6.1.11 Email sent to Australian Maritime Safety Authority (AMSA) - Marine Safety – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please also find attached a vessel density map and GIS shape files.

Please note that Woodside will:
- Notify the AHO no less than 4 weeks before operations commence,
- Notify AMSA's JRCC at least 24-48 hours before operations commence,
- Notify AMSA's JRCC when operations end,
- Provide updates to both the AHO and AMSA on any material changes to planned activities,
- Ensure vessels exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea,
- Evaluate and implement adequate anti-collision measures including but not limited to installation of Automatic Identification System (AIS) units, offshore guard vessel/s that can monitor traffic, and additional warnings and/or lights to attract attention.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29’ 55” S, 116° 35’ 53” E AP3 - 19° 29’ 0” S, 116° 36’ 37” E AP4 - 19° 30’ 38” S, 116° 36’ 19” E PER02 - 19° 31’ 12” S, 116° 06’ 39” E PER04 - 19° 31’ 07” S, 116° 05’ 54” E TPA03 - 19° 45’ 44” S, 115° 53’ 24” E
Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: • Approximately 5–14 days.
Operational Area/exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **30 October 2024.**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Woodside Energy Consultation

6.1.13 Email sent to DAFF - Biosecurity – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environmental Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 78 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel reservoir. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities. There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP 3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

	• Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: • Approximately 5–14 days.
Operational area / exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.
Commonwealth Fisheries	No Commonwealth managed fisheries active in Operational Areas. **Active in EMBA:** • North West Slope Trawl Fishery • Western Deepwater Trawl Fishery

Biosecurity

With respect to the biosecurity matters, please note the following information below:

Environment description	
The Operational Areas are located in Commonwealth waters within the North-west Marine Region (NWMR) in water depths of 77 - 128 m along the continental shelf. The bathymetry within the Operational Area is generally flat, which is consistent with the broader NWS Province shelf region. The seabed has a gentle (0.05°) seaward gradient, extending to a relatively steep outer slope approximately 200 to 300 km offshore in water depths of around 200 m. The continental slope then descends more rapidly from the shelf edge to depths greater than 1,000 m to the north-west.	
Potential IMS risk	***IMS mitigation management***
The introduction and establishment of invasive marine species has the potential to impact ecosystems/habitat, native species survival and socio-economic values, although the risk and impact assessment completed by Woodside identifies the likelihood of IMS introduction from various location potentials has remote or low likelihood of occurring.	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced. Woodside recognises the requirement to manage biosecurity risk to domestic conveyances, the requirements under the Biosecurity Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016. Woodside notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination". Woodside works closely with our suppliers and contractors to address the risks and assure awareness of the obligations outlined above.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at Consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by 4 November 2024.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

Woodside Energy Consultation

6.1.14 Email sent to Chevron – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please also find attached a GIS Shape File.

We would be grateful if you could please forward this consultation information to your Joint Venture participants Osaka Gas Gorgon, MidOcean Gorgon and JERA Gorgon for feedback.

Woodside Energy Consultation

6.1.15 Email sent to Australian Fisheries Management Authority (AFMA), Commonwealth Fisheries Association (CFA), North West Slope Trawl Fishery and Western Deepwater Trawl Fishery licence holders – 27 September 2024

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please note that Woodside has provided consultation information directly to licence holders it has assessed as 'relevant persons' for this EP, as well as relevant fishery representative bodies.

Please let us know if you require notification prior to and on completion of the proposed activities.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29' 55" S, 116° 35' 53" E AP3 - 19° 29' 0" S, 116° 36' 37" E AP4 - 19° 30' 38" S, 116° 36' 19" E PER02 - 19° 31' 12" S, 116° 06' 39" E PER04 - 19° 31' 07" S, 116° 05' 54" E TPA03 - 19° 45' 44" S, 115° 53' 24" E
Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: Approximately 5–14 days.
Operational Area / exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.
Commonwealth Fisheries	No Commonwealth managed fisheries active in the Operational Areas. **Active in EMBA:** • North West Slope Trawl Fishery • Western Deepwater Trawl Fishery

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at Consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **30 October 2024.**

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Woodside Energy Consultation

6.1.17 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) - Underwater Cultural Heritage – 26 November 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 80 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. Woodside Energy Consultation

6.1.18 Email sent to Department of Transport – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

If there is a risk of a spill impacting State waters, Woodside will further consult the Department of Transport as outlined in the Department of Transport Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements (July 2020).

Woodside Energy Consultation

6.1.19 Email sent to Director of National Parks (DNP) – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP 3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29' 55" S, 116° 35' 53" E AP3 - 19° 29' 0" S, 116° 36' 37" E AP4 - 19° 30' 38" S, 116° 36' 19" E PER02 - 19° 31' 12" S, 116° 06' 39" E PER04 - 19° 31' 07" S, 116° 05' 54" E TPA03 - 19° 45' 44" S, 115° 53' 24" E
Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	TPA03 Well Intervention: • Approximately 5–14 days.
Operational areas / exclusion zones	• Operational area: 2000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel reservoir • PER02 and PER04 production wells in the Persus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.

Australian Marine Parks (AMPs)

We note Australian Government Guidance on consultation activities and confirm that:

- The proposed activities are outside the boundaries of a proclaimed Australian Marine Park (AMP), with the closest well (TPA03) located approximately 33 km northeast of the Commonwealth boundary of the Montebello Australian Marine Park (Multiple Use Zone).
- We have assessed potential risks to AMPs in the development of the proposed Environment Plan and consider that there are no credible risks as part of planned activities that have potential to impact the values of the AMPs.
- The worst-case credible spill scenario assessed in this EP is the highly unlikely event of a loss of well control from either the PER02, AP3, or TPA03 wells. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb dissolved and 100 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
  - Montebello AMP
  - Ningaloo AMP
  - Gascoyne AMP

  A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact on the values of the AMP.

Woodside is aware of and will consider the 'Petroleum Activities and Australian Marine Parks' guidance note developed and published jointly by DNP and NOPSEMA, while preparing this EP to ensure that the EP:

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP),
- Clearly demonstrates that the activities will not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park Woodside will notify DNP.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at Consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **30 October 2024**.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards
Woodside Energy Consultation

6.1.20 Email sent to of Department of Defence – 21 November 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please also find attached a defence area map in the areas surrounding the operational area.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29' 55" S, 116° 35' 53" E AP3 - 19° 29' 0" S, 116° 36' 37" E AP4 - 19° 30' 38" S, 116° 36' 19" E PER02 - 19° 31' 12" S, 116° 06' 39" E

Woodside Energy Consultation

6.1.21 Email sent to Department of Primary Industries and Resource Development (DPIRD) – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 78 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please note that Woodside has provided consultation information to licence holders it has assessed as 'relevant persons' for this EP, as well as relevant fishery representative bodies.

Please let us know if you require notification prior to and on completion of the proposed activities.

Woodside Energy Consultation

6.1.23 Email sent to Longreach Capital Investment – 1 October 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29' 55" S, 116° 35' 53" E AP3 - 19° 29' 0" S, 116° 36' 37" E AP4 - 19° 30' 38" S, 116° 36' 19" E PER02 - 19° 31' 12" S, 116° 06' 39" E PER04 - 19° 31' 07" S, 116° 05' 54" E TPA03 - 19° 45' 44" S, 115° 53' 24" E
Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: • Approximately 5–14 days.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area/exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **30 October 2024.**

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards
Woodside Energy Consultation

6.1.24 Email sent to Gascoyne and Pilbara/Kimberley recreational marine users – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 78 metres (m) to 128 m.

The proposed activity includes:

· The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

· The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.

· Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03. A release of this kind is highly unlikely to occur.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please note that Woodside has provided consultation information to licence holders it has assessed as 'relevant persons' for this EP, as well as relevant fishery representative bodies.

Please let us know if you require notification prior to and on completion of the proposed activities.

Dear Recreational Marine User,

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environmental Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.

- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activity. There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is enclosed, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website at www.woodside.com/what-we-do/consultation-activities. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

6.1.26 Email sent to University of Western Australia, Murdoch University, Edith Cowan University, Curtin University, Australian Institute of Marine Science, Commonwealth Scientific and Industrial Research Organisation – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Woodside is seeking your advice regarding any research activities that your institution may be undertaking that may overlap with our proposed activities.

Woodside Energy Consultation

6.1.27 Email sent to Shell – 16 December 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in proposed activities in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 80 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 28’ 59” S, 116° 36’ 37” E AP3 - 19° 30’ 38” S, 116° 36’ 18” E AP4 - 19° 31’ 18” S, 116° 35’ 13” E PER02 - 19° 31’ 11” S, 116° 6’ 39” E PER 04 - 19° 31’ 26” S, 116° 5’ 53” E TPA03 - 19° 45’ 43” S, 115° 53’ 23” E
Approx. Water Depth (m)	80-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: • Approximately 5–14 days.
Operational Area/exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **20 January 2024.**

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards
Woodside Energy Consultation

6.1.28 Email sent to Shire of Ashburton – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in proposed activities in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

Preparedness and Response
In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport (DoT), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage
Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Woodside Energy Consultation

6.1.29 Email sent to Town of Port Hedland – 15 November 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in proposed activities in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 80 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

Woodside Energy Consultation

6.1.30 Email sent to Western Australian Fishing Industry Council (WAFIC) – 27 September 2024

Please see below consultation information for the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP). The consultation period is due to close on 30 October 2024.

A Consultation Information Sheet is also attached.

Under the fee-for-service agreement, can WAFIC please provide the consultation information to (based on active fishing (Fishcube) over the operational area):

- Mackerel Managed Fishery
- Pilbara Fish Trawl Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery

Kind regards,
Woodside Energy Feedback

Dear Licence Holders

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been

shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.

- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

The table below provides a summary of the proposed activities under this EP. The attached Consultation Information Sheet provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures. This is also available on Woodside's website.

If you would like to receive notifications prior to and on completion of activities, please let us know. Woodside will notify WAFIC where relevant.

6.1.31 Email sent to WA Museum – 27 September 2024

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview
The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4 2026.

Environment that May Be Affected (EMBA)
The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Please also find attached the details of WA shipwrecks that are relevant for this EP.

As per the *Underwater Cultural Heritage Act 2018 (Cwth),* Woodside will contact the Commonwealth regulator, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), regarding this EP.

Woodside also refers to the Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance document regarding assessments and the draft Guidelines for Working in Near and Offshore Environment to Protect Underwater Cultural Heritage.

Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 d TPA03 Well Intervention: • Approximately 5–14 days.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area/exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) fiel • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **30 October 2024.**

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards
Woodside Energy Consultation

6.1.32 Email sent to Buurabalyyji Thalanyi Aboriginal Corporation – 30 September 2024

Hi [Individual 4]

I hope all is well.

We are contacting you as the delegated representative for Buurabalayji Thalanyji Aboriginal Corporation (BTAC).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside would like to consult with Buurabalayji Thalanyji Aboriginal Corporation (BTAC) as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside in relation to BTAC's cultural values that we consider relevant to this activity, which is outlined in Attachment A. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of BTAC, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards,

[Attachments: Consultation Information Sheet, Summary Consultation Sheet and Attachment A]

ATTACHMENT A

Previously Provided Information
Buurabalayji Thalanyji Aboriginal Corporation (BTAC) has advised that it has a cultural obligation to care for the environmental values of Sea Country. BTAC's interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Mackerel Islands. Woodside will record BTAC's interests and cultural values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Cultural Features and Heritage Values
- Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.

6.1.33 Email sent to Gogolanyngor Aboriginal Corporation – 30 September 2024

Hi [Individual 5]

I hope you are well mate. I was up your way last month for the KALACC Festival and kept an eye out for you, I guess you are too busy to attend these functions.

Woodside would like to consult with Gogolanyngor Aboriginal Corporation as a relevant stakeholder and EMBA relevant for **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested

[Attachments: Consultation Information Sheet and Summary Consultation Sheet]

6.1.35 Email sent to Kariyarra Aboriginal Corporation – 27 September 2024

Good afternoon [Individual 6] & [Individual 7],

I hope you are both well.

We are contacting you as the representative for Kariyarra Aboriginal Corporation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside would like to consult with Kariyarra Aboriginal Corporation as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside in relation to Kariyarra Aboriginal Corporation's cultural values that we consider relevant to this activity, which is outlined in Attachment A. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of the Kariyarra Aboriginal Corporation, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

ATTACHMENT A

Previously Provided Information
Kariyarra Aboriginal Corporation (Kariyarra) has outlined its Sea Country rights and duties, including: - looking after and protecting Sea Country - fishing, trapping and crabbing - catching turtle - hunting dugong - using stingray barbs for spears

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- collecting shellfish - the protection of Sea Country and totems such as mythic snakes. Woodside will record Kariyarra's interests and cultural values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.
Kariyarra has noted that there are potential impacts on coastal landforms and coastal native vegetation. Woodside will record Kariyarra's interests and cultural values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.
Kariyarra has noted there is tangible and intangible heritage associated with the coast and the ocean. Woodside will record Kariyarra's cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.

6.1.36 Email sent to Murujuga Aboriginal Corporation – 30 September 2024

Hi [Individual 8]

We are contacting you as the delegated representative for Murujuga Aboriginal Corporation (MAC).

Woodside would like to consult with Murujuga Aboriginal Corporation (MAC) as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside in relation to MAC's cultural values that we consider relevant to this activity, which is outlined in Attachment A. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of MAC, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards,

[Attachments: Consultation Information Sheet, Summary Consultation Sheet and Attachment A]

ATTACHMENT A

Previously Provided Information
Murujuga Aboriginal Corporation (Murujuga) has noted there is a potential impact on Jinna (Songlines). Woodside will record Murujuga's cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Murujuga has stated that any development could potentially affect the natural movement, migration and/or other behaviour of marine species, and may have an impact on the cultural interpretation of the seasonal landscape, seascape and associated cultural behaviours.

Woodside will record Murujuga's cultural and environmental values in the proposed EP in the following sections:

- Description of Existing Environment (this includes assessing potential impact and controls)
- Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats)
- Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.

6.1.37 Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (via YMAC) – 27 September 2024

Good afternoon [Individual 9],

We are contacting you as the delegated representative for Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC).

As discussed last week. Woodside would like to consult with Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

[Attachments: Consultation Information Sheet and Summary Consultation Sheet]

6.1.38 Email sent to Ngarluma Aboriginal Corporation – 27 September 2024

Hello [Individual 10] and [Individual 11]

Woodside is seeking to consult with Ngarluma Aboriginal Corporation (NAC) as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. NAC's feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather NAC's feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. As you're aware, Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of NAC, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards,

[Attachments: Consultation Information Sheet and Summary Consultation Sheet]

6.1.39 Email sent to Nimanburr Aboriginal Corporation (via Broome Turf Club) – 30 September 2024

Hi [Individual 12]

I hope you are well.

I have been staying connected with Eric and was hoping you may have been at the KALACC AGM's so as we could touch base. I will telephone before I am in Broome next and hopefully call into La Djardarr Bay to say hello.

We are contacting you as the representative for Nimanburr Aboriginal Corporation.

Woodside would like to consult with Nimanburr Aboriginal Corporation as a relevant stakeholder and EMBA relevant for the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested

6.1.44 Email sent to Wanparta Aboriginal Corporation – 30 September 2024

Hi [Individual 19]

I called earlier and left a long-winded message in relation to an update on our proposed ranger assistance program. I will call again today or tomorrow.

We are contacting you as the representative for Wanparta Aboriginal Corporation.

Woodside would like to consult with Wanparta Aboriginal Corporation as a relevant stakeholder and EMBA relevant for the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside in relation to Wanparta Aboriginal Corporation's cultural values that we consider relevant to this activity, which is outlined in Attachment A. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of the Wanparta Aboriginal Corporation, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards,

[Attachments: Consultation Information Sheet, Summary Consultation Sheet and Attachment A]

ATTACHMENT A

Previously Provided Information
Wanparta Aboriginal Corporation (Wanparta) has noted that Ngarla people have a deep spiritual connection to Sea Country and a responsibility to look after and protect it. Woodside will record Wanparta's cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.
Wanparta has noted the significance of its totem species including the octopus, stingray, spiny bream fish and kestrel. Woodside will record Wanparta's cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats).

6.1.45 Email sent to Wirrawandi Aboriginal Corporation – 27 September 2024

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Good afternoon [Individual 20],

Happy Friday!

We are contacting you as the representative for WAC.

Woodside would like to consult with WAC as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of WAC, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

6.1.46 Email sent to Yawuru Native Title Holders Aboriginal Corporation – 30 September 2024

Hi [Individual 21]

I hope you are well.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sending through information on another environment plan where the EMBA includes Yawuru as being relevant.

Woodside would like to consult with Yawuru Native Title Holders Aboriginal Corporation as a relevant stakeholder and EMBA relevant for the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of the Yawuru Native Title Holders Aboriginal Corporation, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards,

[Attachments: Consultation Information Sheet and Summary Consultation Sheet]

6.1.47 Email sent to Yindjibarndi Aboriginal Corporation – 27 September 2024

Hi [Individual 22],

I hope you and your family are well!

We are contacting NYFL as the delegated representative for Yindjibarndi Aboriginal Corporation.

Woodside would like to consult with Yindjibarndi Aboriginal Corporation as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

6.1.48 Email sent to Yinggarda Aboriginal Corporation – 30 September 2024

Dear [Individual 23], I hope this message finds you well.

Woodside would like to consult with Yinggarda Aboriginal Corporation as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for the activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Overview of the activity

The attached Summary Information Sheet provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

We have considered the information you have already provided Woodside in relation to Yinggarda Aboriginal Corporation's cultural values that we consider relevant to this activity, which is outlined in **Attachment A**. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

6.1.51 Email sent to Ngarluma Yindjibarndi Foundation Ltd – 27 September 2024

Hello [Individual 22] and [Individual 25]

Woodside is seeking to consult with Ngarluma Yindjibarndi Foundation Ltd (NYFL) as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. NYFL's feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather NYFL's feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

Please let us know your preferred method of consultation including whether you would like to meet face to face. We welcome the opportunity to speak with Elders, office holders and other interested parties about this activity. As you're aware, Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in consultation.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, call us on 1800 442 977 or directly to me.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

6.1.52 Email sent to Save Our Songlines – 27 September 2024

Dear [Individual 3],

Woodside understands all communication to [Individual 2] and Save Our Songlines should be directed to you. Please see below for [Individual 2] attention.

Dear [Individual 2],

Woodside would like to consult with Save Our Songlines as a relevant stakeholder that may be affected by the **North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention** (the activity).

Consultation for this activity closes on **Wednesday 30 October 2024**. Your feedback, opinions and comments provided by this date will be reflected in the Environment Plan and considered by NOPSEMA.

The purpose of this email is to:

- inform you about our plans for the activity
- invite you to submit feedback for the activity
- provide an opportunity to discuss the activity
- discuss further ways to consult and engage for the activity.

Overview of the activity

The attached Summary Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map. We have also attached a Consultation Information Sheet with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

1. How the activity could impact your cultural values, interests, and activities
2. Protection of the environment and its relationship to your cultural values
3. Your concerns about the proposed activity
4. Other elements we should consider in the Environment Plan
5. Any other individuals, groups, or organisations we should talk to about this activity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We have considered the information you have already provided Woodside in relation to Save Our Songlines' cultural values that we consider relevant to this activity, which is outlined in **Attachment A**. Please let us know by **Wednesday 30 October 2024** if there are any changes or additional information you would like Woodside to consider.

We note your previously stated preference for consultation to occur in written format (as set out in an email dated 10 April 2024). Woodside also welcomes the opportunity to meet face to face.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so.

Information can be sent to feedback@woodside.com, via the feedback form on our website, or call us on 1800 442 977.

Further information about NOPSEMA

Feedback can also be submitted directly to NOPSEMA by phoning (08) 6188 8700 or via email communications@nopsema.gov.au.

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

- **Brochure:** Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- **Guideline:** Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)
- **Policy:** Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of Save Our Songlines, Traditional Owners and other people and organisations who may be interested.

We look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

ATTACHMENT A

Previously Provided Information
Save Our Songlines has noted cultural features associated with whales, as well as marine mammals, seagrass, and the meeting of freshwater and saltwater was demonstrated. Woodside will record Save Our Songlines' cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.
Save Our Songlines has noted there are cultural features associated with Songlines, dreaming and energy lines. Woodside will record Save Our Songlines' cultural and environmental values in the proposed EP in the following sections: - Description of Existing Environment (this includes assessing potential impact and controls) - Cultural Features and Heritage Values (this includes cultural features and heritage values, marine species and habitats) - Environmental Impact and Risk Assessment, Performance Outcomes, Standards, and Measurement Criteria.

6.1.53 Email sent to DAFF – Fisheries – 4 October 2024

Dear DAFF - Fisheries

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environmental Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

The activities under the NWS Phase 1 Well P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 78 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel reservoir. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Well infrastructure (Christmas trees and wellheads) above the mudline will be removed following plugging of these wells. Wellheads may either be recovered during the P&A activities or temporarily placed on the seabed for later

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

recovery. If Angel wellheads are not removed by the MODU, removal will be conducted under the Angel Subsea Infrastructure Removal EP.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. The Christmas trees may be removed following plugging of these wells. The trees may either be removed during the P&A activities or temporarily placed on the seabed for recovery later. Removal of the PER02 and PER04 wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole reservoir to remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in. Well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.

These activities are planned to commence around Q2 2025 and are expected to be completed at the end of Q4, 2026.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities. There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP 3, or TPA03 wells. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Activity: North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Well Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well

Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 29’ 55” S, 116° 35’ 53” E AP3 - 19° 29’ 0” S, 116° 36’ 37” E AP4 - 19° 30’ 38” S, 116° 36’ 19” E PER02 - 19° 31’ 12” S, 116° 06’ 39” E PER04 - 19° 31’ 07” S, 116° 05’ 54” E TPA03 - 19° 45’ 44” S, 115° 53’ 24” E
Approx. Water Depth (m)	77-128 m
Timing	Expected commencement date: Q2 2025 Expected finish date: Q4 2026
Duration	NWS Phase 1 Well P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of well infrastructure: approximately 1–5 days per well • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. TPA03 Well Intervention: • Approximately 5–14 days.
Operational area / exclusion zones	• Operational area: 4000 m around each well • Temporary exclusion zone: 500 m around the MODU.
Infrastructure	• AP 2, AP 3, and AP 4 production wells in the Angel field • PER02 and PER04 production wells in the Perseus-over-Goodwyn (PoG) field • TPA03 production well in the Tidepole field.
Vessels	MODU, support vessels and helicopters.
Commonwealth Fisheries	No Commonwealth managed fisheries active in Operational Areas. **Active in EMBA:** • North West Slope Trawl Fishery • Western Deepwater Trawl Fishery

Biosecurity

With respect to the biosecurity matters, please note the following information below:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment description	
The Operational Areas are located in Commonwealth waters within the North-west Marine Region (NWMR) in water depths of 77 - 128 m along the continental shelf. The bathymetry within the Operational Area is generally flat, which is consistent with the broader NWS Province shelf region. The seabed has a gentle (0.05°) seaward gradient, extending to a relatively steep outer slope approximately 200 to 300 km offshore in water depths of around 200 m. The continental slope then descends more rapidly from the shelf edge to depths greater than 1,000 m to the north-west.	
Potential IMS risk	***IMS mitigation management***
The introduction and establishment of invasive marine species has the potential to impact ecosystems/habitat, native species survival and socio-economic values, although the risk and impact assessment completed by Woodside identifies the likelihood of IMS introduction from various location potentials has remote or low likelihood of occurring.	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced. Woodside recognises the requirement to manage biosecurity risk to domestic conveyances, the requirements under the Biosecurity Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016. Woodside notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside works closely with our suppliers and contractors to address the risks and assure awareness of the obligations outlined above.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback via email at Consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **4 November 2024**

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards
Woodside Energy Consultation

6.1.54 Email sent to Tuna Australia – 21 October 2025

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

The activities under the NWS Phase 1 P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Christmas Trees may be recovered by the MODU if required to enable plug and abandonment activities or left in-situ for recovery at a later date via a suitable vessel. Removal of the Angel wellheads above the mudline will be included in a separate future approval.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. Christmas Trees may be recovered by the MODU if required to enable plug and abandonment activities or left in-situ for recovery at a later date via a suitable vessel. Removal of the PoG wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field will remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in; well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.
- Preparation and support for the above activities is also included in the EP. Preparation and support may include inspections, cleaning, laying and recovery of moorings for the MODU, and support whilst the MODU is in the Operational Area.

These activities are planned to commence around Q2 2026 and are expected to be completed at around the end of Q4, 2026.

Woodside has recently withdrawn the Angel Subsea Infrastructure Removal EP from assessment by NOPSEMA. As a result, some updates have been required to the NWS Phase 1 P&A and TPA03 Well Intervention EP, as it contained references to the Angel Subsea Infrastructure Removal EP. As part of the revised submission of the NWS Phase 1 P&A and TPA03 Well Intervention EP, Woodside is conducting additional consultation. The updates are incorporated in this email and the attached Consultation Information Sheet.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

Woodside Energy Consultation

6.1.55 Email sent to Southern Bluefin Tuna Fishery, Western Skipjack Fishery and Western Tuna and Billfish Fishery licence holders

Woodside is planning to submit the North West Shelf (NWS) Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Overview

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The activities under the NWS Phase 1 P&A and TPA03 Well Intervention EP will be undertaken using a moored or hybrid (mooring and Dynamic Positioning (DP) capability) semi-submersible mobile offshore drilling unit (MODU) and associated support vessels in water depths between approximately 77 metres (m) to 128 m.

The proposed activity includes:

- The P&A of the AP 2, AP 3, and AP 4 wells in the Angel field. These wells tie back to the Angel platform. Production from these wells has ceased and the wells have been shut in. Christmas Trees may be recovered by the MODU if required to enable plug and abandonment activities or left in-situ for recovery at a later date via a suitable vessel. Removal of the Angel wellheads above the mudline will be included in a separate future approval.
- The P&A of the PER02 and PER04 wells in the Perseus-over-Goodwyn (PoG) field. These wells tie back to the Goodwyn platform. Production from these wells has ceased and the wells have been shut in. Christmas Trees may be recovered by the MODU if required to enable plug and abandonment activities or left in-situ for recovery at a later date via a suitable vessel. Removal of the PoG wellheads above the mudline will be included in a separate future approval.
- Well intervention activities at the TPA03 well in the Tidepole field will remediate a down-hole valve and restore production from the lower reservoir. The well is currently shut in; well start-up and production following intervention activities will be managed under the Goodwyn Alpha (GWA) Operations EP.
- Preparation and support for the above activities is also included in the EP. Preparation and support may include inspections, cleaning, laying and recovery of moorings for the MODU, and support whilst the MODU is in the Operational Area.

These activities are planned to commence around Q2 2026 and are expected to be completed at around the end of Q4, 2026.

Woodside has recently withdrawn the Angel Subsea Infrastructure Removal EP from assessment by NOPSEMA. As a result, some updates have been required to the NWS Phase 1 P&A and TPA03 Well Intervention EP, as it contained references to the Angel Subsea Infrastructure Removal EP. As part of the revised submission of the NWS Phase 1 P&A and TPA03 Well Intervention EP, Woodside is conducting additional consultation. The updates are incorporated in this email and the attached Consultation Information Sheet.

Operational area / exclusion zones

The activity Operational Area will consist of a 4000 m radius around each well. This area is where the MODU and activity vessels can be expected to be operating whilst undertaking P&A and well intervention activities There are no restrictions to other vessels within the Operational Area apart from being advised to take care. A temporary 500 m exclusion zone will be established around the MODU while undertaking activities at each well location. The exclusion zone is established for navigational safety and fishing vessels are not allowed to enter the exclusion zone.

Environment that May Be Affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by modelling a release of hydrocarbons from a loss of well control from either the PER02, AP3, or TPA03. A release of this kind is highly unlikely to occur.

The EMBA models the merged area of many possible paths that a hydrocarbon release could travel depending on factors including the weather and ocean conditions at the time of the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

release. This means in the highly unlikely event a loss of well control does occur, the whole EMBA will not be affected.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website. Here you can also subscribe to our newsletter *Let's Talk – Our Plans, Your Say* and to receive updates on our consultation activities.

Activity: North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP

North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention Environment Plan	
Summary	Permanent plugging and abandonment of five NWS production wells, and well intervention on the TPA03 production well
Permit Area	Production Licenses WA-1-L, WA-3-L and WA-5-L
Location	AP2 - 19° 28' 60" S, 116° 36' 37" E AP3 - 19° 30' 38" S, 116° 36' 19" E AP4 - 19° 31' 18" S, 116° 35' 13" E PER02 - 19° 31' 12" S, 116° 06' 39" E PER04 - 19° 31' 27" S, 116° 05' 54" E TPA03 - 19° 45' 44" S, 115° 53' 24" E
Approx. Water Depth (m)	~77-128 m
Timing	Expected commencement date: Q2 2026 Expected finish date: Q4 2026
Duration	NWS Phase 1 P&A: • Preparatory activities: approximately 7–10 days per well • P&A: approximately 19–33 days per well • Removal of Christmas Trees: approximately 1 days per well, if removed by the MODU under this EP. • Recovery of ancillary equipment (e.g. mooring recovery): approximately 1–2 days. 6.2.2 Activity update – October 2025

6.2.2.1 Activity update email sent to Chevron – 3 October 2025

Dear Chevron,

Woodside previously consulted you during the preparation of the Angel Subsea Infrastructure Removal Environment Plan (EP) and/or the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP.

We would like to provide you with an update on the planned activities.

We would be grateful if you could please forward this update to your Joint Venture participants Osaka Gas Gorgon, MidOcean Gorgon and JERA Gorgon for feedback.

Angel Subsea Infrastructure Removal EP

Woodside has revised the decommissioning strategy for the Angel flowlines (AP2, AP3 and AP4) so that environmental impacts and risks of the activity are reduced to an acceptable level and as low as reasonably practicable (ALARP).

Activities previously proposed under the Angel Subsea Infrastructure Removal EP are now planned to be undertaken as part of Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029. This enables Woodside to undertake pigging (an industry best practice to clean and inspect the inside of subsea pipelines) of the Angel flowlines following cessation of production and prior to their cut and recovery.

Woodside has adopted this approach to validate the residual contents within the flowlines and reduce the impacts and risks of the activity to an acceptable level and ALARP.

Accordingly, Woodside plans to withdraw the submitted Angel Subsea Infrastructure Removal EP from assessment by NOPSEMA. The removal of the Angel flowlines remains part of Woodside's decommissioning strategy and will be addressed closer to cessation of production.

NWS Phase 1 P&A and TPA03 Well Intervention EP

Updates to the activities covered under the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are as outlined below.

*Aspects **removed** from the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP**	*Additional activities **included** in North West Shelf Phase 1 P&A and TPA03 Well Intervention EP*
Removal of reference to the Angel Subsea Infrastructure Removal EP	Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The above method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
Removal of optional wellhead removal scope for AP2, AP3 and AP4 (as wellheads will support future flowline pigging operations).	
Removal of statements relating to the Angel flowlines being severed prior to P&A	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

activities. (as connected flowbases will support future flowline pigging operations).	To provide additional clarity, remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the annulus of the wells as part of the plug and abandonment activity has been included in the Consultation Information Sheet.
Removal of Christmas Trees (Xmas Tree) is now an optional scope under this EP (this is to account for an identified opportunity to P&A the wells through the Xmas Tree and allows for the Xmas Tree recovery scope to be moved to a later EP).	
Update timing estimate for Xmas Trees removal (Xmas Tree removal may be conducted at any point over the life of the EP with a suitable vessel if not removed to enable P&A operations).	
Remove timing estimate for Angel wellheads (wellhead removal is no longer linked to this EP as they are required to support future flowline pigging operations).	

**As a result of the withdrawal of the Angel Subsea Infrastructure Removal EP*

In addition to the above updates, a *Solid Waste Generation and Management* planned impact section has been added to the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP to align with other Woodside decommissioning EPs.

The activities covered in the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are presently expected to commence around Q2 2026.

An updated Consultation Information Sheet reflecting these updates is attached and also available on our website.

There are no other changes to the previously provided consultation information.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **17 October 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Personal information collected in the course of consultation will be handled in accordance with Woodside's EP Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.2.2.2 Activity update email sent to WAFIC – 3 October 2025

Dear [Individual 27],

Please see the below activity update for the *North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan* & *Angel Subsea Infrastructure Removal Environment Plan*. The consultation period is due to close on **17 October 2025**.

An updated Consultation Information Sheet is also attached for the *North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan*.

Under the fee-for-service agreement, can WAFIC please provide the updated consultation information to (based on active fishing (Fishcube) over the operational area):

- Mackerel Managed Fishery
- Pilbara Fish Trawl Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery

Kind regards,

Woodside Energy Consultation

Dear Stakeholder,

Woodside previously consulted you during the preparation of the Angel Subsea Infrastructure Removal Environment Plan (EP) and/or the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP.

We would like to provide you with an update on the planned activities.

Angel Subsea Infrastructure Removal EP

Woodside has revised the decommissioning strategy for the Angel flowlines (AP2, AP3 and AP4) so that environmental impacts and risks of the activity are reduced to an acceptable level and as low as reasonably practicable (ALARP).

Activities previously proposed under the Angel Subsea Infrastructure Removal EP are now planned to be undertaken as part of Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029. This enables Woodside to undertake pigging (an industry best practice to clean and inspect the inside of subsea pipelines) of the Angel flowlines following cessation of production and prior to their cut and recovery.

Woodside has adopted this approach to validate the residual contents within the flowlines and reduce the impacts and risks of the activity to an acceptable level and ALARP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Accordingly, Woodside plans to withdraw the submitted Angel Subsea Infrastructure Removal EP from assessment by NOPSEMA. The removal of the Angel flowlines remains part of Woodside's decommissioning strategy and will be addressed closer to cessation of production.

NWS Phase 1 P&A and TPA03 Well Intervention EP

Updates to the activities covered under the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are as outlined below.

*Aspects **removed** from the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP**	*Additional activities **included** in North West Shelf Phase 1 P&A and TPA03 Well Intervention EP*
Removal of reference to the Angel Subsea Infrastructure Removal EP	Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The above method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible. To provide additional clarity, remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the annulus of the wells as part of the plug and abandonment activity has been included in the Consultation Information Sheet.
Removal of optional wellhead removal scope for AP2, AP3 and AP4 (as wellheads will support future flowline pigging operations).	
Removal of statements relating to the Angel flowlines being severed prior to P&A activities. (as connected flowbases will support future flowline pigging operations).	
Removal of Christmas Trees (Xmas Tree) is now an optional scope under this EP (this is to account for an identified opportunity to P&A the wells through the Xmas Tree and allows for the Xmas Tree recovery scope to be moved to a later EP).	
Update timing estimate for Xmas Trees removal (Xmas Tree removal may be conducted at any point over the life of the EP with a suitable vessel if not removed to enable P&A operations).	
Remove timing estimate for Angel wellheads (wellhead removal is no longer linked to this EP as they are required to support future flowline pigging operations).	

**As a result of the withdrawal of the Angel Subsea Infrastructure Removal EP*

In addition to the above updates, a *Solid Waste Generation and Management* planned impact section has been added to the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP to align with other Woodside decommissioning EPs.

The activities covered in the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are presently expected to commence around Q2 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

An updated Consultation Information Sheet reflecting these updates is attached and also available on our website.

There are no other changes to the previously provided consultation information.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **17 October 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's EP Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Dear Stakeholder,

Woodside previously consulted you during the preparation of the Angel Subsea Infrastructure Removal Environment Plan (EP) and/or the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP.

We would like to provide you with an update on the planned activities.

Angel Subsea Infrastructure Removal EP

Woodside has revised the decommissioning strategy for the Angel flowlines (AP2, AP3 and AP4) so that environmental impacts and risks of the activity are reduced to an acceptable level and as low as reasonably practicable (ALARP).

Activities previously proposed under the Angel Subsea Infrastructure Removal EP are now planned to be undertaken as part of Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029. This enables Woodside to undertake pigging (an industry best practice to clean and inspect the inside of subsea pipelines) of the Angel flowlines following cessation of production and prior to their cut and recovery.

Woodside has adopted this approach to validate the residual contents within the flowlines and reduce the impacts and risks of the activity to an acceptable level and ALARP.

Accordingly, Woodside plans to withdraw the submitted Angel Subsea Infrastructure Removal EP from assessment by NOPSEMA. The removal of the Angel flowlines remains part of Woodside's decommissioning strategy and will be addressed closer to cessation of production.

NWS Phase 1 P&A and TPA03 Well Intervention EP

Updates to the activities covered under the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are as outlined below.

*Aspects **removed** from the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP**	*Additional activities **included** in North West Shelf Phase 1 P&A and TPA03 Well Intervention EP*
Removal of reference to the Angel Subsea Infrastructure Removal EP	Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The above method of well entry is being carried as an option if the base plan to re-enter and
Removal of optional wellhead removal scope for AP2, AP3 and AP4 (as wellheads will support future flowline pigging operations).	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Removal of statements relating to the Angel flowlines being severed prior to P&A activities. (as connected flowbases will support future flowline pigging operations).	abandon the well conventionally is assessed as not feasible. To provide additional clarity, remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the annulus of the wells as part of the plug and abandonment activity has been included in the Consultation Information Sheet.
Removal of Christmas Trees (Xmas Tree) is now an optional scope under this EP (this is to account for an identified opportunity to P&A the wells through the Xmas Tree and allows for the Xmas Tree recovery scope to be moved to a later EP).	
Update timing estimate for Xmas Trees removal (Xmas Tree removal may be conducted at any point over the life of the EP with a suitable vessel if not removed to enable P&A operations).	
Remove timing estimate for Angel wellheads (wellhead removal is no longer linked to this EP as they are required to support future flowline pigging operations).	

**As a result of the withdrawal of the Angel Subsea Infrastructure Removal EP*

In addition to the above updates, a *Solid Waste Generation and Management* planned impact section has been added to the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP to align with other Woodside decommissioning EPs.

The activities covered in the North West Shelf Phase 1 P&A and TPA03 Well Intervention EP are presently expected to commence around Q2 2026.

An updated Consultation Information Sheet reflecting these updates is enclosed and is also available on our website at www.woodside.com/what-we-do/consultation-activities.

There are no other changes to the previously provided consultation information.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form at www.woodside.com/what-we-do/consultation-activities by **17 October 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

6.2.3 Activity update First Nations – October 2025

6.2.3.1 Activity update email sent to Buurabalyyji Thalanyi Aboriginal Corporation – 3 October 2025

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Buurabalayji Thalanyji Aboriginal Corporation (BTAC) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted BTAC on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

Feedback can be emailed to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Please forward this email and the attached document to members of BTAC, Traditional Owners and other people and organisations who may be interested.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP.

Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to call or email me if you would like to discuss further.

Kind regards,

6.2.3.2 Activity update email sent to Gogolanyngor Aboriginal Corporation – 3 October 2025

It was a shame we missed you when we called into the Broome office 22-Sept, but we had a quick chat with [Individual 28] and then bumped into [Individual 29] down town. Please see activity update below and reach out if you have any queries.

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Gogolanyngor Aboriginal Corporation (GAC) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted GAC on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

6.2.3.7 Activity update sent to Ngarluma Aboriginal Corporation – 3 October 2025

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Ngarluma Aboriginal Corporation (NAC) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted NAC on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Feedback can be emailed to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Please forward this email and the attached document to members of NAC, Traditional Owners and other people and organisations who may be interested.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP.

Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to call or email if you would like to discuss further.

Kind regards,

6.2.3.8 Activity update sent to Nimanburr Aboriginal Corporation – 3 October 2025

I hope this email finds you well. I will give you a call early next week.

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Nimanburr Aboriginal Corporation (Nimanburr) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted Nimanburr on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

6.2.3.13 Activity update sent Wanparta Aboriginal Corporation – 3 October 2025

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Wanparta Aboriginal Corporation (Wanparta) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted Wanparta on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

Feedback can be emailed to feedback@woodside.com or via telephone on 1800 442 977.

Please forward this email and the attached document to members of Wanparta, Traditional Owners and other people and organisations who may be interested.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP.

Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to call or email if you would like to discuss further.

Kind regards,

6.2.3.14 Activity update sent to Wirrawandi Aboriginal Corporation – 3 October 2025

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Wirrawandi Aboriginal Corporation (WAC) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Also in September 2024, Woodside consulted WAC on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an

6.2.3.19 Activity update sent to Ngarluma Yindjibarndi Foundation Ltd and Yindjibarndi Aboriginal Corporation – 3 October

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Yindjibarndi Aboriginal Corporation (Yindjibarndi) and Ngarluma Yindjibarndi Foundation Ltd (NYFL) as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted Yindjibarndi and NYFL on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

Feedback can be emailed to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please forward this email and the attached document to members of Yindjibarndi and NYFL, Traditional Owners and other people and organisations who may be interested.

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP.

Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to call or email me if you would like to discuss further.

Kind regards,

6.2.3.20 Activity update sent to Save Our Songlines – 3 October 2025

ACTIVITY UPDATE: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan & Angel Subsea Infrastructure Removal Environment Plan

We are writing to provide an update to stakeholders who have been consulted on the activities described within the abovementioned Environment Plans (EPs).

In September 2024, Woodside consulted Save Our Songlines as a relevant stakeholder whose functions, interests or activities may be affected by the activities to be carried out under the North West Shelf (NWS) Phase 1 Plug and Abandonment (P&A) and TPA03 Well Intervention EP. The EP was prepared and submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for assessment in February 2025.

Also in September 2024, Woodside consulted Save Our Songlines on the Angel Subsea Infrastructure Removal EP, which was prepared and submitted for assessment with NOPSEMA in April 2025.

Since the submission of the EPs to NOPSEMA, Woodside has determined that the activities within the Angel Subsea Infrastructure Removal EP will not be required until a later date (the details of which are explained below).

While the activities described in both EPs are stand-alone decommissioning projects, there are certain activities described in each EP that are interdependent on one another. As a result, information we provided during consultation on the NWS Phase 1 P&A and TPA03 Well Intervention EP has been updated.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Angel Subsea Infrastructure Removal EP

Woodside will no longer be continuing its submission of the current Angel Subsea Infrastructure Removal EP.

The subsea infrastructure removal of the Angel flowlines remains part of Woodside's broader decommissioning strategy. Activities previously proposed under this EP are now planned to be undertaken as part of the Angel cessation of production, which is subject to a range of variables and will be conducted in accordance with the Angel Operations EP, currently in force until mid-2029.

This enables Woodside to undertake an industry best practice to clean and inspect the inside of the Angel subsea pipelines following cessation of production and prior to removal. This allows us to validate the residual contents in the flowlines and reduce the environmental impacts and risks of the activity to acceptable and as low as reasonably practicable (ALARP).

NWS Phase 1 P&A and TPA03 Well Intervention EP

As a result of Woodside delaying the activities within the Angel Subsea Infrastructure Removal EP and progression of engineering assessments, there are updates to the NWS Phase 1 P&A and TPA03 Well Intervention EP. These include:

- Removal of references to the Angel Subsea Infrastructure Removal EP.
- The removal of optional scope to remove Angel wellheads (AP2, AP3 and AP4), including estimated removal timelines. The wellheads will be required to support future flowline decommissioning operations.
- Removal of references to the Angel flowlines being cut prior to NWS plug and abandonment activities commencing. Connected flowbases will support future flowline decommissioning operations.
- Updates to the removal of Christmas Trees (these are structures that provide flow control on oil and gas wells) to optional scope under the EP. This is to account for an identified opportunity to plug and abandon the NWS wells through the Christmas Trees and allows for the recovery scope to be moved to a later EP.
- Removal of references to the estimated timing for Angel Wellhead removal. Wellhead removal activities are no longer part of the EP due to their requirement to support future flowline decommissioning operations.
- Inclusion of sidetrack drilling as an option for re-entry to the wellbore at PER-02, to enable effective permanent abandonment of the well. The method of well entry is being carried as an option if the base plan to re-enter and abandon the well conventionally is assessed as not feasible.
- Additional clarity on remediation, removal, or isolation of any Non-Water Based Muds (NWBM) in the wells, as part of the plug and abandonment activity has been included in the Consultation information Sheet.
- An updated Consultation Information Sheet for the NWS Phase 1 P&A and TPA03 Well Intervention EP is available on our website.

There are no other changes to the previously provided consultation information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We are currently preparing an updated version of the EP for assessment with NOPSEMA. If you have any additional feedback as a result of this activity update, please advise us before **17 October 2025** to allow us to include your feedback in our submission.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide information directly to NOPSEMA, please do so.

Woodside previously consulted you on its plans to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP).

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Woodside also proposes to conduct well intervention activities at the TPA03 well to remediate a valve and restore production from the lower reservoir.

Information on the EP is provided in the email below and in the Consultation Information Sheet, which is attached and available on Woodside's website. The well location coordinates and water depths have been updated below as advised in a follow up email to you on 11 October 2024. There are no other changes to previously provided consultation information, including mitigation and/or management measures.

If you have feedback specific to the activities and the proposed EP, Woodside welcomes it at consultation@feedback.woodside.com or 1800 442 977 by 1 November 2024.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

6.3.2 Email to Australian Fisheries Management Authority (AFMA), Commonwealth Fisheries Association (CFA) – 22 October 2024

Dear Stakeholder

Woodside previously consulted you on its plans to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP).

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Woodside also proposes to conduct well intervention activities at the TPA03 well to remediate a valve and restore production from the lower reservoir.

Information on the EP is provided in the email below and in the Consultation Information Sheet, which is attached and available on Woodside's website. The well location coordinates and water depths have been updated below as advised in a follow up email to you on 11 October 2024. There are no other changes to previously provided consultation information, including mitigation and/or management measures.

If you have feedback specific to the activities and the proposed EP, Woodside welcomes it at consultation@feedback.woodside.com or 1800 442 977 by 1 November 2024.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.3.13 Email sent to Gascoyne and Pilbara/Kimberley recreational marine users – 22 October 2024

Woodside previously consulted you on its plans to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP).

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Woodside also proposes to conduct well intervention activities at the TPA03 well to remediate a valve and restore production from the lower reservoir.

Information on the EP is provided in the email below and in the Consultation Information Sheet, which is attached and available on Woodside's website. The well location coordinates and water depths have been updated below as advised in a follow up email to you on 11 October 2024. There are no other changes to previously provided consultation information, including mitigation and/or management measures.

If you have feedback specific to the activities and the proposed EP, Woodside welcomes it at consultation@feedback.woodside.com or 1800 442 977 by 1 November 2024.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Dear Recreational Marine User,

Woodside previously consulted you on its plans to submit the North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP).

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Woodside also proposes to conduct well intervention activities at the TPA03 well to remediate a valve and restore production from the lower reservoir.

The well location co-ordinates and water depths have been updated as per the table below. There are no other changes to the information provided to you in October 2024, including mitigation and/or management measures.

Wells	Approximate Water Depth (m)	Latitude	Longitude	Titles
AP2	80	19° 28' 59" S	116° 36' 37" E	WA-3-L
AP3	80	19° 30' 38" S	116° 36' 18" E	WA-3-L
AP4	90	19° 31' 18" S	116° 35' 13" E	WA-3-L
PER02	127	19° 31' 11" S	116° 6' 39" E	WA-1-L
PER04	128	19° 31' 26" S	116° 5' 53" E	WA-1-L
TPA03	113	19° 45' 43" S	115° 53' 23" E	WA-5-L

The updated Consultation Information Sheet for this Environment Plan (EP) is available via the QR code below.

If you have feedback specific to the proposed activities described, we would welcome your feedback at consultation@feedback.woodside.com or 1800 442 977 by **24 January 2025**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment)

Woodside Energy Consultation

6.3.19 Email sent to Tuna Australia – 7 November 2025

Woodside previously consulted you on its plans to submit the North West Shelf (NWS) Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP) which involves the permanent plug and abandonment (P&A) of five NWS production wells located in Production Licenses WA-1-L, WA-3-L, and the well intervention of the TPA03 production well in WA-5-L. The activities are located in Commonwealth waters around Woodside's existing Angel and Goodwyn production facilities, with the closest well to shore approximately 125 kilometres (km) north of Dampier, Western Australia.

Additional information on the EP is provided in the email below and in the Consultation Information Sheet, which is available on Woodside's website.

Lightning rod for homemade electric ute-ilisation

MACKENZIE SCOTT

Ten years after the demise of Australia's car industry, Brisbane biochemist Eddie Kocwa has built an assembly line to convert the US's most popular electric ute for use throughout Australia and the Pacific.

Within four months of beginning production, BossCap has converted 150 Ford F-150 Lightnings from left to right-hand drive in order to meet the growing need of businesses and their environmental and climate targets, with deals already struck with the UN, airports and mining companies.

BossCap chief executive Mr Kocwa said they were unlocking technology that would otherwise have been a decade away. "We're trying to help companies reduce their emissions," he said. "We know that they're on the clock, they've got targets to hit by 2030 and 2050. So we're bringing vehicles to this market, that's our goal."

BossCap's factory in the outer northern Brisbane suburb of Brendale currently "remanufactures" three vehicles a day but has the potential to ramp up production to 150. The car has been tested to make sure it can adapt to the harshest of Australian conditions, having done laps around Holden's historic Lang Lang test track in Victoria and Lakeside Park in Brisbane's Kurrongbah.

Not only is BossCap reigniting Australia's vehicle manufacturing industry, it is offering an alternative to Chinese-built electric vehicles as regulators become increasingly wary about the use of foreign technology in cars, with bans currently being proposed in the US.

The business reported turnover of $100m last year and prides itself on being wholly Australian-owned and employing nearly 100 people. Almost the entirety of its supply chain is onshore, which protects it against the turbulence encountered by many industries during the pandemic.

"Creating jobs, creating industry and developing capability(s) important to us because there is not much left in Australia," Mr Kocwa said. "We've seen what happens when supply chains get compromised – everyone rushes and panics. We need to have capability in Australia.

