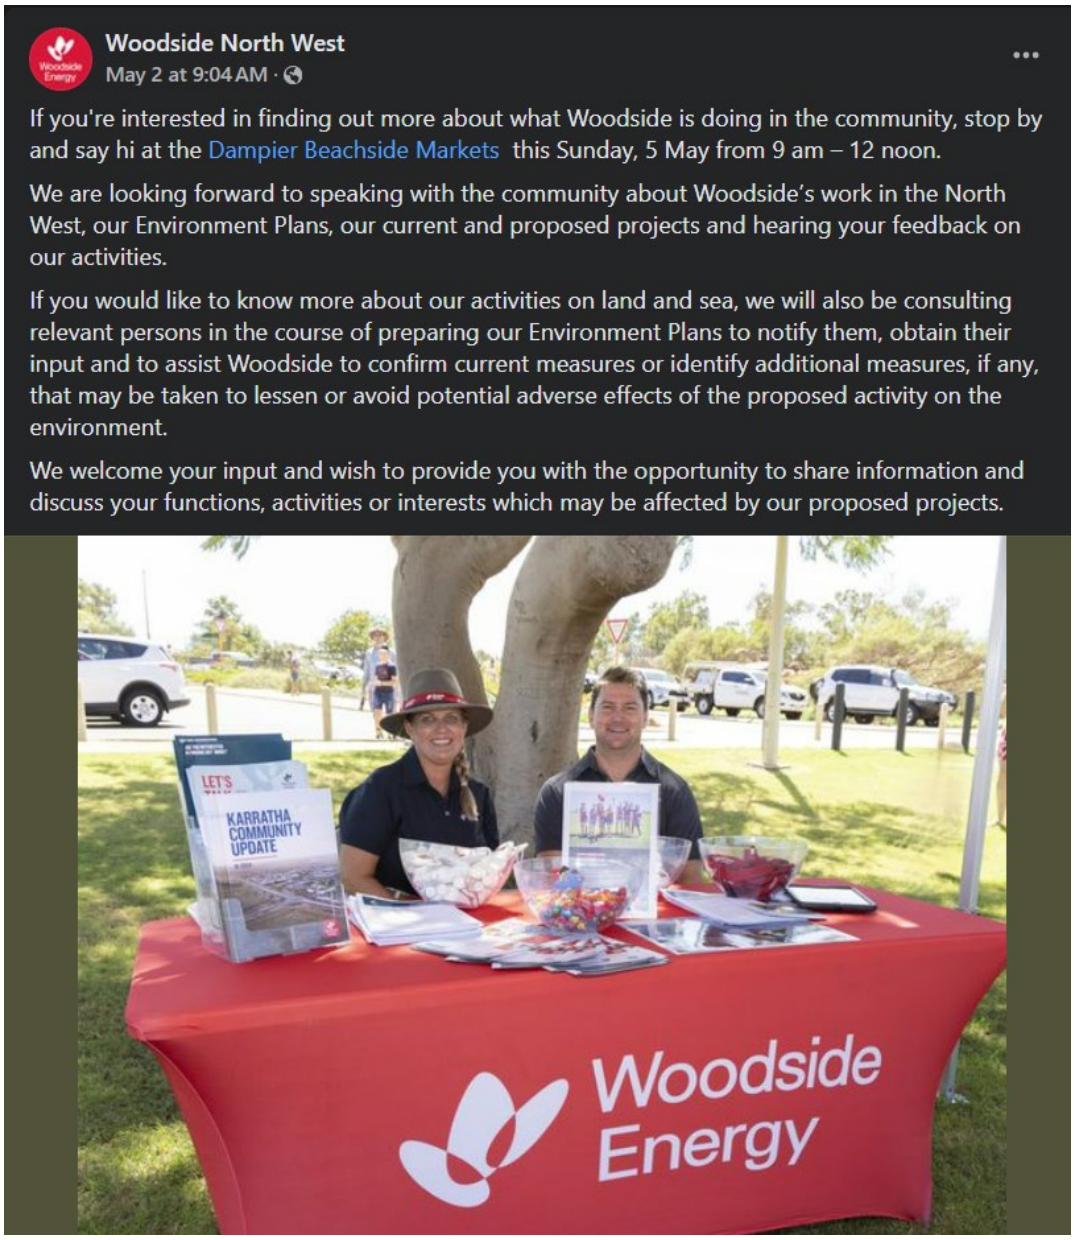
5.3.3 Social Media post (2 May 2024)



5.3.4 Social Media story (3 May 2024)

5.3.5 Lo's Cafe Community notice board (26 April 2024)

5.3.6 Market stand (5 May 2024)

5.4 Exmouth Community Markets (19 May 2024)

Location	**Exmouth**
Activity	**Community markets – Woodside stand**
Date	Sunday, 19 May 2024 (8am to 12pm)
Description of the consultation	Woodside hosted a stand at the Exmouth Community Markets, held at Federation Park. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. Woodside's 'Let's Talk' – a monthly information sheet on the company's Australian activities. In addition, information on the Scarborough Energy Project, Browse to NWS Project, Browse Carbon Capture and Storage (CCS) concept, Woodside's Climate Transition Action Plan, leaflets providing QR codes to Woodside's

	Annual Report and Sustainability , as well as our Reconciliation Action Plan were available. Environment Plan Consultation Information Sheets available to attendees included: • Pluto Facility Operations EP
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from 4 May to 18 May. • Directly inviting local Community Liaison Group • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with the EP factsheets and Project information sheets mentioned above. A selection of images are in this email.
Estimated number of individuals / organisations consulted	Over 300 people attended the markets. Woodside had meaningful conversations with approximately 30 people. These people identified as being Exmouth community members, visitors to Exmouth (residents of the East Coast of Australia, residents of Perth, residents of Karratha), and a few transient backpackers from various overseas locations.

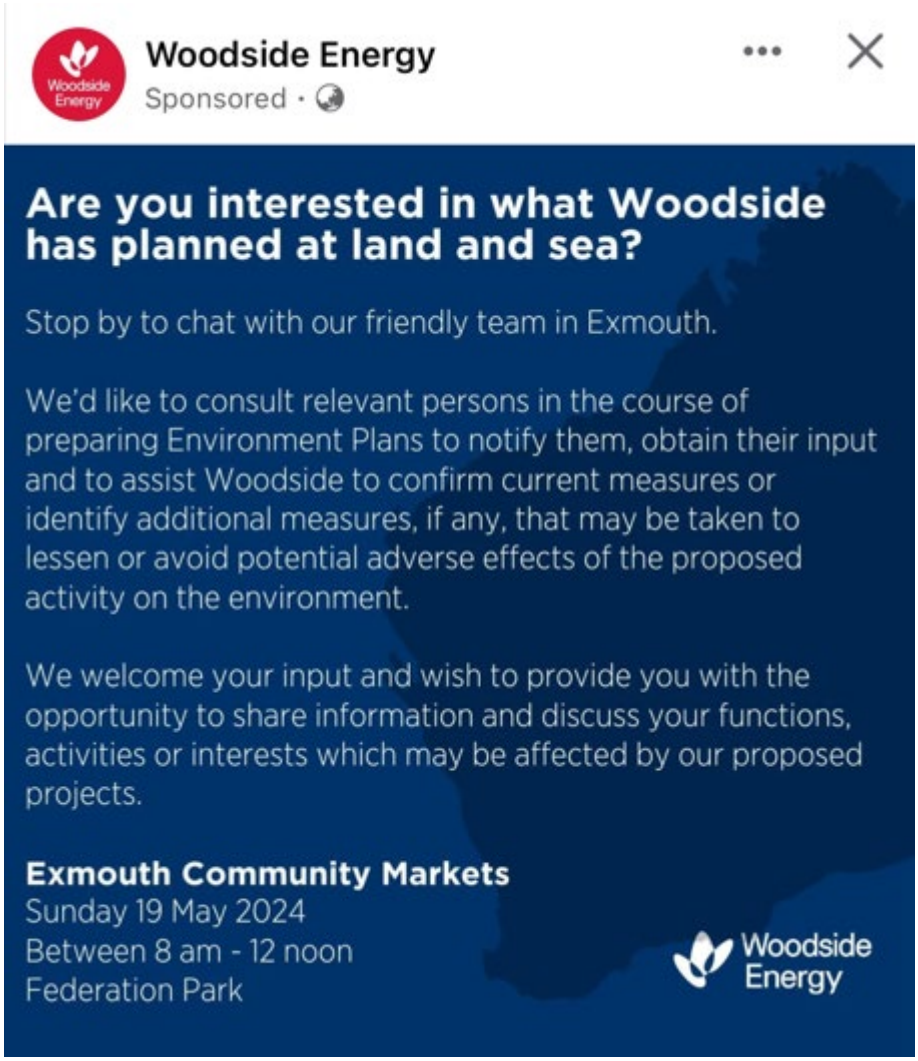
Summary of Feedback, Objection or Claim

- Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.
- General interest in Woodside activities.
- No specific queries on the EPs.
- Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough, Browse to NWS Project, as well as the company's climate strategy and climate transition plans.
- Queries from Exmouth residents around employment and local content opportunities.
- General queries on the progress of the Scarborough Energy Project and Browse to North West Project, with two stakeholders seeking more information on Browse CCS
- Queries on Western Australia's domestic gas reservation policy and the existing domestic gas commitments for Woodside's activities.
- Concern from one Exmouth resident with business links to Eastern Australia over the costs of flights between Exmouth and the East Coast.
- General queries on the location of Woodside assets in relation to Exmouth and Woodside's footprint in Exmouth.
- Local residents interested in understanding current social investment programs and opportunities.
- Interest to understand how Woodside undertakes community consultation.
- A transient worker and an Exmouth local expressed a preference for the sunscreen giveaway to be made with reef-safe ingredients.(This feedback has been forwarded to the Woodside focal point)
- One stakeholder expressed their opposition to oil and gas and voiced a desire for companies like Woodside to invest in geo-thermal energy instead.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity.

Objections to the resources industry was expressed by two stakeholders.
The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.

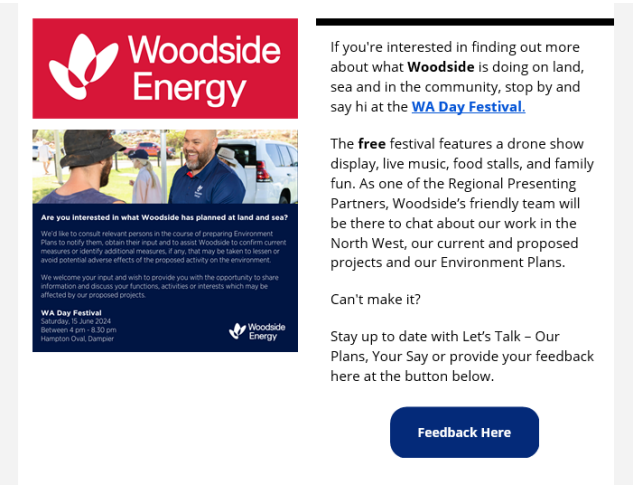


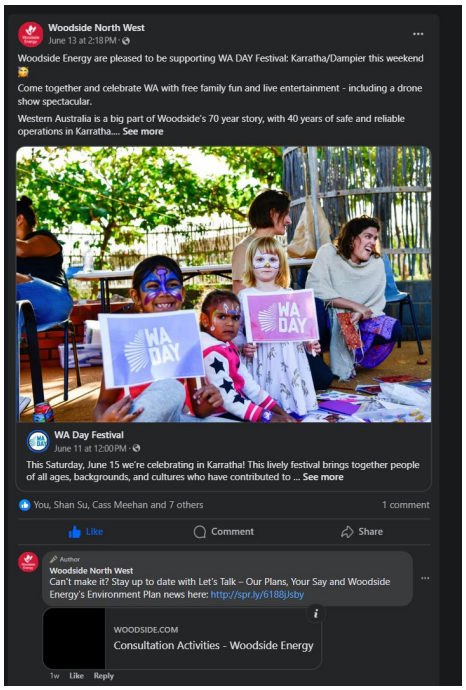
5.5 WA Day Festival (15 June 2024)

Location	Dampier
Activity	WA Day Festival
Date	15 June 2024
Description of the consultation	Woodside hosted a stand at the WA Day Festival organised by Celebrate WA. The event featured a drone show, food stalls, live music, sideshow stalls and interactive exhibits. The stand was staffed by members from Woodside's Corporate Affairs, First Nations and Environment team. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations EP.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the KDCCI e-newsletter distributed 5 June 2024. • Social media posts were published inviting public to attend on Woodside North West Facebook page (**Appendix F, reference 5.4.1**). • Celebrate WA advertised the event via TV commercials, radio advertisement and in print. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with current EP factsheets. (**Appendix F, reference 5.4.2**).
Estimated number of individuals / organisations consulted	Over 2000 community members (Celebrate WA) attended the event. Woodside spoke to many community members, recording 15 meaningful conversations.
Summary of Feedback, Objection or Claim	
• General queries around employment and volunteer opportunities. • General positive commentary from community members working at Woodside or on Woodside projects. • General interest in Scarborough and Browse progress and the future of gas in the energy transition.	

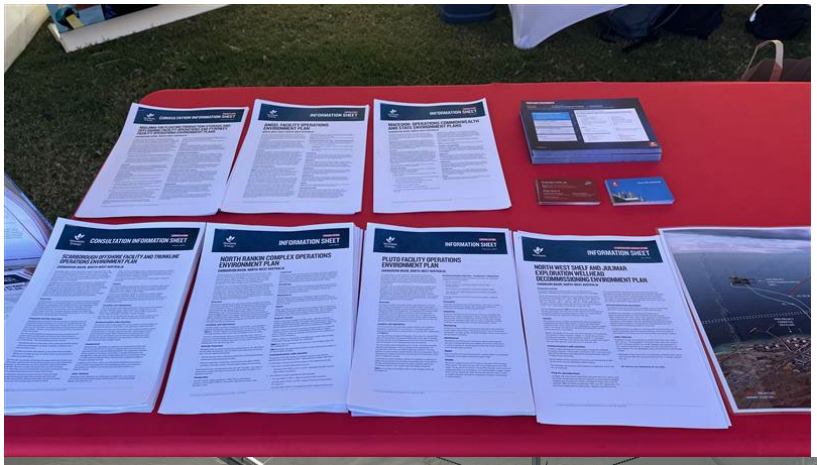
• General query around tax contributions. • EP approval process discussed and why we want to talk to community. No concerns raised.
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

