Table of contents

1. Introduction 15
1.1 Overview 15
1.2 Purpose of the Environment Plan 15
1.3 Environment Plan summary 15
1.4 Description of the titleholder 16
1.5 Structure of the Environment Plan 17
1.6 Details of titleholder and nominated liaison 20
1.6.1 Titleholders 20
1.6.2 Nominated liaison 20
1.6.3 Arrangements for notifying of change 20
1.7 Woodside Management System 20
1.7.1 Environment and Biodiversity Policy 22
1.8 Description of relevant requirements 22
1.8.1 Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGS Act) 22
1.8.2 Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) 23
1.8.2.1 Recovery plans and threat abatement plans 23
1.8.2.2 Australian Marine Parks 23
2. Environment Plan process 25
2.1 Overview 25
2.2 Environmental impact and risk management methodology 25
2.3 Environment Plan process 25
2.4 Establish the context 26
2.4.1 Activity description 26
2.4.2 Existing environment description 26
2.4.3 Relevant requirements 26
2.4.3.1 Legislation and other requirements 26
2.4.3.2 Internal context 26
2.4.3.3 External context 27
2.5 Impact and risk management 27
2.5.1 Impact and risk identification and analysis 27
2.5.1.1 Decision support framework 28
2.5.1.2 Control measures (hierarchy of controls) 30
2.5.2 Impact and risk classification 31
2.5.2.1 Impact classification 31
2.5.2.2 Risk classification 31
2.6 Impact and risk evaluation 33
2.6.1 Demonstration of as low as reasonably practicable (ALARP) 33
2.6.2 Demonstration of acceptability 33
2.7 Recovery plan and threat abatement plan assessment 34
2.8 Environmental performance outcomes, standards and measurement criteria 34
2.9 Implement, monitor, review and reporting 35
3. Description of the activity 36
3.1 Overview 36
3.2 Project overview 36

3.3 Location 37
3.4 Operational Areas 39
3.5 Timing 39
3.6 Survey vessels 39
3.6.1 Other support 40
3.7 Survey activities 40
3.7.1 Geophysical surveys 40
3.7.1.1 Multibeam echo sounder 41
3.7.1.2 Side scan sonar 41
3.7.1.3 Magnetometer 42
3.7.1.4 Sub bottom profiler 42
3.7.1.5 Geophysical equipment deployment 42
3.7.2 Geotechnical survey 44
3.7.2.1 Penetration testing 44
3.7.2.2 Cored borehole 45
3.7.2.3 Piston core sampling 47
3.7.2.4 Box core sampling 48
4. Description of the existing environment 50
4.1 Overview 50
4.2 Regional context 51
4.3 Matters of national environmental significance (MNES) 52
4.4 Physical environment 53
4.5 Habitats and biological communities 54
4.6 Protected species 56
4.6.1 Fish, sharks and rays 58
4.6.2 Marine reptiles 61
4.6.3 Marine mammals 66
4.6.4 Seabirds and migratory shorebirds 72
4.6.5 Seasonal sensitivities for protected species 79
4.7 Key ecological features 80
4.8 Protected places 81
4.9 Cultural features and heritage values 83
4.9.1 Background 83
4.9.2 First Nations peoples 84
4.9.3 Coastally adjacent First Nations groups 85
4.9.3.1 Marine parks 87
4.9.4 Sea Country values 88
4.9.4.1 Desktop assessment of Sea Country values 89
4.9.4.2 First Nations archaeological heritage assessment 97
4.9.4.3 Consultation feedback to inform existing environment 98
4.9.5 Further context: intangible cultural heritage 110
4.9.5.1 Songlines 110
4.9.5.2 Creation/dreaming sites, sacred sites and ancestral beings 110
4.9.5.3 Cultural obligations to care for Country 110
4.9.5.4 Knowledge of Country/customary law and transfer of knowledge 111
4.9.5.5 Connection to Country 111

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.5.6 Access to Country 111
4.9.5.7 Restriction on access to Country 111
4.9.5.8 Kinship systems and totemic species 111
4.9.5.9 Resource collection 111
4.9.6 Further context: marine ecosystems and species 111
4.9.6.1 Marine mammals 111
4.9.6.2 Marine reptiles 112
4.9.6.3 Fish 112
4.9.6.4 Natural environment interests 112
4.9.7 Historic sites of significance 113
4.9.8 Underwater heritage 113
4.9.9 World, national and Commonwealth heritage listed places 113
4.10 Socio-economic environment 114
4.10.1 Commercial fisheries 114
4.10.2 Traditional fisheries 118
4.10.3 Tourism and recreation 119
4.10.4 Commercial shipping 119
4.10.5 Oil and gas 120
4.10.6 Submarine communications infrastructure 122
4.10.7 Defence 122
5. Consultation 124
5.1 Summary 124
5.2 Consultation – general context 125
5.3 Identification of relevant persons for consultation 129
5.3.1 Regulations 25(1)(a), (b) and (c) 129
5.3.2 Identification of relevant persons under Regulations 25(1)(a), (b) and (c) 129
5.3.3 Regulation 25(1)(d) 130
5.3.4 Identification of relevant persons under Regulation 25(1)(d)) 130
5.3.5 Regulation 25(1)(e) 136
5.3.6 Identification of relevant persons under Regulation 25(1)(e) 136
5.3.7 Persons or organisations Woodside chooses to contact 136
5.3.8 Assessment of relevant persons for the proposed activity 136
5.4 Consultation material and timing 136
5.4.1 Sufficient information 137
5.4.2 Reasonable period for consultation 140
5.4.3 Discharge of Regulation 25 141
5.5 Context of consultation approach with First Nations 141
5.5.1 Approach to methodology − Woodside's interpretation of Tipakalippa Appeal 141
5.5.2 Consultation method 142
5.5.3 Identification of relevant persons 144
5.5.4 Opportunity to self-identify and identifying other individuals 145
5.5.4.1 Sufficient information 146
5.5.4.2 Reasonable period for consultation 146
5.5.4.3 Discharge of Regulation 25 146
5.6 Providing feedback and assessment of merit of objections or claims 146
5.7 Ongoing consultation 147

6. Environmental impact and risk assessment, performance outcomes, standards and measurements criteria 148
6.1 Overview 148
6.2 Cumulative impacts 151
6.3 Geophysical and Geotechnical Survey Program presentation 151
6.4 Potential environment risks not included within the scope of the Environment Plan 153
6.4.1 Bunkering 153
6.4.2 Underwater noise emissions from helicopters and remotely operated vehicles 153
6.4.3 Indirect impacts 153
6.5 Planned activities (routine and non-routine) 154
6.5.1 Physical presence: interference with or displacement of third-party vessels 154
6.5.2 Physical presence: disturbance to seabed from geotechnical and geophysical surveys 160
6.5.3 Routine acoustic emissions: generation of noise from project vessels 165
6.5.4 Routine acoustic emissions: generation of noise from geophysical and geotechnical survey equipment 173
6.5.5 Routine light emissions: external lighting on survey vessels 184
6.5.6 Routine atmospheric and greenhouse gas emissions from fuel use 192
6.5.7 Routine and non-routine discharges to the marine environment: survey vessels 196
6.6 Unplanned activities (accidents, incidents, emergency situations) 204
6.6.1 Accidental hydrocarbon release: vessel collision 204
6.6.2 Physical presence: vessel collision with marine fauna 217
6.6.3 Physical presence: disturbance to seabed from dropped objects and equipment loss 221
6.6.4 Unplanned discharges: loss of solid hazardous and non-hazardous wastes/equipment 225
6.6.5 Unplanned discharges: deck, subsea spills from geotechnical and geophysical equipment 228
6.6.6 Physical presence: introduction of invasive marine species 232
6.7 Recovery plan and threat abatement assessment 238
6.8 First Nations cultural features and heritage values assessment 252
7. Implementation strategy 264
7.1 Overview 264
7.2 Systems, practice and procedures 264
7.2.1 Assessment of project fluids 264
7.2.1.1 Ecotoxicity 265
7.2.1.2 Biodegradation 265
7.2.1.3 Bioaccumulation 266
7.2.1.4 Alternatives 266
7.2.1.5 Decision 266
7.3 Roles and responsibilities 266
7.4 Frontline Offshore Seabird Management Plan 270
7.5 Unexpected Finds Procedure 270
7.6 Training and competency 271
7.6.1 Overview 271
7.6.2 Inductions 271
7.6.3 Geophysical and Geotechnical Survey Program specific environmental awareness 272
7.6.4 Management of training requirements 272
7.7 Monitoring, auditing, management of non-conformance and review 272
7.7.1 Monitoring 272
7.7.1.1 Source-based impacts and risks 272

1. INTRODUCTION

1.1 Overview

Woodside Energy Ltd (Woodside), as titleholder under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Commonwealth) (referred to as the Environment Regulations), proposes to conduct a series of geotechnical and geophysical surveys which will collectively form the Geophysical and Geotechnical (GPGT) Survey Program.

The GPGT Survey Program is proposed to be undertaken to support future activities within the titles listed in Table 1-1, including the Goodwyn A (GWA) infill development, plug and abandonment activities at various wells, and future exploration activities for greenhouse gas activities and petroleum activities.

Table 1-1: Permit areas where the proposed Geophysical and Geotechnical (GPGT) Survey Program is planned

Operational Area A	Operational Area B	Operational Area C

WA-56-L	WA-2-L	WA-4-L
WA-57-L		WA-9-L
WA-58-L		WA-16-L
WA-23-L		WA-11-L
WA-24-L		G-10-AP
WA-5-L		
WA-6-L		

1.2 Purpose of the Environment Plan

In accordance with the objectives of the Environment Regulations, the purpose of this Environment Plan (EP) is to demonstrate that:

- the potential environmental impacts and risks (planned (routine and non-routine) and unplanned) that may result from the GPGT Survey Program are identified
- appropriate management controls are implemented to reduce impacts and risks to a level that is 'as low as reasonably practicable' (ALARP) and acceptable
- the GPGT Survey Program is carried out in a manner consistent with the principles of ecologically sustainable development (ESD) (as defined in Section 3A of the Commonwealth *Environment Protection and Biodiversity Conservation (EPBC) Act 1999*).

1.3 Environment Plan summary

Table 1-2 summarises the content of this EP, as required by Regulation 35(7).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 1-2: Environment Plan (EP) summary

EP summary material requirement	Relevant section of this EP containing EP summary material
The location of the activity	Section 3.3
A description of the existing environment	Section 4
A description of the activity	Section 3
Details of the environmental impacts and risks	Section 6
The control measures for the activity	Section 6
The arrangements for ongoing monitoring of the titleholder's environmental performance	Section 7.7
Response arrangements in the oil pollution emergency plan	Section 7.11
Consultation already undertaken and plans for ongoing consultation	Section 5
Details of the titleholder's nominated liaison person for the activity	Section 1.6.2

1.4 Description of the titleholder

Woodside will be conducting the GPGT Survey Program on behalf of the Woodside titleholders and joint venture participants with interests in up to 14 petroleum titles and one greenhouse gas title. The details of the titles, titleholders and joint venture participants are detailed Table 1-3.

Table 1-3: Titleholder details relevant to the GPGT Survey Program

Operational Area	Permit areas	Operator/Woodside titleholder	Joint Venture participants

Woodside's mission is to deliver affordable energy solutions and superior outcomes for stakeholders by being society's trusted energy partner. Woodside's strategy is to provide the low cost, lower carbon energy our world needs. We have significant opportunities to prosper and grow. Our three pillars, oil, gas and new energy, each have a role to play in our future. Wherever Woodside works, it is committed to living its values of one team, we care, innovation, results matter, and we build and maintain trust.

Since 1984 the company has been operating the landmark Australian project, the North West Shelf (NWS) and it remains one of the world's premier liquefied natural gas (LNG) facilities. In 2012, Woodside added the Pluto LNG Plant to its onshore operating facilities.

Further information about Woodside can be found at http://www.woodside.com.

1.5 Structure of the Environment Plan

The EP has been structured to reflect the process and requirements of the Environment Regulations, as outlined in Table 1-4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 1-4: EP process phases, applicable Environment Regulations and relevant section of EP

Criteria for acceptance	Content requirements/relevant regulations	Elements	Section of EP
Regulation 34(a): is appropriate for the nature and scale of the activity	Regulation 21: • Environmental Assessment Regulation 22: • Implementation strategy for the environment plan Regulation 24: • Other information in the environment plan	The principle of 'nature and scale' applies throughout the EP	Section 2 Section 3 Section 4 Section 5 Section 6 Section 6.8
Regulation 34(b): demonstrates that the environmental impacts and risks of the activity will be reduced to as low as reasonably practicable Regulation 34(c): demonstrates that the environmental impacts and risks of the activity will be of an acceptable level	Regulation 21(1)–21(7): • 21(1) Description of the activity • 21(2)(3) Description of the environment • 21(4) Requirements • 21(5) and (6) Evaluation of environmental impacts and risks • 21(7) Environmental performance outcomes and standards Regulation 24(a)–24(c): • A statement of the titleholder's corporate environmental policy • A report on all consultations between the titleholder and any relevant person	Set the context (activity and existing environment) Define 'acceptable' (the requirements, the corporate policy, relevant persons) Detail the impacts and risks Evaluate the nature and scale Detail the control measures – ALARP and acceptable	Section 1 Section 2 Section 3 Section 4 Section 5 Section 6 Section 6.8
Regulation 34(d): provides for appropriate environmental performance outcomes, environmental performance standards and measurement criteria	Regulation 21(7): • Environmental performance outcomes and standards	Environmental Performance Objectives (EPOs) Environmental Performance Standards (PSs) Measurement Criteria (MC)	Section 6
Regulation 34(e): includes an appropriate implementation strategy and monitoring, recording and reporting arrangements	Regulation 22: • Implementation strategy for the environment plan	Implementation strategy, including: • systems, practices and procedures • performance monitoring • Oil Pollution Emergency Plan (OPEP) and operational and scientific monitoring • ongoing consultation.	Section 6.8

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Criteria for acceptance	Content requirements/relevant regulations	Elements	Section of EP
Regulation 34(f): does not involve the activity or part of the activity, other than arrangements for environmental monitoring or for responding to an emergency, being undertaken in any part of a declared World Heritage property within the meaning of the EPBC Act	Regulation 21(1) to 21(3): • 21(1) Description of the activity • 21(2) Description of the environment • 21(3) Without limiting [Regulation 21(2)(b)], particular relevant values and sensitivities may include any of the following: – (a) the world heritage values of a declared World Heritage property within the meaning of the EPBC Act; – (b) the national heritage values of a National Heritage place within the meaning of that Act; – (c) the ecological character of a declared Ramsar wetland within the meaning of that Act; – (d) the presence of a listed threatened species or listed threatened ecological community within the meaning of that Act; – (e) the presence of a listed migratory species within the meaning of that Act; – (f) any values and sensitivities that exist in, or in relation to, part or all of: – (i) a Commonwealth marine area within the meaning of that Act; or – (ii) Commonwealth land within the meaning of that Act.	No activity, or part of the activity, undertaken in any part of a declared World Heritage property	Section 3 Section 4 Section 6
Regulation 34(g): (i) the titleholder has carried out the consultations required by Section 25 (ii) the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate	Regulation 25: • Consultation with relevant authorities, persons and organisations, etc. Regulation 24(b): • A report on all consultations between the titleholder and any relevant person	Consultation in preparation of the EP	Section 5

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Criteria for acceptance	Content requirements/relevant regulations	Elements	Section of EP
Regulation 34(h): Complies with the Act and the regulations	Regulation 21(4)(a): • Describe the requirements, including legislative requirements, that apply to activity and are relevant to the environmental management of the activity Regulation 23: • Details of the titleholder and liaison person Regulation 24(a): • A statement of the titleholder's corporate environmental policy Regulation 24(c): • Details of all reportable incidents in relation to the proposed activity	All contents of the EP must comply with the Offshore All contents of the EP must comply with the *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (Cth) (OPGGS Act) and the Environment Regulations	Section 1.5 Section 6.8

1.6 Details of titleholder and nominated liaison

In accordance with Regulation 23 of the Environment Regulations, details of the titleholders, nominated liaison and arrangements for the notification of changes are described below.

1.6.1 Titleholders

Woodside Energy Ltd

11 Mount Street

Perth, Western Australia

T: 08 9348 4000

ACN: 63 005 482 986 (Woodside Energy Limited)

1.6.2 Nominated liaison

Nicolas Wirtz

Corporate Affairs Manager

11 Mount Street

Perth, Western Australia

Telephone: 08 9348 4000

Email: feedback@woodside.com

1.6.3 Arrangements for notifying of change

If the titleholder, titleholder's nominated liaison person, or the contact details for either change, then National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) will be notified in writing within two weeks or as soon as practicable.

1.7 Woodside Management System

The Woodside Management System (WMS) provides a structured framework of documentation to set common expectations governing how all employees and contractors at Woodside will work. Many of the standards presented in Section 7 are drawn from the WMS documentation, which comprises four elements:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Our Values and Policies; Expectations; Processes and Procedures; and Guidelines as outlined below (and illustrated in Figure 1-1):

- Values and Policies: Set the enterprise-wide direction for Woodside by governing our behaviours, actions, and business decisions and ensuring we meet our legal and other external obligations.
- Expectations: Set essential activities or deliverables required to achieve the objectives of the Key Business Activities and provide the basis for developing processes and procedures.
- Processes and Procedures: Processes identify the set of interrelated or interacting activities that transforms inputs into outputs, to systematically achieve a purpose or specific objective. Procedures specify what steps, by whom, and when required to carry out an activity or a process.
- Guidelines: Provide recommended practice and advice on how to perform the steps defined in Procedures, together with supporting information and associated tools. Guidelines provide advice on how activities or tasks may be performed, information that may be taken into consideration, or, how to use tools and systems.

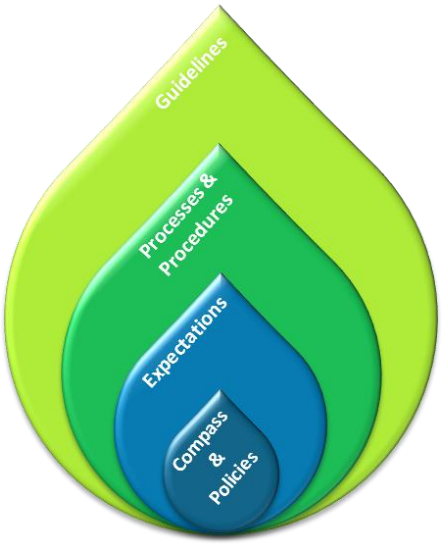

Figure 1-1: The four major elements of the Woodside Management System

The WMS is organised within a business process hierarchy based upon key business activities to ensure the system remains independent of organisation structure, is globally applicable and scalable wherever required. These key business activities are grouped into management, support, and value stream activities as shown in Figure 1-2. The value stream activities capture, generate and deliver value through the exploration and production lifecycle. The management activities influence all areas of the business, while support activities may influence one or more value stream activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

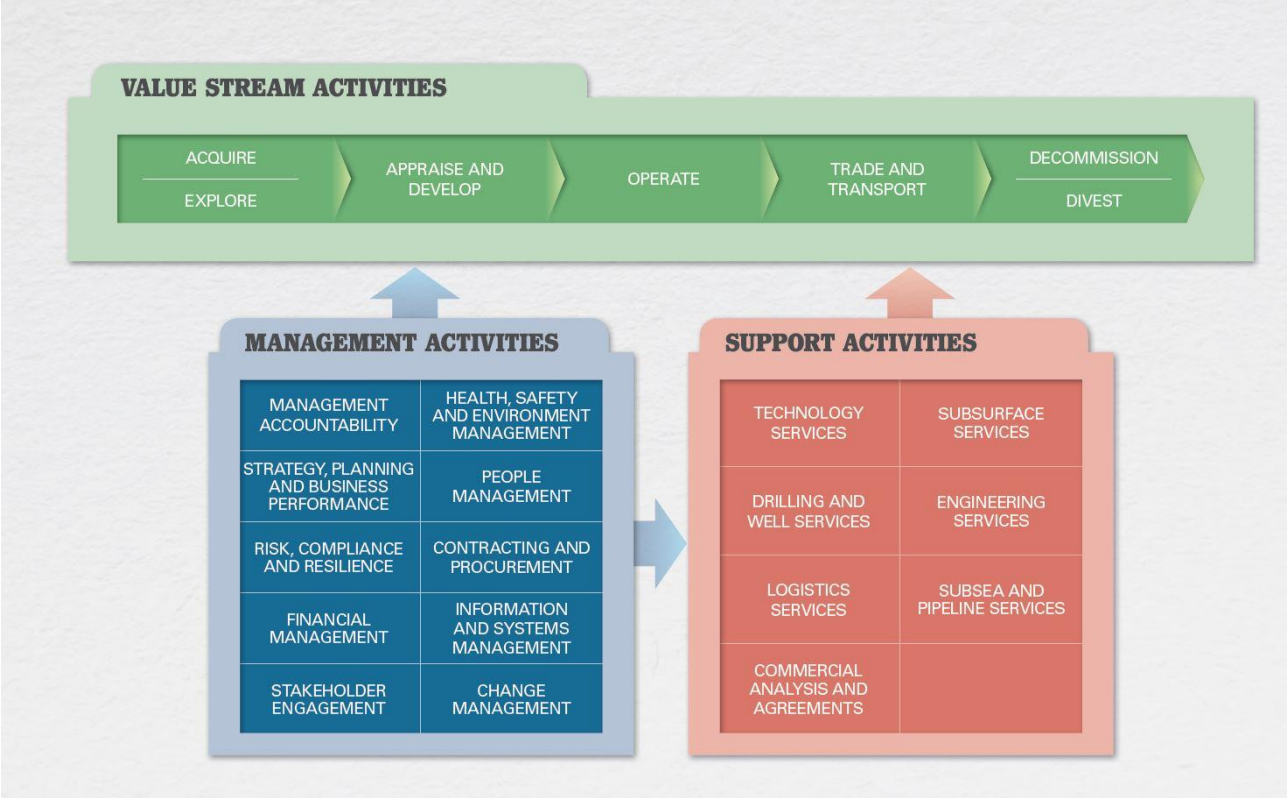

Figure 1-2: The Woodside Management System business process hierarchy

1.7.1 Environment and Biodiversity Policy

In accordance with Regulation 24(a) of the Environment Regulations, Woodside's Corporate Environment and Biodiversity Policy is provided in Appendix A of this EP.

Please note that the Environment and Biodiversity Policy is reviewed regularly and is updated as required. The Environment and Biodiversity Policy is made available on our website:https://www.woodside.com/who-we-are/corporate-governance-and-policies. This EP will be implemented in accordance with the current Environment and Biodiversity Policy as shown on our website.

1.8 Description of relevant requirements

In accordance with Regulation 21(4) of the Environment Regulations, a description of requirements, including legislative requirements, that apply to the activity and are relevant to the management of risks and impacts of the GPGT Survey Program are detailed in Appendix B. The below sections outline environmental legislation applicable to the GPGT Survey Program.

1.8.1 Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGS Act)

The OPGGS Act legislates offshore petroleum activities beyond three nautical miles (NM) of the mainland (and islands) to the outer extent of the Australian Exclusive Economic Zone at 200 NM.

Under the OPGGS Act, the Environment Regulations apply to petroleum activities in Commonwealth Waters and are administered by NOPSEMA. The objective of the Environment Regulations is to ensure petroleum activities are performed in a manner:

- consistent with the principles of ESD
- by which the environmental impacts and risks of the activity will be reduced to ALARP
- by which the environmental impacts and risks of the activity will be of an acceptable level.

This EP has been prepared in accordance with the relevant requirements of the OPGGS Act and the Environment Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

1.8.2 Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)

The EPBC Act is administered by the Department of Climate Change, Energy, the Environment and Water (DCCEEW) Part 3 of the EPBC Act protects matters of national environmental significance (MNES) across Australia in relation to actions on (or impacting upon) Commonwealth land or waters. Impacts on matters protected under Part 3 of the EPBC Act from petroleum and greenhouse gas activities undertaken in Commonwealth waters are assessed by NOPSEMA under the Environment Regulations.

As outlined by Section 146(B) of the EPBC Act, separate EPBC approval is not required for this EP. Impacts on matters protected under Part 3 of the EPBC Act from petroleum and greenhouse gas activities undertaken in Commonwealth waters will be assessed by NOPSEMA under the Environment Regulations.

1.8.2.1 Recovery plans and threat abatement plans

Under Section 139(1)(b) of the EPBC Act, the Environment Minister must not act inconsistently with a recovery plan for a listed threatened species or ecological community or a threat abatement plan for a species or community protected under the Act. Similarly, under Section 268 of the EPBC Act:

> *'A Commonwealth agency must not take any action that contravenes a recovery plan or a threat abatement plan.'*

In respect to offshore petroleum greenhouse gas activities in Commonwealth waters, these requirements are implemented by NOPSEMA via the commitments included in the Program. Commitments relating to listed threatened species and ecological communities under the Act are included in the Program Report (Australian Government, 2014):

- NOPSEMA will not accept an Environment Plan that proposes activities that will result in unacceptable impacts to a listed threatened species or ecological community.
- NOPSEMA will not accept an Environment Plan that is inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community.
- NOPSEMA will have regard to any approved conservation advice in relation to a threatened species or ecological community before accepting an Environment Plan.

1.8.2.2 Australian Marine Parks

Under the EPBC Act, Australian Marine Parks (AMPs) are recognised for conserving marine habitats and the species that live and rely on these habitats. The Director of National Parks (DNP) is responsible for managing AMPs (supported by Parks Australia) and is required to publish management plans for them. Under Section 362, other parts of the Commonwealth Government must not perform functions or exercise powers in relation to these parks that are inconsistent with management plans.

Specific zones within AMPs have been allocated conservation objectives as stated below (International Union for Conservation of Nature (IUCN) Protected Area Category) based on the Australian IUCN reserve management principles outlined in Schedule 8 of the EPBC Regulations 2000:

- Special Purpose Zone (IUCN Category VI): managed to allow specific activities through special purpose management arrangements while conserving ecosystems, habitats and native species. The zone allows or prohibits specific activities.
- Sanctuary Zone (IUCN Category Ia): managed to conserve ecosystems, habitats and native species in as natural and undisturbed a state as possible. The zone allows only authorised scientific research and monitoring.
- National Park Zone (IUCN Category II): managed to protect and conserve ecosystems, habitats and native species in as natural a state as possible. The zone only allows non extractive activities unless authorised for research and monitoring.
- Recreational Use Zone (IUCN Category IV): managed to allow recreational use, while conserving ecosystems, habitats and native species in as natural a state as possible. The zone allows for recreational fishing, but not commercial fishing.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Habitat Protection Zone (IUCN Category IV): managed to allow activities that do not harm or cause destruction to seafloor habitats, while conserving ecosystems, habitats and native species in as natural a state as possible.
- Multiple Use Zone (IUCN Category VI): managed to allow ecologically sustainable use while conserving ecosystems, habitats and native species. The zone allows for a range of sustainable uses, including commercial fishing and mining where they are consistent with park values.

Operational Area A overlaps the Montebello Islands Marine Park Multiple Use Zone (IUCN Category VI). GPGT Survey Program occurring within this zone are approved by a class approval under in accordance with the North Marine Parks Network Management Plan 2018 (DNP, 2018). Conditions of the class approval that are considered relevant to the scope of this EP are provided in Table 1-5.

Table 1-5: Conditions of the class approval relevant to the GPGT Survey Program

Number	Condition	Relevant section of EP
1	The Approved Actions must be conducted in accordance with: • an Environment Plan accepted under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 • the EPBC Act • the EPBC Regulations • the North-west Network Management Plan • any prohibitions, restrictions or determinations made under the EPBC Regulations by the Director of National Parks, and • all other applicable Commonwealth and state laws (to the extent those laws are capable of operating concurrently with the laws and instruments described in paragraphs (a) to (e)).	Conditions 1a, b, c and f are met by the submitted EP. Condition 1d: the impacts on the marine park values have been considered (Sections 6.5, 6.6 and 6.7). Condition 1e: Consultation has been undertaken with the Director of National Parks and no prohibitions, restrictions or determinations have been made (Section 5).
2	If requested by the Director of National Parks, an Approved Person must notify the Director prior to conducting Approved Actions within Approved Zones.	Section 7.10 describes requirements to notify the DNP prior to activities within the Montebello Multiple Use Zone.
3	If requested by the Director of National Parks, an Approved Person must provide the Director with information relating to undertaking the Approved Actions (or gathered while undertaking the Approved Actions), that is relevant to the Director's management of the Approved Zones.	If requested by the Director of National Parks, information relating to undertaking the Approved Actions (or gathered while undertaking the Approved Actions), that is relevant to the Director's management of the Approved Zones will be provided.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2. ENVIRONMENT PLAN PROCESS

2.1 Overview

This section outlines the process Woodside follows to prepare the EP once an activity has been defined as a Petroleum Activity. This includes a description of the environmental risk management methodology that is used to identify, analyse and evaluate risks to meet ALARP and acceptability requirements; and to develop EPOs and PS. This section also describes Woodside's risk management methodologies applicable to implementation strategies applied during the activity. If Woodside is required to submit a revised EP under section 26 of the OPGGS Act, Woodside follows the process to prepare the EP outlined in this section.

2.2 Environmental impact and risk management methodology

The environmental impact and risk management methodology used in this EP is based on Woodside's Risk Management Policy (Appendix A) and aligned with ISO 13001 and the requirements of the Environment Regulations.

2.3 Environment Plan process

Figure 2-1 illustrates the EP development process. Each element of this process is discussed further in Sections 2.4 to 2.9.

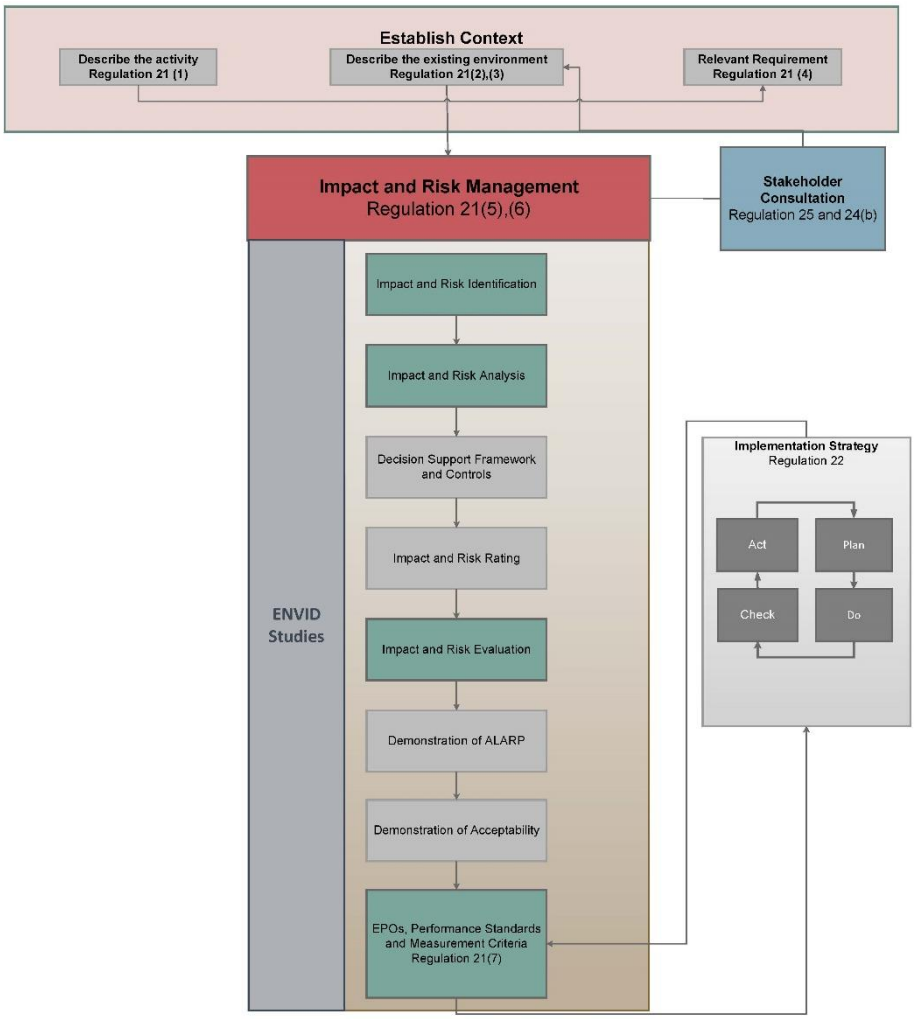

Figure 2-1: EP development process

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.4 Establish the context

Context is established by considering the proposed activities associated with a Petroleum Activity, and the environment in which the activities are planned to take place.

Describing the activity involves the evaluation of whether the activity meets the definition of a 'Petroleum Activity' as defined in the Environment Regulations. The activity is then described in relation to the location, what is to be undertaken and how this allows for the identification of environmental aspects for each activity.

2.4.1 Activity description

The activity description (Section 3) provides a detailed summary of the proposed activities comprising the GPGT Survey Program, including:

- the location or locations of the activity; general details of the construction and layout of the facility used in undertaking the activity
- an outline of the operational details of the activity and proposed timetables for undertaking the activity
- additional information relevant to consideration of environmental impacts and risks of the activity.

The 'what' and 'how' are described in the context of 'environmental aspects' to inform the risk and impact assessment for planned (routine and non-routine) and unplanned (accidents, incidents, emergency conditions) activities.

This activity is described in Section 3 and is referred to as the GPGT Survey Program.

2.4.2 Existing environment description

The environment in the context of this EP refers to the physical, biological, social, economic and cultural features which may be impacted by the activity from planned and unplanned events, including:

- ecosystems and their constituent parts, including people and communities
- natural and physical resources
- the qualities and characteristics of locations, places and areas
- the heritage value of places.

In accordance with Regulation 56(1) of the Environment Regulations, The Master Existing Environment is attached as Appendix H. The purpose is to describe the existing environment that may be impacted by the activity, directly or indirectly, by planned or unplanned events.

The existing environment (Section 4) has been described with consideration of the nature and scale of the activity (size, type, timing, duration, complexity, and intensity of the activity as established in the activity description (Section 3) to inform potential impacts to receptors from the GPGT Survey Program.

2.4.3 Relevant requirements

2.4.3.1 Legislation and other requirements

Relevant legislation and other requirements that apply to the GPGT Survey Program are presented in Section 1.8 and Appendix B. These requirements have been considered through development of this EP.

2.4.3.2 Internal context

The objectives under the Woodside Management System (Section 1.7) define the mandatory performance requirements that apply to all Woodside activities, and its employees and contractors. Where relevant, Woodside internal requirements have been identified as controls to manage impacts and risks managed under this EP. Woodside's Corporate Health, Safety, Environment (HSE) and Quality Policy is presented in Appendix A.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.4.3.3 External context

Consultation with relevant persons including authorities, persons, organisations and other stakeholders, as defined under Regulation 25 of the Environment Regulations, has been undertaken as part of the development of this EP. A summary of relevant persons consultation conducted for this EP is presented in Section 5. A copy of the full text correspondence provided by Woodside to relevant persons is provided in Appendix F

2.5 Impact and risk management

2.5.1 Impact and risk identification and analysis

The first step of impact and risk management is to identify all credible sources of environmental impacts and risks, include those directly and indirectly associated with the GPGT Survey Program and potential emergency and accidental events. This may include environment impacts and risk that are a consequence of the proposed activity but are not within Woodside's control. In this EP:

- Planned (routine and non-routine) activities have the potential for inherent changes to the environment, are termed environmental 'impacts.'
- Unplanned events, including potential emergency and accidental events which have the potential to result in a change to the environment, are termed environmental 'risks.'

An environmental impacts and risks identification and assessment workshop (ENVID) was undertaken by multidisciplinary teams comprising relevant operational, technical and environmental personnel with sufficient breadth of knowledge, training, and experience to reasonably assure that risks and impacts were identified, and their potential environmental consequences assessed. Impacts and risks were identified, during the workshop, for both planned (routine and non-routine) activities and unplanned (accidents/incidents/emergency conditions) events. During this process, risks identified as not applicable (not credible) were removed from the assessment.

Impacts and risks presented in this EP were identified during an ENVID and informed by recent and historic hazard identification and ENVID workshops for similar activities, relevant requirements (Section 2.4.3), activities described in Section 3, and the existing environment that the GPGT Survey Program has a potential to impact (Section 4). The ENVID was undertaken by multidisciplinary teams comprising relevant operational and environmental personnel with sufficient breadth of knowledge, training and experience to reasonably assure that risks and impacts were identified, and their potential environmental consequences assessed.

During the ENVID, environmental impacts and risks were assessed, and controls assigned to each to manage the impact or risk. The ENVID also supported identification of relevant stakeholders to be consulted as part of development of this EP (Section 5). The output of the ENVID, an environmental impacts and risk register, was used as a basis to develop the risk and impact assessment section of this EP (Section 6).

Impacts and risks were evaluated and tabulated for each planned activity and unplanned events respectively. Environmental impacts and risks were recorded in an environmental impacts and risk register. The output of the workshop is used to present the risk assessment and form the basis of EPOs, PSs, and MC. This information is presented in Section 6, following the format presented in Table 2-1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 2-1: Example of layout of identification of risks and impacts in relation to risk sources

Impact evaluation summary													
Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Summary of source of impact/risk													

2.5.1.1 Decision support framework

To support the impact and risk assessment process and Woodside's determination of acceptability (Section 2.6.2), Woodside's HSE risk management procedures include the use of a decision support framework based on principles set out in the Guidance on Risk Related Decision Making (Oil and Gas UK, 2014). Application of the decision support framework confirms:

- activities do not pose an unacceptable environmental risk
- appropriate focus is placed on activities where the impact or risk is anticipated to be acceptable and demonstrated to be ALARP
- appropriate effort is applied to manage risks and impacts based on the uncertainty of the risk, the complexity and risk rating (i.e. potential higher order environmental impacts are subject to further evaluation and assessment).

The framework allows a decision type (A, B, or C) to be selected for each impact and risk based on a number of criteria; the decision type is documented in the environmental impacts and risk register. A summary of the framework and the criteria and resulting level of assessment for Decision Types A, B and C are presented in Figure 2-2 and discussed further below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

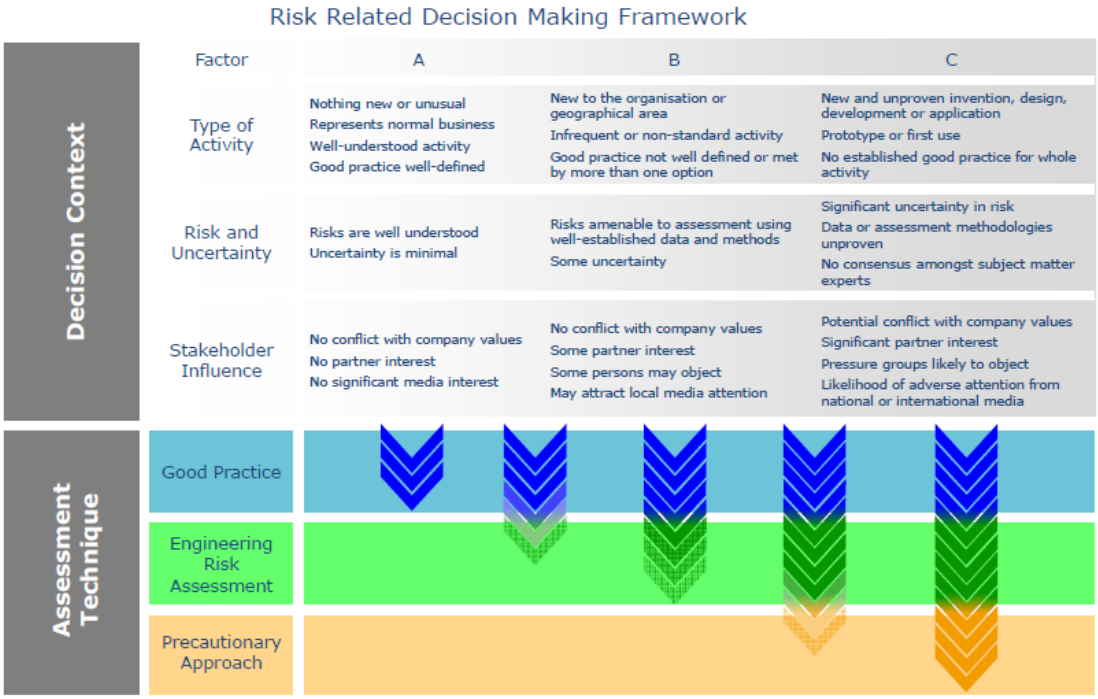

Figure 2-2: Risk-related decision-making framework (Oil and Gas UK, 2014)

2.5.1.1.1 Decision Type A

Decision Type A risks and impacts are well understood and established practice; they are generally recognised as good industry practice and are often embodied in legislation, codes and standards, and use professional judgment.

2.5.1.1.2 Decision Type B

Decision Type B risks and impacts typically involve greater uncertainty and complexity and are considered higher-order impacts and risks. These impacts and risks may deviate from established practice or have some lifecycle implications and therefore require further engineering risk assessment to support the decision and ensure the risk is ALARP. Engineering risk assessment tools may include:

- risk-based tools such as cost-based analysis or modelling
- consequence modelling
- reliability analysis
- company values.

2.5.1.1.3 Decision Type C

Decision Type C risks and impacts typically have significant risks related to environmental performance. Such risks typically involve greater complexity and uncertainty, therefore requiring the adoption of the precautionary approach. The risks may result in significant environmental impact, significant project risk or exposure, or may elicit negative stakeholder concerns. For these risks or impacts, in addition to Decision Type A and B tools, company and societal values need to be considered by undertaking broader internal and external consultation as part of the risk assessment process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.5.1.1.4 Decision support framework tools

The below framework tools were applied, as appropriate, during the assessment of each impact and risk to help identify control measures based on the selected decision type described above.

- Legislation, Codes and Standards (LCS): identifies the requirements of legislation, codes and standards that are to be complied with for the activity.
- Good Industry Practice (GP): identifies further engineering control standards and guidelines that may be applied by Woodside above that required to meet the LCS.
- Professional Judgement (PJ): uses relevant personnel with the knowledge and experience to identify alternative controls. Woodside applies the hierarchy of control as part of the risk assessment to identify any alternative measures to control the risk.
- Risk-based Analysis (RBA): assesses the results of probabilistic analyses such as modelling, quantitative risk assessment and/or cost–benefit analysis to support the selection of control measures identified during the risk assessment process.
- Company Values (CV): identifies values identified in Woodside's code of conduct, policies and the Woodside Compass. Views, concerns and perceptions are to be considered from internal Woodside stakeholders directly affected by the planned impact or potential risk.
- Societal Values (SV): identifies the views, concerns and perceptions of relevant stakeholders and addresses relevant stakeholder views, concerns and perceptions.

2.5.1.1.5 Decision calibration

To determine that the decision type selected and the control measures applied are suitable, the following tools may be used for calibration (i.e. checking) where required:

- LCS/Verification of Predictions: Verification of compliance with applicable LCS and/or good industry practice.
- Peer Review: Independent peer review of PJs, supported by RBA, where appropriate.
- Benchmarking: Where appropriate, benchmarking against a similar facility or activity type or situation that has been deemed to represent acceptable risk.
- Internal Consultation: Consultation undertaken within Woodside to inform the decision and verify company values are met.
- External Consultation: Consultation undertaken to inform the decision and verify societal values are considered.

Where appropriate, additional calibration tools may be selected specific to the decision type and the activity.