"We really enforce an Australia policy across the whole business, even in cases where it costs more, because we will have that resilience and dependability."

The local element also allows the business to respond to the needs of different industries and build each vehicle to specification. Construction and renewable energy development business MPC Kinetic has six vehicles in play as it looks to replace its diesel fleet.

BossCap has also partnered with the UN via a local dealer in Samoa, with the vehicles able to act as back-up generators for homes connected to the island nation's irregular power grid. "These vehicles have a tremendous on-board power supply," Mr Kocwa said. "That's the added benefit to EV; aside from (them being) cleaner and greener, having mobile power in remote locations or off-grid is something I don't think Australia fully understands yet; once we do, it's a game-changer."

Mr Kocwa and the company's co-founders are in discussions with other vehicle manufacturers.

Brisbane Airport is trialling two of the F-150s on the tarmac as part of its ambition to operate carbon naturally by 2025. Airport fleet and mechanical manager Greg Burke said it took six months to develop specifications needed for the utes to operate as airside safety vehicles. "Due to their operation in a live runway environment, any shift in technology comes with unique challenges to overcome," he said. "But as a sustainability leader, it's something we are committed to do. So far the Lightning is ticking all our boxes."

'Give kids the tools to deal with bullies'

EXCLUSIVE

STEPHEN LUNN
SOCIAL AFFAIRS EDITOR

Governments, schools and parents need to widen their focus from identifying and re-educating bullies to teaching young people how to better cope with the emotional damage bullying does, a leading educator says.

And girls need particular support, given research shows they are more vulnerable to bullying, Michael Bernard says.

The former Melbourne University professor said addressing school bullying requires more attention on giving children and adolescents the tools to emotionally protect themselves if they find themselves on the receiving end.

"Schools have programs on preventing bullying, restorative justice systems for holding bullies accountable, education for bullies as to the consequences of their behaviour and positive behaviour rules in schools to limit the extent of bullying, and so they should," Professor Bernard said.

"On the other side, there's too little investment in equipping all kids with the skills and resources to manage being bullied in a way that doesn't overwhelm them."

The California State University emeritus professor said the key to empowering young people to rise above bullying is to understand they have the power to choose between the negative thinking that leaves them upset about being bullied to a positive mindset that puts them more in control.

And young people must be supported to understand they do not lose their self-worth and that however bad the bullying seems, there are worse things that can happen in life.

Professor Bernard said his recent research using a bullying prevention program he designed that focused on helping young people to emotionally regulate had yielded strong results, with more than 90 per cent feeling like they could manage incidents of bullying.

"What is abundantly clear, and this applies to people in the workplace as much as it does to school students, is that people's mindset about bullying largely determines the effect of the bullying on their emotional and behavioural response," he said.

The issue of bullying is in the spotlight after the suicide of a 12-year-old girl in Sydney this month, with her family saying she had been bullied by other students for years and the school should have stepped in earlier to address it.

Data from the Australian Council for Educational Research's Social-Emotional Wellbeing Survey last year showed children and adolescents reported an increase in stress and anxiety every year from 2018 to 2023.

Levels of stress are much higher for girls than boys, along with significant deterioration from primary to secondary years and from year 7 to year 12, the survey revealed.

Professor Bernard said his new research had shown girls were more likely to show significant improvements with anti-bullying programs when they were targeted, primarily because they tended to respond more negatively to being bullied in the first place.

He said governments including departments of education had a critical role in doing all they could to minimise bullying in schools but they weren't investing in programs aimed broadly at developing an intrinsic capacity to cope. At a more granular level, parents and teachers could play their parts too, he said.

Flyers warned of Qantas strike

AISLING BRENNAN

Thousands of travellers could be facing delays as Qantas engineers plan to continue striking amid an ongoing wage dispute.

More than 1000 Qantas engineers will walk off the job during peak hour flights on Monday morning, as NSW school holidays kick off.

Flights departing major airports in Brisbane, Sydney, Canberra, Melbourne, Adelaide, and Perth will be affected as workers participate in stoppages from 7am to 9am in each time zone.

The wage claim made by the Qantas Engineers Alliance – a union alliance comprising the AMWU, the AWU and the ETU – is for 5 per cent a year, and a 15 per cent first year payment to make up for 3% years of wage freezes.

AMWU national secretary Steve Murphy said staff had no option but to take industrial action after a breakdown in communication with Qantas management over bargaining for enterprise agreements, which expired in June.

"These workers hold special and valuable skills that take a decade to build up," Mr Murphy said. "They were essential workers during the pandemic, and made sacrifices so Qantas would survive. Qantas needs to pay that debt back. Respect your workers, value their skills, pay them what they're worth.

"As our members say, there are no car parts when you're 30,000 feet in the air, so these maintenance engineers need to get it right the first time. If Qantas values that safety, it needs to show it values its workers. This is what this dispute is all about."

A Qantas spokesman said travellers shouldn't be badly impacted by the strike action.

"Over the past four days, we have seen no disruptions to our network as a result of the industrial action from some of our engineering workgroups," he said.

"Our teams have done a great job helping customers safely get to their destination over the busy weekend with school holidays and the footy finals. We have contingencies in place and don't expect Monday's planned strike action to have an impact on customers, or their travel plans."

NEWSWIRE

'Clone stadium for Olympics to save millions'

EXCLUSIVE

JAMIE WALKER
ASSOCIATE EDITOR

Former West Australian premier Colin Barnett has called on Queensland to clone Perth's acclaimed Optus Stadium for the 2032 Olympics, saying a replica would save money and time. The long-serving Liberal Party leader was expanding on a proposal he put forward in The Australian earlier this month to break the logjam in the troubled venues program for the Brisbane Games.

Premier Steven Miles's Labor government and the Liberal National Party opposition under David Crisafulli are at odds over the Olympic stadium options entering the state election campaign on Tuesday.

If re-elected, Mr Miles will press on with the redevelopment of the 1982 Commonwealth Games hub at the Queensland Sport and Athletics Centre deep in Brisbane's southside suburbs, despite concern that the aged stadium is poorly served by public transport and offers limited ongoing value.

Mr Crisafulli, front running in the opinion polls, has described the QSAC plan as horrendous with "zilch" prospects if the LNP wins on October 26. He said he would be guided by a post-election review by the independent infrastructure delivery agency that has been another focus of partisan bickering over the Games preparations.

Mr Barnett said Queensland should effectively reproduce Perth stadium on a greenfield site in inner Brisbane, also using a public private partnership to ease the upfront cost for taxpayers.

He said the new $3.4bn Victoria Park stadium recommended in March by a panel headed by former Brisbane mayor Graham Quirk – but immediately rejected by Mr Miles as too expensive – had the same capacity at 60,000 seats and other synergies with the $1.3bn Perth project completed in 2018.

COLIN MURTY

Colin Barnett

"It did occur to me that given the success of the Perth stadium and that it has won a number of international awards and the size seems appropriate, it must be possible to virtually transfer from Perth to Brisbane the design of that stadium," Mr Barnett said.

"They both have the same long-term uses for AFL and cricket. Just replicate it.

"Obviously, there would have to be some tweaking; you would need to make minor changes along the way.

"While Perth stadium has an exterior that is sort of an iron-ore image, related to the Pilbara and resources industry, you would have a very different image in Brisbane – probably reflecting the barrier reef or the tourism aspects of Queensland.

"But I think that would be doable."

Interviewed by this masthead, Mr Crisafulli said the Olympics had been sold to the public as an opportunity to bring on "generational infrastructure" in rail and road links for Queensland's booming southeast, a position he would uphold if the LNP returned to office.

"It was always about creating generational infrastructure and we spoke about existing venues and the opportunities to come," he said.

"That was the original terms of the (2032) bid. I want to make sure that Queenslanders feel like that's being honoured, and that they feel proud of the process." Pressed on whether he was definitively ruling out a new stadium at Victoria Park, Mr Crisafulli said "No new stadium at Victoria Park."

When The Australian put to him that it didn't leave many options for the main Olympic stadium, he said: "Let's have a look at what an independent infrastructure co-ordination authority comes up with."

Mr Crisafulli, however, reaffirmed a new stadium would not be in the terms of reference for the 100-day review he would commission from the agency if the LNP won the election.

Asked whether he would be prepared to revisit the original proposal by Mr Miles's triple election-winning predecessor as Labor premier, Annastacia Palaszczuk, to rebuild the Gabba stadium, he said: "Let's have a look."

Mr Miles reinstated the stand-alone agency in one of his first acts on succeeding Ms Palaszczuk last December, reflecting the LNP's position that Labor had erred by bringing the functions in-house, but failed to staff it ahead of the government entering caretaker mode for the state election.

Asked whether he would consult Labor over the appointments if he became premier, Mr Crisafulli said: "If we were to win the election, I'm going to give the opposition the respect that I was never afforded in the process."

Mr Barnett said replicating Perth stadium in Brisbane would make it a "very clear, easy project" to deliver, "and for that reason the cost would be far lower than the three or four-billion being talked about."

The WA premier in 2008-17 said: "What I would suggest to whoever wins the state election is they should come over to Perth and just quietly have a look at the stadium. Bring a couple of experts with you.

"It's worth a day trip and I'm sure people involved in those negotiations would also be happy to sit down and talk about the merits of a public private partnership."

North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition.

Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

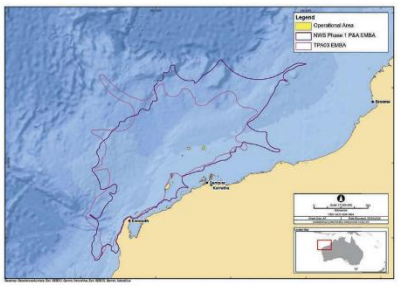
North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention activities

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Three of the wells are located in the Angel field tied back to the Angel platform and two wells are located in the Perseus-over-Goodwyn field tied back to the Goodwyn platform. Woodside also proposes to conduct well intervention activities at the TPA03 well in the Tidepole field tied back to the Goodwyn platform, to remediate a valve and restore production from the lower reservoir.

This Environment Plan covers all plug and abandonment and well intervention activities, which are planned to be completed in one drill rig campaign.

Environment that may be affected (EMBA)

The EMBA is the largest geographic area where unplanned activities could potentially have an environmental consequence. The whole EMBA will not be affected.



We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this Environment Plan, we want to hear from you by **30 October 2024**.

Millions of eyes on final

DYLAN CAPORN

Brisbane's thumping victory over the Sydney Swans was seen by more than 6 million viewers, making it the most watched program on Australian screens this year.

For the first time this year, the deciding match was available on 7plus, with a significant 655,000 viewers streaming the clash on the app. The AFL Grand Final, screened on 7 and streamer 7plus, drew a massive 4.02m viewers across Australian TV screens, including 344,000 in Perth, not including streaming.

The Lions, who walked away with the premiership after a 10-goal victory over the Swans, were watched by 456,000 in their hometown of Brisbane.

In Melbourne, there were 980,000 switching on the game, followed by 464,000 in Sydney and 300,000 in Adelaide.

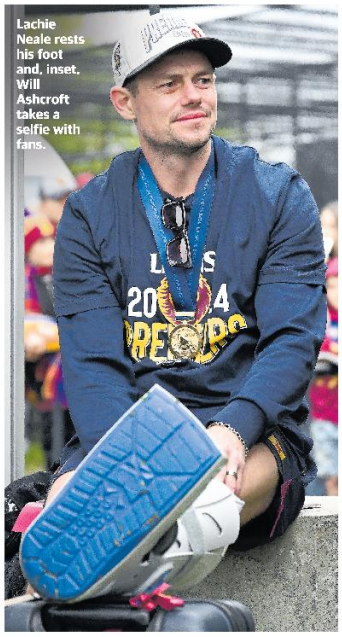
The broadcast topped the more than 3.5 million who watched the State of Origin decider match in July.

It comes after a bumper week leading up to the grand final, with Seven's 2024 AFL Brownlow Medal coverage recording a total TV national reach of 2,898,000.

The match marked the first under a new arrangement for Seven, which will now stream matches free every round on 7plus during next year's premiership season.

And a medal to boot

The party is just starting for the Lions and their legion of fans



Lachie Neale rests his foot and, inset, Will Ashcroft takes a selfie with fans.

JAKE SANTA MARIA

Brisbane's premiership stars continued their grand final party in front of thousands of fans in the club's Melbourne heartland of Fitzroy on Sunday.

Bleary-eyed players took to the stage on a wet day at Brunswick Street Oval, but the biggest attraction was newly minted premiership captain Lachie Neale.

The former Fremantle star, who battled a heel injury through the finals series, was seen sporting a moonboot on stage.

But the two-time Brownlow medallist wasn't bothered at all.

"I couldn't give a s...," Neale said.

"It's a little bit sore this morning but that's probably because I was up until 6am on it, so the physio has put me in a boot this morning. I'll be fine."

The Lions blew Sydney off the park at the MCG on Saturday in a 60-point victory that sealed their first premiership in 21 years.

One man everyone was chasing a selfie with was Will Ashcroft, who became the youngest player to win the Norm Smith medal at just 20.

A few players were rocking sunglasses, with it not hard to imagine some saw very little sleep overnight — though the premiership medals around their necks would likely relieve any ill feelings.

Neale made the high-profile switch to Brisbane from Fremantle at the end of 2018 in chase of premiership success.

Having now reached the top of the AFL mountain, he said it was even better than he imagined.

"You always imagine that moment and think it's going to be incredible," Neale said.

"Words can't really describe how incredible the last (period of time) since that final siren.

"I can't really say the best moment of my life, otherwise my wife will kill me, but very close."

The Lions flew home to Brisbane on Sunday afternoon, where their flag celebrations were expected to kick on.

NEALE PAYS TRIBUTE TO FREO P66-67

North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition.

Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention activities

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Three of the wells are located in the Angel field tied back to the Angel platform and two wells are located in the Perseus-over-Goodwyn field tied back to the Goodwyn platform. Woodside also proposes to conduct well intervention activities at the TPA03 well in the Tidepole field tied back to the Goodwyn platform, to remediate a valve and restore production from the lower reservoir.

This Environment Plan covers all plug and abandonment and well intervention activities, which are planned to be completed in one drill rig campaign.

Environment that may be affected (EMBA)

The EMBA is the largest geographic area where unplanned activities could potentially have an environmental consequence. The whole EMBA will not be affected.

Fortescue release 'mistake'

ADRIAN RAUSO

Rio Tinto's chief executive Jakob Stausholm was shoehorned into a Fortescue decarbonisation press release without approval, forcing an embarrassing retraction.

Last Wednesday Fortescue announced it had signed a $US2.8 billion ($4.1b) deal with Liebherr for the supply of zero-emission trucks, excavators and dozers, which curiously included highly complimentary quotes from Rio's boss.

Rio is not involved in the Fortescue deal with Liebherr.

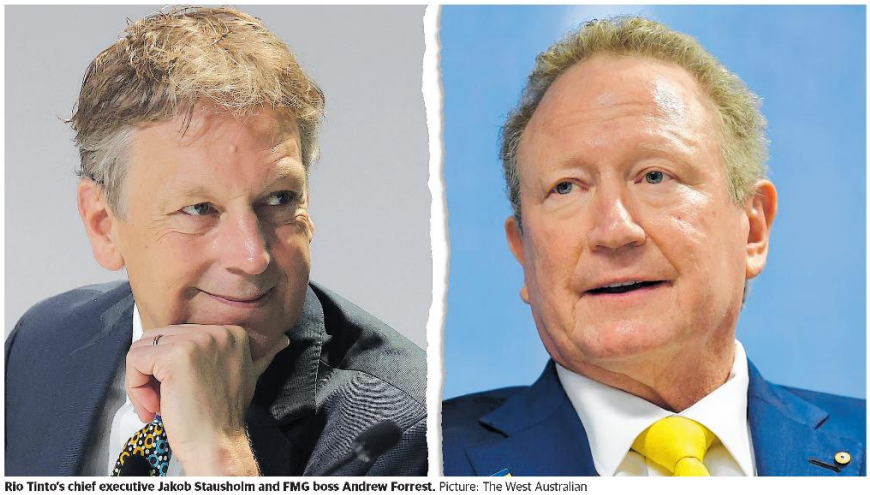
"Fortescue's partnership with Liebherr marks a turning point in the history of the mining industry," the quote attributed to Mr Stausholm said.

"It takes foresight and courage to be a first mover, and while we can't always be first, we can be fast followers".

Nearly two hours later Fortescue re-issued the press release with a retraction.

"Quotes attributed to Rio Tinto CEO Jakob Stausholm were mistakenly included in the Fortescue Liebherr media release. Please disregard these quotes and reach out to Rio Tinto for any comments."

Mr Stausholm ended up posting a comment about the Fortescue-Liebherr deal on LinkedIn, albeit with a much more subdued tone and no mention of Rio being a "fast follower" or Fortescue being a "first mover".



Rio Tinto's chief executive Jakob Stausholm and FMG boss Andrew Forrest. Picture: The West Australian

"This is a significant partnership for the global mining industry and I congratulate the Fortescue team for taking this bold step to decarbonise their mining fleet," he said on LinkedIn.

Sources say the now retracted comments were first floated after Fortescue founder Andrew Forrest and Mr Stausholm bumped into each other at a mining conference in Las Vegas last week.

But the proposed quotes drafted by Fortescue's PR team did not receive the Rio Tinto tick-off and a version with the quotes still included was mistakenly sent out to media.

The deal Fortescue signed with Liebherr encompasses 360 autonomous electric trucks, 55 electric excavators and 60 battery-powered dozers, representing about two-thirds of the current mining fleet across Fortescue's iron ore operations in WA.

The announcement also included comments from Mr Forrest and Fortescue Metals CEO Dino Otranto.

6 NEWS northwesttelegraph.com.au NORTH WEST Telegraph Wednesday, October 2, 2024

Dutton claims rift over tax tweaks

DAN JERVIS-BARDY & ELLEN RANSLEY

Peter Dutton has claimed the Prime Minister and his Treasurer are "at war" with each other over potential changes to negative gearing and capital gains tax concessions that have divided Labor MPs.

The Opposition Leader ruled out supporting any reforms, declaring there was a "growing divide" between Anthony Albanese and Jim Chalmers after it was revealed Treasury had been examining tweaks to the tax breaks.

"It's very obvious that there is a growing divide between the Treasurer on one hand and the Prime Minister on the other," Mr Dutton said last Thursday.

"And those teams seem to be at war with each other.

"And when the Labor Party is focused on internals and fighting against each other, and positioning about who will be the next leader of the Labor Party, Australians are the ones who miss out."

After first declaring it "wasn't Party policy" — in statements reminiscent of Labor's rhetoric before it ripped up the old stage-three tax cuts — Mr Albanese hardened his language on Thursday morning.

He insisted Labor was not planning to take such a policy to the next Federal election, but has not denied the modelling exists or that such changes could be made in the future.

Anthony Albanese. Picture: Facebook

The Prime Minister has insisted he didn't request the work, but conceded he didn't know if Dr Chalmers had.

"Treasury doesn't need to be directed. They're not school children with teachers up the front of the class telling them what to do," he said.

In a press conference last Wednesday, before he departed for China, Dr Chalmers said it was "not unusual for the public service to examine issues that are being speculated about in the public or in the Parliament".

The Labor caucus is split over whether to revisit a version of the policies Bill Shorten took to the failed 2016 and 2019 election, with at least half a dozen backbenchers open to a debate as pressure mounts on the Government to do more to tackle the housing crisis.

But other government MPs, including senior ministers, want the idea to remain firmly off the table.

One senior Labor minister said changes to negative gearing were "absolutely not on the table, and never have been", adding that was the "right approach".

Mr Dutton also accused Dr Chalmers, who is currently in Beijing for bilateral meetings, of running away from questions about "a policy that he's commissioned".

He also denied calls from some of his own backbenchers to consider making changes to negative gearing, instead branding it a "new tax".

"We will take a very strong stance against any changes to negative gearing, because it will disrupt the housing market, it'll drive up rents, and it's not in our nation's best interests," he said.

Appearing at the National Press Club on Thursday, former Liberal Treasurer Joe Hockey reaffirmed his long-held view that negative gearing should be "skewed" to new homes to encourage more construction.

Opposition Leader Peter Dutton. Picture: Kelsey Reid

Mr Albanese remains unconvinced that changes to negative gearing won't reduce housing supply — the main aim of Labor's $32 billion housing agenda.

Property Council-commissioned analysis into Labor's 2019 proposal warned of a 4.1 per cent cut to the housing pipeline, costing 7800 jobs and a $1.5b hit to GDP.

The changes modelled by Treasury reportedly differ from Mr Shorten's plan and include a cap on the number of properties an individual can negatively gear.

"Will it (changing negative gearing) add to supply or will it decrease supply?" Mr Albanese said.

"The figures and research that has been produced by organisations like the Property Council indicate that it would reduce supply and therefore not contribute to solving the issue. And that's the issue."

Alf Parker's Rest in Reef ball sitting on the seabed in 6m of water. Picture: Gill McPherson

Deep way to rest in peace wins

JESSICA MORONEY & MATTHEW PADDICK

A Mid West men's shed has been recognised at the Australian Men's Shed Association awards for its creative efforts to remember loved ones after dying.

The innovative fundraising activity award was taken out by the Jurien Bay Community Men's Shed, for its Rest in Reef project.

The artificial reef was made using reef balls, which used the ashes of loved ones mixed with a special blend of concrete.

The shed offered the unusual memorial service as part of its package, where friends and family could see the reef ball placed within the reef. It is a popular service that has received inquiries from across the nation and is expected to last 20 years, with 100 more balls approved to extend the reef over the next three years.

President Geoff Bunn said the Men's Shed was proud to receive recognition for the project, which created a lasting memorial site for ocean lovers. "We believe this is due recognition of the incredible vision and effort of our foundation members who first developed and constructed an artificial reef off the coast of Jurien Bay, before coming up with the concept of a Rest in Reef," he said. "While we do raise funds from the rest in reef balls, we see it more as a community service than a fundraiser."

Mr Bunn said 17 balls had been added to the original reef, which was made up of 79 larger balls.

It is the only organisation in Australia to offer a Rest in Reef service.

Other men's sheds were recognised at the awards, outlining their contribution to their respective communities.

Wagga Wagga in NSW was recognised for its sustainability, while Queensland's Coolum and NSW's Eden both took out the men's health honour.

Shedder of the year went to Bellbowrie Moggill's Graham Barnard, while the shed of the year was Macclesfield in South Australia.

The Ted Donnelly award for outstanding contribution to the men's shed movement went to Paul Sladdin.

6.4.1.6 Broome Advertiser - 3 October 2024

4 NEWS broomead.com.au Broome Advertiser Thursday, October 3, 2024

Push for a permanent beach car ban at Cable

Djukun Nation chief executive Jaala Ozies said there was a strong desire to protect turtle hatchlings.

CAIN ANDREWS

A traditional owners corporation has started a petition to permanently close Cable Beach to vehicles after Broome Shire Council opted to extend the beach's vehicle ramp closure to protect turtles just last week.

The petition posted to Change.org had gathered more than 5000 signatures in the first 24 hours of its launch on August 13, with the latest numbers nearing 7500 signatures.

Djukun Nation chief executive and lead petitioner Jaala Ozies said the response to the petition had been "overwhelming". "Since we started it in August, we've received an incredible amount of national support," she said.

"The outpouring of signatures and messages shows that there's a strong desire to preserve our cultural heritage and protect the sacred ecosystems on Djukun country."

She said the shire's temporary nesting-season closure was simply "not enough" to protect the sacred habitat. "The continued presence of vehicles in these areas causes damage to the land, disrupts turtle habitats and risks long-term environmental harm," she said.

"For the Djukun people, protecting Billingooroo (Cable Beach) is not only about preserving a sacred cultural site but also ensuring the survival of native wildlife and maintaining the integrity of Djukun country for future generations.

"Extending the vehicle ramp closure temporarily is not enough to protect the ecosystem, the beach, and the turtles. While it may offer short-term relief, the ongoing threat remains as long as vehicles are allowed to access the beach.

"To truly protect the land and wildlife, there should be a permanent closure on all beaches.

This would provide long-term conservation for the environment and ensure the safety of sacred sites on Djukun country."

Ms Ozies said she hoped to see vehicle access banned at Gantheaume Beach as well.

"Protecting all the beaches on Djukun country is essential to preserving the natural environment and the cultural heritage of the Djukun people," she said. However data from the Cable Beach Community Turtle Monitoring data 2017 to 2023 suggests there are minimal turtle hatchlings through the months of March to September each year.

Earliest hatched nests have been recorded in the first week of December with one nest in 2019 recorded on November 13, suggesting some turtles nest successfully on Cable Beach within the monitoring area as early as the first week of October. Tracks have also been opportunistically sighted in September.

In 2023, the last recorded successful nesting was on December 19 with hatching occurring around February 7.

The figures suggest there is a peak period of nesting activity in mid-November to early December with minimal nesting activity during most of January and February.

6.4.1.7 Kimberley Echo - 3 October 2024

Kimberley Echo
Thursday, October 3, 2024
kimberleyecho.com.au

Ley tackles Aboriginal issues

CAIN ANDREWS

Deputy Opposition Leader Sussan Ley has announced the Liberal-National Coalition plans to audit Aboriginal corporations in the Kimberley to ensure Federal funding is effectively used for local services.

During a recent trip to Broome in the lead up to the Federal election next year, Ms Ley said the Coalition was committed to scrutinising how substantial Federal funds were spent.

She said the Coalition would audit Aboriginal corporations in the region to make sure the Federal money they received was actually being spent on services on the ground.

"We've talked about the things that we will do, including a careful audit of Indigenous organisations to make sure that the significant funding they receive from Canberra is actually spent on improving the lives of the people that they are responsible for," Ms Ley said.

"We actually have to start from the ground up and focus on how do we deliver the significant improvements that we know Indigenous Australians deserve."

Deputy Opposition Leader Sussan Ley, left, and Durack MP Melissa Price. Picture: Cain Andrews

In response to questions about how the Coalition would make sure Aboriginal voices throughout the Kimberley were heard after Peter Dutton proclamation's that he will remove the position of First Nations Ambassador if elected, Liberal Durack MP Melissa Price said she would like to see the establishment of "regional voices".

"It's not clear to me what this Indigenous ambassador is actually achieving," Ms Price said.

"I would like to see us as the Coalition review the Voice proposition and start with regional voices so the Kimberley has a voice.

"In fact, we have seen no new policy discussions from the Albanese Government since the Voice failed, so he is failing the Kimberley."

However, there is still no detailed policy framework about how the Coalition would establish these regional voices.

The issue of representation is vital for the Kimberley, which has about 40 per cent of its population identifying as Aboriginal and facing significant challenges related to justice, health and housing.

Support for the Voice varied across the Kimberley, with Fitzroy Crossing voters favouring it at 80 per cent, while Kununurra opposed the proposal.

Other polling locations in the Kimberley, such as Broome and Halls Creek, largely supported the referendum, whereas residents in Kununurra and Derby mirrored the national results more closely.

Nonetheless, the Yes vote gained substantial support in the broader region.

6.4.1.8 Koori Mail - 2 October 2024

Kirk's Pages

Opening a can of worms

How are you going? It's the go to of greetings in every social situation and I've been thinking about this – the automatic response that flies out of the pie whole on sighting an acquaintance on isle 5 at ALDI, 'Good thanks, how are you?'

Imagine if we were to answer this question honestly? How many seconds would it take before you see the thought process, the chest rise with a deep breath in, then responding to the question..... 'I am good.'

I know sometimes we are just trying to get to the next thing, doing the daily list of chores or tasks but I wonder in all honesty has this question lost its meaning or is there another way of starting a conversation or have we lost the courage to really open up and connect or are we withholding true moments of vulnerability that could lead to meaningful moments between each other?

From experience it feels like the question is heard, then we process the idea and answer back in a solid single word response – 'Good' or 'Great'.

What if this simple question was used as an opportunity to listen or dive deep into the things that are really on our minds. A chance to have a moment of connection, or a good old corry ? (if you don't know what this means – ask a friend.)

I'm asking what it would be like to ask someone how they are really going and to hear someone else's perspective for a change – rather than the constant inner workings of our own thoughts and feelings that are usually driven by our own expectations and judgements.

Actual truth

Imagine how many of us take the opportunity to respond honestly with the actual truth?

I am opening a can of worms here which reminds me I need to make an appointment with my therapist ASAP so I can continue to unpick my own list of things to make and do and how to be a better, son, father, creative and friend.

I'm mentioning this phenomena for a few reasons. I love getting into a deep convo with my chosen few friends and family members but I'm also aware of loading up my nearest and dearest with my tiny list of things that seem fairly insignificant considering the state of the world and the fact that some of us have real problems.

But stay with me. I wonder what it would be like if we were to answer this question truthfully – 'How's it going'?

Now create the image in your mind of watching the eyes glaze over as you prepare for the overshare about the confront of turning 50 or the ego screaming about how irrelevant we feel in our chosen profession or 'industry' or the ever pressing concern about that relationship with the person you've been intimate with since 2021 while struggling to find the grace and gratitude for all of the above – as the world engages in a continuing genocide and clowns become leaders in positions of power.

'I'm great thanks'.

In the meantime you're thinking 'to tell you the truth'..... You skim through the 20 thoughts and hot topics on your mind and feelings about the current state of home and family – politics as we continue to witness performative allyship and disingenuous promises for a more inclusive and respectful future together that just makes me want to vomit in my own face.

How are you going?

Well, I feel like I've been swallowed by an idiot and shat out by a moron. But you can't say that right? The truth can sometimes be unsettling to say the least.

A dear friend, peer and mentor once shared about the three versions of the truth, offering a way to see the idea of how we could perceive or experience it. It has stuck in my brain ever since – burnt into the dark matter of my DNA ever since my ear met this sage advice and I am reminded of it often in my hour of need or when I am talking to a friend experiencing a crisis.

Let's imagine

Lets imagine there are threeversions of the truth – there is the personal truth which is our immediate experience of the world and our responses to it (as above), there's the communal truth and how we experience the world as a family or a community, in relation to each other.

The third version is the forensic truth, the kind that unfolds in a courtroom where cold hard evidence is presented and then a jury responds to or translates what the facts are according to the story points presented.

My head hurts even trying to explain this.

In times of emotional challenges I try to sit and observe these three versions of truth and unpick what is the version appearing in front of me at this moment, which one is?

I acknowledge that sometimes we find it difficult to even articulate what the truth is or who is the best person to tell it to? Maybe the question could be how are you listening?

I recognise that there is certain privilege that comes with having a voice and not everyone has this freedom, the real power is in the listening and the skill of hearing what is really going on.

The truth matters and it can hurt sometimes.

But if I could make a wish that would come true, I would ask what it could look like to get better at listening and what kind of actions do we take so that we are ALL heard in a meaningful and respectful way and to have courage in our conversations rather then just paying lip service.

6.4.1.9 National Indigenous Times - 24 September 2024

theibr.com.au THE INDIGENOUS BUSINESS REVIEW NIT 21

Increasing opportunities

EXCLUSIVE DECHLAN BRENNAN

Despite increasingly contributing to the Australian economy, First Nations businesses have gone largely unnoticed by past governments, says Indigenous senator Jana Stewart.

The Mutthi Mutthi and Wamba Wamba woman and Labor senator, who is chairing the Joint Standing Committee on Aboriginal and Torres Strait Islander Affairs, held an open hearing in Perth this month into improving economic prosperity for First Nations people.

The inquiry into economic self-determination and opportunities comes after the release of the Murru Waaruu economic outcomes report, which called for a critical shift in public policy to effectively support the economic empowerment of Indigenous people.

Senator Stewart said evidence from the inquiries showed Indigenous-led businesses were 100 times more likely to employ First Nations people, which in turn provides the best opportunity for culturally safe employment.

"The contribution is overwhelmingly positive, not just to the organisation, but you're also more likely to recruit more Aboriginal people; they add value to the organisation," Senator Stewart said. "If you do the work early, they're (the business is) not going to get held up anywhere along the line, because you've done the work, you build the relationships, you build the trust. You're doing the right thing by mob."

Senator Jana Stewart is promoting the work of Indigenous-led businesses. Picture: Aboriginal Hostels Ltd

Senator Stewart also countered negative narratives around work ethic, arguing instead that the retention rate for Indigenous businesses was high because of a culture of safety in Indigenous-led workplaces.

"There's this kind of narrative out there about us, you know, not wanting to work. But actually, the opposite is true," she said.

The Government has spoken much of the importance of jobs, with the Prime Minister using his speech at the Garma festival to promote Indigenous economic development, especially climate and industry policies designed to leverage benefits for remote communities during Australia's clean energy transition. "It really is a big opportunity, in my mind, to really shift the narrative about what Aboriginal people contribute to our nation," Senator Stewart said.

She said the hearings allowed MPs to hear about the impact on both Indigenous businesses, as well as other Aboriginal businesses they get their suppliers from.

Research from Dilin Duwa, Woi Wurrung for "Everlasting Flow," found the "Indigenous ecosystem" makes an important contribution to the Australian economy. It saw 13,693 active businesses and corporations in 2022, which generated $16.1 billion in revenue, employing 116,795 people, and paying $4.2 billion in wages.

The senator for Victoria said these numbers were "no small feat," before noting people in the community had expressed a belief that the "closing the gap" narrative was deficit-focused, without commenting on First Nations' economic contribution. "Generally speaking, the kind of stereotypes are about 'poor us', rather than our strengths," she said.

"The fact that we've been able to have such an impact in such a small amount of time, when you think about the structural lockout, because it's not a disadvantage; we've had a lockout of any kind of economic position in our country."

Furthermore, Senator Stewart said businesses thrived when they were culturally safe.

North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention Environment Plan
Angel Subsea Infrastructure Removal Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition. Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Woodside is about to commence consultation on two separate Environment Plans.

North West Shelf (NWS) Phase 1 Well Plug and Abandonment and TPA03 Well Intervention activities

Woodside plans to permanently plug and abandon five NWS wells that have ceased production. Three of the wells are located in the Angel field tied back to the Angel platform and two wells are located in the Perseus-over-Goodwyn field tied back to the Goodwyn platform. Woodside also proposes to conduct well intervention activities at the TPA03 well in the Tidepole field tied back to the Goodwyn platform, to remediate a valve and restore production from the lower reservoir.

This Environment Plan covers all plug and abandonment and well intervention activities, which are planned to be completed in one drill rig campaign. The activity will be around 125 km north of Dampier, Western Australia.

The Consultation Information Sheet for this Environment Plan will be available via the QR code below and on Woodside's website from 26 September 2024.

Angel Subsea Infrastructure Removal activities

Woodside plans to remove subsea infrastructure which connects three production wells to the Angel platform. These wells have ceased production and the associated infrastructure is no longer required.

This Environment Plan covers the removal of three subsea flowlines, three umbilicals, and associated equipment from the Angel field. Permanent plugs will be installed to preserve fluids within flowlines and umbilicals to as close as practicable to the Angel platform.

The Consultation Information Sheet for this Environment Plan will be available via the QR code below and on Woodside's website from 30 September 2024.

We want to hear from you

If you are an individual, organisation or community group and believe your functions interests or activities may be impacted by the activities under these Environment Plans, we want to hear from you by **30 October 2024**.

To find out more go to:

6.7 Community information sessions

The community information sessions that Woodside has conducted are captured below:

6.7.1 Gascoyne Region

6.7.1.1 Exmouth Community Information Session – 14 November 2024

Location	Exmouth
Activity	Community Drop-In: Woodside Marquee
Date	14 November 2024
Description of the consultation	Woodside hosted a stand at Ross Street Mall in Exmouth. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. Information on the Scarborough Energy Project, Browse to NWS Project, Woodside's Climate Transition Action Plan, leaflets providing QR codes to Woodside's Annual Report and Sustainability, 'Let's Talk' (a publication on the company's Australian activities) were available. EP Consultation Information Sheets available to attendees included: North West Shelf Phase 1 Well Plug and Abandonment and TPA03 Well Intervention
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: Geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from 9 – 14 November 2024. Post on Woodside social media channel. Promotion at the Exmouth Community Liaison Group meeting. An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with the EP factsheets and Project information sheets.
Estimated number of individuals / organisations consulted	Woodside had meaningful conversations with approximately 12 groups. These people identified as being Exmouth community members or visitors to Exmouth (residents of the East Coast of Australia or Western Australia).

Summary of Feedback, Objection or Claim

Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.

There was general interest in Woodside activities. Key issues discussed:

- Query on whether Woodside is building new marine infrastructure being built in the nearshore environment. A query was received on whether the design of Scarborough infrastructure allows for juvenile fauna to continue to traverse the nearshore environment.
- Woodside responded that the Scarborough trunkline was installed by horizontal directional drilling to minimise impacts to the beach and nesting turtles. The Scarborough trunkline is not a solid structure that would block movement of nearshore juvenile fauna.
- General queries on Woodside's footprint in Exmouth.
- Queries about employment and local content opportunities.
- Interest in understanding current social investment programs and opportunities.
- One stakeholder expressed support for more industry activity in Exmouth.
- Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Query on domestic gas commitments for Woodside's activities.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity. The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.

6.7.1.2 Ningaloo Sky Festival – 28 June 2025

	Location: Exmouth
Activity	Ningaloo Sky Festival
Date	28 June 2025
Description of consultation	Woodside hosted a stall at the Ningaloo Sky Festival in Exmouth to engage community members on our activities. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Information on Woodside's research in the Ningaloo region, Woodside's climate progress, leaflets providing QR codes to Woodside's Annual Report and sustainability information, 'Let's Talk' (a publication on the company's Australian activities) were available. Woodside made available printed consultation information sheets on the North West Shelf Phase 1 Well Plug and Abandonment & TPA03 Well Intervention
Advertising and invitations	Woodside promoted the session with the Exmouth Community Liaison Group to enable individuals to self-identify and promote awareness of the community consultation.
Estimated number of individuals / organisations consulted	Over 200 community members attended the event. Woodside spoke to many community members, recording approximately 25 conversations.
Summary of Feedback, Objection or Claim	
General queries about Woodside's footprint in Exmouth and the two facilities visible from the coast (Pyrenees and Ngujima-Yin FPSOs). General conversations about Woodside's activities in Western Australia, including the North West Shelf and progress on the Scarborough Project. Query on the Woodside-CSIRO Ningaloo Outlook Program and opportunities for further research in the Exmouth area. Questions relating to the current status of the Browse project and considerations for Scott Reef. Query about domestic gas supply and the capacity of the Dampier Bunbury Pipeline. General interest in Woodside's environmental management measures and mitigations. Questions around employment opportunities, in particular apprenticeship opportunities. Query about the development of a port in Exmouth and whether Woodside had involvement in the proposal. Interest in general Woodside updates from stakeholders identifying themselves as shareholders.	
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.7.1.3 Exmouth Community Markets – 5 October 2025

	Location: Exmouth
Activity	Exmouth Community Markets
Date	5 October 2025
Description of consultation	Woodside hosted a stall at the Exmouth Community Markets to engage community members on our activities. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Information on Woodside's activities in the Exmouth region, details of Woodside's community grants program, and fact sheets about marine seismic surveys were available. Woodside also made available printed consultation information sheets on the: NWS Phase 1 Plug and Abandonment and TPA03 Well Intervention EP
Advertising and invitations	Woodside promoted the market stall on its North West Facebook page.
Estimated number of individuals / organisations consulted	Over 200 community members attended the event. Woodside spoke to many community members, recording approximately 20 conversations.

Summary of Feedback, Objection or Claim

- Interest in Woodside's social contribution activities in Exmouth and potential support for health services infrastructure.
- Conversations about Woodside's approach to cultural heritage management
- Query about Woodside's tax contribution.
- Conversation about Woodside's approach to the energy transition and investment in new energy products and lower carbon services.
- Interest in industry's political influence.
- General queries about Woodside's footprint in Exmouth and the two facilities visible from the coast (Pyrenees and Ngujima-Yin FPSOs).
- General conversations about Woodside's activities in Western Australia, including the North West Shelf.
- Questions relating to the current status of the Browse project and considerations for Scott Reef.
- General interest in Woodside's health, safety and environmental management measures and mitigations, particularly in relation to seismic activities and potential impacts to fauna.

Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.7.2 Pilbara Region

6.7.2.1 Dampier Beachside Markets – 12 October 2024

Location	Dampier
Activity	Dampier Beachside Markets - Oktoberfest
Date	12 October 2024
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members from Woodside's Corporate Affairs team. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. An iPad with consultation/feedback subscription prompt was made available. Woodside made available printed consultation information sheets on: • North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the Pilbara News on 9 October 2024 • Geotargeted Social media posts were published inviting public to attend on Woodside North West Facebook page • Social media post from the event host, Dampier Community Association was published on 11 October 2024 inviting the public to attend • Advertisement was displayed on community noticeboard at Lo's Café, Karratha, and Roebourne Library • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) displayed at Woodside's stand along with current EP factsheets.
Estimated number of individuals / organisations consulted	Over 1000 community members attended the event. Woodside spoke to many community members, recording 6 meaningful conversations.
Summary of Feedback, Objection or Claim	
• General interest in progress on the Scarborough project and the future of gas in the energy transition. • General interest in the Carbon Capture and Storage process. • Interest in the Woodside community grant program • EP approval process discussed and why we want to talk to the community. No concerns raised. • General queries around employment and graduate opportunities. • Interest in divestment of ex-Woodside homes.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims raised about EPs. Woodside's participation at the market's is part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

6.7.2.4 Dampier Beachside Markets − 6 April 2025

Location	Dampier
Activity	Dampier Beachside Markets
Date	6 April 2025
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members of Woodside's Corporate Affairs, Environment Plan and First Nations teams. Woodside displayed a QR code at the stand, linked to the 'Consultation activities' page on Woodside's website. Woodside made available printed consultation information sheets on the North West Shelf Phase 1 Well Plug and Abandonment & TPA03 Well Intervention
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • An advertisement published in the Pilbara News on 26 March 2025 (see below) • Social media posts on the Woodside North West Facebook page inviting the public to attend (see below) • A social media post from event host, Dampier Community Association, published on 5 April 2025 inviting the public to attend • An advertisement displayed on community noticeboards at Lo's Café in Karratha, and the Karratha and Roebourne libraries • An EP consultation display with QR code (linked to the 'Consultation activities' page on the Woodside website) displayed at Woodside's stand along with current EP consultation information sheets (see below).
Estimated number of individuals / organisations consulted	Over 1200 community members (Dampier Community Association) attended the event. Woodside spoke to several community members, recording 30 conversations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim
• Queries around employment opportunities, including apprenticeship and trainee opportunities. • Interest in local content opportunities. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • Comments were made about the views of some issue motivated groups. Woodside expressed everyone had the right to share their views in a respectful and peaceful manner. • Conversations on the North West Shelf Project Extension including support for local community, timelines, investing partners, political views and the future of gas in the energy transition. • EP consultation and approval process discussed and why we want to talk to community. No concerns raised. • General interest in Woodsides commitment to emission reduction, positive feedback on meeting commitments. • Discussions around the area's housing market, residential and Fly In/Fly Out workforce. • Several discussions with children about what Woodside does and where gas comes from.
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims raised about EPs. Woodside's participation at the markets is part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

Estimated number of individuals / organisations consulted	Over 1200 community members attended the event. Woodside spoke to many community members, recording 20 conversations.
Summary of Feedback, Objection or Claim	
Queries around employment opportunities, including apprenticeship and trainee opportunities. Interest in local content opportunities. General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. Comments were made about the views of some issue motivated groups. Woodside expressed everyone has the right to share their views in a respectful and peaceful manner. Conversations on the North West Shelf Project Extension including support for local community, timelines, investing partners, political views and the future of gas in the energy transition. EP consultation and approval process discussed and why we want to talk to community. No concerns raised. General interest in Woodsides commitment to emission reduction, positive feedback on meeting commitments.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Discussions around the area's housing market, residential and Fly In/Fly Out workforce. Several discussions with children about what Woodside does and where gas comes from.
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.7.2.6 Red Earth Arts Festival (REAF) @ The Quarter – 15 & 16 May 2025

	Location: Karratha
Activity	Red Earth Arts Festival (REAF) @ The Quarter
Date	Thursday 15 and Friday 16 May 2025
Description of the consultation	Woodside hosted a stand at the Red Earth Arts Festival, a community event bringing together markets, community members and an art installation as part of the festival. The stand was staffed by members of Woodside's Corporate Affairs, Environment and First Nations teams. Woodside displayed a QR code at the stand, linked to the 'Consultation activities' page of the Woodside website. Woodside made available printed consultation information sheets on the North West Shelf Phase 1 Well Plug and Abandonment & TPA03 Well Intervention
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, promote awareness of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in Pilbara News on 14 May 2025 Day. • Posters displayed at notice boards across Karratha and Roebourne. • Social media posts published on the Woodside North West Facebook page inviting the public to attend (see table below). • EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below).
Estimated number of individuals / organisations consulted	Over the Red Earth Arts Festival 1000 community members attended the event. Woodside spoke to many community members, recording 20 conversations.

Summary of Feedback, Objection or Claim

- Queries around employment opportunities, including apprenticeship, trainee and graduate opportunities.
- General interest Woodside operated assets including King Bay Supply Base, Karratha Gas Plant, Scarborough Energy Project progress, Pluto Train 2 and Train 1 modifications projects.
- Conversations on the North West Shelf Project Extension including support for local community, timelines, investing partners, political views and the future of gas in the energy transition.
- Queries relating to whales, in particular pygmy blue whales and the research that Woodside has contributed to over 30 years. In addition, two community members wanted to know about Seismic activities and impacts to whales.
- Queries relating to air emissions and flaring with several flaring fact sheets being given to members of the public.
- Queries around bird migrations and impacts to birds as a result of Woodside's operations. Mitigations were discussed.

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 4 | November 2024

The rundown

North West Shelf Visitors Centre welcomes Wanparta

The Ngarla people at the North West Shelf Visitors Centre.

We acknowledge the unique connection that First Nations communities have to land, waters and the environment and seek to consult them in relation to our operations and proposed projects.

As part of our ongoing consultation with First Nations groups, Woodside Energy recently hosted 13 Traditional Owners from Ngarla country at the North West Shelf Visitors Centre, so they could see our operations first hand.

The Ngarla people are the Traditional Owners of an area of land east of Port Hedland that covers the De Grey and Pardoo pastoral stations in Western Australia's North West.

Woodside Manager First Nations Engagements, Michael Roe said that Wanparta Aboriginal Corporation as the Prescribed Body Corporate for the Ngarla people, had been identified as a relevant person to consult with on previously submitted and present Environment Plans.

"The Ngarla people were interested in learning more about the world of gas, and as part of the consultation process were invited to Karratha for a visit to the North West Shelf Visitors Centre overlooking the Karratha Gas Plant."

"This provided an occasion to build trust and understanding whilst providing the opportunity to provide feedback on our activities. In this case we were consulting on the five-yearly review of the Pluto Facility Operations Environment Plan." said Michael.

An accepted Environment Plan is required in order for Woodside to carry out activities. Meaningful conversations with First Nations people are documented and make up part of an Environment Plan submitted to regulatory bodies for assessment ahead of continued operation.

Wanparta Aboriginal Corporation Chairperson, Mary-Jo Coppin said, "the trip was really informative with good consultation, well organised and we felt very welcome at the facility."

A key element of Woodside's consultation efforts is our willingness to be flexible and adaptable to suit the audience in our overall efforts to avoid or minimise potential impacts from our operations.

Munro's Mack10k Fishing Competition

Munro's Mack10k 2024 Fishing Competition, held in Onslow from 24-25 August 2024, saw hundreds of anglers and fishing enthusiasts from across Australia enter into the running for a chance to reel in $10,000.

The event doubles up as a research initiative, spearheaded by Recfishwest's Fishing for Science program and supported by Woodside Energy.

Working with the Department of Primary Industries and Regional Development, the Recfishwest science team collected biological samples from mackerel caught by competitors, providing insight into the health of the local fish population.

Read more about the annual competition, hosted by the Ashburton Angler Fishing Club by visiting: recfishwest.org.au

Community spotlight

Wangarri Crane and Equipment Hire

Murujuga Commercial Limited's (MCL) first Pilbara business, Wangarri Crane and Equipment Hire (Wangarri), has been awarded the contract for supply and maintenance of cranes and forklifts for the Pluto Train 2 Project, the onshore component of the Scarborough Energy Project.

Established by MCL as a joint venture with Boddington's Hire, Wangarri provides a range of lifting equipment that includes cranes, forklift trucks, reach stackers and telehandlers for hire to the resource sector and other industrial clients across the Pilbara.

One of five commercial ventures managed by MCL, Wangarri forms a portfolio of businesses and commercial ventures that aim to provide a strong and economic future for its Murujuga members.

Wangarri means "Coming to Life" in Yindjibarndi, which represents MCL's journey as it moves from a start-up phase toward building business streams that align to the strategic goals and objectives of the Murujuga Aboriginal Corporation.

Bechtel, the appointed contractor for the Pluto Train 2 project, delivers engineering, procurement, construction and commissioning, has awarded contracts to local Indigenous businesses, such as Wangarri to deliver a variety of work scopes.

"We are very happy to be working with Wangarri on Pluto Train 2. We deeply value this local contract and appreciate their professionalism and dedication to providing safe and high-quality cranes and forklifts." said Bechtel Pluto Train 2 site manager Terry Klowss.

Jig Albert, MCL Managing Director said the contract with Bechtel on Pluto Train 2 had been an enormous stepping stone for their business.

"We have been contracted to provide a range of the smaller cranes for the project. Mostly this consists of Franna pick and carry cranes, however we are also providing a 160 tonne all-terrain crane and a small three tonne Maeda spider crane, as well as the ongoing maintenance of these machines," said Jig Albert.

"It has given our business the confidence to invest in our own equipment which will drive equity for the business and in turn provide a direct return to Murujuga Aboriginal Corporation members."