5.5.1 Social media posts



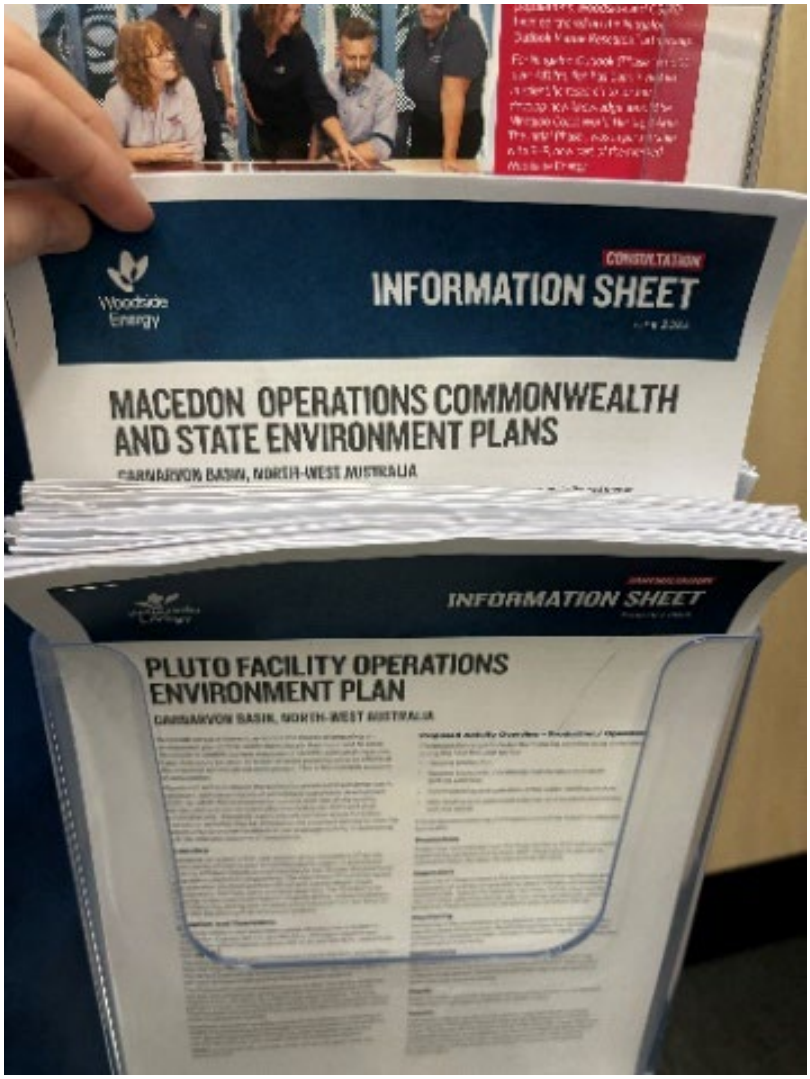


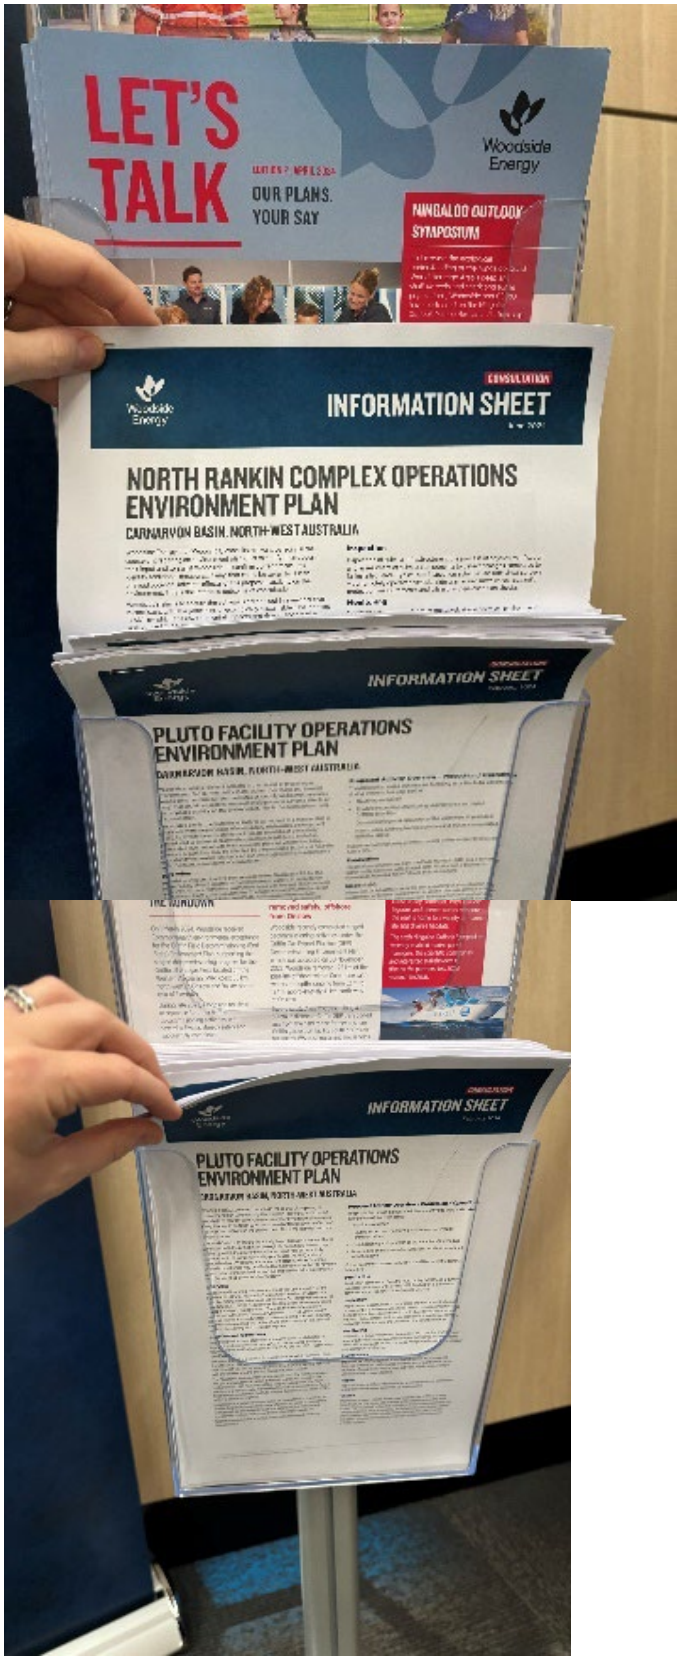
5.5.2 Market stand



5.6 Pilbara Summit (26-27 June 2024)

Location	Karratha
Activity	Pilbara Summit 2024
Date	25-26 June 2024
Description of the consultation	Woodside hosted a stand at Pilbara Summit 2024, a sold-out conference established to raise the profile of issues and opportunities in the Pilbara region. The event provides the opportunity for the Pilbara region's industry, investors, businesses, community, and government representatives to connect. The stand was staffed by members from Woodside's Corporate Affairs, Government Affairs, First Nations, Supply Chain and New Energy teams. Woodside displayed a QR code on the stand, linked to the Let's Talk EP newsletter on the Woodside consultation page of the website. A pull-up banner was on display focusing on engagement on our plans at land and sea with a QR code to the consultation page on the Woodside website. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations EP.
Advertising and invitations	No advertising was undertaken. The Vice President for North West Shelf delivered a speech during the conference, which highlighted the important role the that Woodside will continue to play in the energy transition. In addition a presentative from Woodside's CCS team was part of a panel discussion on Decarbonisation – moving to net zero discussing the role of CCS, opportunities for growth, new business and the best approach to renewable and lower carbon industries. Attendees were invited to find out more about Woodside's projects, developments or environment plans by speaking team members on the Woodside conference stand or to visit Woodside's town office based in The Quarter.
Estimated number of individuals / organisations consulted	Over 600 people attended in person event over 2 days
Summary of Feedback, Objection or Claim • Approximately 10 conversations occurred around new energy opportunities and plans, local content, social investment, EMBAs (relating to EPs) and approvals in general. • No feedback was received regarding Woodside's Environment Plans.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
This session forms part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2** of the EP).	





5.7 Let's Talk – Our Plans, Your Say

Let's Talk Newsletter Hard Copy Distribution – March 2024 Edition

Date	Location	Event (if applicable)
28 February 2024	Karratha	KDCCI Business Breakfast
6 March 2024	Exmouth	Exmouth Chamber of Commerce and Industry office Exmouth Community Liaison Group
7 March 2024	Exmouth	Gascoyne Development Commission office Exmouth Shire office
8 March 2024	Karratha	KDCCI International Women's Day
13 – 15 March 2024	Perth	AOG Energy Conference
22-24 March 2024	Karratha, Dampier, Roebourne	Regional Woodside Environment Plan consultation roadshow
3 April 2024	Karratha	Employees at the Woodside Karratha Gas Plant
10 April 2024	Perth	Meeting with WAFIC
17 April 2024	Karratha	KDCCI Business After Hours
24 April 2024	Perth	Employees at the Woodside MY Building Woodside Annual General Meeting

www.woodside.com/what-we-do/consultation-activities

THE RUNDOWN

In December 2023, The Scarborough Energy Project received secondary Commonwealth environmental approvals for key offshore work scopes. The project is now well underway (over 50% complete) with the commencement of relevant offshore construction activities.

Woodside also received environmental approvals in November and December 2023 enabling in-field works for decommissioning activities at the Griffin (65 km northwest of Onslow) and Stybarrow fields (51 km to the northwest of the North West Cape).

As part of the decommissioning of the Enfield field, Woodside received environmental approvals in July 2023 for the removal of the Nganhurra riser turret mooring (RTM) from the permit area off the coast of Exmouth.

The Nganhurra RTM is a metal structure, about 83 metres long, on which Woodside previously moored an oil producing facility.

The RTM allowed the facility to rotate with weather while moored and also brought subsea production lines from the Enfield oil field to a Floating Production Storage and Offloading facility. Enfield ceased production in November 2018 and the RTM was removed as part of decommissioning activities at the field, which also included the permanent plugging and abandonment of 18 former production wells.

The decommissioning concept for the Nganhurra RTM was matured over more than two years of careful planning and detailed engineering, undertaken in conjunction with a range of specialist contractors.

> In late 2023, Woodside safely and successfully completed activities in the Environment Plan, including lifting the RTM in one piece out of the water and placing it on a barge for transportation to the Australian Marine Complex (AMC) at Henderson.

The RTM is now in its final stages of deconstruction at the AMC, expected to be completed by April 2024. More than 95% of the Nganhurra RTM will be recycled or re-used, supporting local employment and contracting opportunities.

Click here to view the safe removal of Nganhurra Riser Turret Mooring

LET'S TALK

TALKING POINT

Woodside safely completes marine survey

A marine seismic survey conducted by Woodside Energy in December 2023 applied controls to avoid interaction with whales as part of the environment planning process.

Once the Environment Plan for the activity was accepted by the Regulator, Woodside conducted the survey from 2 December to 31 December 2023.

The survey was undertaken with a range of standard and project-specific controls designed to reduce interactions with marine fauna including a dedicated spotter vessel with trained Marine Fauna Observers operating during daylight hours and the use of a Passive Acoustic Monitoring system to detect the presence of vocalising whales.

A shut down zone was in place for whales detected within 2 km of the acoustic source and for sea turtles spotted within 100 m of the acoustic source.

There were also specific controls in place relating to whale species of potential cultural significance, such as pygmy blue whales and humpback whales.

This included an extended 'limits of visibility' shutdown zone if these whale species or large unidentified whales were detected by observers, within their limits of vision.

Weekly project update reports were published on the Woodside website during the survey to provide information on cetacean or marine turtle observations. These reports confirmed that marine fauna continued to move through the area during the survey. They also confirmed that no pygmy blue whale or sea turtles were sighted during the survey.

COMMUNITY SPOTLIGHT

The Scarborough Energy Project

The Scarborough Energy Project will provide a boost to the WA economy and communities, growing jobs and bringing work through the supply chain, with a focus on the Pilbara region.

A second processing train, Pluto Train 2, is being constructed within the existing Pluto LNG facility located near Karratha in the Pilbara Region of Western Australia and is currently set to process about five million tonnes per annum of Scarborough gas. The project is providing various opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Scarborough Energy Project has injected more than $90 million locally and contracted over 65 Karratha businesses.

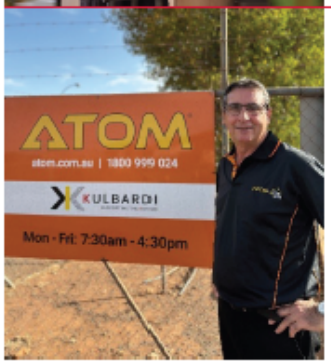
Local business spotlight: ATOM

We're spotlighting local, family-owned business: ATOM. The company name stands for Aqua Terra Oil & Mineral. ATOM has recently been contracted to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best which is why its 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Terry Klowss, Bechtel's Site Manager for Pluto Train 2 said, "ATOM's 100% local workforce helps us ensure our partnerships are benefiting local people – this is something that is very important to us at Bechtel."



> "Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha."

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980. In the same decade, Woodside commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

With access to more than one million products, ATOM is one of Australia's fastest growing industrial and safety supply business.

COME CHAT WITH US

Woodside consults on our activities. Join us at local North West community events and at our offices so you can talk to us about our operations, decommissioning activities or proposed projects.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team. You can find out more and share your feedback about Woodside's work in the North West, our Environment Plans and our current and proposed projects.

Upcoming engagement opportunities

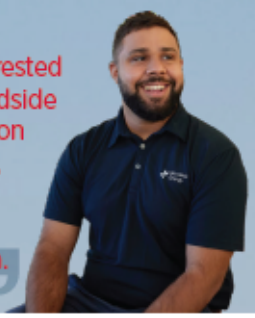
ROEBOURNE
22 March 2024 | 1:00pm – 3:00pm
Woodside Office
39 Roe Street, Roebourne, WA, 6718

KARRATHA
23 March 2024 | 9:00am – 2:00pm
Karratha City Shopping Centre
16 Sharpe Avenue, Karratha, WA, 6714

DAMPIER
24 March 2024 | 9:00am – 12:00pm
Dampier Beachside Markets
Hampton Oval, Dampier, WA, 6713

DAMPIER
3 April 2024 | 10:00am – 2:00pm
North West Shelf Project Visitors Centre
Burrup Road, Dampier, WA, 6713

"If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team."



HAVE YOUR SAY

Woodside consults relevant persons in the course of preparing our Environment Plans. This is to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates
Pluto Facility Operations	Operations	~190km north-west of Dampier	February – March 2024
North Rankin Complex Operations	Operations	~135 km offshore from Dampier	April – May 2024
Scarborough Trunkline Operations (State)	Operations	~30km north of Dampier	April – May 2024

You can access our consultation information, provide feedback and subscribe for updates by visiting **www.woodside.com/what-we-do/consultation-activities** or click **here.**

PROGRESS SNAPSHOT

You can view Environment Plans for approved projects and activities by visiting: **info.nopsema.gov.au/home/approved_projects_and_activities** or click **here**.

Environment Plan	Activity type	Date Accepted	Status
Stybarrow Decommissioning and Field Management	Decommissioning	8 January 2024	Work intended to commence in 2024
Stybarrow Plug and Abandonment	Decommissioning	21 December 2023	In progress
WA-34-L Pyxis Drilling and Subsea Installation (Revision)	Project	21 December 2023	Work intended to commence in 2024
Griffin State Pre-Decommissioning	Decommissioning	20 December 2023	Completed
Scarborough Seabed Intervention and Trunkline Installation	Project	13 December 2023	In progress
Scarborough WA-61-L and WA-62-L Subsea Infrastructure Installation	Project	8 December 2023	In progress

Griffin Decommissioning and Field Management	Decommissioning	21 November 2023	In progress
Nganhurra Operations Cessation	Decommissioning	27 July 2023	Completed

LET'S TALK

What's an Environment Plan?

A Titleholder must have an accepted Environment Plan (EP) in order to carry out certain petroleum activities. An EP sets out information about the proposed activity, how the activity may potentially impact the environment, measures to mitigate potential risks and impacts to as low as reasonably practical (ALARP) and acceptable levels, a record of consultation undertaken by the Titleholder, preparedness for emergencies and information on how environmental performance will be monitored and reported.

When an EP is being developed, a Titleholder:

- Engages in consultation with relevant persons and organisations.
- Provides information on its activities.
- Engages in dialogue with persons being consulted (where appropriate).
- Responds to claims or objections about the activity.

Consultation is an important part of environmental management.

Consultation on Environment Plans

Consultation provides an opportunity for persons who wish to provide feedback or raise concerns about:

- The potential adverse impacts of the activity on their functions, interests or activities, to seek information about the activity.
- How the Titleholder intends to manage the activity so that the risks and impacts are managed to ALARP and acceptable levels.

Information provided by the relevant person may assist the Titleholder to better put in place measures to manage the risks and impacts of an activity.

Commonwealth Waters

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is Australia's independent regulator for health and safety, structural and well integrity, and environment management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.