2.5.1.2 Control measures (hierarchy of controls)

Once impacts and risks have been identified, the sensitivity of potentially impacted receptors is understood and the decision type has been selected, impact and risk reduction measures (i.e. controls) can be applied. Controls are prioritised and categorised in accordance with the below hierarchy of controls, where risk reduction measures at the top of the hierarchy take precedence over risk reduction measures further down:

- Elimination of the impact or risk by removing the hazard.
- Substitution of a hazard with a less hazardous one.
- Engineering Controls include design measures to prevent or reduce the frequency of the impact or risk event, or detect or control the impact or risk event (limiting the magnitude, intensity and duration) such as:
  - Prevention: design measures that reduce the likelihood of a hazardous event occurring
  - Detection: design measures that facilitate early detection of a hazardous event
  - Control: design measures that limit the extent/escalation potential of a hazardous event

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Mitigation: design measures that protect the environment if a hazardous event occurs
  - Response Equipment: design measures or safeguards that enable clean-up/response after a hazardous event occurs.
- Procedures and Administration includes management systems and work instructions used to prevent or mitigate environmental exposure to hazards.
- Emergency Response and Contingency Planning includes methods to enable recovery from the impact of an event (e.g. protection barriers deployed near the sensitive receptor).

2.5.2 Impact and risk classification

Environmental impacts and risks are assessed to determine their potential impact significance level or risk rating, which can then be evaluated, along with other criteria, against the ALARP and acceptability requirements under the Environment Regulations. The full process for impact and risk classification is described in the subsections below.

2.5.2.1 Impact classification

Impacts are classified by significance level in accordance with the Environmental Impact Assessment Guideline and Tool. Table 2-2 describes the possible significance levels for an identified impact. Where multiple receptors have the potential to be impacted, the worst-case impact significance level is carried into the final impact assessment and evaluation.

Table 2-2: Determination of impact significance level

Magnitude[1]	Receptor sensitivity[1]			Impact significance level[2]
	Low	*Medium*	*High*	
Catastrophic	B	A	A	Catastrophic (A) – Applicable limits or standards are substantially exceeded and/or catastrophic or major magnitude impacts are expected to receptors of medium/high or high sensitivity respectively.
Major	C	B	A	Major (B) – Applicable limits or standards are exceeded and/or moderate, major or catastrophic magnitude impacts are expected to occur to receptors of high, medium or low sensitivity respectively.
Moderate	D	C	B	Moderate (C) – Impacts are close to applicable limits or standards, or within standards but with potential for occasional exceedance. Minor, moderate or major magnitude impacts are predicted to occur to receptors of high, medium or low sensitivity respectively.
Minor	E	D	C	Minor (D) – Impact magnitude is within applicable standards but is considered to have significance. Slight, minor or moderate impacts are predicted to occur to receptors of high, medium or low sensitivity respectively.
Slight	F	E	D	Slight (E) – The receptor will experience a noticeable effect, but the impact magnitude is sufficiently small and well within applicable standards, and/or the receptor is of low value.
No lasting effect	F	F	E	Negligible (F) – The receptor will essentially not be affected.

1. *Defined in the Environment Impact Assessment Guidance Tool.*
2. *Defined in the Woodside Environment Impact Assessment Guideline.*

2.5.2.2 Risk classification

Risks are classified in accordance with the Woodside's Risk Assessment Guideline and HSE Risk Assessment Guideline, as well as the Environmental Risk Assessment Tool and Woodside Risk Matrix. The steps for risk classification are described in the subsections below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2.5.2.2.1 Determine the risk consequence level

Table 2-3 describes the possible environmental and social-cultural consequence levels for each identified risk. Where multiple receptors have the potential to be impacted, the worst-case consequence level is carried into the final risk assessment and evaluation.

Table 2-3: Woodside risk matrix (environment and social and cultural) consequence descriptions

Environment	Social and cultural	Consequence level
Catastrophic, long-term impact (>50 years) on highly valued ecosystem, species, habitat or physical or biological attributes.	Catastrophic, long-term impact (>20 years) to a community, social infrastructure or highly valued areas/items of international cultural significance.	A
Major, long-term impact (10 to 50 years) on highly valued ecosystem, species, habitat or physical or biological attributes.	Major, long-term impact (5 to 20 years) to a community, social infrastructure or highly valued areas/items of national cultural significance.	B
Moderate, medium-term impact (2 to 10 years) on ecosystem, species, habitat or physical or biological attributes.	Moderate, medium-term impact (2 to 5 years) to a community, social infrastructure or highly valued areas/items of national cultural significance.	C
Minor, short-term impact (1 to 2 years) on species, habitat (but not affecting ecosystem function), physical or biological attributes.	Minor, short-term impact (1 to 2 years) to a community or highly valued areas/items of cultural significance.	D
Slight, short-term impact (<1 year) on species, habitat (but not affecting ecosystem function), physical or biological attributes.	Slight, short-term impact (<1 year) to a community or areas/items of cultural significance.	E
No lasting effect (<1 month). Localised impact not significant to environmental receptor.	No lasting effect (<1 month). Localised impact not significant to areas/items of cultural significance.	F

2.5.2.2.2 Select the likelihood level

Table 2-4 describes the possible likelihood levels for each identified risk. Likelihood is determined based on the chance of the selected worst-case consequence occurring.

Table 2-4: Woodside risk matrix likelihood levels

Likelihood description						
Frequency	1 in 100,000 to 1,000,000 years	1 in 10,000 to 100,000 years	1 in 1,000 to 10,000 years	1 in 100 to 1000 years	1 in 10 to 100 years	>1 in 10 years
Experience	Remote: Unheard of in the industry	Highly Unlikely: Has occurred once or twice in the industry	Unlikely: Has occurred many times in the industry but not at Woodside	Possible: Has occurred once or twice in Woodside or may possibly occur	Likely: Has occurred frequently at Woodside or is likely to occur	Highly Likely: Has occurred frequently at the location or is expected to occur
Likelihood level	0	1	2	3	4	5

2.5.2.2.3 Calculate the risk rating

The risk rating is derived from the consequence and likelihood levels determined above, in accordance with the Woodside Risk Matrix summarised in Table 2-5. This risk rating is used as an input into the risk evaluation process and ultimately for prioritising further risk reduction measures. Once each risk is treated to ALARP, the risk rating articulates the ALARP baseline risk in the environmental impacts and risk register.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 2-5: Woodside risk matrix determination of risk rating

Consequence level	Likelihood level					
	0	*1*	*2*	*3*	*4*	*5*
A	A0	A1	A2	A3	A4	A5
B	B0	B1	B2	B3	B4	B5
C	C0	C1	C2	C3	C4	C5
D	D0	D1	D2	D3	D4	D5
E	E0	E1	E2	E3	E4	E5
F	F0	F1	F2	F3	F4	F5

Risk rating
Severe
Very High
High
Moderate
Low

2.6 Impact and risk evaluation

In accordance with Regulations 34(a), 34(b), 34(c) and 21(5)(b), Woodside applies the following process to evaluate impacts and risks and demonstrate ALARP and acceptability for environmental impacts and risks, appropriate to the nature and scale of each impact or risk.

2.6.1 Demonstration of as low as reasonably practicable (ALARP)

The descriptions in Table 2-6 articulate how Woodside demonstrates that each impact and risk identified within this EP are ALARP.

Table 2-6: Summary of Woodside's criteria for ALARP demonstration

Risk	Impact	Decision type
Low and moderate (below C level consequence)	***Negligible, slight, or minor (D, E or F)***	***A***
Woodside demonstrates these impacts, risks and decision types are reduced to ALARP if: • identified controls meet legislative requirements, industry codes and standards, applicable company requirements and industry guidelines, or • further effort towards impact/risk reduction (beyond using opportunistic measures) is not reasonably practicable without sacrifices that are grossly disproportionate to the benefit gained.		
High, very high or severe (C+ consequence risks)	***Moderate and above (D, E or F)***	***B and C***
Woodside demonstrates these higher-order risks, impacts and decision types are reduced to ALARP where it can be shown good industry practice and RBA have been employed, if legislative requirements are met, societal concerns are accounted for, and the alternative control measures are grossly disproportionate to the benefit gained.		

2.6.2 Demonstration of acceptability

The descriptions in Table 2-7 articulate how Woodside demonstrates how each impact and risk identified within this EP are Acceptable.

Table 2-7: Summary of Woodside's criteria for acceptability

Risk	Impact	Decision type
Low and moderate	***Negligible, slight, or minor (D, E or F)***	***A***
Woodside demonstrates these lower order impacts, risks and decision types are 'broadly acceptable' if they meet the ALARP requirements for lower order risks and impacts described above (Table 2-6).		
High, very high or severe	***Moderate and above (D, E or F)***	***B and C***
Woodside demonstrates these higher-order risks, impacts and decision types are 'acceptable if ALARP' (as described in Section 2.6.1) if it can be demonstrated using good industry practice and RBA, if legislative requirements are met and societal concerns are accounted for and the alternative control measures are grossly disproportionate to the benefit gained.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Risk	Impact	Decision type
In undertaking this process for moderate and high risks, Woodside evaluates: • the principles of ESD as defined under the EPBC Act • the internal context – the proposed controls and consequence/risk level are consistent with Woodside policies, procedures and standards • the external context – consideration of the environment consequence and stakeholder acceptability are considered • other requirements – the proposed controls and consequence/risk level are consistent with national and international industry standards, laws and policies ad consideration of applicable plans for management and conservation advices, conventions and significant impact guidelines (e.g. MNES). Additionally, very high and severe risks require 'escalated investigation' and mitigation. If after further investigation the risk remains in the very high or severe category, the risk requires appropriate business engagement with increasing involvement of senior management in accordance with Woodside's Risk Management Procedure to accept the risk. This includes due consideration of regulatory requirements.		

2.7 Recovery plan and threat abatement plan assessment

To support the demonstration of acceptability, a separate assessment is undertaken to demonstrate that the EP is not inconsistent with any relevant recovery plans or threat abatement plans (Section 1.8.2.1). The steps in this process are:

- Identify relevant listed threatened species and ecological communities (Section 4.5).
- Identify relevant recovery plans and threat abatement plans (Section 3.2 of the Master Existing Environment).
- List all objectives and (where relevant) the action areas of these plans and assess whether these objectives/action areas apply to government, the titleholder, and the GPGT Survey Program (Section 6.7).
- For those objectives/action areas applicable to the GPGT Survey Program, identify the relevant actions of each plan, and evaluate whether impacts and risks resulting from the activity are clearly not inconsistent with that action (Section 6.7).

2.8 Environmental performance outcomes, standards and measurement criteria

The Environment Regulations define EPOs to mean: "a measurable level of performance required for the management of environmental aspects of an activity to ensure that environmental impacts and risks will be of an acceptable level". As such, the process of defining an appropriate EPO, has relied on the required levels of performance set either in:

- legislation (such as the OPGGS Act)
- regulator guidance notes such as the Matters of National Environmental Significance – Significant Impact Guidelines (DoE, 2013), or
- specific agreements or expectations with other relevant persons (e.g. fishers or other marine users).

For each evaluated impact and risk, controls adopted during the ENVID and through demonstrating ALARP are paired with activity-specific EPOs, PS and MC. EPOs, PS and MC form the basis for monitoring and auditing and allow Woodside's environmental performance to be measured through the implementation of this EP to ensure impacts and risks will be managed to a level that is ALARP and acceptable. EPOs, PS and MC are defined for each identified credible impact and risk in Section 6.

2.9 Implement, monitor, review and reporting

An implementation strategy for the Petroleum Activity describes the specific measures and arrangements to be implemented for the duration of the program. The strategy is based on the requirements of the Environment Regulations, and demonstrates:

- control measures are effective in reducing the environmental impacts and risks of the Petroleum Activity to ALARP and acceptable levels
- EPOs and PSs set out in the EP are met through monitoring, recording, auditing, managing non-conformance, and reviewing
- all environmental impacts and risks of the Petroleum Activity are periodically reviewed in accordance with Woodside's risk management procedures
- roles and responsibilities are clearly defined, and personnel are competent and appropriately trained to implement the requirements set out in this EP, including in emergencies or potential emergencies
- arrangements are in place for oil pollution emergencies, to respond to and monitor impacts
- environmental reporting requirements are met, including 'reportable incidents'
- appropriate consultation is undertaken throughout the activity.

The implementation strategy is presented in Section 6.8.

3. DESCRIPTION OF THE ACTIVITY

3.1 Overview

This section has been prepared in accordance with Regulation 21(1) of the Environment Regulations and describes the activities to be undertaken as part of the GPGT Survey Program under this EP. It includes the location of the activities, operational details and additional information relevant to considering environmental risks and impacts.

3.2 Project overview

Woodside plans to collect high resolution geotechnical and geophysical data within the Operational Areas. This data will inform the design of flowlines and umbilical routes, design of subsea structure foundation locations and planning for mobile offshore drilling unit (MODU) anchoring or jack-up location associated with the GWA infill development, plug and abandonment activities and future exploration activities.

Table 3-1 provides an overview of the GPGT Survey Program, including location, water depths and key activities.

Table 3-1: GPGT Survey Program overview

Item	Description		
Permit Titles	Operational Area A WA-7-R WA-56-L WA-57-L WA-58-L WA-23-L WA-24-L WA-6-L WA-5-L	Operational Area B WA-1-L WA-2-L	Operational Area C WA-3-L WA-4-L WA-9-L WA-16-L WA-11-L G-10-AP
Location	North West Shelf		
Water depth	20 to 190 m		
Vessels	At least two survey vessels (Section 3.6)		
Key activities	Geophysical survey(s) within the Operational Areas using the following survey equipment: • multibeam echo sounder (MBES) • side scan sonar (SSS) • magnetometer • sub bottom profiler (SBP) (boomer, sparker, chirp) Geotechnical survey(s) within the Operational Areas using the following survey equipment: • box cores/grab sample • piston/gravity/vibro cores • drilling core holes • cone penetrometer test		
Other titleholders licence areas that overlap the operational areas which may be subject to access authority)	WA-17-L G-9-AP		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.3 Location

The GPGT Survey Program is proposed to be located on the NWS adjacent to Woodside's GWA platform and North Rankin Complex, approximately 32 km from the nearest shoreline (Montebello Islands) and approximately 123 km to Dampier on mainland WA.

The activities will occur within multiple permit areas as shown in Figure 3-1 within the three Operational Areas further defined in Section 3.4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

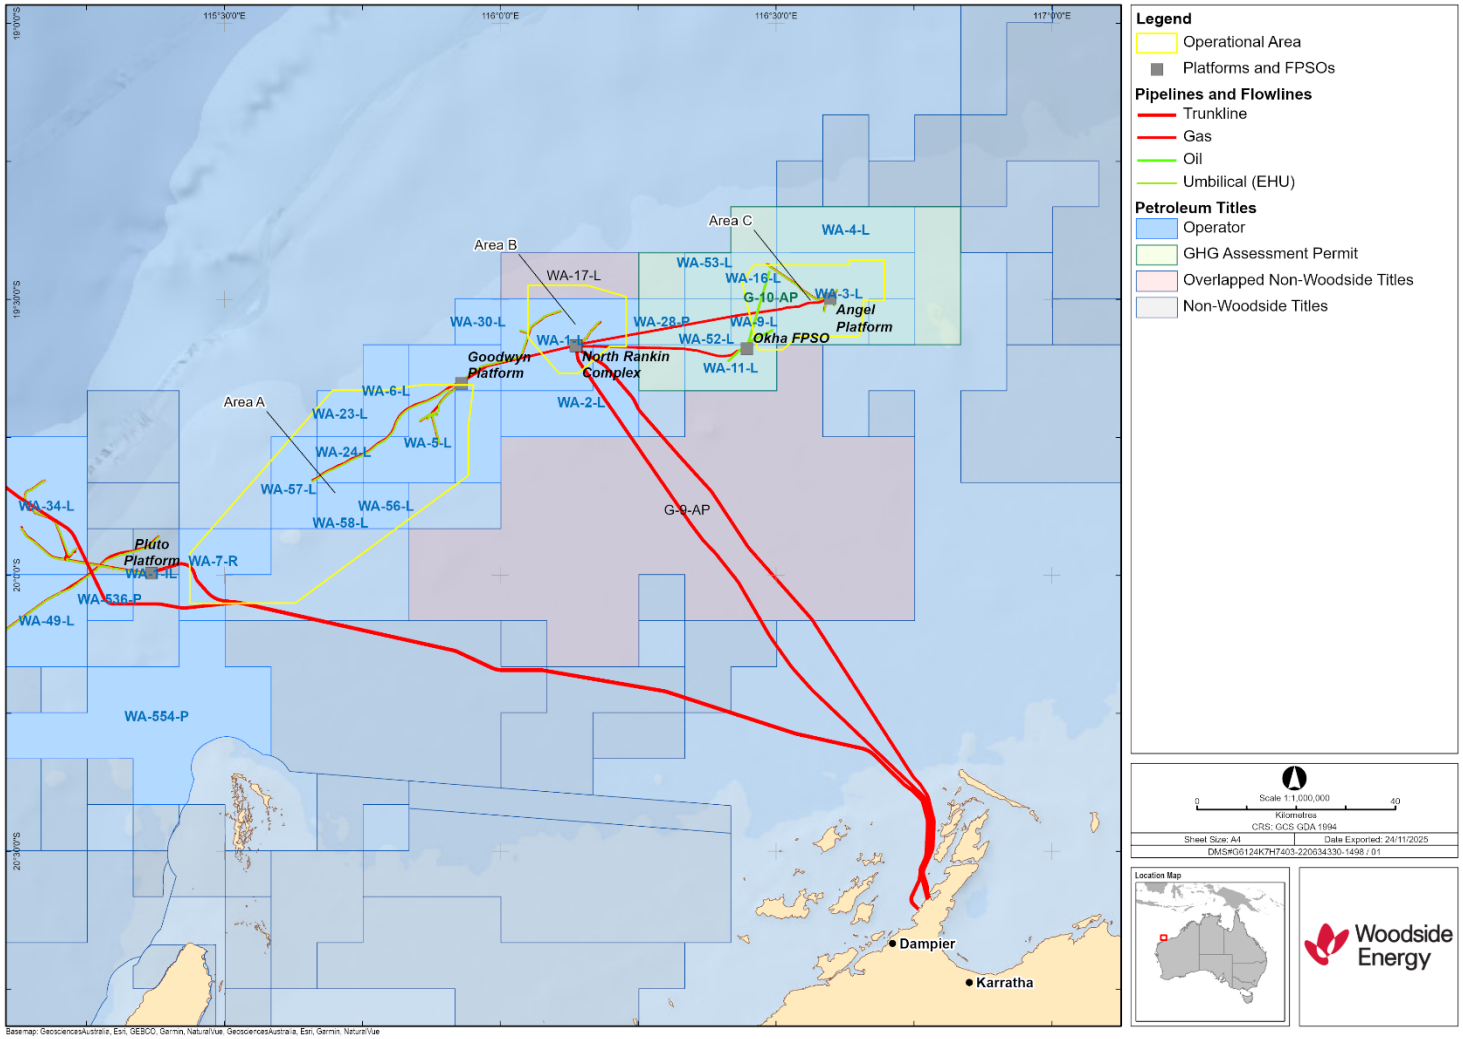

Figure 3-1: Location of the GPGT Survey Program

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.4 Operational Areas

The GPGT Survey Program will occur in three Operational Areas: Operational Area A (1,410.82 km²), Operational Area B (266.88 km²) and Operational Area C (362.53 km²) (Figure 3-1). The coordinates of each Operational Area are:

- about 115.42° E 19.51 S° for Operational Area A
- about 116.80° E 19.33 S° for Operational Area B
- about 116.30° E 19.30 S° for Operational Area C.

As the exact location of the proposed surveys within each Operational Area may vary during the GPGT Survey Program, a conservative approach has been employed to assess risks and impacts; and the size of each Operational Area has been considered to include the potential variations to survey locations. This approach considered the existing environment of the entirety of each of the Operational Areas (along with the environment potentially impacted by the credible hydrocarbon spill scenarios) to provide context for the risk assessment (Section 4).

The Operational Areas for the activity include a 500 m safety exclusion zone around the survey vessels to manage vessel movements. The 500 m safety exclusion zone is under the control of the Person in Charge.

Vessels transiting to and from the Operational Areas are outside the scope of this EP.

To the extent that any activities carried out in parts of the Operational Areas not included in the area of Woodside's existing titles, Woodside will obtain the relevant authorisations and will carry out activities in those areas in accordance with the authorisations. In relation to greenhouse gas (GHG) titles, Woodside will comply with the relevant legislation and obtain the relevant authorisations as appropriate.

3.5 Timing

The GPGT Survey Program is anticipated to commence from Q1 2026 and is forecast a total of approximately 18 weeks to complete with vessels operating 24 hours a day. It is possible that the GPGT Survey Program will not be undertaken in a single campaign and the approximately 18-week activity may be split over the five-year period of this EP. Timing and duration may be subject to change due to project vessel availability, unforeseen circumstances and weather.

The GPGT Survey Program could also occur at any time throughout the year and therefore this EP has assessed risks relevant to geophysical and geotechnical survey activities in all seasons to provide operational flexibility on project schedule changes and project vessel availability.

3.6 Survey vessels

At least two project vessels will be required to complete the activities associated with the GPGT Survey Program. This includes one that is capable of conducting geophysical surveys, such as a multi-purpose project survey vessel, and one to undertake geotechnical surveys such as a geotechnical drilling vessel. There may also be times where a smaller geotechnical survey vessel is required to undertake surveys along proposed pipeline routes. Typical details of these vessels are provided in Table 3-2.

Table 3-2: Typical survey vessel parameters

Purpose	Length	Maximum persons onboard	Fuel type	Largest tank size
Geophysical survey	55 m	30	Marine Diesel	182 m³
Geotechnical survey[1]	85 m	60	Marine Diesel	182 m³

It is feasible, although unlikely, two geotechnical vessels will be in the Operational Areas at any one time, with one undertaking box core and cone penetration test (CPT) sampling, and another the borehole sampling.

1 A vessel used to deploy subsea geotechnical investigation drilling equipment is likely to have similar characteristics. If a separate vessel is used for the pipeline investigation, then this vessel is likely to be smaller in size and capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Geotechnical vessels may hold station in the Operational Areas using a dynamic positioning (DP) system with Class 2 capability as a minimum. No anchoring is planned within the Operational Areas.

All survey vessels are required to pass a Woodside Marine Assurance Inspection Audit (to audit compliance with safety management requirements and marine compliance laws) and operate in accordance with Woodside's HSE policies. A typical geotechnical survey vessel is shown in Figure 3-2.

Vessels will mobilise and demobilise either from international waters or domestically from within Australia and will comply with the relevant maritime safety requirements and marine order requirements as appropriate for the vessel. Port calls may be required, to change crew or reconfigure the vessel to use different survey equipment (for example, between the completion of the geophysical and commencement of the geotechnical surveys). No bunkering at sea will be performed as part of the GPGT Survey Program. Any bunkering would be performed during a port call, out of the scope of this EP.

Vessels associated with the GPGT Survey Program will comply with this EP when they are within the Operational Areas. When vessels are transiting to or from the Operational Areas they will comply with applicable maritime regulations, laws and other requirements.

Figure 3-2: Typical geotechnical investigation vessel

3.6.1 Other support

No other support activities, including helicopter transfers are applicable to the GPGT Survey Program.

3.7 Survey activities

3.7.1 Geophysical surveys

A geophysical survey is the systematic collection of geophysical data. Survey methods used for the geophysical surveys in this GPGT Survey Program involve acoustic measurements to characterise the seabed features, seabed morphology and the sub-seabed stratigraphy. A variety of geophysical systems described below may be used depending on seabed soil conditions and required penetration and resolution. Some of the systems act as the transmitter and receiver; others have a separate transmitter and a short

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

hydrophone streamer as a receiver The industry accepted techniques are outlined in Table 3-3 and described in the following sections. These will be adopted to achieve the objectives of the geophysical survey scope.

The geophysical survey techniques may occur anywhere within the Operational Areas. Geophysical sources emit sound at a variety of intensities and frequencies depending on the resolution of information required. A summary of estimated source levels and operating frequencies for the proposed geophysical survey techniques is provided in Table 3-3.

Table 3-3: Acoustic source characteristics of geophysical survey techniques

Geophysical survey technique	Estimated source sound pressure level ($L_{S,P}$) (dB re 1 µPa m/ dB re 1 µPa @ 1 m)	Estimated source peak pressure level ($L_{S,pk}$) (dB re 1 µPa m/ dB re 1 µPa @ 1 m)	Estimated sound exposure level ($L_{S,E}$) (dB re 1 µPa².s @ 1 m)	Proposed frequency range (kHz)
MBES	210 to 245 [1,2,3]	NA	173 to 188 [2]	The petroleum and greenhouse gas activity program is expected to use approximately 150 to 300 kHz (hull mounted). Using autonomous underwater vehicle (AUV) may be higher frequency due to proximity to seabed.
SSS	200 to 235 [1,2]	NA	200 [2]	75 to 900 [1,2]
SBP – Chirp	192 to 210[2,4]	198 to 218 [2,4]	171 to 193 [2, 4]	2 to 30 [1,2,4]
SBP – Boomer	200 to 206 [2,4]	210 to 217 [2,4]	175 to 180 [2,4]	0.2 to 16 [2,4]
SBP – Sparker	200 to 220[1]	N/A	N/A	0.05 to 4 [1]
Ultrashort Baseline (USBL)	184 to 202[1]	N/A	N/A	19 to 34 [1]

2. *Zykov, 2013*
3. *MacGillivray et al., 2013*
4. *McPherson and Wood, 2017*

3.7.1.1 Multibeam echo sounder

MBES, like other sonar systems, transmit sound energy and analyse the return signal (echo) from the seabed or other objects. The sound waves are transmitted from a transducer mounted on the hull of the survey vessel or AUV to produce a fan-shaped coverage of the seabed. The coverage area on the seabed depends on the equipment used, the settings of the equipment and the depth of the water. Typically, coverage is two to four times the water depth (below the transducer). A summary of sound emitted from MBES, including proposed operating frequency and source intensity, is provided in Table 3-3.

3.7.1.2 Side scan sonar

SSS is a hydro-acoustic technique. The sensor array comprises a set of transducers which are mounted on either side of a towfish or AUV. The transducers produce a high frequency pulse of sound energy which is formed into the shape of a fan that sweeps the seabed. The return signal (echo) comprises acoustic energy reflected from the seabed and waterborne discontinuities. The strength of the return echo is continuously

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

recorded, creating an ‘image’ of the ocean bottom which can be used to indicate the texture of the seabed. A summary of sound emitted from SSS, including proposed operating frequency and source intensity, is provided in Table 3-3.

3.7.1.3 Magnetometer

A magnetometer is used to detect ferrous materials on or buried under the seabed by measuring small variations in the earth's magnetic field. This is used to detect anchors, chains, buried pipelines or cables or identify other magnetic anomalies that may require further investigation. The magnetometer is a passive sensor that does not rely on generating a magnetic field but only measures perturbations in the ambient total field strength in the environment. The sensor is typically towed behind the side scan sonar.

3.7.1.4 Sub bottom profiler

SBP are devices that convert electrical energy into acoustic energy. They produce an acoustic profile which extends from the seabed down to the limit of penetration. Geophysical surveys use a variety of profilers which operate at differing energy levels and are characterised by different dominant frequencies. Higher energy sources are needed to transmit the acoustic signals to greater depth, but they have correspondingly lower dominant frequencies which reduce the resolution of the resultant record. Hence, the type of profiler used depends on the nature of the substrate, penetration and resolution required. The acoustic sources for a SBP associated with this GPGT Survey Program may include the following:

Chirp sub bottom profiler

During the geophysical survey, the chirp SBP system may be used. This system emits a sweep of frequency signals (transmitted electromagnetic signals over a period of time). The chirp system also acts as a receiver for the reflected signal. The chirp SBP may be hull mounted, contained in a towfish or fitted to an AUV.

Boomer sub bottom profiler

A boomer SBP system may be used during the geophysical survey. The system consists of two spatially separated units; the boomer plate acoustic source mounted within a catamaran, and a hydrophone receiver. These are both towed on the surface immediately astern of the vessel, usually on opposite sides.

The boomer plate is an electro-mechanical transducer comprising an insulated electrical coil adjacent to a metal plate. A shipboard power supply generates an electrical pulse which is discharged to the electrical coil causing a magnetic field to repel a metal plate. This energetic motion generates a broad band, high amplitude impulsive acoustic signal in the water column that is directed vertically downward.

The hydrophone system consists of individual hydrophone elements located within neutrally buoyant synthetic hydrocarbon filled tubing (approximately 5 L). They typically contain eight to 12 hydrophone elements evenly spaced in a 2.5 to 4.5 m long, 25 mm diameter tube.

Sparker sub bottom profiler

A sparker SBP system may be used during the geophysical survey. The system consists of two spatially separated units; the sparker array acoustic source mounted within a catamaran and a hydrophone receiver. These are both towed on the surface immediately astern of the vessel, usually on opposite sides.

The sparker is an acoustic source which uses an electrical arc which momentarily vaporises water between positive and negative electrodes, producing an omni-directional acoustic pulse.

The hydrophone system consists of individual hydrophone elements located within neutrally buoyant synthetic hydrocarbon filled tubing (approximately 5 L). They typically contain eight to 12 hydrophone elements evenly spaced in a 2.5 to 4.5 m long, 25 mm diameter tube.

3.7.1.5 Geophysical equipment deployment

A survey vessel together with a towfish and/or towed catamaran (Figure 3-3) will be used to deploy geophysical sources and collect data. Proposed deployment methods are summarised in Table 3-4 and illustrated in Figure 3-3 and Figure 3-4. Depending on the method of deployment, geophysical sources can sit at a variety of locations within the water column (Table 3-5), noting that only one type of deployment will be used.

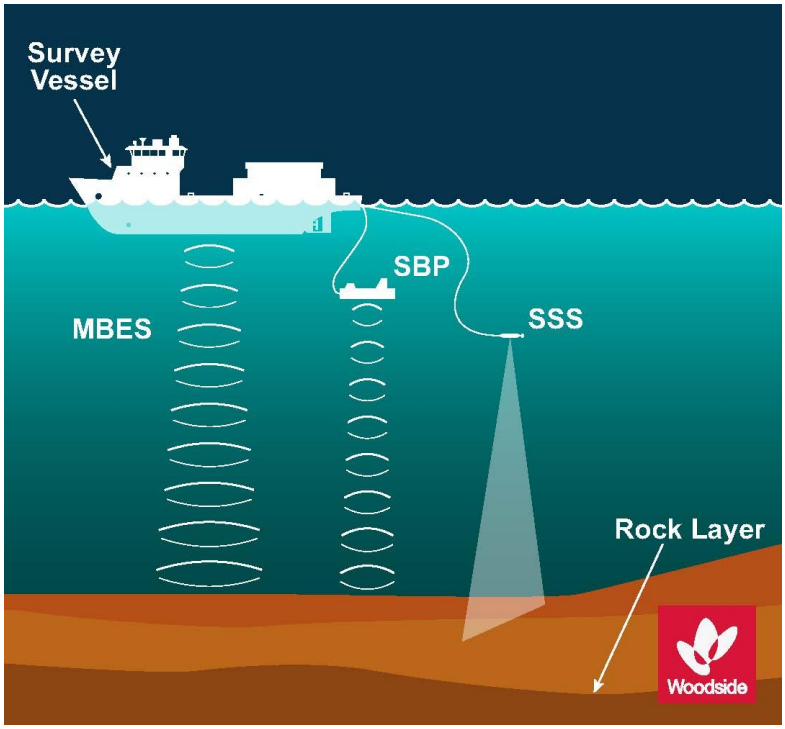

Figure 3-4: Deployment of geophysical survey equipment from a survey vessel

3.7.2 Geotechnical survey

The geotechnical surveys will be performed using standard industry equipment and will consist of *in situ* testing and the recovery of soil/rock samples at locations within the Operational Areas to ground truth existing geophysical data and provide geotechnical data for engineering design.

The geotechnical survey methods that are expected to be used during the GPGT Survey Program include:

- penetration testing
- cored borehole
- piston core sampling
- box core sampling.

Each of these methods are described in the following subsections.

3.7.2.1 Penetration testing

Penetration testing involves pushing a penetrometer (probe) into the seabed at a constant rate of penetration, and continuously measuring resistance, friction and pore pressure. The piezocone/cone penetration test (PCPT/CPTU) is performed most frequently. In suitable seabed sediments, the cone penetrometer can be replaced with a T-bar penetrometer or ball penetrometer to continuously measure resistance, friction and pore pressure during both the push-in and pull-out phases of the test. Figure 3-5 shows the probes that may be used for the GPGT Survey Program.

When the required final penetration depth is reached, all equipment is withdrawn from the seabed. A small hole will remain in the seabed, which will eventually collapse and infill as surface sediments move in the ocean current. The hole remaining in the seabed immediately after test completion will depend on the geometry of the type of penetrometer used:

- piezocone penetrometers: about 25 mm to 40 mm (diameter)
- T-bar penetrometers: a slot of about 40 mm by 250 mm
- ball penetrometers: about 56 mm to 133 mm (diameter).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

PCPTs will generally be undertaken to depths of between 3 m and 35 m below the mudline. Sub-seabed conditions in Operational Areas may include cemented layers that prevent the penetration of the PCPT equipment to the required depth. Depending on the depth and thickness of any cemented layer, it may be necessary to continue the PCPT in order to investigate the conditions below. This would be done by drilling through the cemented layer and the diameter of the drilled hole would depend on the type of equipment utilised (80 mm to 125 mm) The section within a borehole subject to drilling would probably remain open but depending on the layer depth below seabed may eventually infill with the movement of surface sediments in ocean current.

PCPTs may be undertaken using a remotely operated subsea rig positioned on the seabed and capable of continuously driving the probe to target depth or from a remotely operated subsea drilling rig as described in Section 3.7.2.2. Alternatively, the testing may be undertaken from the surface on a vessel, as described in Section 3.7.2.2.

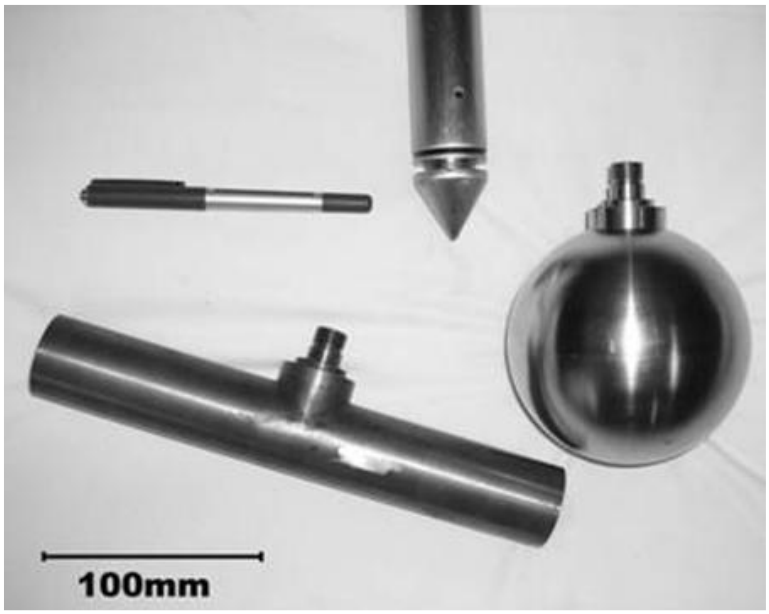

Figure 3-5: Examples of piezocone, T-bar and ball penetrometers

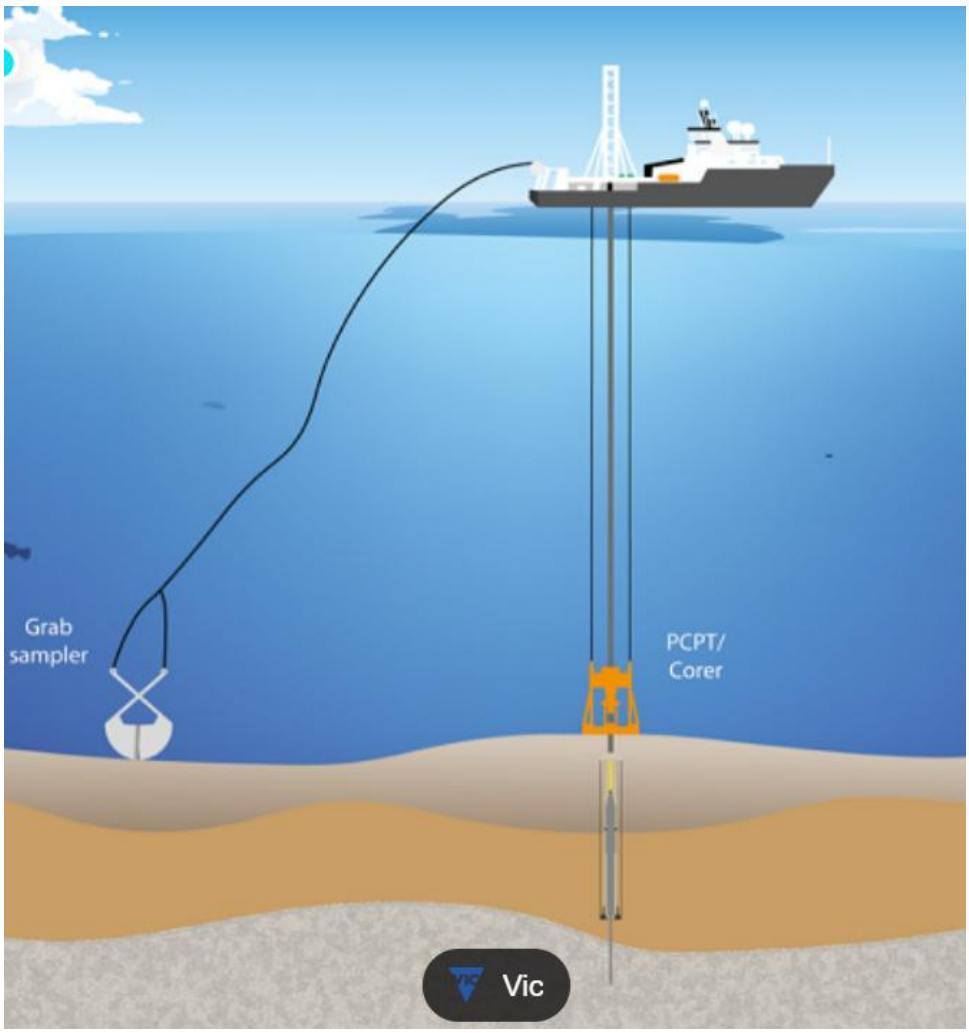

3.7.2.2 Cored borehole

Some boreholes will be required at the proposed rig sites to recover physical samples at greater depths than can achieved using piston core sampling (Section 3.7.2.3) and especially where significant layers of cemented material are present. The equipment used to drill each borehole could involve drilling from the sea surface on a vessel (Figure 3-2), where drilling takes place through a riser spanning the water depth and which is slotted into a base frame located on the seabed (Figure 3-6). The geotechnical drilling vessels generally have a length of less than 100 m and always have DP capability.

In the first case, the borehole is advanced by either push sampling (thin or thick-walled tubes) at intervals or PCPTs (Section 3.7.2.1), each interval followed by drilling to each completed depth using a bit of diameter approximately 125 mm. Where cemented layers are encountered, coring equipment is used to recover representative samples for those layers. In some cases, depending on the strength of the formation, the borehole may need to be stabilised by running sufficient casing to span the weak formation. Drilling mud is generally used in the process in order to lubricate the drill bit, keep the borehole stable and hopefully preclude the necessity for casing. Sea water is the primary constituent of geotechnical drilling fluids. In suitable seabed sediments the base fluid (sea water) can be used as the drilling fluid. However, often one or more drilling fluid additives are mixed with the base fluid to produce a drilling fluid with the appropriate properties for the seabed conditions. The geotechnical survey would involve discharge of a small amount of drill cuttings and associated fluids to the marine environment at seabed level. The drill fluid additives will only be known after the contract is awarded and the specific type of seabed coring is confirmed. However, all drilling fluid products proposed by the geotechnical contractor will be assessed by Woodside using the Chemical Selection and Assessment Environment Guideline prior to approval for use.

The second case involves deploying a self-contained drilling unit to the seafloor rather than using a dedicated vessel. In this scenario there is no drill pipe between the vessel and the seafloor and only a combined lifting wire and umbilical runs from the drill unit up to the vessel. Apart from being remote from the vessel this is a similar operation where the drilling unit can provide either core samples or CPT investigations using a combination of drilling and pushing the CPT probe through the drill pipe. The seafloor units typically use a smaller diameter pipe and do not always need the use of drilling mud.

3.7.2.3 Piston core sampling

Piston coring is normally used on soft, unconsolidated sediments. A piston corer is lowered by wire rope to the seabed, at approximately 1m/s so the duration of lowering and recovery operation is short (minutes at each site). It has a trigger device that hits the seabed before the core barrel and releases the corer allowing it to freefall (Figure 3-8). As the barrel enters the sediment, a special internal piston creates a vacuum and helps to draw the core into the barrel. Core catchers prevent the sediment from coming out of the coring tube. The leading edge of the coring tube is tapered to minimise disturbing the sample and seabed. This suction reduces compaction of the sample in the inner sleeve. Sampling itself is of short duration, typically approximately 15 minutes at each location.

When the depth of sampler refusal is reached, all equipment is withdrawn from the seabed. A small hole will remain in the seabed, which if does not collapse immediately, will infill with time. Typically, the hole left in the seabed will be proportional to the geometry of the sample tube (i.e. typically 3 m depth by 105 mm diameter).

Piston core samples are typically 72 to 105 mm in diameter and 1 m to 6 m in length (Figure 3-9).

Figure 3-9: Examples of a geotechnical piston core sample tubes

3.7.2.4 Box core sampling

Box core samplers (Figure 3-10) are designed to recover bulk, undisturbed samples of soft surficial material. Box dimensions of 0.5 m by 0.5 m by 0.5 m are typically used for offshore geotechnical surveys. The box corer is mounted on a frame, which is lowered to the seabed. A self-releasing trigger mechanism, initiated

once the frame reaches the seabed, allows the box corer to penetrate into the seabed. Penetration is limited by a stopper to 0.5 m depth.

The volume of sample recovery is typically approximately 0.125 m³.

4. DESCRIPTION OF THE EXISTING ENVIRONMENT

4.1 Overview

In accordance with Regulations 21(2) and 21(3) of the Environment Regulations, this section describes the existing environment that may be affected (EMBA) by the activity (planned and unplanned, as described in Section 3), including details of the particular relevant values and sensitivities of the environment, which were used for the risk assessment.

The EMBA is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible spill scenario (Section 6.6.1). The ecological impact thresholds used to delineate the EMBA are defined in Table 4-1. The worst-case credible spill scenario for this EP is accidental vessel collision resulting in breach of project vessel fuel tanks.

Woodside recognises that hydrocarbons may be visible beyond the EMBA at lower concentrations than the ecological impact thresholds defined in Table 4-1. These visible hydrocarbons are not expected to cause ecological impacts. In respect of this, an additional socio-cultural EMBA is defined as the potential spatial extent within which social-cultural impacts may occur from changes to the visual amenity of the marine environment. Receptors relevant to the socio-cultural EMBA include Commonwealth and State marine protected areas, areas of tourism and recreation, and commercial and traditional fisheries. For this EP, the socio-cultural EMBA for surface hydrocarbons encompasses an area wider than the boundaries of the EMBA for ecological impacts The EMBA and socio-economic EMBA are shown in Figure 4-1 and described in Table 4-1.

The EMBA presented does not represent the predicted coverage of any one hydrocarbon spill or a depiction of a slick or plume at any particular point in time. Rather, the areas are a composite of a large number of theoretical paths, integrated over the full duration of the simulations under various metocean conditions.