Learn more about Wangarri Crane and Equipment Hire and their work on the Scarborough Energy Project

The importance of consultation

"Like safety, consultation continues to be a core focus for NOPSEMA," Sue McCarrey, CEO, NOPSEMA *(Source: The Regulator, 2024, Issue 2)*

Consultation is a key component of Woodside's environmental planning and can involve a two-way process with relevant persons who wish to provide feedback on operations or proposed offshore activities.

Consultation enables Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. It is a key requirement of Australia's offshore environmental management framework and Environment Regulations.

An appropriate consultation approach which meets regulatory requirements enables Regulators such as the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for Commonwealth activities, or the Department of Energy, Mines, Industry Regulation and Safety for state activities, to assess and accept Environment Plans (EP).

Woodside is committed to open and transparent consultation and does this by providing clear information on proposed activities, assessing and responding to objections or claims about the activity, and providing a reasonable period of time and opportunity for a relevant person to provide feedback.

If required due to the nature and scale of a proposed activity, Woodside undertakes additional consultation activities over a longer period to ensure a reasonable period of time period and sufficient information has been provided. This allows for an informed assessment of the possible consequences of the activity on stakeholders' (referred to as a 'relevant person' under Commonwealth regulations) functions, interests or activities.

Subscribe to stay up-to-date

On Woodside's website we enable members of the public to subscribe to receive information about EPs as it becomes available.

Subscribing is a great way to stay informed about updates and important information related to Woodside's activities. It also provides the public with timely notifications about new projects, environmental initiatives, community engagements, and consultation information sheets for proposed activities.

Woodside has updated its consultation email address to consultation@feedback.woodside.com

To subscribe to Woodside's consultation activities **click here** and enter your details on the page.

Community conversations

Woodside consults local communities at local events. If you see our friendly team out-and-about, please come and chat to us about our operations and projects.

Recently our team engaged with community members at pop-up Environment Plan information sessions in Karratha and Exmouth and participated in the Dampier Beachside Markets. Our teams also recently met with stakeholders in Broome, Onslow and Roebourne.

We also meet quarterly with Community Liaison Groups in Karratha and Exmouth where we communicate updates and consult with community members on a range of relevant activities.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the Woodside North West Facebook page for updates including our Karratha Community Update newsletter.

Stay up to date on our continued contribution to the community we call home.

Milestone celebrations at FeNaCING Festival

The City of Karratha recently hosted the FeNaCING Festival, bringing together community and celebrating the region's key industries – iron (Fe), sodium chloride, commonly known as salt (NaCl), and natural gas (NG).

Woodside Energy, along with its joint venture partners, proudly supported the event, with a pavilion that featured Woodside's 70th anniversary as a company and 40th year of safe and reliable operations in the North West.

Woodside CEO Meg O'Neill made a special appearance at the festival, meeting local community members and helping with a range of giveaways on offer.

Meg praised the event organisers who successfully celebrated the community spirit that makes Karratha a great place to live and work.

"We know that such a significant milestone could only be achieved with the support of our people and the Karratha community," she said. "I was really thrilled to have the opportunity to join our team in the Woodside marquee as they engaged with the community about issues that matter to them and answered questions about our operations and growth projects."

Many attendees who visited the Woodside marquee expressed curiosity about Woodside's Environmental Plans and other topics including Carbon Capture and Storage, the Scarborough Energy Project and the development of Browse.

Woodside's active participation in events like the FeNaCING Festival supports our consultation approach to engage the community on our current business activities, including opportunity to provide feedback on our Environment Plans.

Our Plans, Your Say

Edition 5 | March 2025

Heritage auditors walking along eastern outside boundary of Pluto LNG Plant on Murujuga Country

The rundown

Cultural Connections: Woodside's Commitment to Heritage Management

Woodside has operated on the Burrup Peninsula (Murujuga) in the Pilbara region of Western Australia for more than 40 years. We've matured our approach to heritage management considerably over this time, and are proud of the relationships we have built with Traditional Owners and Custodians.

Every year, Woodside works with Traditional Custodians undertaking audits of heritage sites around the perimeter of the Karratha Gas Plant and Pluto LNG Parks. These audits arose from our long-standing consultation with Traditional Custodians regarding Cultural Heritage Management at our onshore facilities.

Both assets operate near National Heritage and Tentative World Heritage listed sites, including Murujuga's petroglyphs (rock art).

The primary purpose of the audits is to monitor the condition of culturally and spiritually significant sites and invite recommendations if the potential for impacts are detected.

"The audits are also an opportunity for Traditional Custodians to connect to areas of a cultural landscape that stretch back tens of thousands of years, and for the community's reassurance that cultural heritage is being managed appropriately on Woodside's leases," said Daniel Thomas, Manager Global Heritage and Human Rights.

The most recent heritage audits were carried out last year over a two week period.

"The feedback from Traditional Custodians was that the sites inspected remain in generally good condition," said Daniel.

"Traditional Custodians did identify some areas in need of additional vegetation management, and that vegetation management was supervised by elders and Indigenous community members in November last year. Another issue identified was rubbish washing up on shore which is also now managed."

Learn more about Woodside's cultural heritage management **here**

A soaring community experience

Western Australia's Pilbara shorebirds undertake a remarkable migration journey of over 10,000 kilometres to breed in the northern hemisphere, sustained by the region's marine cuisine.

Around 70 participants recently attended an annual community event at Hearson's Cove featuring shorebird watching and information sessions, and a tour of the incredible petroglyphs at Nganjarli (Deep George).

The event aims to raise awareness about the significance of the Pilbara coast for shorebirds and the rich cultural heritage of the area. Participants gain insights into the birds' behaviour and contribute to conservation efforts within the community.

Woodside Energy thanks the collective support from co-hosts, Pilbara Ports, Rio Tinto, Yara Pilbara and the DBCA Parks and Wildlife Service who partnered with the Murujuga Aboriginal Corporation Rangers and Birdlife Australia.

Community spotlight Impact felt locally in Karratha

Impact Digi is a Pilbara-based Indigenous owned and operated marketing agency with close to a decade of experience working with Woodside Energy.

A full-service marketing agency, Impact Digi has built relationships with government, industry, Indigenous organisations and businesses of all sizes helping them to build brands and reach stakeholders.

"The past couple of years have been extra rewarding as our reputation has grown within Woodside and we're getting to work with team members from other areas of their business," said Impact Digi Managing Director, Tamara Bin Amat.

Starting off by offering photography services when they first began, Impact Digi has transformed over time with a growing team, refined services and an expanded reach.

"Looking back, one of my favourite moments was when local Asset Manager for the Karratha Gas Plant, Breyden Lonnie presented our first ever award for Best Aboriginal Business at the 2015 Karratha and Districts Chamber of Commerce and Industry (KDCCI) Business Excellence Awards," said Tamara.

With Impact Digi recently winning the Business Excellence Award for Best Small Business at the 2024 Awards, among many other accolades, the recognition continues.

Tamara and her team understand the importance of supporting local and contributing to their community.

"Working with Woodside has not only boosted our business but also our reputation, opening doors to new opportunities across the state," said Tamara.

Continue reading about Impact Digi's experience working with Woodside **here**

Managing Director, Tamara Bin Amat left with her team.

Community partners playing a friendly game of lawn bowls during the sundowner event.

Woodsiders ready to chat at Ross St Mall.

Talking Point

Engaging Exmouth

Did you know that Woodside has been engaging with the Exmouth community for over 15 years? Woodside operates two Floating Production Storage and Offtake (FPSO) facilities around 50 kilometres off the coast of Exmouth, the Ngujima-Yin FPSO and the Pyrenees FPSO.

In November 2024, Woodside wrapped up the year with a series of engagements with stakeholders, community partners and the Exmouth community.

This included a Community Liaison Group meeting which is a forum co-hosted by Woodside and Santos. The joint approach stemmed from community feedback received around a decade ago, and the collaborative format has been retained to this day. The group meets three times a year and both Woodside and Santos provide updates on activities and community initiatives, inviting members to raise queries and provide feedback.

Woodside recently presented on our climate strategy and invited research partner, CSIRO to share updates on Ningaloo Outlook, a program furthering knowledge on the deep and shallow reefs of Ningaloo Coast World Heritage Area.

Woodside and Santos thanked community partners during a sundowner event at the Exmouth Bowling Club. This was a great opportunity to celebrate shared commitment to positive community outcomes over a friendly game of lawn bowls.

The following day, Woodside held a pop-up Environment Plan consultation stand at Ross Street Mall where locals (including the iconic Exmouth emus) and visitors dropped by to find out more about our activities and proposed plans.

Woodside's active engagement in community illustrates our commitment to open and transparent consultation.

Read about the Woodside supported programs focusing on the unique ecosystem along the Ningaloo Reef and Exmouth Gulf **here**

Community conversations

Open and transparent consultation is important to Woodside. Consulting firm GHD was recently in Karratha to speak with community stakeholders as part of Woodside's socio-economic impact assessments for communities that host Woodside's workforce and assets.

These insights assist Woodside to identify, assess, and manage social impacts and benefits that may arise from different operational and project scenarios in Karratha and aims to uncover new ways for Woodside to partner with the community in the future.

This informs Woodside's future strategies for impact management, community engagement, local content and social investment.

Further consultation will be taking place in April 2025.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the Woodside North West Facebook page for updates, including our Karratha Community Update.

Stay up to date on our continued contribution to the community we call home.

Environment planning continues to move forward

To undertake offshore petroleum or greenhouse gas activities, a titleholder is required to have an accepted Environment Plan, also referred to as an EP, in place.

In accordance with the objectives of the government regulations, the main purpose of an EP is to demonstrate two things. The first is that potential environmental impacts and risks from activities are identified and appropriate management and mitigation controls are implemented to a level that is 'as low as reasonably practicable' (ALARP) and acceptable.

The second ensures activities are carried out in a manner consistent with the principles of ecologically sustainable development set out in the *Environment Protection and Biodiversity Conservation Act 1999*.

It takes extensive work and time to develop an EP. A staged approach includes early planning of the proposed activity, defining the existing environment, consideration of potential impacts and risks to the environment, and identifying appropriate mitigation and control measures to manage risks to ALARP and an acceptable level.

Woodside Environment Plan Delivery Team Lead, Tim Mander, came into his role in 2023 following a number of legal challenges on the consultation processes under the Offshore Environment Regulations.

"Coming into the role was an interesting and challenging time. We navigated our way through this and in 2024, 12 Environment Plans were accepted with activities spanning ongoing operations, decommissioning, drilling, surveys, and installation of subsea infrastructure on the seafloor," Tim said.

"This year again, we have a number of Environment Plans kicking off across a range of different activities. We'll continue to focus on how we improve what we do to ensure our processes and management measures are appropriate to the nature and scale of these activities."

Environment Plans are required for both State and Commonwealth waters, with the National Offshore Petroleum Safety and Environmental Management (NOPSEMA) assessing and accepting Commonwealth EPs and the Department of Energy, Mines, Industry Regulation and Safety assessing and approving State EPs.

Woodside's Commonwealth EPs, currently under assessment and EPs that have been accepted can be viewed on NOPSEMA's website.

Several of the Scarborough Energy Project EPs were accepted in late 2023, including trunkline installation, with the work completed in October 2024

Upcoming engagement opportunities

Roebourne

Monthly Community Luncheon
- 26 March 2025, 11.00 am – 2.00 pm

Woodside Office, 39 Roe Street, Roebourne, WA, 6718

Dampier

Dampier Beachside Markets
- 6 April 2025, 9.00 am – 12 noon
- 4 May 2025, 9.00 am – 12 noon

Hampton Oval, Dampier, WA, 6713

Have your say

Woodside consults relevant persons while preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

6.8.1.3 Let's Talk October 2025

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 6 | October 2025

Goodwyn A Platform approximately 140 km north-west of Karratha.

The rundown

Goodwyn Area Infill Development Offshore Project Proposal gets the green light

Following NOPSEMA's acceptance of the Goodwyn Area Infill Development Offshore Project Proposal (GWA OPP), Woodside is planning to develop new gas wells about 140 km north-west of Karratha.

The development will make better use of space at the Goodwyn A platform by bringing in extra gas and condensate from up to 8 new wells.

This is a phased development expected to deliver first gas in 2027-2028.

Environment Plans (EPs) supporting the development include:

- Goodwyn Alpha Geophysical and Geotechnical Surveys (Rev 2)
- Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation – consultation closed 27 August 2025.

We currently anticipate consulting on a revision for the GWA Operations EP that will include the proposed new wells in the first half of 2026.

Upcoming engagement opportunities

Woodside is consulting with local community members at events, making it easy to speak to us about our operations, decommissioning activities and proposed projects.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly teams at the locations below, follow the Woodside North West Facebook page or email us at consultation@feedback.woodside.com

Dampier

- Dampier Beachside Markets Saturday, 18 October and 8 November 5.30pm to 8.30pm Hampton Oval, Dampier, WA, 6713

Exmouth

- Exmouth Community Markets Sunday, 5 October 8.00 am to 12.00 noon Federation Park, Exmouth, WA, 6707

Community conversations

The way we engage is based on building trust and understanding to support long-term relationships.

We emphasise open and accessible communication and feedback on our activities. One way we do this is by inviting community to engage with Woodside at popular community events.

Woodside and our joint venture partners were pleased again to sponsor the City of Karratha's Red Earth Arts Festival (REAF) at The Quarter where we helped activate and transform the area into a hub of artistic and cultural activity.

This year's festival featured over 100 performances, workshops, and experiences. Over 9,200 people attended the four-day festival, with 90% of programming free to the community.

The main attraction was 'The Whale' installation, which invited viewers to operate the strings of a large whale puppet and its sea friends while listening to whale vocalisations – an immersive experience enjoyed by all ages.

Artists from Yinjaa-Barni Art Group painted and displayed art, welcoming the public to watch the creation of several pieces and engage in conversations.

A community concert featured roving entertainment, stage performances, music, food trucks and markets.

At our Woodside tent, we engaged with the Karratha community discussing Woodside's work in the North West, our EPs, current and proposed projects and we listened to community feedback.

Woodside, on behalf of the Scarborough Joint Venture, was also proud to support the new biennial Ningaloo Sky Festival in Exmouth recently. The three-day event showcased the region's vibrant culture, food and community.

A key event was a market day at Talanjee Oval featuring local artists and makers, roving entertainers, a kite show, animal petting farm and food trucks.

At our Woodside stand, we chatted with visitors about our EPs and Woodside's activities in the Exmouth region, and listened to people's feedback.

Ningaloo Sky Festival drone show.

A drone show highlighting stories of the region's Traditional Owners and a free community concert by iconic Aussie rock band Eskimo Joe capped off the day.

Other events included astronomy talks highlighting the star-filled Ningaloo night sky, unique dining experiences, sunrise yoga, cultural talks and a community movie night.

Woodsiders also met with the Exmouth Community Liaison Group to provide updates on relevant projects and activities.

Talking point

Pygmy blue whales: feeding discovery

In an Australian first, scientists have recorded where and when pygmy blue whales feed as they migrate along the WA coast, thanks to research co-funded by Woodside Energy.

Every year, many whale species and thousands of individual whales migrate through the offshore waters of WA's north-west.

Luke Smith, Woodside Head of Biodiversity and Science, says collaboration with researchers is helping us better understand these whale species and their annual migration.

"In recent years, we – together with our joint venture partners – have invested heavily in numerous whale research programs," Luke points out.

"We continue to deepen our understanding of these magnificent animals and their natural habitat."

One of our research programs focuses on pygmy blue whales, a species that belies its name and can measure up to 24 metres long and weigh 90 tonnes. They undertake an annual northern migration from south-east Australia up through offshore waters of WA to Indonesia before returning five to six months later.

Photo credit: Grace Russell, Centre for Whale Research.

The research led by the Australian Institute of Marine Science and the Centre for Whale Research, found the whales aren't just migrating but also feeding enroute to their Indonesian breeding grounds – something never previously recorded with telemetry in the north-west waters of WA.

Unlike humpback whales, commonly seen as they play and frolic near to shore on their annual migration along the WA coast, pygmy blues spend little time at the surface and migrate in deeper offshore waters. To understand this species we've turned to the latest technology.

Using satellite tags and dive loggers (think Fitbits for whales), scientists tracked nine pygmy blues as they searched for prey.

Previously, it was thought feeding only occurred at the Perth Canyon and Ningaloo but researchers documented them snacking on the go, too.

The whales were recorded performing deep dives with lunge feeding – a high-speed move where they engulf dense swarms of krill.

The findings are helping researchers deepen their understanding of the species' annual migration, while providing us with more knowledge to include in EPs, improving how we avoid or minimise potential impacts.

"As whale species continue to recover and whale numbers migrating through north-west Australia increase, we'll continue to develop technology and approaches to improve our management of whale interactions," reports Luke.

"It's crucial we further reduce potential impacts, support future project approvals and contribute to science along the way."

Luke believes we can continue to successfully co-exist in the marine environment while simultaneously contributing to the study of these complex, remarkable mammals.

Okha FPSO, approximately 115 kilometres north-west of Dampier.

Let's talk about... FPSOs

Woodside has been producing oil from its Australian assets through Floating Production Storage and Offloading (FPSO) facilities since 1995. Woodside currently has three FPSOs in operation in North West Western Australia.

An FPSO facility is a vessel used in offshore oil and gas production, processing hydrocarbons from subsea wells, storing the oil onboard, and offloading it to tankers for transport. During normal operations, an FPSO is operated by 50 to 100 personnel onboard at any given time. These roles include production operators, marine crew, engineers, safety officers, catering staff, and support personnel.

Moored approximately 115 kilometres north-west of Dampier, the Okha FPSO has been producing oil and gas from the Cossack, Wanaea, Lambert, and Hermes oil fields. Crude oil is offloaded to bulk tankers, and LPG-rich gas is exported to the North Rankin Complex before being processed at the Karratha Gas Plant.

Woodside operates two offshore assets off Exmouth: the Ngujima-Yin and Pyrenees FPSO facilities.

The Ngujima-Yin FPSO is located over the Vincent oil field, 50 kilometres north-west of Exmouth. Ngujima-Yin is a Thalanjyi word meaning "to dream". The Greater Enfield Project, completed in 2018, involved developing several oil accumulations through a subsea tie-back to Ngujima-Yin. This project included a major refit of the FPSO, installation of subsea infrastructure, and the drilling of 12 development wells.

The Pyrenees FPSO commenced operations in 2010 and consists of six conventional oil fields located 45 kilometres north-west of Exmouth.

The Ningaloo region is recognised for its high ecological importance, boasting unique environmental, social, and cultural values, extending across 280 kilometers of coastline between Exmouth and Carnarvon. It is a global biodiversity hotspot and was inscribed on the World Heritage List in 2011.

To better understand and manage the environmental features of the region, Woodside has supported a range of multi-year projects through its environmental partnerships program.

These projects focus on iconic species and habitats across different ecosystems along the Ningaloo Reef and Exmouth Gulf. Woodside's social investment and science-funded projects contribute to conservation efforts, biodiversity education, and community engagement at local and regional scales.

You can read more about this significant region by **clicking here**

Scarborough's subsea infrastructure now in place

The Scarborough Energy Project has reached another exciting milestone–this time beneath the waves. The team has successfully completed the penultimate subsea installation campaign, marking a significant step toward first LNG cargo in the second half of 2026.

Approximately 375 km off the Pilbara coast, over 400 pieces of subsea equipment have now been assembled and installed in the Scarborough field, including the impressive 305-tonne Riser Base Manifold. With all critical infrastructure in place and tested, the project is now more than 86% complete (excluding Pluto Train 1 modifications) and ready for the hook-up and commissioning of the floating production unit (FPU) upon its arrival.

The Scarborough Offshore Facility and Trunkline (Operations) Environment Plan (EP) is now approved, setting out how Woodside will manage environmental risks and impacts associated with offshore operations. The EP covers activities such as FPU installation, commissioning, and ongoing operations, as well as inspection, maintenance, and repair of subsea infrastructure.

Read more about the Scarborough Energy Project by **clicking here**

This is the 80m long, 32" diameter rigid pipe spool which weighs approximately 230 tonnes and was fabricated in Henderson, Western Australia.

6.8.2 Karratha Community Update

6.8.2.1 Edition Q3 – 2024

Woodside Energy

Karratha Community Update

Edition 3 | 2024

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Earlier this year, I relocated to Karratha and commenced as Asset Manager of the North West Shelf Project's Karratha Gas Plant.

It was a real pleasure to join Woodside's local team at a time when we were celebrating 70 years of Woodside and 40 years of operations right here in the North West.

Karratha is where our story began in Western Australia and Woodside has a proud history of contribution to the place we continue to call home. This year's milestones gave me insight into the longstanding partnerships and strong relationships we've developed with the community over this time.

The North West Shelf Project has contributed more than $300 million within the City of Karratha since our operations began. This investment in the local community and economy continues as we support partnerships and businesses like the ones you will read about in this update.

We are entering a period of change at the Karratha Gas Plant as we undertake work to prepare for the retirement of one of our LNG processing trains later this year. This is an important step in the journey ahead as we navigate the gradual decline of the North West Shelf reserves and continue to pursue opportunities to process other resource owners' gas.

As we manage the future of the North West Shelf alongside our Pluto LNG operations and the growth of the Scarborough Energy Project, we will continue to engage and collaborate with those we work with, partner with and live alongside. We look forward to engaging and involving the local community in the future of Woodside in Karratha, working together to create opportunities in the place we call home.

Derek Paulgaard
Asset Manager North West Shelf Onshore.

Celebration sundowner

On the evening of 18 September, as the sun set over Karratha, we gathered with our local community partners to celebrate both Woodside's 70th year as a proud Australian company and 40 years of operations in the North West.

Our sundowner event, held at the Red Earth Arts Precinct, provided an opportunity to share our appreciation for the local community which has supported Woodside over its decades of operations in Karratha.

Woodside Executive Vice President and Chief Operating Officer Liz Wescott joined us at the event and expressed her gratitude for the role those in attendance continue to play in shaping Karratha into a thriving and connected community.

Liz also announced a one-off large grant round, supported by Woodside and its Joint Venture participants in the North West Shelf Project and the Scarborough Energy Project's Pluto Train 2.

With applications open throughout October, the Woodside Anniversary Grants will provide funding of up to $100,000 to community groups and not-for-profit organisations in the City of Karratha to support health, liveability, sustainability and environmental outcomes.

Thank you to all who joined us in marking such a special occasion.

Winyama awarded construction contract

This year, Woodside awarded its largest ever Traditional Owner construction contract to Karratha company Winyama Contracting Group (Winyama). The contract was awarded for the delivery of civil works for the Pluto Train 1 Modifications Project. Winyama will work alongside Kellogg Brown & Root Pty Ltd., the project's engineering, procurement and construction management contractor.

Winyama is a 100% Karratha-owned and 50% Indigenous-owned provider of civil, construction and mining services and renewable asset hire that prioritises spend with local and Indigenous suppliers. The name Winyama, meaning Sea Eagle in the Ngarluma language, symbolises the company's mission to provide economic opportunities and prosperity for local Aboriginal people. It is a bird that has held significance through the female line of Ngarluma majority owner Arthur Ramirez's family for generations.

Woodside Pluto Expansion Project Manager Paul Baker said Woodside was thrilled to be partnering with Winyama for the delivery of the civil works for the Pluto Train 1 Modifications Project and supporting the delivery of local business and employment outcomes for the Pilbara.

"By engaging a local Indigenous-led and owned contractor, we're securing the delivery of an important service while contributing to the local economy. The contract will also support the growth of Winyama, increasing the company's capacity to deliver services to other industries across the Pilbara," he said.

Arthur Ramirez, Winyama Chairman and Indigenous Business Manager, said the new supply agreement with Woodside was a major milestone for Winyama.

"This project will allow our team to grow by about another 65 new employees, with the majority being residential employees.

"Being engaged on the Pluto Train 1 Modifications Project will help fulfil Winyama Contracting Group's vision to increase its footprint in the region, which will enable us to increase our focus on outcomes for Aboriginal people through our reflection Reconciliation Action Plan.

"We are really proud that Woodside has chosen a local Karratha-based Indigenous business to execute a major portion of one of their largest current projects, showing they live their values and support local and Indigenous business growth in the region," he said.

Winyama, KBR and Woodside representatives at Pluto LNG.

Healing comes from Country

Roebourne-based start-up Warridahs of the Ngurra (WOTN) aims to build awareness and respect for traditional bush medicine and share cultural knowledge. Meaning 'Women of Country' in Ngarluma language, WOTN was founded in 2023 by Ngarluma and Banjima woman, Kylie Mowarin.

Kylie's years of dedication to exploring the uses and benefits of native plants have seen her experiment with the ingredients in teas and ointments. The healing properties of these plants have recently been reinforced by modern scientific research conducted in partnership with Griffith University.

"We are working with Griffith University, testing two traditional plants for their antimicrobial, antioxidant and anti-inflammatory properties. So far, we are seeing very positive results," said Kylie.

With support from Woodside, Kylie recently held a bush medicine workshop on Murujuga alongside local Elders, representatives from Murujuga Aboriginal Corporation, Griffith University and a leading archaeologist.

Students from Roebourne District High School were among the attendees at the workshop at Hearson's Cove. Kylie spoke with students about the scientific attributes of traditional medicines and their gathering methods.

"It's important to pass on our knowledge from our ancestors and for our young ones to understand our cultural connections to Country and how it can help with healing our bodies and minds," said Kylie.

Liz Ritchie, Roebourne District High School Principal, said the students' involvement in the workshop was part of Connected Learning, a program developed with support from the Karratha and Roebourne Education Initiative to link classroom curriculum with cultural knowledge and community.

"We are deeply committed to delivering education that is culturally respectful and meaningful. This work can only be achieved when we have the guidance, support and expertise of our families, community advisors, and Elders.

"Participating in the Warridahs of the Ngurra workshops enables our young people to demonstrate practical applications of the learning that occurs in class and on-Country throughout the term.

"The day was an authentic example of how curriculum delivery in a culturally responsive and connected way leads to deep two-way learning of skills and knowledge," she said.

Looking ahead, WOTN plans to create a healing hub in Roebourne, which aims to balance education, wellbeing, and a sustainable business by building upon a range of products Kylie has been developing with native plants.

"We also plan to provide on-Country tours, which will provide economic prosperity for our people through employment and educating women in how to run a business," said Kylie.

Kylie Mowarin with students from Roebourne District High School at Hearson's Cove.

KREI supports student revision seminars

For more than 15 years, Woodside and its Joint Venture participants have contributed to programs aimed at enhancing academic achievements among students in the City of Karratha. Since the establishment of the Karratha and Roebourne Education Initiative (KREI), a key focus has been to bridge the gaps in opportunities available to local students and their peers in metropolitan areas.

During the recent school holidays, the KREI supported a group of Year 12 students from St Luke's College to travel to Perth for a 10-day educational experience. The local students participated in a series of intensive revision seminars, designed to prepare them for their WACE examinations. With small class sizes and personalised help from specialist teachers, students were able to delve into the course material and discuss valuable exam strategies.

While in Perth, the students dedicated time outside the seminars to learn about life at university. They visited several campuses where they engaged in pre-arranged faculty workshops and met with student ambassadors to gain valuable insights into the university environment, academic workload, course offerings and entry pathways.

The students also took the opportunity to explore the university accommodation colleges, helping them to envision their potential future living arrangements and supporting their readiness for their upcoming transition to higher education.

St Luke's College Upper School Pathways Coordinator Carol Potter said this year's revision seminars were an outstanding success.

"We are very fortunate to have the support of the Karratha and Roebourne Education funding, which made both the revision seminars and university visits possible. Our students are now feeling more prepared ahead of their final examinations and transition into tertiary education, away from their family to a big city," she said.

Supporting local students from St Luke's College and Karratha Senior High School to travel to Perth for revision seminars is just one example of Woodside and its Joint Venture participants' contribution to schools in the City of Karratha. Earlier this year, Woodside announced the renewal of the KREI, with five-year community partnership agreements. The renewal builds on a strong history of collaboration and provides continued investment to help local high school and primary school students thrive.

Students from St Luke's College on KREI supported Perth visit.

Scarborough trunkline installation a success

This October, Woodside marked an important milestone as it announced the completion of the Scarborough Energy Project's trunkline installation. Once operational, the 433 km trunkline will transport gas from the offshore Scarborough field to the onshore Pluto LNG facility for processing.

Reaching depths of up to 1400 m, the trunkline took around 12 months to install and had numerous teams and contractors contributing to the successful work program.

Woodside Executive Vice President and Chief Operating Officer Australia Liz Westcott said the trunkline was a critical piece of infrastructure for the Scarborough Energy Project.

"The completion of installation is a significant accomplishment, reflecting the dedication of all involved in achieving this project milestone.

"With the last components of the trunkline in place, the focus will be maintained on safely executing the remaining project scopes to support the targeted first Scarborough LNG cargo in 2026," she said.

Following the successful installation of the trunkline, work will now commence on the pre-commissioning in preparation for hook-up of the subsea infrastructure.

The Scarborough Energy Project was 73% complete in October[1], and is set to help meet demand for the reliable energy the world needs today and into the future. This includes up to 225 terajoules a day of domestic gas supply into the Western Australian market from operations in Karratha.

These volumes will be processed by the recently delivered Pluto Train 2 domestic gas module. The important piece of infrastructure, which arrived in Karratha and was installed in early September, weighs over 1500 tonnes and will connect to the domestic gas export compressor. The domestic gas module is one of the 51 modules that is targeted to be delivered to site by the end of this year.

6.8.2.2 Edition Q1 – April 2025

Karratha Community Update

April 2025

Liz Westcott Executive Vice President and Chief Operating Officer Australia.

Woodside hopes to keep on contributing

As seen in the Pilbara News - Wednesday, 12 March 2025.

Last year, Woodside celebrated 70 years as a proud Australian company, and the North West Shelf Project marked 40 years of operations from right here in Karratha.

We are proud to be a part of this community. It's where our story started.

But there is currently a debate playing out that could determine the future of the North West Shelf Project and the ongoing operation of its Karratha Gas Plant.

The North West Shelf Project Extension approval is required to enable operations beyond 2030.

Let's be clear — this approval does not involve expanding our onshore infrastructure or footprint on Murujuga.

It allows us to continue our existing operations across the North West Shelf Project.

In December last year, six years after we applied, the State Government approved the North West Shelf Project Extension proposal, with conditions including cultural heritage, emissions and air quality. We take our responsibility to manage cultural heritage seriously, guided by Traditional Owners, heritage experts and credible science.

Following the robust assessment from the State, a final decision now rests with the Federal Government, and the stakes are high.

The North West Shelf Project supplies 14 per cent of WA's domestic gas — gas that not only powers homes, but also the mining operations and industries that provide many local jobs and underpin the economic strength of the Pilbara and Australia.

The North West Shelf Project alone employs about 900 people, and some 1300 contractors.

Almost 300 Woodsiders and their families live locally and work at the Karratha Gas Plant.

This year they were joined by 22 new apprentices and trainees who were welcomed into the Woodside Training Academy.

In 2024, the North West Shelf Project invested $5.1 million in the Karratha community on initiatives including education, health and liveability. Annually we spend around $1 billion with WA businesses, including contractors and service providers based in Karratha, and in 2024 about 700 WA businesses were engaged by the North West Shelf.

Last year I was pleased to be able to join some of our longstanding partners in Karratha as we celebrated our 40-year milestone.

I spoke with representatives from local schools, businesses and not-for-profit community organisations. I was humbled by what Woodside and the community here in Karratha have built together over the four decades of North West Shelf operations.

And it can continue to contribute, supporting our State's gas supply, the economy and the Karratha community for decades to come.

Extending the life of the North West Shelf Project will enable the future of our world-class operations, using existing infrastructure to produce the gas that local industry needs and our regional partners rely upon.

It enables us to leverage our decades of experience while unlocking long-term value through the development of the remaining North West Shelf reserves and processing of third-party gas.

Importantly, it allows us to make the business decisions today that will help maximise the use of processing capacity at the Karratha Gas Plant into the future.

With the Australian Energy Market Operator forecasting gas shortfalls in WA from 2028, extending the life of the North West Shelf Project makes sense.

But to be in a position to do this, we need a pragmatic approach from our nation's decision-makers. We need timely decisions to provide operational certainty and confidence to support the ongoing development of gas reserves that will keep the Karratha Gas Plant running.

We can all be proud of what the North West Shelf Project has contributed to Karratha over the last 40 years – and we're working to secure its ongoing contribution to the community we call home.

Stay up to date on our continued contribution to the local community Woodside North West

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

L-R: Roebourne District High School Chaplain Beth Smith, Roebourne District High School Principal Liz Ritchie, Woodside CEO Meg O'Neill, WA Premier Roger Cook and Kevin Michel MLA.

Investment continues to reach students in Roebourne

Woodside welcomed the new year with an exciting announcement.

In January, our CEO Meg O'Neill joined us at Roebourne District High School to share details of our significant contribution to the school's redevelopment.

Alongside WA Premier Roger Cook, Meg announced a contribution of $20 million over five years to the upgrades. Woodside's contribution will come from our A$50 million commitment to the Western Australian Government's Resources Community Investment Initiative.

Meg said funding was directed towards programs that deliver tangible benefits for the sustainability and liveability of our host communities.

"Our investment in the Roebourne District High School upgrades builds on our long-term commitment to positive regional education outcomes through the Karratha and Roebourne Education Initiative," said Meg.

For more than 16 years, we have proudly contributed to the Karratha and Roebourne Education Initiative (KREI) together with our joint venture participants. The partnership with local schools invests in opportunities to support the academic achievements of students and the development of their dedicated teachers.

Roebourne District High School is one of the long-standing participants of the KREI.

In 2024, the school developed a program to support students sitting the Western Australian Department of Education's Online Literacy and Numeracy Assessment (OLNA). Designed for secondary students to demonstrate they successfully meet the minimum standard of literacy and numeracy, the OLNA is an important step in supporting students on their path to further study and training.

Several students at the school were identified as requiring additional assistance and intervention to reach an OLNA pass level in one or more of the assessment areas.

Through the support of the KREI, individual learning and social needs of each student preparing to sit the OLNA were assessed so educational support could be tailored. Resources such as one-to-one and small group tutoring opportunities, and online training tools were provided focusing on building the skills required to improve students' OLNA results.

Roebourne District High School Principal Elizabeth Ritchie said the students who participated demonstrated greater levels of confidence when sitting the OLNA, resulting in one of the highest recorded sittings for the test at our school.

"The OLNA achievements of participating students have not only enhanced their own education experience but is positively impacting peers, because our students are actively supporting their classmates to improve their own reading, writing, and numeracy skills," said Elizabeth.

Woodside helps connect Cherratta to Country

Woodside was proud to award a $35 million contract to Cherratta Lodge earlier this year. The agreement marks the first time Woodside has awarded a village accommodation contract to a business owned by a Traditional Owner.

Under the agreement, Cherratta will accommodate the Pluto Train 1 modifications construction workforce, part of the Scarborough Energy Project.

Woodside initiated discussions last year with long-standing partner Cherratta Lodge, based in Karratha's Industrial Estate.

It was then that Cherratta owner Malcolm Wylie raised the prospect of a new partnership that could transition the site into a village owned and operated by a Traditional Owner – someone with traditional connections to the area.

Malcolm's vision was twofold: to give back to the community in which the business operates and for the site to become a leading facility providing career opportunities for Indigenous people.

"Not everyone wants to or can work on a mine site or a gas plant. A place like Cherratta not only provides jobs like gardening, cleaning, catering, access to trades and apprenticeships, it will deliver mentorship and empowerment programs for fledgling Indigenous businesses," said Malcolm.

Together with his business partner Aaron Polini, Malcolm invited Traditional Owner and Ngarluma Elder Harry Mowarin to join them in the ownership of Cherratta, after building a trusting friendship and agreeing on solutions to challenges together.

"As part of Cherratta's new energy projects, the company awarded a $1 million contract to Harry's contracting business," said Malcolm.

"Harry is a Ngarluma Elder who is well respected in the community and during the successful execution of this contract we realised Harry was the perfect fit for Cherratta. Through our programs he could help guide Indigenous people to learn, grow, develop skills and increase their confidence in an environment that is culturally safe, and on their own country."

L-R: Harry Mowarin Traditional Owner and Ngarluma Elder, Malcolm Wylie Cherratta Lodge business partner, Julie Attwood Local Content Manager and Rebekka Scroop Villages Coordinator.

Rebekka Scroop, our Villages Coordinator and Woodside's Local Content Manager, Julie Attwood both realised the potential significance of the agreement and the value it could provide to the local Indigenous community where we operate.

"It made sense. Woodside's contract would provide Cherratta with the confidence and security to support their transition to become a Traditional Owner village by securing a fixed number of rooms over three years, for the Pluto Train 1 modifications workforce," said Rebekka.

"By coming together to work towards a common goal, we had the opportunity to create a significant impact that will leave a lasting legacy for generations to come," said Rebekka.

Harry is overwhelmed by the opportunities this landmark agreement can create for both his family and his people. "This connection with Cherratta is life changing for me and my family."

"It's something that I never thought would be possible in my lifetime. For me, it's generational healing. I want to leave something behind for the emerging generation, for them to set themselves up and have a chance at a decent life," said Harry

Woodside Training Academy graduates and mentor award winners.

Woodside's own Academy Awards

Eighteen apprentices and trainees have joined the ranks of Woodside Training Academy participants who have been welcomed into roles across our operations.

The Woodside Training Academy Graduation and Awards held at Red Earth Arts Precinct saw the cohort celebrated for their achievements in completing their training.

Reflecting on the event, Academy Team Lead Jacqui Meeson said it provided a special opportunity to recognise the entire graduating group and the outstanding performance of individuals throughout their training.

"The award recipients were not only selected for their excellence during their training but also for their dedication, commitment and consistent demonstration of Woodside's values," said Jacqui.

"We are incredibly proud of what all of the apprentices and trainees have accomplished across their learning journey and we look forward to seeing their continued success throughout their careers with Woodside."

Several Woodsiders were acknowledged alongside the graduates for the support they provided the trainees and apprentices during their time at the Academy.

In his opening address, NWS Onshore Asset Manager Derek Paulgaard expressed his thanks for those across the business who played an essential role in contributing to the growth and development of the cohort.

"When the graduates faced challenges throughout their training, they had a network of family and friends to provide support and guide them. They also had a group of trainers, mentors, supervisors and peers who they could rely on," said Derek.

This year, 22 Karratha-based apprentices and trainees have been recruited by our partner Programmed Training Services and will be hosted at the Woodside Training Academy.

The 2025 intake includes seven operator trainees, 10 apprentices, three pre-pathway trainees and two school-based trainees – one trainee from Karratha Senior High School and one from Roebourne District High School.

Thirteen of the training participants are female and 14 are Indigenous. They are now part of the more than 80 apprentices and trainees building their skills and experience across our Western Australian operations.

Dampier Playgroup was previously awarded a Woodside Community Grant to help purchase new play equipment.

Giving back through community grants

Last year, we extended our grant offerings in the City of Karratha in celebration of our 70 years as a proud Australian company and four decades of safe and reliable operations in the place we call home.

Ten community and not-for-profit organisations were awarded Woodside Anniversary Grants of up to $100,000 for programs and activities that deliver positive local outcomes.

This March, we ran our first of two community grants rounds for 2025. If you missed out, don't worry, applications will be open again in October.

We have been running the program for seven years, awarding grants of up to $5,000 to support community initiatives in the City of Karratha and Shire of Exmouth.

It's part of our commitment to building local capacity and supporting opportunities that strengthen wellbeing in the community.

We were excited to announce the recipients of our Woodside Anniversary Grants in January.

Woodside Executive Vice President and Chief Operating Officer Australia Liz Westcott said Woodside and its joint venture participants in the North West Shelf Project and Scarborough Energy Project's Pluto Train 2 were pleased to support these valuable initiatives.

"Karratha is where our Western Australia story began and we understand that being a part of the community is centred on developing strong relationships and making meaningful contributions," said Liz.

"We have done this for 40 years and look forward to continue supporting projects and programs that provide local solutions to local challenges."

Grant recipients included:

- St John Ambulance to help purchase new ambulances and lifesaving equipment across its Karratha, Roebourne and Wickham operations.
- Yaandina Community Services for the installation of air-conditioning in its Roebourne residential detoxification facility.
- Yinjaa-Barni Art to support upgrades at its Roebourne art studio.
- The WA Centre for Rural Health to deliver a business case to support the development of a Centre for Applied Research and Education (CARE) hub in Karratha.
- Reach Us Pilbara for the purchase of equipment for its Karratha cancer support services centre.
- Juluwarlu Group for the delivery of the Yindjibarndi Wellness pilot program for Jadas and Gurri.
- Karratha RSL for the installation of solar panels, battery storage and new air-conditioners in its facility.
- Pilbara for Purpose to support the delivery of cultural competency training for community service providers.
- Karratha Volunteer Fire and Rescue Services to support the upgrade of storage facilities to support year-round storage of firefighting equipment.
- Dampier Community Association for the purchase of kitchen equipment to support activation of the Dampier foreshore kiosk.

If you would like more information about our next round of grants, you can contact us at northwestcommunities@woodside.com

Listening to our local community

Our approach to social performance at Woodside begins with understanding the potential impacts and opportunities associated with our activities.

Consultants from GHD recently visited Karratha and met with a range of stakeholders to inform Woodside's socio-economic impact assessment. Participants included Woodside's Karratha Community Liaison Group, local businesses, state and local government bodies, social contribution partners and healthcare providers.

During the engagements, participants were presented with a series of scenarios for our ongoing operations and proposed projects in the City of Karratha. Their valuable reflections and insights in response to the scenarios will assist in the identification and management of social impacts and benefits, including opportunities to contribute to the local community.

Woodside's Senior Social Performance Adviser David Collins is leading the assessment scope and said it is important to have the local community be a part of the journey.

"Over the past 40 years of operations, we have built strong relationships in community to enable ongoing engagement across all phases of our activities," said David.

"This is an important piece of work to understand sentiment towards Woodside by listening to concerns and asking how we can best manage impacts on a local level."

The socio-economic impact assessment will continue throughout 2025 as GHD visits community stakeholders in Roebourne.

To find out more about Woodside's approach to social performance please visit our website.

Karratha Community Update

Woodside Energy

July 2025

Woodside and its joint venture partners were proud to support the Red Earth Arts Festival, as The Quarter Sponsor.

Stay up to date on our continued contribution to the local community Woodside North West

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Meet the people of the North West Shelf Project (L-R): Haylee, Aaron and Narelle

Woodside welcomes proposed North West Shelf Project extension

The North West Shelf (NWS) Project has supplied energy to Australian and international customers since the 1980s, investing hundreds of millions of dollars into the local economy and community. It has pioneered the LNG industry in Australia and is a nationally significant asset.

The NWS Project is a major employer in and around Karratha, supporting the development of a local workforce through training and employment pathways and contracting opportunities throughout Western Australia.

After decades of processing only the NWS resources, the Karratha Gas Plant (KGP) now also processes gas for other resource owners, who pay a toll to use the facility. A transformation that enables this landmark facility to continue to supply energy to Western Australia and international markets for decades to come.

State Government approval for North West Shelf Project Extension was received in December 2024 after six years of assessment and appeals.

The Federal Government provided its proposed environmental approval for the North West Shelf Project Extension in May 2025 with proposed conditions. Consultation is now occurring with Government on the proposed conditions.

As part of the State Government approval in December 2024, the North West Shelf committed to a range of environmental management measures, including a significant reduction in air emissions and measures to manage greenhouse gas emissions and to reduce them over time.

In addition, meaningful consultation with Traditional Owners is occurring as part of these conditions, including complying with all air quality objectives and standards arising from the Murujuga Rock Art Monitoring Program.

We remain committed to protecting the Murujuga Cultural Landscape and support its World Heritage nomination. We believe long-term co-existence between cultural heritage and industry is possible when guided by credible science, Traditional Custodian leadership, and genuine collaboration.

Discover the ways the North West Shelf Project holds a special place for our people, the businesses we work with and the Pilbara community by scanning the QR code.

New members join Karratha Community Liaison Group

Woodside is committed to building strong relationships with the community. One way we do this is through our quarterly Community Liaison Group (CLG) meetings.

This month we were excited to welcome new members to the meetings following a review of the group's membership and call for public nominations to fill new community member positions on the CLG.

Meeting quarterly, the CLG is an important platform for Woodside to share information about our operations, gather feedback on current and future activities, and facilitate discussions on issues of importance to the community.

Our meetings cover a range of topics, including operational and project updates, social impacts, local content, environment plans and social investment.

If you're interested in finding out more about the CLG, contact us by email: northwestcommunities@woodside.com or keep an eye on our social media channels for updates.

Woodside's CLG meet quarterly to share information, gather feedback and facilitate discussions.

Impact felt locally in Karratha

Impact Digi is a Pilbara-based Indigenous owned and operated marketing agency with close to a decade of experience working with Woodside Energy.

A full-service marketing agency, Impact Digi has built relationships with government, industry, Indigenous organisations and businesses of all sizes helping them to build brands and reach stakeholders.

"The past couple of years have been extra rewarding as our reputation has grown within Woodside and we're getting to work with team members from other areas of their business," said Impact Digi Managing Director, Tamara Bin Amat

Starting off by offering photography services when they first began, Impact Digi has transformed over time with a growing team, refined services and an expanded reach.

"Looking back, one of my favourite moments was when local Asset Manager for the Karratha Gas Plant, Breyden Lonnie presented our first ever award for Best Aboriginal Business at the 2015 Karratha and Districts Chamber of Commerce and Industry (KDCCI) Business Excellence Awards," said Tamara.

That recognition is continuing with Impact Digi recently winning the Best Small Business Award at the 2024 KDCCI Business Excellence Awards.

Tamara Bin Amat and Jason Miltrup with the Woodside team at EXA 2025 in Perth

Tamara and her team understand the importance of supporting local and contributing to their community.

"Working with Woodside has not only boosted our business but also our reputation, opening doors to new opportunities across the state," said Tamara.

Celebrating 20 Years of Corporate Volunteering at Woodside

This year marks another significant milestone for Woodside: 20 years of corporate volunteering.

We take pride in our long-standing commitment to investing in the communities where we operate, and where our employees live and work. In fact, 20 years ago, Woodside was one of the first companies in Australia to offer volunteering leave to our employees.

Woodside employees are entitled to 12 hours of volunteering leave each year, empowering them to make a meaningful difference in their communities and engage in a variety of activities. In Karratha this includes volunteering at local food banks, participating in beach clean-ups and mentoring young people in educational programs.

Introducing Danielle East. If you've been involved in Woodside volunteering in WA's Pilbara region, chances are you've met Dan.

Since joining Woodside in 2011, Dan has worked across many roles, but none showcase her passion better than coordinating volunteering opportunities for our teams in Karratha.

Dan's commitment to volunteering extends beyond coordination; she actively contributes her time and effort to help those in need. As a long-serving member of the Karratha State Emergency Service, Dan has been instrumental in responding to crises. Earlier this year, following the impact of Category 4 Tropical Cyclone Zelia, she was one of a team of volunteers that assisted a remote Aboriginal community by clearing fallen trees and addressing other emergency response requirements.

"Giving back to the community is in my DNA," Dan shares. "Being able to support my neighbours in need at a time of crisis is essential for me. And I'm grateful Woodside has volunteering programs in place, where I can put my hand up and jump in as and where I'm needed."

Last year alone, Woodside employees dedicated over 650 volunteer hours to community groups and not-for-profit organisations within the City of Karratha. As we celebrate two decades of corporate volunteering, we look forward to continuing our community engagement and making a positive impact, one volunteer hour at a time.

North West Shelf Project supports community housing needs

The North West Shelf Project recently gifted two houses to vital local not-for-profit organisations in the Pilbara region.

This initiative underscores the Project's commitment to fostering community wellbeing and providing essential support to those in need.

One of the houses has been donated to Reach Us Pilbara, an organisation dedicated to providing cancer support services.

This new facility will enable Reach Us Pilbara to expand their services, offering a comforting space for individuals and families navigating the challenges of a cancer diagnosis. The house will serve as a sanctuary where patients can access support, counselling, and respite.

The second house has been gifted to the Salvation Army Karratha Women's and Children's Centre. This centre plays a crucial role in offering refuge and support to women and children escaping domestic violence situations. The additional space will allow the centre to accommodate more families, providing them with a safe and nurturing environment as they rebuild their lives.

By supporting these organisations, the North West Shelf Project aims to help address immediate community needs while contributing to the long-term resilience and wellbeing of the Pilbara community.

One hull of a milestone for Scarborough's FPU

The Scarborough Energy Project has achieved a major engineering milestone with the joining together of the topsides and hull for the Floating Production Unit (FPU).

Constructed separately at two different fabrication yards in China, the joining of the two mega-structures is a significant step forward for the Scarborough Energy Project as it progresses towards first LNG cargo, targeted for the second half of 2026.

The floatover required precise planning and extensive collaboration by all stakeholders. Teams from Woodside, McDermott, QMW and COSCO worked closely on the fabrication of the structures and on safely and successfully bringing them together.

Woodside Executive Vice President & Chief Operating Officer Australia Liz Westcott highlighted what it meant for Woodside and the Scarborough Energy Project, which is now over 82% complete.

"The floatover of the FPU is an engineering marvel and builds on the safe and successful fabrication of the topsides and hull.

"Manoeuvring two structures that each weigh more than 30,000 tonnes at sea is an exceptionally complex operation.

"I am proud of the Woodside and McDermott teams for the safe delivery of the FPU to the integration yard and the completion of this chapter of work. The FPU is a critical piece of infrastructure for this world-class project which continues to be delivered to the highest standard."

The remaining integration work for the FPU will continue at the fabrication yard in Yantai before sailaway to Australia.

Once complete the FPU will be moored 375km off the coast of Karratha. The Scarborough Energy Project is set to produce up to 8 million tonnes of LNG per year and contribute up to 225 terajoules a day of domestic gas supply into the Western Australian market.

6.8.2.4 Edition Q3 – October 2025

Karratha Community Update

Woodside Energy

October 2025

Woodside welcomes approval of North West Shelf Project Extension

The Australian Government's final decision to grant environmental approval for the North West Shelf Project Extension is positive news for Woodside Energy and Karratha as our host community.