EPs submitted to NOPSEMA for assessment are made available on the NOPSEMA website.

Woodside consults in the course of preparing Commonwealth EPs in accordance with section 25 of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023*. Consultation methodologies are designed to:

- Identify relevant persons.
- Provide them with sufficient information and a reasonable period of time to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities.
- Assist Titleholders to consider and adopt appropriate measures in response to claims or objections raised during consultation.

Woodside identifies relevant persons for consultation in accordance with section 25 of the Environment Regulations. Alternatively persons who wish to consult can self-identify, in accordance with regulation 25 of the Environment Regulations.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest area where a petroleum activity could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned activities and unplanned events. Woodside's assessment of relevant persons is based on the EMBA assessed for the activity.

State Waters

The Department of Energy, Mines Industry Regulation and Safety (DEMIRS) is the regulator for activities in State waters in Western Australia. Woodside follows a similar process to identify relevant persons to consult for State EPs. However consultation for State EPs is based on activities in the operational area, not unplanned events in the EMBA. For State EPs, only EP summaries are made public on the DEMIRS website once the EP has been approved.

Are you a Relevant Person?

Recently, Woodside launched an information campaign online and on social media focusing on the Kimberley, Pilbara, Gascoyne and Murchison areas to build a greater understanding of how members of those communities can get involved in consultation and the environmental planning process.

A series of short videos were shared on Woodside's website and on social media with targeted information for different community members including commercial fishers, marine users and traditional custodians.

In the videos, Woodside tells community members about our EPs and asks viewers who might be relevant to our activities to self-identify and participate in consultation.

The campaign is still running and provides suggestions as to ways to get into contact with Woodside and learn more about our EPs.

LET'S TALK

EDITION 2 | APRIL 2024

OUR PLANS, YOUR SAY

Woodside Energy

THE RUNDOWN

On 1 March 2024, Woodside received Commonwealth environmental acceptance for the Griffin Field Decommissioning (End State) Environment Plan, supporting the staged decommissioning program for the Griffin oil and gas field, located off the Western Australian (WA) coast 65 km north-west of Onslow and 94 km north-east of Exmouth.

During late 2023, Woodside received acceptance for other Griffin decommissioning activities, with several activities already safely and successfully completed.

WHAT IS DECOMMISSIONING?

Decommissioning involves managing infrastructure that is no longer required in a timely, safe, and culturally and environmentally responsible manner.

GRIFFIN FIELD – FAST FACTS

- Field discovered 1989
- Production period 1994 – 2009
- Gas produced for the WA domestic gas market - 62 trillion cubic feet
- Barrels of oil produced - 167 million

Griffin gas export pipeline removed safely, offshore from Onslow

Woodside recently completed staged decommissioning activities under the Griffin Gas Export Pipeline (GEP) Decommissioning Environment Plan, which was accepted on 30 November 2023. Woodside removed ~25 km of the pipeline offshore within Commonwealth waters at depths ranging from 52 m to 127 m, approximately 41 km north-west of Onslow.

During production, the 62 km long and 30 cm in diameter Griffin GEP transported gas from the field to the former onshore Griffin gas export facility south of Onslow for use by WA businesses and households.

The decommissioning of the pipeline's WA State waters section and related onshore infrastructure requires separate state approvals. Woodside will engage local stakeholders to understand their views on potential decommissioning options for this pipeline portion.

Woodside is now undertaking a post-removal assessment of the Commonwealth section of the Griffin pipeline to inform future decommissioning activities in the region. Woodside will continue to assess decommissioning options case-by-case, guided by science, consultation, and legislative requirements.

NINGALOO OUTLOOK SYMPOSIUM

To increase the ecological understanding of the Ningaloo Coast World Heritage Area's deep and shallow reefs and shark and turtle populations, Woodside and CSIRO have partnered on the Ningaloo Outlook Marine Research Partnership.

For Ningaloo Outlook (Phase 1 and 2) over A$12million has been invested in scientific research to further develop new knowledge about the Ningaloo Coast World Heritage Area. The initial Phase 1 was in partnership with BHP, now part of the merged Woodside Energy.

The 300 km long Ningaloo Reef is the largest fringing coral reef on the west coast of any continent. With shallow lagoons and deeper waters offshore, the reef is home to a variety of marine life and diverse habitats.

The sixth **Ningaloo Outlook Symposium** recently enabled marine park managers, the scientific community and interested stakeholders to discuss the partnership's 2023 research findings.

Click here to view footage shown at the 2024 Ningaloo Outlook symposium.

COMMUNITY SPOTLIGHT

Support for Murujuga

Woodside is proud to be a signatory of Murujuga Aboriginal Corporation's (MAC) Statement of Intent as part of our unwavering support for World Heritage Listing over the Murujuga Cultural Landscape, and our ongoing support for the protection and management of Murujuga's outstanding heritage values. We are committed to and support the protection of Aboriginal cultural heritage and continue to work closely with Traditional Custodians in the areas we operate.

Woodside was one of 11 signatories to the MAC Statement of Intent at a ceremony held at Hearson Cove on Murujuga Country. Other parties to the Statement of Intent included MAC (as the representative body for five Traditional Custodian groups, being Ngarluma, Yaburara, Yindjibarndi, Mardudhunera and Wong-Goo-tt-oo peoples), the Government (Premier, Environment Minister and Aboriginal Affairs Minister), Commonwealth Government (Environment Minister), Rio Tinto, Pardaman, Yara Pilbara, Horizon Power and the City of Karratha.

The Statement of Intent sets out the guiding principles for MAC, government and industry parties to work together to negotiate a cooperative Strategic Head Agreement in relation to the management, protection, and conservation of the Murujuga Cultural Landscape in support of the World Heritage nomination of this landscape.

Woodside takes its responsibility to protect and manage cultural heritage seriously, including through taking reasonable and practical measures across our operations and growth projects to minimise our emissions.

TALKING POINT

Supporting Science at Scott Reef

Out on the edge of Australia's continental shelf sits the north and south reefs and sandy islet of Scott Reef.

Located about 425 km north-west of Broome, to reach Scott Reef a boat would need to travel from the closest point on the WA coast for 270 km across the Indian Ocean.

Scott Reef and other reefs in the Pilbara and Kimberley were considered "poorly understood" by the Australian Institute of Marine Science (AIMS) three decades ago. However, over the last 30 years, more than 50 expeditions by numerous marine scientists have led to extensive research and understanding of Scott Reef.

In 1993, Woodside supported AIMS' extensive survey of coral and fish communities. This led to the establishment of a long-term monitoring program in 1994, which continues today. The Scott Reef coral reef monitoring program is globally one of the few continuous programs providing insight into the health and condition of resident corals and fish.

Woodside partnered with the WA Museum in 1998, contributing to research on oceanography and the biology and ecology of the resident species. The partnership has enabled long-term research to understand the reef's health and how it changes through time. WA Museum scientists visited Scott Reef in 1984 to carry out extensive surveys to sample fauna. Then, in 2006 returned with Woodside's support and catalogued 1,897 marine life species, including 262 new discoveries.

The WA Museum partnership included the Woodside Collection Project, focused on the marine life of the Dampier Archipelago and Kimberley. Over 55,000 specimens were collected and 700 new species were identified as part of the large Australian biodiversity project.

The wide-ranging Scott Reef research projects have revealed important insights into a complex ecosystem and have delivered a wealth of knowledge to support Woodside's long-term environmental planning and management.

Woodside is consulting on the Browse State Wellhead Decommissioning Environment Plan (EP), involving decommissioning options for three historical wellheads in WA State waters, approximately 430 km north of Broome. **View the consultation information sheet.**

In preparing the EP, Woodside's intent is to minimise environmental and social impacts and is seeking stakeholder input to inform Woodside's development of the EP.

COMMUNITY CONVERSATIONS

Upcoming engagement opportunities

DAMPIER
5 May 2024 | 9:00am – 12:00pm
Dampier Beachside Markets, Hampton Oval

EXMOUTH
19 May 2024 | 8:00am – 12:00pm
Exmouth Community Markets, Federation Park

Dates and times subject to change.

Woodside is consulting with local communities at local events so you can easily come and chat us to us about our operations, decommissioning activities, or proposed projects.

Recently our team talked with community members at the Karratha Shopping Centre and the Dampier Beachside Markets about Environment Plans for the Scarborough State Trunkline Operations and Pluto Operations. We also meet quarterly with Community Liaison Groups in Karratha and Exmouth where we communicate updates and consult with community members on a range of relevant topics.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the **Woodside North West Facebook page** for updates. You can also read our recent **Karratha Community Update here.**

HAVE YOUR SAY

Woodside consults relevant persons while preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates
Browse State Wellhead Decommissioning	Decommissioning	430 km north of Broome	25 March – 3 May 2024
North Rankin Complex Operations	Operations	135 km offshore of Dampier	22 April – 22 May 2024
WA-550-P Exploration Drilling	Exploration	190 km north-west of Dampier	-May – June 2024
Angel Carbon Capture and Storage Geophysical and Geotechnical Surveys	Survey	125 km north-west of Dampier	-May – June 2024
North West Shelf Phase 1 Plug & Abandonment	Decommissioning	~117 km north-west of Dampier	-May – June 2024
Julimar Operations	Operations	160 km north-west of Dampier	-May – June 2024

You can access our consultation information, provide feedback and subscribe for updates by visiting **www.woodside.com/what-we-do/consultation-activities** or click **here.**

PROGRESS SNAPSHOT

Environment Plan	Activity Type	Date Accepted	Status
Griffin Field Decommissioning (End State) (Griffin Field Deviation / Griffin Leave In-situ)	Decommissioning	1 March 2024	In progress
Stybarrow Decommissioning and Field Management	Decommissioning	8 January 2024	In progress
Stybarrow Plug and Abandonment	Decommissioning	21 December 2023	In progress
WA-34-L Pyxis Drilling and Subsea Installation (Revision)	Project	21 December 2023	Drilling to commence around May 2024
Scarborough Seabed Intervention and Trunkline Installation	Project	13 December 2023	In progress
Scarborough WA-61-L and WA-62-L Subsea Infrastructure Installation	Project	8 December 2023	In progress
Scarborough Drilling and Completions	Project	1 December 2023	In progress
Griffin Gas Export Pipeline Decommissioning	Decommissioning	30 November 2023	Completed
TPA03 Well Intervention	Project	28 November 2023	In scheduling
Griffin Decommissioning and Field Management	Decommissioning	21 November 2023	In progress

You can view Commonwealth Environment Plans for approved activities and operations by visiting NOPSEMA's website info.nopsema.gov.au/home/approved_projects_and_activities

LET'S TALK

EMBAs AND OIL SPILL MODELLING

Let's talk about EMBAs – what they are, and just as importantly, what they're not.

When Woodside talks to community members about our activities, we're often asked about the areas marked on our consultation material referred to as the "Environment that May Be Affected" (EMBA).

EMBAs are an important part of preparing the environmental and emergency response strategies that underpin the planning for our offshore activities.

They are produced as part of our extensive oil spill modelling and response planning. They represent the largest spatial area where a petroleum activity could potentially have a direct or indirect environmental impact.

Understanding the EMBA

The EMBA represents the largest, merged area of many potential paths that a highly unlikely oil spill could travel based on predictions around weather, currents, and other conditions at the time. An EMBA is not a predicted impact of a single oil spill, which would be much smaller, and the extent and path of the impact would only be known at the time it occurred.

This means the area the EMBA covers includes locations where planned activities and unplanned events could potentially occur.

Oil Spill Modelling

While offshore oil spills are extremely rare, it is important oil and gas companies are still ready to prepare for and respond to them. There are several different approaches to oil spill modelling, and Woodside uses these in combination for information about where an oil spill could move, how quickly, and the possible effect of using methods to manage a potential oil spill.

To calculate this, our oil spill modelling involves running many (sometimes hundreds) computer simulations of the same scenario to predict the behaviour of oil under different conditions.

Each simulation is subject to a range of variables, including weather and sea conditions, tides, and times of year. In the model, the oil responds to these conditions and behaves differently in each individual simulation.

Every individual simulation is overlayed on top of the next, allowing statistical analysis of the possible area the oil spill could travel in the highly unlikely event that a spill occurs. The smooth boundary drawn around all these computer simulations of the spill creates the EMBA.

The models process the information based on an assumption there is no emergency response, which would of course not be the case in a real emergency.

Oil spill modelling helps us develop our oil spill emergency management plans and assists in preparedness and response planning. Woodside conducts regular emergency response training exercises involving multiple facets of the business so our teams are ready to respond should they ever need to.

The many simulations used to underpin our planning are estimates and predictions only. It is not possible to exactly predict the outcome until the exact weather and other conditions are known if an oil spill event occurs.

Emergency Management Plans

The emergency management plan informed by the oil spill modelling is submitted to both State and Commonwealth regulators for approval along with all other planning documents for our activities.

Woodside, in more than 60 years, has not experienced any significant uncontrolled release of oil or gas to the environment as a result of loss of well control.

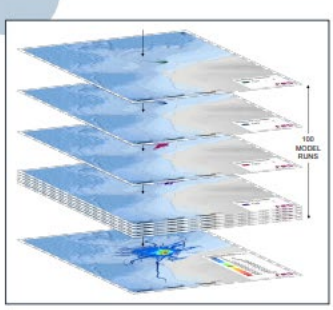

Figure 1: The first stage in EMBA creation is running computer simulations (model runs). Figure 1 shows the model runs for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

Nevertheless, our extensive planning continues, drawing on international good practice, so the impacts and risks associated with our activities are detailed, evaluated and managed to a level that is as low as reasonably practicable.

We are committed to continuous improvement and share our expertise with our peers and take the lessons learned from other operators to incorporate into our management processes.

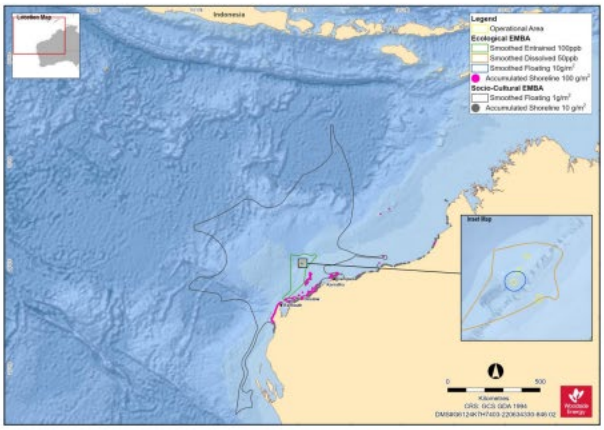

Figure 2: The EMBA is a culmination of all the computer simulations with a smooth boundary. Figure 2 shows the final EMBA for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

November 2024

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 4 | November 2024

The rundown

North West Shelf Visitors Centre welcomes Wanparta

The Ngarla people at the North West Shelf Visitors Centre.

We acknowledge the unique connection that First Nations communities have to land, waters and the environment and seek to consult them in relation to our operations and proposed projects.

As part of our ongoing consultation with First Nations groups, Woodside Energy recently hosted 13 Traditional Owners from Ngarla country at the North West Shelf Visitors Centre, so they could see our operations first hand.

The Ngarla people are the Traditional Owners of an area of land east of Port Hedland that covers the De Grey and Pardoo pastoral stations in Western Australia's North West.

Woodside Manager First Nations Engagements, Michael Roe said that Wanparta Aboriginal Corporation as the Prescribed Body Corporate for the Ngarla people, had been identified as a relevant person to consult with on previously submitted and present Environment Plans.

"The Ngarla people were interested in learning more about the world of gas, and as part of the consultation process were invited to Karratha for a visit to the North West Shelf Visitors Centre overlooking the Karratha Gas Plant."