Table 4-1: Hydrocarbon spill thresholds used to define the environment that may be affected (EMBA) for surface and in-water hydrocarbons

Hydrocarbon type	EMBA1	Socio-cultural EMBA1	Planning area for operational and scientific monitoring
Surface	10 g/m² This represents the minimum oil thickness (0.01 mm) at which ecological impacts (e.g. to birds and marine mammals) are expected to occur.	1 g/m² This represents a wider area where a visible sheen may be present on the surface and, therefore, the concentration at which socio-cultural impacts to the visual amenity of the marine environment may occur. However, it is below concentrations at which ecological impacts are expected to occur. This low exposure value also establishes the planning area for operational and scientific monitoring (NOPSEMA guidance note: A652993, April 2019).	
Dissolved	50 ppb This represents potential toxic effects, particularly sublethal effects to highly sensitive species (NOPSEMA guidance note: A652993, April 2019). As dissolved hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are associated with ecological impacts. Therefore, dissolved hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur.		10 ppb This low exposure value establishes the planning area for operational and scientific monitoring (based on potential for exceedance of water quality triggers) (NOPSEMA guidance note: A652993, April 2019). This area is described further in Appendix I: In the event of a spill, DNP will be notified of AMPs which may be contacted by hydrocarbons at this threshold (Table 7-3).
Entrained	100 ppb This represents potential toxic effects, particularly sublethal effects to highly sensitive species (NOPSEMA guidance note: A652993, April 2019). As entrained hydrocarbons are within the water column and not visible, impacts to socio-cultural receptors are associated with ecological impacts. Therefore, entrained

Hydrocarbon type	EMBA1	Socio-cultural EMBA1	Planning area for operational and scientific monitoring
	hydrocarbons at this threshold also represent the level at which socio-cultural impacts may occur.		
Shoreline	100 g/m² This represents the threshold that could impact the survival and reproductive capacity of benthic epifaunal invertebrates living in intertidal habitat.	10 g/m² This represents the volume where hydrocarbons may be visible on the shoreline but is below concentrations at which ecological impacts are expected to occur.	N/A.

1. *Further details, including the source of the thresholds used to define the EMBA in this table, are provided in Section 6.6.1.*

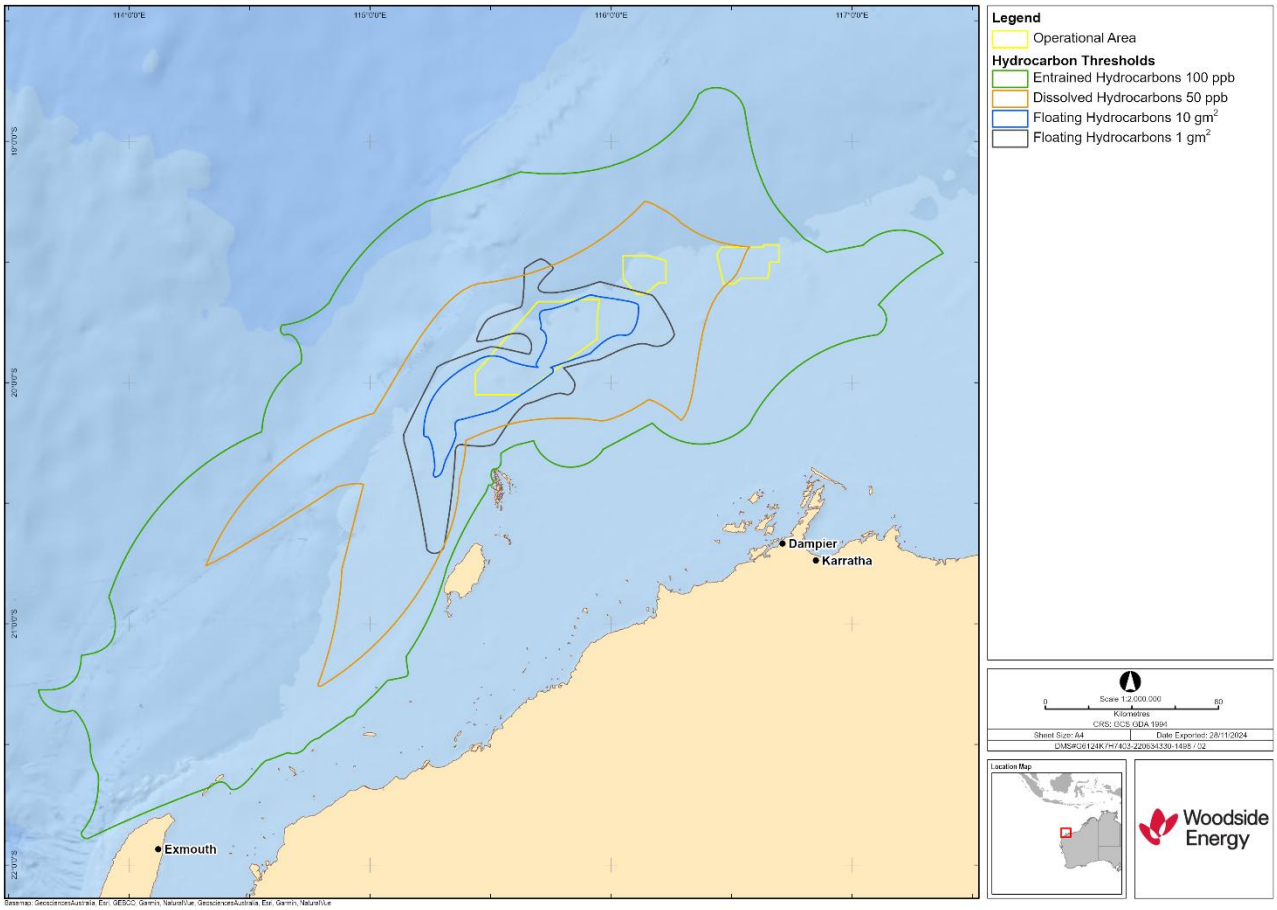

Figure 4-1: Environment that may be affected by the GPGT Survey Program

4.2 Regional context

The Operational Areas are located in Commonwealth waters within the North-West Marine Region (NWMR), as defined under the Integrated Marine and Coastal Regionalisation of Australia (IMCRA v4.0) (Commonwealth of Australia, 2006), in water depths of about 20-190 m with some shallow shoals (Rankin Bank and Wilcox Shoal) at a minimum 20 m water depth. Within the NWMR, the operational areas lie within the NWS Province (Figure 4-2). The EMBA overlaps the Northwest Province and Northwest Transition. Woodside's Master Existing Environment summarises the characteristics for the relevant marine bioregions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

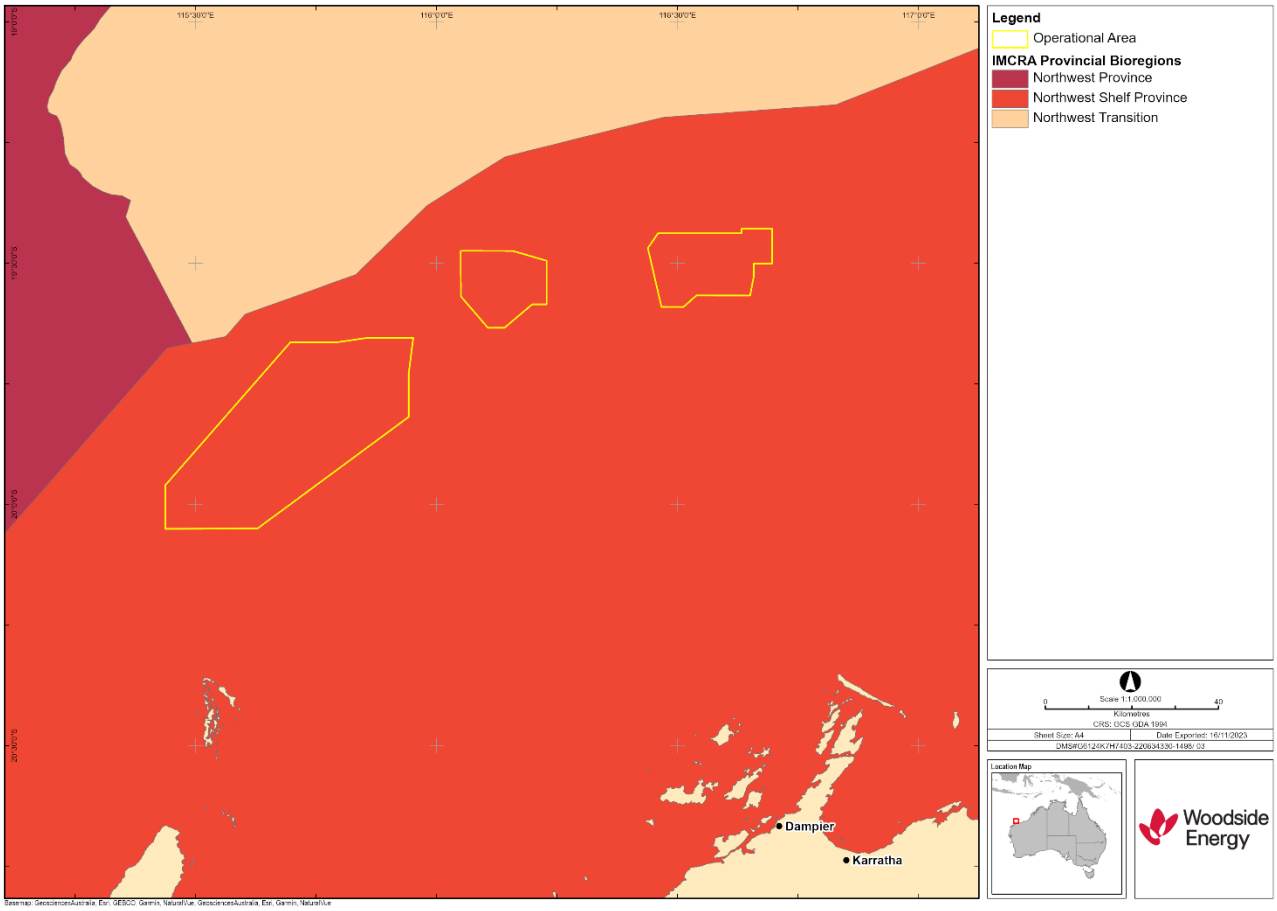

Figure 4-2: Location of the Operational Areas and relevant marine bioregions

4.3 Matters of national environmental significance (MNES)

Table 4-2 and Table 4-3 summarise the MNES under the EPBC Act that overlap the Operational Areas and EMBA, according to EPBC Act Protected Matters Search Tool (PMST) results (Appendix C). The PMST is a general database that conservatively identifies areas in which protected species have the potential to occur.

Table 4-2: Summary of MNES identified by the EPBC Act Protected Matters Search Tool as potentially occurring within the Operational Areas

4.4 Physical environment

The Operational Areas lie on the outer continental shelf in waters approximately 20 to 190 m deep (Figure 4-3). The bathymetry within the Operational Areas is generally flat, which is consistent with the broader NWS Province shelf region (Baker et al., 2008). Operational Area A displays a significant increase in depth at the north-west end of the area. The seabed has a gentle (0.05°) seaward gradient extending to a steep distal slope occurring between 200 to 300 km offshore in water depths of around 200 m (Dix et al., 2005). The continental slope then descends more rapidly from the shelf edge to depths greater than 1000 m to the north-west (James et al., 2004). Operational Area A also includes Rankin Bank and Wilcox Shoal.

A summary of the physical characteristics of the environment within the Operational Areas and EMBA is provided in Section 2.4 of the Master Existing Environment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

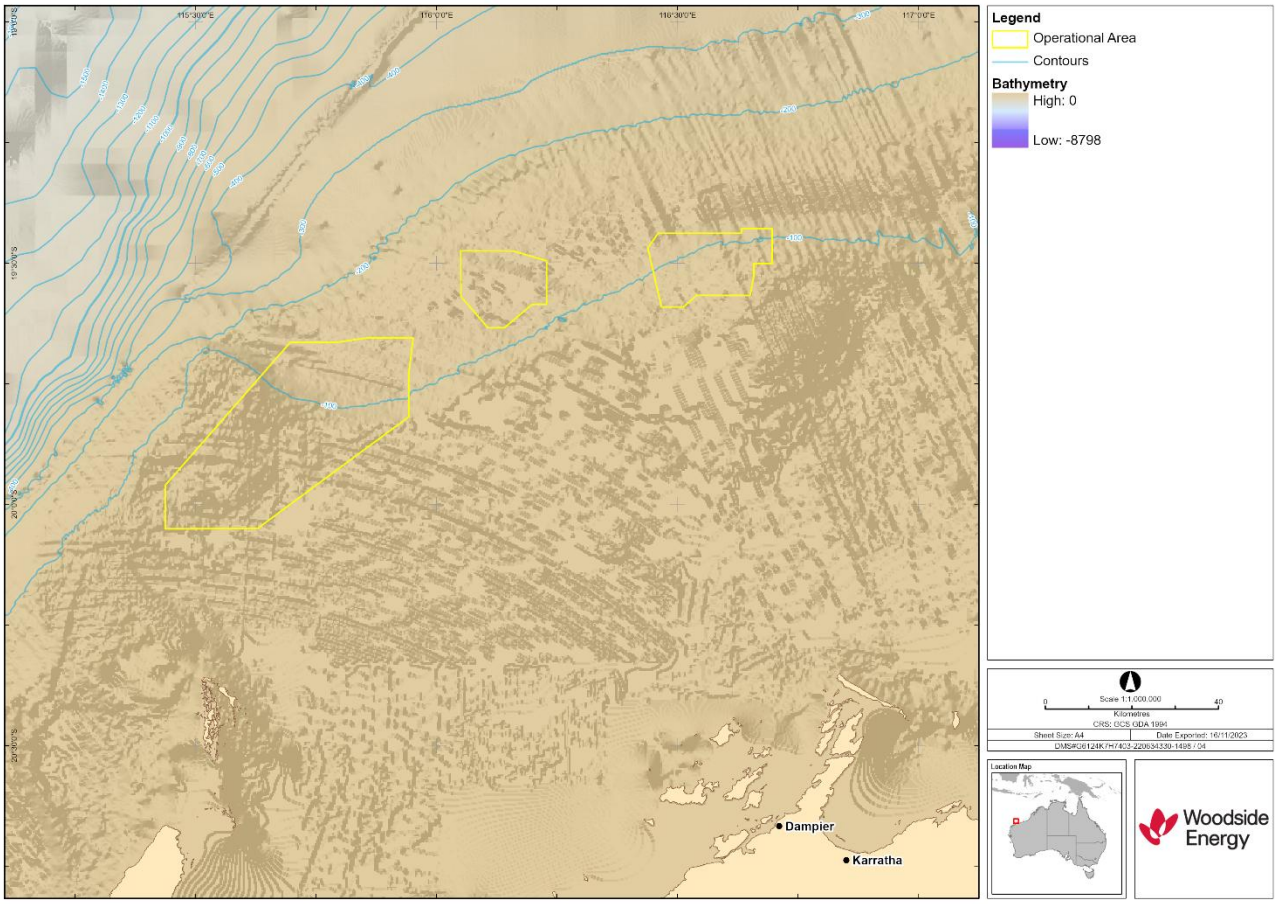

Figure 4-3: Bathymetry of the Operational Areas

4.5 Habitats and biological communities

Sediments in the Operational Areas are broadly consistent with those in the NWS Province, with typically low levels of potential contaminants of geogenic origin (often below laboratory limits of detection), with the exception of localised areas of elevated barium (AIMS, 2014; RPS, 2012). Elevated barium has been attributed to contamination from historical drilling activities (AIMS, 2014b), as barite (barium sulphate) is commonly used in drilling fluids. Sediments in the outer NWS Province are relatively homogenous and are typically dominated by sands and a small portion of gravel (Baker et al., 2008). Fine sediment size classes (e.g. muds) increase with proximity to the shoreline and the shelf break, but are less prominent in the intervening continental shelf (Baker et al., 2008). Carbonate sediments typically account for the bulk of sediment composition, with both biogenic and precipitated sediments present on the outer shelf (Dix et al., 2005). Beyond the shelf break, the proportion of fine sediments increases along the continental slope towards the Exmouth Plateau and the abyssal plain (Baker et al., 2008).

Historical discharge of drill cuttings around wells and the GWA platform has resulted in potential contamination of sediments with drilling fluids (primarily barium, introduced through the historical use of barite in drilling muds). This contamination is typically localised within 200 to 400 m of the GWA platform, with other potential contaminants such as heavy metals present in low concentrations (BMT Oceanica, 2015). Sediments in the operational areas are expected to be comprised primarily of fine sands, very fine sands and silt, with monitoring near the GWA platform indicating these size fractions constitute the majority of sediments (BMT Oceanica, 2015).

Hard substrate occurs within the Operational Areas at a number of shoals and banks, such as Rankin Bank, Wilcox Shoal and Glomar Shoal, it may also occur within the ancient coastline at 125 m depth contour key ecological feature (KEF) (Section 4.7), which overlaps Operational Areas A, B and C.

Rankin Bank is on the continental shelf, and overlaps Operational Area A. While not a KEF, Rankin Bank, along with Glomar Shoal, is the only large, complex bathymetrical feature on the outer western shelf of the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

West Pilbara and represents habitats that are likely to play an important role in the productivity of the Pilbara region (AIMS, 2014a). Rankin Bank consists of three submerged shoals delineated by the 50 m depth contour with water depths of approximately 18 to 30.5 m (AIMS, 2014b).

Rankin Bank represents a diverse marine environment, predominantly composed of consolidated reef and algae habitat (~55% cover), followed by hard corals (~25% cover), unconsolidated sand/silt habitat (~16% cover), and benthic communities composed of macroalgae, soft corals, sponges and other invertebrates (~3% cover) (AIMS, 2014a). Hard corals are a significant component of the benthic community of some parts of the bank, with abundance in the upper end of the range observed elsewhere on the submerged shoals and banks of northwest Australia (Heyward et al., 2012).

Rankin Bank has been shown to support a diverse fish assemblage (AIMS, 2014a). This is consistent with studies showing a strong correlation between habitat diversity and fish assemblage species richness (Gratwicke and Speight, 2005; Last et al., 2005). The habitat surrounding Rankin Bank (<50 m) was mapped by Australian Institute of Marine Science on behalf of Woodside (2014b) and hosts filter feeding communities in areas of consolidated substrate interspersed by sand.

Operational Area A overlaps Wilcox Shoal. Based on the bathymetry of the Wilcox Shoal (ranging from ~30 m below surface waters to ~80 m at seabed), it is highly likely the upper reaches of the shoal support a high cover of benthic organisms comprising mixed hard and soft corals (30 to 40 m depth range), transitioning to a deeper water benthic community comprising soft corals and mixed biota (sponges, other sessile invertebrate biota). The biodiversity value of the coral-dominated mesophotic coral ecosystems and associated abundance and diversity of the fish communities have been documented for Rankin Bank and Glomar Shoal (Abdul Wahab et al., 2018) and, given its proximity to Rankin Bank, it is highly likely that Wilcox Shoal has similar biodiversity values.

Glomar Shoal is a shallow sedimentary bank comprised of coarser biogenic material than the surrounding seabed. The shoals consist of a high percentage of marine-derived sediments with high carbonate content and gravels of weathered coralline algae and shells (McLoughlin and Young, 1985). The shoals are 26 to 70 m below the sea surface and have also been identified as a KEF (Falkner et al., 2009). Glomar Shoals overlaps the south-eastern corner of Operational Area C.

Key habitats and ecological communities within the EMBA are identified in Table 4-4 and described in Sections 4 and 5 of the Master Existing Environment.

Table 4-4: Habitats and communities within the EMBA

Habitat/community	Key locations within the EMBA
Seabed characteristics	
Glomar Shoal	Glomar Shoal is a shallow sedimentary bank comprised of coarser biogenic material than the surrounding seabed. The shoal is 26 to 70 m below the sea surface (Falkner et al., 2009) and overlaps Operational Area C. Glomar Shoals has also been identified as a KEF (Falkner et al., 2009). This KEF encompasses a wider area than the shoal feature itself.
Wilcox Shoal	Wilcox Shoal overlaps part of Operational Area A. Based on the bathymetry of the Wilcox Shoal (ranging from ~30 m below surface waters to ~80 m at seabed) it is highly likely the upper reaches of the shoal support a high cover of benthic organisms comprising mixed hard and soft corals (30 to 40 m depth range), transitioning to a deeper water benthic community comprising soft corals and mixed biota (sponges, other sessile invertebrate biota). The biodiversity value of the coral-dominated mesophotic coral ecosystems and associated abundance and diversity of the fish communities have been documented for Rankin Bank and Glomar Shoal (Abdul Wahab et al., 2018) and, given its proximity to Rankin Bank, it is highly likely that Wilcox Shoal has similar biodiversity values.
Ancient Coastline at 125 m Depth Contour	The Ancient Coastline at 125 m Depth Contour KEF, overlaps parts of three operational areas (DAWE, 2019); Section 4.7). Areas of this KEF comprise hard substrate and may occur within the Operational Areas. Hard substrate seabed habitats present within the operational areas are likely to support filter feeding biota such as sponges and gorgonians (sea whip and fans), as reported for hard substrate seabed habitat in similar water depths along this outer shelf area of the NWS.
Marine primary producers

Habitat/community	Key locations within the EMBA
	Glomar Shoal – about 2 km southwest of Operational Area C Montebello Islands – about 34 km south of Operational Area A Lowendal Islands – about 65 km south of Operational Area A Barrow Island – about 68 km south-southwest of Operational Area A Muiron Islands – about 207 km southwest of Operational Area A
Seagrass beds and macroalgae	Montebello Islands – about 34 km south of Operational Area A Barrow Island – about 68 km south-southwest of Operational Area A Muiron Islands – about 207 km southwest of Operational Area A
Mangroves	Montebello Islands – about 34 km south of Operational Area A Lowendal Islands – about 65 km south of Operational Area A Barrow Island – about 68 km south-southwest of Operational Area A
Other communities and habitats	
Plankton	Plankton within the Operational Areas and EMBA are expected to be representative of the wider NWMR as detailed in Section 4.3 of the Master Existing Environment. Primary productivity of the NWS is largely driven by offshore influences (as reported by Brewer et al., 2007), with periodic upwelling events and cyclonic influences driving coastal productivity, and with nutrient recycling and advection. Cyanobacteria and diatoms are the predominant phytoplankton contributors. It is expected that the dominant primary consumers are copepods, with a wide range of secondary consumers comprising larger planktonic taxa (including larval fish and invertebrates) (Brewer et al., 2007). Spatial and temporal patterns in the distribution and abundance of macro-zooplankton on the NWS are influenced by sporadic climatic and oceanographic events, with large inter-annual changes in assemblages (Wilson et al., 2003). Further detail regarding productivity at other notable locations within the EMBA (e.g. North West Cape) is provided in the Master Existing Environment, Section 4.3.3.
Pelagic and demersal fish populations	Pelagic and demersal fish populations within the three operational areas and EMBA are expected to be representative of the NWMR (described in the Master Existing Environment, Section 5.3). Particular features within the EMBA that are known to support pelagic and demersal fish populations include the Ancient Coastline at 125 m Depth Contour KEF (which is mapped as overlapping all operational areas), the Continental Slope Demersal Fish Communities KEF, the Western demersal slope and associated fish communities of the Central Western Province KEF, Rankin Bank, Wilcox Shoal and Glomar Shoal (including the Glomar Shoal KEF). Detail regarding these features is provided in the Master Existing Environment, Section 9. Notably, the presence of subsea infrastructure associated with the GWA, Pluto and Angel facilities has resulted in the development of demersal fish communities that would otherwise not occur in the operational areas due to the generally featureless, soft substrate that is present (McLean et al., 2017).
Epifauna and infauna	Filter feeders such as sponges, ascidians, soft corals, and gorgonians are animals that feed by actively filtering suspended matter and food particles from water by passing the water over specialised filtration structures (DEWHA, 2008). Filter feeders within the EMBA are expected to be representative of the NWMR, with notable areas of high sponge diversity occurring at Glomar Shoal, overlapping Operational Area C, within the EMBA (see Master Existing Environment, Section 5.4). Discrete areas of hard substrate hosting sessile filter feeding communities may also be associated within the Ancient Coastline at 125 m Depth Contour KEF, which overlaps the operational areas. Filter feeder communities within the operational areas are present on the subsea infrastructure and facilities, which provides hard substrate for attachment in an otherwise generally featureless, soft and sandy substrate.

4.6 Protected species

A total of 102 EPBC Act listed species considered to be MNES were identified as potentially occurring within the EMBA, of which a subset of 73 species were identified as potentially occurring within Operational Area A.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

59 EPBC Act listed species considered to be MNES were identified as potentially occurring within Operational Area B. 62 EPBC Act listed species considered to be MNES were identified as potentially occurring within Operational Area C. The full list of marine species identified from the PMST reports is provided in Appendix C, including several MNES that are not considered to be credibly impacted (e.g. terrestrial species within the EMBA). Criteria for determining species to be considered for impact assessment is outlined in Section 3.2 of the Master Existing Environment. Two conservation dependent species have also been identified with a potential to occur within all Operational Areas and EMBA. These species, the bluefin tuna and scalloped hammerhead, are listed on the Species Profile and Threats Database (DAWE, 2021).

Table 4-5 to Table 4-14 list the species identified by the PMST that have a potential to be impacted by the GPGT Survey Program, as well as overlapping biologically important areas (BIAs) or Habitat Critical to Survival (habitat critical) for these species. A description of each species is included in Sections 5 to 8 of the Master Existing Environment. Figure 4-4 to Figure 4-10 show the spatial overlap with relevant BIAs and habitat critical areas and the Operational Areas and EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.6.1 Fish, sharks and rays

Table 4-5: Threatened and migratory fish, shark and ray species predicted to occur within Operational Areas and the EMBA

Species name	Common name	Threatened status	Migratory status	Potential for interaction

Table 4-8: Marine turtle BIAs within or adjacent to Operational Areas

Species	BIA type	Approximate distance and direction of BIA from Operational Areas (km)		
		Area A	***Area B***	***Area C***
Hawksbill turtle	Internesting Buffer	~11 km south	80 km southwest 83 km south-southeast	69.5 km south
Loggerhead turtle	Internesting Buffer	~20.5 km south	84 km south-southeast	70.5 km south
Green turtle	Internesting Buffer	8.5 km south	75.5 km southwest	73 km south
Flatback turtle	Internesting Buffer	Overlaps	21 km southwest 30 km southeast	12.5 km south

Table 4-9: Marine turtle BIAs within the EMBA

Species	BIA type (closest location)
Hawksbill turtle	Internesting Buffer (Barrow Island; Montebello Islands)
	Nesting (Barrow Island; Montebello Islands)
	Mating (Barrow Island; Montebello Islands)
	Foraging (Barrow Island; Montebello Islands)
Loggerhead turtle	Internesting Buffer (Muiron Islands; North West Cape; Montebello Islands)
	Nesting (Muiron Islands; North West Cape)
Green turtle	Internesting Buffer (Barrow Island; Montebello Islands; Muiron Islands; North West Cape)
	Internesting (Barrow Island; Montebello Islands)
	Nesting (Barrow Island; Montebello Islands; Muiron Islands)
	Foraging (Barrow Island; Montebello Islands)
	Basking (Barrow Island)
	Mating (Barrow Island; Montebello Islands)
	Aggregation (Montebello Islands)

4.6.3 Marine mammals

Table 4-11: Threatened and migratory marine mammal species predicted to occur within the Operational Areas and EMBA

Species name	Common name	Threatened status	Migratory status	Potential for interaction			
				Area A	*Area B*	*Area C*	*EMBA*
Balaenoptera bonaerensis	Antarctic minke whale, dark-shoulder minke whale	N/A	Migratory	N/A	N/A	N/A	Species or species habitat likely to occur within area
Balaenoptera borealis	Sei whale	Vulnerable	Migratory	Species or species habitat likely to occur within area	Species or species habitat known to occur within area	Species or species habitat likely to occur within area	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus	Blue whale	Endangered	Migratory	Migration route known to occur within area	Migration route known to occur within area	Species or species habitat likely to occur within area	Migration route known to occur within area
Balaenoptera edeni	Bryde's whale	N/A	Migratory	Species or species habitat likely to occur within area	Species or species habitat likely to occur within area	Species or species habitat likely occur within area	Species or species habitat likely to occur within area
Balaenoptera physalus	Fin whale	Vulnerable	Migratory	Species or species habitat likely to occur within area	Species or species habitat likely to occur within area	Species or species habitat likely to occur within area	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur Barrow and Boodie Islands subspecies	Boodie, burrowing bettong (Barrow and Boodie Islands)	Vulnerable	N/A	N/A	N/A	N/A	Translocated population known to occur within area
Dasyurus hallucatus	Northern quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu]	Endangered	N/A	N/A	N/A	N/A	Species or species habitat may occur within area
Dugong dugon	Dugong	N/A	Migratory	N/A	N/A	N/A	Breeding known to occur within area

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Species name	Common name	Threatened status	Migratory status	Potential for interaction			
				Area A	***Area B***	***Area C***	***EMBA***
Eubalaena australis	Southern right whale	Endangered	Migratory	N/A	N/A	N/A	Species or species habitat likely to occur within area
Isoodon auratus barrowensis	Golden bandicoot (Barrow Island)	Vulnerable	N/A	N/A	N/A	N/A	Species or species habitat known to occur within area
Lagorchestes conspicillatus conspicillatus	Spectacled hare-wallaby (Barrow Island)	Vulnerable	N/A	N/A	N/A	N/A	Species or species habitat known to occur within area
Megaptera novaeangliae	Humpback whale	N/A	Migratory	Breeding known to occur within area	Breeding known to occur within area	Breeding known to occur within area	Breeding known to occur within area
Orcaella heinsohni	Australian snubfin dolphin	Vulnerable	Migratory	Species or species habitat may occur within area	N/A	N/A	Species or species habitat known to occur within area
Orcinus orca	Killer whale, orca	N/A	Migratory	Species or species habitat may occur within area	Species or species habitat may occur within area	N/A	Species or species habitat may occur within area
Osphranter robustus isabellinus	Barrow Island wallaroo, Barrow Island Euro	Vulnerable	N/A	N/A	N/A	N/A	Species or species habitat likely to occur within area
Petrogale lateralis lateralis	Black-flanked rock-wallaby, Moororong, black-footed rock wallaby	Endangered	N/A	N/A	N/A	N/A	Species or species habitat known to occur within area
Physeter macrocephalus	Sperm whale	N/A	Migratory	Species or species habitat may occur within area	Species or species habitat may occur within area	Species or species habitat may occur within area	Species or species habitat may occur within area
Rhinonicteris aurantia (Pilbara form)	Pilbara leaf-nosed bat	Vulnerable	N/A	N/A	N/A	N/A	Species or species habitat may occur within area

4.6.5 Seasonal sensitivities for protected species

Seasonal sensitivities for protected migratory species identified as potentially occurring within the Operational Areas are identified in Table 4-14. Movement patterns of all protected species identified in Section 4.6 are described in Section 5 of the Master Existing Environment.

Table 4-15: Key seasonal sensitivities for protected migratory species with BIAs overlapping the EMBA

Species	January	February	March	April	May	June	July	August	September	October	November	December
Fish, sharks and rays												
Whale shark (NWMR) – foraging[1]												
Whale shark (Ningaloo Coast) – foraging (high density prey)[1]												
Mammals												
Pygmy blue whale (Exmouth, Montebello, Scott Reef) – northern migration[2]												
Pygmy blue whale (Exmouth, Montebello, Scott Reef) – southern migration[2]												
Humpback whale (NWS) – northern migration[3]												
Humpback whale (NWS) – southern migration[4]												
Dugong (Ningaloo Coast, Exmouth Gulf) – calving, nursing, breeding, foraging[5]												
Marine reptiles												
Flatback turtle (Pilbara) – various nesting areas[6]												
Green turtle (NWS) – various nesting areas[6]												
Hawksbill turtle (WA) – various nesting areas[6]												
Loggerhead turtle (WA) – various nesting areas[6]												
Seabirds and shorebirds												
Wedge-tailed shearwater – various breeding sites[7]												
Australian fairy tern – various breeding sites[8]												
Lesser crested tern – various breeding sites[9]												

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Species	January	February	March	April	May	June	July	August	September	October	November	December
Roseate tern – various breeding sites[10]												
Migratory shorebirds (general peak presence non-breeding)												
	Species may be present in the EMBA											
	Peak period; presence of animals is reliable and predictable each year

4.7 Key ecological features

One KEF overlaps three Operational Areas, and another KEF overlaps only Operational Area C. KEFs within the Operational Areas and EMBA are identified in Table 4-16 and described in Section 9 of the Master Existing Environment. Figure 4-11 shows the spatial overlap with KEFs and the Operational Areas and EMBA.

Table 4-16: KEFs within the Operational Areas and EMBA

Key ecological feature	Distance and direction from Operational Areas to KEF (km)		
	Area A	***Area B***	***Area C***
Ancient Coastline at 125 m Depth Contour	Overlaps	Overlaps	Overlaps
Continental Slope Demersal Fish Communities	20 km northwest	60 km west	104 km west
Glomar Shoal	67 km east	35.5 km east	Overlaps
Exmouth Plateau	117 km northwest	174 km west	217 km west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	175.5 km southwest	254 km southwest	283 km southwest
Commonwealth waters adjacent to Ningaloo Reef	220 km southwest	300 km southwest	329 km southwest

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

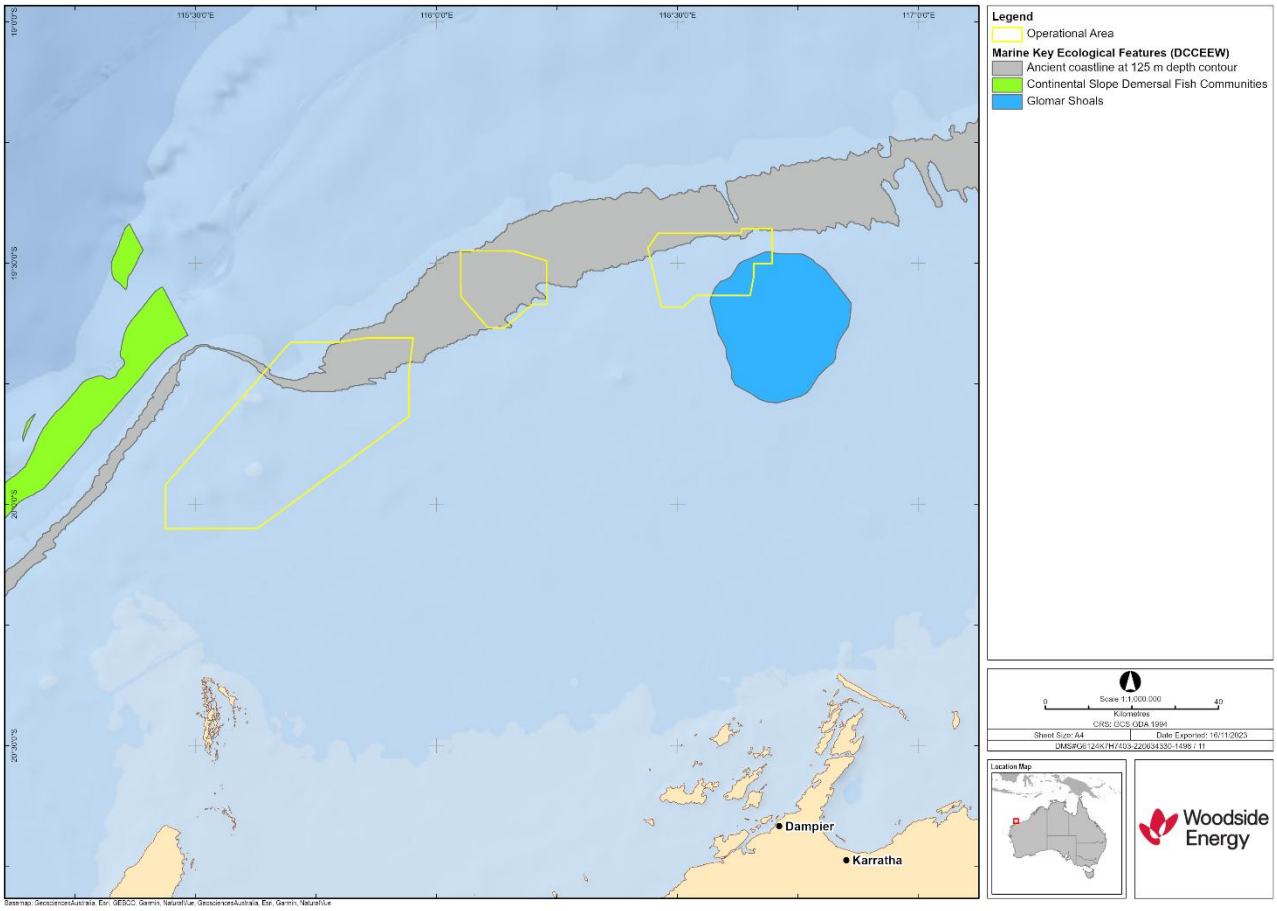

Figure 4-11: Key ecological features overlapping and adjacent to the Operational Areas

4.8 Protected places

Protected places within the Operational Areas and EMBA are identified in Table 4-17 and presented in Figure 4-12. Section 10 of the Master Existing Environment describes the values and sensitivities of protected places and other sensitive areas in the EMBA.

Table 4-17: Established protected places and other sensitive areas overlapping the Operational Areas and EMBA

	Distance and direction from Operational Areas to protected place or sensitive area (km)			IUCN category* or relevant park zone overlapping the Operational Areas or EMBA
	Area A	***Area B***	***Area C***	
AMPs				
Gascoyne Marine Park	191 km southwest	274 km southwest	310 km southwest	Multiple Use Zone – VI
Montebello Marine Park	Overlaps	52 km southwest	74 km southwest	Multiple Use Zone – VI
Ningaloo Marine Park	220 km southwest	300 km southwest	330 km southwest	Recreational Use Zone – IV
State Marine Parks and Nature Reserves				
Marine Parks				
Barrow Island Marine Park	76.5 km south	145 km southwest	172 km southwest	Special Purpose Zone – VI

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Distance and direction from Operational Areas to protected place or sensitive area (km)			IUCN category* or relevant park zone overlapping the Operational Areas or EMBA
	Area A	***Area B***	***Area C***	
Montebello Islands Marine Park	27 km south	95 km southwest	123 km southwest	Special Purpose Zone – VI
Ningaloo Marine Park	220 km southwest	300 km southwest	329 km southwest	Special Purpose Zone – VI
Marine Management Areas				
Barrow Island Marine Management Area	43 km south	114 km southwest	144 km southwest	Habitat Protection Zone – IV
Muiron Islands Marine Management Area	202 km southwest	281 km southwest	310 km southwest	Habitat Protection Zone – IV
Other sensitive areas				
Glomar Shoal	70 km east	40 km east	2 km east	N/A
Rankin Bank	Overlaps	~48 km southwest	~89 km southwest	N/A

**Conservation objectives for IUCN categories include:*

Ia: Strict Nature Reserve

Ib: Wilderness Area

II: national Park

III: Natural Monument or Feature

IV: Habitat/Species Management Area

V: Protected Landscape

VI: Protected area with sustainable use of natural resources – allow human use but prohibits large scale development.

IUCN categories for the marine park are provided and, in brackets, the IUCN categories for specific zones within each Marine Park as assigned under the North-west Marine Parks Network Management Plan 2018 and South-west Marine Parks Network Management Plan 2018.

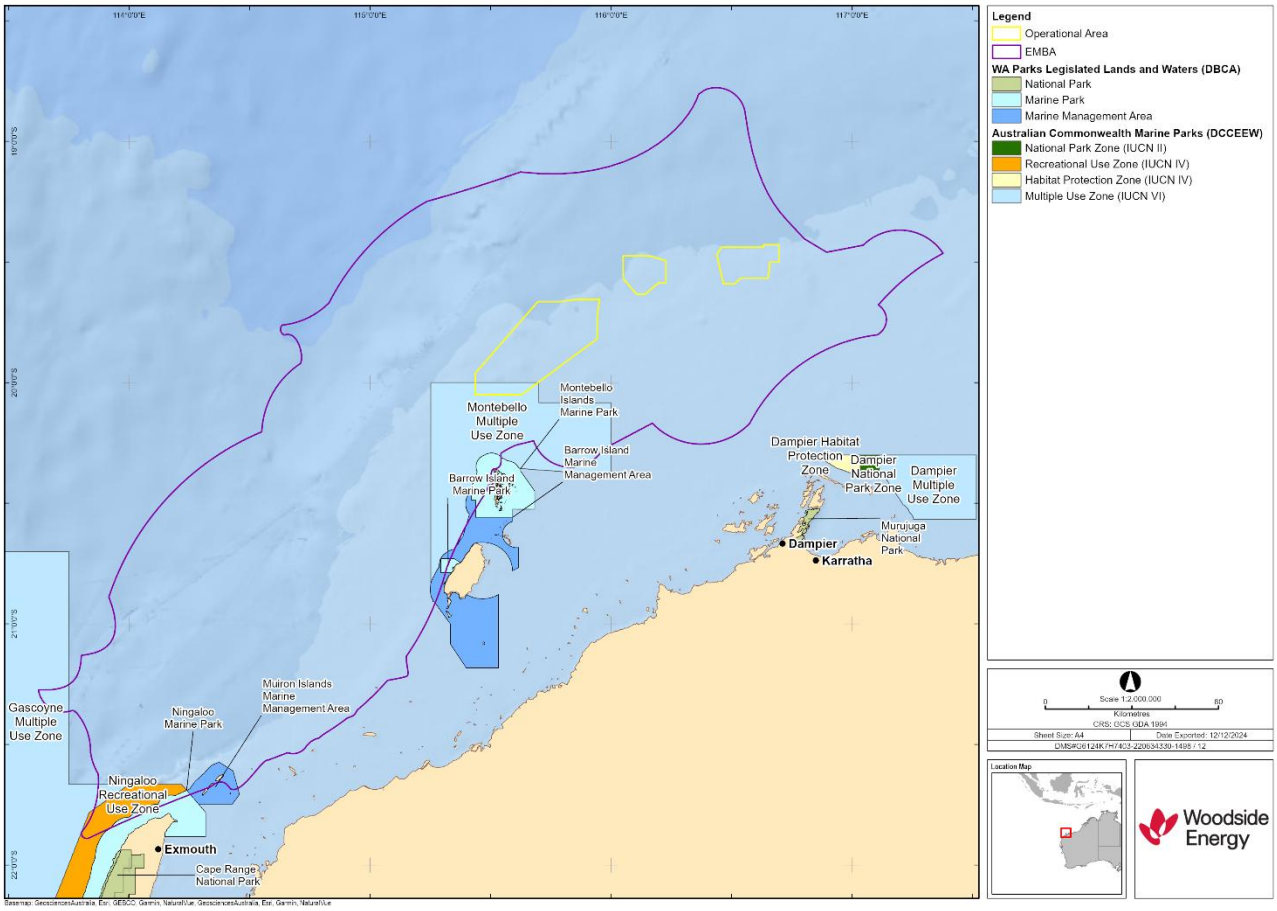

Figure 4-12: Protected areas overlapping and adjacent to the Operational Areas and EMBA

4.9 Cultural features and heritage values

4.9.1 Background

Woodside recognises the 'environment' for the purpose of the evaluation required under the Environment Regulations includes:

- the heritage value of places
- the social, economic and cultural features of the broader environment.

In this section, the heritage value of places within the Operational Areas and EMBA and the cultural features of the Operational Areas and EMBA are described.

In line with The Burra Charter: The Australia International Council on Monuments and Sites (ICOMOS) Charter for Places of Cultural Significance (Australia ICOMOS, 2013) (Burra Charter) and associated practice notes, Woodside understands heritage value to refer to the cultural significance of a place to an individual or group. A cultural feature, by contrast, is understood to be comparable to the Burra Charter term “fabric” and refer to a place’s elements, fixtures, contents and objects which have cultural values. Although these features are necessarily physical, the place they inhabit or comprise may have tangible or intangible dimensions (Australia ICOMOS, 2013).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Through consultation with relevant persons, Woodside recognises the deep spiritual and cultural connection to the environment[2] that First Nations peoples hold.

4.9.2 First Nations peoples

As a starting point for understanding social and cultural features of the environment for Indigenous (First Nations) groups, Woodside uses the existing systems, such as native title, to identify Indigenous groups that may have functions, interests or activities that may be affected. To that end, Woodside identifies native title representative bodies and nominated representative entities, as well as native title claims, determinations and Indigenous Land Use Agreements (ILUAs) which the EMBA overlaps. Native title claims, determinations and ILUAs are defined under the *Native Title Act 1993* (Cth). While acknowledging that cultural features and heritage values may exist outside of the native title framework, Woodside considers this to be the broadest extent over which Indigenous groups have claimed native title rights and interests.