The decision provides certainty for the ongoing operation of the North West Shelf Project.

For Karratha and surrounds, this has meant sustained employment, meaningful social contributions, a legacy built on responsible energy development and a deep-rooted connection with the local community.

Over its lifetime, the North West Shelf Project has paid more than A$40 billion in royalties and excise, supported thousands of Australian jobs and contributed over A$300 million to social investment initiatives and infrastructure support in the City of Karratha.

Importantly, the approval follows an extensive environmental assessment and appeal process and includes rigorous conditions to manage the protection of cultural heritage.

This includes conditions that require additional monitoring and management of air emissions to protect the Dampier Archipelago (including Burrup Peninsula or Murujuga).

Woodside is committed to protecting the Murujuga Cultural Landscape and we were a proud supporter of the World Heritage nomination and assessment process, led by Ngarda Ngarli, the Traditional Custodians of Murujuga, on the World Heritage listing.

The internationally peer-reviewed, best-practice science conducted by the Murujuga Rock Art Monitoring Program, led by Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation, confirms that with the right controls and collaboration, co-existence of industry and cultural heritage is not only possible, but already happening.

"Over its lifetime, the North West Shelf Project has paid more than A$40 billion in royalties and excise, supported thousands of Australian jobs and contributed over A$300 million to social investment initiatives and infrastructure support in the City of Karratha."

As we shape the future of the North West Shelf alongside our Pluto LNG operations and the development of the Scarborough Energy Project, our commitment to collaboration and consultation remains strong.

We will continue to work closely with our colleagues, partners, and neighbours.

I'm looking forward to supporting Woodside's future in Karratha, reflecting the values and aspirations of the place we have proudly called home for over four decades.

Derek Paulgaard
Asset Manager North West Shelf Onshore

Inspiring futures through work experience

We recently had the pleasure of hosting Programmed work experience students from Karratha Senior High School, Roebourne District High School and St Luke's College Karratha at Pluto LNG and Karratha Gas Plant.

The students had the opportunity to shadow our teams, gaining insights into day-to-day operations and exploring the diverse career pathways available right here in the Pilbara.

Thank you all participating students, we hope the experience sparked some new ideas for your future pathways.

Stay up to date on our continued contribution to the local community **Woodside North West**

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Community partnerships valued

On the evening of 13 August 2025, we had the privilege of celebrating the incredible contributions of our community partners at our annual Community Partner Sundowner, held at The Shelf, Red Earth Arts Precinct.

Our sundowner event was a heartfelt tribute to the people and organisations making a real difference across the Pilbara.

Hosted by Derek Paulgaard, Asset Manager – North West Shelf Onshore, the event featured inspiring reflections from Sophie Martin, One Tree Community Services Inc. sharing information about our award-winning Roebourne Pathways Program partnership and its impact on local youth and Stacey Giles, Reach Us Pilbara, highlighting vital cancer support services available to families in the region.

Thank you to everyone who joined us to recognise the incredible work happening across the City of Karratha.

The Woodside Community Grant Program opens in October, providing funding of up to $5,000 to community groups and not-for-profit organisations in the City of Karratha to support health, liveability, sustainability and environmental outcomes.

Building community connections: repurposing for a brighter future

Yurra and Woodside Energy made a collaborative contribution to the Roebourne Work Camp by donating 34 tonnes of scaffold boards.

During supplier visits, Local Content Manager, Julie Attwood, realised there was an opportunity to re-purpose redundant scaffold materials, no longer being used at Karratha Gas Plant.

The materials were welcomed by the men at the Department of Justice Roebourne Work Camp. They were used to make furniture for not-for-profit organisations and local community groups, helping participants develop employable skills, as well as providing benefits to Pilbara regional communities.

Some of the projects completed using these repurposed materials include; timber picnic benches for the Roebourne District Hospital, outdoor seating and cubby houses for local schools and daycares, and tables to display the work of local Aboriginal artists. These projects improve community spaces and connectivity, while providing a platform for artists to gain recognition and income.

Read more about the collaboration between Yurra, Woodside, and the Department of Justice and the positive impact on community by scanning the QR code.

Woodside is building for the future: 30 new homes in Karratha

Woodside Energy (Karratha Services) Pty Ltd, has awarded contracts for the construction of an additional 30 new homes in Karratha for Woodside's residential employees. Under the award, 20 new homes will be built by Thomas Building and 10 by Traditional Owner business, Yurra Building, both locally based contractors.

Expected to be completed from mid-2026, the new houses will be owned by Woodside and are additional to the recent construction of 20 new homes under a 15-year build-to-lease agreement with Karratha Housing, a subsidiary of Yurra Building.

Awarding the construction contracts to Thomas Building and Yurra Building is part of Woodside's ongoing commitment to delivering business opportunities that boost jobs and support the local economy. The contracts include provisions for the employment of local apprentices and trainees.

Woodside Pluto Asset Manager Kate Bardill said the new contracts were part of the company's Karratha housing approach, which aimed to providing quality housing options for employees while balancing the needs of the local housing market.

"Woodside's approach to housing includes investment in new builds, the sale of older housing stock on the open market and support for local housing affordability initiatives such as the City of Karratha's Service Worker Accommodation program," said Kate.

Under Woodside's predominantly residential frontline workforce policy, approximately 75% of the company's employees working at its Karratha operations live locally.

Scarborough's subsea infrastructure now in place

The Scarborough Energy Project has reached another exciting milestone–this time beneath the waves. The team has successfully completed the penultimate subsea installation campaign, marking a significant step toward first LNG cargo in the second half of 2026.

Approximately 375 km off the Pilbara coast, over 400 pieces of subsea equipment have now been assembled and installed in the Scarborough field, including the impressive 305-tonne Riser Base Manifold. With all critical infrastructure in place and tested, the project is now more than 86% complete (excluding Pluto Train 1 modifications) and ready for the hook-up and commissioning of the floating production unit (FPU) upon its arrival.

The Scarborough Offshore Facility and Trunkline (Operations) Environment Plan (EP) is now approved, setting out how Woodside will manage environmental risks and impacts associated with offshore operations. The EP covers activities such as FPU installation, commissioning, and ongoing operations, as well as inspection, maintenance, and repair of subsea infrastructure.

Scan the QR code to read more about the Scarborough Energy Project.

This is the 80 m long, 32" diameter rigid pipe spool which weighs approximately 230 tonnes and was fabricated in Henderson, Western Australia.

REAF reflections

This year saw the continuation of Woodside's support for the City of Karratha's Red Earth Arts Festival (REAF). We were proud to once again sponsor 'REAF at The Quarter,' offering a suite of free, family-friendly activities, activating and transforming the area into a hub of artistic and cultural activity.

The main attraction of REAF at The Quarter was 'The Whale' installation; inviting viewers to interact with a large whale puppet and its sea friends while listening to whale vocalisations – an immersive experience enjoyed by all ages.

REAF is moving towards becoming a destination festival for the region, and Woodside and its joint venture partners are proud to support the continued provision of important and much-loved community events, livability initiatives and significant local government projects.

Artists from Yinjaa-Barni Art Group painted and displayed art on site, welcoming the public to watch the creation of several pieces and engage in conversations.

A community concert featured roving entertainment, stage performances, music, food trucks and the Karratha District Chamber of Commerce and Industry markets.

Attendees were treated to Maori cultural displays, Brazilian samba and Chinese dance while enjoying face painting, elaborately costumed stilt artists, Dr Hubble's bubble display, jazz music from the Perth Symphony Orchestra and a calming space at The Inclusive Movement's sensory tent.

Woodsiders enjoyed engaging with the diverse Karratha community discussing Woodside's work in the North West and listening to community feedback on our activities.

The festival finale featured First Lights - Bunggaliyarra Munggu, presented by Fremantle Biennale in collaboration with Juluwarlu Art Group and supported by Woodside and its Pluto Train 2 Joint Venture partners. Woodside is proud to support events like REAF, bringing the community together, strengthening local connections, and fostering a sense of collective pride.

Karratha Volunteer Fire & Rescue Service were Woodside Community Grant recipients, 2024

Woodside Community Grants

Applications open Wednesday, 1 October 2025

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to $5,000 are available to support community initiatives in the City of Karratha and the Shire of Exmouth.

Applications close Friday, 31 October 2025 and can be completed online at woodside.com/social-contribution

EXECUTIVE SUMMARY

Woodside Energy Ltd. (Woodside) has developed its oil spill preparedness and response position for the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention activities, hereafter known as the Petroleum Activities Program (PAP).

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP described in the Environment Plan (EP). This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenario	**Credible Scenario-01 (CS-01):** Hydrocarbon release caused from a loss of well containment (LOWC) – AP3 Angel Field at 19° 30' 38.51" S, 116° 36' 18.57" E. 107,779 m^3 over 68 days of Angel Condensate. 3.8 % residual component of 4096 m^3	Section 2.2
	Credible Scenario-02 (CS-02): Hydrocarbon release caused from a LOWC – PER-02 PoG Field at 19° 31' 06.50" S, 116° 05' 53.64" E. 219,093 m^3 over 73 days of Perseus (Searipple) Condensate. 0.38 % residual component of 833 m^3	
	Credible Scenario-03 (CS-03): Unplanned hydrocarbon release from a LOWC from TPA03 during well intervention at 19° 45' 43.618" S, 115° 53' 23.986" E. 56,441 m^3 over 71 days of TPA Condensate/ GWA Condensate.[1] 0.8% residual component of 451.5 m^3 or 6.4 m^3 per day.	
	Credible Scenario-04 (CS-04): Marine fuel release caused by loss of marine vessel separation – Angel-3 Wellhead location at 19° 23' 26.03" S, 116° 37' 47.25" E. Instantaneous release of 500 m^3 of marine diesel oil (MDO). 5% residual component of 25 m^3	
Hydrocarbon Properties	**Angel Condensate** Angel Condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 67.0% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 23.8% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 5.4% should evaporate over several days (265 °C < BP < 380 °C). Approximately 3.8% of the oil is shown to be persistent.	Section 6.7.2 of the EP Appendix A of the First Strike Plan
	Perseus (Searipple) Condensate Searipple Condensate is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 66.5% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 20.2% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 13% should evaporate over several days (265 °C < BP < 380 °C).	

[1] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m^3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

1 INTRODUCTION

1.1 Overview

Woodside Energy Ltd (Woodside) has developed its oil spill preparedness and response position for the North West Shelf Phase 1 Plug and Abandonment activities, hereafter known as the Petroleum Activities Program (PAP). This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan (EP)
- Hydrocarbon Spill Australia Regulatory Framework
- The North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Oil Pollution Emergency Plan (OPEP) including
  - Oil Pollution First Strike Plan (FSP)
  - Operational and Scientific Monitoring Bridging Implementation Plan (OSM BIP)
  - Relevant Operations Plans
  - Relevant Tactical Response Plans (TRPs)
  - Relevant Supporting Plans
  - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to ALARP and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP described in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the PAP is shown in Figure 3.1 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, outlining the selected response techniques for this PAP. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the oil pollution FSP is underway. The IAP includes inputs from monitor and evaluate and operational monitoring activities and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 outlines the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the PAP.

The North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Oil Pollution First Strike Plan (FSP) then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

Section 1. INTRODUCTION

Section 2. RESPONSE PLANNING PROCESS

- identification of worst-case credible scenario(s) (WCCS)
- spill modelling for WCCS.

Section 3. IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

- areas predicted to be contacted at concentration >100 g/m^2.

Section 4. NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

- pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
- selected response techniques prioritised and carried forward for ALARP assessment.

Section 5. HYDROCARBON SPILL ALARP PROCESS

- determines the response need based on predicted consequence parameters.
- details the environmental performance of the selected response options based on need.
- sets the environmental performance outcomes, environmental performance standards and measurement criteria.

Section 6. ALARP EVALUATION

- evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP.
- provides a detailed ALARP assessment of selected control measure options against:
  - predicted cost associated with implementing the option
  - predicted change to environmental benefit
  - predicted effectiveness / feasibility of the control measure.

Section 7. ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

- evaluation of impacts and risks from implementing selected response options.

Section 8. ALARP CONCLUSION

Section 9. ACCEPTABILITY CONCLUSION

This document is protected by copyright. 2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

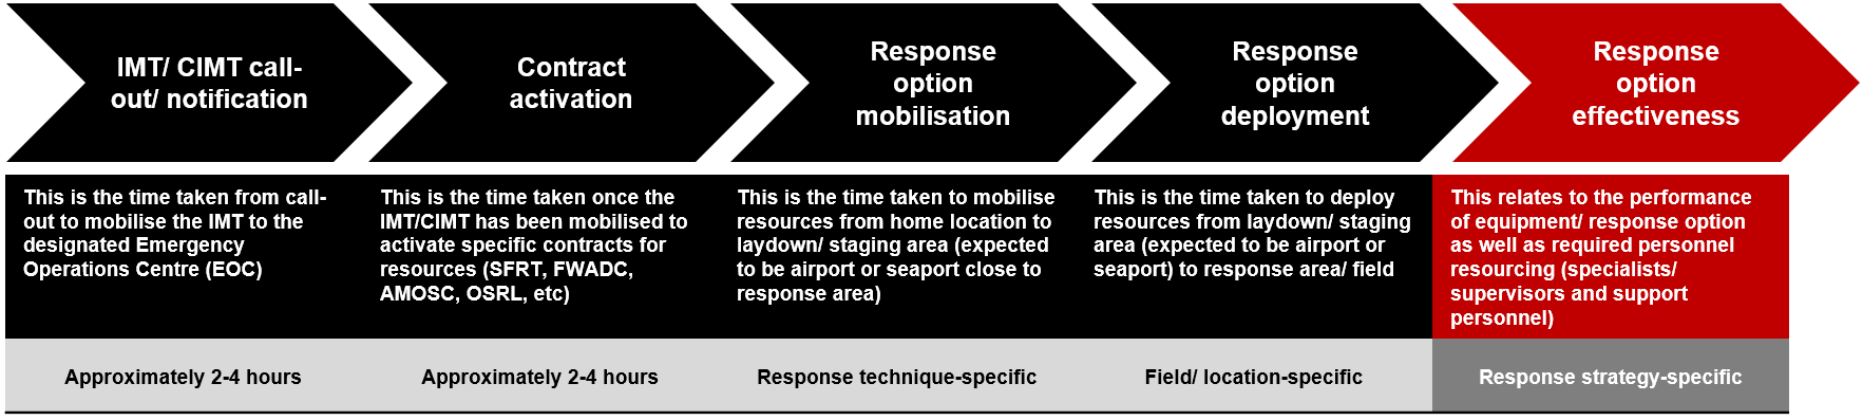

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

This document is protected by copyright. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the PAP have been identified during the risk assessment process (Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Five unplanned events or credible spill scenarios for the PAP have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the PAP. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

A loss of well control scenario at three locations (CS-01, CS-02 and CS-03) has been modelled and is considered to determine the WCCS for response planning purposes. CS-01 is the only scenario to predict shoreline loading, this scenario is therefore selected for planning purposes and is used to inform the shoreline response.

The selection of WCCS for OSM planning purposes is discussed in ANNEX C: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention OSM Activity Specific assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Table 2-1: Petroleum Activities Program credible spill scenarios

Credible Spill Scenarios	Scenario selected for planning purposes	Scenario description	Maximum credible volume released (liquid m^3)[1]	Incident level	Hydrocarbon type	Residual proportion	Residual volume (m^3)
Credible Spill Scenario-01 (CS-01)	Yes	Hydrocarbon release caused from a loss of well containment (LOWC) – AP3 Angel Field	107,779 m^3 over 68 days	3	Angel Condensate	3.8%	4096 m^3 over 68 days (60 m^3 per day)
Credible Spill Scenario-02 (CS-02)	No	Hydrocarbon release caused from a LOWC – PER-02 PoG Field	219,093 m^3 over 73 days	3	Perseus (Searipple) Condensate	0.38%	833 m^3 over 73 days (11 m^3 per day)
Credible Spill Scenario-03 (CS-03)	No	LOWC During well intervention – subsea blowout – TPA03	56,441 m^3 over 71 days	3	GWA Condensate used as an appropriate surrogate [4]	0.8%	451.5 m^3 over 71 days (6 m^3 per day)
Credible Spill Scenario-04 (CS-04)	Yes	Marine fuel release caused by loss of marine vessel separation – Angel 3 Wellhead location	Instantaneous release of 500 m^3	2	MDO	5%	25 m^3 instantaneously
Credible Spill Scenario-05 (CS-05)	No	Marine fuel loss during hydrocarbon bunkering – Angel and PoG Field	24 m^3 over 15 minutes	1	MDO	5%	1.2 m^3 over 15 minutes (0.08 m^3 per minute)

[4] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m^3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6.7.1 to 6.7.3 of the EP.

Angel Condensate

Angel Condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 67.0% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 23.8% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 5.4% should evaporate over several days (265 °C < BP < 380 °C). Approximately 3.8% of the oil is shown to be persistent.

Perseus (Searipple) Condensate

Searipple Condensate is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 66.5% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 20.2% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 13% should evaporate over several days (265 °C < BP < 380 °C).

TPA Condensate / GWA Condensate

N.B. GWA condensate has very similar properties to the hydrocarbon produced from TPA03 well and is therefore an appropriate surrogate – see footnote [5].

GWA condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 65.9% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 22.5% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 10.8% should evaporate over several days (265 °C < BP < 380 °C). Approximately 0.8% of the oil is shown to be persistent.

Marine Diesel Oil (MDO)

Marine diesel is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent. The aromatic content of the oil is approximately 3%.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and

[5] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m^3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 100 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
Condensate	10	50	100	100
Diesel	10	50	100	100

2.3.2 Deterministic modelling

Woodside uses deterministic modelling results to evaluate risks and impacts and response capability requirements. These results are provided in both shapefile and data table format with each row of the data table representing a 1 km^2 cell. This cell size has been used as it represents the approximate area a single containment and recovery operation or surface dispersant operation (single sortie or vessel spraying) can effectively treat in one ten (10) hour day. Smaller cell sizes have been considered but would not change the response need as the potential distance between cells would not allow multiple cells to be treated per day by response operations. Additionally, a 1 km^2 cell is expected to allow averaging of threshold concentrations and mass across the spatial extent to represent a conservative approach (patches of oil and windrows) to response planning that simulates monitor and evaluate feedback in a real event.

Deterministic modelling was carried out on CS-01 as the WCCS and used for response planning purposes. A sample of the deterministic results is provided below as an indication of the data format and content.

- Column A and B provide the latitude and longitude of the cell
- Column C is the elapsed time since the release occurred
- Column D represents the average concentration across the cell in g/m2
- Column E represents the viscosity of the hydrocarbon in centistokes (cSt) at sea surface temperature
- Column F and G represents the mass of hydrocarbon across the entire cell in kg and tons respectively.

-19.711226	115.823922	6	51.471109	80.668490	51597.969472	51.471109
-19.702194	115.823922	6	4.734574	80.068396	4746.515274	4.734574
-19.720258	115.833477	6	4.879617	58.780817	4891.356945	4.879617
-19.711226	115.833477	6	36.161301	70.992921	36250.382543	36.161301

The deterministic modelling data provides an indication of the response need by displaying the potential surface area and volume treated or recovered by response operations. Existing capability is reviewed to approximate the surface area and volumes that can be treated or removed and a range of alternate, improved and additional options to reduce risks and impacts to ALARP are considered.

Woodside recognises no single response technique will treat all available subsea or surface oil and a combination of response techniques will be required for the identified scenario. Even with the significant resources available to Woodside through existing capability and third-party resources, the primary offshore response techniques of surface dispersant application and containment and recovery will only treat or recover a minor proportion (<30%) of the available surface hydrocarbons based on previous response experience.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA are used to predict and assess environmental impacts and inform the operational and scientific monitoring (OSM), however they do not appropriately represent the thresholds at which an effective response can be implemented. Additional response thresholds are used for response planning and to determine areas where response techniques would be most effective. The deterministic modelling is then used to assess the nature and scale of a response.

In the event of an actual response, existing deterministic modelling would be reviewed for suitability and additional modelling would be conducted using real-time data and field information to inform IMT decisions.

The deterministic spill modelling outputs are presented at response planning thresholds for surface hydrocarbons for the WCCS. Surface spill concentrations are expressed as grams per square metre (g/m^2) (Section 2.2). The thresholds used are derived from oil spill response planning literature and industry guidance and are summarised below.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-4: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum threshold for commencing monitor and evaluate[6]	Code 3 – Dull metallic colours	5 to 50

[6] Operational monitoring will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport and Major Infrastructure and Major Infrastructure (WA DTMI) or AMSA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application [7]	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so overall the average thickness is 0.1 mm (or approx. 100 g/m^2 ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten (10) fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code [BAOAC] 3, approx. 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from NOAA in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013).* This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a

[7] At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-4 below from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996, EMSA, 2012, Spence, 2018) the surface threshold of 50 g/m^2 was chosen as an average/equilibrium thickness for offshore response operations (50 g/m^2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or wind-rows).

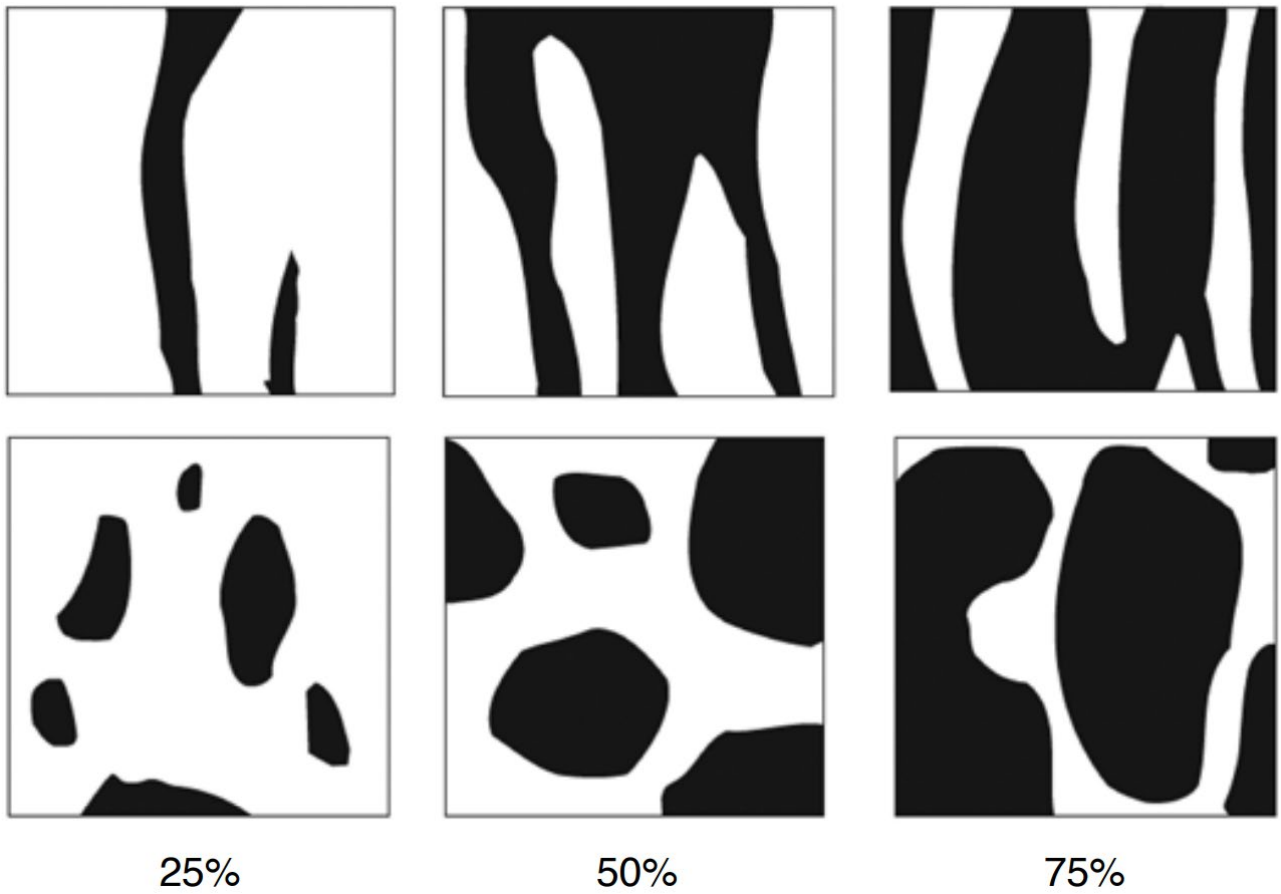

Figure 2-4: Proportion of total area coverage (AMSA, 2014)

Figure 2-5 illustrates the general relationships between on-water response techniques and slick thickness. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

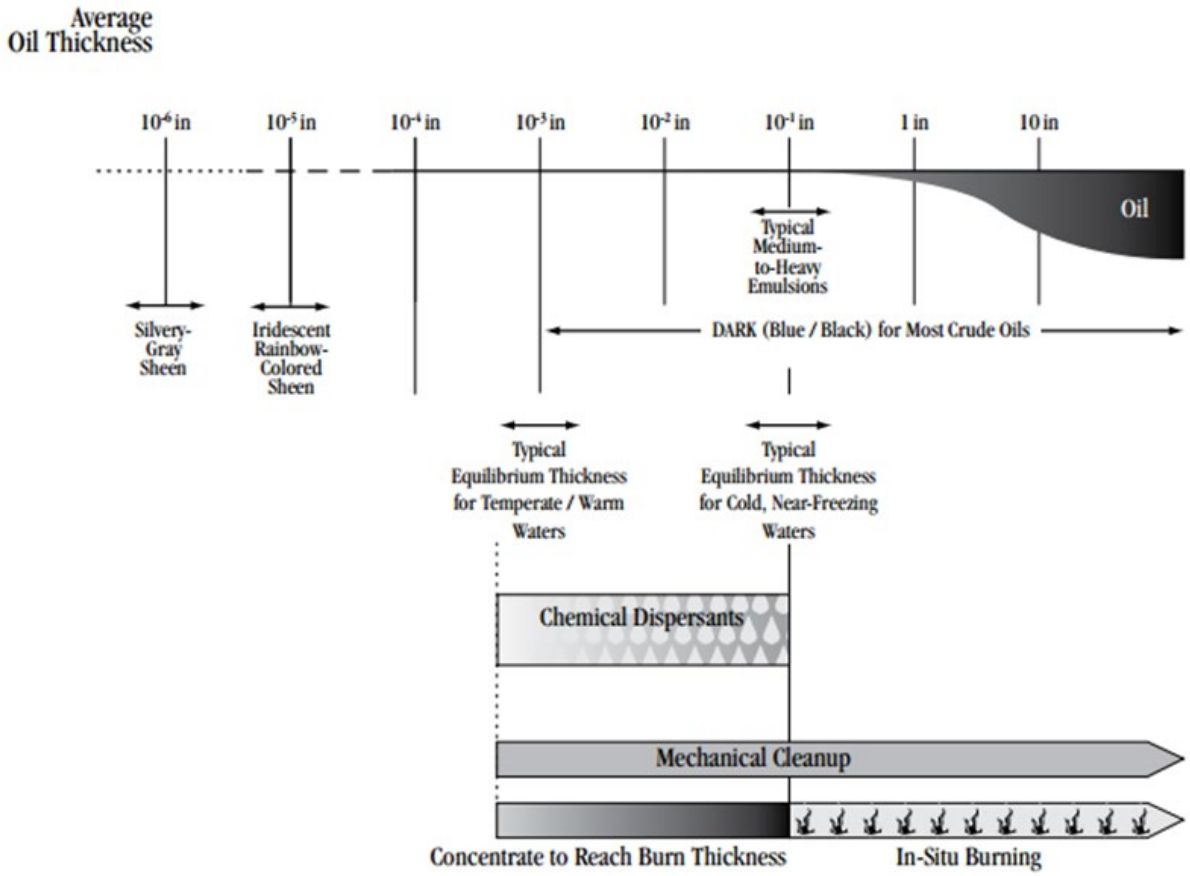

Figure 2-5: Oil thickness versus potential response options (from Allen & Dale 1996)

Wind and wave influence on the feasibility of response operations are also considered below (adapted from NOAA 2013):

- Mechanical Clean-up: Effectiveness drops significantly because of entrainment and/or splash-over as short period waves develop beyond 2–3 ft. (0.6–0.9m) in height. The ability to contain and recover oil decreases rapidly as the slick thickness becomes less than a thousandth of an inch (0.025 mm) (i.e., very low oil encounter rates). Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.
- Dispersants: Effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness; and, there is a point (~25-kt winds, 10-ft waves) where natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approx. 50 g/m^2) to hundredths of an inch (approx. 250 g/m^2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) have been utilised by Woodside in deterministic modelling to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-5: Surface hydrocarbon viscosity thresholds

Surface viscosity threshold (cSt)	Description	European Maritime Safety Authority (EMSA)	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5,000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1,000 or 2,000 mPa (1,000 – 2,000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2,000 or 5,000 mPa (2,000 – 5,000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5,000 mPa (5,000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5,000 cSt at sea temperature are generally possible to disperse, while 5,000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

The thresholds described above are compared with the modelling results for the WCCS (Table 2-6).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs are included along with deterministic results in Table 2-6.

The selected deterministic runs used to represent the WCCS are:

- Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a threshold of 10 g/m^2).
- Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors (at a threshold of 100 g/m^2).
- Minimum time to entrained/dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 100 ppb).

The full list of response protection areas (RPAs) predicted from modelling is available in Table 3-1				

[8] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA’s contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m^3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

From the above modelling results, the results from the following modelling runs for CS-01 have been used as the basis for response planning:

- Model 23, Q1
- Model 1, Q3
- Model 10, Q2

As shown in the analysis of the deterministic results, modelling predicts the following:

2.3.4.1 Hydrocarbon release caused by loss of well containment (CS-01)

- Fastest shoreline contact at 100 g/m^2 is at the Southern Pilbara Islands (23.4 days).
- Glomar Shoals is predicted to receive fastest entrained oil concentrations at the 100 ppb threshold after 3.8 days
- Response operations cannot be implemented if the safety of response personnel cannot be guaranteed. Safety circumstances that limit the execution of this control measure include volatile concentrations of hydrocarbons in the atmosphere, high winds (>20 knots), waves and/or sea states (>1.5m waves) and high ambient temperatures.

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

In a response, monitor and evaluate techniques – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

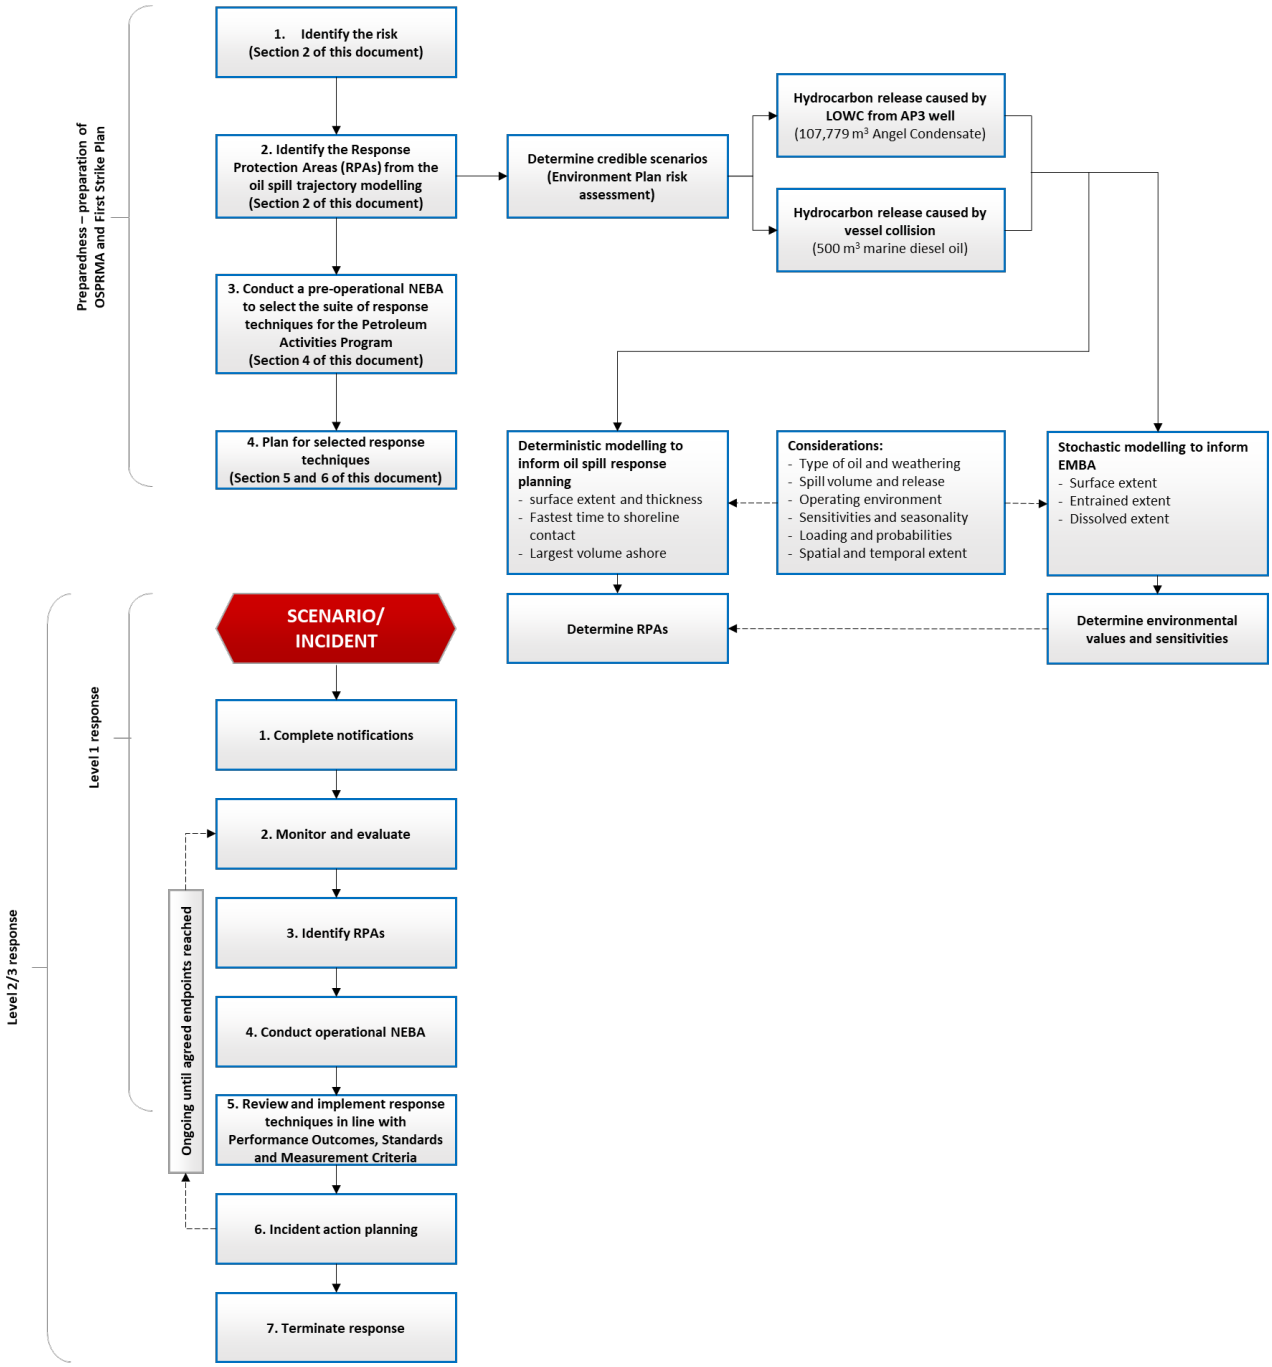

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6.7.2 and 6.7.3 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds
- receptors within the EMBA which meet the following:
  - a number of priority protection criteria/categories
  - International Union of Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas (RPAs)

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (Section 2.3.3). It is important to note that the figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6.7.2 and 6.7.3 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m^2 for shoreline assessment and/or contact with surface slicks >10 g/m^2 for monitor and evaluate) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of Priority Protection Areas (PPAs) potentially contacted from stochastic modelling (as per EMBA definition) (see Section 4 of the EP). Other PPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) considers the results from the stochastic modelling to allow consideration of all feasible response techniques are considered in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed in the planning/preparedness process and would also be followed in a response.

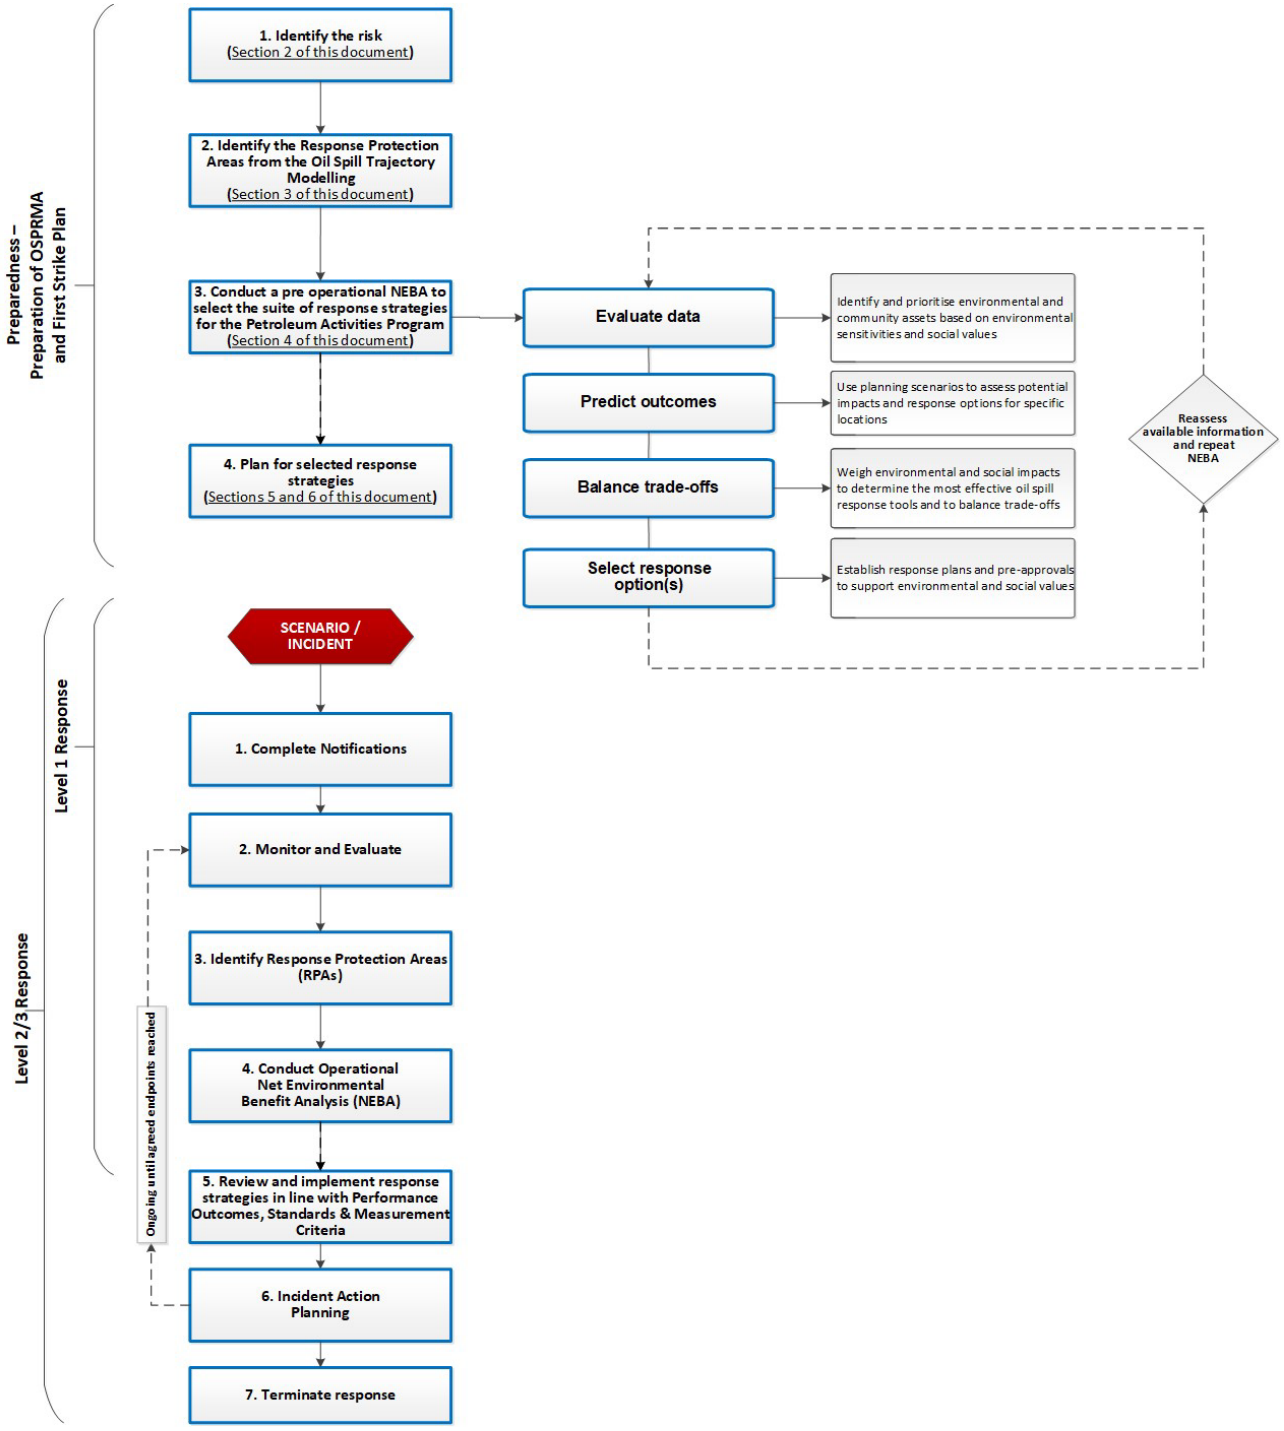

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds (Section 2.3.3) and the surface concentrations (Section 2.3.3.1) from the deterministic modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this PAP are contained in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed through the use of trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the PAP activities.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-6 and Table 3-1.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response effectiveness/ feasibility to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the effectiveness/ feasibility of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released and the sensitivities of the receptors (both ecological and socio-economic) may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Monitor and evaluate
- Source control
  - Remotely operated vehicle (ROV) intervention

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

  - debris clearance and/or removal
  - capping stack
  - relief well drilling
- Source control via vessel SOPEP
- Subsea dispersant injection
- Surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
  - protection
  - deflection
- Shoreline clean-up:
  - Phase 1 – mechanical clean-up
  - Phase 2 – manual clean-up
  - Phase 3 – final polishing
- Oiled wildlife response (including hazing)

Support functions may include:

- Waste management
- Operational and scientific monitoring (routinely implemented for spills if the OMP and SMP initiation criteria are met).

Table 4-1 and Table 4-2 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

Table 4-1: Response technique evaluation – Loss of Well Containment (LOWC)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once monitor and evaluate informs likely RPAs at risk.	Monitoring of a condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport and Major Infrastructure (WA DTMI).	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via blowout preventer (BOP) intervention using ROV and hotstab	Controlling a loss of well containment at source via BOP intervention would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	In the event of the worst-case scenario with a loss of well containment during drilling operations, ROV operations to locally operate the BOP would be attempted.	Yes	The use of source control intervention via ROV may be feasible (depending on local concentration of atmospheric volatiles) and would reduce quantity of hydrocarbons entering the marine environment.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Woodside will have in place an Activity Source Control Emergency Response Plan (SCERP) covering NWS Phase 1 P&A and TPA03 well intervention activities. Capping the wells is considered feasible based on worst-case discharge rates. Capping stack is considered for deployment on the BOP or wellhead. For Angel wells, shallow water depth poses additional challenges, safe deployment of the capping stack would be assessed based on plume and weather conditions on the day. Though all capping stack deployment technologies are unproven, in the event of a loss of well containment, the use of a proven subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack would be attempted with a heavy lift vessel. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The location of suitable vessels for capping stack deployment are monitored monthly. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.	Yes	Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states and high ambient temperatures. Interface checks show the stack can be installed on the top connector of the lower BOP, the subsea tree, or wellhead after tree recovery however, is not compatible with the EDP/LRP While compatibility with the subsea tree has been confirmed, a loss of well control scenario where capping would be required on the vertical subsea tree connector (EDP/LRP not in place) is not considered credible.
Source control via relief well drilling	A release of condensate will be over approximately 68 days at the AP3 well location, 73 days at the PER02 well location and 71 days at the TPA03 well location. Relief well drilling is one of the primary options to stop the release.	For a spill from the AP3, PER02 or TPA03 wells, relief well drilling will be a feasible means of stopping a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling will be the main technique employed to control a loss of well containment event.
Subsea dispersant injection	SSDI is not predicted to be effective on the subsea hydrocarbon release due to shallow water depth, oil properties and predicted gas release volumes. Entrained oil plume likely to be increased resulting in greater spatial extent of entrained oil.	The goal of SSDI is to decrease the volume of oil that rises to the water surface and to reduce exposure to floating and entrained/dissolved oil. Based on the deterministic modelling analysis, it is predicted that 3 m^3 of shoreline accumulation would potentially occur up to 23.4 days after the LOWC occurred in the deterministic run with the shortest timeframe to shoreline accumulation (CS-01). The use of SSDI would not be required in order to deploy a capping stack and unnecessary use of SSDI would increase the complexity of SIMOPS operations around the wellhead. Given the preceding information and that there is conflicting evidence on the efficacy of SSDI, despite the considerable amount of research and experimental work completed since the Deepwater Horizon spill (Quigg et al. 2021), the use of SSDI is considered unwarranted and would not provide net environmental or safety benefits.	No	Due to the minimal surface and shoreline exposure predicted at RPAs, together with this technique not being required to facilitate other source control techniques, the use of SSDI is not deemed appropriate. The application of subsea dispersant would unnecessarily introduce additional chemical substances to the marine environment and further increase exposure of subsea ecosystems to entrained hydrocarbons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Surface dispersants are not generally considered a feasible response technique when applied to thin surface films such as condensate, as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon. EMSA (2010) recommends thin layers of spilled hydrocarbons should not be treated with surface dispersant, including surface slicks with Bonn Agreement Oil Appearance Codes (BAOAC) 1-3. Surface oil concentrations are not predicted to meet the 50 g/m^2 minimum concentration required for application of dispersant to be effective for CS-01 (Angel AP3 well). Surface oil concentrations >50 g/m^2 are only predicted for short distances for CS-02 and CS-03 (Perseus – 8 km from the release site) and CS-04 (TPA-03 – 1 km from the release site). Rapid evaporation of the surface oil (>80% in 24-hours) will result in rapid weathering and thinning of the oil. Therefore, effective subsea dispersant will not be feasible. The volatile nature of condensate is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon spill, thus this response technique is deemed unsuitable for this activity.	No	Angel, Perseus and TPA condensates will rapidly evaporate and disperse, resulting in concentrations too thin to effectively treat with surface dispersant. The use of surface dispersant could unnecessarily introduce additional chemical substances to the marine environment.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved and where calm metocean conditions can be confirmed. Use of this technique would also cause an increase the release of atmospheric pollutants.	There is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which would be difficult to achieve. Furthermore, this technique may be prevented from being undertaken due to personnel safety issues arising from predicted high local concentrations of atmospheric volatiles.	No	The safety concerns and the predicted low effectiveness associated with implementing an in-situ burning response outweigh the potential environmental benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Modelling of a condensate spill for NWS Phase 1 P&A and TPA03 Well Intervention predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for containment and recovery to be feasible within any RPA. Surface oil concentrations are not predicted above 50 g/m^2 for CS-01 (Angel AP3 well). Surface oil concentrations >50 g/m^2 are only predicted for short distances for CS-02 and CS-03 (Perseus - 8km from the release site) and CS-04 (TPA-03 - 1 km from the release site). The volatile nature of condensate is also likely to lead to unsafe conditions near release location.	No	Containment and recovery would be an ineffective response technique as it requires a hydrocarbon thickness of BAOAC 4-5 with a 50-100% coverage of 100-200 g/m^2. Surface oil concentrations are not predicted above 50 g/m^2 for CS-01 (Angel AP3 well). Surface oil concentrations >50 g/m^2 are only predicted for short distances for CS-02 and CS-03 (Perseus – 8 km from the release site) and CS-04 (TPA-03 – 1 km from the release site). This response strategy is therefore considered ineffective.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	If monitor and evaluate techniques indicate surface hydrocarbons are moving toward shorelines, pre-emptive assessments of sensitive receptors at risk and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). For CS-01, the first shoreline contact is predicted from shoreline accumulation hydrocarbon in 23.4 Days (at Southern Pilbara Islands – Peak Island, 3 m^3) allowing adequate time to deploy this technique. No shoreline contact is predicted for CS-02 - CS-04. Protection strategies can be used for targeted protection of sensitive resources.	Yes	RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are deemed to be at risk, based on real-time modelling during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing net environmental benefit.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		Access to sensitive areas may cause more negative impact than benefit.		
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	If monitor and evaluate techniques indicate hydrocarbons will contact shorelines, pre-emptive assessments of sensitive receptors at risk, shoreline assessments and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). For CS-01, the first shoreline contact is predicted from shoreline accumulation hydrocarbon in 23.4 Days (at Southern Pilbara Islands – Peak Island, 3 m^3) allowing adequate time to deploy this technique. No shoreline contact is predicted for CS-02 - CS-04. Can reduce or prevent impact on sensitive receptors in most cases. Must confirm, through shoreline assessment, that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.	Yes	Response Protection Areas predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are at risk, based on real-time modelling during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites. Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature. This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a Pluto Condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	Yes	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Table 4-2: Response technique evaluation – MDO release from vessel collision (CS-04)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MDO				
Monitor and evaluate	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once monitor and evaluate informs likely RPAs at risk.	Monitoring of a marine diesel spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DTMI. Practicable techniques that could be used for this scenario include predictive modelling, surveillance and reconnaissance and monitoring of hydrocarbon presence in water. Modelling does not predict impact of any shoreline receptors at threshold, however, pre-emptive assessment of sensitive receptors at risk and monitoring of contaminated resources would be utilised if any sensitive shoreline receptors are deemed to be at risk of impact.	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce VOCs in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	This technique is not suitable for MDO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as marine diesel as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	No	The application of dispersant to marine diesel is unnecessary as the diesel will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	Use of in-situ burning as a response technique for marine diesel is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.	No	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100 g/m^2 to 200 g/m^2.	This technique is not suitable for MDO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations. Furthermore, modelling predicts that floating oil will not reach the required threshold (>50 g/m^2) for containment and recovery to be feasible within any RPA.	No	Containment and recovery would be an inappropriate response technique for a spill of marine diesel. Corralling a volatile hydrocarbon such as MDO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		The volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.		prior to the commencement of containment and recovery operations.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	A marine diesel spill would be prone to rapid spreading and evaporation and modelling predicts that no shoreline receptors will be contacted at threshold. Furthermore, the volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Monitor and evaluate will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	In addition to safety issues and the rapid spreading and evaporation of the diesel, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at any of the assessed thresholds.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m2.	A marine diesel spill would be prone to rapid spreading and evaporation and the modelling predicts that no shoreline receptors will be contacted at threshold – any minor contact is significantly below any threshold concentration that would allow a response to be feasible. Furthermore, the volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Monitor and evaluate techniques will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	In addition to safety issues, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at a recoverable threshold and a spill of marine diesel is unlikely to accumulate at concentrations appropriate for shoreline clean-up techniques.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate techniques will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	Yes	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488* (2024) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/SIMA, Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- considers the Response Planning Need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability
- considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
    - predicted cost associated with adopting the control measure
    - predicted change/environmental benefit
    - predicted effectiveness/feasibility of the control measure.
- evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- a structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique
- the analysis of alternate, additional, and improved control measures meets one of the following criteria:
    - all identified, reasonably practicable control measures have been adopted; or
    - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
    - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned
- higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or clearly unreasonable control measure
- cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the purpose of the ALARP assessment, the following terms and definitions have been used:

- response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably
- cost is defined as the time, effort and/or trouble taken in financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance terms to adopt a control measure
- where the predicted change to environmental impact is compared against standard environmental values and sensitivities impacts using positive or negative criteria from the NEBA Impact Ranking Classification Guidance in Annex A.