"This provided an occasion to build trust and understanding whilst providing the opportunity to provide feedback on our activities. In this case we were consulting on the five-yearly review of the Pluto Facility Operations Environment Plan." said Michael.

An accepted Environment Plan is required in order for Woodside to carry out activities. Meaningful conversations with First Nations people are documented and make up part of an Environment Plan submitted to regulatory bodies for assessment ahead of continued operation.

Wanparta Aboriginal Corporation Chairperson, Mary-Jo Coppin said, "the trip was really informative with good consultation, well organised and we felt very welcome at the facility."

A key element of Woodside's consultation efforts is our willingness to be flexible and adaptable to suit the audience in our overall efforts to avoid or minimise potential impacts from our operations.

Munro's Mack10k Fishing Competition

Munro's Mack10k 2024 Fishing Competition, held in Onslow from 24-25 August 2024, saw hundreds of anglers and fishing enthusiasts from across Australia enter into the running for a chance to reel in $10,000.

The event doubles up as a research initiative, spearheaded by Recfishwest's Fishing for Science program and supported by Woodside Energy.

Working with the Department of Primary Industries and Regional Development, the Recfishwest science team collected biological samples from mackerel caught by competitors, providing insight into the health of the local fish population.

Read more about the annual competition, hosted by the Ashburton Angler Fishing Club by visiting: recfishwest.org.au

Community spotlight

Wangarri Crane and Equipment Hire

Murujuga Commercial Limited's (MCL) first Pilbara business, Wangarri Crane and Equipment Hire (Wangarri), has been awarded the contract for supply and maintenance of cranes and forklifts for the Pluto Train 2 Project, the onshore component of the Scarborough Energy Project.

Established by MCL as a joint venture with Boddington's Hire, Wangarri provides a range of lifting equipment that includes cranes, forklift trucks, reach stackers and telehandlers for hire to the resource sector and other industrial clients across the Pilbara.

One of five commercial ventures managed by MCL, Wangarri forms a portfolio of businesses and commercial ventures that aim to provide a strong and economic future for its Murujuga members.

Wangarri means "Coming to Life" in Yindjibarndi, which represents MCL's journey as it moves from a start-up phase toward building business streams that align to the strategic goals and objectives of the Murujuga Aboriginal Corporation.

Bechtel, the appointed contractor for the Pluto Train 2 project, delivers engineering, procurement, construction and commissioning, has awarded contracts to local Indigenous businesses, such as Wangarri to deliver a variety of work scopes.

"We are very happy to be working with Wangarri on Pluto Train 2. We deeply value this local contract and appreciate their professionalism and dedication to providing safe and high-quality cranes and forklifts." said Bechtel Pluto Train 2 site manager Terry Klowss.

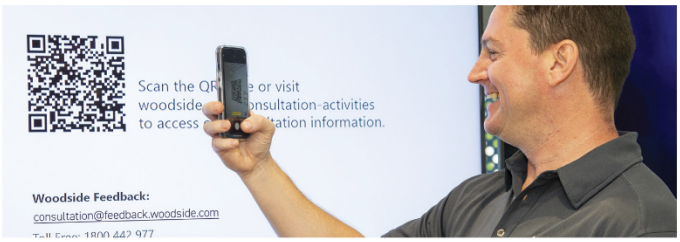
Jig Albert, MCL Managing Director said the contract with Bechtel on Pluto Train 2 had been an enormous stepping stone for their business.

"We have been contracted to provide a range of the smaller cranes for the project. Mostly this consists of Franna pick and carry cranes, however we are also providing a 160 tonne all-terrain crane and a small three tonne Maeda spider crane, as well as the ongoing maintenance of these machines," said Jig Albert.

"It has given our business the confidence to invest in our own equipment which will drive equity for the business and in turn provide a direct return to Murujuga Aboriginal Corporation members."

Learn more about Wangarri Crane and Equipment Hire and their work on the Scarborough Energy Project

The importance of consultation



"Like safety, consultation continues to be a core focus for NOPSEMA," Sue McCarrey, CEO, NOPSEMA *(Source: The Regulator, 2024, Issue 2)*

Consultation is a key component of Woodside's environmental planning and can involve a two-way process with relevant persons who wish to provide feedback on operations or proposed offshore activities.

Consultation enables Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. It is a key requirement of Australia's offshore environmental management framework and Environment Regulations.

An appropriate consultation approach which meets regulatory requirements enables Regulators such as the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for Commonwealth activities, or the Department of Energy, Mines, Industry Regulation and Safety for state activities, to assess and accept Environment Plans (EP).

Woodside is committed to open and transparent consultation and does this by providing clear information on proposed activities, assessing and responding to objections or claims about the activity, and providing a reasonable period of time and opportunity for a relevant person to provide feedback.

If required due to the nature and scale of a proposed activity, Woodside undertakes additional consultation activities over a longer period to ensure a reasonable period of time period and sufficient information has been provided. This allows for an informed assessment of the possible consequences of the activity on stakeholders' (referred to as a 'relevant person' under Commonwealth regulations) functions, interests or activities.

Subscribe to stay up-to-date

On Woodside's website we enable members of the public to subscribe to receive information about EPs as it becomes available.

Subscribing is a great way to stay informed about updates and important information related to Woodside's activities. It also provides the public with timely notifications about new projects, environmental initiatives, community engagements, and consultation information sheets for proposed activities.

Woodside has updated its consultation email address to consultation@feedback.woodside.com

To subscribe to Woodside's consultation activities **click here** and enter your details on the page.

Milestone celebrations at FeNaCING Festival

The City of Karratha recently hosted the FeNaCING Festival, bringing together community and celebrating the region's key industries – iron (Fe), sodium chloride, commonly known as salt (NaCl), and natural gas (NG).

Woodside Energy, along with its joint venture partners, proudly supported the event, with a pavilion that featured Woodside's 70th anniversary as a company and 40th year of safe and reliable operations in the North West.

Woodside CEO Meg O'Neill made a special appearance at the festival, meeting local community members and helping with a range of giveaways on offer.

Meg praised the event organisers who successfully celebrated the community spirit that makes Karratha a great place to live and work.

"We know that such a significant milestone could only be achieved with the support of our people and the Karratha community," she said. "I was really thrilled to have the opportunity to join our team in the Woodside marquee as they engaged with the community about issues that matter to them and answered questions about our operations and growth projects."

Many attendees who visited the Woodside marquee expressed curiosity about Woodside's Environmental Plans and other topics including Carbon Capture and Storage, the Scarborough Energy Project and the development of Browse.

Woodside's active participation in events like the FeNaCING Festival supports our consultation approach to engage the community on our current business activities, including opportunity to provide feedback on our Environment Plans.

Woodside Energy CELEBRATE 70

March 2025

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 5 | March 2025

Heritage auditors walking along eastern outside boundary of Pluto LNG Plant on Murujuga Country

The rundown

Cultural Connections: Woodside's Commitment to Heritage Management

Woodside has operated on the Burrup Peninsula (Murujuga) in the Pilbara region of Western Australia for more than 40 years. We've matured our approach to heritage management considerably over this time, and are proud of the relationships we have built with Traditional Owners and Custodians.

Every year, Woodside works with Traditional Custodians undertaking audits of heritage sites around the perimeter of the Karratha Gas Plant and Pluto LNG Parks. These audits arose from our long-standing consultation with Traditional Custodians regarding Cultural Heritage Management at our onshore facilities.

Both assets operate near National Heritage and Tentative World Heritage listed sites, including Murujuga's petroglyphs (rock art).

The primary purpose of the audits is to monitor the condition of culturally and spiritually significant sites and invite recommendations if the potential for impacts are detected.

"The audits are also an opportunity for Traditional Custodians to connect to areas of a cultural landscape that stretch back tens of thousands of years, and for the community's reassurance that cultural heritage is being managed appropriately on Woodside's leases," said Daniel Thomas, Manager Global Heritage and Human Rights.

The most recent heritage audits were carried out last year over a two week period.

"The feedback from Traditional Custodians was that the sites inspected remain in generally good condition," said Daniel.

"Traditional Custodians did identify some areas in need of additional vegetation management, and that vegetation management was supervised by elders and Indigenous community members in November last year. Another issue identified was rubbish washing up on shore which is also now managed."

Learn more about Woodside's cultural heritage management **here**

A soaring community experience

Western Australia's Pilbara shorebirds undertake a remarkable migration journey of over 10,000 kilometres to breed in the northern hemisphere, sustained by the region's marine cuisine.

Around 70 participants recently attended an annual community event at Hearson's Cove featuring shorebird watching and information sessions, and a tour of the incredible petroglyphs at Nganjarli (Deep George).

The event aims to raise awareness about the significance of the Pilbara coast for shorebirds and the rich cultural heritage of the area. Participants gain insights into the birds' behaviour and contribute to conservation efforts within the community.

Woodside Energy thanks the collective support from co-hosts, Pilbara Ports, Rio Tinto, Yara Pilbara and the DBCA Parks and Wildlife Service who partnered with the Murujuga Aboriginal Corporation Rangers and Birdlife Australia.

Community spotlight

Impact felt locally in Karratha

Impact Digi is a Pilbara-based Indigenous owned and operated marketing agency with close to a decade of experience working with Woodside Energy.

A full-service marketing agency, Impact Digi has built relationships with government, industry, Indigenous organisations and businesses of all sizes helping them to build brands and reach stakeholders.

"The past couple of years have been extra rewarding as our reputation has grown within Woodside and we're getting to work with team members from other areas of their business," said Impact Digi Managing Director, Tamara Bin Amat.

Starting off by offering photography services when they first began, Impact Digi has transformed over time with a growing team, refined services and an expanded reach.

"Looking back, one of my favourite moments was when local Asset Manager for the Karratha Gas Plant, Breyden Lonnie presented our first ever award for Best Aboriginal Business at the 2015 Karratha and Districts Chamber of Commerce and Industry (KDCCI) Business Excellence Awards," said Tamara.

With Impact Digi recently winning the Business Excellence Award for Best Small Business at the 2024 Awards, among many other accolades, the recognition continues.

Tamara and her team understand the importance of supporting local and contributing to their community.

"Working with Woodside has not only boosted our business but also our reputation, opening doors to new opportunities across the state," said Tamara.

Continue reading about Impact Digi's experience working with Woodside **here**

Managing Director, Tamara Bin Amat left with her team.

Community partners playing a friendly game of lawn bowls during the sundowner event

Woodsiders ready to chat at Ross St Mall

Talking Point

Engaging Exmouth

Did you know that Woodside has been engaging with the Exmouth community for over 15 years? Woodside operates two Floating Production Storage and Offtake (FPSO) facilities around 50 kilometres off the coast of Exmouth, the Ngujima-Yin FPSO and the Pyrenees FPSO.

In November 2024, Woodside wrapped up the year with a series of engagements with stakeholders, community partners and the Exmouth community.

This included a Community Liaison Group meeting which is a forum co-hosted by Woodside and Santos. The joint approach stemmed from community feedback received around a decade ago, and the collaborative format has been retained to this day. The group meets three times a year and both Woodside and Santos provide updates on activities and community initiatives, inviting members to raise queries and provide feedback.

Woodside recently presented on our climate strategy and invited research partner, CSIRO to share updates on Ningaloo Outlook, a program furthering knowledge on the deep and shallow reefs of Ningaloo Coast World Heritage Area.

Woodside and Santos thanked community partners during a sundowner event at the Exmouth Bowling Club. This was a great opportunity to celebrate shared commitment to positive community outcomes over a friendly game of lawn bowls.

The following day, Woodside held a pop-up Environment Plan consultation stand at Ross Street Mall where locals (including the iconic Exmouth emus) and visitors dropped by to find out more about our activities and proposed plans.

Woodside's active engagement in community illustrates our commitment to open and transparent consultation.

Read about the Woodside supported programs focusing on the unique ecosystem along the Ningaloo Reef and Exmouth Gulf **here**

Join the conversation at **woodside.com/what-we-do/consultation-activities**

Community conversations

Open and transparent consultation is important to Woodside. Consulting firm GHD was recently in Karratha to speak with community stakeholders as part of Woodside's socio-economic impact assessments for communities that host Woodside's workforce and assets.

These insights assist Woodside to identify, assess, and manage social impacts and benefits that may arise from different operational and project scenarios in Karratha and aims to uncover new ways for Woodside to partner with the community in the future.

This informs Woodside's future strategies for impact management, community engagement, local content and social investment.

Further consultation will be taking place in April 2025.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the Woodside North West Facebook page for updates, including our Karratha Community Update.

Stay up to date on our continued contribution to the community we call home.

Search on Facebook or click **here**

Environment planning continues to move forward

To undertake offshore petroleum or greenhouse gas activities, a titleholder is required to have an accepted Environment Plan, also referred to as an EP, in place.

In accordance with the objectives of the government regulations, the main purpose of an EP is to demonstrate two things. The first is that potential environmental impacts and risks from activities are identified and appropriate management and mitigation controls are implemented to a level that is 'as low as reasonably practicable' (ALARP) and acceptable.

The second ensures activities are carried out in a manner consistent with the principles of ecologically sustainable development set out in the *Environment Protection and Biodiversity Conservation Act 1999*.

It takes extensive work and time to develop an EP. A staged approach includes early planning of the proposed activity, defining the existing environment, consideration of potential impacts and risks to the environment, and identifying appropriate mitigation and control measures to manage risks to ALARP and an acceptable level.

Woodside Environment Plan Delivery Team Lead, Tim Mander, came into his role in 2023 following a number of legal challenges on the consultation processes under the Offshore Environment Regulations.

"Coming into the role was an interesting and challenging time. We navigated our way through this and in 2024, 12 Environment Plans were accepted with activities spanning ongoing operations, decommissioning, drilling, surveys, and installation of subsea infrastructure on the seafloor," Tim said.

"This year again, we have a number of Environment Plans kicking off across a range of different activities. We'll continue to focus on how we improve what we do to ensure our processes and management measures are appropriate to the nature and scale of these activities."

Environment Plans are required for both State and Commonwealth waters, with the National Offshore Petroleum Safety and Environmental Management (NOPSEMA) assessing and accepting Commonwealth EPs and the Department of Energy, Mines, Industry Regulation and Safety assessing and approving State EPs.

Woodside's Commonwealth EPs, currently under assessment and EPs that have been accepted can be viewed on NOPSEMA's website.