Native title claims are applications made to the Federal Court under the Native Title Act for a determination or decision about native title in a particular area. A claim is made by a native title claim group which asserts it holds native title rights and interests in an area of land and/or water, according to its traditional laws and customs. By making a claim, the native title claim group seeks a decision that native title exists so that its native title rights and interests are recognised by the common law of Australia. This is called a native title determination. A determination is a decision by a recognised body, such as the Federal Court or High Court of Australia, that native title either does or does not exist in relation to a particular area (National Native Title Tribunal).

A requirement to establishing a positive determination of native title in court is proving that there is an organised society that occupied the land and/or waters at the time of British annexation. The requirement of an 'organised society' is set out by Justice Toohey in the historic judgment of Mabo v Queensland (No 2) [1992] HCA 23; (1992) 175 CLR 1 ('Mabo'). Justice Toohey had the following to say (at 187):

> *it is inconceivable that indigenous inhabitants in occupation of land did not have a system by which land was utilised in a way determined by that society. There must, of course, be a society sufficiently organised to create and sustain rights and duties…*

Therefore, Woodside understands that native title rights and interests are held communally by an organised society, that native title claims are understood to represent the area over which Indigenous groups are claiming these rights and interests, and that native title determinations provide clarity on where native title rights and interests are found to either exist or not exist. Where native title rights or interests are determined to exist they will be held by a Registered Native Title Body Corporate (section 57, Native Title Act) in trust or as agent for native title holders.

ILUAs are voluntary agreements between native title parties and other people or bodies about the use and management of land and/or waters and are registered by the Native Title Registrar in the Register of ILUAs. An ILUA can be made over areas where:

- native title has been determined to exist in at least part of the area, or
- a native title claim has been made, or
- where no native title claim has been made.

While registered, ILUAs operate as a contract between the parties, including relevant native title holders (National Native Title Tribunal).

The Native Title Act provides for a Representative Aboriginal/Torres Strait Islander Body (Native Title Representative Body) to be recognised by the Commonwealth Minister for an area. Native Title Representative Bodies have specialist functions set out in the Native Title Act within the area for which they

[2] *'Environment' in Regulation 5 of the OPGGS (Environment) Regulations is defined as:*

a) ecosystems and their constituent parts, including people and communities

b) natural and physical resources

c) the qualities and characteristics of locations, places and areas

d) the heritage values of places; and includes

e) the social, economic and cultural features of the matters mentioned in paragraphs (a), (b), (c) and (d)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

are the Native Title Representative Body. However, the functions of a Native Title Representative Body are such that they do not hold details on the cultural features or heritage values of an area and therefore do not inform Woodside's understanding of heritage values or cultural features.

For the activity in this EP, there is one native title determination (Gnulli, Gnulli #2 and Gnulli #3 – Yinggarda, Baiyungu and Thalanyji People) that overlaps the EMBA (see Figure 4-13).

A summary of native title claims, determinations and ILUAs overlapping or coastally adjacent to the EMBA is set out in

Table 4-18.

4.9.3 Coastally adjacent First Nations groups

Woodside understands that First Nations groups are keenly aware of the extent of their rights, interests and responsibilities for Country, and these are generally discrete, defined areas, including areas of sea (Smyth, 2007). To identify cultural features and heritage values which may exist outside of native title claim, determination and ILUA areas, Woodside considers native title claims, determinations and ILUAs coastally adjacent to the EMBA to be an instructive means of identifying potentially relevant Indigenous groups to be consulted (see Table 5-2).

That said, Woodside understands from engagement with stakeholders that extending a native title group's responsibility to areas which those groups have elected to not include in their claims or ILUAs can have significant cultural consequences for Indigenous groups and individuals. This may also, over time, build expectations in the broader Indigenous community that a group is responsible for maintaining environmental values in areas for which they do not hold traditional knowledge. Woodside also acknowledges that an Indigenous group's relative proximity to any Operational Areas or EMBA is not necessarily a meaningful indicator of the connection of Indigenous groups to the area, and providing advice over such areas can be culturally dangerous. As a result, caution must be used when conducting broader engagement.

For this EP, no ILUAs overlap the Operational Areas.

A summary of native title claims, determinations and ILUAs overlapping or coastally adjacent to the EMBA is set out in

Table 4-18. Claims and determinations have not been differentiated in this table, as it is acknowledged that either of these may indicate the existence of rights and interests.

4.9.3.1 Marine parks

Woodside acknowledges that Commonwealth and State Marine Park Management Plans have sought to recognise cultural values of Indigenous groups. AMPs describe this framework in the following way: ‘when making decisions about what can occur in marine parks and what action we will take to protect marine parks, we take values into account’. AMP summarises these values as natural values, cultural values, heritage values and socio-economic values. Woodside considers the management plans of marine parks that overlap the Operational Areas and the EMBA to determine whether cultural features and heritage places have been identified and whether there are Traditional Custodians or representative bodies referenced to contact regarding potential cultural features and heritage places.

The Operational Areas overlap features of the Montebello AMP. The EMBA overlaps features of a further two AMPs under the North-West Marine Parks Network Management Plan 2018. The Operational Areas do not overlap any State Marine Parks, however the EMBA overlaps six State Marine Parks. Where these plans specify identifiable representative bodies who may hold knowledge of heritage values or cultural features—including but not limited to Registered Native Title Bodies Corporate—these bodies are consulted (see **Error! Reference source not found.**). Consultation with these groups may identify heritage values and c ultural features beyond those addressed in the marine park management plans. One identifiable representative body was specified for one of the marine parks overlapped by the EMBA (see Table 4-19).

The marine park management plans did note for the Gascoyne, Montebello and Ningaloo AMPs that the Yamatji Marlpa Aboriginal Corporation is the relevant Native Title Representative Body. Consultation with the Yamatji Marlpa Aboriginal Corporation included discussion of the Traditional Custodians who may hold knowledge of heritage values or cultural features (see **Error! Reference source not found.**, Table 1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-19: Summary of Commonwealth and State Marine Park Management Plan EMBA overlap

Marine Park Management Plan	EMBA Traditional Custodian group overlap
Commonwealth Marine Park Management Plan	
Montebello AMP	Yes – Yamatji Marlpa Aboriginal Corporation
Ningaloo AMP	Yes – Nganhurra Thanardi Garrbu Aboriginal Corporation Yamatji Marlpa Aboriginal Corporation
Gascoyne AMP	Yes – Yamatji Marlpa Aboriginal Corporation
State Marine Park Management Plan	
Barrow Island Marine Management Area	Yes – however no Traditional Custodian group specified
Barrow Island Marine Park	Yes – however no Traditional Custodian group specified
Montebello Islands Marine Park	Yes – however no Traditional Custodian group specified
Muiron Islands Marine Management Area	Yes – however no Traditional Custodian group specified
Muiron Islands Nature Reserve	Yes – however no Traditional Custodian group specified
Ningaloo Marine Park	Yes – Nganhurra Thanardi Garrbu Aboriginal Corporation

In the management plans for the AMPs it is noted that “Sea Country is valued for Indigenous cultural identity, health and wellbeing.” Cultural identity is understood to refer to the fact that “essence of being a 'Saltwater' person is ontological rather than merely technological. That is, it is about how people relate spiritually to the sea and engage with spiritual forces that created it, the marine flora and fauna and people.” (McDonald and Phillips, 2021) This connection may be damaged where people are displaced or disrupted (e.g. during colonisation) or where there is a loss of technical skills or environmental knowledge (McDonald and Phillips, 2021), however no impacts of this nature are considered to arise from this GPGT Survey Program.

The Management Plan for the Ningaloo Marine Park and Muiron Islands Marine Management Area 2005–2015: Management Plan Number 52 (relating to the Muiron Islands Marine Management Area and Ningaloo Marine Park) notes the aesthetic values of the seascape as a cultural value and that “Panoramic vistas of turquoise lagoon waters, reefs, beaches, breaking surf and the blue open ocean beyond the reef line are major attractions of the reserves.” In particular, the plan notes that “Inappropriate structures along the coastline, on the islands and in the surrounding waters have the potential to degrade the aesthetic values of the reserves. Coastal developments and maritime infrastructure projects must therefore be planned with careful consideration of this issue.” As the GPGT Survey Program described in this EP does not include the addition of any structures within these parks, no impacts on the aesthetic values of these parks are anticipated.

A number of management plans for the state marine parks also note Indigenous and maritime heritage within the marine parks. These are addressed in Section 4.9.3.1.

4.9.4 Sea Country values

‘Sea Country’ can be defined as the area of sea over which a First Nations group has interests, cultural value, connection and use. It has been noted that “the saltwater peoples of the north-west are associated with discrete clan estates or tribal areas, often referred to in contemporary Aboriginal English as ‘Saltwater Country’ or ‘Sea Country’. ‘Country’ refers to more than just a geographical area: it is shorthand for all the values, places, resources, stories and cultural obligations associated with that geographical area.” (Smyth, 2007). “Sea Country is valued for Indigenous cultural identity, health and wellbeing” (DNP, 2018). Cultural identity is understood to refer to the fact that “essence of being a 'Saltwater' person is ontological rather than merely technological. That is, it is about how people relate spiritually to the sea and engage with spiritual forces that created it, the marine flora and fauna and people” (McDonald and Phillips, 2021).

In terms of seascape extent, McNiven (2004) suggests that “for those mainland groups whose exploitation of the sea was limited to littoral resources, it is likely that seascapes extended no more than c. 20 to 30 km out to sea, out to the horizon and the limit of human visibility. However, in some coastal places, clouds that can be seen well over 100 km out to sea are imbued with spiritual significance. For those groups with elaborate canoe technology, seascapes extend well over the horizon.” While there is some evidence of traditional

watercraft in Australia's northwest, the recorded evidence is limited to travel across inland rivers (e.g. Barber and Jackson, 2011) or travel between coastal islands (Paterson et al., 2019).

Woodside recognises the potential for marine ecosystems to include cultural features as well as environmental values. The link between environmental protection and cultural heritage protection is illustrated in the Australian Government's Indigenous Protected Areas Program. The Indigenous Protected Areas program provides for "areas of land and sea managed by Indigenous groups as protected areas for biodiversity conservation…[Indigenous Protected Areas] deliver environmental benefits…Managing [Indigenous Protected Areas] also helps Indigenous communities protect the cultural values of their Country for future generations…" (DCCEEW, 2023). This intrinsic link concept is also described by Murujuga Aboriginal Corporation (MAC, 2021) as it relates to the values of the marine environment that are of cultural importance to MAC based on engagement with their Elders and Murujuga Land and Sea Unit Rangers. Elders were clear that all living things in Mermaid Sound are connected and that Mermaid Sound and Dampier Archipelago (Murujuga) are considered one place where the entire environment and all ecosystems hold both cultural and environmental value, with these types of values (cultural and environmental) intrinsically linked (MAC, 2021 as cited in Woodside, 2023a).

Cultural features of coastal areas may include marine species that may travel many thousands of kilometres through areas with similar cultural values to multiple First Nations language groups. Some species may travel as far as 5000 km from Antarctica to the Kimberley region of Western Australia (Double et al., 2010, 2012), passing First Nations language groups along the entire west coast of Australia. Distribution and migratory patterns of migratory species are described in Section 4.6.

Sea Country values have been defined through desktop assessment of Sea Country values from publicly available sources and consultation with First Nations groups and individuals.

The process for identifying First Nations groups who may have interests and connection in Sea Country are set out in Section 4.9.3. The scope of advice Traditional Custodians were encouraged to provide through project consultation was not limited by reference to any particular boundaries or limits of Sea Country.

4.9.4.1 Desktop assessment of Sea Country values

Cultural features and heritage values identified in publicly available literature

Publicly available sources were assessed for any records of previously identified Sea Country values or cultural features that may overlap with the EMBA or Operational Areas. Where cultural features or Sea Country values were identified these are summarised in Table 4-21 according to the First Nations groups (where identified or inferable) who hold these values. Except where specific references are made to cultural values, these are considered to be addressed through the management of environmental values and are not summarised is this section.

4.9.4.2 First Nations archaeological heritage assessment

Woodside understands that communal cultural connection may exist between Traditional Custodians and land and waters. It is understood from the onshore archaeological record that Aboriginal people have occupied the Australian continent for at least 65,000 years (Clarkson et al., 2017) and in many places maintain a strong continuing connection that is said to extend back in Indigenous cosmology to the beginning of time.

It is understood that the sea level has risen significantly during the 65,000 years of Indigenous occupation, and areas that were once inhabited are now submerged on the continental shelf (Veth et al., 2019; UWA, 2021). Woodside also understands that, at its lowest level during First Nations occupation, sea level was between 125 m (O'Leary et al., 2020; Veth et al., 2019; Williams et al., 2017) and 130 m below current levels (Benjamin et al., 2020; Benjamin et al., 2023; UWA, 2021). Archaeological material preserved on the Ancient Landscape has the potential to provide further information about the earliest periods of human occupation (Veth et al., 2019; UWA, 2021).

Recent archaeological discoveries demonstrate that the now submerged landscape was occupied and inhabited and can retain archaeological material from this time (Benjamin et al., 2020; see Ward et al., 2021 for an opposing view).

In recognition of this, Woodside considers the Ancient Landscape between the mainland and the Ancient Coastline KEF as an area where potential Indigenous archaeological material may exist on the seabed, as this covers the full extent of this possible Indigenous occupation. Known Indigenous heritage places including archaeological sites may be protected subject to declarations under the *Aboriginal and Torres Strait Islander Heritage Protection Act 1984* (ATSIHP), *Underwater Cultural Heritage (UCH) Act 2018* or EPBC Act. However, these Acts only extend protection to heritage places specified by declaration or otherwise included on a statutory list. Woodside understands that there is no Indigenous archaeology known to exist anywhere within Commonwealth waters and no declarations or prescriptions under these Acts are located within the EMBA.

For this EP, a search of Department of Planning, Lands and Heritage's Aboriginal Cultural Heritage Inquiry System was undertaken, which showed no Registered Aboriginal Sites or Other Heritage Places in the EMBA (see Appendix D). The Operational Areas intersect part of the Ancient Landscape but also extends beyond the furthest extent of the Ancient Landscape.

Archaeological material on the Ancient Landscape is a relevant matter for the proposed activity as there is overlap between the Operational Areas and the Ancient Landscape, and potential for seabed disturbance from planned activities and therefore potential for impacts to archaeological material. Assessment of the potential for archaeological material to be impacted by the GPGT Survey Program is discussed in Sections 6.5 and 6.6. Assessments undertaken for the previous EP revision Operational Area did not identify any archaeological sites or values in Commonwealth waters that may be impacted by the GPGT Survey Program. Revised areas of the GPGT Survey Program will be assessed, consistent with Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (DCCEEW, 2024c) (see Section 6.8 for more details).

In Australia until recently, the consideration of submerged archaeological sites has generally focused on the sub-discipline of maritime archaeology with connection to Australian Indigenous archaeology through studies of Indigenous fish-traps, whaling stations and shipwreck survivor camps. However, with the exception of Indigenous fish traps in intertidal zones, the consideration of Indigenous heritage sites submerged by post-glacial sea-level rise has only recently been considered (Mott, 2019).

There has been long and continuous occupation of the coastal Pilbara region as evidenced by scientific studies (Balme et al., 2009; McDonald et al., 2018; Veth et al., 2017). Petroglyph motifs feature a range of subject matter with many examples depicting extinct fauna and early stylistic techniques (McNickle, 1984; McDonald, 2005; Mulvaney, 2009, 2010, 2013).

In order to assess and define potential for preservation of submerged Late Pleistocene and Holocene sediment bodies that may contain preserved archaeological deposits, modelling on continental shelf development in the Dampier Archipelago has been undertaken. Analysis and modelling between the Last Glacial Maximum, through the Holocene marine transgression and up to the present day has shown that archaeological materials, if present, would most likely be evident in deposits associated with the early phases of inundation of the Dampier Archipelago, dating from around 9 to 7 ka before present (Ward et al., 2013). In contrast, the study proposes that coastal archaeology older than about 12 ka before present, when

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

the post-glacial sea levels were below about 50 m, will have been exposed to a phase of faster tidal currents on the continental shelf, and hence eroded or poorly preserved (Ward et al., 2013).

Through the Deep History of Sea Country project, researchers undertook a systematic and hierarchical approach to underwater investigation of the submerged landscapes at Murujuga (Dampier Archipelago). The researchers looked at the previously recorded Indigenous heritage sites from terrestrial surveys and used principles of geological, geomorphological and environmental associations to extrapolate to submerged landscapes. Where possible, the research considered submerged landscape principles as comparable but recognised that a range of factors may affect direct comparisons. A major constraint to any comparative studies is the shortage of marine stratigraphic, paleo-environmental, or geochronological data, and thus comparisons were initially divided into hard (crystalline) rock and soft (sedimentary) rock contexts, with the relative age of a potential site or deposit based on bathymetry (i.e. depth below modern sea level) and morphological setting. These essentially inform and delineate prospective target areas for broad-scale underwater mapping (Veth et al., 2019).

The sites considered most likely to survive inundation, based on the review of existing literature, were logically the more robust forms, including:

- midden and artefacts within cemented dunes, relict water holes, and beach rock deposits
- quarry outcrops, extraction pits, and associated reduction debris in fine-grained volcanic outcrops
- curvilinear stone structures and standing stones sitting on volcanic pavements and jammed into volcanic rock piles
- lag deposits of artefacts and possibly midden on hardpan in suitable landscape contexts with good preservation conditions (e.g. shallow declination shorelines in sheltered passages of the inner archipelago or on the leeward side of hard-rock/fringing reef causeways adjacent to the outer islands)
- small overhangs and shelters with preserved deposits, facing away from the dominant wave and wind action (Veth et al., 2019).

Should feedback be received (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).

Where Indigenous archaeological material is identified within the EMBA, Woodside will discuss the management of this material with appropriate Traditional Custodian group(s), starting with any adjacent Native Title Body Corporate.

4.9.4.3 Consultation feedback to inform existing environment

Summary of values raised during consultation

The topics/interests and values raised by relevant First Nations groups through consultations on this GPGT Survey Program, or raised in context of other activities are summarised in Table 4-21.

First Nations cultural values are communally held. This is reflected in Vision 3 of Dhawura Ngilan that "Aboriginal and Torres Strait Islander heritage is managed…according to community ownership" (Heritage Chairs of Australia and New Zealand, 2020). Dhawura Ngilan also specifically notes that "Aboriginal and Torres Strait Islander…intangible knowledge systems, which are held in songlines and language, are endangered. This knowledge is held by Elders and the community." Through consultation, Registered Native Title Bodies Corporate and nominated representative corporations have identified or raised topics relating to environmental values of cultural interest. Woodside recognises the deep spiritual and cultural connection to the environment[3] that First Nations people hold.

[3] *'Environment' in Regulation 5 of the OPGGS (Environment) Regulations is defined as:*

a) ecosystems and their constituent parts, including people and communities

b) natural and physical resources

c) the qualities and characteristics of locations, places and areas

d) the heritage values of places, and includes

e) the social, economic and cultural features of the matters mentioned in paragraphs (a), (b), (c) and (d).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-21: Feedback received via consultation to inform the Master Existing Environment

Relevant First Nations group/individuals	Consultation context	Description of feature and value/interest	Potential for Overlap	
			Operational Area	***EMBA***
Buurabalayji Thalanyji Aboriginal Corporation representing some of the Gnulli native title claimants (Baiyungu and Thalanyji people)	Raised in context of consultation on activities subject to other EPs	Value: Cultural obligation to care for the environmental values of Sea Country. Sea Country extends *"out to the vast islands off the coast of the Pilbara, including the Montebello Islands, Barrow Island, and the Mackerel Islands".*	Possible (unspecified)	Possible (unspecified)
Kariyarra Aboriginal Corporation	Raised in context of consultation on this activity and activities subject to other EPs	Value/Interest: Kariyarra have values and interests in Sea Country including traditional fishing and gathering rights in the ocean.	Possible	Possible
		Value: Presence of mythic snakes and Yinta; associated with Sea Country.	Possible	Possible
		Feature: Dugongs.	No	Possible
		Feature: (Majun) marine turtles and turtle eggs.	Possible	Possible (marine turtles) No (turtle eggs) (EMBA does not reach shoreline)
		Feature/Value: Stingrays (barbs used for spears).	Possible	Possible
		Feature: Fish.	Possible	Possible
		Feature: Shellfish.	No	Possible
		Value/Interest: Various resource species including marine mammals, fish, molluscs (bivalves, gastropods and cephalopods).	Possible	Possible
		Value: Cultural knowledge transfer.	No	No
		Interest: Offshore islands (low tide).	No	Possible (unspecified)
		Value: Care for Country, including Sea Country.	Possible	Possible
		Interest: Avoid impacts on coastal landforms and coastal native vegetation.	No	No (EMBA does not reach shoreline)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Relevant First Nations group/individuals	Consultation context	Description of feature and value/interest	Potential for Overlap	
			Operational Area	***EMBA***
		Interest: Tangible cultural heritage (sites) associated with the coast/ocean.	No	No (Kariyarra's coastal tangible heritage is outside of EMBA)
		Value: Marine resources. Concern raised about the potential for diseases due to adverse event (hydrocarbon spill).	Possible	Possible
		Value: Responsibility to care for Sea Country. Value: Marine resources. Kariyarra explained the most important thing is the preservation of sea life and coastal areas. The ocean provides critical food sources to their community and Kariyarra Traditional Owners are coastal people so they have a strong connection to the area and a responsibility to preserve the area for future generations.	Possible	Possible
		Value: River systems are important to the food chain.	No	No
		Value: Marine Resources: Shellfish	Possible	Possible (all)
		Cockles	Possible	
		Oysters	Possible	
		Clam shells,	Possible	
		Con shells	Possible	
		Mullets	Possible	
		Sea cow (dugong)	No	
Murujuga Aboriginal Corporation representing Ngarda-Ngarli people (Mardudhunera, Ngarluma,	Raised in context of consultation on activities subject to other EPs	Value: Mermaid Sound – ecosystem health.	Possible	Possible
		Feature: Whale. Value: A whale thalu is an increase at a totemic site that brings whales into beach.	Possible (Table 4-11) Possible (unspecified)	Possible (Table 4-11) Possible (unspecified)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Relevant First Nations group/individuals	Consultation context	Description of feature and value/interest	Potential for Overlap	
			Operational Area	***EMBA***
Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi)	Raised during the course of consultation for another EP	Value: Whales and other species of totemic importance need to be protected, including their populations, biodiversity and migration patterns.	Possible	Possible
		Value: Whales are culturally important species that migrate through Mermaid Sound. Humpback whales in particular.	Possible	Possible
		Feature: Dolphins.	Possible	Possible
		Value: There are cultural ceremonies associated with communicating with dolphins.	Possible (unspecified)	Possible (unspecified)
		Feature: Dugongs.	No	Possible
		Value: Dugongs are a food source associated with seagrasses near Gidley Island.	No	Possible
		Feature: Fish.	Possible	Possible
		Value: There are Thalu ceremonies associated with increasing fish stocks.	Possible (unspecified)	Possible (unspecified)
		Feature: Sea snakes. Specifically mentioned as culturally important species.	Possible	Possible
		Feature: Flatback, green, hawksbill, loggerhead and leatherback turtles. Turtles are culturally important species that moves through Mermaid Sound. Turtles are most often seen in shallower areas and where there are seagrasses.	Possible (Table 4-7)	Possible (Table 4-7)
		Most beaches are nesting sites for turtles, including those on Gidley and Legendre Islands.	No	No
		Value: The songline associated with the turtle comes from Fortescue to Withnell Bay. This song is sung by four or five tribes for day and night without consuming food or water.	Possible	Possible
		Interest: Coral. Fish are attracted to areas with coral. Concerned about coral bleaching because corals are important. Beautiful colours. They also attract a lot of other things. Fish carry coral spawn like bees pollinate flowers. If fish were looked after, the corals would get brighter and brighter (by transmitting nutrients and performing other ecosystem services, fish can be symbiotic with corals). Spawning events should be avoided (associated with full moon). Locations identified during consultation include Withnell Bay; Conzinc Bay; south-west of Legendre Island.	No	No

4.9.5 Further context: intangible cultural heritage

Intangible cultural heritage has been identified through consultation with First Nations people as culturally important. Cultural knowledge, as expressed through songlines, dreaming, dance and other cultural practices, can be associated with tangible objects and physical sites that are culturally important to First Nations people (Adler, 2021; Bursill et al., 2007). Intangible cultural heritage can also be embodied in the practices, representations, expressions, knowledge, uses and skills associated with physical sites (UNESCO, 2003). As a result, physical features may have intangible dimensions (Australia ICOMOS, 2013).

4.9.5.1 Songlines

Oral Songlines are often described by First Nations people as the law of the land and make up part of the Dreaming (Neale and Kelly, 2020:30). Songlines are viewed in Western academia as a framework for relating people to land and consist of a series of invisible, interconnected routes across the landscape that mark significant sites for First Nations people (Higgins, 2021:723). Songlines demonstrate First Nations peoples' strong connections to land by revealing sacred knowledge that is place-specific (Roberts, 2023:5). The land's physical features are instrumental in maintaining songlines because this is how ancestral spirits journeyed through, and interacted with, the physical landscape leaving sacred knowledge behind. The interconnection between the physical and spiritual is where songlines become intrinsically tied to significant places across Country. As a result, geographical landforms are recorded within songlines and become sacred places. Such landforms can include inter alia: rocks, mountains, rivers, caves and hills (Higgins, 2021:724). Songlines can become lost, fragmented or broken when there is a loss of Country or forced removal from Country (Neale and Kelly, 2020:30). Physical sites that have been identified as comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge.

In Australia, songlines can stretch thousands of kilometres, making up a complex and organic network of stories containing cultural knowledge of First Nations communities across the land (Neale and Kelly, 2020:35). Songlines can also extend out to Sea Country and contain cultural knowledge that is tied to geographic features, atmospheric phenomena and marine plants and animals. Often songlines containing references to a seascape or Sea Country make mention of mythical events occurring around marine life, fishing areas, submerged rocks or coral. Songlines that embody seascapes can reflect how a group may relate to, or value, Sea Country; for example. connections to nearby islands that they once inhabited in their songlines (Smyth and Isherwood, 2016:307). Songlines can also be used as proof of long-standing connection to land and support a legal entitlement to land rights (Higgins, 2021:74). Examples where songlines contain strong references to Sea Country are more common in Pacific Islander and Torres Strait Islander communities, who often refer to seascapes and skylines in their songlines in order to communicate sacred knowledge that assists in safe navigation of the ocean (Neale and Kelly, 2020:83-84).

The routes of any songlines in the EMBA have not been provided by Traditional Custodians through consultation.

4.9.5.2 Creation/dreaming sites, sacred sites and ancestral beings

The only sources located by Woodside with detailed descriptions of the location ancestral beings or creation/dreaming/sacred sites placed these on land or within inland water sources such as rivers or pools. However, some ancestral beings are noted to live within or originate from the sea generally, and some creation stories talk to the creation of features from or in the sea. Additionally, every place on shore or at sea must be assumed to have been created on some level in First Nations cosmology.

4.9.5.3 Cultural obligations to care for Country

Caring for Country collectively refers to the cultural obligations of individuals and groups, as well as rituals and ceremonies required for the physical and spiritual health of the environment. In the literature reviewed by Woodside, caring for Country was noted to include, but is not limited to, maintenance of the physical environment and ecosystem. It may also have cultural, spiritual and ritual dimensions such as caring for ancestral beings or ensuring cultural safety. Thalu are places where increase ceremonies are performed to enhance or maintain populations of plants, animals or phenomena. All mentions of active ceremonial sites were confined to onshore locations, though the values may extend offshore where, for example, a thalu relates to marine species populations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.5.4 Knowledge of Country/customary law and transfer of knowledge

Knowledge of and familiarity with the features of Sea Country is itself a value. The inherent potential for restricted or secret knowledge makes this difficult to assess even through consultation with Traditional Custodians. However, aspects such as limitations on access to sites or disruption/relocation of First Nations communities may have implications for the preservation of First Nations knowledge. Further, connection to Country may be damaged where people are displaced or disrupted (e.g. during colonisation) or where there is a loss of technical skills or environmental knowledge (McDonald and Phillips, 2021).

Transfer of knowledge includes continuing traditional practices to pass on practical skills. This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003).

4.9.5.5 Connection to Country

Connection to Country describes the multi-faceted relationship between First nations people and the landscape, which is envisioned as having personhood and spirit. It is also an aspect of personal identity for many First nations people. In the case of Sea Country this can mean identifying as a Saltwater person, where "essence of being a 'Saltwater' person is ontological… it is about how people relate spiritually to the sea and engage with spiritual forces that created it, the marine flora and fauna and people" (McDonald and Phillips, 2021).

4.9.5.6 Access to Country

Access to Country, including Sea Country, is necessary for the continuation of other values including caring for Country and the transfer of traditional knowledge. Being on Country can be an important way of expressing or maintaining connection to Country (Australian Indigenous HealthInfoNet n.d.). Access is also a value in its own right, as a continuation of traditional Sea Country access and use.

4.9.5.7 Restriction on access to Country

Some areas of Sea Country identified through the literature review include areas that should not be accessed, or are otherwise subject to access restrictions including requiring ceremonies or being accessed only by people of the correct gender. Failure to comply with these obligations may result in risks to cultural or spiritual safety for those individuals or for Traditional Custodians.

4.9.5.8 Kinship systems and totemic species

Individuals may have kinship to specific species (Smyth, 2008; Juluwarlu, 2004) or a responsibility to care for species (Muller, 2008). Kinship arises from totemic associations within First Nations "skin group" systems. It is forbidden for an individual to kill or eat a species who is from the same "skin group" (Juluwarlu, 2004). They may also have certain obligations linked to the discussion of caring for Country below. It is assumed that marine species may have kinship/totemic relationships to Traditional Custodians, but it is understood that these relationships do not prohibit people outside of that "skin group" from hunting or eating that same species (Juluwarlu, 2004).

4.9.5.9 Resource collection

A number of marine species are identified through consultation and literature as important resources, particularly as food sources. In addition to their immediate value as sustenance, the gathering and preparation of these resources are informed by cultural knowledge, and an inability to use these resources may result in a loss of ability to transfer that knowledge to future generations.

4.9.6 Further context: marine ecosystems and species

4.9.6.1 Marine mammals

Whales, and in particular humpback whales, have been identified through consultation with First Nations people as culturally important species, with totemic importance including their populations, biodiversity, and migration patterns. Cultural ceremonies associated with communicating with dolphins have also been raised by MAC through consultation.

Whale symbology expressed through stories, music, and dance can reflect a group's connections with the sea, as well as marine fauna, which then comprise a group's cultural values (Ardler, 2023; Bursill et al.,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2007; Cressey, 1998). Whales also speak to a broader connection that exists between First Nation people and their surrounding environment. Beyond mythology and symbolism, whales can be connected with various economic and social functions associated with everyday life. Cultural knowledge of whales, whale migration, behaviour and the related marine environment may all be important in ensuring the continuation of these socio-economic functions and other related activities that remain valuable to First Nations people (Fijn, 2021:47).

Details pertaining to whales, dugongs and dolphins, their distribution, migration patterns and populations are described in Section 4.6.3, with further details in the Master Existing Environment.

4.9.6.2 Marine reptiles

Turtles and sea snakes have been identified through consultation with First Nations people as culturally important species, with turtles identified as a resource. First Nations people that identify marine reptiles as species of totemic importance or integral to songlines may place high cultural value on their protection. No marine reptiles related songlines have been identified as per Section 4.9.5.1 that have the potential to interact with the Operational Areas or EMBA. Note the only songline related to marine reptiles (turtles) was shared by MAC, and was geographically restricted from Fortescue to Withnell Bay, in Mermaid Sound (MAC, 2021).

Turtle symbology expressed through stories, music, and dance can reflect an individual or group's connections with the sea, as well as marine fauna, and comprise First Nations' cultural values (Ardler, 2023; Bursill et al., 2007). Beyond mythology and symbolism, turtles can be connected with various economic and social functions associated with everyday life including hunting and settlement location. Turtles speak to a broader connection that exists between First Nation people and their surrounding environment, including cultural values associated with food security (Delisle et al., 2018:250).

Cultural knowledge of turtles at a population level (turtle migration, behaviour and the related marine environment) may all be important in ensuring the continuation of cultural functions and activities that remain valuable to First Nations people (Fijn, 2021:47; Delisle et al., 2018). Details pertaining to marine reptiles, their distribution, and populations are described in Section 4.6.2, with further details in the Master Existing Environment.

4.9.6.3 Fish

Fish have been identified through consultation with First Nations people as a culturally important species and a resource.

First Nations may identify cultural values associated with fish species as important to maintaining both tangible (physical cultural sites) and intangible (cultural knowledge) cultural heritage. Tangible cultural heritage associated with fish can include important cultural sites such as midden sites, fish traps and thalu sites. Traditional fish traps require traditional knowledge of the surrounding environment and may involve specialised techniques which have been developed in adaptation to location conditions over time (Fijn, 2021:63).

Intangible cultural heritage associated with fish include songlines, dreaming, art, song and dance. Cultural values relating to fish, and other marine fauna, can collectively capture 'Sea Country' which refers to a seascape that Traditional Custodians view, interact with or hold knowledge of. As a result, fish may be culturally value in relationship with broader marine environmental values that are of cultural importance to First Nations people (Smyth, 2007).

Details pertaining to fish, sharks and rays are described in Section 4.6.1, with further details in the Master Existing Environment.

4.9.6.4 Natural environment interests

First Nations people have advised through consultation that they have a general interest in environmental management and ecosystem health, including understanding changes in water quality as a result of the GPGT Survey Program and potential resultant effects on marine species and benthic communities in the Operational Areas and EMBA. This includes marine mammals, marine reptiles, fish, seabirds, plankton and subtidal soft bottom communities, which are described in context of their distribution and populations in the Master Existing Environment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.7 Historic sites of significance

There are no known sites of historic heritage of significance within the Operational Areas. Section 11 of the Master Existing Environment describes cultural heritage sites within the EMBA.

4.9.8 Underwater heritage

A search of the Australasian Underwater Cultural Heritage Database, which records all known Maritime Cultural Heritage (shipwrecks, aircraft, relics and other UCH) in Australian waters does not contain records of sites within the Operational Areas; however, a number of sites (shipwrecks) exist within the EMBA. Table 4-22 lists sites within 50 km of the Operational Areas.

Table 4-22: Underwater heritage sites located within the EMBA and proximity to Operational Areas

Vessel name	Year wrecked	Wreck location	Latitude (D.MM °S)	Longitude (D.MM °E)	Distance and direction from Operational Area (km)
Parks Lugger		Hermite Island. Montebello Islands	20°28.63'S	115°31.71'E	27.31 km from Operational Area A
Vianen	1628	Barrow Island Area	20°0.00'S	115°10.00'E	28.31 km from Operational Area A
Wild Wave (China)	1873	Montebello Islands	20°0.00'S	115°10.00'E	28.31 km from Operational Area A
Marietta	1905	Barrow Island	20°0.00'S	115°10.00'E	28.31 km from Operational Area A
Tanami		Trial Rocks	20°17.00'S	115°22.00'E	26.78 km from Operational Area A
Trial	1622	Trial Rocks	20°17.16'S	115°22.51'E	26.83 km from Operational Area A
Curlew	1911	At Onslow, Monte Bellos Group	20°0.00'S	115°10.00'E	28.31 km from Operational Area A
McCormack	1989	Northeast tip of Eaglehawk Island west of Dampier	20°8.20'S	115°57.20'E	28.46 km from Operational Area A
McDermott Derrick Barge No 20	1989	Northeast tip of Eaglehawk Island, Dampier Archipelago	20°8.20'S	115°57.20'E	28.46 km from Operational Area A
Plym HMS	1952	NA*	20°24.21'S	115°33.95'E	39.1 km from Operational Area A
Tropic Queen	1975	NA*	20°26.00'S	115°30.05'E	42.42 km from Operational Area A

** NA: Not Applicable*

4.9.9 World, national and Commonwealth heritage listed places

No listed heritage places overlap the Operational Areas. World, national and Commonwealth heritage places within the EMBA are identified in Table 4-23.

Section 11.2 of the Master Existing Environment describes the values and sensitivities of these places.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-23: World, national and Commonwealth heritage listed places within the EMBA

Listed Place	Distance and direction from Closest Operational Area to listed place (km)
World Heritage Places	
Ningaloo Coast	355 km southwest Operational Area A
Murujuga Cultural Landscape	90 km southeast Operational Area C
National Heritage Places	
Ningaloo Coast	355 km southwest Operational Area A
Commonwealth Heritage Places	
Ningaloo Marine Area – Commonwealth waters	220 km southwest Operational Area A

4.10 Socio-economic environment

4.10.1 Commercial fisheries

A number of Commonwealth and State fishery management areas are located within the Operational Areas and EMBA. The Annual Fishery Status Reports published by the Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) were used to identify if Commonwealth managed fisheries have fished within the Operational Areas and EMBA in the last five years. FishCube data were also requested from the WA Department of Primary Industries and Regional Development (DPIRD) for the most recently available five-year period of fishery catch and effort data (2018 to 2022) to analyse the potential for interaction with State managed fisheries within the Operational Areas and EMBA (DPIRD, 2022). Data was reviewed from the last five years as a subset of past fishing effort. This was deemed an appropriate period to represent potential future fishing effort over the lifecycle of this EP (four years). In addition, any impacts to fish are expected to be temporary in nature (See Sections 6.5 and 6.6) and therefore not extending beyond the life of the EP. This information was used to determine relevant fisheries for consultation who may be impacted by the GPGT Survey Program. Table 4-24 provides an assessment of the potential interaction and the Master Existing Environment provide further detail on the fisheries that have been identified through desk-based assessment and consultation (Section 5). Table 4-24 and Figure 4-14 shows fisheries identified as having a potential interaction with the GPGT Survey Program.

Table 4-24: Commonwealth and State commercial fisheries overlapping the Operational Areas

Fishery	Potential for interaction		
	Operational Areas[5]	EMBA[4]	Description
Commonwealth managed fisheries			
Southern Bluefin Tuna Fishery	×	×	This fishery management area overlaps with the Operational Areas and EMBA. The Southern Bluefin Tuna Fishery spans the Australian Fishing Zone, however since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). Fishing mainly occurs in the Great Australian Bight during summer months, and off the New South Wales coastline during winter months (AFMA, 2020). The fishery has not been active in the Operational Areas or EMBA within the last five years (ABARES, 2022). Woodside considers there to be no potential for interaction with this fishery and the GPGT Survey Program given the current distribution of fishing effort.