5.1 Monitor and Evaluate

Monitor and evaluate techniques includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

Techniques may include:

- Predictive modelling of hydrocarbons to assess resources at risk
- Surveillance and reconnaissance to detect hydrocarbons and resources at risk
- Pre-emptive assessment of sensitive receptors at risk

Woodside maintains an *Operational Monitoring Operational Plan*. If shoreline contact is predicted, Response Protection Areas (RPAs) will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey (SCAT) will be completed to guide effective shoreline clean-up operations per arrangements detailed in Woodside's Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) (see Section 5.8). This plan includes the process for the CIMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier/ Karratha to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier/ Karratha. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth, Onslow or Port Hedland.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective monitor and evaluate is expected to be present in open waters. Surface oil concentrations >50 g/m^2 are only predicted for short distances for CS-02 (8 km from the release site) and CS-03 (1 km from the release site).
- The shortest timeframes that shoreline contact from floating oil at >100 g/m^2 is predicted to be 23.4 days at Southern Pilbara – Islands (3 m^3, CS-01). No shoreline contact is predicted at threshold concentrations for CS-02, CS-03 or CS-04).
- The shortest time to contact for oil at concentrations of entrained hydrocarbons greater than 100 ppb at shoreline receptors is 3.8 days at Glomar Shoals (CS-01).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the worst-case spill may extend up to 68 days (CS-01) with response operations extending to month 3 based on the predicted time to complete shoreline clean-up operations.

5.1.2 Environmental performance based on need

Table 5-1: Environmental Performance – Monitor and evaluate

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside common operating picture (COP) daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	2 trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	1 aircraft available for two sorties per day, available for the duration of the response from day 1	1, 3C, 4
		4.3	Observer to compile report during flight as per FSP. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support Shoreline Contamination Assessment Technique (SCAT), containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Pre-emptive assessment	5.1	10 days prior to any predicted impact, in agreement with WA DTMI (for Level 2/3 incidents), deployment of 2 specialists from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
	of sensitive receptors	5.2	Daily reports provided to IMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4

The control measures and capability of Woodside and its third-party service providers are shown to support Monitor and evaluate activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Monitor and evaluate operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.2 Source Control and Well Intervention

The worst-case credible scenario for a loss of well containment is considered to be complete loss of well control during well intervention/ P&A activities. This scenario would result in an uncontrolled flow from the well as outlined in the EP. In the event of a complete loss of well containment, the primary response would be relief well drilling.

Woodside is a signatory to a MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well, if a [subsea scenario] incident were to occur. The MoU commits the signatories to share rigs, equipment, personnel and services to assist another operator in need.

5.2.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Prior to any source control activities, Woodside will implement protocols to confirm that the site is safe including subsea ROV surveys and surface air monitoring.
- Hydrocarbons will flow from the well until one of the following interventions can be made:
  - closure of the Tubing Retrievable Safety Valve (TRSV)
  - a capping stack is installed
  - a relief well is drilled and first attempt at well kill within 68 days (AP3 well, CS-01), 73 days (PER02 well, CS-02) or 71 days (TPA03, CS-03).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 68 days (CS-01) with response operations extending to month 3 based on the predicted time to complete shoreline clean-up operations.

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-2: Response Planning Assumptions – Source Control

Response planning assumptions	
Capping stack feasibility	Capping stack deployment is not considered feasible where water depths are <100m. Associated personnel safety issues make it unsafe to deploy equipment in close proximity to the release location. Conventional/ vertical capping stack deployment may be feasible. This would be considered, at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew and factors that may influence a safe deployment such as plume radius and acceptable environmental conditions e.g. wind speed, wave height, current and plume radius.
Safety considerations	Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	Woodside's primary source control option would be ROV intervention followed by relief well drilling for a loss of containment for any of the wells within the PAP. The following approaches outline Woodside's hierarchy for relief well drilling; • Primary – Review internal drilling programs and MODU availability to source an appropriate rig operating within Australia with an approved Safety Case; • Alternate – Source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case; • Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case

5.2.2 Environmental performance based on need

Table 5-3: Environmental Performance – Source Control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
6	Subsea First Response Toolkit (SFRT)	6.1	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		6.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		6.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		6.4	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
7	Well intervention	7.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		7.2	Source control vessel will have the following minimum specifications: • active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. • at least 90 m in length • deck has water/electricity supply • deck capacity to hold at least 110 T of capping stack.	1, 3B, 3C
		7.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		7.4	ROV available on MODU ready for deployment within 48 hours to attempt initial BOP well intervention.	1, 3B, 3C
		7.5	Hot Stab and/or well intervention attempt made using ROV and SFRT within 48 hours.	1, 3B, 3C
		7.6	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.[11]	1, 3C
		7.7	Contract in place for access to equipment and staff to assist with the mobilisation, deployment, and operation of well intervention equipment.	1, 3B, 3C
		7.8	MODU mobilised to site for relief well drilling within 21 days.	1, 3C
		7.9	First well kill attempt completed within 68 days (AP3 well, CS-01), 73 days (PER02 well, CS-02) or 71 days (TPA03, CS-03) days	1, 3B, 3C
		7.10	Open communication line(s) to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
		7.11	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history, to meet specifications for relief well drilling. Titleholders of suitable MODUs notified.	3C

[11] Note: Capping stack is not considered feasible for water depths of <100m and/or if vertical Xmas trees are in place. Feasibility will be assessed on a case-by-case basis.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
8	Support vessels	8.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C
		8.2	Frame agreements for installation support vessels (ISVs) require vessels to maintain in-force safety case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		8.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C
9	Safety Case	9.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing safety case	1, 3C
		9.2	Woodside Planning, Logistics, and Safety Officers (on roster/Call 24/7) to assist in expediting the safety case assessment process as far as practicable.	1, 3C
		9.3	Woodside will maintain minimum safe operating standards that can be provided to MODU and vessel operators for Safety Case guidance.	1, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to relief well drilling operations to stop the well flowing.

- The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered grossly disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this PAP.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.2.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.3 Source Control via Vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the PAP vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by IMO Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer marine diesel and thus minimise the release.

5.3.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the PAP which are detailed in Section 6.7 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.3.

Performance standards for each contracted PAP vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.4 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable.

Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- There is no floating oil predicted above threshold (50 g/m^2).
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact at 100 g/m^2, which occurs on day 23 at Southern Pilbara Islands – Peak Island with concentrations exceeding 100 g/m^2.
- The duration of the spill may be up to 68 days (CS-01) with shoreline response operations extending to month 3 based on the predicted time to complete shoreline clean-up operations.
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for Shoreline Protection and Deflection. These assumptions have been described in the table below.

Table 5-4: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	One Shoreline Protection and Deflection operation may include; • Quantity of shoreline sealing boom (as outlined in TRP) • Quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire Specific details of each operation would be tailored to the Tactical Response Plan implemented (where available).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.4.2 Environmental performance based on need

Table 5-5: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
10	Response teams	10.1	In liaison with WA DTMI (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation within 5 days prior to a predicted impact.	1, 3A, 3C, 4
		10.2	In liaison with WA DTMI (for Level 2/3 incidents), mobilise teams to RPAs within 5 days prior to a predicted impact. Teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool.	1, 2, 3B, 3C, 4
		10.3	In liaison with WA DTMI (for Level 2/3 incidents), 1 operation mobilised 5 days prior to predicted impact for each identified RPA. Expected to be 1 RPA within 23.4 days (operation as detailed above).	1, 3A, 3B, 4
		10.4	12 trained personnel available (2 supervisors plus 10 additional personnel) 5 days prior to predicted impact for each identified RPA. Sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		10.5	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s)	1, 3A, 3B
		10.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
11	Response equipment	11.1	Equipment mobilised from closest stockpile 5 days prior to predicted impact.	1, 3A, 3C, 4
		11.2	Supplementary equipment mobilised from State and AMOSC stockpiles 5 days prior to predicted impact.	1, 3C, 4
		11.3	Supplementary equipment mobilised from OSRL within 5 days prior to predicted impact.	
		11.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3C, 4
12	Management of Environmental Impact of the response risks	12.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		12.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		12.3	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

Under optimal conditions, during the subsea and surface releases the capability available exceeds the need identified. It indicates that, the shoreline protection and deflection capability have the following expected performance:

- Deterministic modelling scenarios indicate that first shoreline impact at Southern Pilbara Islands – Peak Island within 23.4 days for the AP3 LOWC scenario (CS-01).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

- Existing capability allows for mobilization and deployment of shoreline protection operations by Day 2 (if required). Given shoreline contact at RPAs is not predicted until Day 23 at Southern Pilbara Islands – Peak Island, the existing capability is considered sufficient to mobilise and deploy protection at RPAs prior to hydrocarbon contact, guided by the ongoing operational monitoring.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.5 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches, and
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (AMSA 2015).

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil is predicted is 23.4 days (3 m^3) at Southern Pilbara Islands.
- The duration of the spill may extend up to 68 days (CS-01) with shoreline response operations extending to month 3 based on the predicted time to complete shoreline clean-up operations.
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport and Major Infrastructure and Major Infrastructure, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Table 5-6: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 x trained supervisor • 8–10 x personnel/ labour hire • Supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface Threshold • Lower – 100 g/m^2–100% coverage of 'stain' – cannot be scratched off easily on coarse sediments or bedrock – Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of 'coat' – can be scratched off with a fingernail on coarse sediments – Expected trigger to commence clean-up operations
Efficiency **(m^3 oil recovered per person per day)**	Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m^3 oil recovered per person per 10 hour day is based on moderate to high coverage of oil (100 g/m^2–1000 g/m^2) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises

Table 5-7: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.5.2 Environmental performance based on need

Table 5-8: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
13	Shoreline responders	13.1	In liaison with WA DTMI (for Level 2/3 incidents), deployment of 1 shoreline clean-up team to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool within XX hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		13.2	Relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation 5 days prior to monitor and evaluate predicting impacts.	1, 3A, 3C, 4
		13.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		13.4	Zoning of response locations to prevent secondary contamination and minimize the mixing of clean and oiled sediment and shoreline substrates	
		13.5	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy up to 1 shoreline clean-up operation to each site where monitor and evaluate predicts an accumulation 5 days prior to impact.	1, 2, 3A, 3C, 4
		13.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
		13.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
14	Shoreline clean up equipment	14.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		14.2	Equipment mobilised from closest stockpile 5 days prior to predicted impact.	
		14.3	Supplementary equipment mobilised from State and AMOSC stockpiles 5 days prior to predicted impact.	1, 3C, 4
		14.4	Supplementary equipment mobilised from OSRL 5 days prior to predicted impact .	
15	Management of environmental impact of the response risks	15.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		15.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		15.3	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves	
		15.4	Limiting vegetation removal to only that vegetation that has been moderately or heavily oiled	
		15.5	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations.	
		15.6	Oversight by trained personnel who are aware of the risks.	
		15.7	Trained unit leaders brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the PAP.

Whilst modelling predicts shoreline contact from day 23.4 (Southern Pilbara Islands), Woodside is satisfied that the current capability is managing risks and impacts to ALARP.

The capability available meets the need identified for this activity. The shoreline clean-up capability has the following expected performance (if required during a response):

- Woodside has the capacity to mobilise and deploy up to 105–140 shoreline clean-up units per week (approximately 1260-1680 responder-units per week) by week 3 using existing labour hire contracts with Woodside, AMOSC, Core Group and OSRL team leads.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability and the response would be completed by the end of month 4.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness. The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth to Port Hedland and management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.6 Oiled Wildlife Response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DTMI *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DTMI. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DTMI. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (BC Act)* which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.6.1 Response need based on predicted consequence parameters

Wildlife response priority areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- Presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- Greatest probability of shoreline accumulation
- Shortest timeframe to contact

Table 5-9 outlines the wildlife response areas for this activity. At the time of a spill, identification and allocation of wildlife RPA's should also take into consideration any key biological activities. Additional detail regarding species and their key biological activities within the vicinity of the PAP are described in Section 4 of the North West Shelf Phase 1 Plug and Abandonment Environment Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

For WA, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife), 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-9: Key at-risk species potentially in Response Protection Areas and open ocean

Species	Open Ocean	Southern Pilbara Islands	Muiron Islands	Sunday Island	Gascoyne MP
Marine turtles (including foraging and inter-nesting areas and significant nesting beaches)	✓	✓	✓	✓	✓
Whale sharks (migration to and from waters at Ningaloo)	✓		✓	✓	✓
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓
Cetaceans – migratory whales	✓		✓	✓	✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓
Sea snakes	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- Floating oil at >10 g/m^2 is predicted at Muiron Islands within 64.2 days for CS-01.
- The shortest timeframe for shoreline accumulation at response thresholds (>100 g/m^2) is predicted to be 23.4 days at Southern Pilbara Islands – Peak Island (3 m^3).
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and operational and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between medium and high, as defined in the WAOWRP (DBCA, 2022a) (Table 5-10).

Table 5-10: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with operational and scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response is likely, requiring preventative actions and/or wildlife rescue, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, along with capture, intake and treatment require a higher degree of planning, approval (licenses) and skills and will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.6.2 Environmental performance based on need

Table 5-11: Environmental Performance – Oiled Wildlife Response (OWR)

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016*.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
16	Wildlife response arrangements	16.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		16.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by OMP: Marine Fauna Assessment and in liaison with DBCA.	1
17	Wildlife response equipment	17.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 4
		17.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 4
18	Wildlife responders	18.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an OWR Management course.	1, 2, 3B
		18.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists	1, 3B, 3C
		18.3	Maintain contract with OSRL to access additional trained OWR specialists	1, 3B, 3C
		18.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
19	Management of environmental impacts of response risks	19.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance:

- undertake OWR first strike response:
  - mobilisation of OMP: Marine Fauna Assessment to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons.
- availability and mobilisation of trained OWR personnel to supervise OWR activities.
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.7 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- Liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and wildlife response, and/or
- Solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and wildlife response.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004, and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.
- processes will be in place for transfers of bulk liquid wastes and include:
  - inspection of transfer hose undertaken prior to transfer
  - watchman equipped with radio visually monitors loading hose during transfer
  - tank gauges monitored throughout operation to prevent overflow

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.7.1 Response need based on predicted consequence parameters

Table 5-12: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.7.2 Environmental performance based on need

Table 5-13: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
20	Waste Management	20.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		20.2	Access to up to 720 m^3 waste storage by end of Month 3	
		20.3	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		20.4	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		20.5	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		20.6	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B, 3C, 4
		20.7	Waste management services available and employed during response	
21	Management of environmental impacts of response risks	21.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

The largest shoreline waste volumes predicted for CS-01 are 720 m^3 during month 3 and up to 288 m^3 during month 4 with a maximum of 1,008 m^3 of waste expected across all shoreline clean-up operations during the response. The capability available exceeds the need identified.

It indicates that the waste management capability has the following expected performance:

- The largest shoreline waste volumes predicted for CS-01 are 720 m^3 during month 3 and up to 288 m^3 during month 4 with a maximum of 1,008 m^3 of waste expected across all shoreline clean-up operations during the response. The capability available exceeds the need identified.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.7.
- Woodside's waste contractor (Veolia) has access to approximately 120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.8 Operational and Scientific monitoring

Operational and scientific monitoring (OSM) is a key component of the environmental management document framework for offshore petroleum activities, which includes activity EPs and OPEPs. The key elements and differences between operational monitoring and scientific monitoring include:

- **Operational Monitoring (OM)** – Is undertaken during the course of the spill and includes any physical. chemical and biological assessments that may guide operational decisions such as selecting the appropriate response and mitigation methods and/or to determine a response activity. This monitoring is additional to the activities (aerial/vessel surveillance, tracking buoys, oil spill trajectory modelling and satellite tracking) performed as part of the Monitor and Evaluate Strategy (Section 5.1). Information needs to be collected and processed rapidly to suit response needs, with a lower level of sampling and accuracy needed than for scientific purposes. For the OMP initiation and termination criteria during a Level 2-3 spill event refer to Table 9-1 of the Joint Industry OSM Framework.
- **Scientific Monitoring (SM)** – Is the principal tool for determining the extent, severity and persistence of possible environmental impacts from a hydrocarbon spill and for informing resultant remediation activities. Consequently, such studies are required to account for natural or sampling variation, and study designs must be robust and produce defensible data. Scientific monitoring is typically conducted over a wider study area, extending beyond the spill footprint, and a longer time period, extending beyond the spill response. For the SMP initiation and termination criteria during a Level 2-3 spill event refer to Table 9-2 of the Joint Industry OSM Framework.

Woodside has developed a Woodside OSM Bridging Implementation Plan (OSM-BIP), which describes a program of monitoring oil pollution that will be adopted in the event of a hydrocarbon spill incident (Level 2–3) to marine waters. It aligns with the Joint Industry OSM Framework (AEP, 2021) and describes how this Framework applies to Woodside activities and spill risks.

A series of Operational Monitoring Plans (OMPs) and Scientific Monitoring Plans (SMPs) form part of the Joint Industry OSM Framework and provide detail on monitoring design, standard operating procedures, data management, quality assurance and quality control and reporting.

Table 5-14 lists the Joint Industry OMPs and SMPs that are relevant to North West Shelf Phase 1 Plug and Abandonment Petroleum Activities Program (PAP). The aims/objectives of each OMP and SMP are listed in Tables 5-1 and 6-1 of the Joint Industry OSM Framework respectively. Woodside confirms it has reviewed these aims/objectives and determined they are all appropriate to address the potential impacts, risks and response activities of this PAP, noting that dispersant application is not a suitable response strategy for this activity.

The OSM-BIP is structured so that it can provide a flexible framework that can be adapted to individual spill incidents. The Combined OSM Planning Area (refer to section 2.1 of the OSM-BIP), derived from all Woodside worst-case scenarios, represents the geographical extent of the Woodside OSM-BIP.

The OSM requirements for PAP credible spill scenarios, including monitoring priorities, implementation timeframes and capability, is provided in ANNEX C: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention OSM Activity Specific assessment.

Woodside will review the initiation criteria for OMPs and SMPs (provided in Table 9-1 [OMPs] and Table 9-2 [SMPs] of the Joint Industry Operational and Scientific Monitoring Framework (AEP, 2021)) during the preparation of the initial IAPs, and subsequent IAPs. If any initiation criteria are met, then that relevant OMP and/or SMP will be activated via the OSM Services Provider.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Table 5-14: Joint industry OSM plans relevant to the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Petroleum Activities Program

		SM10: Social Impact Assessment	✓

5.8.1 Response need for Shoreline Clean-Up Assessment (SCAT) based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- SCAT will be mobilised to RPAs contacted at 100 g/m^2.
- The deterministic run with the shortest timeframe for shoreline accumulation at 100 g/m^2 predicted is 23.1 days at Southern Pilbara Islands – Peak Island.

In addition, a number of assumptions are required to estimate the response need for SCAT. These assumptions have been described in Table 5-15. Consequently, for planning purposes and based on the deterministic modelling results for shortest time to contact at 100 g/m^2 there are three RPAs (Southern Pilbara Islands – Peak Island, Muiron Islands and Sunday Island) requiring up to six SCAT specialists. These resourcing requirements can be met via the resourcing arrangements outlined in Table 8-3 of the OSM-BIP.

Table 5-15: Response Planning Assumptions – SCAT

Response planning assumptions: SCAT	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
SCAT	• Deployment of 2 x specialists in SCAT from resource pool for each of the RPAs with predicted impacts

5.8.2 Summary – operational and scientific monitoring

A detailed OSM preparedness assessment is provided in ANNEX C: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention OSM Activity Specific assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

The ALARP assessment for operational and scientific monitoring (Section 6.8) considers alternate, additional, and/or improved control measures on each selected response technique.

Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The OSM program's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.8.3 Environmental performance based on need

Table 5-16: Operational and scientific monitoring

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
22	OSM arrangements	22.1	Maintain access to OSM expertise qualified to fulfill OSM Implementation Lead role during a Level 2/3 spill event per Joint Industry OSM Framework requirements.	3A, 3B, 3C, 4
		22.2	OSM Implementation Lead responsible for overseeing implementation of OMP and SMP components in accordance with the Woodside OSM Bridging Implementation Plan.	
23	Access to adequate OSM capability to provide both initial and ongoing monitoring	23.1	Maintain contract with third-party OSM Services Provider to provide access to suitably qualified and competent personnel and equipment to assist in the implementation of monitoring in accordance with the capability and resourcing requirements described in Sections 8–10 of the OSM-BIP and the activity-specific capability assessment in Table C-7 and Table C-8	3A, 3B, 3C, 4
		23.2	Obtain monthly capability reports from OSM Service Provider to demonstrate the capability described in Section 10 of the OSM-BIP is available throughout the activity	
		23.3	Annual testing of OSM Service Provider standby arrangements and activation process	
24	Baseline studies assurance	24.1	Annual review of environmental baseline data for all locations where spill modelling has predicted contact at relevant hydrocarbon thresholds	3C
25	OSM response	25.1	OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (AEP, 2021)	1
		25.2	Initiation criteria of OMPs and SMPs will be reviewed during the preparation of the initial Incident Action Plan (IAPs) and subsequent IAPs; and if any criteria are met, relevant OMPs and SMPs will be activated	
		25.3	If the OSM Implementation Lead identifies that additional monitoring capability is required beyond that described in Section 10 of the OSM-BIP, the need for these resources will be identified as soon as practicable and mobilised through the OSM Services Provider Contract, which includes provisions for scaling up personnel to meet monitoring program requirements	
		25.4	Decisions regarding co-mobilisation of monitoring teams will be determined following a spill event, as part of the Incident Action Planning process. These decisions will be made by the CIMT in consultation with the OSM Services Provider and relevant stakeholders, with due consideration given to safety, access to sensitive receptors, timing, and data quality requirements	
		25.5	OSM to be conducted in accordance with the Woodside OSM-BIP and, where relevant to the activity, the assessment detailed in ANNEX C: North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention OSM Activity Specific assessment	
		25.6	Monitoring prioritisation will be undertaken in accordance with the process and checklist provided in Table 13-1 of the OSM-BIP, informed by the guidance in Section C.2 of the OSPRMA	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

		25.7	Mobilisation and implementation of OMPs and SMPs will be undertaken in accordance with the indicative timeframes and sequencing described in Section C.3 of the OSPRMA and Part B of the OSM-BIP	
		25.8	Implementation of OSM will comply with the minimum standards listed in Appendix A of the Joint Industry OSM Framework	
		25.9	Once OSM data reports are drafted they will be peer reviewed by an expert panel for data integrity	
		25.10	OMPs and SMPs will be terminated in accordance with the termination criteria provided in Table 9-1 and 9-2 of the Joint Industry OSM Framework (AEP, 2021)	
26	OSM-BIP maintenance	26.1	Annual review will be conducted according to the criteria in Section 11 of the OSM-BIP	3A, 3B, 3C, 4
27	Shoreline Clean-up Assessment Technique (SCAT)	27.1	Within 24 hours, in liaison with regulatory or jurisdictional authority (for Level 2/3 incidents), deployment of 1-2 specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts	1, 2, 3B, 3C, 4
		27.2	Reports from OMP: Shoreline Clean-up Assessment will be provided to the IMT daily, detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
28	Management of Environmental Impact of the response risks	28.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		28.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		28.3	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations	
		28.4	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves	
		28.5	Oversight by trained personnel who are aware of the risks	
		28.6	Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.9 Incident Management System (IMS)

The Incident Management System (IMS) is both a control measure and a measurement criteria. As a control measure the IMS function is to prompt, facilitate and record the completion of three key response planning processes detailed below. As a measurement criteria the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used of the PAP.

As the IMS does not directly remove hydrocarbons spilt into the marine environment there is no direct relationship to the response planning need.

5.9.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based IC may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident either the CIMT DM or IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.9.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of Environment Plan/ Oil Pollution Emergency Plan (EP/ OPEP) acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response, An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Joint Industry OSM Framework (APPEA, 2021). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.9.3 Consultation engagement process

Woodside will consult relevant persons/ organisations are engaged during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.9.4 Environmental performance based on need

Table 5-17: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
29	Operational SIMA	29.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		29.2	Record the evidence and justification for any deviation from the planned response activities.	
		29.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
30	Stakeholder engagement	30.1	Prompt and record all notifications (including government notifications) for persons/ organisations in the region are made	
		30.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		30.3	Undertake communications in accordance with: • Functional Support Team Guideline – Reputation • External Communication and Continuous Disclosure Procedure	
31	Personnel required to support any response	31.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident are appropriate to the situation at the time.	1, 3B
		31.2	A duty roster of trained and competent people will be maintained to maintain minimum manning requirements are met all year round.	3C
		31.3	Immediately activate the CIMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		31.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		31.5	S&EM advisors will be integrated into CIMT to monitor performance of all functional roles.	
		31.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.	
		31.7	Follow the Hydrocarbon Spill Australia Regulatory Framework, Operational Plans, FSPs, support plans and the IAPs developed.	1, 2, 3A, 4
		31.8	Contribute to Woodside's response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

5.10 Measurement Criteria for all Response Techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The aforementioned performance tables identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Emergency and Crisis Management Procedure. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Emergency and Crisis Management Procedure defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down.

The IAP process formally documents and communicates the:

- Incident objectives
- Status of assets
- Operational period objectives
- Response techniques (defined during response planning)
- The effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, development and the execution of the IAP.

2. The CEM Competency Dashboard

The CEM competency dashboard records the number of trained and competent responders that are available across Woodside to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-1 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

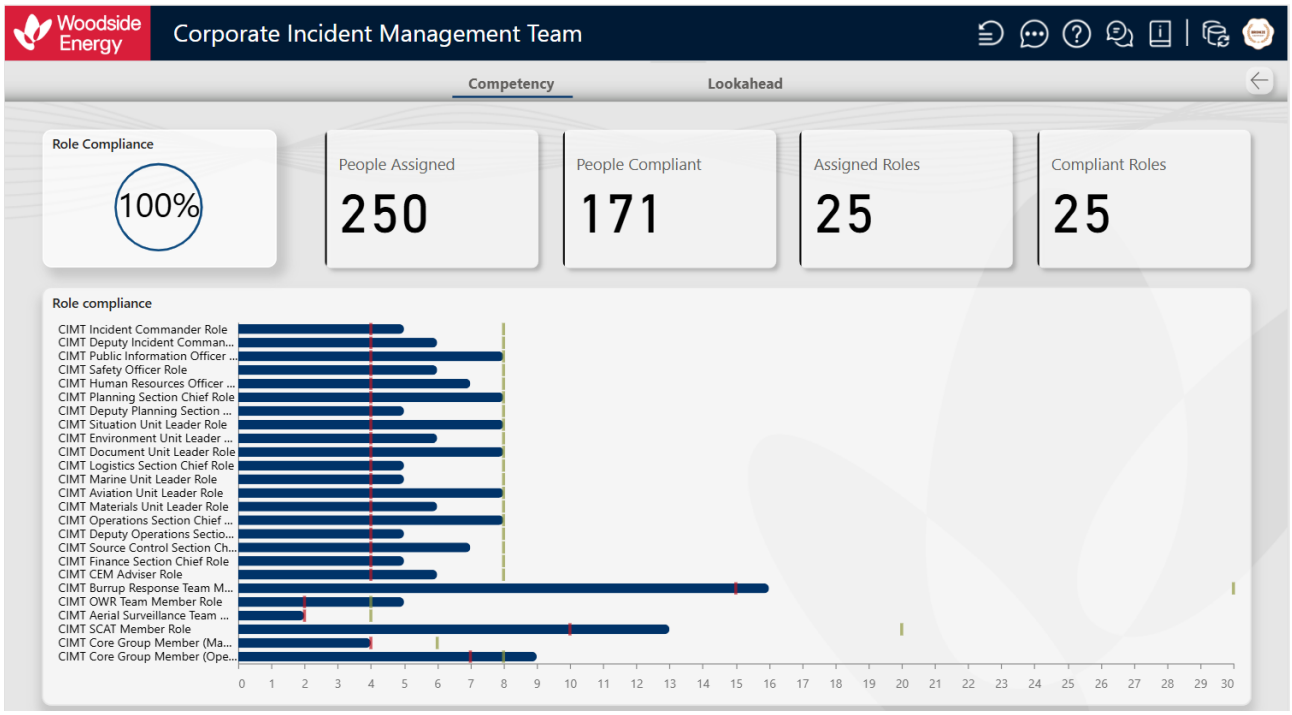

Figure 5-1: Example screenshot of the CEM dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability to meet the requirements of the environmental performance standards that relate to filling certain response roles.

Figure 5-2 shows an example of the SCAT role and the training modules required to show competence.

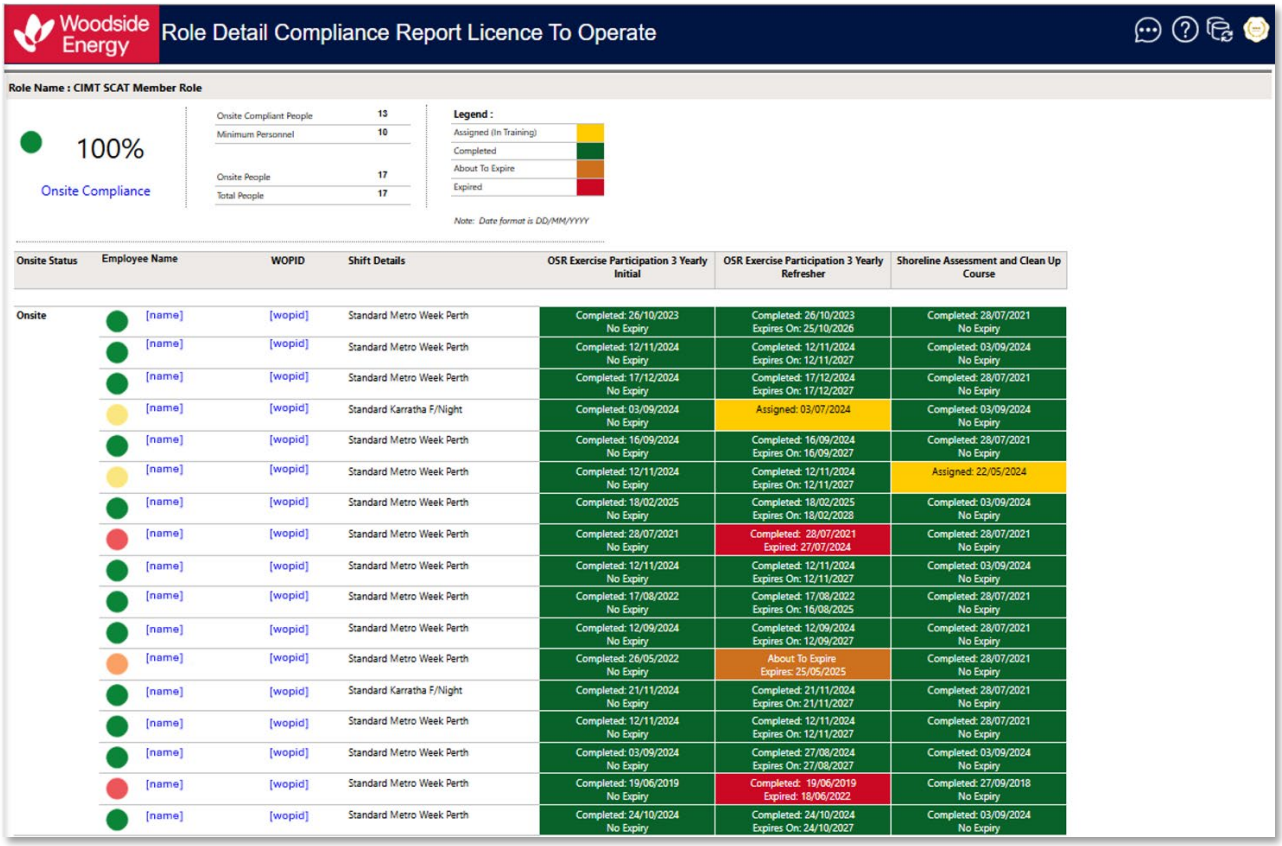

Figure 5-2: Example screenshot for the SCAT role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Woodside also maintains access to a pool of trained responders is composed of, but not limited to, personnel from the following organisations:

- Australian Marine Oil Spill Centre (AMOSC) core group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- Woodside contracted workforce

3. The Hydrocarbon Spill Preparedness Assurance Process

The Hydrocarbon Spill Response Team uses Woodside's assurance process to track compliance over three key control areas:

a) **Plans** – confirms all plans (including: Hydrocarbon Spill Australia Regulatory Framework, first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b) **Competency (personnel and testing)** – confirms the competency dashboard is up to date and there are the minimum numbers across CIMT, CMT and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (TOA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to ensure compliance.

c) **Capability (equipment and contracts)** – tracks and monitors capability that could be required in a hydrocarbon incident, including but not limited to: integrated fleet[12] vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

The assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported on a monthly basis through the CEM Function.

4. The Hydrocarbon Spill Planning Standard, Hydrocarbon Spill Planning Work Instruction (Australia), Hydrocarbon Spill Capability and Competency Standard, and Hydrocarbon Spill Response Standard

The Hydrocarbon Spill Planning Standard sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment. (Note, this standard does not apply to scenarios relating to gas releases in the marine environment). This standard details the requirement for an Oil Pollution Emergency Plan (OPEP) to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable).

The Hydrocarbon Spill Planning Work Instruction (Australia) details planning for hydrocarbon spill response preparedness including:

- Developing OPEPs.
- Defining how spill scenarios are developed on an activity specific basis
- Priority response receptor determination.
- ALARP determination.

The Hydrocarbon Spill Capability and Competency Standard details:

- Developing spill training requirements and ongoing maintenance of training and competency for personnel
- Developing requirements for spill exercising / testing of spill response arrangements
- Maintaining access to identified equipment, personnel and contracts.
- Ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

[12] The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response.

All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

The Hydrocarbon Spill Response Standard details requirements for appropriate hydrocarbon spill response standards including:

- safeguarding the safety and health of people (responders and communities)
- stopping the source of the spill as quickly as possible
- minimising the environmental and community impact

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Monitor and Evaluate – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Monitor and evaluate – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system approx. A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**

6.1.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to monitoring data used to inform all other response techniques. No improvement required.	No improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approx. A$25,000.	This option is not adopted as the current capability meets the need.	**No**
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility, additional needs are met from WEL owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6,000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	**No**
Additional trained aerial observers.	Current capability meets need. WEL has access to a pool of trained, competent observers at strategic locations to ensure timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Current capability meets need. WEL has a pool of trained, competent observers at strategic locations to ensure timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL Aviation standards & guidelines ensure all aircraft crews are competent for their roles. WEL maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations ensure training and competency is maintained.	Cost for additional trained aerial observers would be A$2,000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.1.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24hr access plus an initial A$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**
Night time aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations, is disproportionate to the benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's golden rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	**No**

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.2 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case credible scenarios (as described in Section 2.2). This includes the following selection of primary source control and well intervention techniques which would be conducted concurrently:

- direct ROV intervention on BOP or Xmas tree
- debris clearance and/or removal
- capping stack
- relief well drilling.

6.2.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead. The ROV available on the MODU can be deployed for this purpose within 48 hours. Work class ROVs for well intervention are also available through the existing frame agreements and are available for deployment within seven days (Table 6-1). It is not expected that any additional regulatory approvals would be required as inspection, maintenance and repair is within the scope of activities for the contracted MODU and Frame Agreement vessels.

As Woodside holds Frame Agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimate ROV inspection duration (days)
Source and mobilise vessel with work class ROV	2 days
Liaise with Regulator regarding risks and impacts*	4 days
Undertake ROV Inspection	1 day
TOTAL	**7 days***

** Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.*

6.2.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an "associated offshore place" but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario from those presented in Figure 6-3 for implementing this response would be "no safety case revision required". Timeframes for well intervention are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the "no Safety Case" revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.2.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would take place in parallel with mobilisation of the capping stack to ensure initial ROV surveys and debris clearance have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

6.2.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in Figure 6-3 for implementing this response would be “no safety case revision required”. Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “No Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.3 Capping stack

The Activity Source Control Emergency Response Plan (SCERP) details the mobilisation and resource requirements for implementing this strategy. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the Activity SCERP. This plan has pre-identified vessel specifications for the capping stack deployment and Woodside monitors the availability and location of these vessels on a monthly basis. Woodside maintain several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.

A capping stack will be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.2.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting capping stack are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- existing frame agreement vessel, located outside the region with approved Australian Safety Case
- a safety case revision and scope of validation is required

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

- vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Planning Guideline
- vessel has an active heave compensated crane, rated to at least 150T for shallow waters or 250T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in Figure 6-3 and Table 6-3. To reduce uncertainty in regulatory approval timeframe, Woodside is collaborating with The Drilling Industry Steering Committee (DISC) and a contracted ISV Vessel Operator to develop a generic Safety Case Revision that contemplates a capping stack deployment. This Safety Case Revision will be used to reduce uncertainty in permissioning timeframes in the event a capping stack deployment is required. Woodside will execute the capping stack response in the fastest possible timeframe, provided the required safety and metocean conditions allow. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.2.5.

6.2.4 Relief Well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and ensure necessary regulatory approvals are in place to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following and the process used for North West Shelf Phase 1 Plug and Abandonment is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case.
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case.
- Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case.

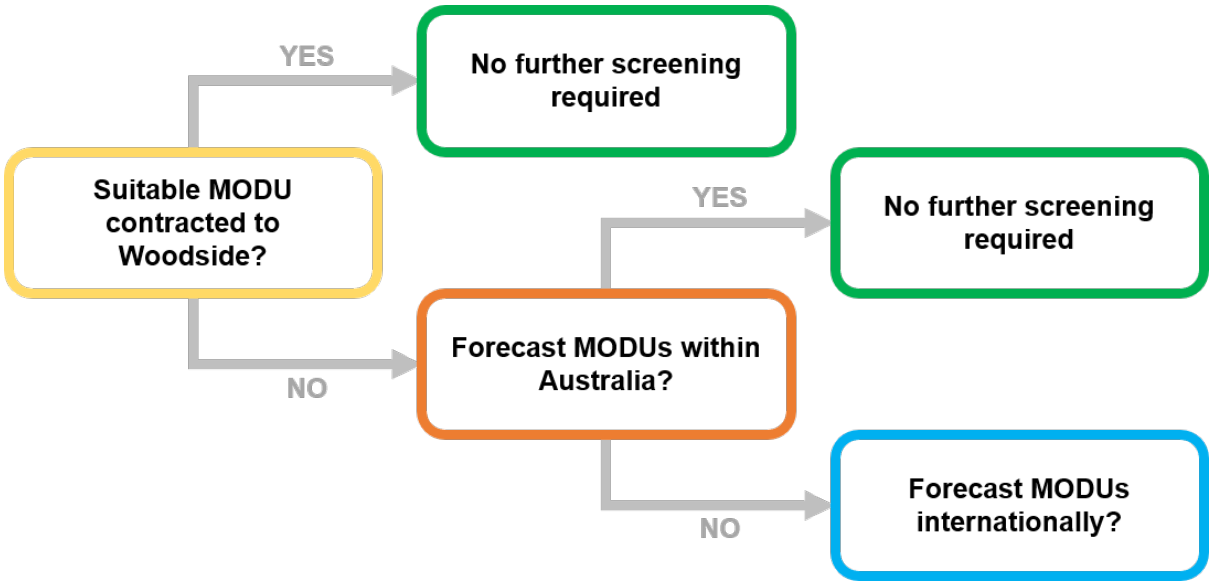

Figure 6-1: North West Shelf Phase 1 Plug and Abandonment process for sourcing relief well MODU

Woodside has not assessed the timeframe for obtaining a relief well MODU through international supply for this project as the certainty of local supply has been confirmed. Screening of a relief well MODU from international waters is undertaken only if required, i.e. there is low confidence in local (Australian) availability. The screening of relief well MODUs is undertaken and presented at a well design stage peer assessment. The capability, location and Australian Safety Case status is assessed for each Woodside contracted MODU. In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters. The suitability and location of pre-identified relief well MODUs is tested again prior to the operation. Though the AEP MoU will serve as the instrument to facilitate the transfer of drilling units and well

site services between operators in the event of an emergency, Woodside will engage each of the identified titleholders in advance to maintain confidence in MODU suitability and availability.

Based on the detail provided, the Primary and Alternate approaches are expected to be achieved within the 21-day period.

The internal and external availability of moored MODUs, plus MODU activities of registered operators and MODUs with approved safety cases, are tracked by Woodside on a monthly basis to ensure that the best available option can be sourced and utilised in the event of the worst-case credible scenario.

If the above forecast indicates a gap in availability of a suitable MODU for relief well drilling within Australia, screening would be extended to MODUs with a valid safety case outside Australia. If an international MODU with an Australian safety case is not identified, an internal review will be undertaken, NOPSEMA notified and the issue tabled at the AEP Drilling Industry Safety Committee. A review of the significance of the change in risk will be undertaken in accordance with Woodside's environment management of change requirements and relevant regulatory triggers. The aforementioned lookahead timeframe would allow two years' warning of any potential gap. Woodside will execute relief well drilling in the fastest possible timeframe.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and Acceptable levels through the control measures and performance standards outlined in Section 5.2.

6.2.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) is assessed as 68 days at the AP3 well location, 73 days at the PER02 well location and 71 days at the TPA03 well location for the North West Shelf Phase 1 Plug and Abandonment PAP. Relief wells for other wells within the field are expected to be similar duration.

Details on the steps and time required to drill a relief well is shown in Table 6-2. DP and moored MODUs are suitable for the North West Shelf Phase 1 Plug and Abandonment PAP. A moored MODU has been used as the basis for the time estimate below.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the 21-day mobilisation period forms part of Woodside's three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator's activities, contracting the MODU, vessel safety case revision and transit to location.

Table 6-2: Relief well drilling timings

Estimated Relief Well Duration (moored days)	AP3	PER02	TPA03	
Rig Mobilisation				
Secure and suspend well. Complete Relief well design. Secure relief well materials.	8.0			21 days
Transit to location based on mobilisation from within the region	2.0			
Backload and loadout bulks and equipment, complete internal assurance of relief well design.	2.0			
Contingency for unforeseen event	9.0			
Mooring activities and relief well construction operations	**33 days**	**38 days**	**36 days**	
Intersection and well kill comprising the following stages:				
Drill out shoe, conduct formation integrity test and drill towards intersection point	1.5			14 days
Execute well-specific ranging plan to accurately intersect wellbore in minimum timeframe	9.5			
Pump kill weight drilling fluid per the relief well plan. Confirm well is static with no further flow	0.5			
Contingency for unforeseen technical issues	2.5			
Total discharge duration	**68 days**	**73 days**	**71 days**	

The following conditions and assumptions are applicable:

All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

- A dynamically positioned MODU is not available.
- A pre-lay mooring spread is required to moor the MODU over subsea infrastructure. Installation would occur in parallel to MODU mobilisation.

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.2.5.

Intersect and kill duration is estimated at 14 days for the AP3, PER02 and TPA03 wells. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well. During the Montara incident, it took five attempts to achieve a successful intersect.

6.2.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. In the event that a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to ensure timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/ vessel to commence drilling a relief well. Performance standards associated with these measures have been included in Section 5.2.

These include;

- Access to Safety and Risk discipline personnel with specialist knowledge.
- Monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements on a monthly basis, with a two-year lookahead.
- Prioritisation of MODUs/vessels with current or historical contracting arrangements. Woodside maintains records of previous contracting arrangements and companies. All current contracts for vessels and MODUs are required to support Woodside in the event of an emergency.
- Leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support.
- Woodside Planning, Logistics, and Safety Section Chiefs/ Unit Leaders (on-Roster/Call 24/7) who can articulate need for, and deliver Woodside support, in key delivery tasks including sitting with potential external operators.
- Ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three safety case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in Figure 6-3. The assumptions for each of the cases are detailed in subsequent Table 6-3.

The MODUs screened for contingency relief well drilling all operate under an Accepted base Safety Case. A relief well Safety Case Revision would leverage the previously accepted Safety Case Revision for the North West Shelf Phase 1 Plug and Abandonment, including the associated site-specific well hazards. As such, there is less new detail for the regulator to review and should present a short review timeframe with no impact expected to the commencement of relief well drilling activities.

Table 6-3: Safety case revision conditions and assumptions

Case	No safety case revision required	Safety case revision and submission	Safety case revision and scope of validation
Description	Vessel/MODU has a safety case in place appropriate for activities.	Vessel/MODU has an existing safety case, however, a revision is required.	Vessel/MODU has an existing safety case, however, a revision is required plus scope of validation.
Conditions/ assumptions	Assumes that existing vessel/MODU safety case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety case timing assumes vessel/MODU selected and crew and available for workshops and safety case studies.	Safety case timing assumes vessel/ MODU selected and crew and available for workshops and safety case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing safety case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU safety case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the safety case submission is not dependent on the validation statement, however the safety case acceptance is.
		Assumes safety case preparation is undertaken 24/7.	Assumes safety case preparation is undertaken 24/7.

6.2.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.2.1, 6.2.2, 6.2.3 and 6.2.4 outline the primary and alternate approach respectively that Woodside would implement for relief well drilling**.**

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option

Alternative, Additional and Improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical.

- Alternative options, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control.
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures.
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.2.6 Activation/Mobilisation – Control Measure Options Analysis

This section details the assessment of alternative, additional or improved control measures that were considered to ensure the selected level of performance in Section 5.2 reduces the risk to ALARP. The alternative, additional and improved control measures that have been assessed and selected are highlighted in green and the relevant performance of the selected control is cross referenced. Items highlighted in red have been considered and rejected on the basis that they are not feasible or the costs are clearly grossly disproportionate compared to the environmental benefit.