Several of the Scarborough Energy Project EPs were accepted in late 2023, including trunkline installation, with the work completed in October 2024

Upcoming engagement opportunities

Roebourne

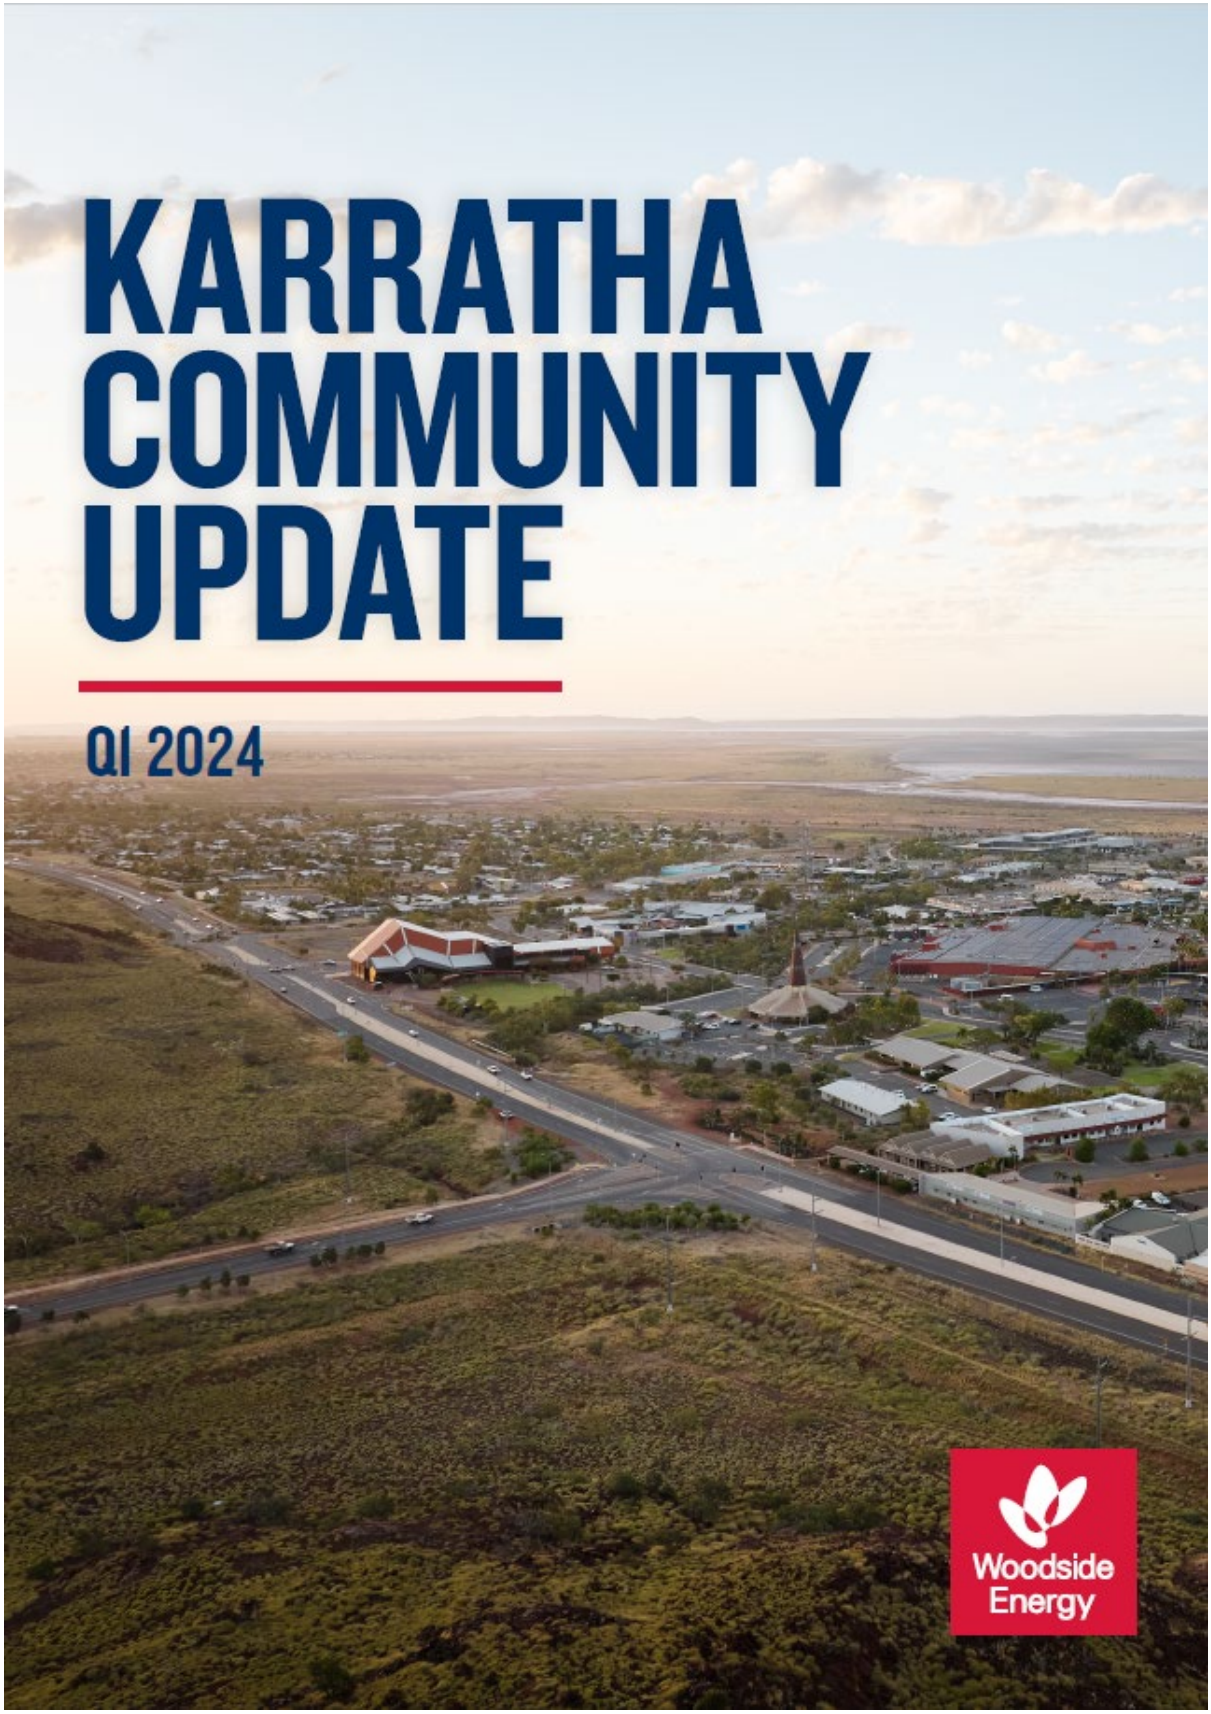
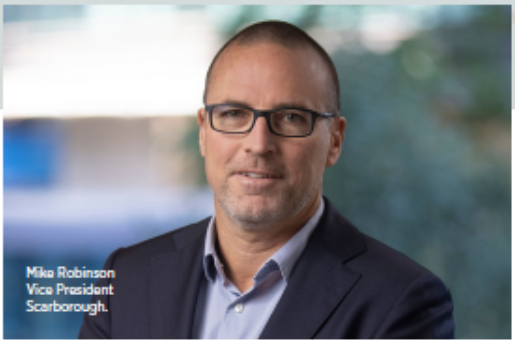
5.8 Karratha Community Update Newsletter



Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.



Mike Robinson
Vice President
Scarborough.

Graduating apprentices and trainees at Red Earth Arts Precinct.

The Scarborough Energy Project will see gas from the Scarborough fields piped approximately 430 km to be processed onshore at the Pluto LNG facility, where Pluto Train 2 is currently under construction. Scarborough gas will also be processed through the existing Pluto Train 1 plant following modifications, which are expected to commence in late 2024.

The Project is now more than 55% complete[1], and in March 2024, Pluto Train 2 achieved a key milestone, the arrival of the first modules in Karratha. This year, a total of 51 modules will be delivered to Pluto for installation.

This year, Woodside also celebrates its 70th anniversary and the North West Shelf Project marks 40 years of domestic gas production and 35 years of LNG exports from Karratha. Over this period, we have provided reliable energy to Australia and the world from the community we continue to call home. Karratha is where the Woodside story began and the Scarborough Energy Project will build on the legacy of supporting the world's energy needs from this region.

We are proud of the Scarborough Energy Project and what it will deliver for the Karratha community and the nation.

Mike Robinson
Vice President Scarborough

[1] The completion percentage excludes the Pluto Train 1 modifications project.

Celebrating success: Woodside Training Academy Graduation and Awards

The Karratha Gas Plant-based Woodside Training Academy has seen more than 750 apprentices and trainees commence their learning journey with Woodside since it opened its doors in 2010.

The Academy plays an integral role in hosting those who are building their employable skills and experience, supporting the development of local workforce capabilities.

This March, Woodside welcomed 21 apprentices and trainees into roles across its Burrup assets. The Woodside Training Academy Graduation and Awards held at Red Earth Arts Precinct saw the graduating cohort celebrated for their achievements in completing their training. The event also recognised and awarded the outstanding performance of particular individuals throughout their training process. The award recipients were selected for their dedication, commitment and consistent demonstration of Woodside's values.

An additional 33 apprentices, trainees and pre-pathway trainees, including 17 school leavers from the Karratha area, have been recruited by Woodside's training partner, Programmed Training Services and are being hosted by Woodside in 2024. We're proud to have close to 100 apprentices and trainees learning their craft at the Woodside Training Academy and offshore assets this year.

Woodside extends investment in education initiative

Woodside was recently joined in Karratha by the WA Minister for Education Dr. Tony Buti MLA and Kevin Michel MLA to share news of our ongoing collaboration with schools in the local community.

Together with our joint venture partners, we were pleased to announce our extended support for education in the City of Karratha after signing five-year community partnership agreements for the ongoing delivery of the Karratha and Roebourne Education Initiative (KREI).

The extension builds on more than 15 years of investment by the Woodside-operated North West Shelf Project to bridge the gap between the opportunities and resources available to students residing in the Pilbara and their metropolitan peers, and support students on their pathway to employment.

The renewed agreements with the Department of Education and St Luke's College increases funding provided for programming at local high schools and extends that support to primary schools in the community.

The funding will enable the delivery of quality educational opportunities, including ATAR revision seminars, additional STEM curriculum, student leadership programs, employment and career pathway planning, and teacher development.

Western Australia's Minister for Education, Hon Dr Tony Buti MLA, said he is thrilled support for the initiative will continue for years to come, benefitting even more students in the Pilbara.

"It has proved to be a very successful partnership over the years helping many students achieve their best and guiding them to a range of careers," Minister Buti said.

Woodside CEO, Meg O'Neill, said the renewed agreements reflected Woodside's commitment to improving capability and capacity in its host communities.

"The initiative has delivered strong educational outcomes and its success is a testament to what can be achieved when we work collaboratively with a student-centred approach," she said.

Baynton West Primary School Principal Lisa Ledger, WA Minister for Education Hon Dr Tony Buti MLA, Woodside Energy Corporate Affairs Manager North West Amanda Fuery, Pilbara Education Regional Office Program Coordinator Amanda Lawrence, Member for Pilbara Kevin Michel MLA and students from Baynton West Primary School.

Apprentice takes home Citizen of the Year

Meet Rhian. She's a fourth-year, Programmed Electrical Instrumentation Apprentice at Karratha Gas Plant and was recently named the City of Karratha's Citizen of the Year.

Rhian joined the Karratha Volunteer Fire and Rescue Service to meet people and make friends when she first moved to Karratha. She now holds a senior position and is on-call 24/7 with requests for jobs, including road crash rescues, house fires, HAZMAT incidents and assisting the local police.

But Rhian's contribution to the community doesn't stop at fire and rescue. Five years ago, she joined St John Ambulance as an Emergency Medical Technician volunteer.

She's attended more than 800 jobs in and around Karratha, and she also helped at the 2019-2020 Black Summer fire in QLD. Rhian also volunteers at community events like Speedway, Karratha's FeNaCING festival, Santa lolly runs, youth cadets and school visits.

"I just love giving back to the community and helping people in times of need. It's what I enjoy doing in my spare time. Some people play sport. I volunteer," said Rhian.

Electrical Instrumentation Apprentice and City of Karratha Citizen of the Year, Rhian

Indigenous Collegiate leads cargo loading

As the Woodside-operated North West Shelf Project prepares to mark 35 years of delivering LNG cargoes to our international customers, another achievement was recently recognised at Karratha Gas Plant.

In January, an LNG cargo was loaded at Karratha Gas Plant's berths by a team made up entirely of Indigenous employees.

The team consisted of nine members from Storage and Loading, including Operations Support Trainees through to Maintenance Technicians and Supervisors. The vessel was also piloted by Woodside and Australia's first Indigenous master mariner.

Woodside's Indigenous Liaisons Coach, Josh Hill, said the activity demonstrated the progress Woodside has made in creating employment opportunities for First Nation's people.

"It was inspiring to see and reflects Woodside's work to increase Indigenous recruitment and provide career support for members of the Indigenous Collegiate," he said.

Pluto Train 2 modules arriving in Karratha.

Making significant progress on the Scarborough Energy Project

The Scarborough Energy Project's Pluto Train 2 achieved a major milestone with the first three modules now safely installed on site in Karratha.

The modules, which arrived in February 2024, weigh a combined total of more than 4,000 metric tonnes, equivalent to the weight of 30 houses or 24 Boeing 787 Dreamliner aircraft. The modules were transported from Pilbara Ports to the construction site at the existing Pluto LNG facility using 21 specialised hydraulic transporters with 126 axles and 504 wheels.

Our CEO, Meg O'Neill, said the delivery of the first Pluto Train 2 module was a key milestone towards the delivery of the Scarborough Energy Project, which will help meet the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

"The safe and timely arrival of the module is a testament to the hard work and dedication of the Woodside team and our lead contractor Bechtel," she said.

The Scarborough Energy Project will contribute significantly to the Australian economy and create thousands of job opportunities during its construction phase.

The Project is already benefiting local Karratha businesses, including almost 30 Indigenous businesses that have been engaged. It is also supporting Woodside's investment in social contribution partnerships that provide positive impacts for those living in the Karratha community.

Scan the QR code or click here to see the arrival of the modules in Karratha .

Local businesses set to benefit from the Scarborough Energy Project

The Scarborough Energy Project, including Pluto Train 2 is providing opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Project has injected more than $90 million locally and contracted with close to 70 Karratha businesses.

Local, family-owned business, ATOM is one of these businesses. ATOM was recently awarded a contract to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best, which is why their 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980, where during the same decade, we commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader of ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

Darren Wilson, ATOM Karratha Branch Manager.

Would you like to know what Woodside has planned on land and sea?

Q2 – 2024

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Volunteering WA Regional Community Engagement Coordinator Kelly Nunn (left) with Woodside volunteers at Gumala Early Learning Centre.

This year, Woodside celebrates its 70th anniversary and four decades of operations in Karratha.

Over this time, we have provided the reliable energy our state needs to power homes and industry.

2024 also marks 35 years since the North West Shelf Project loaded its first liquefied natural gas (LNG) cargo. After delivering more than 6,500 cargoes from the Karratha Gas Plant and Pluto LNG, we continue to supply the gas our international customers require to continue their decarbonisation journeys.

Since 1984, Woodside and its joint venture partners have made lasting contributions to the Karratha community through valued social contribution partnerships, employment and training pathways and opportunities for local businesses. These important and positive impacts were front of mind 40 years ago, and they will be as we embark on a period of change across our North West operations.

As the North West Shelf reserves gradually decline, we are assessing our future infrastructure requirements. We have previously said that we will be retiring one LNG processing train at the Karratha Gas Plant, which could happen as early as this year. We also continue to pursue opportunities to process other resource owners' gas and are focused on remaining a world-class tolling facility, albeit one that may become smaller over time.

At the same time, we are progressing our Scarborough Energy Project and building a second train at our Pluto LNG facility. We are pursuing local new energy opportunities, including the proposed Woodside Solar facility and we are investigating a potential carbon capture and storage project to help decarbonise industry in the Pilbara.

While the North West Shelf will operate differently over the next 40 years, our commitment to the Karratha community remains strong.

Just as the North West Shelf marked itself in Australia's history books in 1984, as we start to write a new chapter in the North West, we will do so together with the Karratha community.

Breyden Lonnie
Vice President North West Shelf

WOODSIDE VOLUNTEERS MAKE VALUED CONTRIBUTIONS

At Woodside, we take pride in giving back to the communities in which we operate. One of the ways we do this is through our corporate volunteering program.

Since the launch of the program with Volunteering WA in 2010, Woodsiders have been lending a helping hand with all kinds of community projects. Most recently, volunteers have participated in a range of activities from cooking meals for The Salvation Army to building a sandpit at Gumala Early Learning Centre and assembling furniture for the redevelopment of Roebourne District High School.

Our program partner, Volunteering WA, plays a crucial role in the success of Woodside's volunteering efforts by connecting us with local organisations in need of assistance and facilitating the opportunities to participate.