[5] Green highlight in these columns denotes overlap between the Operational Areas with the fishery management area. Ticks or crosses indicate the potential for interaction.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction		
	Operational Areas[5]	EMBA[4]	Description
Western Skipjack Tuna Fishery	×	×	This fishery management area overlaps the Operational Areas and EMBA however, this fishery is not currently active and no fishing has occurred since 2009 (Patterson et al., 2022). Therefore, Woodside considers there is no potential for interaction with this fishery at present.
Western Tuna and Billfish Fishery	×	×	While this fishery management area overlaps the Operational Areas and EMBA, fishing effort in the last five years has been concentrated in southwest WA (typically as far north as Carnarvon) and occasionally off South Australia. Woodside considers there to be no potential for interaction with this fishery given the current distribution of fishing effort.
North West Slope Trawl Fishery	×	✓	The North West Slope Trawl Fishery management area overlaps the EMBA. Between one to six vessels have been active in the fishery since 2005. Fishery Status Reports indicate most recent activity inside the EMBA occurred in the 2021 to 2022 season (Patterson et al., 2022). There has been fishing effort reported within the Operational Areas in the last five years. Accordingly, Woodside considers it a possibility that interactions with the fishery may occur in the Operational Areas and the EMBA.
Western Deepwater Trawl Fishery	×	✓	The Western Deepwater Trawl Fishery management area overlaps the EMBA. Fishery Status Reports indicate most recent activity overlapping the EMBA occurred in the 2021 to 2022 season (Patterson et al., 2022). There has been no fishing effort reported within the Operational Areas in the last five years. Woodside considers it a possibility that interactions with the fishery may occur in the EMBA.
State managed fisheries			
Mackerel Managed Fishery	✓	✓	The Mackerel Managed Fishery has been active within the Operational Areas in the last five years. Given the Operational Areas overlap this fisheries management area (specifically, the Pilbara management area – Area 2) and as fishing effort has been reported in the Catch and Effort System (CAES) blocks overlapping the Operational Areas in the last five years, it is considered that there is the potential for interaction with this fishery.
Pilbara Line Fishery *Part of the Demersal Scalefish Fishery (includes trawl, trap and line fisheries)*	✓	✓	The Operational Areas overlap this fishery management area. The Pilbara Line Fishery licensees are permitted to operate anywhere within Pilbara waters (Newman et al., 2017). Fishing effort has been reported in the CAES blocks overlapping the Operational Areas in the last five years. Therefore, it is considered there is potential for interaction with this fishery.
Pilbara Trap Managed Fishery *Part of the Demersal Scalefish Fishery (includes trawl, trap and line fisheries)*	✓	✓	The Operational Areas overlaps active areas of this fishery management area. Fishing effort is typically focused in waters less than 50 m; however, through consultation fishers have reported setting traps in waters greater than 50 m deep. Additionally, fishing effort has been reported in the CAES blocks overlapping the Operational Areas in the last five years. Therefore, it is considered there is potential for interaction with this fishery.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction		
	Operational Areas[5]	EMBA[4]	Description
Pilbara Trawl (Interim) Managed Fishery *Part of the Demersal Scalefish Fishery (includes trawl, trap and line fisheries)*	✓	✓	The Operational Areas overlaps active areas of this fishery management area. Fishing effort for this fishery has been recorded within the CAES blocks overlapping the Operational Areas in the last five years. Therefore, it is considered that there is potential for interaction with this fishery.
Onslow Prawn Managed Fishery	✓	✓	The Operational Areas overlaps this fishery management area. Fishing effort for this fishery has been recorded within the CAES blocks overlapping the Operational Area A in the last five years Therefore it is considered that there is potential for interaction with this fishery.
Marine Aquarium Managed Fishery	✓	✓	The Marine Aquarium Managed Fishery overlaps the Operational Areas. This fishery is typically active within waters less than 30 m deep. However, there was fishing effort recorded in the CAES blocks overlapping the Operational Area A in the last five years. Therefore, it is considered it is considered that there is potential for interaction with this fishery.
Western Australian Sea Cucumber Fishery	×	✓	The Western Australian Sea Cucumber Fishery management area overlaps the Operational Areas. Fishing effort also typically occurs in water depths of less than 30 m. The fishery is permitted to operate throughout all WA waters, and the target species typically inhabit nearshore waters. Fishing effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.
West Australian Abalone Fishery	×	×	While the Operational Areas are overlapped by this fishery management area, no commercial fishing has occurred north of Moore River since 2011 to 2012. As there was no fishing effort reported within the CAES blocks overlapping the Operational Areas or EMBA in the last five years, no interaction with this fishery is anticipated.
Specimen Shell Managed Fishery	×	✓	The Operational Areas overlap this fishery management area however shells are typically collected in waters less than 30 m deep. Fishing effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.
Nickol Bay Prawn Fishery	×	✓	The Operational Areas overlap this fishery management area. Fishery effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.
Tour Operator	×	✓	The Operational Areas overlap this fishery management area. Fishery effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Fishery	Potential for interaction		
	Operational Areas[5]	EMBA[4]	Description
South-west Coast Salmon Managed Fishery	×	×	The South West Coast Salmon Managed Fishery management area overlaps the Operational Areas. As no fishing occurs north of the Perth metropolitan area, no interaction with this fishery is anticipated.
West Coast Deep Sea Crustacean Managed Fishery	×	✓	The West Coast Deep Sea Crustacean Managed Fishery is permitted to fish in waters deeper than the 150 m isobath overlapping the Operational Areas. However, no fishing effort was recorded within the CAES blocks overlapping the Operational Areas and as fishing effort is concentrated in water depths of 500 to 800 m (significantly deeper than the Operational Areas). Fishing effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.
Pilbara Crab Managed Fishery	×	✓	This fishery area overlaps the Operational Areas; however, fishing is limited to inshore coastal waters (particularly within Nickol Bay) and no fishing effort has been recorded within the CAES blocks overlapping the Operational Areas in the last five years. Fishing effort for this fishery has been recorded within the CAES blocks overlapping the EMBA only in the last five years. Therefore, it is considered that there is potential for interaction with this fishery in the EMBA only.
Pearl Oyster Managed Fishery	×	×	This fishery management area overlaps the Operational Areas however fishing effort is limited to 35 m depth. No fishing effort has been recorded within the CAES blocks overlapping the Operational Areas in the last five years. No interaction with this fishery is therefore anticipated.
WA North Coast Shark Fishery	×	×	This fishery management area overlaps the Operational Areas. However, fishing activity has not been reported by this fishery since the 2008 to 2009 fishing season (Patterson et al., 2021). Accordingly, Woodside considers there to be no interaction with this fishery.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

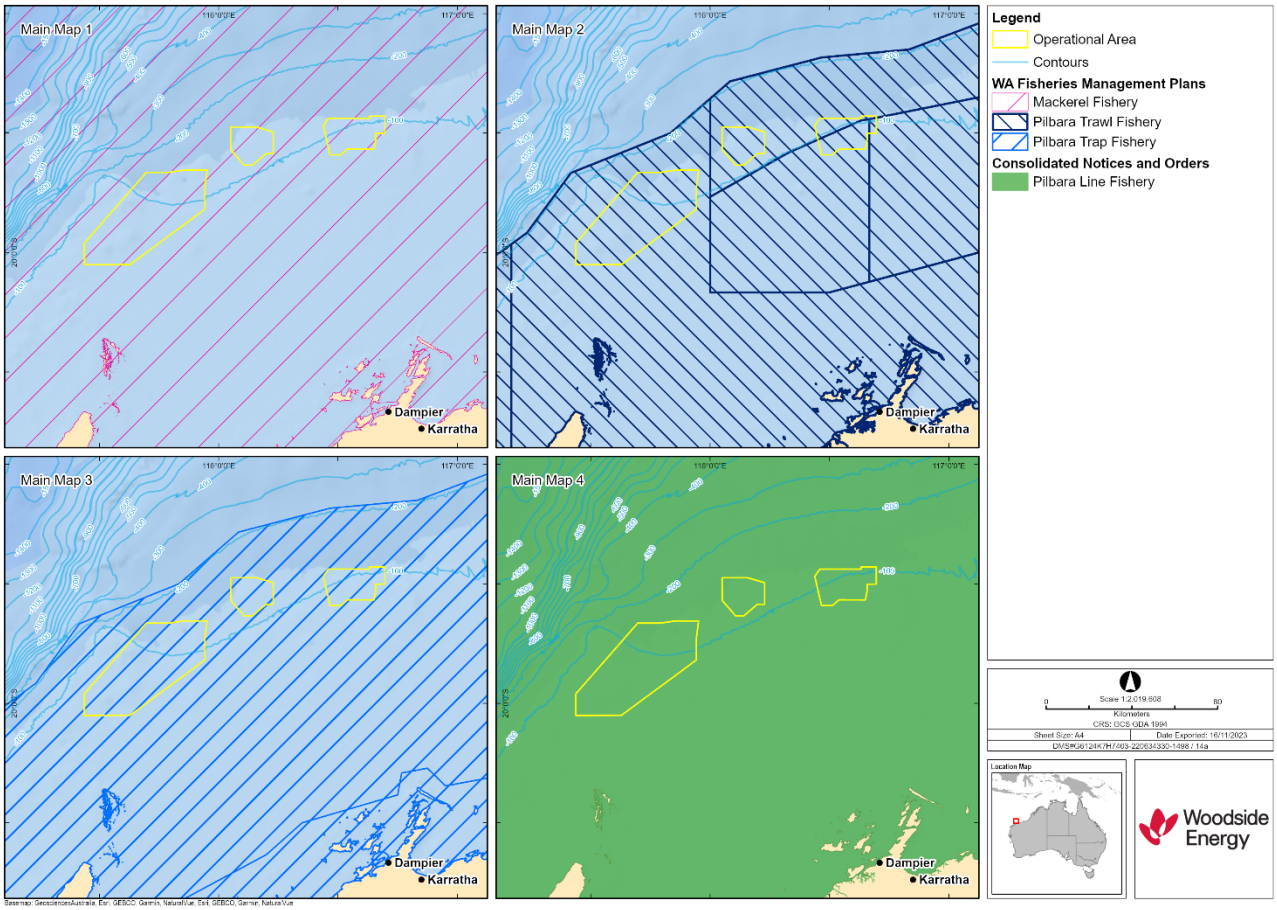

Figure 4-14: State commercial fisheries overlapping the Operational Areas with a potential for interaction with the GPGT Survey Program

Additional fisheries overlapping the EMBA include the:

- Commonwealth-managed fisheries:
  - North-west Slope Trawl Fishery
  - Western Deepwater Trawl Fishery
- State-managed fisheries:
  - Western Australia Sea Cucumber Fishery
  - Specimen Shell Managed Fishery
  - Nikol Bay Prawn Fishery
  - Tour Operators
  - West Coast Deep Sea Crustacean Managed Fishery
  - Pilbara Crab Managed Fishery.

4.10.2 Traditional fisheries

There are no traditional or customary fisheries within the Operational Areas, as these are typically restricted to shallow coastal waters and/or areas with structures such as reefs. However, it is recognised that Barrow Island and the Montebello Islands have a known history of fishing when areas were occupied (as from historical records) (CALM, 2005; DEC, 2007).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.3 Tourism and recreation

No tourist activities take place specifically within the Operational Areas. However, growth and the potential for further expansion in tourism and recreational activities is recognised for the Pilbara and Gascoyne regions, with the development of regional centres and a workforce associated with the resources sector (SGS Economics and Planning, 2012). Tourism is one of the major industries of the Gascoyne region and contributes significantly to the local economy in terms of both income and employment.

The main marine nature-based tourist activities are concentrated around and within the Ningaloo Coast World Heritage Property (approximately 212 km south-west of Operational Area A). Activities undertaken include recreational fishing, snorkelling and scuba diving and wildlife watching and encounters (including whale sharks, manta rays, humpback whales and turtles) (Catlin et al., 2010)..The Montebello Islands (34 km from Operational Area A) are the closest location for tourism with some charter boat operators taking visitors to these islands (DEC, 2007). Recreational fishing in the Pilbara and Gascoyne regions is mainly concentrated around coastal waters and islands and has grown considerably with the expanding regional centres, seasonal tourism and increasing residential and fly in/fly out work force, particularly in the Pilbara region (Fletcher et al., 2017). Some recreational fishing has historically taken place at Rankin Bank (which overlaps Operational Area A) and the Glomar Shoal (approximately 68 km from Operational Area A overlapping with Operational Area C). However, due to the distance from access nodes, such as Dampier and Onslow (approximately 121 km and 186 km from the Operational Areas at the closest point respectively) recreational fishing effort is expected to be restricted to relatively large vessels and hence is considered to be low.

4.10.4 Commercial shipping

The Australian Maritime Safety Authority (AMSA) has established a network of marine fairways to reduce the risk of vessel collisions with offshore infrastructure. One of these fairways intersects with Operational Area A (Figure 4-15). Vessel tracking data shows shipping activity has potential to occur in all Operational Areas.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

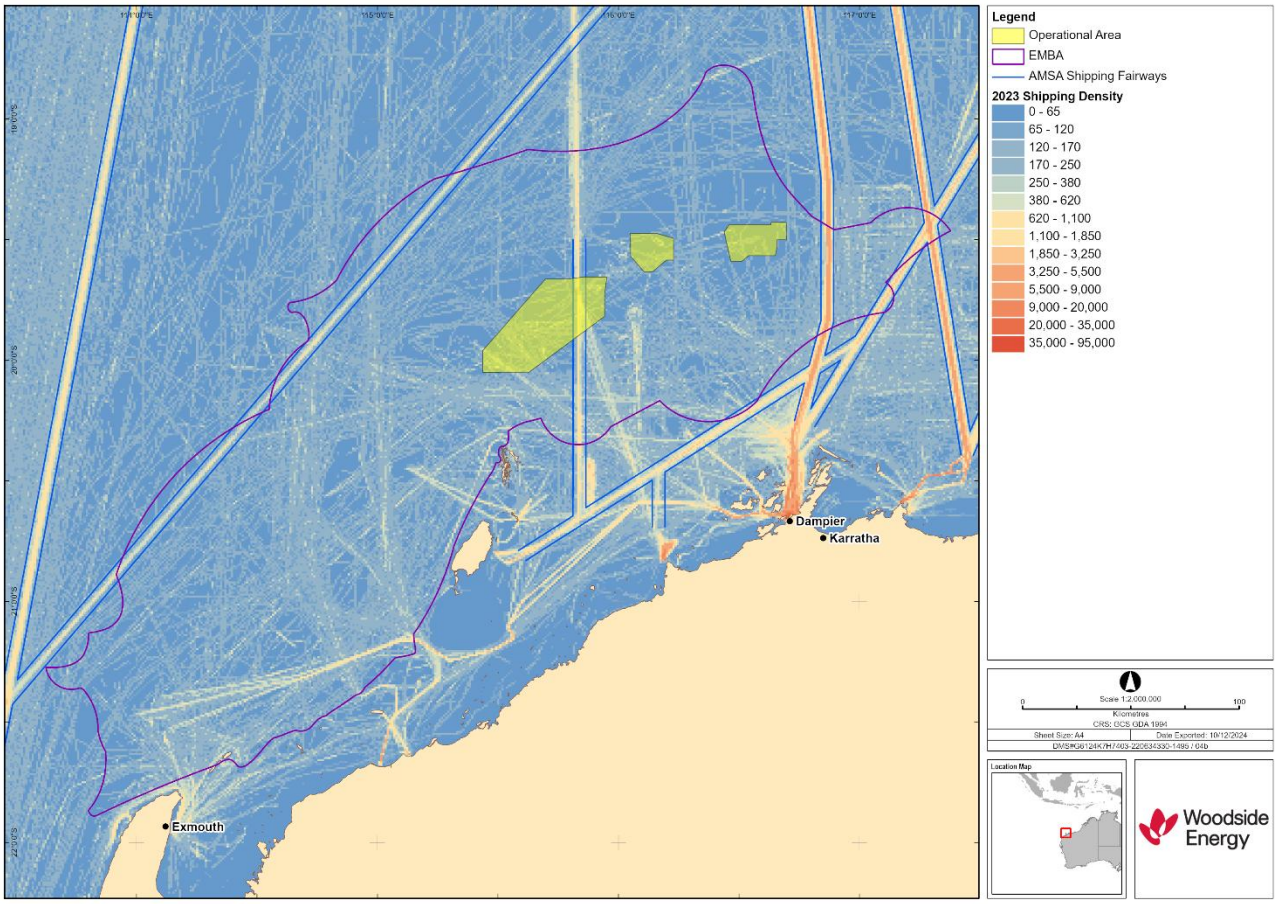

Figure 4-15: Vessel density map for the Operational Areas and EMBA, derived from Australian Maritime Safety Authority satellite tracking system data

4.10.5 Oil and gas

Table 4-25 identifies other oil and gas facilities located within 50 km of the Operational Areas, shown in Figure 4-16. Section 11.9 of the Master Existing Environment describes current oil and gas development within the EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 4-25: Other oil and gas facilities located within 50 km of the Operational Areas

Facility name and operator	Distance and direction from closest Operational Area (km)
Angel Platform	Within Operational Area C
Okha Floating Production, Storage and Offloading Facility	West of Operational Area C – 2.1 km East of Operational Area B – 23 km
North Rankin Complex	Within Operational Area B
Goodwyn Platform	Northeast of Operational Area A – ~0.3 km Southwest of Operational Area B – 16 km
Pluto Platform	West of Operational Area A – 7 km
Various production gas flowlines	Within or in close proximity to Operational Areas
Wheatstone Platform	West of Operational Area A – 6.5 km
Modec Venture 11 Floating Production, Storage and Offloading Facility	North of Operational Area C – ~18 km
Reindeer Platform	East of Operational Area A – ~44 km
John Brookes Platform	Southeast of Operational Area A – ~55 km
Wonnich Platform	Southeast of Operational Area A – ~50 km
Campbell Platform	South of Operational Area A – ~42 km

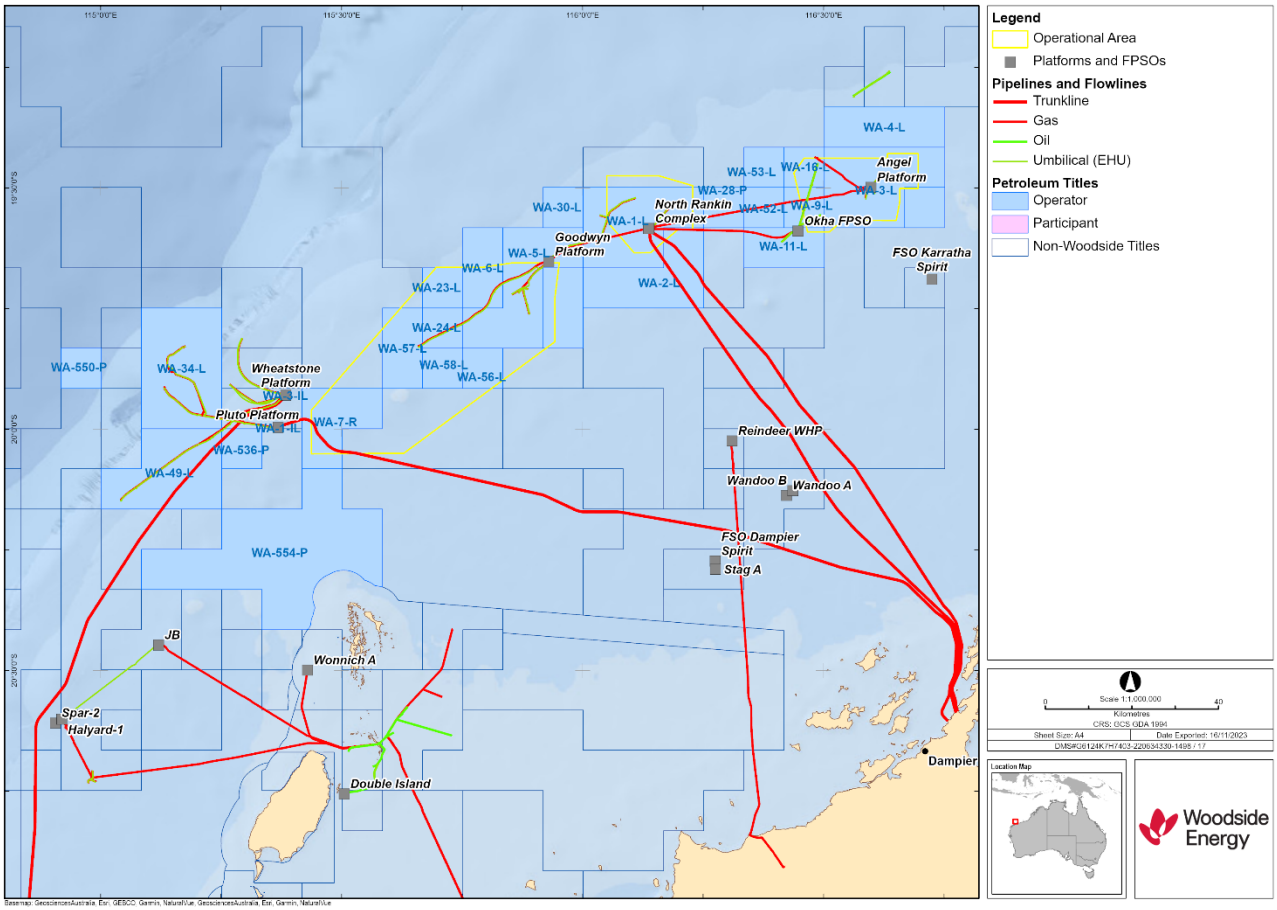

Figure 4-16: Oil and gas Infrastructure in proximity to the Operational Areas

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.6 Submarine communications infrastructure

The GPGT Survey Program is located in a region with submarine communications infrastructure. The submarine communications infrastructure located within 100 km of the GPGT Survey Program is listed in Table 4-26.

Table 4-26: Communications infrastructure located within 100 km of the Operational Areas

Communications infrastructure (submarine cables)	Operational Area	Distance and direction from Operational Areas to facility
Woodside Fibre Optic Cable Route	A	~2.7 km south from the Operational Area
	B	Overlaps
	C	~47 km southwest from the Operational Area
Scarborough Fibre Optic Cable	A	~22 km north from the Operational Area
	B	~10 km north from the Operational Area
	C	~20 km north from the Operational Area
Chevron Fibre Optic Cable Route	A	Intersects Operational Area in two places
	B	~61 km southwest from the Operational Area
	C	~94 km southwest from the Operational Area

Source: Submarine cable locations sourced from Vocus and Telstra.

4.10.7 Defence

No defence areas overlap the Operational Areas. Defence areas overlapping the EMBA are presented in Figure 4-17.

There are designated defence practice areas in the offshore marine waters off Ningaloo and the North West Cape in the EMBA. The closest site where unexploded ordinance is known to occur is 24 km west of Operational Area A in depths of about 50 m.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. CONSULTATION

5.1 Summary

Woodside consults relevant persons in the course of preparing an EP in accordance with Regulation 25 of the Environment Regulations. (In this section, references to 'regulations' are to the Environment Regulations, unless otherwise stated).

The consultation process is designed to identify relevant persons and provide them with sufficient information and a reasonable period to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. This enables Woodside to assess the merits of objections or claims about the adverse impact of each activity to which the EP relates that are received from relevant persons and for Woodside to adopt appropriate measures (if any) in response to those objections or claims so that the activity is carried out in a manner by which the environmental impacts and risks of the activity will be reduced to ALARP and will be of an acceptable level.

Consultation is informed by both the Environment Regulations and the findings of relevant Courts, including the Full Federal Court in the Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 (Tipakalippa Appeal) (see Sections 5.2 and 5.5.1) and Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9 (Munkara Case).

For this EP, Woodside has considered both the Operational Areas and the broader EMBA in undertaking consultation (see further discussion in Section 5.2). The broadest extent of the EMBA has been determined by reference to the highly unlikely event of a hydrocarbon release resulting from activities in the Operational Areas (see Section 4).

Woodside's consultation methodology is divided into two parts:

- The first part (Sections 5.2 to 5.5) provides an overview of Woodside's consultation methodology for its EPs, including how we apply Regulation 25(1) to identify relevant persons
- The second part (Sections 5.6 and 5.7) details Woodside's approach to accepting feedback and assessment of the merits of each objection or claim about the adverse impact of each activity to which the EP relates, and engaging in ongoing consultation for this EP.

Woodside's consultation record is in **Error! Reference source not found.** and includes a summary of:

- assessment and identification of relevant persons
- consultation information provided to relevant persons, feedback received, Woodside's assessment of the merits of objections or claims and Woodside's response to relevant persons and other stakeholders Woodside chose to consult
- engagement with persons or organisations that Woodside chose to contact who are 'not relevant' persons for the purposes of Regulation 25(1) (see Section 5.3.7)
- opportunities provided to persons or organisations to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

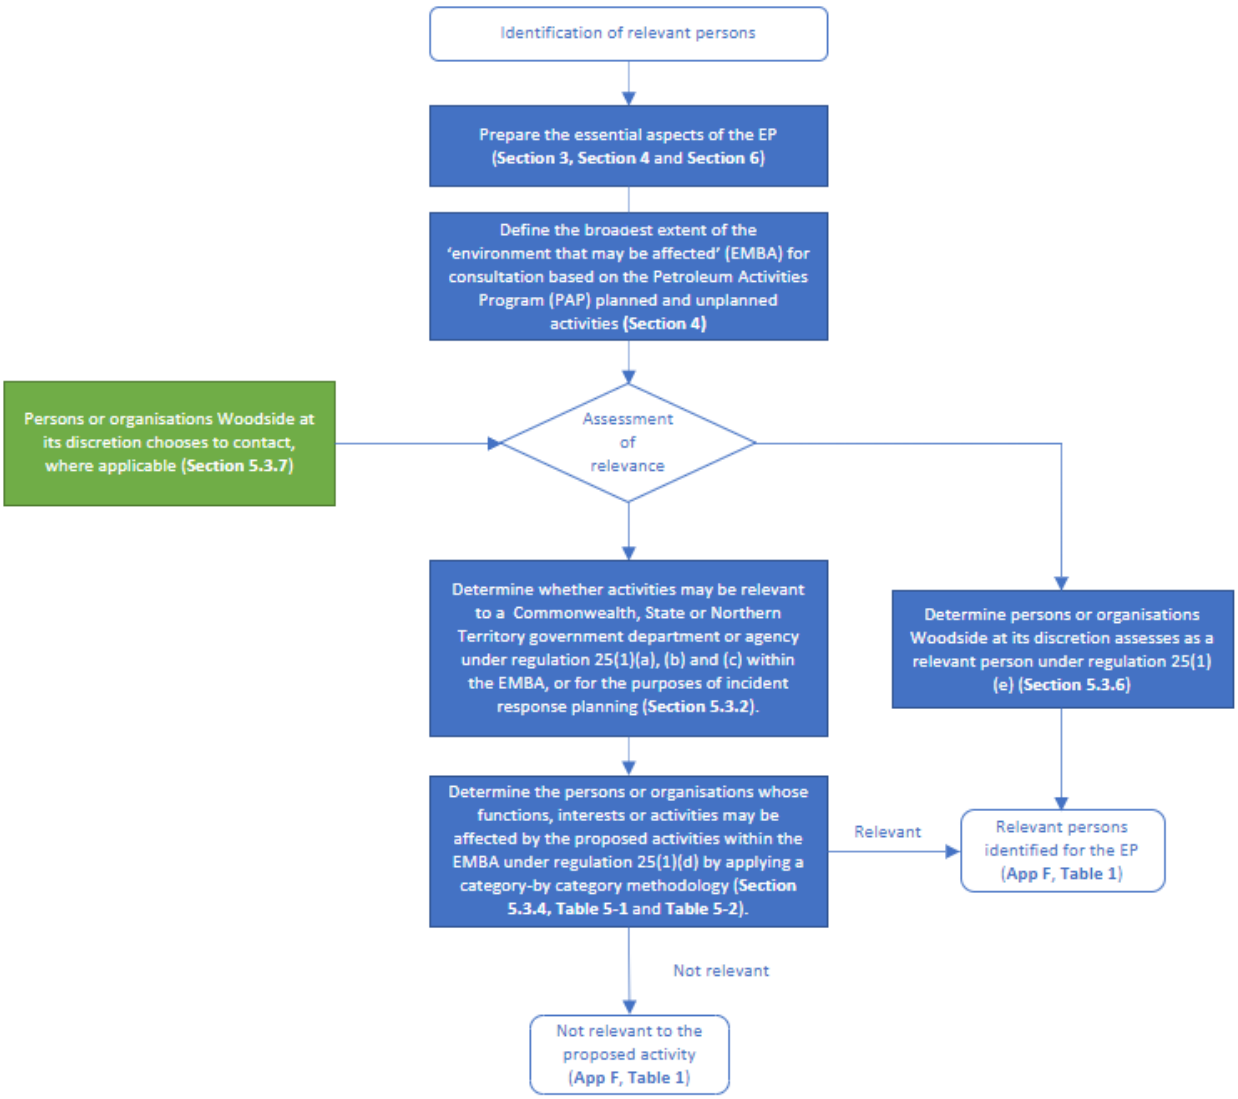

Figure 5-1: Overview of Woodside's methodology to identify relevant persons

5.2 Consultation – general context

Woodside has a portfolio of quality oil and gas assets and more than 40 years of operating experience. We have a strong history of working with local communities, the relevant regulators and a broad range of persons and organisations, to better understand the potential risks and impacts associated with our proposed activities and to develop appropriate measures to manage them.

The length of time that we have operated in Commonwealth and State waters, and the history of continued engagement with a wide range of persons and organisations, enables Woodside to develop an extensive consultation list to inform its consultation process. This consultation list is not used as a definitive list of persons to consult but, rather, assists Woodside as an input to its understanding of relevant persons with whom to consult on a GPGT Survey Program. The information in the consultation list has been captured from years of experience: it contains insights relating to the type of information particular persons or organisations want to receive during consultation, the appropriate method of consultation for relevant persons and includes appropriate contact details, which are reviewed and updated periodically.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside acknowledges NOPSEMA's GL2086 – Consultation in the course of preparing an environment plan guideline (May 2023) as well as judicial guidance in the Tipakalippa Appeal on the intent of consultation, as follows:

- At paragraph 54 of the appeal decision: … provide a basis for NOPSEMA's considerations of the measures, if any, that a titleholder proposes to take or has taken to lessen or avoid the deleterious effect of its proposed activity on the environment, as expansively defined.
- At paragraph 89 of the appeal decision: …its purpose is to ensure that the titleholder has ascertained, understood and addressed all the environmental impacts and risks that might arise from its proposed activity. Consultation facilitates this outcome because it gives the titleholder an opportunity to receive information that it might not otherwise have received from others affected by its proposed activity. Consultation enables the titleholder to better understand how others with an objective stake in the environment in which it proposes to pursue the activity perceive those environmental impacts and risks. As the Regulations expressly contemplate, it enables the titleholder to refine or change the measures it proposes to address those impacts and risks by taking into account the information acquired through the consultations. Objectively, the scheme intends that this is likely to improve the minimisation of environmental impacts and risks from the activity.

The Tipakalippa Appeal and Munkara Case have also been further considered in the context of specific methods for consultation with First Nations relevant persons (Section 5.5.1).

To undertake consultation, Woodside has developed a methodology for identifying relevant persons in accordance with Regulation 25(1) (Section 5.3). This methodology is consistent with NOPSEMA's Guideline and demonstrates that, to meet the requirements of Regulation 34 (criteria for EP acceptance) when preparing the EP, Woodside understands:

- our planned activities in the Operational Areas, being the area in which our planned activities are proposed to occur (see Section 3.4)
- the geographical extent to which the environment may be affected by risks and impacts from our activities (unplanned) (identified in Section 4.3 and assessed in Section 6.8).

Woodside has undertaken consultation in the course of preparing this EP in compliance with Regulation 25, which requires a titleholder to:

- consult with each of the following (a relevant person) in the course of preparing an EP:
  - each Commonwealth, State or Northern Territory agency or authority to which the activities to be carried out under the EP may be relevant
  - if the plan relates to activities in the offshore area of a State – the Department of the responsible State Minister
  - if the plan relates to activities in the Principal Northern Territory offshore area – the Department of the responsible Northern Territory Minister
  - a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the EP
  - any other person or organisation that the titleholder considers relevant (Regulation 25(1))
- give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on their functions, interests or activities (Regulation 25(2))
- allow a relevant person a reasonable period for the consultation (Regulation 25(3))
- tell each relevant person that the titleholder consults with, that the relevant person may request that particular information it provides in the consultation not be published and any information subject to such a request is not to be published (Regulation 25(4)).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Further, Woodside seeks to carry out consultation in a manner that:

- is consistent with the principles of ESD set out in section 3A of the EPBC Act – see Section 2
- is intended to reduce the environmental impacts and risks from the activity to ALARP and an acceptable level (Regulation 4)
- is intended to minimise harm to the relevant person and the environment from the proposed petroleum activities and to enable Woodside to consider measures that may be taken to mitigate the potential adverse environmental impacts from the petroleum activity
- is collaborative. Woodside respects that, for a relevant person, consultation is voluntary. Where the relevant person seeks to engage, Woodside engages with the relevant person with the aim of seeking genuine and meaningful two-way dialogue provides opportunities for relevant persons to provide feedback throughout the life of the EP through its ongoing consultation process (refer to Section 5.7 and Section 7.10.2.1).

An overview of Woodside's consultation approach is outlined at Figure 5-2.

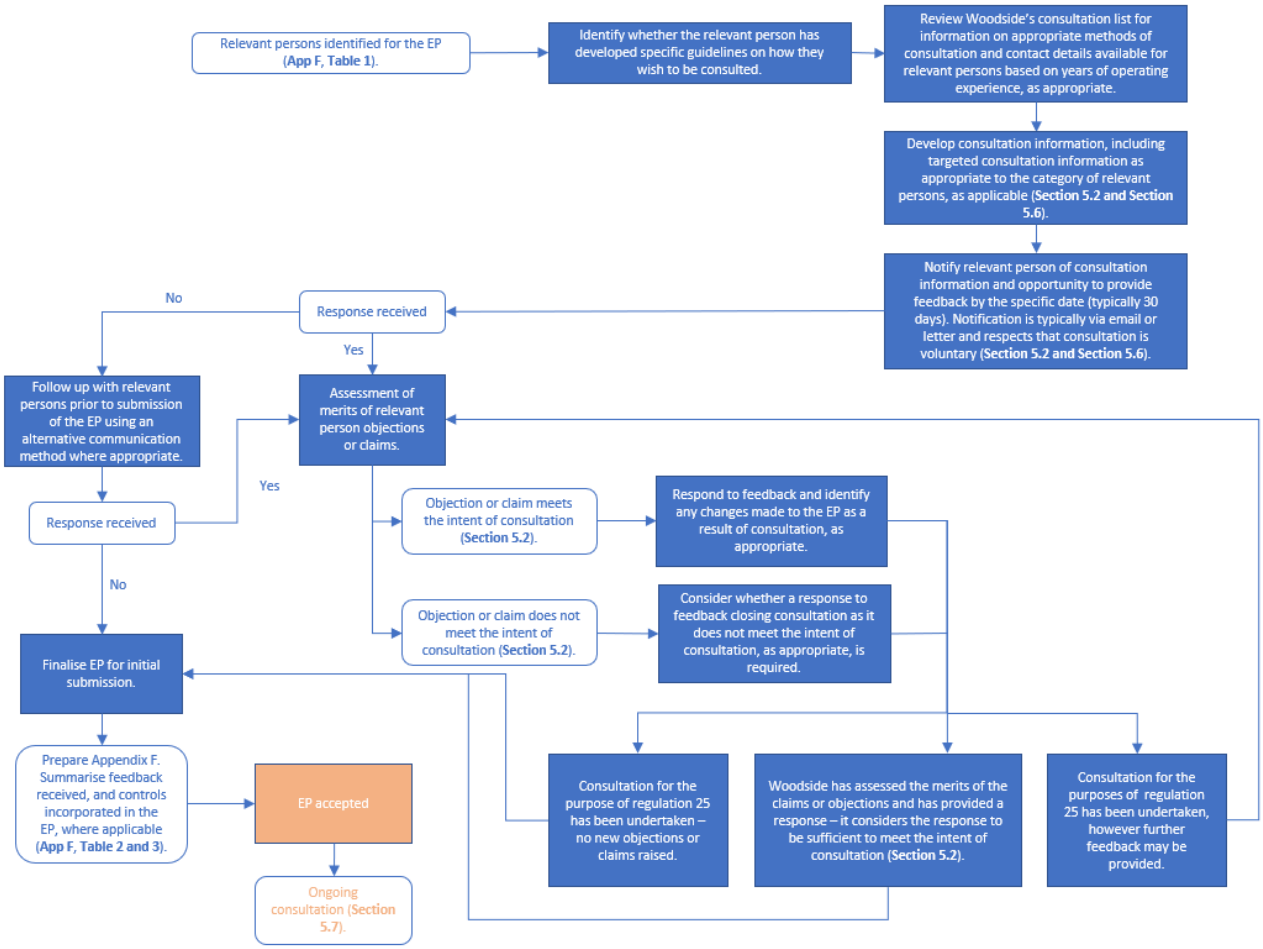

Figure 5-2: Overview of Woodside's consultation approach

The methodology for consultation for this activity has been informed by various guidelines and relevant information for consultation on planned activities, including:

Federal Court:

- Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193
- Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9

5.3 Identification of relevant persons for consultation

5.3.1 Regulations 25(1)(a), (b) and (c)

The relevant inquiry for determining relevant persons under Regulations 25(1)(a) and (b) is whether the activities to be carried out under the EP may be relevant to one of the government departments or agencies in those regulations. The government departments and agencies relevant to the EP are listed in **Error! R eference source not found.**, Table 1. In accordance with Regulation 25(1)(b), Woodside consults with the Department of the relevant State Minister.

5.3.2 Identification of relevant persons under Regulations 25(1)(a), (b) and (c)

Woodside's methodology for identifying relevant persons under Regulations 25(1)(a), (b) and (c) is as follows:

- Woodside considers the defined responsibilities of each of the departments and agencies to which the activities to be carried out in the EMBA under the EP may be relevant. This list of relevant departments and agencies is formulated by reference to the responsibilities of the government departments, as set out on their websites, in NOPSEMA's *GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area guideline* (January 2024), which describes where the Department is a relevant agency under the Environment Regulations, as well as experience and knowledge that Woodside has gained from years of operating. This list is revised from time to time, for example, for the purposes of accommodating government restructures, renaming of departments, shifting portfolios and/or to account for new agencies that might arise.
- Woodside has categorised government department or agency groups as follows:

Government departments/ agencies – marine	Agencies with legislated responsibilities for use of the marine environment.
Government departments/ agencies – environment	Agencies with legislated responsibilities for the protection of the environment.
Government departments/ agencies – industry	The legislated Department of the responsible Commonwealth, State or Northern Territory Minister for Industry.

- Woodside considers each of the responsibilities of the departments and agencies, determining whether those responsibilities overlap with potential risks and impacts specific to the Petroleum Activities Area in the EMBA. The assessment is both activity and location based.
- Woodside acknowledges the roles and responsibilities of government departments and agencies acting on behalf of various industry participants. For example, AMSA – Marine Safety is responsible for the safety of vessels and the seafarers who are operating in the domestic commercial shipping industry; and Australian Hydrographic Office (AHO) is responsible for maritime safety and Notices to Mariners. To undertake proposed activities in a manner that prevents a substantially adverse effect on the potential displacement of marine users, Woodside therefore consults AMSA – Marine Safety and AHO on its proposed activities. Woodside considers each of the responsibilities of the departments and agencies and determines those that would either be involved in the incident response itself or in relation to the regulatory or decision-making capacity with respect to planning for the unlikely event of a worst-case hydrocarbon release incident response specific to the Operational Areas. Feedback received, if any, is assessed in accordance with the intended outcome of consultation.
- The list of government departments and agencies assessed as relevant is set out in **Error! Reference s ource not found.**, Table 1.
- Feedback received, if any, is assessed in accordance with the intended outcome of consultation and summarised at **Error! Reference source not found.**, Table 2 and Table 3 as appropriate to the r elevance assessment.

Woodside does not consult with departments or agencies with interests that do not overlap with risks and impacts specific to the Petroleum Activities Area in the EMBA or would not be involved in incident response planning.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.3 Regulation 25(1)(d)

To identify a relevant person for the purposes of Regulation 25(1)(d), the meaning of "functions, interests or activities" needs to be understood. In Regulation 25(1)(d), the phrase "functions, interests or activities" should be construed broadly and consistently with the objects of the Environment Regulations (Regulation 3) and the objects of the EPBC Act (section 3A).

In developing its methodology for consultation, Woodside acknowledges that the guidance on the definition of functions, interests and activities is as follows in accordance with NOPSEMA's GL2086 – Consultation in the course of preparing an environment plan guideline (May 2023):

Functions	Refers to a power or duty to do something.
Interests	Conforms to the accepted concept of 'interest' in other areas of public administrative law and includes any interest possessed by an individual whether or not the interest amounts to a legal right or is a proprietary or financial interest or relates to reputation.
Activities	Broader than the definition of 'activity' in Regulation 5 of the Environment Regulations and is likely be directed to what the relevant person is already doing.

Woodside's methodology for determining 'relevant persons' for the purpose of Regulation 25(1)(d) of the Environment Regulations includes consideration of:

- whether a person or organisation has functions interests or activities that overlap with the Operational Areas and EMBA
- whether a person or organisation's functions, interests or activities may be affected by Woodside's proposed planned or unplanned activities.

5.3.4 Identification of relevant persons under Regulation 25(1)(d))

Relevant persons under Regulation 25(1)(d) are defined as a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the EP. In identifying relevant persons, Woodside considers:

- the planned activities to be carried out under this EP (described in Section 3)
- the EMBA by unplanned activities (identified in Section 4 and assessed in Section 6).

To identify relevant persons who fall within Regulation 25(1)(d), Woodside adopts the following methodology, and then undertakes consultation with relevant persons.

As a general proposition, Woodside assesses whether a person or organisation is a relevant person having regard to:

- whether a person or organisation has functions interests or activities that overlap with the Operational Areas or Petroleum Activity Area and EMBA
- whether a person or organisation's functions, interests or activities may be affected by Woodside's proposed planned or unplanned activities to be carried out under the EP.

This assessment will include applying judgement, knowledge and current literature.

Further, to assist in identifying the full range of relevant persons, Woodside considers the impacts and risks associated with its proposed activities and considers the broad categories of relevant persons who may be affected by the activities proposed to be carried out under the EP. The broad categories are identified in Table 5-1 and identification methodology applied as set out in Table 5-2.

The list of those persons or organisations assessed as relevant and persons or organisations Woodside separately chose to contact is set out in **Error! Reference source not found.**, Table 1.

Feedback received, if any, is assessed in accordance with the intended outcome of consultation and applying the categories of relevant persons methodology outlined in Table 5-2, as appropriate.

Feedback from relevant persons is summarised at **Error! Reference source not found.**, Table 2. Feedback f rom persons assessed as 'not relevant' but whom Woodside chose to contact or self-identified and Woodside assessed as 'not relevant' are summarised at **Error! Reference source not found.**, Table 3.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 5-1: Categories of relevant persons

Category	Explanation
Commercial fisheries (Commonwealth and State) and peak representative bodies	Commonwealth or State Commercial Fishery with a fishery management plan recognised under the *Commonwealth Fisheries Management Act 1991* (Cth) and the *Western Australian Fish Resources Management Act 1994* (WA), which may be amended from time to time. Commonwealth peak fishery representative bodies are identified by AFMA. WAFIC is the peak representative body for state fishers in Western Australia.
Recreational marine users and peak representative bodies	Charter boat, tourism and dive operators identified by DPIRD specific to the location of the proposed activity. Representative bodies are the recognised peak organisation(s) for recreational marine users.
Titleholders and operators	Registered holder of an offshore petroleum title or GHG title under the OPGGS Act and associated regulations.
Peak industry representative bodies	Recognised peak organisation(s) for the oil and gas sector.
Traditional Custodians (individuals and/or groups/entity)	Traditional Custodians are First Nations Australians with cultural rights and interests or cultural functions or who perform cultural activities over particular lands and waters. Where a First Nations person, group or entity self-identifies and asserts cultural rights, functions, interests or activities they will be considered under the definition of Traditional Custodian for the purpose of this EP (as appropriate).
Nominated Representative Corporations	Nominated representative corporations are Traditional Custodians nominated representative institutions such as Prescribed Bodies Corporate (PBCs). PBCs are established under the Native Title Act (Cth) by Traditional Custodians to represent their entire Traditional Custodian group (defined broadly by reference to descents from an ancestor set who were known to be the Traditional Custodians at the time of European colonisation) and their interests including, among other things, management and protection of cultural values.
Native Title Representative Bodies	A Representative Aboriginal/Torres Strait Islander Body is a regional organisation appointed under the Native Title Act with prescribed functions, set out in Part 11 of the Native Title Act, which relate to: facilitation and assistance; certification; dispute resolution; notifications; agreement making. They are also known, and referred to here, as Native Title Representative Bodies.
Historical heritage groups or organisations	Legislated or government enlisted groups or organisations responsible for the management of marine heritage.
Local government and elected Parliamentary representatives and recognised local community reference/liaison groups or organisations	Local government body formed under the *Local Government Act 1995* (WA) and elected Parliamentary representatives which are responsible for representing the local community. Recognised local community reference or liaison group or organisation in relation to oil and gas matters.
Other non-government groups, organisations or individuals	Non-government organisation with public website material targeting the proposed activity. Individual who demonstrates the proposed activity could potentially impact their interests, functions or activities.
Research institutes and local conservation groups or organisations	Research institutes are government or private institutions that conduct marine or terrestrial research. Local conservation groups are local non-government organisation that regularly conduct conservation activities focused on the local environment or wildlife.