6.2.6.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Standby MODU shared for all Woodside activities	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to 10 days (to 11 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities. This may allow the well to be killed up to 10 days sooner (total of 58 days for well kill) and may result in a reduction of up to 15,350 m^3 of Angel condensate for the worst-case credible scenario (LOWC at AP3 well).	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Even with costs shared across Woodside operations, the costs (approximately A$1.1 B over the five years) of maintaining a shared MODU are considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation times by up to 10 days.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the Petroleum Activities Program are disproportionate to the environmental benefit gained above finding a MODU through the MOU agreement for all spill scenarios.	**No**
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MOU is likely to provide a minor environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to seven days (to 14 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities. This may result in a reduction of up to 10,745 m^3 of Angel condensate for the worst-case credible scenario (LOWC at AP3 well).	This option is not considered feasible for a number of Titleholders due to the remote distances in Australia as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across a range of Titleholders	As the environmental benefit is only considered minor and the reduction in timing would only be for the mobilisation period (reduction from 21 days to 14 days) the costs are considered disproportionate to the minor benefit gained.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the Petroleum Activities Program are disproportionate to the environmental benefit gained above finding a MODU through the MOU agreement for all spill scenarios.	**No**

6.2.6.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Implement and maintain minimum standards for Safety Case development	Woodside's contingency planning consideration would be to source a rig from outside Australia with an existing Safety Case. This would require development and approval of a safety case revision for the rig and activities prior to commencing well kill operations.	This option is considered feasible and would require Woodside to develop minimum standards for safe operations for relevant Safety Case input along with maintaining key resources to support review of Safety Cases. Woodside would not be the operator for relief well drilling and would therefore not develop or submit the Safety Case revision. Woodside's role as Titleholder would be to provide minimum standard for safe operations that MODU operators would be required to meet and/or exceed.	Woodside has outlined control measures and performance standards regarding template Safety Case documentation and maintenance of resources and capability for expedited Safety Case review.	This option has been selected based on its feasibility, low cost and the potential environmental benefits it would provide.	**Yes**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.2.6.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the Petroleum Activities Program, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors vessel and MODU availability through market intelligence services for location. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Woodside has outlined control measures and performance standards.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other Petroleum Titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and therefore volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Commercial and operational provisions do not allow WEL to discuss current and potential drilling programs in detail with other Petroleum Titleholders.	Associated cost of implementation is moderate to the environmental benefit gained. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore safety case status) on a monthly basis. This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing safety case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.2.7 Deployment Options Analysis

6.2.7.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.7.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, the feasibility issues surrounding an offset capping deployment in the water depths at the PAP well locations, together with mobilisation lead times for both a cap and required vessels/ support equipment, would minimise any environmental benefit gained.	Technical feasibility: • The base case considerations for offset installation equipment (OIE) requires a coordinated response by 4 to 7 vessels working simultaneously outside of the 500m exclusion zone. In the event of a worst-case shallow water gas discharge, the 10% LEL modelled radius extends beyond the area of activity required for the OIE deployment thereby introducing health and safety risk to any vessels required for the initial deployment of the carrier and subsequent operations with ROV during capping operations. Though manageable for single vessels, it is prohibitive for operations requiring SIMOPs with numerous vessels working at 180 degrees from one another. • Water depth is also a key consideration as buoyancy modules have not been proven for use in the PAP water depths or with the expected worst-case gas blowout rates. Other factors: • Due to the OIE's size and scale, fabrication of equipment, e.g. mooring anchors, outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames. • Screening indicates that mobilising some components of the OIE, based in Italy, can only be done so by sea and is likely to erode any time savings realised through killing the well via a relief well. The March 2019 OSRL exercise in Europe tested deployment of the OIE and highlighted that it will require a 600+MT crane vessel for deployment to ensure there is useable hook height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel safety case are not locally or readily available.	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage. Implementation of OIE has been assessed as a complex and unfeasible SIMOPs operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the PAP location. Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks. As such the primary source control response and ALARP position remains drilling a relief well.	**No**
Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the feasibility issues surrounding a dual vessel capping	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120 m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Further, the	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

	deployment in the water depths at the PAP well locations, together with mobilisation lead times for both a cap and required vessels and support equipment, would minimise any environmental benefit.	longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would actually be lowered on the AHV work wire so a crane would not be required on the barge.			
Subsea Containment System alternative to capping stack deployment	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the release duration is 68-73 days (for the AP3, PER02 and TPA03 wells) before drilling of a relief well under the adopted control measure.	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be longer (>90 days), than the expected 68-73 day relief well drilling operations based on the location, size and scale of the equipment required, including seabed piles that can only be transported by vessel.	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by Woodside for this Petroleum Activities Program is not considered reasonably practical and are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**
Pre-drilling top-holes	This option represents additional environmental impacts associated with discharge of additional drill cuttings and fluids along with benthic habitat disturbance. It is also not expected to result in a significant decrease in relief well timings	This option is not considered feasible due to the uncertainties related to the location and trajectory of the intervention well, which may vary according to the actual conditions at the time the loss of containment event occurs. Additionally, there is only expected to be a minor reduction in timing for this option of 1-2 days based on the drilling schedule. Duration to drill and kill may be reduced by 1-2 days, but top-hole may have to be relocated, due to location being unsafe or unsuitable and further works will be required each year to maintain the top holes.	Utilising an existing MODU and pre-drilling top-hole for relief well commencement would significantly increase costs associated the Petroleum Activities Program. Estimated cost over the program's life is approx. A$1.6 M per day over the PAP based on 2-4 days of top-hole drilling (plus standby time) for each top-hole drilled.	This option would not provide an environmental benefit due to the additional environmental impacts coupled with a lack of improved relief well timings.	**No**
Purchase and maintain mooring system	Purchasing and maintaining a mooring system could provide a moderate environmental benefit as it may reduce equipment sourcing time. However, due to the continued need for specialists to install the equipment plus sourcing a suitable vessel, the timeframe reduction would be minimal.	Woodside is not a specialist in installing and maintaining moorings so would require specialists to come in to install the moorings and would also require specialist vessels to be sourced to undertake the work.	The cost of purchasing, storing and maintaining pre-lay mooring systems with anchors, chains, buoys and ancillary equipment is considered grossly disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit as timeframe reductions would be minimal.	**No**
Contract in place with Wild Well Control and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will ensure that competent personnel are available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**

6.2.7.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, casing, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately A$600K with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**

6.2.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- Alternative

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

  - None selected
- Additional
  - Implement and maintain minimum standards for Safety Case development
  - Contract in place with Wild Well Control and Oceaneering to supply trained, competent personnel
- Improved
  - Monitor internal drilling programs for MODU availability
  - Monitor external activity for MODU availability
  - Monitor status of Registered Operators / Approved Safety cases for MODUs

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.3 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.3.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.3.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical additional control measures identified					

6.3.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical improved control measures identified					

6.3.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.4 Shoreline Protection and Deflection – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Shoreline Protection and Deflection

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.4.2 Response Planning: North West Shelf Phase 1 Plug and Abandonment – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of Response Protection Areas (RPAs) from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until monitor and evaluate confirms that the locations were no longer at risk. Woodside has identified the RPAs from modelling results provided from specific scenarios. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

The control measures selected provide capability to mobilise shoreline protection equipment by Day 1-2 (if required). Deterministic modelling scenarios indicate that first shoreline impact at Southern Pilbara Islands – Peak Island within 23.4 days (3 m^3) for the AP3 LOWC scenario (CS-01). There is no shoreline impact predicted at threshold for CS-02, CS-03 or CS-04. The existing capability is therefore considered sufficient to mobilise and deploy protection at RPAs prior to hydrocarbon contact, guided by the ongoing monitor and evaluate.

Tactical response plans exist for many of the RPAs identified. The plans identify values and sensitivities that would be protected at location. Modelling does not predict that all priority protection shorelines will be at risk of contact at the same time. Therefore, to allow for the best use of available shoreline protection and deflection resources, monitor and evaluate will inform the response, targeting RPAs where contact is predicted above response threshold levels.

Table 6-4 Table 6-4below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed). As can be seen from the table below. Woodside's capability exceeds the response planning need identified for shoreline protection and deflection operations at identified RPAs.

Table 6-4: Response Planning – Shoreline Protection and Deflection

North West Shelf Phase 1 Plug and Abandonment – AP3 LOWC (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	Oil on shoreline (from deterministic modelling) m^3	0	0	0	0	0	0	0	0	0	3	0	72
A	Capability Required												
A1	Number of RPAs contacted (> 100 g/m^2) – AP3 LOWC (CS-01)	0	0	0	0	0	0	0	0	0	1	0	3
B	Capability Available (operations per day)												
B1	SPD operations available – per day (lower)	0	1	1	2	2	4	6	70	70	70	330	330
B2	SPD operations available – per day (upper)	1	2	3	4	6	8	10	84	84	84	336	336
C	Capability Gap (operations per day)												
C1	SPD operations gap – per day (lower)	0	0	0	0	0	0	0	0	0	0	0	0
C2	SPD operations gap – per day (upper)	0	0	0	0	0	0	0	0	0	0	0	0

A1 – the number of Response Protection Areas contacted by surface hydrocarbons above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline protection and deflection operations available (based on response planning assumptions in Section 5.4),
C1 and C2 – the gap between the upper and lower number of shoreline protection and deflection operations required in A1, A2 and A3 compared to the operations available in B1 and B2

Table 6-5: Indicative Tactical response plan, aims and methods for identified RPAs

Tactical Response Plan	Response aims and methods
Muiron Islands	**First Response Objective:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident. **Second Response Objective**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately. **Third Response Objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate. **Fourth Response Objective**: Collection and specialist cleaning/rehabilitation of oiled wildlife.
Pilbara Islands – Southern Island Group	**First Response objective:** Undertake Monitor and Evaluate strategy – Shoreline assessment techniques to be undertaken. **Second Response objective:** Pre-clean of the beach area using rakes and shovels, move any debris on the beach to above the high tide area, above the reach of any floating oil. **Third Response objective:** Shoreline Protection - prevent oil from moving into key sensitive areas within the gulf area by deployment of booms. Deflection & containment methods would be undertaken. **Fourth Response objective:** Recovery of collected oil where possible through the use of skimming systems. Although boom formations will deflect most of the spilt hydrocarbon away from sensitive areas, it may be necessary to collect and remove floating oil from additional boom formations to prevent the spread of oil down the coastline into the Gulf. **Fifth Response objective:** Clean-up of oiled shoreline using manual clean up techniques, predominantly rakes and shovels, with flushing and vacuum skimming if appropriate and required.

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

A shoreline protection and deflection response would be launched only when monitoring and modelling indicated that contact could occur and monitor and evaluate operations identify spill heading towards RPA(s).

6.4.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Pre-position equipment at Response Protection Areas (RPAs)	Additional environmental benefit of having equipment prepositioned is considered minor. Equipment is currently available to protect RPAs and additional shorelines, within estimated minimum times until shoreline contact at RPAs, enabling mobilisation of the selected delivery options.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost to preposition protection/ deflection packages at each site of potential impact would be approx. A$6,100 per package per day.	This option is not adopted as the existing capability meets the need.	**No**

6.4.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Supplemented stockpiles of equipment in Exmouth to protect additional shorelines	Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary. A reduction in environmental consequence from a 'B' rating (serious long-term impacts) is unlikely to be realised as a result of having more equipment available locally.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost for purchase supplemental protection and deflection equipment would be approximately. A$455,000 per package.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSRO's (OSRL/AMOSC) to manage other responders.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

		Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.			

6.4.3.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 23.4 (CS-01), Woodside considers that there is sufficient time for deployment of protection and deflection operations prior to impact.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days. Hydrocarbons are not predicted to accumulate at threshold until day 23.4 at Southern Pilbara Islands – Peak Island (CS-01) therefore allowing enough time to re-locate existing equipment, personnel and other resources to the most appropriate areas.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	**No**

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.5 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Shoreline Clean-up

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.5.2 Response planning: North West Shelf Phase 1 Plug and Abandonment – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the PAP.

Given modelling predicts shoreline contact from day 23.4 (Southern Pilbara Islands – Peak Island) for the AP3 LOWC (CS-01) at lesser volumes (3 m^3) with ongoing accumulation over the following days, Woodside is satisfied that the current capability is managing risks and impacts to ALARP. The largest volumes ashore are at Montebello Islands with approximately 56.3 m^3 predicted on day 45.8. These volumes assume no treatment of floating surface oil by containment and recovery or surface dispersant application prior to contact so are considered very conservative. The full list of RPAs predicted to be contacted by oil is detailed in Table 3-1 and relevant Tactical Response Plans available for identified RPAs are included in Table 6-5.

These figures have been combined into a single response planning need scenario that provides a worst-case scenario for planning purposes as outlined below. Given all other shoreline contact scenarios identified from deterministic modelling are longer time frames and lesser volumes, demonstration of capability against this need will ensure Woodside can meet requirements for any other outcome.

Due to the time of contact predicted shoreline clean-up and deterministic modelling predicting ongoing stranding after this peak, this response may not be as time critical compared to other response techniques and the scale will depend on the success of other techniques preventing oiling occurring. Further, the potential scale and remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in the Dampier region to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in the Dampier region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.5.4.

Table 6-6: Response Planning – Shoreline Clean-up

	Shoreline Clean-up (Phase 2)	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
	Oil on shoreline (from deterministic modelling) m^3													
	Shoreline accumulation (above 100 g/m^2) - m^3	0	0	0	0	0	0	0	0	0	3	0	72	0
	Oil remaining following response operations - m^3	0	0	0	0	0	0	0	0	0	0	0	0	29
A	**Capability Required (number of operations)**													
A1	SCU operations required (lower)	0	0	0	0	0	0	0	0	0	0	0	7	3
A2	SCU operations required (upper)	0	0	0	0	0	0	0	0	0	0	0	14	6
B	**Capability Available (number of operations)**													
B1	SCU operations available - Stage 2 - Manual (lower)	0	1	3	5	8	12	15	105	105	105	560	560	560
B2	SCU operations available - Stage 2 - Manual (upper)	0	2	5	8	10	15	20	140	140	140	560	560	560
C	**Capability Gap**													
C1	SCU operations gap (lower)	0	0	0	0	0	0	0	0	0	0	0	0	0
C2	SCU operations gap (upper)	0	0	0	0	0	0	0	0	0	0	0	0	0

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.5),
C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.5.3 Shoreline Clean-up – Control measure options analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.5.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional trained personnel available	The level of training and competency of the response personnel ensures the shoreline clean-up operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety brief prior to commencing operations.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will ensure there is no increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 x Trained Supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including On-Scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to ensure an efficient shoreline clean-up. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**

6.5.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 23.4 (CS-01), Woodside considers that there is sufficient time for deployment of clean-up operations prior to impact.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	**No**

6.6 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Oiled Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Oiled Wildlife Response - Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	**No**

6.6.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements ensure that these resources can be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel by Day 3. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response threshold concentrations (>10 g/m^2) with offshore waters is expected from day one (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Additionally, the remote offshore location of the release site, with an earliest impact on day 12, provides sufficient opportunity for the ongoing monitoring and surveillance operations to inform the scale of the response. Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by monitor and evaluate. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1,700 per operational site per day.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas.	Current numbers meet the needs required and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending	Additional wildlife response personnel cost A$2,000 per person per day	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

	The potential environmental benefit of training additional personnel is expected to be low.	on the scale of the event and the impact to wildlife and maybe sourced via existing contracts with OSROs. Materials for holding facilities, portable pools, enclosures and rehabilitation areas would be sourced as required.			

6.6.2.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster mobilisation time for wildlife response	Response time is limited by specialist personnel mobilisation time. Current timing is sufficient for expected first shoreline contact. This control measure provides increased effectiveness through faster mobilisation of specialists. However, no significant net environmental benefit is expected due to shoreline stranding times.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, given the effectiveness of an oiled wildlife response is expected to be low, an earlier response would provide a marginal increase in environmental benefit.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need.	**No**

6.6.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.7 Waste Management – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Waste Management

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.7.2 Waste Management - Control Measure Options Analysis

6.7.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.7.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Veolia's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with OSRL. Existing arrangements meet identified need for the PAP.	Cost for increased waste disposal capability would be approx. A$1,300 per m^3. Cost for increased onshore temporary waste storage capability would be approx. A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	**No**

6.7.2.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

	and transport will allow continuous response operations to occur. This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.				

6.7.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

6.8 Operational and Scientific Monitoring – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base OSM capability described in Section 5.8 and the Woodside OSM-BIP. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Operational and Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability for operational and scientific monitoring is detailed in Section 5.8 and is adequate for the response required for the modelled spill scenarios (CS-01, CS-02, CS-03 and CS-04).

6.8.2 Operational and Scientific Monitoring – Control Measure Options Analysis

6.8.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated contracted OSM vessel (exclusive to Woodside)	Would provide marginally faster mobilisation time of initial monitoring resources. However, the timescale difference would be limited when compared to the availability of in-field support vessels which are equipped with water quality sampling equipment, meaning it would result in very minor to no environmental benefit.	Chartering and equipping additional vessels on standby for operational and scientific monitoring has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when existing contracted support vessels can be equipped with initial water quality sampling equipment. Additionally, vessels are not the limiting factor in deployment times, as the majority of operational and scientific monitoring components require trained specialists, who can take > 72 hours to mobilise.	The cost and organisational complexity of contracting a dedicated response vessel is considered disproportionate to the potential environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	**No**

6.8.2.2 Additional control measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position a team of trained scientific monitoring personnel on standby in Dampier	Pre-positioning a team of trained scientific monitoring personnel closer to the spill location would result in quicker mobilisation times for one or two priority OMPs or SMPs to be implemented.	A trained team of scientific monitoring personnel positioned in Dampier could result in a more rapid deployment of initial monitoring. However, this option is reliant on suitable vessels being readily available in Dampier and not requiring relocation from nearby ports or adjacent offshore locations.	The costs of having a small team of trained scientific monitoring personnel available on standby in Dampier would be in excess of A$3-4M / annum and would be an associated cost to the activity whether there was a spill or not.	The cost of maintaining a team of trained scientific monitoring personnel on standby in Dampier is considered disproportionate, as multiple teams of trained personnel are required to implement multiple OMPs and SMPs. It is considered more cost effective and feasible to pre-position sampling kits on support vessels (see below).	**No**
Contract additional OSM Service Providers to increase availability of monitoring personnel in the first 2 weeks of the spill	The availability of additional monitoring personnel could theoretically increase the number of receptors and locations able to be monitored, however, the ability to deploy personnel would be subject to a range of feasibility considerations.	This option has been considered and evaluated; however, it has been discounted on the basis that deploying a significantly larger number of monitoring teams concurrently with response operations would introduce additional safety, environmental, and operational risks. The current resource assessment in Section C.4 indicates that up to 26 monitoring teams may be required during the initial two weeks of the response. Expanding this effort further by engaging additional contracted monitoring teams would likely result in increased simultaneous operations (SIMOPs), elevating the potential for vessel interactions, collision risks, anchoring impacts, and waste discharges, thereby increasing the overall risk profile. To ensure risk remains ALARP, a staged and scalable approach to resourcing has been adopted. Should additional monitoring capacity be required	Cost to contract an additional OSM Service Provider.	The option to contract an additional OSM Service Provider to increase the number of contracted monitoring teams during the initial stages of the spill response has been assessed and found not to be reasonably practicable due to the elevated safety and environmental risks associated with SIMOPs, including vessel collisions, anchoring impacts, and waste discharges. These risks outweigh the marginal benefit of increased early-stage monitoring coverage, particularly given the scale of the existing response and monitoring deployment already planned.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

		from week 3 onwards, this will be identified early through ongoing review of monitor and evaluate activities and existing monitoring efforts. Woodside will activate additional resourcing via its existing contract with the OSM Services Provider, thereby ensuring a streamlined and controlled expansion of effort. By this stage of the response, operational response activities are expected to have stabilised, reducing the likelihood and severity of SIMOPs-related risks. In addition, efficiencies may be gained by reallocating existing monitoring teams to other priority receptors where monitoring is still required, particularly in cases where termination criteria have been met at initial locations. This dynamic resourcing approach ensures that additional personnel are only deployed when necessary, thereby supporting both environmental and safety performance outcomes and maintaining ALARP principles throughout the monitoring program.		
Purchase water quality/ hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection	The availability of water quality / hydrocarbon sampling kits on nearby support vessels (and an accompanying technical procedure for sample collection) will provide an opportunity for more rapid initial measurements of hydrocarbon properties and concentrations. This information will provide important initial situational awareness information that will aid decision making in both monitoring and response efforts.	This control measure will improve the availability and timeframe for initial water quality sampling.	Implementing this additional control measure will involve time and effort to source and supply sampling kits to the selected supply vessels. There will also be employee time involved in developing and conducting training to vessel crews on the technical procedure for sample collection.	Adoption of this control measure will provide an additional and quicker opportunity for initial water quality sampling, resulting in improved situational awareness for decision making in monitoring and response teams.	**Yes**
Modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)	Initial aerial surveillance provides important information for decision making in response operations, but can also provide important initial environmental monitoring data. Amending the Woodside Aerial Surveillance Observer Log to include the ability to report on location, presence and type of fauna could assist in a more rapid, effective deployment of specialised OMP teams for Marine Fauna Assessment and Oiled Wildlife Response.	This control measure is considered reasonably practicable to implement.	Cost to modify the Aerial Surveillance Observer Log is minimal and is associated with time and effort of existing employees.	Adoption of this control measure is considered to be beneficial as it could assist in more effective and efficient deployment of fauna monitoring and response efforts.	**Yes**
Conduct periodical review of existing baseline data sources across receptors predicted to be contacted within 7 days at the low thresholds and a probability ≥10%	This ensures that receptors with deficient baseline data are identified. This a consideration for first-strike monitoring prioritisation and the finalisation of each SMP design	This control measure is considered reasonably practicable to implement.	Cost of contract with Service Provider.	Understanding the presence or absence, suitability and quality of baseline data for receptors predicted to be contacted within 7 days, at a probability ≥ 10%, is an important preparatory measure. Understanding which receptors have insufficient baseline data will help quickly guide monitoring prioritisation and the finalisation of each SMP design and whether there is a need to include alternative designs.	**Yes**

6.8.2.3 Improved Control Measures considered

Improved Control Measures considered
Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision	A Joint Industry capability provision has considerable benefits, including an improvement to industry OSM standards; improved reliability in accessing specialist personnel; efficiencies and capability growth associated with shared testing and exercising; and greater depth in Monitoring Service Provider (MSP) capability, with a centralised	This control measure has already been developed by Industry and is considered reasonably practicable to implement.	Cost of annual subscription to OSRL OSM Supplementary Service Agreement	Adopting this control measure involves additional costs, but the benefits of a Joint Industry OSM capability provision outweighs the costs and therefore this additional measure has been accepted.	**Yes**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

	contract coordinating multiple consultancies and MSPs.				
Determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas	Understanding vessel specification requirements for OSM at priority locations will result in quicker mobilisation times, and more effective monitoring, as correctly equipped vessels will be made available at the commencement the monitoring effort.	This control measure is considered reasonably practicable to implement.	Cost to determine vessel specifications is minimal and is associated with time and effort of existing employees.	This control measure would result in the correct vessels being mobilised for monitoring personnel and result in quicker implementation of monitoring.	**Yes**

6.8.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- Alternative
  - None selected
- Additional
  - purchase initial water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection
  - modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)
  - conduct periodical review of existing baseline data sources for receptors predicted to be contacted within 7 days, at the low thresholds and a probability ≥ 10%.
- improved
  - adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision
  - determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.8.4 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Operational and Scientific Monitoring		
ALARP Summary	X	Known, reasonably practicable control measures have been adopted
	X	No additional, alternative and improved control measures would provide further benefit
	X	No reasonably practical additional, alternative, and/or improved control measure exists
	The resulting operational and scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be Moderate and the overall delivery effectiveness considered Medium. The operational and scientific monitoring's main objectives can be met, with the addition of one alternative control measures to provide further benefit.	
Acceptability Summary	• The control measures selected for implementation manage the potential impacts and risks to ALARP. • In the event of a hydrocarbon spill for the PAP, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. • Operational and scientific monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. • Throughout the PAP, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of well control. • Stakeholder consultation undertaken for the PAP did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. • The level of impact and risk to the environment has been considered with regards to the principles of ESD; and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.	
On the basis from the ALARP and acceptability summary as presented above and in Section 6.7 of the EP Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing operational and scientific monitoring activities to a level that is ALARP and acceptable.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- Atmospheric emissions
- Routine and non-routine discharges
- Physical presence, proximity to other vessels (shipping and fisheries)
- Routine acoustic emissions vessels
- Lighting for night work/navigational safety
- Invasive marine species
- Collision with marine fauna
- Disturbance to Seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- Drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- Vessel operations and anchoring
- Presence of personnel on the shoreline
- Human presence (manual cleaning)
- Vegetation cutting
- Additional stress or injury caused to wildlife
- Secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

This document is protected by copyright. 7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

A number of direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- Temporary increase in total suspended solids (TSS) in the water column;
- Attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation;
- Sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota; and
- Potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated Total Suspended Solids (TSS), changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in proximity to the well locations with potential for localised spread downstream (depending on the speed of currents throughout the water column and seabed) (IOGP 2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m; 250 m and 1 km distances

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM and non-water based muds (NWBMs, no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the loss of well containment (LOC) event a relief well drilling activity would be responding too).

Vessel operations and anchoring

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- Damage to vegetation/habitat to gain access to areas of shoreline oiling;
- Damage or disturbance to wildlife during shoreline surveys;
- Removal of surface layers of intertidal sediments (potential habitat depletion); and
- Excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- Liquids (recovered oil/water mixture), recovered from shoreline clean-up operations and oiled wildlife response.
- Semi-solids/solids (oily solids), collected from shoreline clean-up operations and oiled wildlife response.
- Debris (e.g. seaweed, sand, woods, plastics), collected from shoreline clean-up operations and oiled wildlife response.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- Capturing wildlife
- Transporting wildlife
- Stabilisation of wildlife
- Cleaning and rinsing of oiled wildlife
- Rehabilitation (e.g. diet, cage size, housing density)
- Release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase it's important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (PS12.1, PS 15.1, PS 28.1).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 12.2, PS 15.2, PS 28.2).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 15.6, PS 28.5).
- Trained unit leader's brief personnel of the risks prior to operations of the environmental risks of presence of personnel on the shoreline (PS 15.7, PS 28.6).

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 12.3, PS 15.5, PS 28.3).
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 15.3, PS 28.4)

Waste generation

- Zoning of response locations to prevent secondary contamination and minimize the mixing of clean and oiled sediment and shoreline substrates (PS 13.4)
- Limiting vegetation removal to only that vegetation that has been moderately or heavily oiled (PS 15.4).
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 21.1)

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan. (PS19.1).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
    - Known, reasonably practicable control measures have been adopted.
    - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
    - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting all of the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/ impact are deemed acceptable by relevant persons/ organisations are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
    - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
    - National Water Quality Management Strategy and supporting guidelines for marine water quality.
    - Conditions of approval set under other legislation.
    - National and international requirements for managing pollution from ships.
    - National biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY AND ABBREVIATIONS

11.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with PAP.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the PAP.
Dependency	The degree of reliance on other systems in order for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (WHA, Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.

Term	Description / Definition
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥10 g/m^2, dissolved – ≥50 ppb and entrained hydrocarbon concentrations – ≥100 ppb.
Zone of Application	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the PAP for [scenario/oil type] and [scenario/oil type]. The complete list of potential receptor locations within the EMBA within the PAP is included in Section 6.7 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the PAP identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m^2)
- Shoreline accumulation (>100 g/m^2) at any time

The detailed NEBA assessment outcomes are shown below. The North West Shelf Phase 1 Plug and Abandonment preoperational NEBA contains the full assessments.

Table A-1: NEBA assessment technique recommendations for Angel Condensate release caused by well loss of containment (CS-01)

Receptor	Monitor and evaluate	Containment and recovery	Dispersant application: sub-sea	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Well control and intervention
Muiron Islands & Marine Management Area	Yes	No	No	No	Yes	Yes	No	No	Yes	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact[13]	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	**3P**	**Major**	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	**Moderate**	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A

	1P	**Minor**	Likely to prevent impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors such as:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Decrease in duration of impact by several seasons (< 1 year)	N/A

	0	**Non-mitigated spill impact**	**No detectable difference to unmitigated spill scenario.**		
Negative	**1N**	**Minor**	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	**Moderate**	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))

	3N	**Major**	Likely to result in impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors resulting in either:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

[13] NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: MONITOR AND EVALUATE ACTIVATION AND TERMINATION CRITERIA

Table B-1: Monitor and evaluate objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – Predictive Modelling of Hydrocarbons to Assess Resources at Risk	Predictive modelling focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. Predictive modelling utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of predictive modelling are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP	Predictive modelling will be triggered immediately following a level 2/3 hydrocarbon spill.	The criteria for the termination of predictive modelling are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by surveillance observations) predicts no additional natural resources will be impacted

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – Surveillance and reconnaissance to detect hydrocarbons and resources at risk	Surveillance and reconnaissance aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of surveillance and reconnaissance are: • Verify spill modelling results and recalibrate spill trajectory models . • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	Surveillance and reconnaissance will be triggered immediately following a level 2/3 hydrocarbon spill.	The termination triggers for the Surveillance and reconnaissance are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results do not predict surface exposures at visible levels.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – Pre-emptive assessment of sensitive receptors at risk	Pre-emptive shorelines assessment aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. The primary objective of pre-emptive shorelines assessment is to confirm understanding of the status and characteristics of environmental resources, predicted by predictive modelling and surveillance, to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. Indirectly, qualitative/semi-quantitative pre-contact information collected by pre-emptive shorelines assessment on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. Pre-emptive shorelines assessment would be undertaken in liaison with WA DTMI as the control agency once the oil is in State Waters (if a Level 2/3 incident).	Triggers for commencing pre-emptive shorelines assessment include: • Contact of a sensitive habitat or shoreline is predicted by predictive modelling and surveillance. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed via SCAT.	The criteria for the termination of pre-emptive shorelines assessment at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. ANNEX C: NORTH WEST SHELF PHASE 1 PLUG AND ABANDONMENT AND TPA03 WELL INTERVENTION OSM ACTIVITY SPECIFIC ASSESSMENT

The Woodside OSM-BIP comprehensively presents important information for OSM assessment and implementation, including the process for assessing OSM requirements for each activity. This Annex provides the activity-specific information required for the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention OSM Assessment, including:

- OSM Planning Area;
- Monitoring priorities;
- Mobilisation and implementation timeframes; and
- Resourcing requirements and capability assessment.

C.1 Determine if the activity OSM Planning Area fits within the Combined OSM Planning Area

The OSM Planning Area for the North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention activities (hereafter referred to as the PAP) credible spill scenarios (as shown in Figure C - 1) fits within the Combined OSM Planning Area (Figure 2-1 in the OSM-BIP).

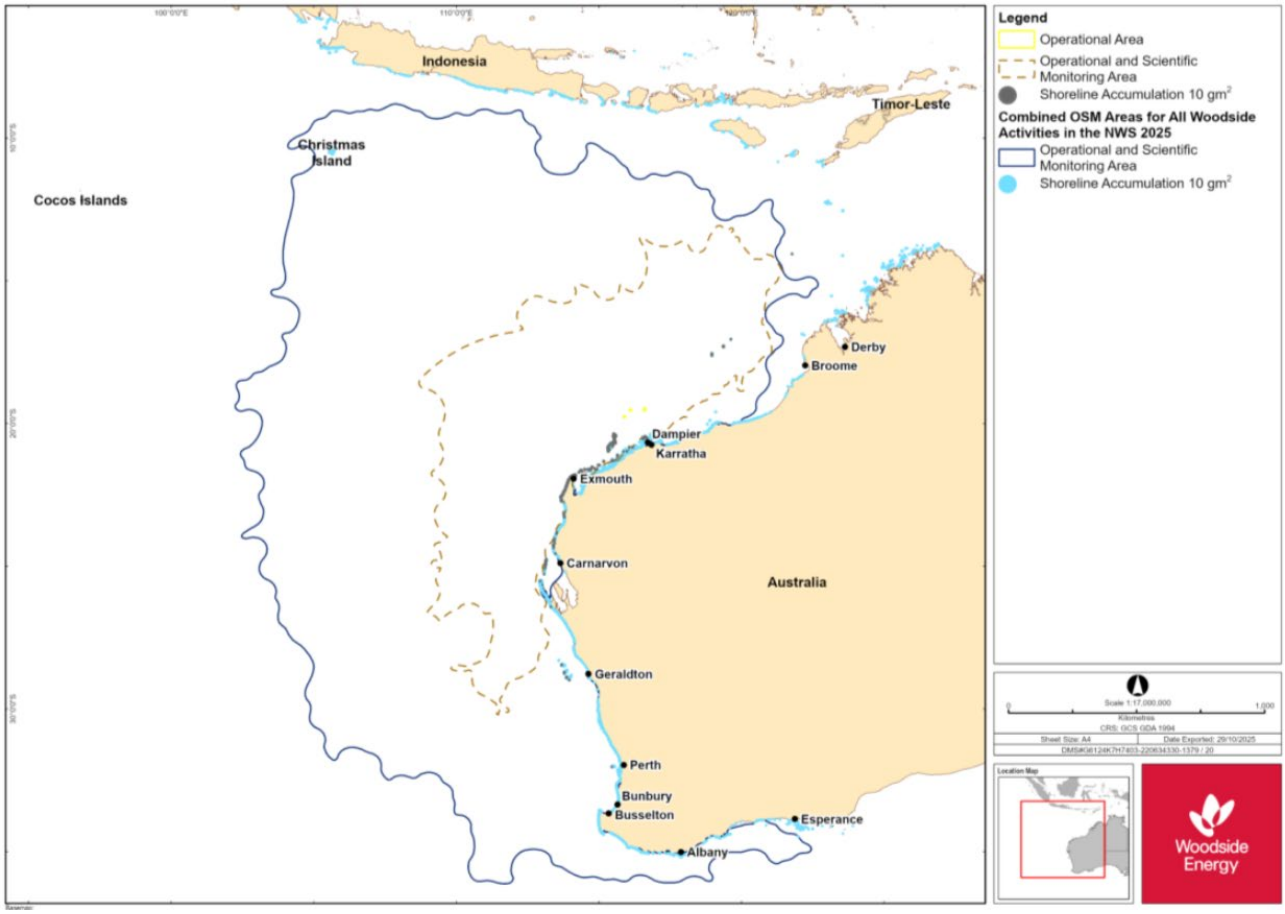

Figure C - 1: PAP OSM Planning Area based on the area potentially contacted by the low (below ecological impact) hydrocarbon thresholds in the event of the worst-case credible spill scenarios

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention Environment Plan.

C.2 Determine activity-specific monitoring priorities

Assess spill exposure risk using trajectory modelling

Woodside has reviewed the stochastic oil spill modelling results for the worst-case credible spill scenarios listed in Table 2-1 and as outlined in Section 2.2 of the OSM-BIP and identified receptors contacted at a higher probability of rapid contact. Table C-1 presents the receptors contacted within 14 days at a probability >10% at the low threshold for dissolved (≥10 ppb), entrained (≥10 ppb), floating (≥1 g/m^2), and shoreline contact (≥10 g/m^2). The inclusion of entrained hydrocarbons at concentrations greater than 10 ppb is used to denote exposure to hydrocarbons, but does not necessarily imply toxicity. For entrained whole-oil droplets, the toxic fraction is small, as many hydrocarbon constituents remain sequestered and not bioavailable (French-McCay 2024).

Evaluate availability of adequate baseline data

The availability of baseline data may influence monitoring priorities. Section 4 of the OSM-BIP outlines Woodside's baseline review and evaluation process. Using the Marine Environment Baseline Database, Woodside has reviewed baseline data for all of the receptors predicted of being rapidly contacted at a higher probability from the PAP activities (Table C-1) to help determine which receptors and key features have insufficient or no baseline data available and should be given a higher monitoring priority.

It is anticipated that some receptors and locations may be impacted before monitoring teams can begin the assessments. Given this constraint, and the limited baseline data at many priority monitoring locations and receptors, scientific monitoring will likely need to use a combination of approaches including gradient analysis, impact versus control comparisons, and lines of evidence methodologies. During a spill, it may be necessary to identify additional unaffected control sites for comparative monitoring where possible. As such, control sites have been factored into capability planning in Section C.4.

Consideration of Key Ecological Features, Biologically Important Areas and transient receptors

A number of broadscale ecological features are located within the OSM Planning Area and have been considered in monitoring prioritisation and OSM capability planning for the PAP. The following Key Ecological Features (KEFs) (and their distances to the Operational Area (OA)) are noted in Table 4-14 of the EP:

- Ancient Coastline at 125 m depth contour (overlaps OAs for A, B and C)
- Glomar Shoals (45 km southeast of OA A, overlaps OA B, and 70 km northeast of OA C)
- Canyons Linking the Cuvier Abyssal Plan and the Cape Range Peninsula (260 km southwest of OA A, 292 km southwest of OA B and 234 km southwest of OA C)
- Commonwealth Waters Adjacent to Ningaloo Reef (306 km southwest of OA A, 339 km southwest of OA B and 269 km southwest of OA C)
- Continental Slope Demersal Fish Communities (62 km southwest of OA A, 112 km southwest of OA B and 40 km southwest of OA C)
- Exmouth Plateau (173 km southwest of OA A, 224 km southwest of OA B and 153 km southwest of OA C)
- Mermaid Reef and Commonwealth waters surrounding Rowley Shoals (343 km southwest of OA A, 298 km southwest of OA B and 276 km southwest of OA C)

The Ancient Coastline KEF overlaps the three Operational Areas and Glomar Shoals, so they are at a higher risk of contact with hydrocarbons. All KEFs within the OSM Planning Area are described in detail in Section 4.7 and Appendix C of the EP. These KEFs include subsea receptors (benthic and pelagic habitats; demersal fish communities; marine fauna aggregations) that may be at risk of contact from the scenario associated with the PAP (refer to Table 2-1). Therefore, OSM planning and resourcing for this activity includes relevant monitoring requirements, such as water quality, sediment quality, benthic habitats and fish for these features (refer to Table C-3 and Table C-8).

The OSM Area also overlaps a number of Biologically Important Areas (BIAs) with protected species potentially occurring in the area, as described in Section 4.6 of the EP and listed in Table C-3. A number of the BIAs and protected species are located within the geographical extents of other receptors, such as marine turtles within the Montebello AMP, so these BIAs and protected species would automatically be included in the relevant SMPs for that receptor (refer to Table C-6). Where BIAs, protected species and KEFs are situated away from the monitoring priorities, they will be captured in the Offshore Environs monitoring unit described in Table C-6.

Initial Monitoring Priorities

Monitoring prioritisation during the initial stages of a spill should focus on sensitive receptors with the highest risk of adverse consequences and where oil spill modelling predicts high probability of rapid contact. During the initial monitoring response, emphasis will be placed on receptors contacted by floating, shoreline, and dissolved hydrocarbon phases. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response.

To further guide monitoring prioritisation in the event of a spill, Woodside has also compared the availability of baseline data against the WA State-based protection prioritisation evaluation rankings. The WA DTMI protection priority rankings were established through the Western Australian Marine Oil Pollution Risk Assessment process. These rankings evaluate each receptor's vulnerability to marine oil spills, considering impacts from both floating and dissolved oil, as shown in Table C-4. This information is then used to determine the resultant initial monitoring priorities for the activity.

Table C-4: Initial monitoring priorities

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
Montebello Islands	**Mangroves** Montebello Islands' mangrove communities are regarded as globally unique.	N/A	High	3	3	Medium
	Turtles Nesting area for green (*Chelonia mydas*) (endangered), flatback (*Natator depressus*) (data deficient), and hawksbill (*Eretmochelys imbricata*) (critically endangered) turtles. The islands are recognised as critical habitat for flatback turtles and for hawksbill turtles, with key sites for the latter including Ah Chong Island, South East Island, and Trimouille Island.	Turtle nesting Nov to Mar	High	4	3	High
	Marine mammals Pygmy blue whale (vulnerable) and humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Resident populations of Indo-Pacific bottlenose dolphin (*Tursiops aduncus*) (unknown and Australian humpback dolphins (*Sousa sahulensis*) (vulnerable). Dugong (*Dugong dugon*) (vulnerable) foraging.	Pygmy blue whale migration: Apr to Aug Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Significant seabird nesting and foraging areas. Staging point/feeding area for migratory shore birds.	Seabird: Species dependant Migratory shorebirds: Aug to Apr	High, with the exception of wedge-tailed shearwater on Ah Chong Island (low)	3	2	Medium
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Pearling (inactive/pearling zones). Very significant for recreational fishing and charter boat tourism (Marine Management Area). Social amenities and other tourism. Nominated place (National Heritage).	Year-round	High	3	2	Medium
Montebello AMP	**Coral and other subsea benthic primary producers** A prominent seafloor feature in the Marine Park is Tryal Rocks consisting of two close coral reefs. The reefs are emergent at low tide.	Coral spawning: Mar & Oct	High	3	4	High
	Turtles Biologically important internesting, foraging, mating, and nesting habitat for turtles.	Nesting green and flatback turtles: Oct to Mar (hawksbill can nest all year)	High	3	3	Medium
	Birds Biologically important breeding habitat for seabirds.	Species dependant	High	3	2	Medium
	Whale shark Biologically important habitat for whale shark (*Rhincodon typus*) (endangered)		High	3	4	High
	Marine mammals	Jun to Oct	High	3	2	Medium

C.3 Mobilisation and timing of OMP and SMP implementation

Table C-5 provides a list of OMPs and SMPs relevant to the PAP, as well as indicative timeframes for mobilisation of each OMP and SMP for key receptors. In addition, monitor and evaluate activities will capture initial observations of fauna, habitat, and other sensitive receptors. Water samples will be collected during vessel surveillance for OM1: Hydrocarbon Characterisation, when safe to do so. Rapid Marine Faura Surveillance teams will begin mobilisation within 48–72 hours of notification to document fauna observations. This information will be provided to the IMT to aid early decision making per the process outlined in Section 18.1 of the OSM-BIP.

Table C-5: Indicative OMP and SMP implementation schedule for OSM activities if initiation criteria are met

Proximity to spill source	Monitoring type	0–48 hours from OSM activation	Within 72 hours of OSM activation	~5–7 days from OSM activation	Weeks 1–2 from OSM activation	Ongoing
Spill site and surrounding waters	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation, where resources are available (e.g. Supply Vessel with onboard sampling equipment). • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per ongoing arrangements)	Continued (as per ongoing arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (e.g. Situation Unit) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill.
	SM	• Commence activation and mobilisation process. • Activation of SMP Team Leads.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM6: Benthic Habitat Assessment • SM7: Marine fish and elasmobranch assemblages assessment	Continued	Continue SMP monitoring until termination criteria are met
Sensitive receptors predicted to be contacted within 7 days	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations.	• OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment	Continued (as per on-going arrangements)	Continued (as per on-going arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Lead) and used in the Incident Action Planning process for the next

C.4 Determine the OSM resourcing requirements and assess capability for the activity

To guide the resourcing requirements assessment for the PAP, the spill scenario (see Table 2-1) most likely to require the greatest initial capability was selected for further assessment. Selection was based on stochastic modelling results, focusing on the scenario predicted to contact the greatest number of receptors at the low dissolved, floating and shoreline thresholds within 14 days and at the highest contact probabilities. If a receptor is only contacted by low concentrations of entrained hydrocarbons at probability > 10%, and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response as outlined in Section C.2. The unplanned hydrocarbon release of 56,441 m^3 TPA/GWA Condensate[14] arising from a LOWC from TPA03 during well intervention was identified as the worst-case scenario (CS-03), affecting the most locations within 14 days and determined to require the greatest OSM capability.

The first 14 days of the response has been selected as the focus area for the OSM resourcing assessment as it is the period during which resources are likely to be overwhelmed, before additional resources (including appropriately qualified personnel, suitable vessels and additional monitoring equipment) can be scaled in locally and from interstate and international resources. Other factors influencing the selection of the scenario with the highest capability requirements were location of the spill, proximity to receptors, and hydrocarbon properties. The OSM Services Provider Contract includes provision of scale-up resources, which would be considered and mobilised as soon as practicable following the spill.

Monitoring Units

Using the stochastic modelling results for dissolved, floating and shoreline, Woodside has grouped the monitoring priorities for the PAP activities into monitoring 'units' (Table C-6). These units incorporate all of the possible receptors that may be contacted by the scenarios shown in Table C-1 at a probability >10%. Receptors only contacted by entrained hydrocarbons and no other phase of hydrocarbon were not included. These unit groupings are based on consultation with experienced monitoring personnel and planners, who often group these receptors together for time-bound monitoring projects. The grouping of units is based on factors such as access and distance to ports, SIMOPS of multiple vessels and teams working in a close area, travel time between individual locations/receptors and time taken to collect samples for each SMP.

The monitoring units presented in Table C-6 also include KEFs, BIAs and transient species. Additional information on the seasonality of the receptors can be found in Appendix B of the OSM-BIP and Table 4-14 of the EP. Each monitoring unit will require 1-2 teams during the initial response (first 14 days). The number of teams allocated to each unit will depend on the extent of the spill, the outcome of the monitoring prioritisation finalised at the time of the spill (Section 13 of the OSM-BIP), the ALARP assessment, and SIMOPs.

It should be noted that not all monitoring units will be contacted by a single spill and that the list below has been generated from stochastic modelling results.

Table C-6: Monitoring units for the PAP relevant to stochastic modelling results

Monitoring Unit	Receptors within Monitoring Unit
Montebello	• Montebello AMP* • Humpback whale (migration) BIA • Marine turtle BIAs • Pygmy blue whale (distribution) BIA • Seabird and shorebird BIAs • Montebello Islands • Montebello Islands MP* • Montebello Shoals* • Tryal Rocks*
Barrow	• Barrow Island (including Boodie and Middle Islands) • Barrow Islands MMA and Barrow Island MP (State)*

[14] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m^3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

Stochastic modeling

OSM resourcing requirements were determined using stochastic modelling. Deterministic modelling was not undertaken, as the existing response capability arrangements (refer to Sections 9 and 10 of the OSM-BIP) provide sufficient capacity to meet or exceed the resourcing requirements for all receptors forecast to be contacted by floating, shoreline and/or dissolved hydrocarbons (at >10% probability) by stochastic modelling within the initial two weeks of the PAP.

The resources required to commence operational and scientific monitoring components during weeks 1–2 are presented in Table C-7 and Table C-8 respectively, which are based on the locations requiring a baseline review in Table C-2, the implementation schedule outlined in Table C-5, and the worst-case stochastic spill results outlined in Table C-1, including the resources required for monitoring unaffected control sites.

Woodside's OSM capability arrangements are detailed in Sections 9 and 10 of the OSM-BIP. These sections demonstrate that Woodside has established arrangements to mobilise up to 5-6 teams for most OMPs and SMPs, confirming that despite the use of stochastic modelling (which means an overconservative estimate of capability has been used for this activity) the OSM capability requirements for PAP activities (Table C-7 and Table C-8) are fully satisfied by the existing capability arrangements in the OSM-BIP.

[#] *Specific monitoring units are mentioned for planning and guidance purposes based on a worst-case planning approach. In the event of an actual spill, other locations and/or receptors may be contacted and the ability to access these locations (i.e. with consideration of safety and SIMOPS) would be assessed. This would be identified and managed as part of implementation as per the guidance in Section 13 of the BIP.*

** Initial co-mobilisation between SMP: Water quality impact assessment and SMP: Sediment quality impact assessment.*

^ Can initially be performed by the same team as the relevant OMP. This SMP may replace the relevant OMP, if the relevant OMP's termination criteria are triggered.

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Jurisdictional Authority/ Hazard Management Agency	Control Agency	Incident Controller
Spill from facility including subsea infrastructure Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations	Commonwealth waters	1	NOPSEMA	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3		Woodside	Corporate Incident Management Team Incident Commander (CIMT IC)
	State waters	1/2/3	Western Australian Department of Transport and Major Infrastructure (DTMI)	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority/ DTMI	Port Harbour Master/ DTMI Incident Controller
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	AMSA	Vessel Master
		2/3		AMSA	AMSA (with response assistance from Woodside)
	State waters	1/2/3	DTMI	DTMI	DTMI Incident Controller
	Within port limits	1	DTMI	Port Authority	Port Harbour Master
		2/3		Port Authority/ DTMI	Port Harbour Master/ DTMI Incident Controller

SPILLS IN STATE WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Energy Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport and Major Infrastructure (DTMI).

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DTMI IMT (APPENDIX F – Woodside Liaison Officer resources to DTMI). DTMI's role as the Controlling Agency in State waters does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters/ within port limits or to commence the initial response actions to a spill prior to DTMI establishing incident control in line with DTMI *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DTMI can be seen at APPENDIX E – Woodside Incident Management Structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines.