Volunteering WA's Regional Community Engagement Coordinator, Kelly Nunn said the partnership has delivered some important outcomes for the local community.

"Corporate volunteering offers fantastic opportunities for community organisations to complete ongoing maintenance or projects with the help of Woodside's employees, allowing them to focus on what they do best - providing programs and events for our community," she said.

STAY UP TO DATE ON OUR CONTINUED CONTRIBUTION TO THE COMMUNITY WE CALL HOME.

WOODSIDE NORTH WEST

WORK READINESS PROGRAM CREATES CAREER PATHWAYS

A new Work Ready Program being run as part of the Pluto Train 2 Project is supporting skills development for local participants.

The latest round of the program commenced in February 2024, with participants offered the opportunity to build employable skills and industry experience. Participants complete Construction White Card, First Aid and site induction certifications. During the program, Bechtel offered job shadow placements of participants' choice which provided invaluable insights into the industry, helping them make informed decisions about their futures.

Gaining on the job experience with Bechtel also built work-life balance skills to prepare the graduates for full-time employment.

Sixteen individuals are now ready to commence full-time employment with Bechtel on the Pluto Train 2 site as Trade Assistants. The roles vary for these dedicated participants across various disciplines, including electrical, mechanical, warehousing and concreting.

A large part of the Work Ready Program's success is the camaraderie and culture that has been fostered within the group. As their skills have grown, so have integral and supportive relationships.

Woodside will continue to provide wrap-around support for these motivated participants, identifying long-term training and development opportunities such as apprenticeships, traineeships or roles within operations and projects.

Pluto Train 2 Project Manager, Tom Feutrill said the experience is creating pathways into fulfilling careers and building capability in the local community.

"Woodside's involvement in the program is aimed at establishing employment opportunities and providing successful and meaningful careers while developing critical life skills and confidence," he said.

Working with an experienced construction contractor such as Bechtel provides a unique opportunity to be involved in a program that supports meeting the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

The Work Ready Program is run by the Ngarliyarndu Bindirri Aboriginal Corporation (NBAC), supported by the Pluto Train 2 Project and the engineering, procurement and construction contractor, Bechtel.

NBAC team members with Work Ready Program graduates.

KARRATHA CENTRAL HEALTHCARE SOLAR INSTALL A SUCCESS

Social contribution plays an important role in building the capacity and capability of community partners to deliver positive impacts in the regions where we live and work. Together with our joint venture partners, Woodside is proud to support those who support others in the City of Karratha.

Allied health services provider, Karratha Central Healthcare is one of the valued organisations Woodside has proudly partnered with. In 2023, the Scarborough Energy Project assisted Karratha Central Healthcare to review its operations and strategies developed to support the not-for-profit's long-term sustainability. The review identified a reduction in operating costs as a key opportunity, with a particular focus on power expenditure.

The Pluto Train 2 Project was pleased to provide funding alongside the City of Karratha for the installation of a solar power system at Karratha Central Healthcare's premises. The system, which was installed by local business Coastal Electrical and Data, will go a long way in helping Karratha Central Healthcare to reduce its power costs.

Karratha Central Healthcare's Operations Manager, Kingsley Murray said the solar power system would help the organisation allocate resources into programs for the local community.

"The solar system has already made a notable difference to our operating costs; on a good day the system is supplying up to 95% of our power needs, and in overcast and lowlight conditions about 35-40%.

"These savings can then be used for our not-for-profit and charitable programs, it's a win for us and a win for our community," he said.

Karratha Central Healthcare clinic.

ACCOMMODATION INITIATIVE ACKNOWLEDGED AT EXCELLENCE AWARDS

In May 2024, the City of Karratha Service Worker Accommodation Initiative was recognised as a finalist in the Community Development category of the Australian Energy Producers' Excellence Awards.

The Service Worker Accommodation Initiative is a partnership between the City of Karratha, Woodside and industry that aims to provide additional affordable rental options for people working in critical service worker sectors in Karratha, like childcare and allied health.

Launched in 2021, the initiative established a pool of housing managed by the City of Karratha and Woodside, offering affordable rental options for service workers. Woodside and joint venture partners at Pluto LNG and the North West Shelf Project are pleased to now contribute 30 houses to the accommodation pool.

If you would like to find out more about the Service Worker Accommodation Initiative, visit the City of Karratha website.

GBSC Yurra team member working on one of the 20 new builds.

BUILDING MOMENTUM WITH LOCAL HOUSING CONTRACT

We understand that housing is an important issue for the Karratha community. And that's why Woodside is working closely with the City of Karratha and other stakeholders to help overcome this challenge.

Some initiatives established to support housing in Karratha include contributing 30 properties to the City of Karratha's Service Worker Accommodation Initiative, the incremental divestment of older housing stock as well as making a small number of properties available for lease on the open market.

Late last year, the Pluto LNG Project also entered into a long-term agreement with Traditional Owner business Karratha Housing Pty Ltd (a subsidiary of Yurra Pty Ltd) for the build and lease back of 20 houses in Karratha.

Under the agreement, 10 homes are being built by GBSC Yurra and another 10 will be constructed by Ngarluma Yindjibarndi Foundation Limited (NYFL) in partnership with Thomas Building.

Work is now well underway on the construction of these new homes, which will be leased back to Woodside for a period of 15 years and are targeted to be completed by the end of 2025.

All of the houses will be maintained by Karratha Housing Pty Ltd as part of the lease agreement that will provide long-term revenue and capital assets to support the Yurra business into the future.

Michael Woodley, Chief Executive Officer at Yindjibarndi Aboriginal Corporation and Yurra Founder said he is very proud of the Yurra team and the partnership that has been established with Woodside over recent years.

"Having long-term contracts such as this enables us to work collaboratively with Woodside Energy on mutually beneficial plans that will create real legacy for our community," he said.

Woodside is also investigating potential options to build up to 60 additional new homes in Karratha to address its future workforce needs.

Our partnership with the City of Karratha helps to support much-loved community events.

WOODSIDE JOINS THE FUN AT RED EARTH ARTS FESTIVAL

Woodside and some of our joint venture partners were pleased to support the City of Karratha's Red Earth Arts Festival (REAF) which featured over 70 performances, workshops, and experiences over four days in May 2024.

This year saw the introduction of REAF at The Quarter which offered a suite of free, family-friendly activities, activating and transforming the area into a hub of artistic and cultural activity.

The Plants of the Pilbara installation was a highlight, a pop-up flower dome sculpture invited viewers to experience the magic of Western Australia's native flora on a larger-than-life scale. Artists from Yinjaa-Barni Art Group painted and displayed art on site, welcoming the public to engage.

Locals were spoilt for dinner choices as part of Karratha City Eats, picnicking on the Quarter grass while enjoying an open-air performance featuring captivating handpan artist Sam Maher and Indigenous songwriter Frank Yamma, crossing cultural and musical boundaries.

The Community Development partnership between the City of Karratha and Woodside and our joint venture partners was extended last year, with support from the Scarborough Energy Project. This supports the continued provision of important and much-loved community events like REAFas well as liveability initiatives and significant City projects.

City of Karratha Mayor Daniel Scott said working together was an integral part of delivering high quality community programs and well-attended community events.

"This support is incredibly important, assisting City operations in the delivery of exceptional events, programming and projects for our residents to enjoy," he said.

Q3 – 2024

Woodside Energy

Karratha Community Update

Edition 3 | 2024

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Earlier this year, I relocated to Karratha and commenced as Asset Manager of the North West Shelf Project's Karratha Gas Plant.

It was a real pleasure to join Woodside's local team at a time when we were celebrating 70 years of Woodside and 40 years of operations right here in the North West.

Karratha is where our story began in Western Australia and Woodside has a proud history of contribution to the place we continue to call home. This year's milestones gave me insight into the longstanding partnerships and strong relationships we've developed with the community over this time.

The North West Shelf Project has contributed more than $300 million within the City of Karratha since our operations began. This investment in the local community and economy continues as we support partnerships and businesses like the ones you will read about in this update.

We are entering a period of change at the Karratha Gas Plant as we undertake work to prepare for the retirement of one of our LNG processing trains later this year. This is an important step in the journey ahead as we navigate the gradual decline of the North West Shelf reserves and continue to pursue opportunities to process other resource owners' gas.

As we manage the future of the North West Shelf alongside our Pluto LNG operations and the growth of the Scarborough Energy Project, we will continue to engage and collaborate with those we work with, partner with and live alongside. We look forward to engaging and involving the local community in the future of Woodside in Karratha, working together to create opportunities in the place we call home.

Derek Paulgaard
Asset Manager North West Shelf Onshore

Celebration sundowner

On the evening of 18 September, as the sun set over Karratha, we gathered with our local community partners to celebrate both Woodside's 70th year as a proud Australian company and 40 years of operations in the North West.

Our sundowner event, held at the Red Earth Arts Precinct, provided an opportunity to share our appreciation for the local community which has supported Woodside over its decades of operations in Karratha.

Woodside Executive Vice President and Chief Operating Officer Liz Wescott joined us at the event and expressed her gratitude for the role those in attendance continue to play in shaping Karratha into a thriving and connected community.

Liz also announced a one-off large grant round, supported by Woodside and its Joint Venture participants in the North West Shelf Project and the Scarborough Energy Project's Pluto Train 2.

With applications open throughout October, the Woodside Anniversary Grants will provide funding of up to $100,000 to community groups and not-for-profit organisations in the City of Karratha to support health, liveability, sustainability and environmental outcomes.

Thank you to all who joined us in marking such a special occasion.

Stay up to date on our continued contribution to the local community Woodside North West

Winyama awarded construction contract

This year, Woodside awarded its largest ever Traditional Owner construction contract to Karratha company Winyama Contracting Group (Winyama). The contract was awarded for the delivery of civil works for the Pluto Train 1 Modifications Project. Winyama will work alongside Kellogg Brown & Root Pty Ltd., the project's engineering, procurement and construction management contractor.

Winyama is a 100% Karratha-owned and 50% Indigenous-owned provider of civil, construction and mining services and renewable asset hire that prioritises spend with local and Indigenous suppliers. The name Winyama, meaning Sea Eagle in the Ngarluma language, symbolises the company's mission to provide economic opportunities and prosperity for local Aboriginal people. It is a bird that has held significance through the female line of Ngarluma majority owner Arthur Ramirez's family for generations.

Woodside Pluto Expansion Project Manager Paul Baker said Woodside was thrilled to be partnering with Winyama for the delivery of the civil works for the Pluto Train 1 Modifications Project and supporting the delivery of local business and employment outcomes for the Pilbara.

"By engaging a local Indigenous-led and owned contractor, we're securing the delivery of an important service while contributing to the local economy. The contract will also support the growth of Winyama, increasing the company's capacity to deliver services to other industries across the Pilbara," he said.

Arthur Ramirez, Winyama Chairman and Indigenous Business Manager, said the new supply agreement with Woodside was a major milestone for Winyama.

"This project will allow our team to grow by about another 65 new employees, with the majority being residential employees.

"Being engaged on the Pluto Train 1 Modifications Project will help fulfil Winyama Contracting Group's vision to increase its footprint in the region, which will enable us to increase our focus on outcomes for Aboriginal people through our reflection Reconciliation Action Plan.

"We are really proud that Woodside has chosen a local Karratha-based Indigenous business to execute a major portion of one of their largest current projects, showing they live their values and support local and Indigenous business growth in the region," he said.

Winyama, KBR and Woodside representatives at Pluto LNG.

Healing comes from Country

Roebourne-based start-up Warridahs of the Ngurra (WOTN) aims to build awareness and respect for traditional bush medicine and share cultural knowledge. Meaning 'Women of Country' in Ngarluma language, WOTN was founded in 2023 by Ngarluma and Banjima woman, Kylie Mowarin.

Kylie's years of dedication to exploring the uses and benefits of native plants have seen her experiment with the ingredients in teas and ointments. The healing properties of these plants have recently been reinforced by modern scientific research conducted in partnership with Griffith University.

"We are working with Griffith University, testing two traditional plants for their antimicrobial, antioxidant and anti-inflammatory properties. So far, we are seeing very positive results," said Kylie.

With support from Woodside, Kylie recently held a bush medicine workshop on Murujuga alongside local Elders, representatives from Murujuga Aboriginal Corporation, Griffith University and a leading archaeologist.

Students from Roebourne District High School were among the attendees at the workshop at Hearson's Cove. Kylie spoke with students about the scientific attributes of traditional medicines and their gathering methods.

"It's important to pass on our knowledge from our ancestors and for our young ones to understand our cultural connections to Country and how it can help with healing our bodies and minds," said Kylie.

Liz Ritchie, Roebourne District High School Principal, said the students' involvement in the workshop was part of Connected Learning, a program developed with support from the Karratha and Roebourne Education Initiative to link classroom curriculum with cultural knowledge and community.

"We are deeply committed to delivering education that is culturally respectful and meaningful. This work can only be achieved when we have the guidance, support and expertise of our families, community advisors, and Elders.

"Participating in the Warridahs of the Ngurra workshops enables our young people to demonstrate practical applications of the learning that occurs in class and on-Country throughout the term.

"The day was an authentic example of how curriculum delivery in a culturally responsive and connected way leads to deep two-way learning of skills and knowledge," she said.

Looking ahead, WOTN plans to create a healing hub in Roebourne, which aims to balance education, wellbeing, and a sustainable business by building upon a range of products Kylie has been developing with native plants.

"We also plan to provide on-Country tours, which will provide economic prosperity for our people through employment and educating women in how to run a business," said Kylie.

Kylie Mowarin with students from Roebourne District High School at Hearson's Cove.

Stay up to date on our continued contribution to the local community Woodside North West

KREI supports student revision seminars

For more than 15 years, Woodside and its Joint Venture participants have contributed to programs aimed at enhancing academic achievements among students in the City of Karratha. Since the establishment of the Karratha and Roebourne Education Initiative (KREI), a key focus has been to bridge the gaps in opportunities available to local students and their peers in metropolitan areas.

During the recent school holidays, the KREI supported a group of Year 12 students from St Luke's College to travel to Perth for a 10-day educational experience. The local students participated in a series of intensive revision seminars, designed to prepare them for their WACE examinations. With small class sizes and personalised help from specialist teachers, students were able to delve into the course material and discuss valuable exam strategies.

While in Perth, the students dedicated time outside the seminars to learn about life at university. They visited several campuses where they engaged in pre-arranged faculty workshops and met with student ambassadors to gain valuable insights into the university environment, academic workload, course offerings and entry pathways.

The students also took the opportunity to explore the university accommodation colleges, helping them to envision their potential future living arrangements and supporting their readiness for their upcoming transition to higher education.

St Luke's College Upper School Pathways Coordinator Carol Potter said this year's revision seminars were an outstanding success.

"We are very fortunate to have the support of the Karratha and Roebourne Education funding, which made both the revision seminars and university visits possible. Our students are now feeling more prepared ahead of their final examinations and transition into tertiary education, away from their family to a big city," she said.

Supporting local students from St Luke's College and Karratha Senior High School to travel to Perth for revision seminars is just one example of Woodside and its Joint Venture participants' contribution to schools in the City of Karratha. Earlier this year, Woodside announced the renewal of the KREI, with five-year community partnership agreements. The renewal builds on a strong history of collaboration and provides continued investment to help local high school and primary school students thrive.

Students from St Luke's College on KREI supported Perth visit.

Scarborough trunkline installation a success

This October, Woodside marked an important milestone as it announced the completion of the Scarborough Energy Project's trunkline installation. Once operational, the 433 km trunkline will transport gas from the offshore Scarborough field to the onshore Pluto LNG facility for processing.

Reaching depths of up to 1400 m, the trunkline took around 12 months to install and had numerous teams and contractors contributing to the successful work program.

Woodside Executive Vice President and Chief Operating Officer Australia Liz Westcott said the trunkline was a critical piece of infrastructure for the Scarborough Energy Project.