Table 5-2: Methodology for identifying relevant persons within the EMBA undertaken under Subregulation 25(1)(d) – by category

Category	Relevant person identification methodology
Commercial fisheries (Commonwealth and State) and peak representative bodies	Woodside assesses relevance for commercial fisheries (Commonwealth and State) and their representative bodies using the following next steps in its methodology: • Defining the parameters having regard to timing, location and duration of the proposed petroleum activity. • Confirming whether the EMBA overlaps with the fisheries management area (i.e. the spatial area the fishery is legally permitted to fish in) (see Section 4.10). • Woodside acknowledges WAFIC's consultation guidance[6], that titleholders develop separate consultation strategies for significant unplanned events (for example an oil spill) where titleholders can demonstrate the likelihood of such events occurring is extremely low. WAFIC's guidance is that consultation on unplanned events resulting in an emergency scenario should only be undertaken if an incident occurs (see Table 4-24). • For Commonwealth and State commercial fisheries, Woodside assesses the potential spatial and temporal extent for interaction with the fishery by reviewing AFMA, ABARES and DPIRD FishCube data within the Operational Areas and EMBA (see Section 4.10.2). Assessment of relevance: • State commercial fisheries that have been assessed as having a potential for interaction within the Operational Areas or EMBA (see Section 4.10.2) are assessed as relevant to the proposed activity. However, to avoid over consulting and as requested in WAFIC's guidance, Woodside only consults individual licence holders based on WAFIC's advice. Woodside also utilises WAFIC's consultation service whereby WAFIC: – directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Areas – consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario. • Commonwealth commercial fisheries that have been assessed as having a potential for interaction within the Operational Areas or EMBA (see Section 4.10.2) are assessed as relevant to the proposed activity. • If Woodside has identified that a Commonwealth or State fishery is a relevant person, then Woodside also consults the fisheries relevant representative body. For example, WAFIC represents the interests of State fisheries in Western Australia. If a State fishery is identified as relevant, Woodside would also identify WAFIC as relevant. Recognised Commonwealth fishery representative bodies are identified by AFMA via its website. WAFIC is the only recognised State fishery representative body.
Recreational marine users and peak representative bodies	Woodside assesses relevance for recreational marine users and peak representative bodies using the following next steps in its methodology: • Use Woodside knowledge and operating experience, applying knowledge of recreational marine users in the area. This assessment is both activity and location based. • Define the parameters having regard to timing, location and duration of the proposed petroleum activity. • Assess the potential spatial and temporal extent for interaction with recreational marine users by reviewing DPIRD FishCube data to assess whether there has been activity within the EMBA in the past five years. Assessment of relevance: • Recreational marine users that have been active in the past five years within the EMBA are assessed as relevant to the proposed activity. Woodside is provided

[6] *Consultation Approach for Unplanned Events - WAFIC*

Category	Relevant person identification methodology
	with the contact details of charter, boat tourism and dive operators specific to the region of the EMBA by DPIRD to consult with the relevant persons. • If Woodside has identified recreational marine users as relevant persons, then Woodside also consults identified peak recreational marine user representative bodies. For example, Recfishwest represents the interests of recreational fishers. These representative bodies are identified via Woodside's existing consultation list, which is updated as appropriate via advice from known groups and DPIRD.
Titleholders and operators	Woodside assesses relevance for other titleholders and operators using the following steps in its methodology: • Use GPInfo to determine overlap with other titleholders or operators permit areas within the EMBA. • Use Woodside knowledge and operating experience, applying knowledge of other operators in the area. • Produce a map showing the outcome of this assessment. Assessment of relevance: • Titleholders and operators whose permit areas are identified as having an overlap within the EMBA are assessed as relevant.
Peak industry representative bodies	Woodside assesses relevance for peak industry representative bodies using the following steps in its methodology: • Review of peak industry representative bodies responsibilities that Woodside actively participates in, with consideration of overlap between industry focus area and Woodside's proposed activities within the EMBA. • Review of Woodside's existing consultation list. • Website search to identify whether any additional peak industry representative bodies have been created whose responsibilities may overlap with Woodside's proposed activities within the EMBA. Assessment of relevance: • Peak industry representative bodies whose responsibilities are identified as having an overlap with Woodside's proposed activities within the EMBA are assessed as relevant.
Traditional Custodians (individuals and/or groups/entity) and Nominated Representative Corporations	Consistent with its understanding of the matters discussed in Section 4.9, to identify Traditional Custodian groups or individuals, Woodside: • uses existing systems of recognition to identify First Nations groups who overlap or are coastally adjacent to the EMBA (for example, recognition provided under Native Title or cultural heritage legislation, or marine park management plans, or identification by other First Nations groups or entities) • notifies and invites consultation with First Nations people through their nominated representative corporation (for example, PBCs); or, in the case of Native Title and where appropriate, the Native Title Representative Body • requests the nominated representative body to forward the notifications and invitations to consult to their members (members are individual communal rights holders) • requests advice as to other First Nations groups or individuals that should be consulted • advertises widely so as to invite self-identification and consultation by First Nations groups and individuals. Further detail to Woodside's methodology is as follows. Woodside uses the databases of the National Native Title Tribunal: • To understand whether there are any Native Title Claims (historical or current) or determinations overlapping or coastally adjacent to the EMBA • To understand whether there are any relevant ILUAs, registered with the National Native Title Tribunal that overlap or are adjacent to the EMBA that may identify Traditional Custodians or representative bodies to contact regarding potential cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Category	Relevant person identification methodology
	Where there is a positive determination of Native Title, contacting the PBC or, where their representative is a Native Title Representative Body, contacting the Native Title Representative Body. Where appropriate, contacting the relevant Native Title Representative Body to request a list of any First Nations groups asserting Traditional Custodianship over an area of coastline adjacent to the EMBA. Review of Commonwealth and State Marine Park Management Plans that overlap the EMBA which may identify Traditional Custodians or representative bodies to contact regarding potential cultural values. In Victoria, using the Victorian Aboriginal Heritage Council data to determine whether there are any Registered Aboriginal Parties appointed under the *Aboriginal Heritage Act 2006* (Vic), that overlap or are adjacent to the EMBA. First Nations groups or individuals identified by a Traditional Custodian, nominated representative corporation, Native Title Representative Body. Request to the PBC to distribute Woodside consultation materials through its membership. Woodside is unable to contact this membership through any other means. Woodside has a number of public notification and information sharing processes by which individual Traditional Custodians can become aware of the proposed activity, its risks and impacts, and self-identify. Individuals that consider their functions, interests or activities may be affected by a proposed activity are provided an opportunity to self-identify for each EP. Woodside does not presume that self-identification for an activity, covered by another EP, automatically means that an individual/s functions, interests and activities may be affected by other activities where EMBAs overlap. This decision is for the individual to make. The public notification, information sharing, and consultation processes Woodside puts in place enables Traditional Custodians to become aware of proposed activities, assess risks and impacts to their values, and enable individuals to self-identify. Assessment of relevance: • Traditional Custodian groups, entities or individuals and Nominated Representative Corporations who are identified through the above methodology and overlap or are coastally adjacent to the EMBA are assessed as relevant.
Native Title Representative Bodies	Woodside assesses relevance for Native Title Representative Bodies using the following steps in its methodology: • A Representative Aboriginal/Torres Strait Islander Body is a regional organisation appointed under the Native Title Act with prescribed functions set out in Part 11 of the Native Title Act, which relate to: facilitation and assistance; certification; dispute resolution; notifications; agreement making. They are also known, and referred to here, as Native Title Representative Bodies. • Review of National Native Title Tribunal Representative Aboriginal/Torres Strait Islander Body areas that overlap or are coastally adjacent to the EMBA. Assessment of relevance: • Where the area for which a Native Title Representative Body is recognised under the Native Title Act, overlaps with the EMBA or is coastally adjacent to the EMBA, Woodside will assess the Native Title Representative Body as relevant.
Historical heritage groups or organisations	Woodside assesses relevance for groups or organisations whose responsibilities are focused on historical heritage using the following steps in its methodology: • Using the Australasian Underwater Cultural Heritage Database to assess known records Maritime Cultural Heritage sites (shipwrecks, aircraft and relics) within the EMBA (see Section 4.9.1). Assessment of relevance: • Where there is a known underwater heritage site (shipwrecks, aircraft and relics) within the EMBA, the relevant group or organisation that manages the site will be assessed as relevant.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Category	Relevant person identification methodology
Local government and recognised local community reference/liaison groups or organisations	Woodside assesses relevance for local government and recognised local community reference/liaison groups or organisations using the following steps in its methodology: • Review of Woodside maps (developed based on data from the WA Local Government, Sport and Cultural Industries 'My Council' database and WA Local Government Association (WALGA) Local Government Directory maps to assess overlap between the local government's defined area of responsibility and the EMBA. • Woodside hosts regular community reference/liaison group meetings. Members represent a cross-section of the community and local towns interests. Representatives are from community and industry and generally include, Woodside, State Government (for instance relevant Regional Development Commissions), Local Government, Indigenous Groups, Industry representative bodies, community and industry organisations. Woodside considers these reference/liaison groups to be the appropriate recognised representatives of the local community for the oil and gas sector. • Woodside reviews the community reference/liaison group's terms of reference to determine its area of responsibility and overlap with the EMBA. For example, the Exmouth Community Liaison Group's area of responsibility in relation to Woodside's operational, development and planning activities, is defined in the terms of reference as the Exmouth sub-basin. Comparatively, the Karratha Community Liaison Group's area of responsibility is the Pilbara region (i.e. onshore). Assessment of relevance: • The local government whose defined area of responsibility overlaps the EMBA is assessed as relevant. • The community reference/liaison group whose defined area of responsibility overlaps the EMBA is assessed as relevant and consulted collectively via the relevant reference/liaison group.
Other non-government groups, organisations or individuals	Woodside assesses relevance for other non-government groups, organisations or individuals using the following steps in its methodology: • Review of Woodside's existing consultation list. • Website search of registered non-government groups or organisations (i.e. registered with an Australian Business Number and publicly available contact information) that may have public website and/or social media material specific to the proposed activity at the time of development of the EP. • Organisation has a publicly available statement (or purpose) that clearly describes their collective functions, interests or activities. • Review of current website and/or social media material to identify targeted information which demonstrates functions, interests or activities relevant to the potential risks and impacts associated with planned activities associated with the EMBA. • Review of an organisation's/individual's feedback to consider whether their functions, interests or activities could be impacted. Assessment of relevance: • Registered non-government groups or organisations with current targeted public material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation will be assessed as relevant. • Individual demonstrates their functions, interests or activities may be impacted will be assessed as relevant.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Category	Relevant person identification methodology
Research institutes and local conservation groups or organisations	Woodside assesses relevance for research institutes and local conservation groups or organisations using the following steps in its methodology: • Review of Woodside's existing consultation list. • Website search for research institutes that may operate within the EMBA. This assessment is both activity and location based. • Website search for local conservation groups or organisations that regularly conduct conservation activities within the EMBA. Assessment of relevance: • Where there is known research being undertaken by a research institute within the EMBA, the research institute that is conducting the research will be assessed as relevant. • Local environmental conservation groups who regularly conduct conservation activities or have demonstrated conservation functions, interests or activities within the EMBA are assessed as relevant. This assessment is both activity and location based.

5.3.5 Regulation 25(1)(e)

In addition to assessing relevance under Regulation 25(1)(d), Woodside has discretion to categorise any other person or organisation as a relevant person under Regulation 25(1)(e).

5.3.6 Identification of relevant persons under Regulation 25(1)(e)

Woodside adopts a case-by-case approach for each EP to assess relevance under Regulation 25(1)(e).

5.3.7 Persons or organisations Woodside chooses to contact

In addition to undertaking consultation with relevant persons under Regulation 25(1), from time to time there are persons or organisations that Woodside chooses to contact in relation to a proposed activity. For example, these are persons or organisations:

- that are 'not relevant' pursuant to Regulation 25(1) but that Woodside has chosen to seek additional guidance from, for example, to inform the correct contact person that Woodside should consult, or engage with
- that are 'not relevant' pursuant to Regulation 25(1) but have been contacted as a result of consultation requirements changing or updated guidance from the Regulator
- where it is unclear what their functions, interests or activities are, or whether their functions, interests or activities may be affected. In this circumstance, engagement is used to inform relevance under Woodside's methodology. Woodside follows the same methodology for assessing a person or organisation's relevance as it does during its initial assessment (as described in Figure 5-1 and Section 5.3). The result of Woodside's assessment of relevance during the development of the EP is outlined at **Error! Reference source not found.**, Table 1.

5.3.8 Assessment of relevant persons for the proposed activity

The result of Woodside's assessment of relevant persons in accordance with Regulation 25(1) is outlined at Appendix F, Table 1 and **Error! Reference source not found.**, Table 2.

Persons or organisations that Woodside assessed as 'not relevant' but chose to contact at its discretion in accordance with Section 5.3.4 or self-identified and Woodside assessed as not relevant are summarised at **Error! Reference source not found.**, Table 1 and Table 3.

5.4 Consultation material and timing

Regulation 25(2) provides that a titleholder must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person. Regulation 25(3) provides that the titleholder must allow a relevant person a reasonable period for the consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As set out in Section 5.2, Woodside notifies relevant persons of the proposed activities, respecting that consultation is voluntary, and collaborates on a consultation approach where further engagement is sought by the relevant person. The consultation process aims to be appropriate for the category of relevant persons and not all persons or organisations will require the same level of engagement. Woodside recognises that the level of engagement is dependent on the nature and scale of the Operational Areas. Woodside acknowledges published guidance for good practice consultation, relevant to different sectors and disciplines. Woodside's methodology for providing relevant persons with sufficient information as well as a reasonable period of time to provide feedback is set out in this section.

5.4.1 Sufficient information

Woodside produces a Consultation Information Sheet for each EP. This is provided to relevant persons and organisations and is also available on Woodside's website for interested parties to access and to provide feedback. The Consultation Information Sheet typically includes:

- a description of the proposed petroleum activity:
- the Operational Areas or Petroleum Activity Area, dependant on the EP
- where the activity will take place
- the timing and duration of the activity
- a location map of the Operational Areas or Petroleum Activity Area and EMBA
- a description of the EMBA
- relevant exclusion zones
- a summary of relevant risks and mitigation and management control measures relevant to the proposed petroleum activity.

It also sets out contact details to provide feedback to Woodside.

The level of information necessary for a person or organisation to understand the impacts of the proposed activity on their functions, interests or activities may vary and may depend on the degree to which a relevant person is affected. For example, Woodside considers that relevant persons who may be impacted by planned activities in the Operational Areas, as a result of temporary displacement due to exclusion zones, may require more targeted information relevant to their functions, interests or activities. Sufficient information may have been provided to a relevant person even where all documents requested by a relevant person have not been provided. Woodside acknowledges NOPSEMA's brochure entitled 'Consultation on offshore petroleum environment plans information for the community', which advises persons being consulted that they may inform titleholders that they only want to be consulted in the very unlikely event of an oil spill.

Woodside places advertisements in selected local, state and national newspapers. This typically includes:

- the name of the EP Woodside is seeking feedback on
- an overview of the activity
- the consultation feedback date
- the ways in which a person or organisation can provide feedback.

Advertising in the local paper in the area of the activity is also consistent with the public notification process under section 66 of the Native Title Act for Native Title applications. Woodside typically aligns advertisement feedback timeframes with the timing described below. Feedback received is assessed in accordance with Section 5.3 to determine relevance and evidenced in **Error! Reference source not found.**, Table 1 as a ppropriate.

Woodside utilises a range of tools to provide sufficient information to relevant persons, which may include one or more of the following:

- Consultation Information Sheet available on Woodside's website and shared directly with relevant persons

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Summary Consultation Information Sheet, presentations or summaries specific to a particular relevant person group
- subscription available on Woodside's website to receive notification of new Consultation Information Sheets for Woodside EPs
- emails
- letters
- phone calls
- face-to-face meetings (virtual or in person) with presentation slides or handouts as appropriate
- Let's Talk newsletter – digital and hard copy
- maps outlining a person or organisation's defined area of responsibility in relation to the proposed activity, for example a fisheries management area or defence training area
- community meetings, as appropriate
- attendance at on-the-ground community events or planned regional roadshows
- broader awareness campaigns on the how to be involved in the EP consultation process.

Woodside recognises that information may be provided to relevant persons in an iterative manner during the consultation process. Woodside considers that genuine two-way engagement may be demonstrated via information on incorporation of controls, where applicable, being provided to the relevant person so that the relevant persons understand how their input has been considered in the development of the EP.

Woodside communicates with relevant persons in different ways. Woodside recognises that, as part of genuine two-way dialogue, these forms of communication may evolve including, for example due to changes to organisation representation, as relationships are further established, or a preference for an alternative form of communication is expressed by a person or organisation. There might be limitations in how Woodside can consult with relevant persons.

Typical forms of communications for categories of relevant persons are set out below.

Category of relevant person	Typically accepted form of communication
Government departments/agencies – marine Government departments/agencies – environment Government departments/agencies – industry	Woodside applies NOPSEMA's guideline for engagement with Commonwealth government departments or agencies GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2023 by using email for its consultation unless another form of communication is requested. Other forms of communication, such as phone calls, meetings and/or presentation briefings are used on request.
Commercial fisheries and peak representative bodies Recreational marine users and peak representative bodies	**Commonwealth commercial fisheries**: Email is used as the primary form of communication with Commonwealth commercial fisheries in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request. **State commercial fisheries and recreational marine users**: The Western Australian Department of Primary Industries and Regional Development (DPIRD) has responsibility for managing the *Fish Resources Management Act 1994* and *Aquatic Resources Management Act 2016*, which limits the provision of contact details from the register to the name and business address of licence holders. Alternative forms of communication are at the licence holder's discretion. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request. **Peak representative bodies**: Email is used as the primary form of communication with commercial fishery and recreational marine user peak representative bodies in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Category of relevant person	Typically accepted form of communication
Titleholders and operators	Email is used as the primary form of communication between titleholders and operators in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Peak industry representative bodies	Email is used as the primary form of communication with peak representative bodies in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Traditional Custodians and nominated representative corporations	There are many forms of communication that Woodside uses on a case-by-case basis and as appropriate to or requested by the specific group, such as email, phone calls, meetings and community forums. Other forms of communication are used on request.
Native Title Representative Bodies	There are many forms of communication that Woodside uses on a case-by-case basis and as appropriate to or requested by the specific group, such as email, phone calls, meetings and community forums. Other forms of communication are used on request.
Historical heritage groups or organisations	NOPSEMA's guideline (GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2023) for engagement with government departments or agencies is used as a reference for Woodside's approach for communicating with historical heritage groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Local government and recognised local community reference/liaison groups or organisations	**Local government:** NOPSEMA's guideline (GL1887 – Consultation with Commonwealth agencies with responsibilities in the marine area – January 2023) for engagement with local government is used as a reference for Woodside's approach for communicating with historical heritage groups or organisations. **Community reference/liaison groups and chambers of commerce**: Email and presentations are used as the primary form of communication with local community reference/liaison groups or organisations in the ordinary course of business. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Other non-government groups or organisations	Email is used as the primary form of communication with Other non-government groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.
Research Institutes and Local conservation groups or organisations	Email is used as the primary form of communication with research institutes and local conservation groups or organisations. Other forms of communication, such as phone calls, and meetings and/or presentation briefings are used on request.

Information which is provided to relevant persons for the purposes of consultation on this EP is summarised at **Error! Reference source not found.**, Table 2.

Error! Reference source not found., Table 3 sets out the information which is provided to persons or o rganisations that are 'not relevant' for the purposes of Regulation 25 but which Woodside has chosen to contact.

When engaging in consultation, Woodside notifies relevant persons that, in accordance with Regulation 25(4), the relevant person may request that the titleholder notifies NOPSEMA that particular information the person or organisation provides in the consultation not be published, and that information subject to that request will not be published under the Environment Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.2 Reasonable period for consultation

Woodside seeks to consult in order to support preparation of its EP. Woodside recognises that what constitutes a reasonable period for consultation should be considered on a case-by-case basis, with reference to the nature, scale and complexity of the activity.

Woodside recognises that information may need to be provided to relevant persons in an iterative manner during the consultation process. Woodside considers that genuine two-way engagement may be demonstrated via information on incorporation of controls, where applicable, being provided to the relevant person so that the relevant person understands how their input has been considered in the development of the EP.

Woodside's methodology allows relevant persons a reasonable period for consultation (Regulation 25(3)). A reasonable period for all relevant persons, including Traditional Custodians, to participate in consultation for this EP has been provided.

The consultation period under this EP has satisfied benchmark periods under other relevant legislative processes:

- Regulation 30 sets out a public consultation period of 30 days.
- The DMPE *Guidelines for Consultation with Indigenous People by Mineral Explorers* directs a period of 21 to 30 days of consultation with traditional owners.
- While repealed, guidance taken from the *Aboriginal Cultural Heritage Act 2021—Consultation Guidelines* (Government of Western Australia, 2023) suggests that up to 12 weeks may be a reasonable period to allow identification, contact and response from First Nations peoples (subject to any alternative timeframe being agreed through co-design of consultation).

This period of consultation demonstrates that Woodside has provided a "*reasonable period*" for relevant persons to consult in accordance with Regulation 25(3). Commentary in the *Tipakalippa Appeal* judgment limits consultation to a process that must be capable of being discharged within a reasonable time:

> *"it must be taken to be the regulatory intention that the consultation requirement cannot be one that is incapable of being complied with within a reasonable time..."*[7]

Woodside seeks feedback in order to support preparation of its EP. What constitutes a reasonable period for consultation is considered on a case-by-case basis, with reference to the person being consulted and the nature, scale and complexity of the activity.

Woodside's typical approach to providing a reasonable period for consultation is as follows:

- advertising in selected local, state and national newspapers to give persons or organisations the opportunity to understand the activity and identify whether their functions, interests or activities may be affected
- providing consultation materials directly to identified relevant persons as well as persons who are 'not relevant' but Woodside chose to contact and providing a target date for feedback. Woodside acknowledges that feedback may be received from relevant persons following the target date
- acknowledging that the way in which Woodside provides consultation information may vary depending on the relevant person or organisation and, may depend on the degree to which a relevant person or organisation is affected. Different consultation processes may be required for relevant persons and organisations depending on the information requirements
- following up with relevant persons prior to EP submission. Where possible, Woodside will endeavour to use an alternative method of communication to contact the relevant person
- engaging in two-way dialogue with relevant persons or organisations where feedback is received.

Error! Reference source not found., Table 2 and Table 3 sets out a history of consultation and d emonstrates that a reasonable period of consultation has been afforded for each relevant person.

[7] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at paragraph [136].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside considers that the “reasonable period” of consultation for this EP has closed.

As detailed in Section 5.6, if comments and feedback are received after the EP has been submitted, Woodside will consider those comments and update controls as appropriate, at all stages during the life of the EP as per Woodside’s ongoing consultation approach as described in Section 5.7.

5.4.3 Discharge of Regulation 25

The Full Federal Court made clear in the *Tipakalippa Appeal* that consultation should be approached in a “*reasonable”, “pragmatic” and “not so literal”* way, so that consultation obligations were capable of being met by titleholders (Section 5.5.1).[8] Consultation is a “*real world activity*” and must be capable of reasonable discharge.[9] The Full Federal Court referred to Native Title cases as an illustration that reasonable limits should be applied to consultation efforts to ensure the process is workable.[10]

When the titleholder demonstrates that it has provided sufficient information and a reasonable period for consultation, then Regulation 25 consultation requirements are met.[11] Meeting these obligations requires evaluative judgement to determine reasonable satisfaction of the consultation obligation and, as such, the Regulator uses its discretion to determine if these criteria are met. The nature of the person being consulted and their function, interest and activity that may be affected, will inform the manner of consultation and the reasonable period to be afforded.[12]

While a titleholder is required to provide an opportunity to consult, the titleholder is not required to obtain consent to engage in the activity from a person being consulted, or confirmation from a person being consulted, that consultation is complete. The Federal Court has commented that a “*reasonable opportunity*” for consultation must be afforded to relevant persons.[13] A reasonable opportunity may not be every opportunity requested and is limited to reasonable opportunities to consult.

Woodside has completed steps required to discharge its consultation obligations. Woodside has provided sufficient information and a reasonable period of time to enable relevant persons to make an informed assessment of the possible consequences of the activity on their functions, interests or activities; and sufficient time to provide relevant feedback for Woodside to assess relevant persons’ objections or claims. Woodside has also provided a reasonable opportunity for there to be genuine two-way dialogue on a person’s claims or objections.

Woodside has discharged its duty under Regulation 25 and considers that is complete.

Error! Reference source not found., Table 2 and Table 3 of this EP sets out the history of consultation u nder Regulation 25. To the extent a relevant person says that they have further information to share or claims that consultation under Regulation 25 has not been completed, **Error! Reference source not found.**, T able 2 and Table 3 provide reasons why Woodside considers consultation under Regulation 25 has been met, in relation to that relevant person.

5.5 Context of consultation approach with First Nations

To comply with Regulation 25, Woodside identifies and consults Traditional Custodians whose functions, interests or activities may be affected by the activities under an Environment Plan.

5.5.1 Approach to methodology − Woodside’s interpretation of Tipakalippa Appeal

Woodside has implemented a consultation methodology consistent with Regulation 25 and guidance provided in the *Tipakalippa Appeal* (Section 5.2). Woodside’s consultation methodology allows for a sufficiently broad capture of Traditional Custodian relevant persons, provides for informed consultation,

follows cultural protocols and allows a reasonable opportunity for consultation with Traditional Custodians whose functions, interests or activities may be affected by the activity described in this EP (Sections 5.5.3 to 5.5.4.3).

Woodside notes the Full Federal Court discussed several *Native Title Act (NTA) 1993 (Cth*) cases in response to a submission made in that case that a requirement under Regulation 25 to consult *"each and every*" relevant person would be "*unworkable*". The reference to Native Title cases dealt with how decision-making processes under the NTA requiring "*all*" members of a group to be contacted for communal approval are interpreted by courts in a "*reasonable*", "*pragmatic*" and "*not so literal*" way,[14] and how obligations to consult "*each and every*" person under Regulation 25 should be interpreted in a similarly pragmatic way, so that consultation is workable. The reference to NTA authorities was made by analogy:

> *"It can be seen that the terms of [the native title legislation] are somewhat absolute – "all". However, [the native title legislation] has consistently been construed in a way that is not so literal … The cases concerning [the native title legislation] … have reiterated … that [the native title legislation] does not require that "all" of the members of the relevant claim group be involved in the decision. The key question will be whether a reasonable opportunity to participate in the decision-making process has been afforded by the notice for a relevant meeting." [15]*
>
> *"We consider the authorities in relation to processes under the NTA to be illustrative of how a seemingly rigid statutory obligation to consult persons holding a communal interest may operate in a workable manner"[16] (emphasis added).*
>
> *"…there is no definition of what constitutes "consultation for the purpose of Reg11A [now Regulation 25] ... A titleholder will need to "demonstrate" to NOPSEMA that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant persons" [17] (emphasis added).*

The Judgment in the Tipakalippa Appeal makes it clear that a titleholder will have some decisional choice in identifying which person(s) are to be approached, how the information will be given to allow the "*relevant person*" to assess the possible consequence of the proposed activities on their functions, interests or activities, and how the requisite consultation is undertaken.[18] Consultation is not fixed to a rigid process and will be adapted so that it is informed by the relevant person or group. Woodside has met its Regulation 25 requirements through its consultation methodology (Section 5.5.2).

Consistent with the *Tipakalippa Appeal*, Woodside considers NTA-style "*full group*" meetings are not required for there to be compliance with Regulation 25. Nominated representative corporations (such as PBCs established under the NTA) have a designated role of representing the views of their member Traditional Custodians. They have established methods for engaging with their own members. Woodside will not undermine the purpose and authority of nominated representative corporations by requiring full group meetings where the nominated representative corporations have not requested engagement of members via full group meetings. It is not appropriate for titleholders to direct or challenge the nominated representative corporations on how to engage with their members.

Woodside's approach described below demonstrates that sufficient information and a reasonable opportunity is provided to individual Traditional Custodians to provide feedback on Woodside activities beyond the opportunity provided to nominated representative corporations.

5.5.2 Consultation method

Woodside's First Nations team has experience in engaging and working with Traditional Custodian organisations and individuals, including within the Commonwealth Native Title and cultural heritage systems, and state and territory cultural heritage and land rights systems. The team understands the complexities of making information accessible to groups and individuals and engaging in accordance with Traditional

[17] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at paragraph [104].*
[18] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at paragraph [47] and [48].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Custodian groups' established channels of communication and methods of consultation. Woodside's First Nations team exercises its professional judgement and is respectful of long-standing relationships (where in place) when considering consultation with Traditional Custodian groups. The First Nations team's approach is also informed by the established systems of recognition for Traditional Custodian groups and their nominated representative corporations within particular jurisdictions.

For example, the methodology for engaging with Traditional Custodian groups in the Northern Territory ('not relevant' for this EP) tends to centre around engagement through Aboriginal land councils (under the *Aboriginal Land Rights (Northern Territory) Act 1976* (*Cth*)) as well as community meetings that target clan groups where they do not have PBCs or other nominated representative corporations to represent them.

By contrast, recognition for Traditional Custodian groups and their nominated representative corporations in Western Australia falls under the *Native Title Act 1993 (Cth*) because the vast majority of the Western Australian coastline is settled under the Native Title regime. This means that the methodology and process for consultation in Western Australia places greater emphasis on, but is not limited to, Native Title Representative Bodies and PBCs.

Native Title determinations provide certainty about the appropriate Traditional Custodian groups that have the cultural authority to speak for Country adjacent to the EMBA and help Woodside to identify Traditional Custodian persons and groups asserting Traditional Custodianship. The Judgment in the *Tipakalippa Appeal* endorses methods of consultation with groups of relevant persons that are appropriate and adapted to the characteristics of groups.[19] Woodside's consultation methodology is adapted and appropriate to the recognised systems of communal interests in Western Australia.

In Western Australia (relevant for this EP), Woodside has sought to follow the established, effective and respectful means of communication used by Native Title Representative Bodies and nominated representative corporations (including PBCs) with their respective Traditional Custodian communities. Woodside follows these processes for the appropriate broad capture of individuals' awareness of our activities, to self-identify (Section 5.5.4), and to provide feedback to inform the management of environmental impacts and risks.

Using these processes, Woodside communicates information about EPs by:

- Advertising in relevant Indigenous and non-Indigenous newspapers. This encourages self-identification, by advertising proposed activities widely through newspapers that have national and intra-state circulation, i.e. Koori Mail, National Indigenous Times, The West Australian.
- Creating carefully considered Summary Consultation Information Sheets with content developed by Woodside's First Nations Team to remove jargon and present information in a simplified format.
- Directing contact through nominated representative corporations.
- Using social media (i.e. Facebook/Instagram), texts, phone calls and emails. These mediums are the preferred communication methods used by Traditional Custodians throughout Western Australia and, on that basis, used by Native Title Representative Bodies and other government agencies and industry, to engage with Traditional Custodians or call meetings. First Nations woman, Professor Bronwyn Castle, through 10 years of research found *"Social media is an intrinsic part of daily life. The use of Facebook is around 20 per cent higher [among First Nations people] than the national average across all geographical locations*" (Social media mob: being Indigenous online, Professor Bronwyn Carlson (2018)).
- Carrying out ongoing consultation post Regulation 25 consultation, where Woodside has a Program of Ongoing Engagement with Traditional Custodians. This program sets out Woodside's commitment to ongoing engagement and support to care for and manage Country, including Sea Country. The program was developed in response to Traditional Custodian feedback.
- Basing members of its First Nations team in Karratha and Roebourne and who serve as on-Country points of contact for Traditional Custodian organisations and individuals. These team members have broad local knowledge and established, on-the-ground relationships within communities. This helps contribute to positive outcomes including distributing information and providing notice to the community

[19] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193 at paragraph [95].[104].[153].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

to support Traditional Custodian attendance and involvement at Woodside's information sessions and Community roadshows.

- Ensuring that from the commencement of engagement with Traditional Custodians, Woodside seeks direction on how they prefer to be consulted and has consulted accordingly. Consultation processes that are informed by Traditional Custodians and co-designed on a case-by-case basis and includes their direction as to cultural protocols, structure of consultation and who to appropriately consult with (such as elders).
- Holding meetings on Country at a place and time agreed with Traditional Custodians and offering and providing financial assistance for meeting expenses (as appropriate).
- Providing information specifically designed to be easily understood, to reach all relevant people, and give a reasonable period of time for those people to make an informed assessment of the possible consequences of the proposed activity on them.

The First Nations team approach to consultation is also consistent with the Federal Court's decision in the *Munkara Case*. The *Munkara Case* notes that the word "*culture*" (and hence the word "*cultural*") has a communal aspect to it. To establish cultural features, it is necessary that the beliefs and values are held by the relevant people *as a people*. For values, features or beliefs that are expressed by an individual to be "*cultural*" they cannot simply be an individual's belief – the belief must have a communal aspect too, and demonstrate that the "*individual beliefs are broadly representative of the beliefs of other members of the group*"[20]. The phrase "*cultural features*", when applied to "*people*" as constituent parts of an ecosystem, is not directed to idiosyncratic views or beliefs of an individual[21]. When the First Nations team is told that a particular value is cultural by an individual Traditional Owner, that information is taken back to the relevant cultural authority to test its broad acceptance. In the case of gender sensitive information, that information would be restricted to the specific gender within the community.

5.5.3 Identification of relevant persons

To undertake consultation, Woodside has developed a methodology for identifying relevant persons, in accordance with Regulation 25(1) (Sections 5.2 and 5.3).

Specific to Woodside's approach for identifying relevant Traditional Custodians, Woodside's First Nations Communities Policy and consultation approach is guided by Traditional Custodians by directing consultations through their nominated representative corporation. This has been implemented by Woodside through consultation with a nominated representative corporation, where that corporation has advised Woodside that it acts as the representative body for a Traditional Custodian group and has requested that Woodside engage with it as the representative body for that Traditional Custodian group.

Woodside asks nominated representative corporations (such as PBCs) and Native Title Representative Bodies to identify individuals that should be consulted, and enables individuals to self-identify in response to national and local advertising, social media and community engagement opportunities (Section 5.5.4.3). Where there is a nominated representative corporation for an area, unless directed by the nominated representative corporation, Woodside does not directly approach individuals for consultation, because this has the potential to undermine the role of the nominated representative corporation. Approaching individuals directly is a practice that is no longer considered acceptable because of divisions it has been shown to cause in communities. In addition to asking for the identification of individuals, Woodside also asks nominated representative corporations to distribute consultation information to whomever the nominated representative corporations deem appropriate, including members of the nominated representative corporations who are communal rights holders.

Having said this, as set out in further detail in Section 5.5.4.3, individuals are also given the opportunity to self-identify, consult and provide their own feedback on the proposed activity. When approached in this way, Woodside will engage individuals as relevant persons and will also (subject to any confidentiality or cultural restrictions) advise the nominated representative body of the consultation where it relates to cultural values. These methods of consultation are consistent with requirements for notification under the NTA, such as under the future act provisions (section 29), which requires notification of the Native Title Representative

[20] *Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9 at [205].*

[21] *Munkara v Santos NA Barossa Pty Ltd (No 3) [2024] FCA 9 at [205].*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Body, the PBC (or nominated representative) and notification through newspapers. The notification process has been selected as a respectful, practical and pragmatic analogue for consultation with First Nations peoples, rather than requiring members to be notified via a formal authorisation process which seeks, from members, authorisation of agreements and Native Title/compensation claims under the NTA[22].

In this consultation, Woodside requested nominated representative corporations to identify any potential individual relevant persons for consultation. Woodside requests nominated representative corporations to distribute consultation materials to their members. However, Woodside recognises that the process is voluntary and that it cannot compel nominated representative corporations (such as PBCs) to do so. Woodside also recognises that it would not be appropriate to seek to audit the nominated representative corporations for compliance with any member consultation request.

5.5.4 Opportunity to self-identify and identifying other individuals

Woodside requests nominated representative corporations and Native Title Representative Bodies to identify other individuals to consult with or individuals who may seek to self-identify for a proposed activity. Woodside also advertises broadly through Indigenous, national and local advertising, social media and community engagement opportunities to provide individuals with an opportunity to consult. Woodside does not directly approach individuals for consultation, as this undermines the role of the nominated representative corporations (Section 5.5.3). Woodside's approach to providing individual Traditional Custodians the opportunity to self-identify and consult for an EP is as follows:

- Woodside applies the principles of self-determination when consulting with Traditional Custodians by consulting through the Traditional Custodians authorised representative entities.
- Recognising the function of nominated representative corporations (such as PBCs) and Native Title Representative Bodies to represent communal interests and manage cultural values, Woodside requests that the information provided to representative entities is provided to their members but Woodside recognises the process is voluntary and Woodside cannot compel them to do so, nor seek to audit the representative entities for compliance with any request.
- Representative entities cannot provide membership details to Woodside due to individual confidentiality requirements.
- Woodside requests advice as to who else Woodside should be consulting but recognises the process is voluntary and cannot compel nominated representative corporations to provide this information.
- Modern Indigenous engagement practises rely on the building and maintaining of respectful relationships. To date, most nominated representative corporations have requested the building of that relationship, where one is not already in place.
- While Woodside has, in some cases, approached individual directors and Elders outside of this process due to requirements imposed in EP consultation, this approach is considered inappropriate by modern Indigenous engagement standards, fundamentally undermining the authority of the authorised representative entity and can be detrimental to the relationship.

For this proposed activity, Woodside requested nominated representative corporations (including PBCs) and Native Title Representative Bodies to identify any potential individual relevant persons for consultation, and to distribute consultation materials to their member base. However, Woodside recognises the process is voluntary and it cannot compel them to do so nor seek to audit the representative entities for compliance with any request. Woodside has not been directed to engage individual Traditional Custodians by nominated representative corporations for this proposed activity. Woodside has nevertheless provided reasonable opportunity for individual Traditional Custodians to engage in consultation through appropriate and adapted consultation methods.

[22] *Santos NA Barossa Pty Ltd v Tipakalippa [2022] FCAFC 193, at [104]*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.5.4.1 Sufficient information

Woodside recognises that the information sufficient to allow a person or organisation to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities may vary and may depend on the degree to which a relevant person is potentially affected.

Woodside produces Consultation Information Sheets for each EP, which are provided to relevant persons and organisations for the purpose of seeking feedback on the activity (Section 5.4). In response to feedback from Traditional Custodians on information provisions, Woodside has tailored effective consultation methods for its activities. These methods are specifically designed for Traditional Custodians, so that information is provided in a form that is readily accessible and appropriate. The targeted Summary Information Sheet is developed and reviewed by Woodside's First Nations Team to ensure that content is appropriate to the intended recipients, which is then provided to relevant Traditional Custodian groups. Phone calls are made to provide context to the consultation.

Where face-to-face consultation meetings are requested, Woodside coordinates engagement at the Traditional Custodians location of choice (where practicable) and with their nominated attendees. Along with members of Woodside's First Nations engagement team, key project personnel and environmental experts are typically present to enable effective communication and prompt response to questions. Materials for these sessions incorporate visual aids such as photos, maps and videos, and plain language suitable for people with a non-technical background.

During consultation, Woodside provides relevant persons with additional information as appropriate in response to requests. There is no requirement to provide relevant persons with all information or documents requested and a titleholder will have provided sufficient information even where it has not provided all information or documents requested.

Woodside has sought to provide sufficient information to individual members of nominated representative corporations (such as PBCs) by providing information to representative bodies and requesting dissemination with members. However, Woodside recognises consultation is voluntary and it cannot compel them to do so, nor would it be appropriate to seek to audit the representative entities for compliance with any request.

5.5.4.2 Reasonable period for consultation

Woodside seeks to consult in order to support preparation of its Environment Plan. Woodside recognises that what constitutes a reasonable period for consultation should be considered on a case-by-case basis, with reference to the nature, scale and complexity of the activity (Section 5.4.2).

5.5.4.3 Discharge of Regulation 25

Woodside's consideration and approach to discharging Regulation 25 for relevant persons is discussed in Section 5.4.3. In addition to this, Woodside has considered the application of Regulation 25 specific to Traditional Custodians based on the Tipakalippa Appeal.

In relation to Traditional Custodian relevant persons (and all relevant persons), Woodside has discharged its duty under Regulation 25 of the Environment Regulations. Woodside considers that consultation under Regulation 25 is complete (Section 5.4.3).

5.6 Providing feedback and assessment of merit of objections or claims

There are a number of ways in which feedback can be provided. Feedback can be provided through the Woodside feedback email or via the Woodside feedback toll free phone line as outlined in the Consultation Information Sheet and the Woodside website. Where appropriate, consultation may also be supported by phone calls or meetings. An EP feedback form is also available on Woodside's website enabling stakeholders to provide feedback on proposed activities, or to request additional information.

Woodside consults widely on its EPs and notes that feedback is received in various forms. Feedback that is considered inappropriate or that puts the environment, health, safety or wellbeing of Woodside employees or operations at risk will not be tolerated. Woodside respects people's rights to protest peacefully and lawfully but actions that put the environment, health, safety or wellbeing of Woodside employees or operations at risk go beyond those boundaries.

Woodside accepts feedback and engages in consultation in order to achieve the aims set out in Section 5.2. Woodside recognises there are persons and organisations that take a view that Woodside's operations and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

growth projects should be stopped or at least delayed as far as possible. While Woodside assesses the merits of objections or claims received, it acknowledges NOPSEMA's guidance in its brochure entitled Consultation on offshore petroleum environment plans information for the community, which states that relevant persons are free to respond on any matter and raise any concern, however this may not be able to be considered if it is outside the scope or purpose of the EP and approval process, for example, statements of fundamental objection to offshore petroleum activities or information containing personal threats or profanities. Under Regulation 34(g), there is no requirement for a relevant person to agree or confirm that they have been adequately consulted.

Feedback from relevant persons is reviewed and an assessment of the merits is made of information provided as well as objections or claims about the adverse impact of each activity to which the EP relates. This might, for instance, be done through a review of data and literature and for relevance to the nature and scale of the activity outlined in the EP. Consistent with the aim of consultation in Section 5.2, Woodside will consider information received when reviewing and designing measures to put in place to minimise harm to relevant persons and where reasonable or practical to further manage impacts and risks to ALARP and acceptable levels.

Woodside considers feedback during consultation from relevant persons and other persons Woodside chose to contact (see Section 5.3). This information is summarised in **Error! Reference source not found.**, Table 1 and Table 2 of the EP and includes a statement of Woodside's response, or proposed response, if any, to each objection and claim.

In accordance with Regulation 26(8), sensitive information (if any) in an EP, and the full text of any response by a relevant person to consultation under Regulation 25, must be contained in the sensitive information part of the plan and not anywhere else in the plan.

5.7 Ongoing consultation

Consultation can continue to occur during the life of an EP, including after an EP has been accepted by NOPSEMA.

As per Woodside's ongoing consultation approach (refer to Section 7.10.2.1), feedback and comments received from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP, including during its assessment and once accepted, in accordance with the intended outcome of consultation.

Should consultation feedback be received following the acceptance of an EP that identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Revision process as appropriate (see Section 7.8).

6. ENVIRONMENTAL IMPACT AND RISK ASSESSMENT, PERFORMANCE OUTCOMES, STANDARDS AND MEASUREMENTS CRITERIA

6.1 Overview

This section presents the impact and risk analysis and evaluation, EPOs, PSs and MC for the GPGT Survey Program, using the methodology described in Section 2 of this EP. Impacts and risks associated with the GPGT Survey Program are summarised in Table 6-1 and evaluated in Sections 6.5 and 6.6.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 6-1: Environmental impact analysis summary of planned and unplanned activities

Aspect	EP section	Risk rating				Acceptability of impact/ risk
		Impact/ consequence	Potential impact/consequence level	Likelihood	Current risk rating	
Planned activities (routine and non-routine)						
Physical presence: interaction with third-party vessels	6.5.1	F	Social and Cultural – No lasting effect (less than one month); localised impact not significant to areas/items of cultural significance receptors.	-	-	Broadly acceptable
Physical presence: disturbance to benthic habitat from geotechnical and geophysical surveys	6.5.2	E	Environment – Slight, short term local impact (less than one year) on species and habitat (but not affecting ecosystems function).	-	-	Broadly acceptable
Routine acoustic emissions: generation of noise from survey vessels	6.5.3	F	Environment – No lasting effect (less than one month); localised impact not significant to species.	-	-	Broadly acceptable
Routine acoustic emissions: generation of noise from geophysical and geotechnical survey equipment	6.5.4	E	Environment – Slight, short term local impact (less than one year) on species and habitat (but not affecting ecosystems function).	-	-	Broadly acceptable
Routine light emissions: external lighting on survey vessel	6.5.5	F	Environment – No lasting effect (less than one month); localised and temporary disturbance to marine fauna.	-	-	Broadly acceptable
Routine atmospheric emissions from fuel use	6.5.6	F	Environment – No lasting effect (less than one month); localised impact not significant to environmental receptors (e.g. air quality).	-	-	Broadly acceptable
Routine and non-routine discharges to the marine environment from survey vessels	6.5.7	F	Environment – No lasting effect (less than one month); localised impact not significant to environmental receptors.	-	-	Broadly acceptable
Unplanned activities (accidents, incidents, emergency situations)						
Accidental hydrocarbon release: vessel collision	6.6.1	D	Environment – Impact magnitude is within applicable standards but is considered to have significance. Slight, minor or moderate impacts are predicted to occur to receptors of high, medium or low sensitivity respectively.	1	M	Broadly acceptable
Physical presence: vessel collision with marine fauna	6.6.20	E	Environment – The receptor will experience a noticeable effect, but the impact magnitude is sufficiently small and well within applicable standards, and/or the receptor is of low value.	1	L	Broadly acceptable

6.2 Cumulative impacts

Woodside has assessed the cumulative impacts of the GPGT Survey Program in relation to other relevant petroleum and greenhouse gas activities that could realistically result in overlapping temporal and spatial extents. In particular, planned activities at Angel and GWA Facilities near Operational Areas A and B.

Additionally, where relevant the cumulative impacts of activities associated with undertaking multiple concurrent or parallel activities associated with this GPGT Survey Program have been assessed for cumulative impacts as relevant in Sections 6.5 and 6.6.

6.3 Geophysical and Geotechnical Survey Program presentation

The environmental impact and risk analysis and evaluation, demonstration of ALARP and acceptability, EPOs, PSs and MC are presented in tabular form throughout Sections 6.5 and 6.6, as shown in the example below. Italicised text in this example table denotes the purpose of each part of the table, with reference to the relevant sections of the Regulations and/or this EP.

6.4 Potential environment risks not included within the scope of the Environment Plan

The ENVID identified a number of environmental risks that were assessed as not being applicable (not credible) as a result of the GPGT Survey Program. Therefore, they were determined to not form part of this EP. These are described in the following sections for information only.

6.4.1 Bunkering

No bunkering at sea will be performed. Any bunkering will be performed during a port call, out of the scope of this EP. Consequently, risks associated with this activity are not considered applicable to this EP.

6.4.2 Underwater noise emissions from helicopters and remotely operated vehicles

It is not credible that airborne noise helicopter transfers would add to levels of underwater noise emanating from the project vessels and GPGT equipment. Similarly, it is not credible that noise from remotely operated vehicle (ROV) operations at the seabed would add to levels of noise emanating from project vessels just below the sea surface, or noise emissions from GPGT equipment. Noise emissions from these other sources would not add to cumulative sound fields from project vessel and GPGT equipment to any discernible extent. As such, noise emissions from these sources have not been considered in Section 6.5.3.