RESPONSE PROCESS OVERVIEW

	For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A	
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [1]	
	If further support required, implement this Oil Pollution First Strike Plan per relevant actions detailed in Table 1-1 and Table 2-1.	
LEVEL 1	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA and coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan Remember to download each Operational Plan.
	If the spill escalates such that the site cannot manage the incident, inform the WCC on: [1] and escalate to a level 2/3 incident.	
LEVEL 2/3	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Handover control to CIMT and notify DTMI	Handover control to AMSA and stand up CIMT to assist.
	Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA: Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
	Create an Incident Action Plan (IAP) for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA) see the OSPRMA Appendix A	If requested by AMSA: Create an IAP for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA see the OSPRMA Appendix A

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

In the event of an incident impacting live well infrastructure, also activate Angel Operations Oil Pollution First Strike Plan

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Corporate Incident Management Team Incident Commander (CIMT IC)	[1]	Verbally notify WCC of event and estimated volume and hydrocarbon type. If further support required, implement this Oil Pollution First Strike Plan per relevant actions detailed in Table 1-1 and Table 2-1.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), CIMT IC or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[2]	Verbally notify NOPSEMA for spills >80L. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DMPE).	Link	
Within 3 days	WSR, CIMT IC or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DMPE) NOPSEMA [2] NOPTA [3] DMPE [4]	[2]	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from EP	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	WA Department of Transport and Major Infrastructure	DTMI Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[5]	Verbally notify DTMI MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha/Fremantle. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DTMI to be notified if spill is likely to extend into WA State waters. Request DTMI to provide Liaison to Woodside IMT.	[5]	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	Department of Primary Industries and Regional Development (DPIRD)			Notification to DPIRD via email within 24 hours of Woodside reporting the incident to the appropriate authority: [6]	Email	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	WA Fishing Industry Council (WAFIC)	Industry Liaison Officer	[15]	Notification to WAFIC via email within 24 hours of Woodside reporting the incident to the appropriate authority: [15]	Verbal/ email	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[7]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: • titleholder details • time and location of the incident • proposed response arrangements and locations as per the OPEP • contact details for the response coordinator • confirmation of access to relevant monitoring and evaluation reports when available.	Verbal	
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land	CIMT IC or Delegate	WA Department of Biodiversity,	Duty Officer	[8]	Phone call notification	Verbal	

[1] Notification to NOPSEMA must be from a Woodside Representative.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

or waters managed by WA Department of Biodiversity, Conservation and Attractions		Conservation and Attractions (DBCA)					
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for North West Shelf Phase 1 Plug and Abandonment. Relevant persons/ organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for North West Shelf Phase 1 Plug and Abandonment. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Rescue Coordination Centre (RCC)	[9]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with a written Harmful Substances Report (POLREP) as soon as practicable following verbal notification.	[9]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT IC or Delegate	AMOSC	AMOSC Duty Manager	[10]	Notify AMOSC that a spill has occurred and follow-up with an email from the **CIMT IC/ CIMT Deputy IC/ CMT Leader** to formally activate AMOSC. Determine what resources are required consistent with the AMOS Plan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[10]	
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[11]	Notification for all services: Contact OSRL duty manager and request assistance from technical advisor in Perth. Send the completed notification form to OSRL as soon as practicable.	[11]	
					Mobilisation of response personnel/ equipment: For mobilisation of response personnel/ resources, send the Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[11]	
					Mobilisation of Operational and Scientific Monitoring service: For mobilisation of Operational and Scientific Monitoring (OSM) service, send the OSM Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[11]	
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[12]	Activate the contract with MSRC (in full) for the provision of up to 14 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Cond.					
Monitor and evaluate – tracking buoy	Yes	Yes	ALL	If a vessel is on location, consider the need to deploy the oil spill tracking buoy. If no vessel is on location, consider the need to mobilise oil spill tracking buoys from the King Bay Supply Base (KBSB) Stockpile. If a surface sheen is visible from the facility, deploy the satellite tracking buoy within two hours.	Operations	**DAY 1:** Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Monitor and evaluate – predictive modelling	Yes	Yes	ALL	Undertake initial modelling using OceansMap and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A.	Situation or Environment	**DAY 1:** Initial modelling within 6 hours using the Rapid Assessment Tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
	Yes	Yes	ALL	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([13]).	Situation	**DAY 1:** Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Monitor and evaluate – aerial surveillance	Yes	Yes	ALL	Instruct Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**DAY 1:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
Monitor and evaluate – satellite tracking	Yes	Yes	ALL	The Situation Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [10] • OSRL Duty Manager: [11] • KSAT: [14] • Others identified by CIMT	Situation	**DAY 1:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Monitor and evaluate – pre-emptive assessment of receptors at risk	Yes	Yes	ALL	Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk.	Planning or Environment	**10 DAYS PRIOR TO CONTACT:** In agreement with WA DTMI, deployment of 2 specialists for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors in Operational Monitoring Operational Plan).
Operational monitoring – shoreline assessment	Yes	Yes	ALL	Consider the need to mobilise resources to undertake shoreline assessment surveys.	Planning or Environment	**10 DAYS PRIOR TO CONTACT:** In agreement with WA DTMI, deployment of 2 specialists trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Mobilise OSM service via OSRL: [11] Refer to OSM Bridging Implementation Plan – Part B for additional implementation information: Link
Operational and Scientific Monitoring	Yes	Yes	ALL	Consider the need to mobilise OSM resources via third party service provider.	Environment	**DAY 1:** Notify service provider of spill event and mobilise required programs depending upon nature of spill event	Refer to Joint Industry Operational And Scientific Monitoring Plan Framework for activation criteria and additional supporting information.
Surface dispersant	No	No	N/A	This response strategy is not recommended for Angel, PoG or TPA03 condensate or marine diesel as there is limited to no surface expression predicted above response threshold (>50 g/m^2). The addition of dispersant is not considered to have a net environmental benefit			
Containment and recovery	No	No	N/A	This response strategy is not recommended for Angel, PoG or TPA03 condensate or marine diesel as there is limited to no surface expression predicted above response threshold (>50 g/m^2). Containment and Recovery of condensate poses a significant safety risk and low flash points. Corralling low flash point	Logistics and Planning

				substances should be avoided, therefore, this response technique is not feasible.			
Mechanical dispersion	**No**	**No**	**N/A**	This response strategy is not recommended.			
In-situ burning	**No**	**No**	**N/A**	This response strategy is not recommended.			
Shoreline protection and deflection	**No**	**Yes**	**ALL**	Equipment from Woodside and AMOSC stockpiles mobilised. Consideration of mobilisation of interstate/international shoreline protection equipment (i.e. OSRL).	Operations and Planning	**5 DAYS PRIOR TO CONTACT:** In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy 1 shoreline clean-up operation to each site where operational monitoring predicts an accumulation 5 days prior to impact. Equipment mobilised from closest stockpile 5 days prior to predicted impact. Supplementary equipment mobilised from State, and AMOSC stockpiles 5 days prior to predicted impact.	Protection and Deflection Operational Plan *Logistics Section to download immediately and follow steps*
Shoreline clean-up	**No**	**Yes**	**ALL**	Equipment from Woodside and AMOSC stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	**5 DAYS PRIOR TO CONTACT:** Equipment mobilised from closest stockpile 5 days prior to predicted impact. Supplementary equipment mobilised from State and AMOSC stockpiles 5 days prior to predicted impact.	Shoreline Clean-up Operational Plan *Logistics Section to download immediately and follow steps*
Oiled wildlife response	**Yes**	**Yes**	**ALL**	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC Oiled Wildlife Containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning		Oiled Wildlife Response Operational Plan
SOURCE CONTROL TECNIQUES							
Subsea First Response Toolkit	**No**	**Yes**	**L2/3**	Debris clearance equipment to be mobilised prior to deployment of capping stack (if feasible).	Source Control	**DAY 2:** Remotely Operated Vehicle (ROV) on Mobile Offshore Drilling Unit (MODU) ready for deployment within 48 hours	• Source Control Emergency Response Planning Guideline • Activity Source Control Emergency Response Plan
Subsea Dispersant	**No**	**No**	**L2/3**	This response strategy is not recommended. The PER02, PER03 and TPA03 wells are in water depths of greater than the 100 m minimum water depth recognised for feasible use of subsea dispersant. However, modelling predicts that the LOWC scenarios for these wells will not result in any surface or shoreline oil at any RPA above threshold values, therefore the use of subsea dispersant would increase dispersed/entrained hydrocarbon levels and exposure of subsea biota to potentially higher toxicity substances without providing a net environmental benefit.			
Capping Stack	**No**	**Yes**	**L2/3**	Capping stack is considered feasible for water depths of >100m and/or if vertical Xmas trees has been removed. Feasibility will be assessed on a case-by-case basis.	Source Control	**DAY 16:** Capping stack deployed by a chartered construction vessel.	
Relief Well	**No**	**Yes**	**L2/3**	Undertake tactics per Source Control Emergency Response Plan (SCERP).	Source Control	**DAY 1:** Identify source control vessel availability within 24 hours. ROV on MODU ready for deployment within 48 hours. MODU mobilised to location

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, no sensitive receptors are identified as having the potential to be contacted by hydrocarbon at or above impact threshold levels within 48 hours of a spill.

Hydrocarbon spill modelling results indicate the sensitive receptors listed below have the potential to be contacted by hydrocarbons beyond 48 hours of a spill (from CS-01 – refer to Appendix A):

- Muiron Islands/ Muiron Islands MMA
- Southern Pilbara Islands
- Sunday Island

Tactical Response plans for these locations can be accessed via the link here and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the North West Shelf Phase 1 Plug and Abandonment Operational Areas and identifies priority protection areas.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-1** indicates the assets within the vicinity of the North West Shelf Phase 1 Plug and Abandonment Operational Areas.

Table 3-1: Assets in the vicinity of the North West Shelf Phase 1 Plug and Abandonment Operational Areas

Asset and Operator	Distance and Direction from Operational Area A (km)	Distance and Direction from Operational Area B (km)	Distance and Direction from Operational Area C (km)
Angel (Woodside)	47 km east	Overlaps	76 km northeast
Goodwyn Alpha (Woodside)	19 km southwest	66 km southwest	9 km northeast
North Rankin Complex (Woodside)	3 km southeast	43 km southwest	28 km northeast
Reindeer (Santos)	55 km southeast	58 km southwest	48 km southeast

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the North West Shelf Phase 1 Plug and Abandonment Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[2]
CS-01 (WCCS) **68-day uncontrolled subsurface LOWC of Angel Condensate from the AP3 Well**	*Angel condensate*	107,779 m^3 [3]	3.8% (4096 m^3)	12 hours (BP < 180 °C)	67%	*NWS condensate*
				24 hours (180 °C < BP < 265 °C)	23.8%	
				Several days (265 °C < BP < 380 °C)	5.4%	
CS-02 **73-day uncontrolled subsurface LOWC of Searipple Condensate from PER 02 Well**	*Searipple condensate*	219,093 m^3	0.38% (833 m^3)	12 hours (BP < 180 °C)	66.5%	*NWS condensate*
				24 hours (180 °C < BP < 265 °C)	20.2%	
				Several days (265 °C < BP < 380 °C)	13%	
CS-03 **71-day uncontrolled subsurface LOWC of TPA (GWA) condensate from the TPA03 Well**	*TPA condensate*	56,441 m^3	0.8% of (451.5 m^3)	12 hours (BP < 180 °C)	65.9%	*NWS condensate*
				24 hours (180 °C < BP < 265 °C)	22.5%	
				Several days (265 °C < BP < 380 °C)	10.8%	
CS-04 **Vessel collision at Angel-3 well resulting in rupture of tank**	*MDO*	500 m^3	5% (25 m^3)	12 hours (BP < 180 °C)	6%	*Diesel Fuel Oil – Southern USA 1 (API 37.2°)*
				24 hours (180 °C < BP < 265 °C)	34.6%	
				Several days (265 °C < BP < 380 °C)	54.4%	

[2] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

[3] Modelling for GDA05 LOWC, 6 km from TPA03 well and within the same title (WA-5-L), was undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. TPA03 Well Intervention LOWC is expected to be circa 50% smaller (56,441 m^3) than the GDA05 LOWC volume (108,843 m3), has the same residue (0.8%), occurs in similar water depths and both over a 71-day release period. Given that TPA03 spill parameters and geographic location fall within the envelope of GDA05, the existing modelling is an appropriate surrogate and therefore additional modelling was not required.

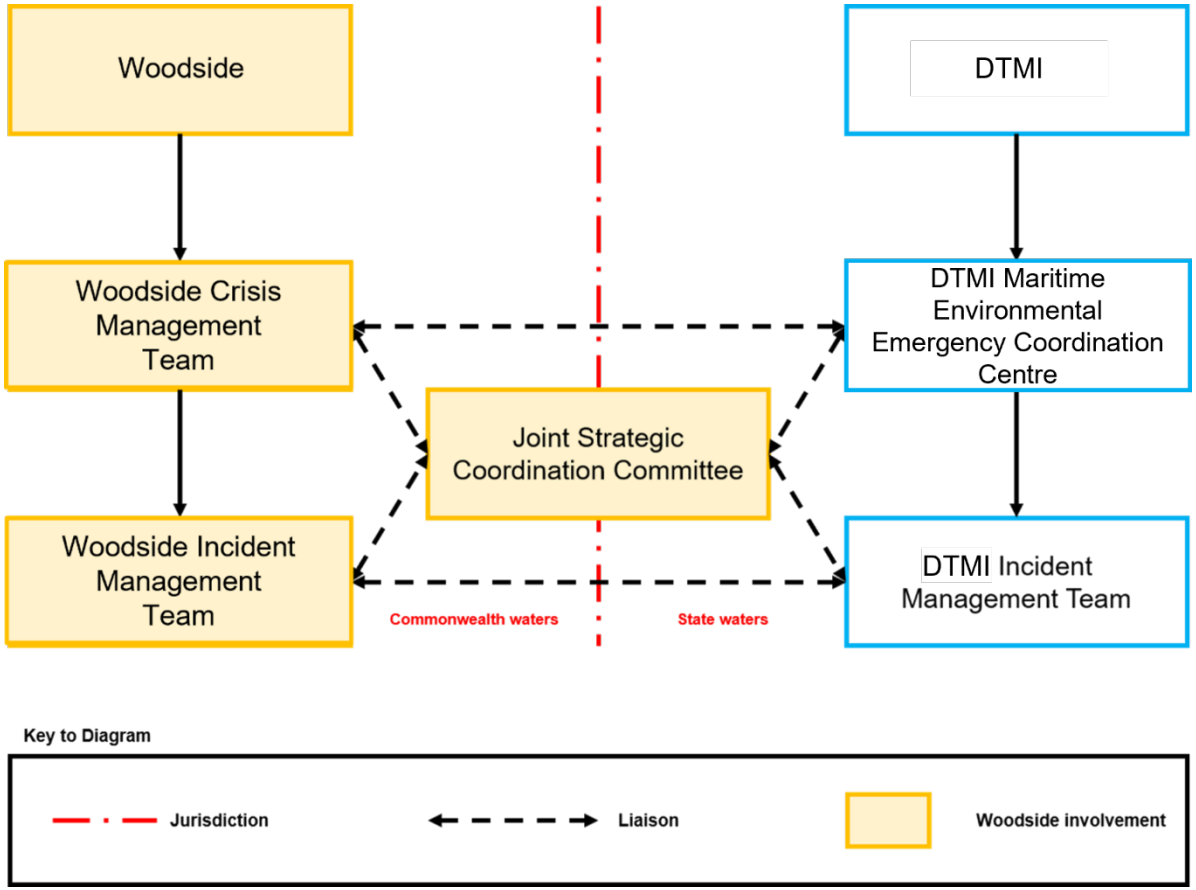
APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES[4]



The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).

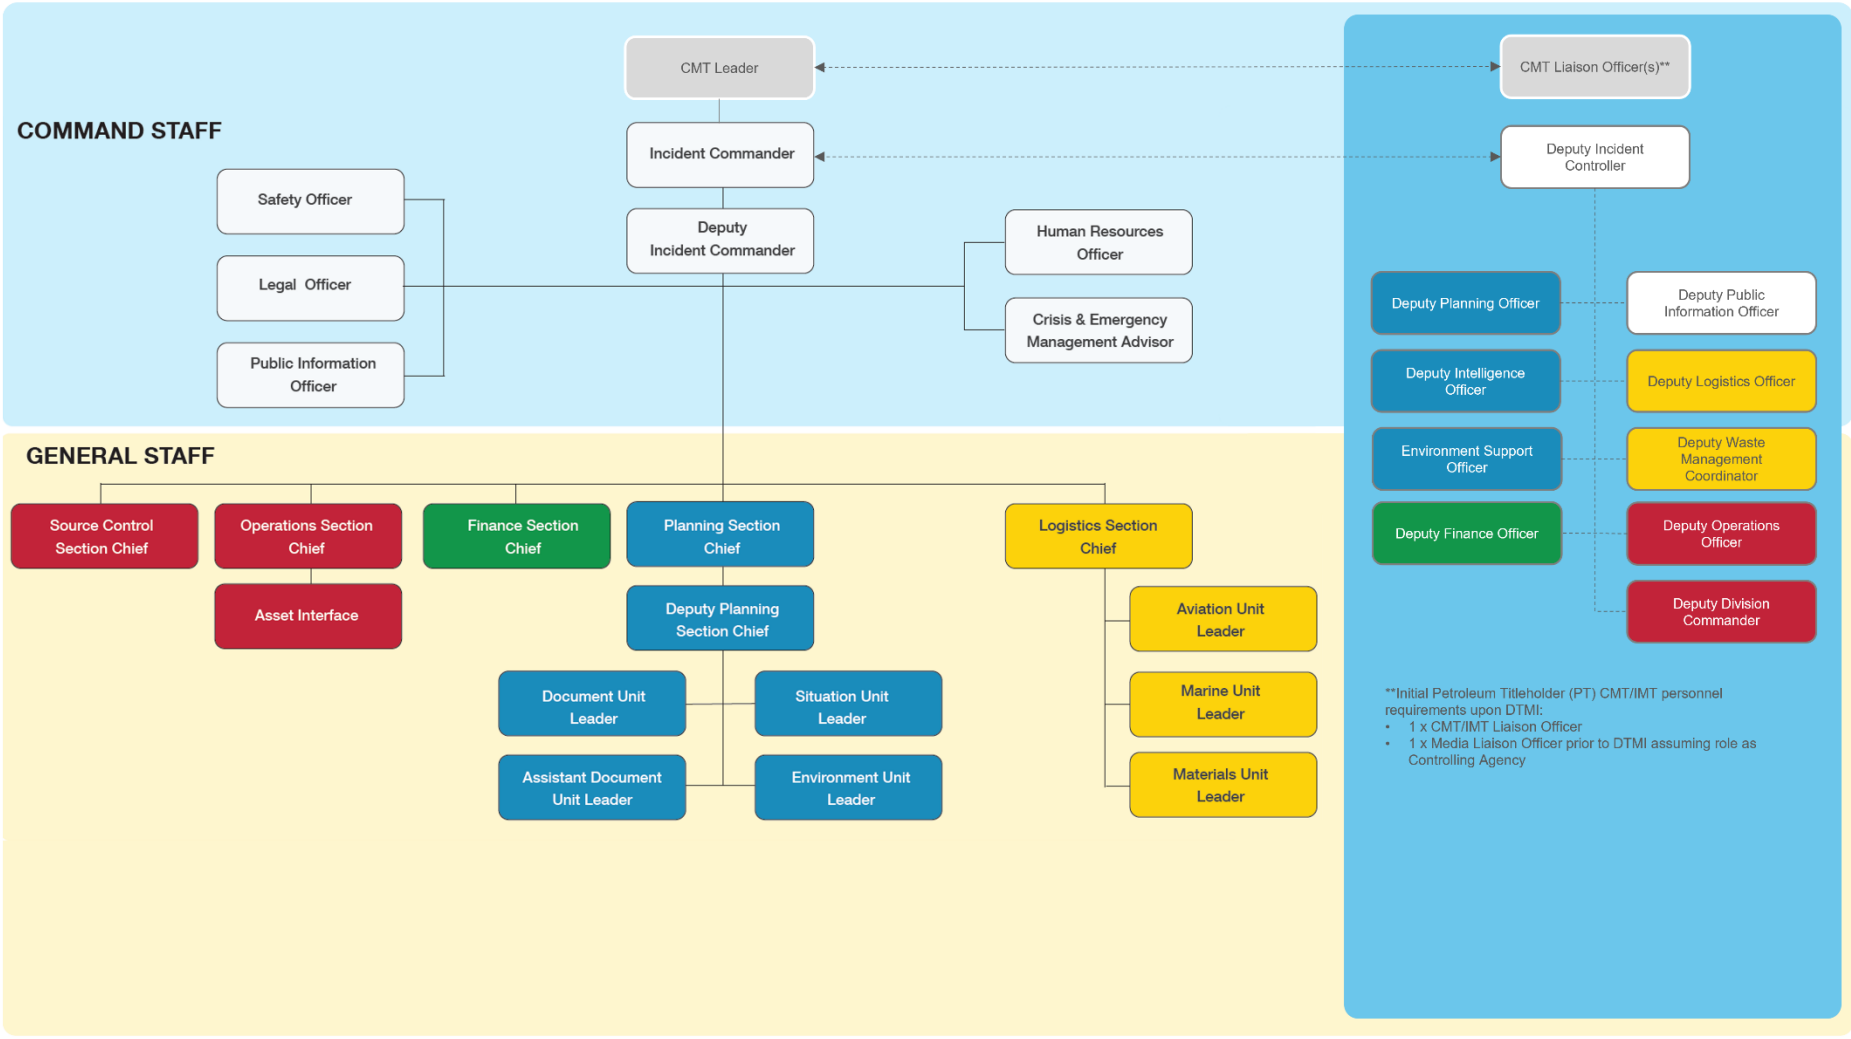
The Control Agency/ Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DTMI. DTMI will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

[4] Adapted from DTMI Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside Incident Management Structure for Hydrocarbon Spill (including Woodside Liaison Officers Command Structure within DTMI IMT if required) is shown below. Woodside's CIMT would operate from the Emergency Operations Centre (EOC) at the Woodside headquarters in Perth.



This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DTMI

In the event that DTMI is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DTMI IMT.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DTMI Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8 am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DTMI's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside personnel[5]	Key Duties	#
DTMI Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and SMPC. • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DTMI IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DTMI IMT. • Facilitate effective communications and coordination between the PT IC and the DTMI IC. • Offer advice to the DTMI IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DTMI IMT.	1
DTMI IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DTMI IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT. • Facilitate the provision of relevant mapping originating from the DTMI IMT to the PT IMT.	1
DTMI IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans.	1

[5] *These positions would be mobilised, in consultation with DTMI, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [10]*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[5]	Key Duties	#
			• Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. • Facilitate the provision of relevant environmental information and advice originating from the DTMI IMT to the PT IMT.	
DTMI IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	• As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. • Facilitate the provision of relevant IAP and sub plans from the PT IMT. • Assist in the interpretation of the PT OPEP from the PT. • Assist in the interpretation of the PT IAP and sub plans from the PT IMT. • Facilitate the provision of relevant IAP and sub plans originating from the DTMI IMT to the PT IMT. • Assist in the interpretation of the PT existing resource plans. • Facilitate the provision of relevant components of the resource sub plan originating from the DTMI IMT to the PT IMT. **(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)**	1
DTMI IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	• As part of the Public Information Team, provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information and Warnings team. • Offer advice to the DTMI Media Coordinator on matters pertaining to PT media policies and procedures. • Facilitate effective communications and coordination between the PT and DTMI Community Liaison teams. • Assist in the conduct of joint community briefings and events. • Offer advice to the DTMI Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. • Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT.	1
DTMI IMT Logistics	Deputy Logistic Officer	Deputy Logistics Section Chief	• As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. • Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. • Collects Request Forms from DTMI to action via PT IMT. **(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)**	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside personnel[5]	Key Duties	#
DTMI IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	• As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. • Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. • Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DTMI and to be charged back to the PT.	1
DTMI IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	• As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. • Facilitate effective communications and coordination between the PT Operations Section and the DTMI Operations Section. • Offer advice to the DTMI Operations Officer on matters pertaining to PT incident response procedures and requirements. • Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DTMI response efforts.	1
DTMI IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	• As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. • Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. • Collects Request Forms from DTMI to action via PT IMT.	1
DTMI FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	• As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. • Provide a direct liaison between the PT FOB and DTMI FOB. • Facilitate effective communications and coordination between the PT Division Commander and the DTMI Division Commander. • Offer advice to the DTMI Division Commander on matters pertaining to PT incident response policies and procedures. • Assist the Safety Coordinator deployed in the FOB in the performance of their duties, particularly as they relate to PT employees or contractors. • Offer advice to the Safety Coordinator deployed in the FOB on matters pertaining to PT safety policies and procedures.	1
			Total	11

APPENDIX G – DTMI LIAISON OFFICER RESOURCES TO WOODSIDE

Once DTMI activates a State waters/shorelines IMT, DTMI will make available the following roles to Woodside.

Area	DTMI Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DTMI Liaison Officer (prior to DTMI assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DTMI assumes Controlling Agency)	DTMI	• Facilitate effective communications between DTMI's SMPC/ Incident Controller and the Petroleum Titleholder's appointed CMT Leader / Incident Controller. • Provide enhanced situational awareness to DTMI of the incident and the potential impact on State waters. • Assist in the provision of support from DTMI to the Petroleum Titleholder. • Facilitate the provision technical advice from DTMI to the Petroleum Titleholder Incident Controller as required.	1
Woodside CIMT Public Information – Media	DTMI Media Liaison Officer	DTMI	• Provide a direct liaison between the PT Media team and DTMI IMT Media team. • Facilitate effective communications and coordination between the PT and DTMI media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DTMI Information & Warnings team. • Offer advice to the PT Media Coordinator on matters pertaining to DTMI and wider Government media policies and procedures.	1
			Total DTMI Personnel Initial Requirement to Woodside	2

APPENDIX I PROGRAM OF ONGOING ENGAGEMENT WITH TRADITIONAL CUSTODIANS

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Proposed Program of Ongoing Engagement with Traditional Custodians

This Program of Ongoing Engagement with Traditional Custodians ("Program") has been developed to demonstrate Woodside's commitment to ongoing engagement and support of Traditional Custodians' capacity to care for and manage Country, including Sea Country, and has been directly informed by Traditional Custodians' feedback regarding their capacity to engage and consult on Environment Plans.

It is a living document designed to evolve with ongoing consultation and feedback from Traditional Custodians and, at a minimum, will be subject to annual review. In addition to this Program, Woodside will continue to participate in, and support collective industry engagement with Traditional Owners on the development of a future, sustainable, industry wide Program. Through the Program, Woodside actively supports Traditional Custodians' capacity for, and involvement in, ongoing engagement and feedback on environment plans.

The Program has been developed so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the possible consequences of an activity to be carried out under an environment plan on their functions, interests and activities as they relate to cultural values. This feedback will be evaluated in conjunction with Traditional Custodians and, where necessary, avoidance or mitigation strategies in will be developed in collaboration with Traditional Custodians. How the Program is implemented with specific Traditional Custodians will depend on their stated needs and priorities

The Program is underpinned by Woodside's First Nations Communities Policy (woodside.com), the objective of which is to ensure Woodside partners and engages with First Nations communities to create positive economic, social and cultural outcomes that leave a lasting legacy. Woodside does this through building respectful relationships and partnerships with First Nations communities where we are active, in the areas where they are most interested in. We acknowledge the unique connection that First Nations communities have to land, waters and the environment.

The Program will include, as agreed with relevant communities, reasonable commitment to:

1. **Support for ongoing dialogue and engagement**

Woodside will support the capacity of Traditional Custodians to participate in ongoing dialogue and engagement about the environment plans and to enable the ongoing and future identification of cultural values potentially impacted by Woodside's activities. Woodside further commits to agreeing consultation protocols with individual Traditional Custodians to ensure the material provided is appropriate in level of detail such that the potential for cultural impact from Woodside activities can be determined and as required measures can be adopted to avoid or minimise impact.

In addition, Woodside will receive feedback on cultural values from an individual person or organisation that identifies as a Traditional Custodian, at any stage during the development and implementation of activities. This feedback will be evaluated, in conjunction with the Traditional Custodian individual or group and if required, control measures will put in place to avoid impacts to cultural values, or where avoidance is not possible, to minimise and mitigate the impacts to an acceptable level.

Where cultural values are identified post activity completion, any controls relevant to value management will be implemented during the next relevant activity.

2. Support for the identification and recording of cultural features

Woodside will support Traditional Custodians to record and articulate their Sea Country values and will invest in cultural assessments codesigned with Traditional Custodians, where required, to inform potential risks to cultural values from our petroleum activities.

This may include supporting cultural mapping by Traditional Custodians to identify and map significant cultural features including archaeological sites and other cultural values. The scoping of the mapping process will be codesigned with Traditional Custodians.

Woodside understands that cultural knowledge remains the intellectual property of Traditional Custodians and will agree with Traditional Custodians at the outset how that information from surveys will be used to feedback into and inform the environment plan's design and implementation.

In addition, Woodside applies the Cultural Heritage Management Procedure 2019, updated in 2023, to the Program which*:*

- provides a process for the identification, protection, and management of Cultural Heritage taking into account relevant standards, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the Charter for the Protection and Management of the Archaeological Heritage, the Convention for the Safeguarding of the Intangible Cultural Heritage, and the Convention on the Protection of the Underwater Cultural Heritage;
- applies to underwater cultural heritage and, consistent with current practice, provides for the commissioning of (where appropriate) both archaeological and ethnographic assessments of cultural values over the submerged landscape; and
- the process includes the following:
    - early engagement with relevant Traditional Custodians
    - identification of potential heritage, this could include desktop and field surveys undertaken with the Traditional Custodians.
- the development of cultural management strategies; and, where it is determined cultural heritage may be impacted, the development of Cultural Heritage Management Plans codesigned with Traditional Custodians and implemented by Woodside's First Nations team which:
    - focus on avoidance or minimisation of impacts; and
    - provide regular reviews and for inclusion of new information and further development of the Cultural Heritage Management Plan.

Woodside is committed to continue to receive feedback on cultural values for the life of an environment plan, the inclusion of new information and the development of avoidance or mitigation strategies in collaboration with Traditional Custodians. This information will be recorded via the Woodside Management of Knowledge Process and any potential impacts to the accepted Environment Plan evaluated via the Woodside Management of Change Process.

3. Building capacity for the ongoing protection of country

Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups. This is guided by Woodside's Indigenous Affairs Strategy 2019 ("Strategy"), which is designed to enable the building and maintaining of relationships with Traditional Custodians to leave a lasting legacy, including strengthening of Traditional Custodians' capacity to care for and manage Country, including Sea Country. The Strategy was developed with inputs from Traditional Custodians and contains four pillars that direct Woodside's social investment, policies relating to economic development, procurement and employment, and Woodside's agreement making and implementation of agreements. The pillars are:

1. Culture and Heritage Management: support social outcomes through protection, recognition and respect for culture and heritage;
2. Economic Participation: provide training, jobs, and business opportunities;

3. Capability and capacity: ensure strong corporate governance, leadership development and education initiatives to support self-determination; and
4. Safer and Healthier Communities: partner with Aboriginal people and service providers to maximise safer and healthier community outcomes.

Woodside is committed to an ongoing relationship between Woodside and the Traditional Custodian groups. Through consultation with Traditional Custodians Woodside will continue to:

- establish support for Indigenous ranger programs via social investment;
- establish support for Indigenous oil spill response capability via investigating training models;
- establish support for identification and recording of cultural values and the management of that information by Traditional Custodians;
- establish support for programs identified by the Traditional Custodians as important to them and as agreed by Woodside.

4. Support for capacity and capability in relation to governance

Pillar 3 of the Indigenous Affairs Strategy 2019 focuses on ensuring strong corporate governance, leadership development and education initiatives to support self-determination. To enable this, Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups, including in relation to governance and management systems.

The nature of this support will be informed by the individual needs of Traditional Custodian groups, but may include:

- funding or other support for community meetings, particularly where consultation with representative bodies lies outside of that body's core business and cultural authority or mandate needs to be secured,
- resourcing internal expertise so that information is managed consistently and internally, including ensuring appropriate record keeping of consultation to provide stakeholders with a lasting record of discussions, and
- development or upgrade of IT systems to manage information.

5. Program Reporting and Review of Effectiveness

Woodside will undertake an annual review of the Program to assess its effectiveness and adapt the Program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.
Progress of the Program will be reported annually in line with annual sustainability reporting via the Woodside website.

Search Criteria

59 Aboriginal Cultural Heritage (ACH) Register in Shapefile - NWS_Phase1PA_AdvertisingEMBA. Warning: Search area complex so results may be inaccurate. Contact DPLH for assistance.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Copyright

Copyright in the information contained herein is and shall remain the property of the State of Western Australia. All rights reserved. This includes, but is not limited to, information from the Register established and maintained under the *Aboriginal Heritage Act 1972*.

Location information data licensed from Western Australian Land Information Authority (WALIA) trading as Landgate. Copyright in the location information data remains with WALIA. WALIA does not warrant the accuracy or completeness of the location information data or its suitability for any particular purpose.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department..
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- **Culturally Sensitive Nature:**
  - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
  - **Men only:** Only *males* can view restricted information.
  - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.
Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

1. INTRODUCTION

1.1 OBJECTIVE

To provide guidance on the Australian regulatory framework as it applies to hydrocarbon spill response planning in Australian Commonwealth and State jurisdictions.

This document supports the implementation of mandates in the:

- Our Expectations - Hydrocarbon Spill
- Hydrocarbon Spill Planning Standard
- Hydrocarbon Spill Planning Work Instruction – Australia

1.2 APPLICABILITY

Anyone using, following, and applying the Hydrocarbon Spill Planning Work Instruction – Australia and for persons seeking to understand the Australia legislative framework.

2. LEGISLATIVE FRAMEWORK

Marine oil pollution emergency planning, together with supporting hydrocarbon response documents, is a requirement of an Environment Plan's (EP) implementation strategy. Woodside is required to meet the following applicable regulations and regulatory agencies, as appropriate to their statutory needs:

- National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA), in accordance with Regulation 22(3), Regulation 22(8) and Regulation 22(11) of the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations 2023 (Cth) (the OPGGS (E) Regulations), OPGGS (E) Regulations.
- Western Australian (WA) Department Mines, Petroleum and Exploration (DMPE), in accordance with the Petroleum and Geothermal Energy Resources (Environment) Regulations 2012 (WA).
- Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW) where the petroleum activity is required to satisfy a Ministerial Condition of approval.
- WA Department of Transport and Major Infrastructure (WA DTMI) as the Hazard Management Authority (HMA), in accordance with the Emergency Management Regulations 2006 (WA).
- Northern Territory Department of Environment, Parks and Water Security (NT DEPWS) as the HMA, in accordance with Section 9 of the Emergency Management Act 2013 and via the Territory Emergency Plan.
- Victorian Earth Resources Regulation (ERR) branch of the Department of Energy, Environment and Climate Action (DEECA) in accordance with the Victoria *Offshore Petroleum and Greenhouse Gas Storage Act 2010* and the Victoria *Offshore Petroleum and Greenhouse Gas Storage Regulations 2021*.

2.1 STATUTORY AND CONTROL AGENCY JURISDICTIONS

Woodside's facilities and permit areas are currently situated in Western Australian, Victorian, and Commonwealth waters. Depending on their location, these facilities and permit areas fall under various statutory jurisdictions[1] and nominated Control Agencies[2], as outlined in Table 1 and Figure 1 and Figure 2.

For oil and gas activities taking place in Commonwealth waters, the titleholder is the responsible Control Agency for all operational aspects of oil spill response. NOPSEMA is the jurisdictional authority with responsibility for regulating the titleholder's response to the incident (DISR, 2019).

2.1.1 Control Agency Transfer Protocols for Commonwealth Waters Response

In all instances of spills arising from Woodside's petroleum activities in Commonwealth waters, Woodside's response activities should be considered to be regulated by NOPSEMA and directed by the relevant activity-specific OPEP until such time as another control agency verifies its intention to stand up and assert control.

[1] A Statutory Authority is the agency with legislative responsibility to regulate the responsible party. The Statutory Authority oversees the response to hydrocarbon spills and may request the State or Commonwealth Control Agency to take control if deemed appropriate.

[2] The Control Agency is the agency assigned by legislation, administrative arrangements, or the relevant contingency plan to control response activities to a maritime environmental emergency. The Control Agency will have responsibility for appointing the Incident Controller (IC)

As a response grows in size and complexity, a range of other parties and agencies may become involved, either to meet legislative obligation or to provide support to a control agency. In all cases, for spills originating from Woodside assets and activities, Woodside will facilitate the provision of resources to the control agency for their use in mitigating the consequences of the spill.

The AMSA National Plan includes a guidance for change of control agencies to a third party and includes processes for:

- approval from the relevant jurisdiction, or relevant regulator within that jurisdiction
- planning for the transfer of control
- implementing a transfer arrangement.

The AMSA National Plan and supporting guidance (National plan supporting documents) provide for a jurisdiction to request that AMSA or another Control Agency assume operational control of an incident in exceptional circumstances.

Where a transfer of control is required, the Woodside Crisis Management Team Leader/ Corporate Incident Management Team Incident Commander will handover control in accordance with:

- the aforementioned guidance within the AMSA National Plan;
- the emergency and crisis management arrangements outlined in Section 5.5.2 and Section 5.5.3 of Woodside's Incident Management Team (Level 2) Guidance; and

in accordance with 'Transfer of Command' processes detailed in the Woodside Incident Management Handbook. The latest version of the incident action plan (IAP) will be shared with the external agency to assist the workflow.

2.1.2 Control Agency Transfer Protocols for State/Territory Waters/Shoreline Response

Where an incident arising from oil and gas activities impacts upon State or coastal waters, the relevant state or territory government may decide to assume the role of Control Agency (from the titleholder) for the elements of the response that take place within coastal waters and on the shoreline. Should this occur, there will be two Control Agencies, with the titleholder being the Control Agency for the response taking place in Commonwealth waters (under the guidance of NOPSEMA as jurisdictional authority – see Section 2.1) and the state or territory government as Control Agency for the response taking place in coastal waters.

Where a transfer of control is required, the Woodside Crisis Management Team Leader/ Corporate Incident Management Team Incident Commander will handover control in accordance with:

- the above guidance within the AMSA National Plan;
- the Incident Control Transfer Checklist (APPENDIX A) for incidents impacting Western Australia waters;
- the emergency and crisis management arrangements outlined in Section 5.5.2 and Section 5.5.3 of Woodside's Incident Management Team (Level 2) Guidance; and
- the 'Transfer of Command' processes detailed in the Woodside Incident Management Handbook.

The latest version of the incident action plan (IAP) will be shared with the external agency to assist the workflow.

The arrangements for incident control and handover of control to relevant Commonwealth/State/Territory agencies, if required, is shown Table 1.

Table 1: Statutory Authorities and Control Agencies relevant to Woodside activities

Location of Incident Response	Source	Statutory Authority	Control Agency[3]	
			Level 1	Level 2/Level 3
Commonwealth waters[4]	Offshore Petroleum Facility	NOPSEMA[5]	Titleholder (Woodside)	
	Shipping Sourced Spill	AMSA (& NOPSEMA)[6]	AMSA[7]	
State/ Territory waters/ shorelines [8]	Onshore Petroleum Facility	Port Authority	Titleholder (Woodside)	Port Authority[9]
	Terminals (WA Waters)	WA DMPE	Terminal Operator (Woodside)	Port Authority or WA DTMI
	Offshore Facility (State waters)	WA DTMI	WA DTMI	
		Vic DTP	Titleholder (Woodside)	DTP Victoria
	Shipping/Vessel Sourced Spill	WA DTMI	WA DTMI	
		Vic DTP / NT DEPWS	Vessel Owner	Vic DTP/ NT DEPWS
	Wildlife Response (Victoria)	DEECA	DEECA	
Port water (2)	Facility including subsea infrastructure within port limits	WA DTMI	Port Authority	Port Authority / WA DTMI
	Vessel in port limits	WA DTMI	Port Authority	Port Authority / WA DTMI
		Vic DTP / NT DEPWS	Port Authority	Vic DTP / NT DEPWS
JPDA waters	Vessels/ FPSO (in transit)	ANP[10]	AMSA	

[3] The Control Agency may request support from government and oil spill response organisations.
[4] Beyond 3 nm of the State/Territory sea baseline.
[5] NOPSEMA does not have the legislative function to perform the Control Agency role.
[6] If the Ship is a facility.
[7] Woodside (Titleholder) and the vessel owner may provide first strike response capabilities in the event of a spill under the direction of the Control Agency
[8] Within 3 nm of the State/Territory sea baseline.
[9] Port Authority may be required to respond initially as ‘‘First Response/Controlling Agency’ under State/Territory Hazard Plan or Oil Spill Contingency Plan arrangements.
[10] The JDPA does not have a Statutory Authority. The ANP is a Designated Authority, which regulates operations within the KDPA on behalf of both Australia and Timor Leste. The ANP is a Designated Authority, which regulates operations within the KDPA on behalf of both Australia and Timor Leste.

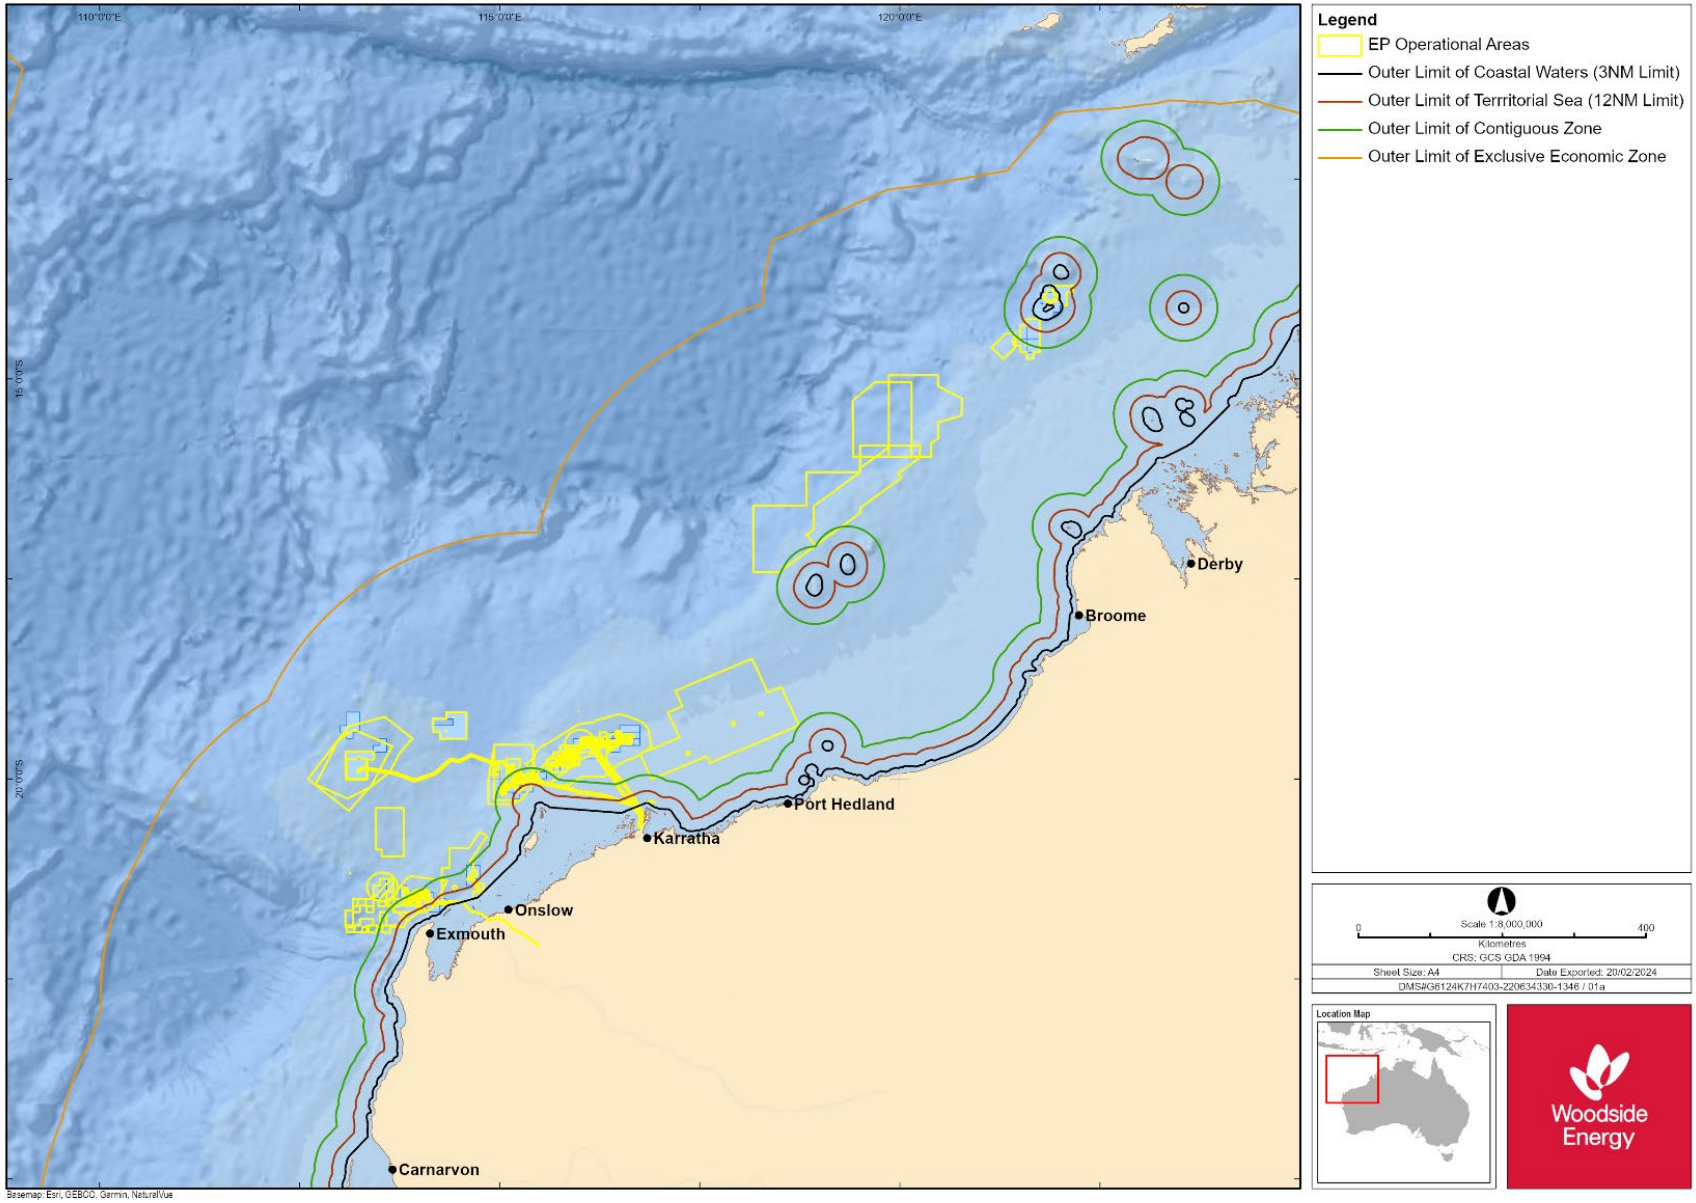

Figure 1: Western Australian oil pollution emergency jurisdictions in relation to key Woodside petroleum facilities

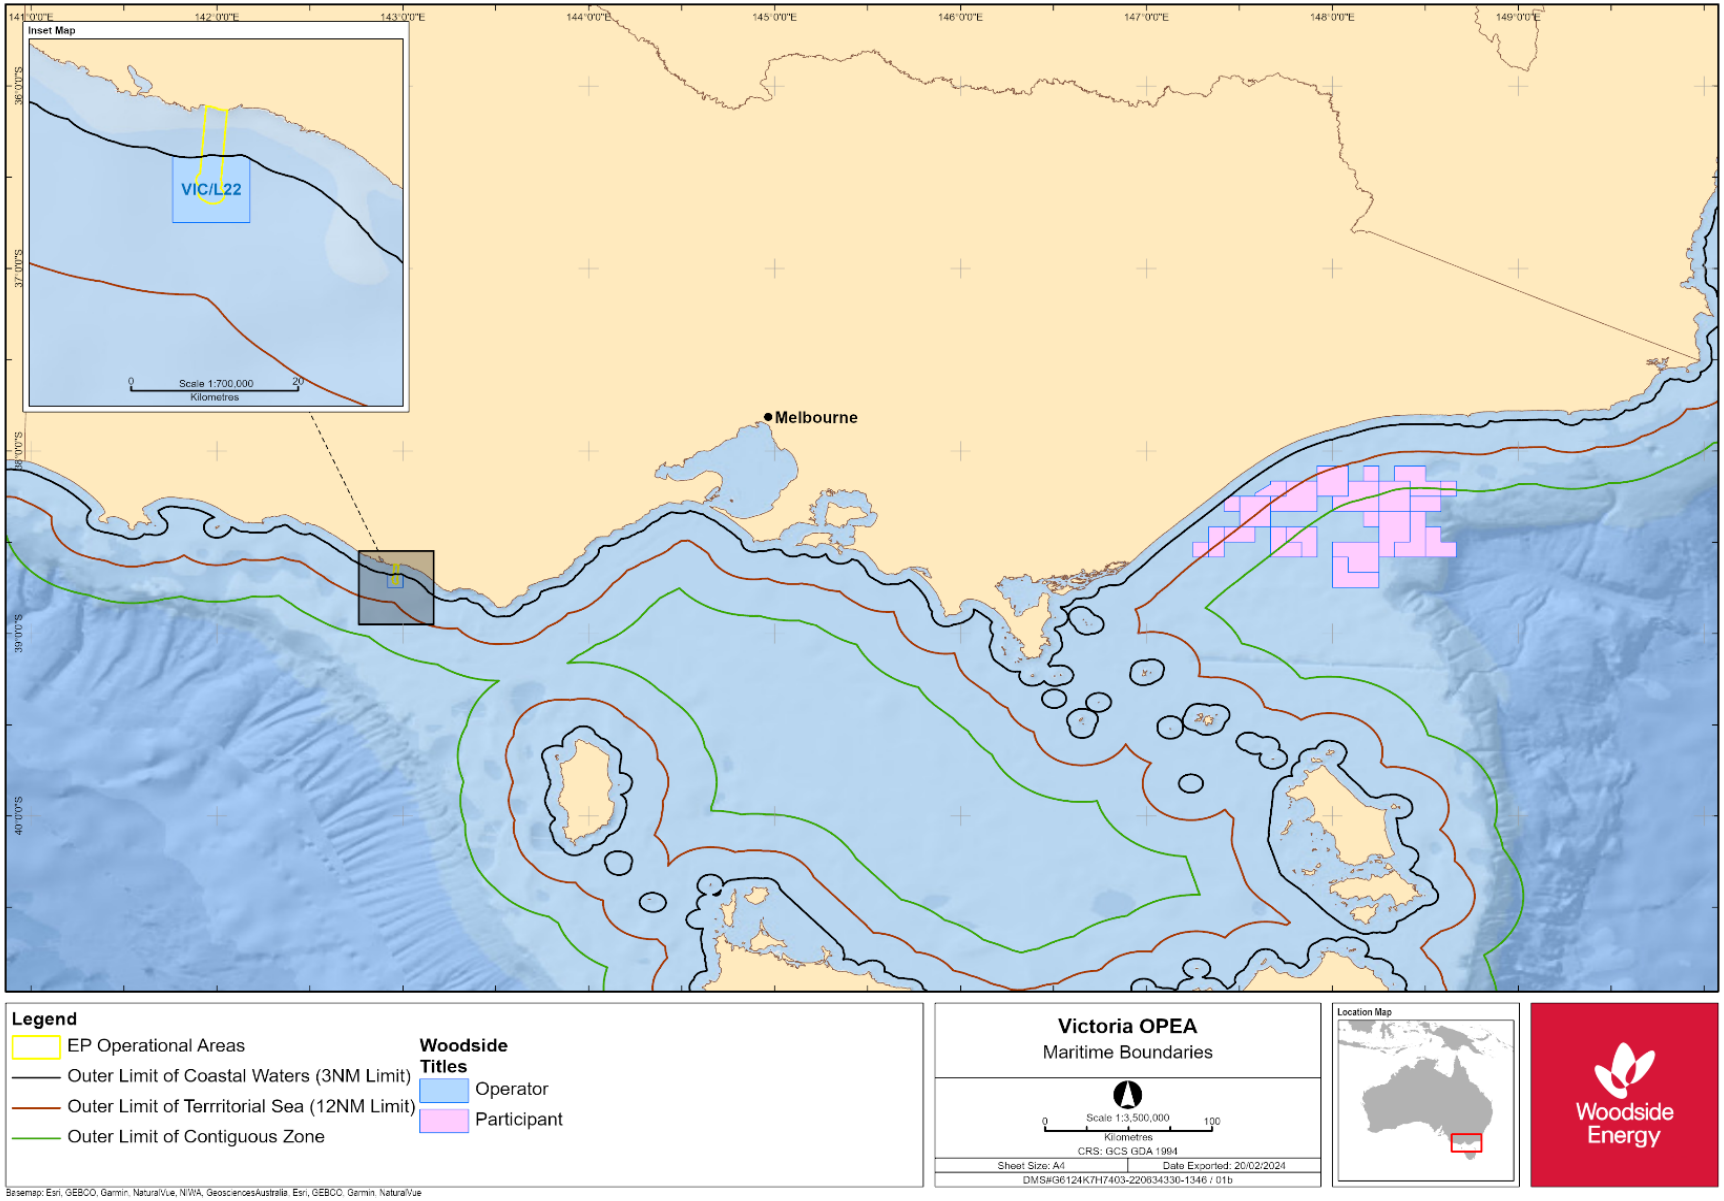

Figure 2: Victorian oil pollution emergency jurisdictions in relation to key Woodside petroleum facilities

2.2 INTERFACE WITH OTHER PLANS

Table 3 summarises how this document interfaces with the relevant hydrocarbon spill response plans of the Government and external agencies discussed within this section.