"The completion of installation is a significant accomplishment, reflecting the dedication of all involved in achieving this project milestone.

"With the last components of the trunkline in place, the focus will be maintained on safely executing the remaining project scopes to support the targeted first Scarborough LNG cargo in 2026," she said.

Following the successful installation of the trunkline, work will now commence on the pre-commissioning in preparation for hook-up of the subsea infrastructure.

The Scarborough Energy Project was 73% complete in October[1], and is set to help meet demand for the reliable energy the world needs today and into the future. This includes up to 225 terajoules a day of domestic gas supply into the Western Australian market from operations in Karratha.

These volumes will be processed by the recently delivered Pluto Train 2 domestic gas module. The important piece of infrastructure, which arrived in Karratha and was installed in early September, weighs over 1500 tonnes and will connect to the domestic gas export compressor. The domestic gas module is one of the 51 modules that is targeted to be delivered to site by the end of this year.

[1] Excluding Pluto Train 1 modifications.

Let's Talk

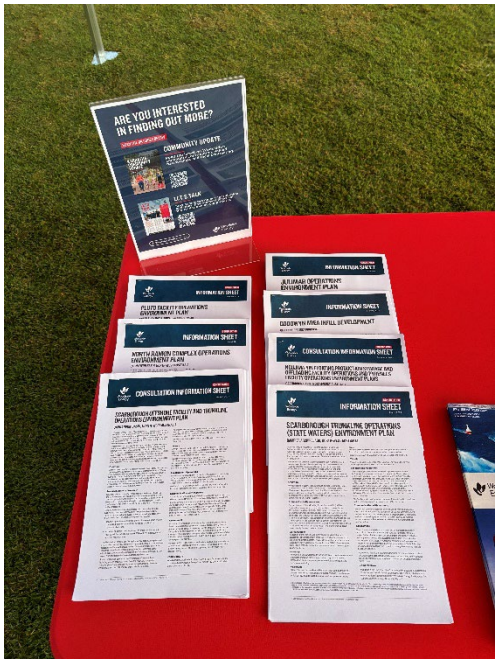
Our plans, Your say

Head to woodside.com/consultation-activities to read our latest edition and Environment Plan consultation information.

We welcome feedback on your relevant functions, activities or interests. Alternatively, you can contact us at consultation@feedback.woodside.com or on 1800 442 977.

5.9 Community pop-up at Lo's Cafe (26 July 2024)

Location	Karratha
Activity	Community pop-up at Lo's Cafe
Date	26 July 2024
Description of the consultation	Woodside hosted a stand in the community to coincide with Woodside's 70th birthday and 40 years of safe operations in Karratha. Members of Woodside's Corporate Affairs team actively engaged with the community to discuss proposed Environment Plan activities and general community engagement discussion. Woodside displayed a QR code on the stand, linked to the Let's Talk EP newsletter on the Woodside consultation page of the website. A pull-up banner was on display focusing on engagement on our plans at land and sea with a QR code to the consultation page on the Woodside website. Woodside made available printed consultation information sheets for this EP.
Advertising and invitations	Woodside advertised this engagement on social media only. • Social media post was advertised on Woodside North West Facebook page on 26 July 2024. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website)was displayed at Woodside's stand along with current EP factsheets.
Estimated number of individuals / organisations consulted	Over 60 community members attended the event. Woodside spoke to many community members, recording 10 meaningful conversations.
Summary of Feedback, Objection or Claim • Approximately 10 conversations occurred around employment opportunities and pathways, social investment, the Environment Plan process and approvals in general. • No feedback was received regarding Woodside's Environment Plans.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
This session forms part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2** of the EP).	



Woodside North West is with **Woodside Energy.**
5 days ago ·

🎉 It's our birthday 😘

Today we're celebrating 70 years of Woodside, and this year, four decades of safe and reliable operations in Karratha.

To thank the community for their support over this time, we've been providing free morning coffees across the City of Karratha this past month.

Join us at just one of the participating local providers, Lo's this morning! Grab a coffee on us and let's talk about upcoming projects, ongoing operations and our role in the community we've proudly called home for forty years.

As we celebrate this significant milestone, we look forward to continuing to support the local community through our ongoing operations and growth projects. This includes the Scarborough Energy Project and Pluto Train 2, which has engaged more than 75 Karratha businesses since construction began.

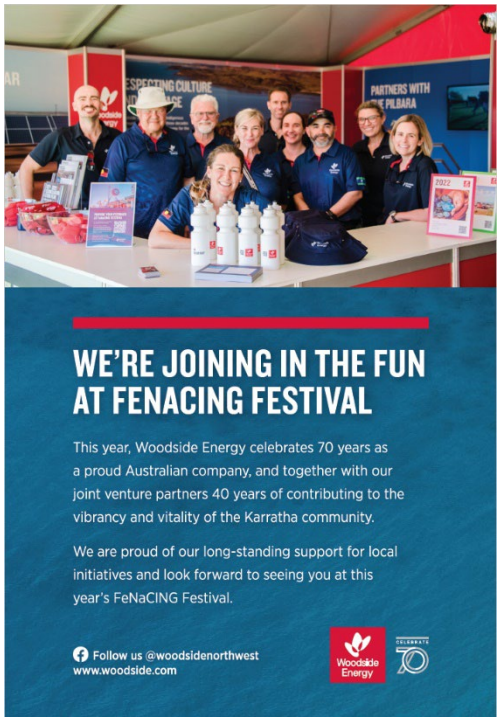
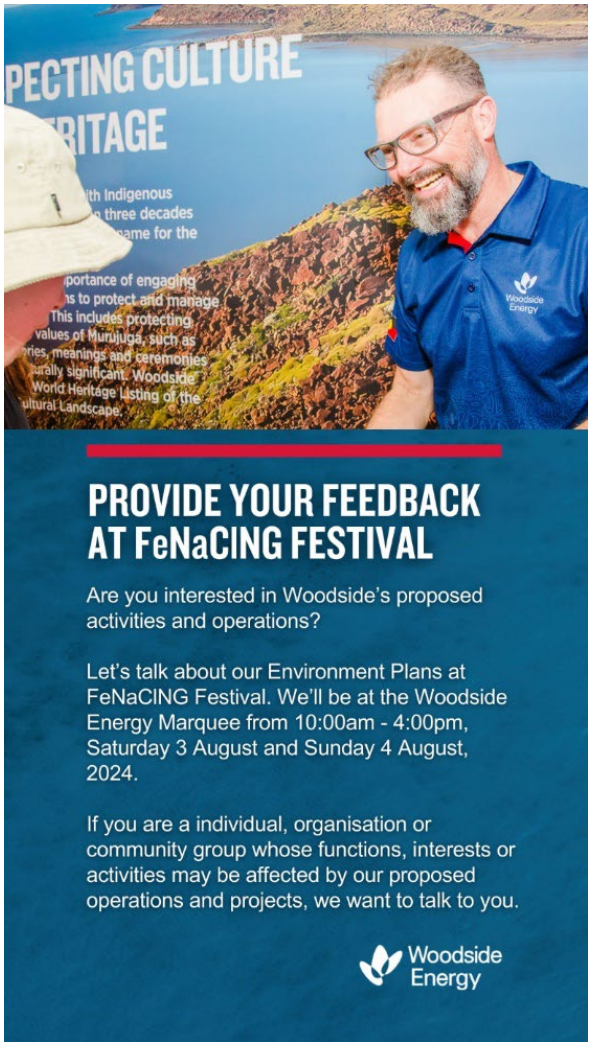
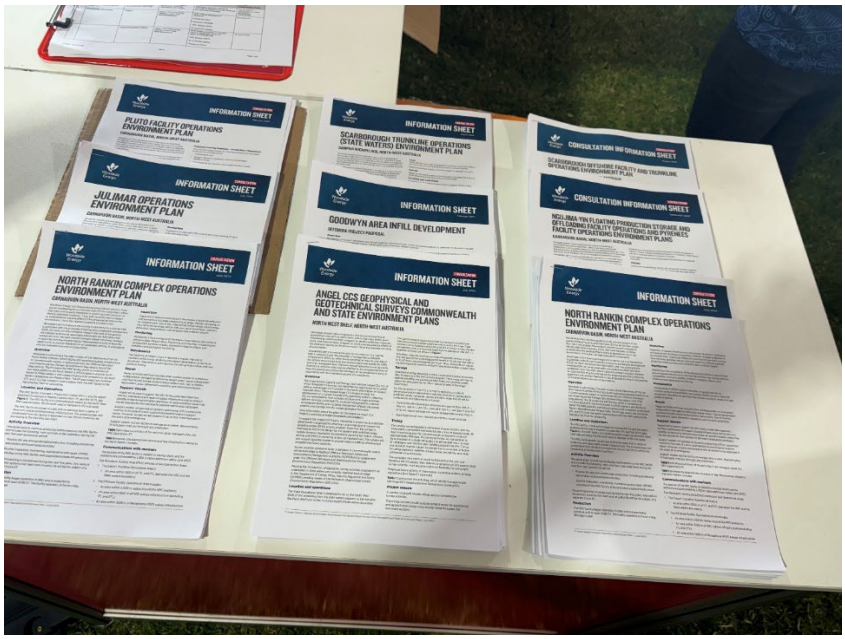
5.10 FeNaCING Festival (3 to 4 August 2024)

Location	Karratha
Activity	FeNaCING Festival
Date	3-4 August 2024
Description of the consultation	Woodside hosted a stand at the FeNaCING Festival 2024. Members of Woodside's Corporate Affairs, Environment and Operations teams actively engaged with the community to discuss proposed Environment Plan activities. Woodside displayed a QR code on the stand, linked to the Let's Talk EP newsletter on the Woodside consultation page of the website. A pull-up banner was on display focusing on engagement on our plans at land and sea with a QR code to the consultation page on the Woodside website. Woodside made available printed consultation information sheets for this EP.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Social media post was advertised on the City of Karratha and FeNaCING Festival Facebook page on 18 July 2024.). • Social media post was advertised on the Woodside North West Facebook page. • FeNaCING Festival lift-out in the Pilbara News on 31 July 2024. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was on display outside the Woodside Marquee, and EP factsheets were displayed, and provided in the Woodside Marquee.
Estimated number of individuals / organisations consulted	Over 10 000 community members (City of Karratha) attended the event. Woodside spoke to many community members, recording 30 meaningful conversations.
Summary of Feedback, Objection or Claim • Approximately 10 conversations occurred around new energy opportunities and plans. • Other conversations included: o Local content o Social investment o General understanding of an EMBA o Approvals status for Browse and Scarborough o The future of the Karratha Gas Plant assets future o How oil and gas is produced o Tax and royalties. • No feedback was received regarding specific Environment Plans.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Woodside's participation at FeNaCING forms part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2** of the EP).	







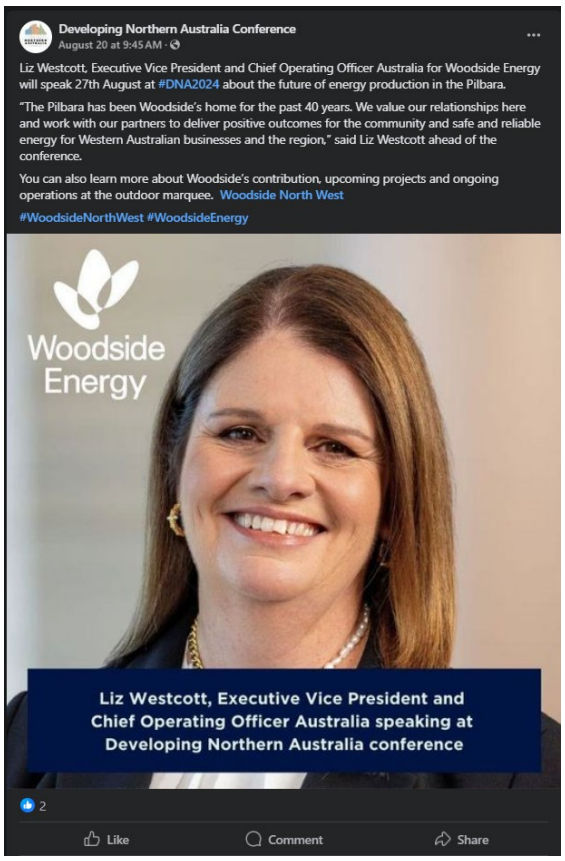
5.11 Developing Northern Australia (DNA conference) (26 to 28 August 2024)

Location	Karratha
Activity	Developing Northern Australia (DNA) Conference
Date	26-28 August 2024
Description of the consultation	Woodside hosted an exhibition stand at the DNA Conference. Members of Woodside's Corporate Affairs team actively engaged with 400+ individuals, policy makers and decision makers attending the conference to discuss, amongst other things, EP activities. Woodside displayed a QR code, linked to the Let's Talk EP newsletter on the Woodside consultation page of the website. An ipad was available encouraging audience to view and subscribe to the consultation page on the Woodside website. Woodside made available consultation information sheets for this EP.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: Woodside advertised participation at the DNA Conference, the opportunity to consult and to enable individuals to self-identify, and enable individuals to provide feedback on proposed activities, through the following: • Social media post was advertised on the Developing Northern Australia Facebook page on 20 August 2024.

	EP consultation information sheets and copies of Let's Talk with QR codes linking to Consultation Activities - Woodside Energy were displayed and provided.
Estimated number of individuals / organisations consulted	Over 400 delegates attended the conference. Woodside spoke to many conference attendees, recording 20 meaningful conversations.

Summary of Feedback, Objection or Claim
• Approximately 10 conversations occurred around new energy opportunities and plans.
• Other conversations included:
  ○ Local content
  ○ Social investment
  ○ General understanding of an EMBA
  ○ How oil and gas is produced and the organisations future in energy transition
  ○ Price of gas for international project forecasting
  ○ Ai and simulation technology
  ○ Carbon sequestration
• No feedback was received regarding specific Environment Plans.	

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Woodside's participation at the DNA conference forms part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2** of the EP).	



5.12 Dampier Beachside Markets (12 October 2024)

Location	Dampier
Activity	Dampier Beachside Markets - Oktoberfest
Date	12 October 2024
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members from Woodside's Corporate Affairs team. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. An iPad with consultation/feedback subscription prompt was made available. Woodside made available printed consultation information sheets for this EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the Pilbara News on 9 October 2024. • Geotargeted Social media posts were published inviting public to attend on Woodside North West Facebook page. • Social media post from the event host, Dampier Community Association was published on 11 October 2024 inviting the public to attend. • Advertisement was displayed on community noticeboard at Lo's Café, Karratha, and Roebourne Library. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) displayed at Woodside's stand along with current EP factsheets.
Estimated number of individuals / organisations consulted	Over 1000 community members attended the event. Woodside spoke to many community members, recording 6 meaningful conversations.
Summary of Feedback, Objection or Claim	
• General interest in progress on the Scarborough project and the future of gas in the energy transition. • General interest in the Carbon Capture and Storage process. • Interest in the Woodside community grant program	

- EP approval process discussed and why we want to talk to the community. No concerns raised.
- General queries around employment and graduate opportunities.
- Interest in divestment of ex-Woodside homes.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims raised about EPs.
Woodside's participation at the market's is part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

5.13 Dampier Beachside Markets (2 November 2024)

Location	Dampier
Activity	Dampier Beachside Markets – Guy Fawkes
Date	2 November 2024
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members from Woodside's Corporate Affairs and First Nations teams. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. Woodside made available printed consultation information sheets for this EP.
Advertising and invitations	Woodside advertised event to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the Pilbara News on 30 October 2024. • Social media posts were published inviting public to attend on Woodside North West Facebook page. • Social media post from event host, Dampier Community Association was published on 11 October 2024 inviting public to attend. • Advertisement was displayed on community noticeboard at Lo's Café, Karratha, and Roebourne Library. • An EP consultation display with QR code (linked to the Consultation Activities page on the Woodside website) displayed at Woodside's stand along with current EP factsheets.
Estimated number of individuals / organisations consulted	Over 1200 community members (Dampier Community Association) attended the event. Woodside spoke to many community members, recording 10 meaningful conversations.
Summary of Feedback, Objection or Claim	
• General queries around employment opportunities. • General interest in the Scarborough progress and Browse and the future of gas in the energy transition. • EP approval process discussed and why we want to talk to community. No concerns raised. • General interest in the Carbon Capture and Storage process.	