6.4.3 Indirect impacts

For the GPGT Survey Program, the potential ‘Indirect’ environmental impacts and risks evaluated are those associated with mobilisation/demobilisation of the vessels to the Operational Areas, which have been considered in the environmental impact assessment in Sections 6.6 and 6.7. Due to the nature and scale of these potential indirect environmental impacts and risks (such as fuel usage, interaction with other marine users and usual vessel discharges), and the regulatory frameworks and applicable maritime regulations in place to manage them, Woodside considers the potential impacts and risks from mobilisation and demobilisation of the survey vessels to be inherently ALARP in its current state. Therefore, Woodside considers that standard vessel operations are appropriate to manage the potential impacts and risks from mobilisation and demobilisation of the vessels to a level that is acceptable.

[24] *Where impact/consequence descriptors are capitalised and presented within EPOs in Section 6; performance level corresponds with those aligned with the Woodside Risk Matrix (refer Section 2.6).*

6.5 Planned activities (routine and non-routine)

6.5.1 Physical presence: interference with or displacement of third-party vessels

Context		
Project vessels – Section 3.6	Socio-economic environment – Section 4.10	Consultation – Section 5

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Interference with/exclusion of Interaction with third-party vessels						X	A	F	-	-	LCS GP PJ	Broadly Acceptable	EPO 1

Description of source of impact

To conduct the GPGT Survey Program, at least two project vessels will be present in the Operational Areas. The geophysical surveys are expected to take approximately 40 days to complete and the geotechnical surveys approximately 80 days to complete, this may occur as a single campaign or could be split over a number of campaigns (as defined in Section 3.5).

Vessels do not plan to anchor within the Operational Areas during activities and instead maintain positioning using DP. The physical presence and movement of project vessels within the Operational Areas has the potential to displace other marine users. All vessels will display navigational lighting and external lighting on a 24-hour basis, as required for safe operations.

No support vessels are required for survey activities and no permanent survey equipment is planned to be left on the seabed following completion of the GPGT Survey Program. Geophysical survey equipment is towed at a distance of approximately 3x the water depth from the stern and within the 500 m exclusion zone of the vessel. Geotechnical equipment is deployed near vertical and is therefore, in close proximity to the working vessel.

There is the potential for the project vessels and associated survey equipment to temporarily displace third party vessels i.e. commercial fishing, aquaculture and shipping vessels, including vessels associated with oil and gas activities and recreational fishing vessels, from within the area where the vessel is directly operating.

Impact assessment

Environmental value(s) potentially impacted

Displacement to commercial fishing and aquaculture

A number of Commonwealth and State managed fisheries occur in the region (Section 4.10.1). Potential impacts to commercial fishers depend on the use of the area by fishers, in addition to the temporal and spatial extent of the presence of vessels and facilities/infrastructure. Commercial fishing vessels in the vicinity of the Operational Areas are most likely to be licenced under the Pilbara Demersal Scalefish Fishery and the Mackerel Managed Fishery and may employ several gear types (including trap, trawl and line).

The presence of vessels in the Operational Areas would likely be of short duration, potentially resulting in a minor interference (i.e. navigational hazard) and localised displacement/avoidance by commercial fishing vessels within the immediate vicinity of the project vessels. It is also noted that there was no direct response from commercial fisheries and aquaculture during the consultation period, so the potential impacts of survey activities on commercial fisheries is considered minor and temporary.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No permanent infrastructure is intended to be installed or remain in-situ as part of the GPGT Survey Program. Therefore, there is no ongoing entanglement or equipment damage risk to bottom trawl fisheries.

Displacement of recreational fishing and tourism

Tourism and recreation activity in the Operational Areas is expected to be infrequent, with recreational and charter fishing from vessels visiting the Montebello Islands Marine Park the only tourism and recreation activities identified as potentially occurring in the Operational Areas. Operational Area A overlaps with a small section of the Montebello Islands Marine Park Multiple Use Zone IV. It is noted that some recreational fishing may occur at Wilcox Shoal and Rankin Bank, which lies in close proximity to the Operational Areas (overlapping Operational Area A) and within the Glomar Shoal KEF, which overlaps the northwest area of Operational Area C. Any recreational and charter fishing from vessels is largely undertaken using lines. Consultation outcomes did not indicate any recreational fishing occurs within the Operational Areas (Section 5). Additionally, no concerns were raised by tourism operators during consultation. As such, impacts to recreational and charter fishing are expected to be localised and of no lasting effect.

Displacement to commercial shipping

Significant commercial shipping occurs in the region, with commercial shipping traffic comprising vessels such as:

- bulk carriers (e.g. mineral ore, salt) from Port Hedland, Cape Preston and Dampier
- offtake tankers
- support vessels for offshore oil and gas activities
- LNG carriers from Dampier, Barrow Island and Ashburton North.

The presence of project vessels could potentially cause temporary disruption to commercial shipping. To reduce the likelihood of interactions between commercial shipping vessels and project vessels, AMSA have introduced a series of shipping fairways within which commercial shipping vessels are advised to navigate. The fairways are not mandatory; however, AMSA strongly recommends commercial shipping vessels remain within the fairway when transiting the region. The use of shipping fairways is considered to be good seafaring practice, with AUSREP data from AMSA indicating cargo ships and tankers routinely navigate within the established fairways.

The fairway intended to direct north-/south-bound vessel traffic from Barrow Island and the southern Montebello Islands overlaps Operational Area A (Figure 4-15). Therefore, there is a slightly higher chance of interference between the GPGT Survey Program and commercial shipping in this area. However, any impact would be limited to the duration of the survey activities and temporary in nature.

During the course of consultation for this EP revision, AMSA noted that heavy vessel traffic could be encountered throughout the EMBA with vessels travelling along the charted shipping fairways and requested notification be provided to AMSA's ARC 24 to 48 hours prior to the commencement of operations to allow for the promulgation of radio-navigation warnings (PS 1.3).

Oil and gas

A number of oil and gas platforms occur in the region (see Table 4-25). Operational Area B overlaps with the North Rankin Complex and Operational Area C overlaps with the Angel Platform. The nearest facility not operated by Woodside, is the Chevron-operated Wheatstone platform, which lies approximately 6.5 km west of Operational Area A. Given the distance between the Operational Areas and petroleum greenhouse gas activities undertaken by other operators, no impacts to other operators will occur as a result of the physical presence of the vessels.

Operational Area B overlaps the title WA-17-L which is held by ExxonMobil Australia Resources Company. Additionally Operational Area C overlaps the title G-9-AP which is held jointly by Chevron and Santos. Activities covered by the EP which may overlap these titles includes vessel line turns associated with the geophysical and geotechnical activities. Current planning does not include any survey acquisition in these adjacent permit areas. If this were to change, Woodside would apply for appropriate permits (for example, access authorities) before performing the work.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
Vessels to adhere to the navigation safety requirements including the *Navigation Act 2012* and any subsequent Marine Orders.	F. Yes. CS: Minimal cost. Standard practice. ALARP statement: On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating ALARP (Section 2.6.1), Woodside considers the adopted controls appropriate to manage potential impacts associated with the physical presence of project vessels on other users such as commercial fisheries, recreational fishing and shipping. As no reasonably practicable additional/alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts/risks are considered ALARP.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Demonstration of Acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, physical presence of the project vessels may result in a negligible impact that is unlikely to result in a potential impact greater than isolated and short-term impacts to commercial fishing, recreational fishing and shipping. Further opportunities to reduce the impacts have been investigated above. The adopted controls are considered good practice/industry best practice and meet the requirements of Australian Marine Orders, and expectations of AMSA, AHO and DoT provided in consultation with relevant persons. On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating acceptability (Section 2.6.2), Woodside considers impacts to be managed to a level that is broadly acceptable.

EPOs, PS and MC			
EPO	***Controls***	***PS***	***MC***
EPO 1 Impacts to relevant marine users from the GPGT Survey Program planned activities will be limited through the provision of appropriate information/notification.	C1.1 Vessels to adhere to the navigation safety requirements and any subsequent Marine Orders: • Marine Order 21 (Safety of Navigation and emergency procedures) 2016 • Marine Order 27 (Safety of navigation and radio equipment 2016 • Marine Order 30 (Prevention of collisions) 2016.	PS 1.1 Survey vessels compliant with Navigation Act, Marine Order 21 (Safety of navigation), Marine Order 27 (emergency procedures) and Marine Order 30 (Prevention of collisions).	MC 1.1.1 Marine Assurance inspection records demonstrate compliance with standard maritime safety procedures (Marine Orders 21, 27 and 30).
	C 1.2 AHO will be notified of activities and movements no less than four working weeks prior to commencement of the GPGT Survey Program.	PS 1.2 Notification to AHO of activities and movements to allow generation of navigation warnings (i.e. Maritime Safety Information Notifications and Notice to Mariners (including AUSCOAST warnings)) where relevant.	MC 1.2.1 Consultation records demonstrate AHO has been notified within required timeframes, before the activity commences.
	C 1.3 Notify AMSA's Response Centre (ARC) of activities and movements.	PS 1.3 AMSA's ARC is notified of the activity 24 to 48 hours before operations start for awareness. AMSA's ARC will require the survey vessel's details (including name, callsign and Maritime Mobile Service Identity), satellite communications details (including INMARSAT-C and satellite telephone), area	MC 1.3.1 Consultation records demonstrate AMSA's ARC has been notified within required timeframes before the activity starts.

6.5.2 Physical presence: disturbance to seabed from geotechnical and geophysical surveys

Context		
Project vessels – Section 3.6 Geotechnical survey activities – Section 3.7.2	Physical environment – Section 4.4 Habitats and biological communities – Section 4.5	Consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Disturbance to benthic habitat as a result of geotechnical surveys	X			X			A	E	-	-	GP PJ	Broadly Acceptable	EPO 2

Description of source of impact

Geotechnical surveys

The geotechnical surveys will be performed using standard industry equipment (Section 3.7.2) and will consist of in situ testing and the recovery of soil and rock samples by deploying the geotechnical equipment from the project vessels to the seabed at locations within the Operational Areas to ground truth the geophysical data and provide geotechnical data for engineering design.

The geotechnical investigation may involve the following seabed-disturbing activities:

Penetration testing: The GPGT Survey Program includes a number of PCPTs across the Operational Areas. Each PCPT will create a hole on the seabed between 3 and 35 m deep with a diameter of up to 250 mm. The number of PCPTs that will be carried out during the GPGT Survey Program will depend on conditions during the GPGT Survey Program and results of PCPT as they occur. However, for the purpose of this EP the impact assessment assumes approximately 90 PCPTs could occur, in addition to the ~70 PCPTs that have taken place to date under the existing in-force revision of this EP. Once PCPTs are complete all equipment is removed from the seabed and the resulting hole will infill naturally overtime.

Cored boreholes: Cored boreholes of up to 35 m deep are planned to be taken across the Operational Areas. These will either be drilled from the surface on a vessel or drilling/testing equipment involving a remotely operated subsea rig lowered to the seabed from the vessel. The borehole will be advanced by either push sampling at intervals or PCPT testings at intervals, followed by drilling using a bit approximately 125 mm in diameter. The remaining hole in the seabed would infill naturally with sediment over time. The number of boreholes made during the GPGT Survey Program may change depending on conditions during the GPGT Survey Program. For the purpose of this EP, the impact assessment assumes approximately 90 boreholes.

Piston core sampling: Piston gravity core or vibro core sampling may occur during the GPGT Survey Program creating holes with depths of between 1 m to 6 m below the mudline. When the depth of sample refusal is reached, all equipment is withdrawn from the seabed. A small hole will remain in the seabed, approximately 115 mm in diameter, which will infill naturally with sediment over time. The number of piston cores taken during the GPGT Survey Program may change depending on conditions during the GPGT Survey Program. For the purpose of this EP, the impact assessment assumes approximately 60 piston cores will be executed across all Operational Areas.

Box Core sampling: Box core sampling will occur during the GPGT Survey Program across all Operational Areas. All box core samples will result in a cube of sediment being removed from the seabed. The possible box core sample equipment is capable of recovering is approximately 0.125 m³ (0.5 m by 0.5 m by 0.5 m). A self-releasing trigger mechanism, initiated once the frame reaches the seabed, allows the box corer to penetrate into the seabed.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Penetration is limited by a stopper to 0.5 m depth. The number of box cores taken may change depending on conditions during the GPGT Survey Program. For the purpose of this EP, the impact assessment assumes approximately 60 box cores will be executed in total across all the Operational Areas.

Section 3.7.2 provides further details on the geotechnical equipment associated with the survey and the potential seabed disturbance associated with it. At the end of the surveys all equipment will be removed from the seabed and no infrastructure or equipment will remain in the Operational Areas.

Drill cuttings

The geotechnical seabed coring may result in the indirect discharge of a small quantity of drill cuttings and fluid at the seafloor. Sampling boreholes drilled to recover soil and rock samples generate minimal drill cuttings as the objective is to recover a continuous sample profile of the depth of the borehole. Any drill cuttings will remain on the seabed immediately adjacent to the borehole site. The cuttings are pieces of material being drilled and likely to be benign calcareous sediment. Some of the discharged cuttings (lighter particles) will be temporarily suspended in the water column (close to seafloor) before settling to the seafloor within the immediate vicinity of the drilling location. The environmental impact associated with the indirect discharge of cuttings from the geotechnical seabed coring activities would be negligible and temporary lasting only minutes after the seabed coring operations are complete. Drilling fluid will consist primarily of seawater, and may have small quantities of additives. These additives are considered to be very low toxicity (as assessed through Woodside's Chemical Selection and Assessment Environment Guideline) and are expected to dilute rapidly upon discharge; as such no toxic effect to biota are expected to occur.

Placement of equipment on the seafloor

Placing the geotechnical equipment on the seafloor will result in minor localised physical disturbance to the seafloor beneath the equipment. These temporary footprints will return to natural state from natural sediment movements.

Discharge of drilling fluids is discussed further in Section 6.5.7.

Impact assessment

Environmental value(s) potentially impacted

Geotechnical survey activities are likely to result in localised and temporary physical modification and disturbance to a small area of the seabed.

Benthic habitat

The benthic habitat within the Operational Areas is predominantly soft sediment with sparsely associated epifauna which is broadly represented throughout the NWS Province and wider NWS (Section 4.5). Benthic habitats of the soft sediment seabed are characterised by burrowing infauna such as polychaetes and worms, with biota such as sessile filter feeders occurring on areas of hard substrate. The infauna communities are likely to be representative of the NWS province which is described as being of low abundance and dominated by polychaetes and crustaceans (RPS, 2012).

Operational Area A overlaps a small area of Wilcox Shoal (ranging from ~30 m below surface waters to ~80 m at seabed) it is highly likely the upper reaches of the shoal support a high cover of benthic organisms comprising mixed hard and soft corals (30 to 40 m depth range), transitioning to a deeper water benthic community comprising soft corals and mixed biota (sponges, other sessile invertebrate biota). No survey is planned to occur at Wilcox Shoal and therefore there will be no direct impact to the seabed in this location. Survey activities around Wilcox Shoal are expected to create very localised impacts which are unlikely to extend to Wilcox Shoal.

Subtidal soft sediments support a patchy abundance of various infauna (including polychaete worms, molluscs, and crustaceans) and epifauna (including crabs, sea urchins, snails, sea stars, demersal fish, sponges, sea whips and sea squirts) which are widespread and well represented and in the context of the contiguous extent of habitats across the region. They are considered to be of relatively low environmental sensitivity (Section 4.4).

Impacts from geotechnical survey activities are expected to be confined to sediment burrowing infauna, surface epifauna invertebrates and potentially sessile filter feeders inhabiting the seabed directly around the survey activities (Gates and Jones, 2012; Hughes et al., 2010). Placing equipment on the seafloor may relocate small amounts of sediment, with slight and short-term impacts to biota, detailed above, due to elevated turbidity and the clogging of respiratory and feeding parts of filter feeding organisms. However, elevated turbidity would only be expected to be temporary, and is therefore not expected to have a lasting effect on environment receptors.

Key ecological features

The Operational Areas overlap with the Ancient Coastline at 125 m depth contour KEF. Impacts to benthic marine fauna as a result of geotechnical surveying are expected to be highly localised to surface area of the borehole, drill cuttings and the footprint of the geotechnical equipment, which is a relatively small area compared to the regional extent of the ancient coastline KEF, extending from Exmouth to the Dampier Peninsula and the Glomar Shoals KEF (noting the KEF encompasses a wider area than the shoal feature itself). As such, this habitat is well represented on a regional scale.

Benthic habitat surveys in the region (including within the Ancient Coastline at 125 m depth contour KEF) indicate that benthic habitats within the KEF are characterised by sand interspersed with areas of rubble and outcroppings of limestone pavement (AIMS, 2014a; RPS, 2011). Such habitats are widely distributed in the NWS Province. As noted

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

in Section 9 of the Master Existing Environment, the geomorphic feature the KEF is associated with is represented worldwide and represents the coastline during a previous glacial period. Therefore, potential impacts to this regional-scale KEF are expected to be short term and localised.

A small section of Operational Area C overlaps the Glomar Shoal KEF. Glomar Shoal is a shallow sedimentary bank comprised of coarser biogenic material than the surrounding seabed. The shoal is 26 to 70 m below the sea surface (Falkner et al., 2009). The KEF encompasses a much wider area than the shoal feature itself. Impacts to benthic marine fauna that may be present on this feature as a result of geotechnical surveying are expected to be highly localised to surface area of the borehole, drill cuttings and the footprint of the geotechnical equipment, which is a relatively small area.

Cumulative impacts

Given the small area of seabed potentially impacted by the survey activities, the cumulative area potentially disturbed is considered negligible in the context of the wider distribution of the habitats present.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[25]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
No additional controls were identified.				
Good practice				
Monitor the seabed environment before and after the GPGT Survey Program to assess any impacts to the seabed.	F: Yes. CS: Significant. Monitoring of the seabed would have significant additional costs to obtain and analyse data with the spatial resolution to accurately assess changes to the seabed habitat.	Environmental monitoring would not change how the activity is conducted; therefore, no change in consequence would occur.	Based on the nature of the activity (i.e. predictable impacts over a small area) and relatively low sensitivity of the area, application of an environmental monitoring control is considered grossly disproportionate. Monitoring will not reduce the consequence or impacts to the seabed, and the cost associated with the level of monitoring required to accurately assess any impacts greatly outweighs the benefits gained. In addition, the presence of additional vessels incur additional impacts and risks to the marine environment as described in other sections.	No

ALARP statement: On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating ALARP (Section 2.6.1), Woodside considers the potential impacts associated with seabed disturbance from geophysical and geotechnical survey activities to be ALARP. As no reasonably practicable additional/alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts/risks are considered ALARP.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, in its current state, disturbance to the seabed represents a potential impact no greater than a slight and short-term effect on habitat (but not affecting ecosystems function). Further opportunities to reduce the impacts have been investigated above. The potential impacts are consistent with industry best practice and are considered broadly acceptable in their current state. On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating acceptability (Section 2.6.2), Woodside considers impacts to be managed to a level that is broadly acceptable.

EPOs, PS and MC			
EPO	***Controls***	***PS***	***MC***
EPO 2 Seabed disturbance to be limited to planned activities and impacts described as part of the GPGT Survey Program.	C2.1 No routine anchoring will occur during the GPGT Survey Program.	PS 2.1 No anchoring in the Operational Areas.	MC 2.1.1 Scope of work specifically states that anchoring is not allowed in the operational areas (apart from emergency situations). Vessel bridge daily records show no anchoring occurred in the Operational Areas.
	C 2.2 Monitor inventory deployed to the field and track removal of equipment during activity.	PS 2.2 Location of equipment deployed to seabed will be tracked and removed from the seabed.	MC 2.2.1 Field reports for activities that include equipment deployed to seabed will specify the deployment location and the complete removal of the equipment.
	C 2.3 No seabed disturbance will occur on shoals within the Operational Areas.	PS 2.3 No seabed disturbance on shoals within the Operational Areas.	MC 2.3.1 Survey reports provide all sample and investigation locations and depths demonstrating no activities occurred at the shoals within the Operational Areas.

6.5.3 Routine acoustic emissions: generation of noise from project vessels

Context		
Project vessels – Section 3.6	Protected species – Section 4.6	Consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Generation of acoustic signals from vessels during normal operations					X		A	F	-	-	GP PJ	Broadly Acceptable	EPO 3
Generation of acoustic signals from DP systems					X		A	F	-	-	GP PJ	Broadly Acceptable	

Description of source of impact

Vessels and operation of dynamic positioning systems

Project vessels will generate noise both in the air and underwater, due to operating thrusters, engines and moving propellers. These noises will contribute to and can exceed ambient noise levels, which range from around 90 dB re 1 µPa (root mean square sound pressure level (rms SPL)) under very calm, low wind conditions, to 120 dB re 1 µPa (rms SPL) under windy conditions (McCauley, 2005).

Thruster noise (from cavitation caused by propellers) is typically the most significant noise source for vessels holding station, with other noise sources typically relatively minor (McCauley, 1998).

Thruster noise is typically high intensity and broadband in nature. Project vessels will maintain position using main engines and/or thrusters (including use DP systems) for short durations while the vessel is maintaining station prior to and during geotechnical surveying. There is no applicable sound data available for a typical DP vessel; however, based upon past research, frequencies and sound levels are expected to be less than those from DP vessels. Near- and far-field underwater noise measurements were taken in 2011 for the MAERSK Discoverer DP drill rig used on the NWS. The rig DP system (similar to the system proposed for the survey vessels) emitted tonal signals between 200 Hz and 1.2 kHz, which is within the auditory band width of whales. The measured source level was between 176 and 186 dB re 1 µPa @ 1 m.

Vessels may use DP while the vessel is maintaining position. McCauley (1998) measured underwater broadband noise equivalent to about 182 dB re 1 µPa at 1 m (rms SPL) from a support vessel holding station in the Timor Sea; it is expected that similar noise levels will be generated by vessel used for this GPGT Survey Program.

The physical presence of, and the underwater noise generated by project vessel operations has the potential to cause temporary and localised disturbance to marine fauna (e.g. displace or attract resulting in behavioural changes) in response to received continuous noise levels of 120 dB re1 µPa (rms SPL) (Southall et al., 2007).

Impact assessment

Environmental value(s) potentially impacted

The Operational Areas are located in water depths between 20 and 190 m. The fauna associated with these areas are predominantly pelagic species of fish, with migratory species such as turtles, whale sharks and cetaceans potentially present in the area seasonally. Noise interference is a key threat to a number of migratory and threatened cetaceans and marine turtles identified as occurring within the Operational Areas.

Elevated underwater noise has the potential to affect marine fauna, including cetaceans, fish, sharks and rays in three main ways (Richardson et al., 1995; Simmonds et al., 2004):

- by causing direct physical effects on hearing or other organs. Hearing loss may be temporary (temporary threshold shift (TTS); referred to as auditory fatigue), or permanent threshold shift (PTS; injury)
- by masking or interfering with other biologically important sounds (including vocal communication, echolocation, signals and sounds produced by predators or prey)
- through disturbance leading to behavioural changes or displacement from important areas (e.g. BIAs). The occurrence and intensity of disturbance is highly variable and depends on a range of factors relating to the animal and situation.

Koessler and McPherson (2020) undertook sound transmission loss modelling for an offshore support vessel (source level of 183 dB re 1 µPa) approximately 220 km east of Operational Area C in water depths of 90 m. The noise source levels applied in the modelling are similar to those of the project vessels and were modelled in similar water depths. Therefore, the outputs (Table 6-2) of the modelling have been applied in this assessment.

Table 6-2: Maximum (R_{max}) horizontal distances (in km) for an offshore support vessel

SPL (dB re 1 µPa)	R_{max} (km)
180	-
170	-
160	-
150	0.06
140	0.34
130	1.25
120	4.57
110	11.9

Based on the modelling outputs of Koessler and McPherson (2020) (Table 6-2), potential impacts may include:

- cetaceans: potential behavioural disturbance out to about 5 km
- turtles: potential masking and behavioural disturbance at intermediate and far ranges
- fish: potential masking and behavioural disturbance at near and intermediate ranges; likelihood of TTS is considered not credible, given fish would move away from the source – demersal fish are not expected to be exposed to underwater noise above impact thresholds.

Sound propagation

Increasing the distance from the noise source results in the level of noise reducing, due primarily to the spreading of the sound energy with distance The way that the noise spreads (geometrical divergence) will depend upon several factors such as water column depth, pressure, temperature gradients, and salinity, as well as surface and bottom conditions.

Cetaceans

Marine mammals and especially cetaceans rely on sound for important life functions including individual recognition, socialising, detecting predators and prey, navigation and reproduction (Weilgart, 2007; Erbe et al., 2015; Erbe et al., 2018). Underwater noise can affect marine mammals in various ways including interfering with communication (masking), behavioural changes, a shift in the hearing threshold (PTS and TTS), physical damage and stress (NRC, 2003; Erbe, 2012; Rolland et al., 2012).

The thresholds that could result in a behavioural response, TTS and PTS for cetaceans as a result of continuous noise sources are presented in Table 6-3. These thresholds have been adopted by the United States National Oceanic and Atmospheric Administration (NOAA) (National Marine Fisheries Service [NMFS], 2014, 2018; Southall et al., 2019; NOAA, 2019). Updates to the recommended thresholds in October 2024 (NMFS, 2024) are also shown in Table 6-3, with slightly lower PTS and TTS thresholds for low-frequency (LF) cetaceans and higher thresholds for high-frequency (HF) and very-high-frequency (VHF) cetaceans. The adopted thresholds are based on best data

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

available and published in peer-reviewed literature and represent conservative internationally accepted and applied impact evaluation thresholds for continuous (non-impulsive sound sources). The maximum (R_{max}) horizontal distances (km) from vessels to modelled marine mammal thresholds is detailed in Table 6-4 (Koessler and McPherson, 2020).

Table 6-3: Thresholds for permanent and temporary threshold shift and behavioural response onset for low-frequency, high-frequency and very-high-frequency cetaceans for continuous noise

Hearing group and generalised hearing range	Southall et al. (2019), updates from NMFS (2024) are shown in parentheses		NOAA (2019)
	PTS onset thresholds: SEL_{24h} (dB re 1 µPa².s)	***TTS onset thresholds: SEL_{24h} (dB re 1 µPa².s)***	***Behavioural response (dB re 1 µPa)***
Low-frequency cetaceans	199 (197)	179 (177)	120
High-frequency cetaceans	198 (201)	178 (181)	120
Very-high-frequency cetaceans	173 (181)	153 (161)	120

Source: NMFS, 2014, 2018; Southall, 2019; NOAA, 2018.

Table 6-4: Maximum (R_{max}) horizontal distances (km) from vessels to modelled marine mammal thresholds* from Koessler and McPherson (2020)

Hearing Group	**Distance Rmax (km)**	
	Threshold for PTS, SEL24h (dB re 1 µPa2 s)	***Threshold for TTS, SEL24h (dB re 1 µPa2 s)***
Low-frequency cetaceans	0.03	0.79
High-frequency cetaceans	-	0.03
Very-high-frequency cetaceans	0.05	0.93

Note: Modelling based on Southall et al. (2019) PTS and TTS thresholds and frequency-weighting functions. Distances for HF and VHF cetaceans are therefore expected to be conservative compared to updated recommended thresholds in NMFS (2024), while those from LF cetaceans are expected to be very slight underestimates, though still considered appropriate for risk assessment purposes.

Project vessels will contribute noise into the marine environment; however, they will only use DP for short periods when undertaking actual geotechnical investigations. Project vessels transiting on main engines will produce lower levels of underwater noise that is below the injury threshold for sensitive marine fauna (e.g. cetaceans), thereby limiting the potential for any impacts.

It is not expected that individual LF and HF cetaceans passing through the Operational Areas during the activity would experience PTS or TTS, given individuals would need to remain in close proximity (<1 km) of the activity for a period of 24 hours Table 6-4. This is based on the swimming speed of pygmy blue whales during migration tracked in Thums et al. (2022a). The slowest individual of that study travelled at approximately 0.5 m/s or ~2 km/hour (Thums et al., 2022a). Similarly, it is considered highly unlikely that any VHF cetaceans would experience PTS or TTS.

There are no known critical habitats (i.e. feeding, breeding, calving or constricted migratory pathways) for EPBC listed cetaceans present within the Operational Areas. It is possible that the activity will overlap with the migration seasons for humpback and pygmy blue whales (the Operational Areas overlap the pygmy blue whale distribution zone). There is potential for these species to be exposed to underwater noise levels that may alter their behaviour when they are in the region during seasonal migrations. It is reasonable to expect that cetaceans may demonstrate avoidance or attraction behaviour to the noise generated by the vessels, however predicted noise levels are not considered to be ecologically significant at a population level.

Other cetacean species, including high frequency odontocetes, may also occur in the Operational Areas, although the lack of important habitats for these species suggests only low numbers are expected. Given the short duration of the survey activities and low level of behavioural response expected, impacts to individuals or populations are not expected.

Turtles

There is a paucity of data regarding responses of marine turtles to underwater noise. However, turtles have been shown to respond to low frequency sound, with indications that they have the highest hearing sensitivity in the frequency range 100 to 700 Hz (Bartol and Musick, 2003). Lenhardt (1994) observed marine turtles avoiding LF sound. Popper et al. (2014) assessed thresholds for marine turtles and found qualitative results that TTS was only moderate for near field exposure, and low for both intermediate and far field exposure. McCauley et al. (2000) noted that sea turtles exhibit increased swimming activity at 166 dB re 1 µPa. No numerical thresholds have been developed for impacts of continuous sources (e.g. vessel noise) on marine turtles. Updates to the recommended underwater noise effect criteria – temporary threshold shift (TTS) and auditory injury (AINJ) thresholds – for marine turtles were

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

published in April 2025 in Accomando et al. (2025)[26], and recently adopted in September by NMFS (2025)[27]. This update outlined lower AINJ and TTS weighted onset thresholds for marine turtles as shown in Table 6-5. Note that the behavioural effect threshold for marine turtles remains unchanged (Table 6-6). The contemporary thresholds listed in Table 6-5 are considered appropriate for the assessment of impacts from continuous acoustic discharges to marine turtles from the GPGT Survey Program. No numerical thresholds have been developed for behavioural impacts of continuous sources (e.g. vessel noise) on marine turtles. A Popper et al. (2014) review assessed thresholds for marine turtles and found qualitative results that the risk of behavioural disturbance was high for near field exposure, moderate for intermediate exposure and low for far field exposure.

Table 6-5: Thresholds for permanent threshold shift and temporary threshold shift and auditory injury threshold onset in marine turtles for continuous noise (dB re 1 µPa)

Receptor	Previous (Finneran et al., 2017)		Contemporary (Accomando et al., 2025)	
	TTS	AINJ (PTS[27])	TTS	AINJ (PTS[27])
Marine turtles	200	220	178	198

Table 6-6: Thresholds for behavioural response onset in marine turtles for continuous noise

Receptor	Masking	Behaviour
Marine turtles	(N) High (I) High (F) Moderate	(N) High (I) Moderate (F) Low

Note: The sound units provided in the table above include: relative risk (high, medium and low) is given for marine turtles at three distances from the source defined in relative terms as near (N – tens of metres), intermediate (I – hundreds of metres) and far (F – thousands of metres) (after Popper et al., 2014).

The Recovery Plan for Marine Turtles (Commonwealth of Australia, 2017) notes there is limited information available on the impact of noise on marine turtles and that the impact of noise on turtle stocks may vary depending on whether exposure is short (acute) or long-term (chronic). However, given the thresholds outlined in Table 6-5, it is reasonable to expect that marine turtles may demonstrate avoidance or attraction behaviour to the noise generated by the GPGT Survey Program.

Turtles may occur in the Operational Areas since the flatback turtle internesting buffer BIA and flatback turtle habitat critical buffer zone both overlap Operational Area A. Turtles may exhibit behavioural responses when exposed to underwater noise, such as diving. Such disturbances are expected to be localised (given the expected transmission loss described above) and, since the vessel will be continually moving, and activities of short duration. Given the distance of the Operational Areas to the nearest shoreline (and potential nesting beaches), impacts to nesting females are not expected. Disturbance to individual mating or internesting behaviours may occur, but given the temporary nature of the disturbance, is unlikely to affect individual breeding success or impact marine turtles at the population level.

Fish (including sharks and rays)

Fish perceive sound through the ears and the lateral line, which are sensitive to vibration. Some species of teleost or bony fish (e.g. herring) have a structure linking the gas-filled swim bladder and ear, and these species usually have increased hearing sensitivity. These species are considered to be more sensitive to anthropogenic underwater noise sources than species such as cod (*Gadus* sp.), which do not possess a structure linking the swim bladder and inner ear. Fish species that either do not have a swim bladder (e.g. elasmobranchs (sharks and rays) and scombrid fish (mackerel and tunas)) or have a much-reduced swim bladder (e.g. flat fish) tend to have a relatively low auditory sensitivity.

Considering these differences in fish physiology, Popper et al. (2014) developed sound exposure guidelines for fish; these are presented in Table 6-7 and are considered appropriate to assess continuous acoustic discharges to fish from the GPGT Survey Program.

[26] *The weighted non-impulsive thresholds by themselves only indicate the TTS/AINJ threshold at the most susceptible frequency.*

[27] *AINJ was previously referred to as PTS. The new terminology acknowledges that auditory injury may occur without PTS.*

Table 6-7: Impact thresholds to fish, sharks and rays for continuous noise

Receptor	Mortality and potential mortal injury	PTS	TTS	Masking	Behaviour
Fish: no swim bladder	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Moderate (I) Low (F) Low	(N) High (I) High (F) Moderate	(N) Moderate (I) Moderate (F) Low
Fish: swim bladder not involved in hearing	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Moderate (I) Low (F) Low	(N) High (I) High (F) Moderate	(N) Moderate (I) Moderate (F) Low
Fish: swim bladder involving hearing	(N) Low (I) Low (F) Low	170 dB rms SPL for 48-hours	158 dB rms SPL for 12-hours	(N) High (I) High (F) High	(N) High (I) Moderate (F) Low
Fish eggs and fish larvae	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low	(N) Moderate (I) Moderate (F) Low

Note: The sound units provided in the table above include relative risk (high, medium and low) is given for fish (all types) at three distances from the source defined in relative terms as near (N – tens of metres), intermediate (I – hundreds of metres) and far (F – thousands of metres) (after Popper et al., 2014).

Cartilaginous fish (such as sharks and rays) lack a swim bladder and are considered less sensitive to sound than bony fish. Given the thresholds outlined in Table 6-7, it is reasonable to expect that fish, sharks and rays may demonstrate avoidance or attraction behaviour to the noise generated by the GPGT Survey Program. The Operational Areas overlap the whale shark foraging BIA. The hearing capabilities of the whale shark have not been studied, but it has been suggested that they are likely to be most responsive to low frequency sounds (Myberg, 2001).

Potential impacts to fish (including whale sharks) are expected to be restricted to masking and behavioural disturbance. Fish may temporarily be displaced from the immediate vicinity of a noise source; however, they would be expected to behave normally once the noise emissions ceased.

It is expected that fish (including sharks and rays) may exhibit some behavioural responses to the noise generated by vessel activities of the GPGT Survey Program. However, the behavioural responses are expected to be restricted to the immediate area of vessel activities. No permanent changes in behaviour that could impact on long-term biological or ecological functioning of fish populations are expected.

Cumulative impacts

Potential impacts to individuals are confined to behavioural responses localised around the vessel. A larger number of vessels may increase the area in which elevated noise levels could lead to a behavioural response. However, given the minor behavioural responses expected and the localised area of potential impact around each vessel, the presence of multiple vessels in the Operational Areas does not increase the consequence rating of this impact.

ALARP statement: Based on the environmental risk assessment objectives and use of the relevant tools appropriate to the decision type (i.e. Decision Type A, Section 2.6.1). The potential impacts from acoustic emissions during geophysical and geotechnical survey activities is expected to be localised, temporary and minor. Efforts will be made to minimise unnecessary disturbance from acoustic emissions by undertaking the minimum required survey activities to achieve the program's objectives.

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that vessel noise disturbance will not result in a potential impact greater than localised impacts insignificant to marine fauna, with no lasting effect. Further opportunities to reduce the impacts have been investigated above. The potential impacts are considered broadly acceptable. Therefore, Woodside considers standard operations appropriate to manage the impacts of vessel noise emissions to a level that is broadly acceptable.

Description of source of impact

Geophysical survey activities

Geophysical sources are used for bathymetric mapping and shallow sub-bottom profiling, penetrating to depths of about 60 m below the seabed. The geophysical surveys will use a range of sources (Table 3-3).

Most commercial SBPs are small, low-powered, high-resolution and shallow-penetrating systems, producing electrical pulses across a range of frequencies (Salgado Kent et al., 2016; Jiménez-Arranz et al., 2017). The SBP instruments proposed for the survey produce pulses of sound between approximately 50 Hz and 30 kHz with source levels between approximately 192 and 220 dB re 1 µPa (SPL) at 1 m.

MBES and SSS are VHF and high-resolution systems, producing short micro-pulses of sound at frequencies in the tens or hundreds of kilohertz. The high-frequency pulses of sound produced by MBES are focused within multiple highly directional and narrow beams, which form a fan shape directed at the seabed (Salgado Kent et al., 2016; Jiménez-Arranz et al., 2017). SSS also produces sound in a focussed swath directed at the seabed. The pulses of sound produced by these instruments are of such high frequency that they rapidly attenuate outside of the beam (Zykov, 2013). Despite relatively high source levels, the high operating frequencies of most MBES and SSS places the dominant sound frequencies above the principal auditory range of most marine fauna species, although mid-frequency cetaceans that may occur in the GPGT Survey Program (e.g. dolphins) have the capability to hear some of the sound energy at the lower end of the operating frequency ranges (NMFS, 2018).

A USBL system may also be used during the survey for the purpose of accurate underwater positioning. USBL systems work by emitting short pulses of medium to high frequency sound (19 to 34 kHz) in short 'chirps'. Source levels are in the order of 184 to 202 dB re 1 µPa (SPL) at 1 m. The operating frequency range is above the auditory range of LF cetaceans (peak hearing at 0.2 to 19 kHz; NMFS, 2018), marine turtles and the majority of fish species (<1 kHz; Ladich, 2000; Popper et al. 2014). Similar to MBES and SSS, dolphins have the capability to hear the sound produced from USBL.

Geotechnical survey activities

The key sound sources during geotechnical surveys include the penetration tests and sampling boreholes undertaken at the seabed. Sound levels associated with standard penetration testing and small-core drilling have been measured in waters off WA (Erbe and McPherson, 2017). The broadband (20 Hz to 24 kHz) source levels for penetration testing were 151 to 160 dB re 1 uPa^{2}s sound exposure level (SEL) at 1 m (equivalent to approximately 160 to 170 dB re 1 µPa SPL at 1 m), with received levels reducing to approximately 141 to 146 dB re 1 µPa SPL within 20 m distance from the source (Erbe and McPherson, 2017). The broadband (30 Hz to 2 kHz) drilling source levels were 142 to 145 dB re 1 µPa SPL at 1 m (Erbe and McPherson, 2017). The reported levels are tens of decibels less than those

produced during production or construction operations and below levels commonly considered in marine noise regulations (Erbe and McPherson, 2017).

Underwater sound produced by the geophysical and geotechnical survey instruments has the potential to affect marine fauna that may pass within close proximity to survey operations. The potential effects to habitats and ecosystems (i.e. benthic invertebrate communities, planktonic communities, KEFs), as well as indirect effects to commercial fisheries associated with the potential disturbance to fishes is also considered.

Impact assessment

Environmental value(s) potentially impacted

Receptors

The Operational Areas are located in water depths of approximately 20 to 190 m (refer to Section 3.3). The fauna associated with this area will be predominantly pelagic species of fish, with migratory species such as cetaceans and marine turtles potentially occurring in the area seasonally (Section 4.6). Noise interference is a key threat to a number of migratory and threatened cetaceans and marine turtles identified as potentially occurring within the Operational Areas, including the pygmy blue whale. Relevant actions included in recovery plans for these species are outlined in Section 6.7.

The pygmy blue whale migration BIA does not overlap with the Operational Areas. Operational Area A is approximately 22 km away, but individual pygmy blue whales may occasionally transit the areas during April to July and October to January during their seasonal migrations. A humpback whale migration BIA is located about 6 km south-southeast of Operational Area A, migrating whales may be present between about May and November. Occasional individuals may transit through the area.

A flatback turtle internesting buffer BIA overlaps with Operational Area A at the Montebello Islands. Green, loggerhead and hawksbill turtle internesting buffer BIAs at Montebello Island are about 9 km, 20.5 km and 11 km south of Operational Area A respectively. Given the majority of the water depths are deep and distance from shore (there are two shoals in Operational Area A), the Operational Area does not represent suitable foraging or internesting habitat. Satellite tracking of flatback turtle nesting populations (Barrow Island and mainland sites) indicates this species travels to the east of Barrow Island between nesting events, within WA mainland coastal waters less than 70 m deep (Chevron Australia Pty Ltd, 2015).

A whale shark foraging BIA overlaps with the Operational Areas (with peak numbers expected March to July). A wedge-tailed shearwater breeding BIA overlaps with the Operational Areas and wedge-tailed shearwaters will be present between August and April. Due to the lack of roosting or nesting habitat for wedge-tailed shearwaters in proximity to the Operational Areas, only a low density is expected even during peak nesting periods.

While the Ancient Coastline KEF may be associated with outcroppings of hard substrate, there is no known evidence of significant reefs associated with such outcroppings has been found in the Operational Areas. However, there are some shoals present within Operational Area A where demersal fish are likely to be present.

Potential impact of noise

Geophysical and geotechnical survey techniques will generate impulsive sound sources.

Elevated underwater noise from impulsive sound sources have the potential to affect marine fauna, including cetaceans, marine turtles, fish, sharks and rays, in three main ways (Richardson et al., 1995; Simmonds et al., 2004):

- by causing direct physical effects on hearing or other organs. Hearing loss may be temporary (TTS; referred to as auditory fatigue), or permanent (PTS; injury)
- by masking or interfering with other biologically important sounds (including vocal communication, echolocation, signals and sounds produced by predators or prey)
- through disturbance leading to behavioural changes or displacement from important areas (e.g. BIAs). The occurrence and intensity of disturbance is highly variable and depends on a range of factors relating to the animal and situation.

Sound propagation

Increasing the distance from the noise source results in the level of noise reducing, due primarily to the spreading of the sound energy with distance. The way that the noise spreads (geometrical divergence) will depend upon several factors such as water column depth, pressure, temperature gradients, and salinity, as well as surface and bottom conditions.

Cetaceans

Species sensitivity and thresholds

Sound exposure thresholds and criteria for impulsive sound sources applicable to the types of cetaceans that may be present near the Operational Areas are summarised in Table 6-8. Thresholds for potential hearing impairment, in terms of PTS or TTS are presented as dual metric criteria, the peak pressure (PK) from a single impulse or the SEL accumulated from multiple impulses over a period of 24 hours (SEL_{24h}). The SEL_{24h} thresholds are frequency weighted according to the auditory weighting categories of different types of cetaceans, including LF cetaceans (large baleen whales such as humpback and pygmy blue whales) and HF cetaceans (sperm whale, all beaked whales and most

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

dolphins) (Southall, B.L et al., 2019)). The PK thresholds for a single impulse are not frequency weighted. Updates to recommended thresholds in October 2024 (NMFS, 2024) are included in Table 6-8, showing higher peak SPL thresholds for onset of PTS and TTS in LF cetaceans and higher SEL_{24h} thresholds for PTS and TTS onset in HF cetaceans.