Table 2: Interface with other plans

Relevant Plans	Responsible Party	Main Content
National Plan for Maritime Environmental Emergencies (National Plan)	AMSA	The National Plan for Maritime Environmental Agencies provides a national system for responding promptly and effectively to marine pollution by hydrocarbons and other noxious and hazardous substances, by designating competent national and local authorities. The National Plan is responsible for maintaining: • a national contingency plan for preparedness and response • an adequate Level of pre-positioned marine pollution combat equipment and program for its use • a comprehensive national training program for personnel familiarisation • detailed state, local and industry contingency plans. The National Plan provides for AMSA to be the Australian Government's Control Agency in the event of vessel-based spills for the purposes of the National Plan.
State Hazard Plan: Maritime Environmental Emergencies (MEE)	WA DTMI	The State Hazard Plan for Maritime Environmental Emergencies (SHP-MEE) (the Plan) provides an overview of arrangements for the management of marine oil pollution and marine transport emergencies in Western Australia and contains information on prevention, preparedness, response and recovery. Collectively these two hazards are referred to as Maritime Environmental Emergencies. The Plan refers to a range of existing plans and documents relating to Maritime Environmental Emergencies but does not duplicate the information contained in these, instead providing directions to websites or other sources where further information can be obtained if required. The Director General, WA DTMI, is the Hazard Management Agency (HMA) for marine oil pollution and marine transport emergencies.
Broome Port Authority OSCP	BrPA	BrPA's OSCP is a sub-plan of the Port's ERP and is activated as the primary plan to combat pollution of the Port from oil. The ERP requires that all personnel who may be involved in the management of oil spills in the Port are conversant with the content of the National Plan. The current version of BrPA OSCP can be obtained from the BrPA Harbour Master.
Pilbara Ports' Port of Dampier Marine Pollution Contingency Plan	Pilbara Ports	The Pilbara Ports' Port of Dampier Emergency Response Plan (ERP) provides guidelines for actions to be taken during an emergency to minimise the potential for loss of life, injury to people, and damage to the environment and property by covering foreseeable incidents and outlining remediation. The latest versions of the Pilbara Ports' Port of Dampier ERP and the Marine Pollution Contingency Plan are available on the Emergency Preparedness and Response page of the Pilbara Ports' Port of Dampier website.
NT OSCP	NT DEPWS	NT DEPWS is responsible for the NT Oil Spill Contingency Plan, which supports the Territory Emergency Plan, and is the Hazard Management Agency (HMA) for marine oil pollution and marine transport emergencies.
Darwin Port Corporation Oil Spill Contingency Plan (DPC OSCP)	Darwin Port Corporation	The DPC OSCP sets out the response to spills of oil and hazardous and noxious substances within the Port of Darwin. This includes hydrocarbon spills from vessels or land based activities that enter Port waters. More information is available on the Emergency & Cyclone Plans page of the Darwin Port Authority website. The Port of Darwin Harbourmaster is the Incident Controller for all spills within the harbour.

Relevant Plans	Responsible Party	Main Content
AMOSPlan	AMOSC	AMOSPlan covers the spill response and training activities of AMOSC and the company- to- company mutual assistance arrangements administered by AMOSC. The AMOSPlan is underpinned by a Principal and Agency Agreement signed between AMOSC and each Participating Company that sets out the basis on which personnel and company-owned equipment can be loaned by each Company to AMOSC. A Master Services Contract is also signed between these parties. This contract also covers the entities of Member Companies. In the event that a company is involved in a hydrocarbon spill incident necessitating activation of its Contract, a supplementary Service Contract specifies the equipment and/or personnel to be hired. The specified equipment will vary depending on the nature and location of the oil spill incident. AMOSPlan is activated by a company when the response to an oil spill incident is regarded by the company as requiring resources beyond those of the company itself. The AMOSPlan also outlines the agreement between AMOSC and AMSA that enables AMSA to hire equipment and personnel from AMOSC on behalf of the National Plan. The AMOSPlan divides into several response regions with Mutual Aid Contacts (MACs) identified in each region.
Victorian State Emergency Management Plan (SEMP) State Maritime Emergencies (non-search and rescue)	Department of Energy, Environment and Climate Action (DEECA) Department of Transport and Major Infrastructure and Planning (DTP)	DEECA retains responsibility for titles administration, well integrity and environment within state water (located within 3 nautical miles of the Victorian coast). In accordance with the *Victorian Marine (Drug, Alcohol and Pollution Control) Act 1988 (the Act),* Emergency Management Act 2013 and the *Emergency Management Manual Victoria*, DTP is the control agency for marine pollution incidents in state waters, up to 3 NM offshore. The Maritime Emergencies (NSR) Subplan prescribes the emergency management arrangements for preparedness and response to marine pollution from vessel, offshore petroleum activities and other sources in state waters.

2.3 GOVERNMENT AND EXTERNAL AGENCIES

2.3.1 NOPSEMA

NOPSEMA is the Statutory Authority responsible for the oversight of response actions to pollution events from offshore petroleum activities in areas of Commonwealth jurisdiction. It administers the OPGGS (E) Regulations.

NOPSEMA has National Plan Statutory Responsibility for the offshore petroleum industry. During a spill incident, NOPSEMA's role will be to:

- Implement regulatory processes to monitor and secure compliance with the OPGGS(E) Regulations 2023 and the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (Cth) (the OPGGS Act), including issuing directions as required.
- Investigate accidents, occurrences, and circumstances involving deficiencies in environment management as required.
- Provide management, operational, technical, and environmental advice, as required to the Titleholder.

Although NOPSEMA is the Statutory Authority for hydrocarbon spill incidents from offshore petroleum activities, it does not have the legislative capacity to undertake the role of Control Agency and, as such, the Titleholder remains responsible (as Control Agency) for all Levels of hydrocarbon spill incidents from offshore petroleum activities. NOPSEMA will, however, provide support for a whole-of-government approach to incident coordination by providing advice and issuing directions to Titleholders and/or operators during an offshore petroleum incident.

2.3.2 Australian Maritime Safety Authority (AMSA)

AMSA is the national shipping and maritime industry regulator and was established under the Australian Maritime Safety Authority Act 1990 (Cth). AMSA manages the National Plan to Combat Pollution of the Sea

by Oil and other Noxious and Hazardous Substances on behalf of the Australian Government, working with State and the Northern Territory governments, emergency services, and private industry to maximise Australia's marine pollution response capability[11]..

Legislatively, AMSA is responsible for protecting the marine environment from pollution from vessels and other environmental damage caused by vessels. AMSA functions are to:

- combat pollution in the marine environment
- provide a search and rescue service
- perform other functions conferred on it by or under any other Acts.

As part of this national plan, a National Response Team (NRT) and the National Response Support Team (NRST) were established to provide support to control agencies in the event of a major marine oil pollution incident.

Each State/Territory is to nominate to AMSA suitably qualified personnel to fill designated roles, including:

- Planning Officer
- Operations Officer
- Logistics Officer
- Response Team Leader.

Each of these roles is filled in each State/Territory as part of the NRT.

AMSA is to be notified immediately through the Rescue Coordination Centre (RCC) of all ship-sourced incidents. When AMSA is the Control Agency, AMSA will assume control of the incident and respond in accordance with the AMSA's Marine Pollution Response Plan. AMSA's Marine Pollution Response Plan is the operational response plan for the management of vessel-sourced spills (as per Section 8 of the Memorandum of Understanding between Woodside and AMSA). AMSA is Control Agency for hydrocarbon spills, as per Table 1.

Woodside will undertake first strike response on behalf of AMSA for vessel-sourced spills, in line with the relevant Oil Pollution First Strike Plan.

For marine pollution incidents from offshore petroleum facilities arising in Commonwealth Waters where Woodside is the Control Agency, Woodside would enact its hydrocarbon spill arrangements per the activity-specific Oil Pollution First Strike Plan. For events requiring regional or national level support AMSA, as managers of the National Plan, will coordinate the resources under its direct control. This may include technical and response advice, services, equipment, personnel and contractors.

2.3.2.1 National Plan

The National Plan implements Australia's obligations as a State Party under the United Nation's Convention on the Law of the Sea 1982, the International Convention on Oil Pollution Preparedness, Response and Cooperation 1990, and the Protocol on Preparedness, Response and Cooperation to Pollution Incidents by Hazardous and Noxious Substances (HNS) 2000. AMSA works with the State/Northern Territory governments, emergency services, and private industry to maintain Australia's marine pollution response capability. Central to this capability is the Inter-Governmental Agreement on the National Plan that outlines AMSA and State/Northern Territory Government responsibilities.

As part of the National Plan, a Marine Pollution Controller will be appointed to an incident. As outlined within the National Plan, the duties of the appointed Marine Pollution Controller may include:

- Assisting the Control Agency with strategic communications, including:
  - primary spokesperson for the multi-agency response
  - primary point of contact for the briefing of government(s).
- Providing the common operating picture and situational awareness at the strategic Level.
- Strategic coordination, including:
  - resolution of strategic multi-jurisdictional policy and legislative issues on behalf of the Control Agency

[11] http://www.amsa.gov.au/forms-and-publications/Publications/national_plan.pdf

- facilitating collaboration between all parties and resolving multi-jurisdictional-agency conflicts
- facilitating national and international assistance through the National Plan and Australian Emergency Management arrangements.

2.3.2.2 AMSA equipment

AMSA maintains strategic equipment stockpiles of marine pollution response equipment around the Australian coastline. Stocks of dispersant are stored at these stockpiles as well as other key locations. Woodside may request access to these resources via AMOSC.

2.3.3 Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Under the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (the EPBC Act), actions that may have a significant impact on a matter of national environmental significance (MNES) require referral to the Australian Commonwealth Minister for Environment (the Minister). The Minister will decide whether assessment and approval is required under the EPBC Act.

Important for hydrocarbon spill response, an exemption from Part 3 of the EPBC Act was granted in March 2014 and remains in place for agencies acting in accordance with the National Plan. This exemption allows for the implementation of hydrocarbon spill response options, without the need for Part 3 approvals, provided that the actions taken are in accordance with the National Plan.

Although the use of chemical dispersant may be consistent with the National Plan, the dispersant type is required to be on the list of accepted National Plan Oil Spill Control Agents (OSCA list) or comply with the transitional arrangements for existing dispersants stocks accepted prior to 1 December 2012, in order for its use to be exempt from Part 3 of the EPBC Act.

An exemption from Part 13 of the EPBC Act was also granted in March 2014. Where response actions are taken in accordance with the National Plan, those actions are exempt from the Part 13 contraventions that would otherwise apply.

2.3.4 Port Authority Arrangements

Woodside operates out of several ports in the Australian states and territories. The Port Authorities house and maintain some oil spill equipment.

State/Territory authorities can also access the AMSA National Plan equipment for incident response if required.

Each Port Authority maintains its own OSCP as a subset of the State/Territory Plan. These plans are summarised in Table 3. Port Authorities may also be involved in the following tasks in relation to hydrocarbon spill preparedness:

- Operator training.
- Regular exercises (including deployment).
- Coordination of committees, such as quarterly meetings of the Dampier Port Authority Marine Oil Pollution (MOP) Committee of Port Users and the Regional Response Team, which is a collaboration between adjacent port authorities and ports (as defined by the Shipping and Pilotage Act 1967 (WA).
- Risk assessments.

2.3.4.1 AMOSC and AMOSPlan

AMOSC was established through the support of members of the Australian Institute of Petroleum (AIP), including Woodside. The Centre maintains a 24-hour stand-by status and can respond quickly to a major incident.

Arrangements between AMOSC and its participating members are outlined in a Master Services Contract signed between AMOSC and the participating Member Company. When activating AMOSC as a service (i.e. hydrocarbon spill response or training) a Service Contract is executed. Woodside also has contractual arrangements with the AMOSC to access the Australian Subsea First Response Toolkit (SFRT) equipment and dispersant stockpiles.

AMOSC administers the AMOSPlan, which outlines arrangements for mutual aid between members. Mutual aid support is available from the member companies of AMOSC and the AMOSC Core Group response team and may comprise response equipment and personnel employed by another AMOSC member company.

AMOSC Core Group members are a group highly skilled in the discipline of hydrocarbon spill response, which includes approximately 120 experienced member company personnel who can be made available to support and assist with spill response activities. The request for assistance is made directly between companies via each company-nominated Mutual Aid Contact (AMOSC should be consulted for the most up-to-date Mutual Aid Contacts). AMOSC will also activate the Service Contract of the lending company and will coordinate the signing of a Service Contract for the borrowing company or companies.

2.3.5 Western Australian Agency Arrangements and the WA Department of Transport and Major Infrastructure

The Emergency Management Act 2005 (WA) designates Agencies within the State as Statutory Authority for hazards. In Western Australia, the hazard management agency for Marine Oil Pollution is the WA DTMI.

Under the Act, the Statutory Authorities are required to produce and administer Plans for the hazards assigned to them.

They are responsible not only for the oversight of a response, but also for responding, should the party responsible for the spill not be able to control the situation.

For oil pollution to the marine environment in State waters/shorelines the WA DTMI has produced and administer the SHP-MEE.

In the event of a spill where Woodside is the responsible party and the spill may impact State waters/shorelines, Woodside will notify WA DTMI.

For all levels of spill in State waters/shorelines, WA DTMI is the Control Agency. WA DTMI will appoint an Incident Controller and form a separate Incident Management Team.

The WA DTMI coordinates the State Response Team (SRT). SRT is part of Western Australia's commitment to ensure the effective preparedness and response to marine pollution incidents. The SRT members are primarily frontline responders. Members of the team are from government agencies, port authorities, and industry, all of whom have a vested interest in marine oil pollution.

For any Level 2 or 3 Marine Oil Pollution (MOP) incident, Woodside will immediately notify WA DTMI and conduct initial response actions in State waters as directed and in accordance with the WA OSCP/ Oil Pollution Emergency Plan (OPEP). Woodside will continue to manage those operations at WA DTMI direction until formal incident control can be established by WA DTMI.

Initially, Woodside will be required to make available an appropriate number of suitably qualified persons to work in the WA DTMI Incident Management Team (IMT). WA DTMI's role as the Controlling Agency for spills in State waters/shorelines does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a Marine Oil Spill incident in State waters/shorelines, or to commence the initial response actions to a spill prior to WA DTMI establishing incident control in line with the WA DTMI Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements.

A list of roles and key duties for Woodside personnel working in the WA DTMI IMT and the response structure can be found in an approved Oil Pollution First Strike Plan on Corporate Hydrocarbon Spill SharePoint.

To assist WA DTMI in assuming formal incident control, the nominated WA DTMI Incident Controller will establish contact with the Woodside Incident Controller and work through the Controlling Agency Transfer Checklist at APPENDIX A.

Upon establishment of incident control by WA DTMI, Woodside will continue to provide planning and resources in accordance with their OSCP/OPEP. This will include response assets and contracts specified in the OSCP/OPEP, such as those pertaining to waste management, transport, and personnel, as well as response arrangements with the Australian Marine Oil Spill Centre (AMOSC) and other third-party responders.

In performing the Controlling Agency function, WA DTMI will use Woodside's approved/accepted OSCP/OPEP as a starting point for all aspects of a response. WA DTMI reserves the right to deviate from the OSCP/OPEP in circumstances where there is a justifiable cause, in consultation with Woodside.

By arrangement with WA DTMI, within designated port limits the relevant Port Authority is responsible for hydrocarbon spills in port waters.

In the case where a spill for which Woodside is responsible has, or will, enter State waters/shorelines, the WA DTMI will send a State Marine Pollution Coordinator (SMPC) Liaison Officer and a Media Liaison Officer to Woodside's CIMT. The role of the WA DTMI Liaison Officer will be to:

- Facilitate effective communications between WA DTMI's SMPC and Incident Controller and Woodside's appointed Crisis Management Team (CMT) Leader and CIMT Incident Commander.
- Provide enhanced situational awareness to WA DTMI of the incident and the potential impact on State waters.
- Assist in the provision of support from WA DTMI to Woodside.
- Facilitate the provision technical advice from WA DTMI to the Woodside Incident Controller as required.

Additional information on marine oil pollution coordination arrangements in WA State waters is included in Section 2.3.14.

2.3.6 WA Department of Water and Environment Regulation (DWER)

The DWER has responsibilities associated with State environmental regulation, approvals and appeals processes, and pollution prevention. The DWER primarily administers the Environmental Protection Act 1986 (WA).

The DWER's Pollution Response Unit has operational waste management responsibilities in accordance with the Environmental Protection Act 1986 (WA). This includes approving temporary waste storage areas. The DWER may send an Officer to a spill site and can provide an External Liaison role in Woodside's IMT.

The DWER Pollution Response Unit will be notified directly of any spill incident that requires temporary waste storage outside existing Woodside Lease boundaries.

2.3.7 WA Department of Biodiversity, Conservation and Attractions (DBCA)

The DBCA has responsibilities associated with wildlife and activities in national parks, reserves, and State marine parks.

The Biodiversity Conservation Act 2016 (WA) (which replaced the Wildlife Conservation Act 1950 (WA)) provides the Department of Parks and Wildlife (DPaW) with the responsibility and Statutory Authority to treat, protect, and destroy wildlife. The DPaW does not provide oiled wildlife operational response support. Industry is expected to have access to their own oiled wildlife capability.

DBCA, together with AMOSC, have developed the Western Australia Oiled Wildlife Response Plan (WAOWRP) and the Western Australia Oiled Wildlife Response Manual, which align with the SHP-MEE and address requirements for oiled wildlife response in both State and Commonwealth waters. The WAOWRP details the legislative responsibilities, relationships to other plans, roles and responsibilities, emergency management structure, and procedures for OWR.

2.3.8 Northern Territory Arrangements

Authority for the regulation of marine pollution, powers of investigation, and appointment of authorised officers in the Northern Territory (NT) is derived from the *Marine Pollution Act, 1999* (NT) (the Act). NT DEPWS is responsible for administering the Act.

The Territory Emergency Plan (TEP) describes the NT emergency management principles for response and recovery operations, and the control and coordination roles and responsibilities across multiple hazards.

The TEP is established by the *Emergency Management Act, 2013* (NT) (EM Act) and administered by the Department of Police, Fire and Emergency Services (PFES). Administrative authority for the TEP is held by the Territory Emergency Controller. The NT OSCP is listed as a hazard-specific emergency plan within the TEP.

NT DEPWS is the Hazard Management Authority and is responsible for maintaining currency of the NT OSCP and providing strategic oversight and technical advice for marine oil spill incidents.

Where Woodside believes a spill may cross into Territory coastal waters, Woodside will notify NT DEPWS.

2.3.9 Northern Territory Environment Protection Authority (NT EPA)

The NT EPA is an independent corporation established under the Northern Territory Environment Protection Act 2019. The NT EPA is responsible for regulatory services to provide for effective waste management, pollution control and sustainable practices. The NT EPA will be informed verbally and by email as soon as practicable via notification through a 24-hour pollution hotline and email, in the event of a hydrocarbon spill which is predicted to enter NT coastal waters.

2.3.10 Northern Territory Department of Environment, Parks and Water Security (NT DEPWS)

The NT DEPWS is the regulatory authority responsible for protecting the NT's environment and natural resources while providing advice and support to enable the responsible use and development of the Territory's land and waters within three nautical miles of the coastline. NT DEPWS will be responsible for wildlife response if a spill tracks towards NT coastal waters. NT DEPWS will also provide advice on waste management and clean-up of NT shorelines, if required.

2.3.11 Victorian Arrangements

In accordance with *Victorian Marine (Drug, Alcohol and Pollution Control) Act 1988* (the Act), *Emergency Management Act 2013* and the Emergency Management Manual Victoria, Department of Transport and Major Infrastructure and Planning (DTP) is the control agency for marine pollution incidents in state waters, up to three nautical miles offshore.

The State Controller Maritime Emergencies (SCME) has overall responsibility for ensuring there is an adequate response to a marine pollution incident in state waters; this includes marine pollution arising from a petroleum activity originating in either state or Commonwealth waters. In these circumstances, the provision of an adequate response will be primarily achieved through the coordinated employment of the titleholders' resources. Department of Energy, Environment and Climate Action (DEECA) retains responsibility for titles administration, well integrity, and environment within state waters.

In the event of a marine pollution incident originating in Commonwealth waters that impacts or threatens Victorian state waters, DTP assumes jurisdictional control for such incidents within coastal waters (only) from a state consequence management perspective.

2.3.12 Victoria Department of Transport and Major Infrastructure and Planning (DTP) & State Controller Maritime Emergencies (SCME)

The Victorian DTP is the regulatory authority responsible for Level 2 and Level 3 marine pollution incidents in coastal waters, up to three nautical miles from land.

The SCME has overall responsibility for ensuring there is an adequate response to a marine pollution incident in state waters; this includes marine pollution arising from a petroleum activity originating in either state or Commonwealth waters. During an actual or impending marine (petroleum) pollution incident in state waters, the SCME provides overall strategic management of the response and executive level support and guidance to the Incident Controller. DTP's Resilience and Emergency Coordination (REC) team assists the SCME and the DTP to fulfil their statutory obligations in response to a marine pollution incident in state waters.

2.3.13 Australian Government Coordination Arrangements for Maritime Environmental Emergencies

2.3.13.1 Purpose

The purpose of the Australian Government Coordination Arrangements for Maritime Environmental Emergencies (Coordination Arrangements) (NP-GUI-020) is to provide a framework for the coordination of Australian Government departments and agencies to respond to a maritime environmental emergency.

2.3.13.2 Objectives

The objectives of the Coordination Arrangements are to:

- provide whole-of-government management of maritime environmental emergencies
- establish the roles and responsibilities of Australian Government departments and agencies in the management of maritime environmental emergencies

- protect the strategic interests and reputation of the Australian Government
- provide for the effective and timely briefing, reporting and engagement across the Australian Government and to the community
- coordinate the commitment of the Australian Government's resources to combat a maritime environmental emergency.

2.3.13.3 Scope

Maritime Environmental Emergencies

The Coordination Arrangements apply to all maritime incidents as defined by the National Plan for Maritime Environmental Emergencies.

Geographic Scope

This includes incidents occurring:

- within the Commonwealth marine area
- on the High Seas or within the marine area of a neighbouring country and that has the potential to impact the interests of the Australian Government or
- within the jurisdiction of a state or the Northern Territory and has the potential to impact the interests of the Australian Government.

The Coordination Arrangements may also be applied through the National Plan within the jurisdiction of a state or Northern Territory for significant incidents that require the support of the Australian Government.

Relevant supporting and legal arrangements are detailed within Sections 1.4 and 1.5 of the Coordination Arrangements.

2.3.13.4 Governance

The Coordination Arrangements work within the governance arrangements of the National Plan for Maritime Environmental Emergencies (the National Plan). Under the National Plan, sit a number of Committees, including the Australian Government National Plan Committee (AGNPC), which is responsible for ensuring Australian Government departments and agencies are prepared to respond to maritime environmental emergencies. Figure 3 describes the Governance model.

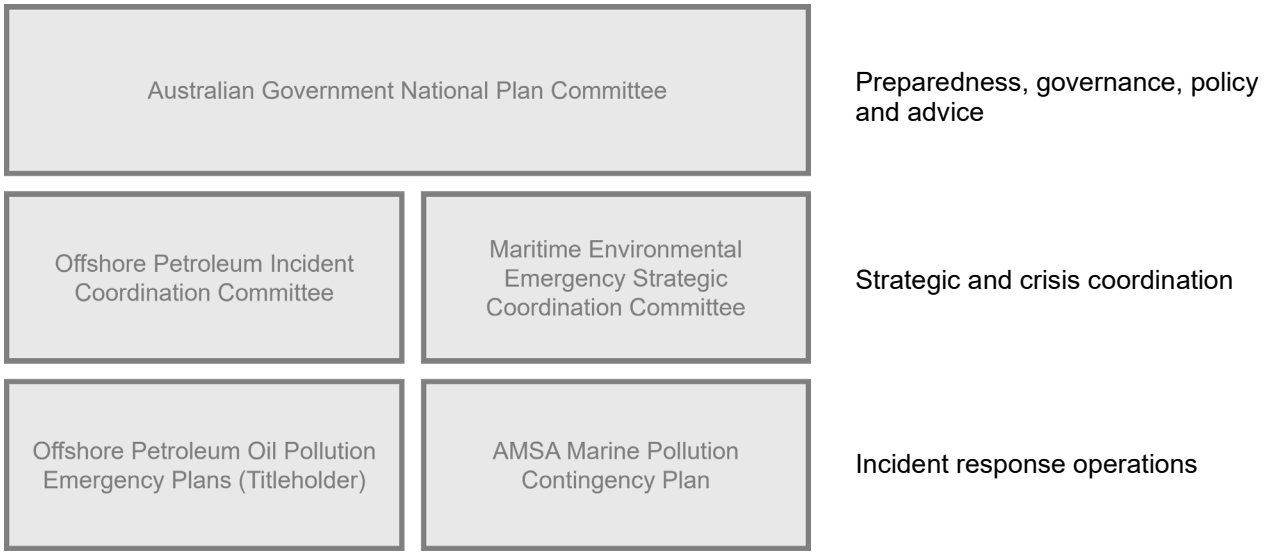

Figure 3: Governance model for the Australian Government Coordination Arrangements

2.3.13.5 Incident management

The Coordination Arrangements address three areas of response to a maritime environmental emergency:

- strategic and crisis coordination
- emergency response
- recovery.

They do not replace existing plans and response systems but help to draw them into a single coordinated framework.

2.3.13.6 Strategic Coordination

Strategic and crisis coordination, within the context of these Arrangements, refers to bringing together Australian Government departments and agencies to manage the strategic and reputational interests of the Government as well as effectively and efficiently resource operational responses to incidents where relevant. This may include:

Australian Government Crisis Management Framework – The Australian Government Crisis Management Framework (AGCMF) defines the Australian Government's approach to crisis management. The Framework outlines Ministers and senior official's roles and responsibilities when preparing for, responding to and recovering from crisis, and sets out the arrangements that link ministers and the work of key officials, committees and facilities. For a maritime environmental emergency, this Framework stipulates that the Australian Government Coordinating Agency will be the Department of Industry, Science and Resources (DISR). A key responsibility of this agency is harnessing capabilities and resources in line with coordination requirements from within the portfolio, and from other agencies when portfolio-managed options are insufficient which, for a maritime environmental emergency, may include requesting Australian Government (AMSA) support with National Plan resources if required.

Maritime Emergency Strategic Coordination Committee – A Maritime Emergency Strategic Coordination Committee (MESCC) may be formed in the event of a significant maritime incident involving a ship within the Commonwealth marine area, or where the Australian Government is supporting a state or Northern Territory under the National Plan arrangements. The MESCC is led by AMSA and is constituted by the membership of the AGNPC.

Offshore Petroleum Incident Coordination Committee – An Offshore Petroleum Incident Coordination Committee (OPICC) (see additional detail in Section 2.3.13.7) may be formed in the event of a significant offshore petroleum incident in Commonwealth waters, as set out in the AGCMF and Offshore Petroleum Incident Coordination Framework. OPICC draws together expertise and capability from across government to guide a coordinated Commonwealth Government strategic response to an offshore petroleum incident in Commonwealth waters. In these circumstances, DISR is the lead Commonwealth agency providing support to OPICC as the primary mechanism to facilitate coordinated strategic leadership.

Incidents involving offshore petroleum activities and ships – Offshore petroleum activities are regulated by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA). If an event occurs in Commonwealth waters that incorporates both a significant offshore petroleum incident and a maritime environmental emergency involving a ship, together DISR/ NOPSEMA and Department of Infrastructure, Transport, Regional Development, Communications, Sport and the Arts (DITRDCSA)/ AMSA will make an early decision on whether the OPICC will manage the Commonwealth Government's involvement and coordination, or the Maritime Emergency Strategic Coordination Committee will manage the incident.

Figure 4 outlines the AGCMF arrangements and the intersect with the MESCC and OPICC.

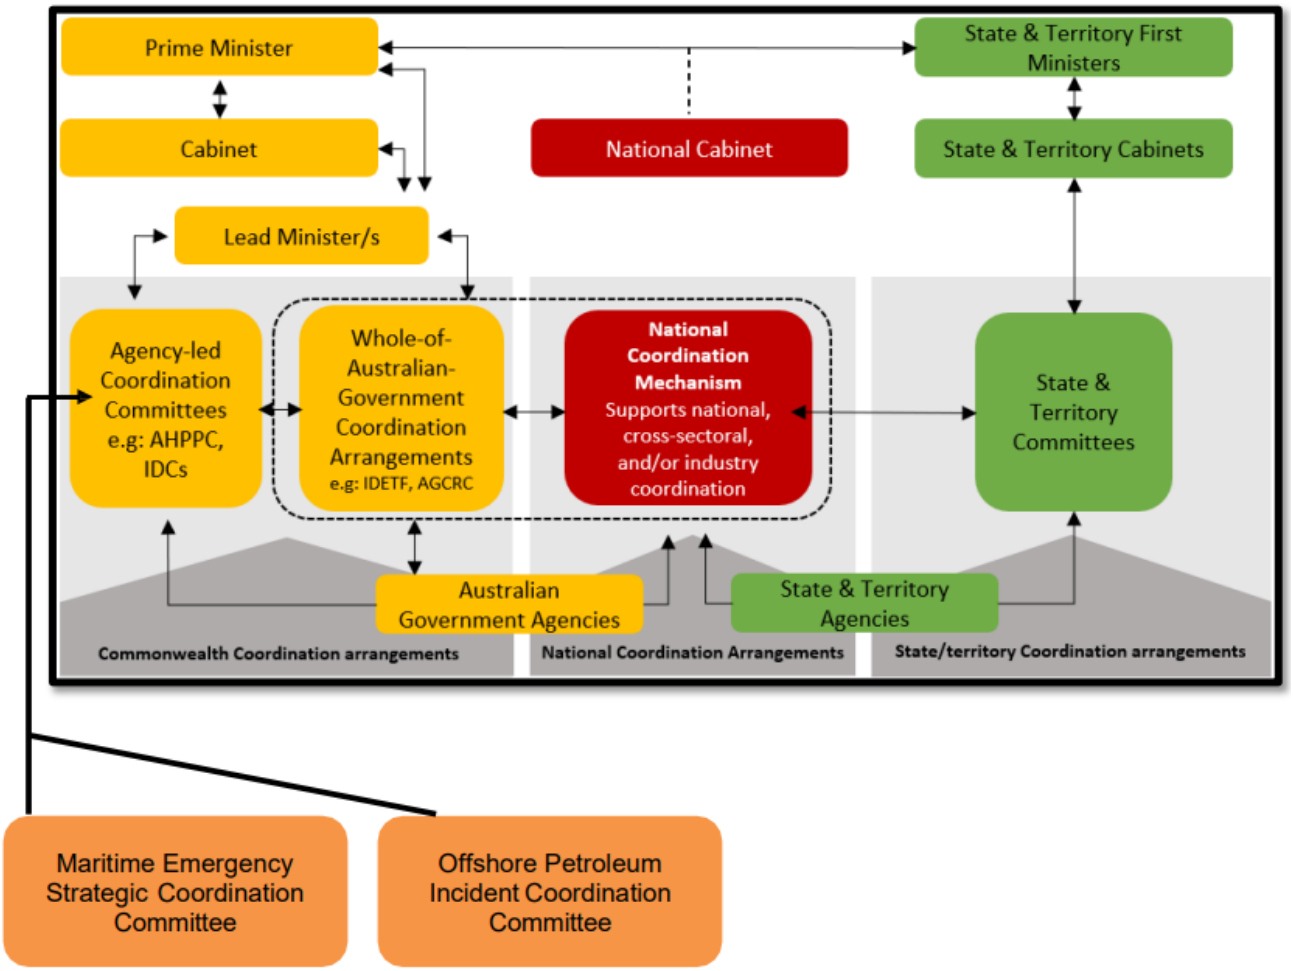

Figure 4: The Australian Government Crisis Management Framework and the intersect with the Maritime Emergency Strategic Coordination Committee and Offshore Petroleum Incident Coordination Committee[12]

2.3.13.7 Offshore Petroleum Incident Coordination Committee

The purpose of the Offshore Petroleum Incident Coordination Committee (OPICC) is to draw together expertise and capability from across government to guide a coordinated Commonwealth Government response to a significant offshore petroleum incident in Commonwealth waters. Significant Incident Arrangements are defined in the Offshore Petroleum Incident Coordination Framework.

The OPICC is not responsible for leading the operational response to an incident and does not have decision-making powers to allocate funding to any activities occurring in response to a significant incident

The OPICC has the following responsibilities:

- **Situational awareness**: provide an accurate and unified picture of the significant incident and the Commonwealth Government's, state and territory governments' and industry's capacity to respond
- **Advice**: inform and align advice to ministers, through portfolio agencies, on the status of the incident and possible response option
- **Public information**: ensure a coordinated approach to communications management to support consistent messaging
- **Leadership**: provide strategic direction from the Commonwealth Government during and following an incident
- **Assistance**: liaise with the titleholder to provide advice on Commonwealth Government capabilities and regulatory processes
- **Evaluation**: to monitor and evaluate the effectiveness of the OPICC's activities in relation to public and ministerial expectations

[12] Australian Government Coordination Arrangements for Maritime Environmental Emergencies (June 2024) (NP-GUI-020)

OPICC composition

The OPICC is activated by the Chair, the General Manager of the Offshore Strategy Branch, DISR.

Members include senior representatives from relevant Australian Government agencies, State/Territory Government(s) impacted or potentially impacted by the significant incident, and industry representatives where appropriate.

The composition of the OPICC may vary and will be determined by the Chair depending on the nature of the significant incident. Agencies central to the OPICC include:

- DISR (Chair)
- NOPSEMA
- AMSA
- DITRDCSA

Other agencies may be included in the OPICC as needed.

Trans-national incidents

In accordance with Coordination of International Incidents: Notification Arrangements Guidance (NP-GUI-007), in the event a pollution incident is affecting or is likely to affect another country, the Control Agency (in the case of pollution from a ship or unknown source) will contact the Department of Foreign Affairs and Trade (DFAT) as soon as practicable through the contact point advised by DFAT.

In the event a pollution incident originates from an offshore facility, DISR will contact DFAT as soon as practicable through the contact point advised by DFAT.

In relation to pollution of the marine environment occurring from petroleum activities in the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) in the Timor Sea:

a. The operator will inform the Autoridade Nacional do Petroleo (ANP) (as the Designated Authority for the JPDA, in its delegated capacity as the regulator on behalf of the Timor-Leste and Australian Governments) and may also inform the Australian Government.

b. If informed of such an incident, DISR will contact DFAT as soon as practicable.

c. Should DFAT become aware of such an incident, DFAT will notify DISR.

d. In the event that a pollution incident occurs within Australian waters and the pollution may spill into the JPDA, DISR, through the Australian Joint Commissioner, will notify the Timor-Leste Government through the Timorese Joint Commissioner, in addition to notifying DFAT.

Woodside's response operations across trans-national boundaries will be determined in conjunction with DFAT and in consultation with local authorities.

2.3.14 Western Australia Coordination Arrangements for Maritime Environmental Emergencies

Marine oil pollutions incidents originating from offshore petroleum activities that impact State Waters require a high level of coordination between WA DTMI (see Section 2.3.5), the Australian Government (see Section 2.3.13) and the respective Petroleum Titleholder. The interrelationships between Commonwealth, State/ Territory and industry are illustrated in Figure 5. Response by WA DTMI as HMA and Controlling Agency, and relevant obligations for the Petroleum Titleholder, are detailed in Section 2.3.5.

To facilitate effective coordination between the two Controlling Agencies and their respective IMT's, a Joint Strategic Coordination Committee (JSCC) will be established. The JSCC will be jointly chaired by the SMEEC and the Petroleum Titleholder's nominated Crisis Management Team (CMT) Leader and will comprise of individuals deemed necessary by the chairs to ensure an effective coordinated response across both jurisdictions. As the relevant Jurisdictional Authority in Commonwealth Waters, NOPSEMA may opt to participate in the JSCC as they see fit.

Key functions of the JSCC include:

- Ensuring that the key objectives set by multiple IMTs in relation to the marine oil pollution incident are consistent and focused on achieving an effective coordinated response.
- De-conflicting competing priorities between multiple IMTs.
- De-conflicting competing requests for resources between the multiple IMTs, including those managed by AMSA, such as national stockpile equipment, dispersant aircraft, and the National Response Team.

- Resolution of significant strategic issues as they arise during the incident response.
- Ensuring that there is a single shared understanding of the concept of operations for the response and resolution of any controversial actions.
- Ensuring that there is a shared understanding of the incident situation and its meaning among all key stakeholders.
- Ensuring there is agreement on how information is communicated to the public, particularly those issues that have actual or perceived public health implications.
- Ensuring adequate coordination and consistency is achieved in relation to access and interpretation of intelligence, information, and spill modelling to promote a common operating picture.

It is important to note that the JSCC is a committee, not a team operating from a specified location. The JSCC will be administered by the Controlling Agency.

In WA waters, the inaugural JSCC meeting will be convened by the SMPC, once both the Petroleum Titleholder and WA DTMI formally assume the role of Controlling Agency.

Additional information on the role of WA DTMI as Controlling Agency for spill arising in or impacting WA State waters is provided in Section 2.3.5.

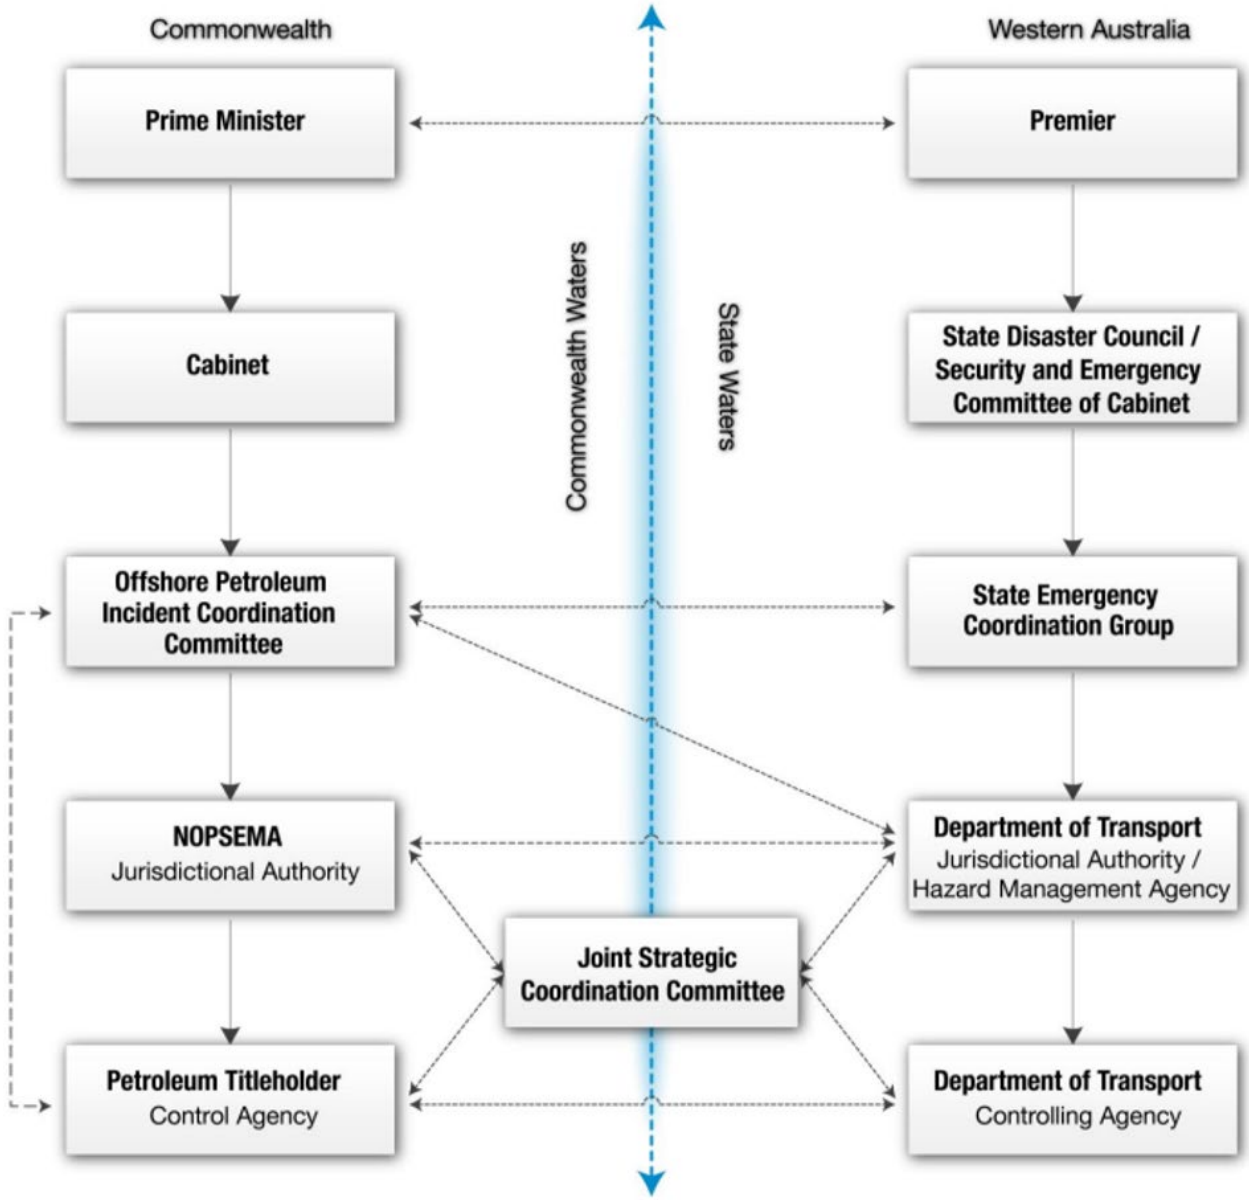

Figure 5: Overall Coordination Arrangements – Cross Jurisdiction[13]

[13] WA Department of Transport and Major Infrastructure Offshore Petroleum Industry Guidance Note - Marine Oil Pollution: Response and Consultation (July 2020)

APPENDIX A – WESTERN AUSTRALIA DEPARTMENT OF TRANSPORT AND MAJOR INFRASTRUCTURE INCIDENT CONTROL TRANSFER CHECKLIST

☐	Confirm date and time of formal transfer of Incident Control in State Waters
☐	Confirm respective Incident Controller lines of communication arrangements (including exchange of Liaison Officers in IMT.
☐	Confirm respective On-Scene Commander lines of communication arrangements (including exchange of Liaison Officers in FOB)
☐	Confirm the location of any Woodside FOB and Staging Areas.
☐	Confirm the details of all current response operations being conducted by Woodside in State Waters
☐	Confirm the composition and status of all response resources, both personnel and equipment, currently being controlled by Woodside that relate to response operations in State Waters.
☐	Confirm the composition and status of all response resources, both personnel and equipment that has been mobilised by Woodside and in transit to the spill site that will contribute to future response operations in State Waters.
☐	Confirm the composition and status of all response resources, both personnel and equipment that is in the process of being mobilised by Woodside to contribute to future response operations in State Waters.
☐	Confirm current level of incident and the predicted level in the future
☐	Confirm existence and adherence to an OPEP/OSCP and secure a copy for the relevant OPEP/OSCP plan, EP and OSMP.
☐	Secure a copy of the current Situation Report and incident prognosis.
☐	Secure a copy of the Product Material Safety Data Sheet (MSDS)
☐	Notification of significant Safety Risks
☐	Secure a copy of the latest spill trajectory modelling
☐	Secure a copy of the latest actual spill monitoring and surveillance information.
☐	Confirm GIS lines of communication arrangements
☐	Secure a copy of the current IAP as it relates to State Waters response operations specifically the details of all immediate and future response operations planned by Woodside in State waters.
☐	Secure a copy of the most recent media statements.
☐	Secure a summary of all community / stakeholder engagement activities undertaken to date and those planned in the immediate future that pertain to state waters impact.
☐	Confirm deployment of initial Woodside personnel to DoT IMT and DoT FOB
☐	Reconfirm date and time of formal transfer of Incident Control in State Waters
DoT Incident Controller_____ Date_____ Time_____

4. DEFINITIONS

Term	Meaning
Control Agency	The agency or company assigned by legislation, administrative arrangements or within the relevant contingency plan, to control response activities to a maritime environmental emergency.
First Strike	The prompt initial response to a spill by a Control Agency or on behalf of a control agency (i.e. by a Person in Charge (PIC) or Vessel Master) to protect the environment and is intended to limit the effect of an incident, until such time as other supporting resources can be deployed.
Support Agency	An agency or company that provides essential services, personnel, material or advice in support of the Control Agency during the response to a maritime environmental emergency.
Statutory Authority	An agency authorised by law to enforce legislation on behalf of the relevant country or state.

5. ABBREVIATIONS

Abbreviation	Term
AEP	Australian Energy Producers
AGCMF	Australian Government Crisis Management Framework
AGNPC	Australian Government National Plan Committee
AIP	Australian Institute of Petroleum
AMOSC	Australian Marine Oil Spill Centre
AMOSPlan	A voluntary oil industry mutual aid plan intended to supplement the National Plan, administered by Australian Institute of Petroleum through AMOSC.
AMSA	Australian Maritime Safety Authority
ANP	Autoridade Nacional do Petróleo e Minerais – Timor-Leste National Petroleum Authority (Designated Authority of the JPDA)
BrPA	Broome Port Authority
CIMT	Corporate Incident Management Team
CMT	Crisis Management Team
DBCA	Department of Biodiversity, Conservation and Attractions (Western Australia)
DEECA	Victorian Department of Energy, Environment and Climate Action
DEPWS	Northern Territory Department of Environment, Parks and Water Security
DISR	Department of Industry, Science and Resources
DITRDCSA	Department of Infrastructure, Transport, Regional Development, Communications, Sport and the Arts
DMPE	Western Australian Department Mines, Petroleum and Exploration
DTP	Victorian Department of Transport and Major Infrastructure and Planning
DWER	Western Australian Department of Water and Environment Regulation

EM Act	Emergency Management Act (Northern Territory)
EPA	Environmental Protection Authority
ESC	Environmental Scientific Coordinator
EP	Environment Plan
ERR	Victorian Earth Resources Regulation
ERP	Emergency Response Plans
FOB	Forward Operations Base
FPSO	Floating Production, Storage and Offloading Vessel
FSP	Oil Pollution First Strike Plan
GIS	Geographical Information System
HMA	Hazard Management Agency
IC	Incident Controller
IGA	National Plan Inter-Governmental Agreement
IMT	Incident Management Team
JPDA	Joint Petroleum Development Area
JSCC	Joint Strategic Coordination Committee
MACs	Mutual Aid Contacts (under AMOSPlan)
MEE	Maritime Environmental Emergencies
MESCC	Maritime Emergency Strategic Coordination Committee
MNES	Matter of National Environmental Significance
MOP	Marine Oil Pollution
MoU	Memorandum of Understanding
MSDS	Material Safety Data Sheet
NEMO	National Environmental Maritime Operations System
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NRT	National Response Team
NRST	National Response Support Team
NT EPA	Northern Territory Environment Protection Authority
National Plan	National Plan for Maritime Environmental Emergencies
OPEP	Oil Pollution Emergency Plan
OPGGS	Offshore Petroleum and Greenhouse Gas Storage
OPICC	Offshore Petroleum Incident Coordination Committee

OSCA	Oil Spill Control Agent
OSCP	Oil Spill Contingency Plan
OSR	Oil Spill Response
OWR	Oiled Wildlife Response
PFES	Police, Fire and Emergency Services (Northern Territory)
PT	Petroleum Titleholder
RCC	Rescue Coordination Centre (AMSA)
SMPC	State Maritime Pollution Coordinator
SHP-MEE	State Hazard Plan – Maritime Environmental Emergencies
TEP	Territory Emergency Plan (Northern Territory)
WA DTMI	Western Australian Department of Transport and Major Infrastructure
WA DTMI OSCP	Western Australian Department of Transport and Major Infrastructure Oil Spill Contingency Plan
WAOWRP	Western Australia Oiled Wildlife Response Plan