• Discussions around the areas housing market and related industry opportunities.
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims raised about EPs. Woodside's participation at the market's is part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

5.14 Exmouth Community Information Session (14 November 2024)

Activity	**Community markets – Woodside stand**
Date	Thursday, 14 November 2024
Description of the consultation	Woodside hosted a stand at Ross Street Mall in Exmouth. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. Environment Plan Consultation Information Sheets available to attendees including this EP.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from November 9 to November 14 • Post on Woodside social media channel • Promotion at the Exmouth Community Liaison Group meeting • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with the EP factsheets and Project information sheets.
Estimated number of individuals / organisations consulted	Woodside had meaningful conversations with approximately 12 groups. These people identified as being Exmouth community members or visitors to Exmouth (residents of the East Coast of Australia or Western Australia).
Summary of Feedback, Objection or Claim	

• Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.
• There was general interest in Woodside activities. Key issues discussed:
  • Query on whether Woodside is building new marine infrastructure being built in the nearshore environment. A query was received on whether the design of Scarborough infrastructure allows for juvenile fauna to continue to traverse the nearshore environment.
  • Woodside responded that the Scarborough trunkline was installed by horizontal directional drilling to minimise impacts to the beach and nesting turtles. The Scarborough trunkline is not a solid structure that would block movement of nearshore juvenile fauna.
  ○ General queries on Woodside's footprint in Exmouth.
  ○ Queries about employment and local content opportunities.
  ○ Interest in understanding current social investment programs and opportunities.
  ○ Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough.
  ○ Query on domestic gas commitments for Woodside's activities.	

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity. The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.	

From 09 November 2024, Woodside ran an Operations EP specific geotargeted, sponsored social media campaign across regions within or coastally adjacent to the Operations EP EMBA. The campaign was designed to bring the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they could find out about Woodside's proposed activities by visiting Woodside's website.

5.15 Dampier Who's Who in the Hood (18 March 2025)

Location	Dampier
Activity	Dampier Community Association – Who's Who in the Hood
Date	18 March 2025
Description of the consultation	Woodside hosted a stand at the Dampier Community Hub available to community members, sporting groups and industry representatives who provide funding opportunities in Dampier. The stand was staffed by members from Woodside's Corporate Affairs teams. Woodside displayed a QR code at the stand, linked to the 'Consultation activities' page of the Woodside website and provided hard copy versions of the March 2025 'Let's Talk' newsletter. Woodside made available printed consultation information sheets including for this EP.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • Social media posts on the Woodside North West Facebook page inviting the public to attend (see below) • An EP consultation display with QR code (linked to the 'Consultation activities' page on the Woodside website) displayed at Woodside's stand along with current EP consultation information sheets (see below).
Estimated number of individuals /	Over 50 community members (Dampier Community Association) attended the event. Woodside spoke to many community members, recording 2 meaningful conversations.

organisations consulted	

Summary of Feedback, Objection or Claim
• General queries around community grants and what is available from Woodside.

Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response
There were no objections or claims raised about EPs. Woodside's participation at 'Who's Who in the Hood' is part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

APPENDIX G: ONGOING ENGAGEMENT WITH TRADITIONAL OWNERS

Proposed Program of Ongoing Engagement with Traditional Custodians

This Program of Ongoing Engagement with Traditional Custodians ("Program") has been developed to demonstrate Woodside's commitment to ongoing engagement and support of Traditional Custodians' capacity to care for and manage Country, including Sea Country, and has been directly informed by Traditional Custodians' feedback regarding their capacity to engage and consult on Environment Plans.

It is a living document designed to evolve with ongoing consultation and feedback from Traditional Custodians and, at a minimum, will be subject to annual review. In addition to this Program, Woodside will continue to participate in, and support collective industry engagement with Traditional Owners on the development of a future, sustainable, industry wide Program. Through the Program, Woodside actively supports Traditional Custodians' capacity for, and involvement in, ongoing engagement and feedback on environment plans.

The Program has been developed so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the possible consequences of an activity to be carried out under an environment plan on their functions, interests and activities as they relate to cultural values. This feedback will be evaluated in conjunction with Traditional Custodians and, where necessary, avoidance or mitigation strategies in will be developed in collaboration with Traditional Custodians. How the Program is implemented with specific Traditional Custodians will depend on their stated needs and priorities.

The Program is underpinned by Woodside's First Nations Communities Policy (woodside.com), the objective of which is to ensure Woodside partners and engages with First Nations communities to create positive economic, social and cultural outcomes that leave a lasting legacy. Woodside does this through building respectful relationships and partnerships with First Nations communities where we are active, in the areas where they are most interested in. We acknowledge the unique connection that First Nations communities have to land, waters and the environment.

The Program will include, as agreed with relevant communities, reasonable commitment to:

1. **Support for ongoing dialogue and engagement**

Woodside will support the capacity of Traditional Custodians to participate in ongoing dialogue and engagement about the environment plans and to enable the ongoing and future identification of cultural values potentially impacted by Woodside's activities. Woodside further commits to agreeing consultation protocols with individual Traditional Custodians to ensure the material provided is appropriate in level of detail such that the potential for cultural impact from Woodside activities can be determined and as required measures can be adopted to avoid or minimise impact.

In addition, Woodside will receive feedback on cultural values from an individual person or organisation that identifies as a Traditional Custodian, at any stage during the development and implementation of activities. This feedback will be evaluated, in conjunction with the Traditional Custodian individual or group and if required, control measures will put in place to avoid impacts to cultural values, or where avoidance is not possible, to minimise and mitigate the impacts to an acceptable level.

Where cultural values are identified post activity completion, any controls relevant to value management will be implemented during the next relevant activity.

2. **Support for the identification and recording of cultural features**

Woodside will support Traditional Custodians to record and articulate their Sea Country values and will invest in cultural assessments codesigned with Traditional Custodians, where required, to inform potential risks to cultural values from our petroleum activities.

This may include supporting cultural mapping by Traditional Custodians to identify and map significant cultural features including archaeological sites and other cultural values. The scoping of the mapping process will be codesigned with Traditional Custodians.

Woodside understands that cultural knowledge remains the intellectual property of Traditional Custodians and will agree with Traditional Custodians at the outset how that information from surveys will be used to feedback into and inform the environment plan's design and implementation.

In addition, Woodside applies the Cultural Heritage Management Procedure 2019, updated in 2023, to the Program which:

- provides a process for the identification, protection, and management of Cultural Heritage taking into account relevant standards, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the Charter for the Protection and Management of the Archaeological Heritage, the Convention for the Safeguarding of the Intangible Cultural Heritage, and the Convention on the Protection of the Underwater Cultural Heritage;
- applies to underwater cultural heritage and, consistent with current practice, provides for the commissioning of (where appropriate) both archaeological and ethnographic assessments of cultural values over the submerged landscape; and
- the process includes the following:
    - early engagement with relevant Traditional Custodians
    - identification of potential heritage, this could include desktop and field surveys undertaken with the Traditional Custodians.
- the development of cultural management strategies; and, where it is determined cultural heritage may be impacted, the development of Cultural Heritage Management Plans codesigned with Traditional Custodians and implemented by Woodside's First Nations team which:
    - focus on avoidance or minimisation of impacts; and
    - provide regular reviews and for inclusion of new information and further development of the Cultural Heritage Management Plan.

Woodside is committed to continue to receive feedback on cultural values for the life of an environment plan, the inclusion of new information and the development of avoidance or mitigation strategies in collaboration with Traditional Custodians. This information will be recorded via the Woodside Management of Knowledge Process and any potential impacts to the accepted Environment Plan evaluated via the Woodside Management of Change Process.

3. **Building capacity for the ongoing protection of country**

Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups. This is guided by Woodside's Indigenous Affairs Strategy 2019 ("Strategy"), which is designed to enable the building and maintaining of relationships with Traditional Custodians to leave a lasting legacy, including strengthening of Traditional Custodians' capacity to care for and manage Country, including Sea Country. The Strategy was developed with inputs from Traditional Custodians and contains four pillars that direct Woodside's social investment, policies relating to economic development, procurement and employment, and Woodside's agreement making and implementation of agreements. The pillars are:

1. Culture and Heritage Management: support social outcomes through protection, recognition and respect for culture and heritage;
2. Economic Participation: provide training, jobs, and business opportunities;

3. Capability and capacity: ensure strong corporate governance, leadership development and education initiatives to support self-determination; and
4. Safer and Healthier Communities: partner with Aboriginal people and service providers to maximise safer and healthier community outcomes.

Woodside is committed to an ongoing relationship between Woodside and the Traditional Custodian groups. Through consultation with Traditional Custodians Woodside will continue to:

- establish support for Indigenous ranger programs via social investment;
- establish support for Indigenous oil spill response capability via investigating training models;
- establish support for identification and recording of cultural values and the management of that information by Traditional Custodians;
- establish support for programs identified by the Traditional Custodians as important to them and as agreed by Woodside.

4. Support for capacity and capability in relation to governance

Pillar 3 of the Indigenous Affairs Strategy 2019 focuses on ensuring strong corporate governance, leadership development and education initiatives to support self-determination. To enable this, Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups, including in relation to governance and management systems.

The nature of this support will be informed by the individual needs of Traditional Custodian groups, but may include:

- funding or other support for community meetings, particularly where consultation with representative bodies lies outside of that body's core business and cultural authority or mandate needs to be secured,
- resourcing internal expertise so that information is managed consistently and internally, including ensuring appropriate record keeping of consultation to provide stakeholders with a lasting record of discussions, and
- development or upgrade of IT systems to manage information.

5. Program Reporting and Review of Effectiveness

Woodside will undertake an annual review of the Program to assess its effectiveness and adapt the Program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.
Progress of the Program will be reported annually in line with annual sustainability reporting via the Woodside website.

6. Current Status

Following distribution of this proposed Program, Woodside is now participating in a number of specific ongoing consultation activities with Traditional Custodian Relevant Persons. Specific ongoing activities are tabulated below:

Traditional Custodian Relevant Person	Ongoing Consultation Description	Forward Plan	Estimated Timeframes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	BTAC proposed a Collaboration Agreement in May 2023. Woodside agreed in principle and exchanged correspondence to understand details of the proposal. The Collaboration Agreement would enable support for BTAC to undertake an ethnographic assessment to articulate values, and ensure appropriate cost recovery.	Woodside and BTAC have executed a Costs Acceptance Letter. Woodside provided a draft Consultation Agreement to BTAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with BTAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by BTAC in relation to BTAC's capacity and priorities to finalise the agreement.
Yamatji Marlpa Aboriginal Corporation (YMAC)	In June 2023, YMAC provided Woodside a proposed draft Framework Agreement, and a proposal to fund in-house expertise to support consultation and implement the Collaboration Framework. In July 2023, Woodside agreed in principle to the proposed Collaboration Framework and the funding proposal and requested a meeting to work together on details. Woodside provided the Proposed Program of Ongoing Consultation to complement the proposed Collaboration Framework.	Woodside provided a draft Consultation Agreement to YMAC for NTGAC, who are represented by YMAC, in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with YMAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by YMAC in relation to YMAC's capacity and priorities to finalise the agreement.
Wirrawandi Aboriginal Corporation (WAC)	In August 2023, WAC proposed a Framework Agreement with Woodside to provide a streamlined, formalised approach to consultation between WAC and Woodside. Woodside has confirmed receipt of the proposed framework from WAC.	Woodside provided a draft Consultation Agreement to WAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with WAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by WAC in relation to WAC's capacity and priorities to finalise the agreement.
Ngarluma Aboriginal Corporation (NAC)	In September 2023, NAC proposed a Joint Working Group to practically manage consultation processes. It was proposed that the group would meet monthly for 2023 and quarterly thereafter, meetings would include NAC CEO and NAC Directors and potentially independent SME/s, the proposal was that Woodside draft a Framework Agreement, and included a request for funding for this approach. Woodside provided in-principle support for the proposal.	Woodside provided a draft Consultation Agreement to NAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with NAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by NAC in relation to NAC's capacity and priorities to finalise the agreement.
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	In a meeting during August 2023, NTGAC proposed a Framework Agreement. This included terms for ongoing engagement such as frequency of consultation, participation, and content. NTGAC has also requested Woodside provide funding for an in-house environmental scientist to review material. Woodside agreed in principle to this approach and has requested a first draft of the Framework Agreement for consideration. Woodside have agreed to pay for YMAC's in-house scientist to attend NTGAC meetings to advise NTGAC.	Woodside has been responding to queries from NTGAC regarding various Environment Plans, who have passed information provided by Woodside onto their Environmental Scientist. Woodside provided a draft Consultation Agreement to NTGAC via YMAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with NTGAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by NTGAC in relation to NTGAC's capacity and priorities to finalise the agreement.

Yinggarda Aboriginal Corporation (YAC)	In August 2023, YAC requested Woodside provide a draft Framework Agreement for their consideration. Woodside has provided a draft Framework Agreement to YAC for review.	Woodside provided a draft Consultation Agreement to YAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with YAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by YAC in relation to YAC's capacity and priorities to finalise the agreement.
Robe River Kuruma Aboriginal Corporation (RRKAC)	RRKAC have noted that they are insufficiently resourced to engage further and respond to Woodside regarding EPs. Woodside assesses that a Framework Agreement could address this.	Woodside has on several occasions written to RRKAC offering to fund consultation meetings. Woodside will offer RRKAC a Framework Agreement which will propose funding, scope of work and timeframes to assist with consultation and ongoing consultation. If RRKAC are open to the proposal, it is intended to put forward a draft Framework Agreement to RRKAC.	Woodside continues to be guided by RRKAC in relation to RRKAC's capacity and priorities relating to an agreement.
Ngarluma Yindjibarndi Foundation Limited (NYFL)	NYFL and Woodside have an existing Agreement in place which enables quarterly communication about Woodside activities. NYFL has advised they are working with other First Nations organisations and representative Bodies developing a Framework Agreement.	Woodside provided a draft Consultation Agreement to NYFL in March 2024. NYFL responded with a quote for an initial review of the draft terms of agreement. Woodside supports funding requests that are reasonable and will seek to reach agreement on a funding proposal put forward by NYFL.	Woodside is in regular discussions with NYFL regarding the draft proposed Consultation Agreement and continues be guided by NYFL in relation to its progress.
Kariyarra Aboriginal Corporation (KAC)	In September 2023 KAC proposed an agreement which would include meeting arrangements, ongoing consultations, specialist advice and contact protocols.	Woodside supports funding requests that are reasonable and will seek to reach agreement on a funding proposal put forward by KAC. Woodside agrees that a Framework Agreement is a sound tool to set out ongoing consultation with KAC, funding arrangements and social investment opportunities that KAC would want explored. Woodside provided a draft Consultation Agreement to KAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with KAC regarding the draft proposed Consultation Agreement and continues be guided by KAC in relation to its progress.

APPENDIX H: OIL SPILL PREPAREDNESS AND RESPONSE MITIGATION ASSESSMENT

Oil Spill Preparedness and Response Mitigation Assessment for Pluto Facility Operations

Corporate HSE

Hydrocarbon Spill Preparedness

April 2025
Revision 0c

TABLE OF CONTENTS

EXECUTIVE SUMMARY **8**

1 INTRODUCTION **11**