A range of behavioural changes can occur in marine fauna in response to sound pressure levels. Onset of behavioural disturbance to cetaceans has been reported to occur in response to sound levels ranging from 120 to over 180 dB re 1 µPa SPL (Southall et al., 2007). This may include minor responses, such as a momentary pause in vocalisation or reorientation of an animal to the source of the sound, or stronger avoidance responses (Southall et al., 2007). The US NMFS proposes a threshold of 160 dB re 1 µPa SPL for a potentially significant behavioural response to impulsive sound sources (NMFS, 2014).

Thresholds for potential hearing impairment, in terms of PTS or TTS are presented as dual metric criteria, the PK from a single impulse or the SEL accumulated from multiple impulses over a period of 24 hours (SEL_{24h}). The SEL_{24h} thresholds are frequency weighted according to the auditory weighting categories of different types of cetaceans, including low frequency cetaceans (large baleen whales such as humpback and pygmy blue whales) and mid-frequency cetaceans (toothed whales and dolphins). The PK thresholds for a single impulse are not frequency weighted.

Table 6-8: Exposure thresholds for impulsive sounds applicable to cetaceans

Hearing group	NMFS (2014)	Southall et al., 2019; updates from NMFS, 2024 shown in parentheses			
	Behaviour	PTS onset thresholds (received level)		TTS onset thresholds (received level)	
	SPL (L_p; dB re 1 µPa)	Weighted SEL_{24h} ($L_{E,24h}$; dB re 1 µPa^2·s)	PK (L_{pk}; dB re 1 µPa)	Weighted SEL_{24h} ($L_{E,24h}$; dB re 1 µPa^2·s)	PK (L_{pk}; dB re 1 µPa)
Low-frequency cetaceans	160	183	219 (222)	168	213 (216)
High-frequency cetaceans		185 (193)	230	170 (178)	224

Impact assessment

Acoustic modelling of sub-bottom profilers by Zykov (2013), MacGillivray et al. (2013) and McPherson and Wood (2017), indicates limited horizontal sound propagation outside of the main directional beams of sound. The modelling studies also indicate that PK and SEL_{24h} thresholds for PTS are not exceeded. The potential for TTS resulting from single pulse PK pressure exposure is not predicted to occur, while the potential for TTS resulting from SEL_{24h} exposures is limited to a few metres from the moving sound source (Zykov, 2013; McPherson and Wood, 2017), which is not expected for mobile marine fauna as they are likely to move out of the area relatively quickly. Exceedance of the 160 dB re 1 µPa SPL behavioural response threshold is limited to within a few tens of metres in most instances, or up to a maximum of 150 m depending upon which instrument is used, water depth and the seabed sediment characteristics (Zykov, 2013; McPherson and Wood, 2017).

The VHF micro-pulses of sound produced by the MBES and SSS also rapidly attenuate outside of the beam (MacGillivray et al., 2013; Zykov, 2013). The high operating frequencies of these instruments also places the majority of sound frequencies above the auditory range of most marine fauna species. Dolphins and other mid-frequency cetaceans, which have peak hearing sensitivity up to 110 kHz, with potential for some limited hearing ability up to approximately 160 kHz (NMFS 2018), may be able to detect a small amount of the sound energy from some MBES and SSS instruments in the lower operating frequency ranges (MacGillivray et al., 2013; Zykov, 2013). The propagation of the high frequency sound from MBES and SSS with similar source frequency characteristics as those proposed for the GPGT Survey Program has been undertaken by Zykov (2013) and MacGillivray et al. (2013). The modelling results indicate that the sound emissions outside of the main beams are below the threshold levels for potential injury, PTS or TTS. Sound levels that may result in behavioural effects are likely limited to within tens of metres, but potentially up to a few hundreds of metres from the sound source for mid-frequency cetaceans (Zykov, 2013; MacGillivray et al., 2013).

USBL positioning equipment also produces high frequency sound, which may only be audible to dolphins and other mid-frequency cetaceans. The USBL has lower source levels than the other instruments proposed for the geophysical survey and is not expected to result in any injury or hearing impairment. Some localised behavioural effects may occur in close proximity to the USBL, but the extent of any effect is expected to be smaller than that of other survey instruments and there is not expected to be any lasting behavioural effects.

Sound emitted from the geotechnical activities at the seabed (penetration tests and sampling boreholes) may be at levels that result in very localised behavioural effects to animals that happen to be exposed within less than 10 m, but

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

such effects will be temporary and the sound levels are well below those that may result in any injury or hearing impairment (Erbe and McPherson, 2017).

Based on the above assessment, the geophysical and geotechnical survey activities are expected to result in behavioural effects to cetaceans most likely within tens of metres, possibly up to hundreds of metres from the survey activities. Such localised effects and potential deviations are not expected to be significant given the transient nature of cetaceans or in the context of long-distance migrations undertaken by pygmy blue whales or other migratory species that might be present. It is highly unlikely that TTS effects will occur as individual animals are unlikely to remain within range of the survey activities (i.e. within a few hundred metres of the passing geophysical survey vessel) for durations long enough for the relevant sound exposure threshold to be exceeded.

Marine turtles

Species sensitivity and thresholds

Sound exposure thresholds and criteria for impulsive sound applicable to marine turtles are summarised in Table 6-9.

McCauley et al. (2000) observed the behavioural response of caged green and loggerhead turtles to an approaching seismic airgun. For received levels above 166 dB re 1 µPa SPL, the turtles increased their swimming activity and above 175 dB re 1 µPa they began to behave erratically, which was interpreted as an agitated state. The 166 dB re 1 µPa SPL has been used as the threshold level for a behavioural disturbance response by the US NMFS (NSF, 2011) and is applied to this impact assessment. Finneran et al. (2017) presented thresholds for turtle PTS and TTS, considering both PK and frequency-weighted SEL, which have been applied in this study.

Table 6-9: Exposure thresholds for impulsive sounds applicable to marine turtles

160	204	232	189	226	184	230	169	224

Impact assessment

Sound levels that are likely to be produced by various different SBP instruments are predicted to fall below the 166 dB re 1 µPa SPL threshold within a few metres or tens of metres (Zykov, 2013; McPherson and Wood, 2017). The sea turtle audiogram suggests its hearing sensitivity is a narrower band within the broader low frequency range (Accomando et al., 2024). As such, when considering contemporary sea turtle PTS and TTS thresholds, results of distances at which LF cetacean PTS and TTS thresholds may be exceeded have be used in this impact assessment as a conservative proxy to assess the potential spatial extent of possible impacts to sea turtles For low frequency cetaceans, modelling studies indicate that PK and SEL_{24h} thresholds for PTS are not exceeded. Further, the potential for TTS resulting from single pulse PK pressure exposure was not predicted to occur. Potential for TTS resulting from SEL_{24h} exposure was limited to a few meters from the moving source (Zykov, 2013; McPherson and Wood, 2017). As with cetaceans, this is not expected to be credible given the movement behaviour of marine fauna in the open ocean environment and the expectation that they are likely to move out of the area relatively quickly.

The HF sounds produced by the MBES, SSS and USBL are expected to be above the auditory range of marine turtles and so behavioural impacts are not expected to occur.

As with cetaceans, the sound produced during geotechnical activities may only result in very localised behavioural effects to animals that happen to be exposed within less than 10 m, but such effects are anticipated to be temporary, and the sound levels are well below those that may result in any injury or hearing impairment.

Operational Area A overlaps the internesting buffer BIA of flatback turtles and flatback turtle habitat critical buffer zone nesting at the Montebello Islands (with peak nesting between December and January). However, recent studies have demonstrated the Operational Area does not represent suitable habitat for flatback turtles during the internesting period (Whittock et al., 2014) and turtles are not expected to be present in significant numbers. The localised and short-term behavioural disturbances that may result from the geophysical survey will not have a discernible impact on internesting behaviours or result in the displacement of individual animals (potentially exposed within tens of metres of

[29] *AINJ was previously referred to as PTS.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

the passing geophysical survey vessel for a brief period). As a result, and given the temporary nature of the survey activities, no population level impacts are expected.

Short-nosed sea snake

Impacts of acoustic signals on sea snakes have not been researched in great depth. Guinea and Whiting (2005) reported that very few short-nosed sea snakes moved as far as 50 m from the reef flat and are therefore unlikely to be encountered in high numbers in the Operational Areas given its proximity to suitable reef habitat.

Fishes and elasmobranchs

Species sensitivity and thresholds

Fishes are primarily sensitive to the particle motion component of sound at close range to a sound source, while the presence of the swim bladder results in a varying degree of sensitivity of some fishes to sound pressure (Popper and Hawkins, 2018; Popper et al., 2019). Consequently, fishes are broadly categorised into three groups with respect to their hearing capabilities that are relevant to the types of fishes and sharks that may be present in the Operational Areas (Popper et al., 2014):

- Fishes with no swim bladder or other gas chamber (e.g. sharks, mackerels) – Sensitive only to particle motion, not sound pressure changes.
- Fishes with swim bladders, but without a direct connection between the swim bladder and the inner ear (e.g. demersal snappers and emperors) – Hearing primarily involves particle motion with some limited ability to indirectly detect changes in sound pressure.
- Fishes with a swim bladder or other gas volume connected directly to the inner ear (e.g. herrings, sardines, pilchards, shads) – These fishes are able to detect both sound pressure as well as particle motion, and are susceptible to barotrauma.

Sound exposure thresholds and criteria applicable to the types of fishes and sharks that are likely to occur in the Operational Areas are summarised in Table 6-10.

Popper et al. (2014) propose a relative risk criteria (high, moderate, low) for behavioural effects to fishes at three distance categories, near (N) (tens of metres from the source), intermediate (I) (hundreds of metres from the source), and far (F) (kilometres from the source). It is important to note however, that the criteria are based on studies into the effects of exploration seismic surveys and are therefore highly conservative for the low energy geophysical instruments proposed for this activity.

Table 6-10: Sound exposure thresholds and criteria for impulsive sounds applicable to fishes

Type of animal	Mortality and potential mortal injury	Impairment			Behaviour
		Recoverable injury	TTS	Masking	
Fish: No swim bladder (particle motion detection)	>219 dB SEL_{24h} or >213 dB PK	>216 dB SEL_{24h} or >213 dB PK	>>186 dB SEL_{24h}	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low
Fish: Swim bladder not involved in hearing (particle motion detection)	210 dB SEL_{24h} or >207 dB PK	203 dB SEL_{24h} or >207 dB PK	>>186 dB SEL_{24h}	(N) Low (I) Low (F) Low	(N) High (I) Moderate (F) Low
Fish: Swim bladder involved in hearing (primarily pressure detection)	207 dB SEL_{24h} or >207 dB PK	203 dB SEL_{24h} or >207 dB PK	186 dB SEL_{24h}	(N) Low (I) Low (F) Moderate	(N) High (I) High (F) Moderate

Impact assessment

The potential for injury or TTS effects to fish resulting from single impulse PK or accumulated exposures to SBP, MBES and SSS sound is limited to within 1–2 m beneath or to the side of the sound source (Zykov, 2013; McPherson and Wood, 2017). Single impulse exposures at this range are highly unlikely to occur as are accumulated exposures over several hours at this range.

The impacts to fishes are, therefore, likely to be limited to localised and temporary behavioural changes. The criteria suggested by Popper et al. (2014) in Table 6-10 are based on exploration seismic surveys and are therefore highly conservative for the low energy geophysical instruments proposed for this activity. Therefore, the potential behavioural effects to the demersal and pelagic fish species in the Operational Areas (which are primarily sensitive to close-range particle motion changes rather than sound pressure) are likely to be limited to within tens of metres of the various geophysical and geotechnical sound sources proposed for this activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impacts to protected species of sharks and rays, such as whale sharks, are not expected given that sharks do not possess swim bladders and are not sensitive to sound pressure. The Operational Areas overlap with the BIA for foraging whale sharks; however, the potential for behavioural effects within just tens of metres of the geophysical survey instruments indicates behavioural effects will not be significant and whale sharks will be able to continue to utilise the wider area for foraging.

Potential impacts to ecosystems/habitats

Modelling of sound levels beneath SBP, MBES and SSS instruments (Zykov, 2013; McPherson and Wood, 2017) indicates there would be no impact to benthic invertebrates. Therefore, benthic habitats and communities, including those within the Ancient Coastline at the 125 m depth contour KEF, will not be affected by sound produced by the geophysical or geotechnical survey activities.

Impacts to plankton will be limited to within just metres (McPherson and Wood, 2017), which is negligible in the context of naturally variability.

Therefore, impacts to marine habitats, primary and secondary production (plankton) and ecosystems are not expected.

Cumulative underwater sound impacts

Given the very localised extent of potential effects from the geophysical and geotechnical survey techniques described above, there is limited potential for the GPGT Survey Program to contribute to cumulative sound impacts within the areas accessed by fisheries in the region.

The potential for cumulative impacts to arise from other concurrent activities is also considered. As described in Section 3, existing subsea infrastructure associated is located within the Operational Areas. However, production noise produced by this infrastructure will be relatively low and no significant cumulative impacts are expected. Vessel noise associated with these activities may result in some localised behavioural effects in addition to those that result from the geophysical and geotechnical activities, but the cumulative effects will be limited.

Overall, cumulative impacts associated with sound emitted during the GPGT Survey Program are likely to be temporary and are expected to have no lasting effect.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[30]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
No additional controls were identified.				
Good practice				
Implement a shut-down zone around SBP for: • cetaceans (low and mid frequency) • marine turtles • whale sharks.	F: Yes. However, as equipment is underwater, effective implementation of zones is challenging from topside observation. CS: Moderate, requires use of a dedicated suitably trained crew member to undertake marine fauna observations.	Limited. For cetaceans and turtles, is not considered credible that relevant thresholds for PTS are exceeded from the proposed SBP sources. Whale sharks would need to be less than 1 m from the source which is not credible. Further, species that can be detected reliably enough to implement a shutdown are expected to self-mitigate against TTS through avoidance of the vessel keeping them outside the range of the acoustic source where TTS could occur.	Disproportionate. Limited environmental benefit and additional costs.	No

at a constant speed of less than 6 knots. • Project vessels will not travel greater than 8 knots within 250 m of a whale shark and not allow the vessel to approach closer than 30 m of a whale shark.				
Have trained marine crew or MFO onboard the survey vessel to observe for marine fauna.	F: Yes. CS: Costs associated with implementation are limited to time associated with training marine crew, as observations would be made as part of general watch.	Trained marine crew are to conduct prestart observations when deploying equipment to provide the opportunity to modify the GPGT Survey Program if marine fauna are observed.	Limited benefit given the lack of sensitive habitats overlapping the operational area and the short duration of the GPGT Survey Program. Cost associated with training specialist staff would outweigh potential benefit.	No
Conduct prestart visual observations for whales prior to start-up of noise emitting survey equipment.	F: Yes. CS: Minimal. Bridge crews already maintain a constant watch during operations.	Reduces the likelihood of individuals of pygmy blue whales being within proximity of the acoustic source where behavioural impact could occur. This control is intended to minimise the impact of noise emitting survey equipment to protected pygmy blue whales. A precautionary approach has been taken and the control has been applied to whales more broadly.	Benefits outweigh cost/sacrifice. Given the conservation status of pygmy blue whales, and to conduct the activity in a way that is not inconsistent with the Blue Whale Conservation Management Plan, conducting prestart visual observations prior to the start-up of noise emitting survey equipment is considered a proportionate measure.	Yes C 4.1
Conduct prestart visual observations for whale sharks and turtles prior to start-up of noise emitting survey equipment.	F: Yes. CS: Minimal. Bridge crews already maintain a constant watch during operations.	Reduces the likelihood of individuals of turtles and/or whale sharks being within proximity of the acoustic source where behavioural impact could occur.	Disproportionate as the implementation of C 3.1 will limit vessels from approaching whale sharks and turtles within distances (50 m and 30 m respectively) and thereby already reducing the likelihood of individuals of whale sharks and turtles	No See C 3.1

ALARP statement: On the basis of the environmental risk assessment outcomes and use of the relevant tools appropriate to the decision type (i.e. Decision Type A, Section, 2.5.1.1.1), Woodside considers the adopted controls appropriate to manage the impacts of routine noise emission from survey equipment. As no reasonable additional/alternative controls were identified that would further reduce the impacts without grossly disproportionate sacrifice, the impacts and risks are considered ALARP.				

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that, given the adopted controls, noise emissions from geophysical and geotechnical surveys represent a minor and temporary disruption to a small portion of the population of protected species. Further opportunities to reduce the impacts have been investigated above. The adopted controls are considered good survey practice/industry best practice. The potential impacts are considered broadly acceptable if the adopted controls are implemented. Therefore, Woodside considers the adopted controls appropriate to manage the impacts of noise emissions from geophysical and geotechnical survey activities to a level that is broadly acceptable. On the basis of the environmental risk assessment outcomes and use of the relevant tools appropriate to the decision type, Woodside considers the adopted controls appropriate to manage the impacts and risks of routine noise emission from survey equipment. As no reasonable additional/alternative controls were identified that would further reduce the impacts and risks without grossly disproportionate sacrifice, the impacts and risks are considered ALARP.

External light emissions onboard project vessels					X		A	F	-	-	PJ	Broadly Acceptable	EPO 5

Description of source of impact

Vessel operations

Routine light emissions include light sources that alter the ambient light conditions in an environment at night. The project vessels will routinely use external lighting to facilitate navigation and conduct safe operations at night throughout the GPGT Survey Program. This lighting typically consists of bright white (i.e. metal halide, halogen, fluorescent) lights and is not dissimilar to lighting used for other offshore activities, including fishing and shipping.

Lighting levels will be determined primarily by operational safety and navigational requirements under relevant legislation, specifically the Navigation Act. Project vessels will be lit to maintain operational safety on a 24-hour basis. External light emissions from the vessels are typically managed to a level that maintains good night vision for crew members. Lighting on the vessels is used to allow safe operations during night hours, and to communicate the vessel's presence and activities to other marine users (i.e. navigation lights). Lighting is required to safely operate the vessels and cannot reasonably be eliminated.

The activity is expected to take up to 40 days for the geophysical activity and 40 days for the geotechnical activity. The activity may be undertaken as a single campaign, or split over a number of campaigns. Operations will take place 24 hours, seven days a week. Due to the transient nature of the survey activity, the source location of the light emissions will vary across the Operational Areas throughout the activity.

Lighting from project vessels may appear as a direct light source from an unshielded lamp with direct line of sight to the observer or through sky glow. Direct lighting falling upon a surface is referred to as light spill. Sky glow is the diffuse glow caused by light that is screened from view, but through reflection and refraction creates a glow in the atmosphere. The distance at which direct light and sky glow may be visible from the source depends on the characteristics of the vessel (namely height above sea level) and environmental conditions (e.g. cloud cover). The external lighting, which is located over the entire vessel, is not expected to be more than 20 m above sea level. The distance to the horizon at which components of the vessel will be directly visible can be estimated using the formula of:

$$horizon\ distance = 3.57 \times \sqrt{height}$$

where 'horizon distance' is the distance to the horizon at sea level in kilometres and 'height' is the height above sea level of the light source in metres. Using this formula, the approximate distances at which vessel lighting will be visible at sea level is about 16 km from the vessel, based on the typical survey vessels that are proposed to be used for the GPGT Survey Program.

While the line of sight may extend to this 16 km distance from the source (vessel), the light density (measured in Lux – which represents the intensity of light that arrives at or leaves a surface, as perceived by the human eye) rapidly decreases as distance increases from the source of the light. Monitoring undertaken as a part of Woodside's 2014 study indicated light density (from navigational lighting) attenuated to below 1.00 Lux and 0.03 Lux at distances of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

300 m and 1.4 km, respectively, from the source (a MODU). Light densities of 1.00 Lux and 0.03 Lux are comparable to natural light densities experienced during deep twilight and during a quarter moon. Navigational lighting levels from project vessels is expected to be appreciably lower than lighting on a MODU, hence light emissions from the project vessels are expected to be below 1.00 Lux within 300 m from the source.

Impact assessment

Environmental value(s) potentially impacted

Receptors that have important habitat within a 20 km buffer of the Operational Areas were considered for the impact assessment, based on recommendations of the National Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds. The 20 km threshold provides a precautionary limit based on observed effects of sky glow on marine turtle hatchlings, demonstrated to occur at 15 to 18 km, and fledgling seabirds grounded in response to artificial light 15 km away (Commonwealth of Australia, 2020). Within the 20 km buffer of each Operational Area, no additional species were identified that are potentially affected by light (dugongs, grey nurse sharks, Australian snubfin dolphin and leaf-scaled seasnake were the only ones identified as occurring within the 20 km buffer).

Light emissions have the potential to disrupt ecological processes that rely on natural light for visual cues. Light emissions can affect fauna in two main ways:

- Behaviour: many organisms are adapted to natural levels of lighting and the natural changes associated with the day and night cycle as well as the phase of the moon. Artificial lighting has the potential to create a constant level of light at night that can override these natural levels and cycles.
- Orientation: species such as marine turtles and birds may also use lighting from natural sources to orient themselves in a certain direction at night. In instances where an artificial light source is brighter than a natural source, the artificial light may override natural cues, leading to disorientation.

There is no known critical habitat within the Operational Areas for EPBC listed species, nor do the Operational Areas overlap habitat critical for the survival of the species of marine turtles, although there is overlap with several BIAs (Section 4.6):

- flatback turtle internesting buffer
- wedge-tailed shearwater breeding
- whale shark foraging
- dugong nursing.

The fauna within the Operational Areas are predominantly pelagic fish and zooplankton, with a low abundance of transient species such as migratory seabirds, marine turtles, whale sharks and whales transiting through the area. Cetaceans, fish (including whales sharks) and planktonic organisms are not expected to be impacted by above-surface light emissions.

Given the low abundance of fauna expected to occur within the Operational Areas, impacts from light emissions are considered to be highly unlikely.

The light buffer of 20 km around Operational Area A also overlaps the hawksbill turtle and green turtle internesting buffer BIAs and internesting habitat critical to the survival of marine turtle species, and the 20 km buffer around Operational Area C overlaps the flatback turtle internesting buffer.

However, as outlined below, internesting adult female turtles are not impacted by artificial light emissions, and it is more relevant to consider separation distances between light sources and nesting habitat critical for turtles (i.e. the nesting locations as identified in Table 6 of the Recovery Plan for Marine Turtles in Australia 2017–2027) (Commonwealth of Australia, 2017a). At the closest point the Petroleum Activities Area is located approximately 34 km away from the nearest turtle nesting locations at the Montebello Islands.

Migratory birds

Artificial lighting can attract and disorient seabird species resulting in species behavioural changes (e.g. circling light sources or disrupted foraging), injury or mortality near the light source as a result of collision (Longcore and Rich, 2004; Gaston et al., 2014). The Operational Areas may be occasionally visited by migratory and oceanic birds, but do not contain any emergent land that could be used as roosting or nesting habitat and contains no known critical habitats for any species. The BIA, for wedge-tailed shearwater breeding and foraging overlaps the Operational Areas with the breeding period occurring, at the Montebello Islands, from August to April (Section 4.6.5).

The most vulnerable life stages for seabirds and migratory shorebirds are nesting adults or fledglings. Nesting or fledgling seabirds and migratory shorebirds are vulnerable to artificial lighting within 20 km of the nesting location (Commonwealth of Australia, 2020). For shearwater species, fledglings are predominantly impacted by onshore lighting sources, which can override sea finding cues and attract fledglings further inland, preventing them from reaching the sea (Mitkus et al., 2018; Telfer et al., 1987). The Operational Areas overlap a foraging and breeding BIA for the wedge-tailed shearwater, and is approximately 36 km from the Montebello Islands, which are an important breeding site for this species.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Adult shearwaters are vulnerable to artificial lighting during the breeding cycle, when returning to and leaving the nesting colony to maintain nesting sites or forage. Foraging adult wedge-tailed shearwaters may be attracted to sources of light emissions to feed on fish drawn to the light, or may be attracted to vessel light during periods of low visibility (Catry et al., 2009; Whittow, 2020); however, the species feeds primarily during the day. Artificial light can also impact behaviour and adult nest attendance, or confuse shearwater species, resulting in injury or mortality as a result of birds colliding with structures (Cianchetti-Benedetti et al., 2018; Rodriguez et al., 2017).

Behavioural disturbance to birds is expected to be localised to within the vicinity of the vessels within the Operational Areas. The light source from the vessels within the Operational Areas will be temporary and only when operations are occurring. Interactions with seabirds are therefore expected to be unlikely and any impacts are predicted to be at an individual and not a population level. Therefore, any temporary behavioural disturbance of birds will be localised around the light sources and not result in a substantial adverse effect on a population of species or its lifecycle.

Given the nearest emergent land (Montebello Islands) is ~36 km north of Operational Area A and outside of the light impact buffer (20 km), impacts to adult nesting or fledgling seabirds and migratory shorebirds are not expected. Artificial light from the GPGT Survey Program is not predicted to disrupt critical breeding behaviours within important nesting habitat or displace seabirds from nesting habitat.

Migratory shorebirds may be present in or fly through the region between July and December, and again between March and April as they complete migrations between Australia and offshore locations (Commonwealth of Australia, 2015c). The risk associated with collision from seabirds and shorebirds attracted to the light is considered to be low, based on the intermittent and localised nature of the activities in the Operational Areas, as well as the distance offshore. Impacts are expected to be limited to temporary behavioural disturbance to isolated individuals that is not expected to disrupt important migration patterns of migratory seabirds.

Based on the detailed evaluation, the magnitude of impacts to birds from light emissions during activities associated with the Petroleum Activities Program is expected to have no lasting effect.

Marine turtles – hatchlings

Turtle hatchlings emerge from the nest and orient towards the sea. After entering the water, hatchlings use a combination of cues (wave direction and currents) to orient and travel into offshore waters. Impacts to the sea-finding behaviour of hatchlings are more common for light sources behind a beach, as lighting offshore will orient emerging hatchlings towards the sea. Artificial light at close distances can also impact hatchling dispersal once they are in the water. Light spill may ‘entrap’ hatchling swimming behaviour, reducing the success of their seaward dispersion and potentially increasing their exposure to predators via silhouetting (Salmon et al., 1992).

As described above, the nearest turtle nesting locations to the Operational Areas are on Montebello Island (~36 km) and the risk of significant numbers of dispersing hatchlings becoming attracted to direct light or sky glow from project vessels is not considered credible. This is supported by the findings of a desktop lighting impact assessment for the Scarborough Project, conducted by Pendoley Environmental (2020). At a range of ~34 km, the density of dispersing hatchlings is expected to be low and very few individuals will be at risk of attraction. For any isolated individuals potentially attracted to light spill from project vessels, following sunrise, any effect of these light sources on hatchlings will be eliminated, allowing dispersal behaviour to resume.

Any impacts to hatchling turtles from artificial light will be limited to possible short-term behavioural impacts to isolated individual hatchlings offshore, with no lasting effect to the species.

Marine turtles – adults

Although individuals undertaking behaviours such as internesting, migration, mating (adults) or foraging (adults and pelagic juveniles) may occur within Operational Areas, marine turtles do not use light cues to guide these behaviours. Furthermore, there is no evidence, published or anecdotal, to suggest that internesting, mating, foraging or migrating turtles are impacted by light from offshore vessels. As such, light emissions from the project vessels are unlikely to result in displacement of, or behavioural changes to individuals in these life stages (Pendoley Environmental, 2020).

Artificial lighting may affect where nesting adult turtles emerge onto the beach, the success of nest construction, whether nesting is abandoned, and the seaward return of adults (Salmon et al., 1995a, 1995b; Salmon and Witherington, 1995). Such lighting is typically from residential and industrial development at the coastline, rather than offshore from nesting beaches. As described above, the beaches on Montebello Island (~36 km from the Operational Area) are the nearest known turtle nesting locations, meaning direct light from the project vessels will not be visible to nesting adult turtles. Furthermore, nesting females are not considered highly vulnerable to disorientation due to artificial light (Pendoley Environmental, 2020) and it is highly unlikely that the Petroleum Activities Program could cause disruption to sea-finding behaviour post nesting, particularly as the light source is located directly offshore in the same direction that females would be heading in anyway during normal sea-finding behaviour. As such, vessel light sources will not discourage females from nesting, or affect nest site selection, and therefore will not displace females from nesting habitat.

Although the Flatback turtle internesting buffer BIA and flatback turtle habitat critical zone overlap with Operational Area A, these areas are not known to provide foraging habitat for turtles and therefore there is a low potential for internesting turtles to be present within the Operational Areas. Although individual turtles migrating, mating or foraging may occur within or adjacent to the Operational Area, marine turtles do not use light cues to guide these behaviours.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As such, light emissions from the project vessels are unlikely to result in more than localised behavioural disturbance to isolated transient individuals, with no lasting effect to the species.

Fish

Lighting from the presence of a vessel may result in the localised aggregation of fish below the vessel. These aggregations of fish are considered localised and temporary and any long-term changes to fish species, including whale sharks, composition of abundance is considered highly unlikely. Similarly, any localised impacts to marine fish are not expected to impact on any commercial fishers in the area.

Cumulative impacts

No significant cumulative impacts over the life of the GPGT Survey Program or in relation to other operations and activities in the region (e.g. GWA, North Rankin Complex) are expected.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[31]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Legislation, codes and standards				
No additional controls were identified.				
Good practice				
Lighting will be limited to the minimum required for navigational and safety requirements, with the exception of emergency events.	F: Yes. Lighting is typically appropriate for navigation and safety. CS: Minor.	Given the potential impacts to turtles during this activity is insignificant, implementation of this control would not result in a reduction in consequence.	While the control does not result in significant reduction of impacts, it is good practice and not at significant cost.	Yes C 5.1
Implement a Seabird Management Plan (Section 7.4) that includes: • standardisation and maintenance of record keeping and reporting of seabird interactions • procedures on seabird intervention, care and management • regulatory reporting requirements for seabirds (unintentional death of or injury to seabirds that constitute MNES) • a scalable adaptive management process should negative light	F: Yes. The management plan is an internal Woodside process developed to manage the impacts of artificial light emissions. CS: Minimal cost/sacrifice.	Implementing a Seabird Management Plan will enable standardised data collection to better understand seabird interactions with project vessels, provide guidance on seabird management to enable the best outcomes for grounded birds and facilitate escalation and adoption of management actions within 24 hours, preferably before next nightfall, should triggers be met.	While the control does not result in significant reduction of impacts, it is good practice and not at significant cost.	Yes C 5.2

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[31]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
impacts to nocturnal seabirds be detected.				
Professional judgement – eliminate				
Substitute external lighting with 'turtle-friendly' light sources (reduced emissions in turtle visible spectrum).	F: Yes. Replacement of external lighting with turtle-friendly lighting is technically feasible, although is not considered to be practicable. CS: Significant cost sacrifice. The retrofitting of all external lighting on the vessels would result in considerable cost and time expenditure. Considerable logistical effort to source sufficient inventory of the range of light types onboard the vessel.	Given the potential impacts to turtles during this activity are insignificant, implementing this control would not reduce the consequence.	Grossly disproportionate. Implementing the control requires considerable cost sacrifice for minimal environmental benefit. The cost/sacrifice outweighs the benefit gained.	No
Use of curfews to manage light emissions at night.	F: Yes. Variation of GPGT Survey Program timing to manage light emissions at night is technically feasible, although it is not considered to be practicable. CS: Significant cost sacrifice. The use of curfews to limit light emissions at night would substantially limit operations to only daylight hours. Additionally, the project vessels are required to use a baseline level of lighting for navigational safety, meaning the use of curfews to limit project operations to daylight hours would not eliminate light emissions at night. The use of curfews would effectively double the duration of the campaign, resulting in increased environmental impacts and risks and a significant increase in cost.	Given the potential impacts to turtle and seabird species during this activity are insignificant, implementing this control would not reduce the consequence.	Grossly disproportionate. Implementing the control requires considerable cost sacrifice for minimal environmental benefit with respect to light emissions and increased environmental impacts in other aspects. The cost/sacrifice outweighs the benefit gained.	No

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[31]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Vary the timing of the GPGT Survey Program to avoid shearwater breeding season (August to April).	F: Yes. Variation of the GPGT Survey Program timing to avoid shearwater fledgling season periods is technically feasible, although it is not considered practicable. The Operational Areas overlap with the shearwater BIA and may be occasionally visited by migratory and oceanic birds. However, the Operational Areas do not contain any emergent land that could be used as roosting or nesting habitat and contains no known critical habitats for any species, meaning the risk of potential impacts to seabirds is low. CS: Significant cost and schedule impacts due to delays in securing vessels for specific timeframes, particularly because this would limit operations to a 3-month window.	Given the impacts to seabirds during this activity are insignificant, implementing this control would not reduce the consequence.	Grossly disproportionate. Implementing the control requires considerable cost sacrifice for minimal environmental benefit. The cost/sacrifice outweighs the benefit gained.	No
Vary the timing of the GPGT Survey Program to avoid peak turtle internesting periods (December to January).	F: Yes. Variation of the GPGT Survey Program timing to avoid turtle internesting periods is technically feasible, although it is not considered practicable. Operational Area A overlaps with the flatback turtle internesting buffer BIA in an area not known to provide foraging habitat. Given the low potential for internesting turtles to be present with the Operational Areas, the risk of potential impacts from vessel light emissions on adult turtles is considered to be low.	Given the impacts to turtles during this activity are insignificant, implementing this control would not reduce the consequence.	Grossly disproportionate. Implementing the control requires considerable cost sacrifice for minimal environmental benefit. The cost/sacrifice outweighs the benefit gained.	No

ALARP statement:				
On the basis of the environmental impact assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating ALARP (Section 2.6.1), Woodside considers the adopted controls appropriate to manage potential impacts from routine light emissions from the project vessels. The potential impacts to marine fauna, such as turtles, fish or seabirds, from light emissions from the project vessels is expected to be restricted to localised attraction (if any), and are considered to be localised, temporary and minor. As no reasonably practicable additional/alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts/risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement:
The impact assessment has determined that, given the adopted controls, routine light emissions from the project vessels may result in a negligible impact that is unlikely to result in a potential impact greater than localised behavioural disturbance to fauna within the Operational Areas, with no lasting effect. Further opportunities to reduce the impacts have been investigated above. The potential impacts are consistent with industry best practice and are considered broadly acceptable in their current state.
On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating acceptability (Section 2.6.2), Woodside considers impacts to be managed to a level that is broadly acceptable.

6.5.6 Routine atmospheric and greenhouse gas emissions from fuel use

Context		
Project vessels – Section 3.6	Physical Environment – Section 4.4	Consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Routine atmospheric emissions from fuel use Emissions generated from internal combustion engines on project vessels and machinery			X				A	F	-	-	LCS GP PJ	Broadly Acceptable	EPO 6

Description of source of impact

Atmospheric emissions assessed in this EP have been classified into two categories:

- Atmospheric pollutants (non-greenhouse gas emissions) are gases and particulates from an activity, or piece of machinery, which have a recognised adverse effect on human health and/or flora and fauna. The main emissions responsible for these effects include carbon monoxide, nitrogen oxides, sulphur dioxide, particulate matter less than 10 microns, non-methane volatile organic compounds (VOCs), and benzene, toluene, ethylbenzene and xylenes, which are specific VOCs of interest.
- GHG emissions are those gasses within the atmosphere that absorb long-wave radiation, and thus trap heat reflected from the Earth's surface. The main gases responsible for this effect include carbon dioxide, methane and nitrous oxide. Other greenhouse gases include perfluorocarbons, hydrofluorocarbons and sulphur hexafluoride.

Atmospheric emissions will be generated by the project vessels from internal combustion engines (including all equipment and generators) during the GPGT Survey Program.

Atmospheric emissions generated during these operations will include sulphur oxides, nitrogen oxides, particulates and VOCs. Sulphur oxides and particulate matter emissions are heavily influenced by the fuel used and its relative sulphur content, marine gas oil usually having a lower sulphite content than marine diesel oil or heavy fuel oil.

There is the potential for use of a drillship during the activity (for geotechnical drilling) and a smaller geophysical survey vessel. The assumption is that the vessels will use up to 10 tonnes per day, and the geophysical survey vessel up to 7 tonnes per day. Helicopter use has not been provided for in this EP. The total expected GHG emissions from vessel activity are presented in Table 6-11.

Table 6-11: Greenhouse gas emissions and sources

Source	GHG emissions released (tonnes of carbon dioxide equivalent)
Geophysical/geotechnical operations	
Geophysical survey vessel operations (40 days)	759
Geotechnical survey vessel (80 days)	2,168
Total GHG emissions	**2,927**

Impact assessment
Environmental value(s) potentially impacted
Air quality (atmospheric pollutants) Atmospheric emissions may result in a decline in local air quality, within the immediate vicinity of the emissions source. As described above, produced emissions throughout the GPGT Survey Program will include sulphur dioxide, nitrogen oxides, ozone-depleting substances, carbon dioxide, particulates and VOCs. Emissions from engines, generators and deck equipment may be toxic, odoriferous or aesthetically unpleasing, and will result in a reduction in air quality. Given the offshore location of the GPGT Survey Program, and the low volume of atmospheric emissions which will be generated, biodiversity, ecological integrity, social amenities and human health will not be impacted and any potential impact to air quality is negligible. ***Aesthetic value*** Atmospheric emissions have the potential to introduce odour and visual amenity issues which can result in changes to the aesthetic value of an area. Given the distance from shore of the GPGT Survey Program (~32 km) and the short duration of the activities, the potential for a change in air quality from atmospheric emissions resulting in a change to aesthetic value for tourism/recreation or settlements is not considered to be credible. Therefore, a change in aesthetic value from atmospheric emissions associated with GPGT Survey Program is negligible.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Description of source of impact
The project vessels are likely to routinely generate/discharge: • small volumes of grey water to the marine environment • relatively small volumes (routinely/periodically) of bilge water, which can contain water, oil, detergents, solvents, chemicals, particles and other liquids, solids or chemicals • variable water from vessel decks directly overboard or via deck drainage systems; sources could include rainfall events and/or deck activities such as cleaning/wash-down of equipment/decks • cooling water from machinery engines and brine water produced during the desalination process of reverse osmosis to produce potable water onboard the survey vessels. Non-routine project vessel discharges may include firefighting foams, used in the event of an emergency. Survey vessels may be equipped with in-built or portable firefighting foam systems which typically supply 3% aqueous film-forming foam (AFFF) concentrates which may be used in the event of an emergency, such as a vessel fire. Environmental risks relating to disposal/discharges above regulated levels or incorrect disposal/discharge of waste would be unplanned (non-routine/accidental) and are addressed in Section 6.6.5. ***Drill cuttings*** The geotechnical seabed coring will result in the indirect discharge of a small quantity of drill cuttings and fluid at the seafloor (refer Section 6.5.2). Drilling fluid will consist primarily of seawater and may have small quantities of additives. These additives are considered to be very low toxicity (as assessed through Woodside's Chemical Selection and Assessment Environment Guideline) as described in Section 6.5.2 and are expected to dilute rapidly upon discharge; as such, no toxic effects to biota are expected to occur. All drilling fluids used during the drilling process will be discharged from the borehole at the seabed including small amounts of excess fluid which may be produced. Volumes of excess drilling fluid will be limited as fluids are mixed for use on an as needs basis.
Impact assessment
Environmental value(s) potentially impacted
The project vessels will routinely discharge (daily if necessary) relatively small volumes of grey water and bilge water to the marine environment in compliance with MARPOL requirements. It is noted that sewage and putrescible wastes are not allowed to be discharged within 3 NM of land but may be discharged beyond 3 NM (including outside of the Operational Areas) so long as it is discharged in accordance with MARPOL requirements. No significant impacts are anticipated because of the minor quantities involved, localised area of impact, high level of dilution into oceanic waters and high biodegradability/low persistence of the wastes disposed. Bilge tanks receive fluids from many parts of the vessel. Bilge water can contain water, oil, detergents, solvents, chemicals, particles and other liquids, solids or chemicals. Treatment of bilge water will be conducted using an oily water separator or transported onshore for treatment and disposal. However, if not treated prior to discharge there would be potential for a negligible and localised increase in nutrient concentrations due to the high level of dilution and the natural daily nutrient flux that occurs within the region. The potential impact from routine discharge of treated or untreated sewage, grey water, bilge water and putrescible wastes is expected to be low. The discharges outlined, which may include other non-organic contaminants (e.g. bilge water, deck drainage and cooling water), will be rapidly diluted when discharged. Variable water discharge from the project vessel deck directly overboard or vial deck drainage systems could also occur. Water sources could include rainfall events and/or from deck activities such as cleaning/wash-down of equipment/decks. They are expected to be in very small quantities and concentrations that don't pose any significant risk to any relevant receptors. As such, no significant impacts from the planned (routine and non-routine) discharges listed above are anticipated, because of the minor quantities involved and the expected localised mixing zone and high level of dilution into the open water marine environment of the Operational Areas. Drilling fluid discharges are expected to increase turbidity and TSS levels above ambient concentrations above the seabed for a short duration during geotechnical drilling. Given the very small volumes discharged short duration and selection of low toxicity (as assessed through Woodside's Chemical Selection and Assessment Environment Guideline), the potential impacts are expected to be negligible. Aqueous Film Forming Foams are typically comprised of a mix of organic and fluorinated surfactants, however novel and emerging AFFF products may also be comprised of fluorine-free formulations. When discharged in bodies of water, both fluorine containing and fluorine-free AFFF formulations may deplete dissolvable oxygen content. However, when diluted in low concentrations such as in the event of application in a fire, these foams are considered to have relatively low toxicity (Department of Environmental and Heritage Protection, 2016). Further, concerns regarding contamination and the toxicity and bioaccumulation potential of AFFF discharges are typically associated with land and waterways near to sites with frequent or prolonged applications. This includes military sites such as defence areas and civilian sites such as airports and industrial areas (Moody et al., 2000, Hu et al. 2016). The non-routine

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

discharge of AFFF in open water environment of the Operational Area in the event of a fire is not consistent with these conditions.

Given the toxicological effects of foam are associated with sites of frequent or prolonged applications and the notion that any non-routine AFFF discharges in the event of an emergency during the activity would be expected to rapidly disperse in the open water environment, it is expected that any impacts would be localised and short-term in nature. Furthermore, potential impacts of AFFF discharge in the event of an emergency are outweighed by the environmental and health and safety benefits that are achieved through suppressing fire and hence, mitigating potential for further adverse impacts.

Cumulative impacts

The project vessels will be continuously moving in the Operational Areas during the majority of the survey with only short stationary periods during the collection of geotechnical survey data. These routine and non-routine discharges are expected to be intermittent in nature for the duration of the GPGT Survey Program. Therefore, cumulative impacts to water quality within the Operational Areas are expected to be localised and short term, with no lasting effect.

It is possible that marine fauna transiting the localised area may come into contact with these discharges (e.g. marine turtles, cetaceans, fish, Section 4.6); however, given the localised extent of cumulative impacts from vessel discharges within the Operational Areas, significant impacts to marine fauna are not expected.

Control considered	***Control feasibility (F) and cost/sacrifice (CS)[33]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
Monitor the ambient water quality during discharge of operational fluids to verify impact during activity.	F: Yes. CS: Undertaking sampling would incur the following costs: • For in-water sampling using ROV – time and logistics for tool change-out from operational tools to specialised sampling tools. • Additional personnel onboard to operate ROV and coordinate sampling program. • Low ROV availability due to operations can limit time to complete environmental monitoring. • If additional ROV is required on the vessel, deck space and resources to run/store/service ROV. • Resources for sample processing (space/ equipment/ personnel).	Minimal environmental benefit would be gained by monitoring during the activity. Monitoring could be used to inform additional control measures in future activities, although it's not guaranteed that additional controls would be feasible, or if they would provide any environmental benefit.	Based on the nature of the activity (i.e. predictable impacts) and relatively low sensitivity of the area application of an environmental monitoring control is considered grossly disproportionate. Cost/sacrifice outweighs the benefit to be gained in the context of the existing environment (open ocean communities).	No

Description of source of impact

Background

The GPGT Survey Program will involve primarily one survey vessel undertaking each activity, though allowance for two survey vessels in the Operational Areas at any one time is provided. Support vessels are not proposed as part of the survey and vessel transfer activities are not planned during this survey (except in an emergency).

The worst-case credible hydrocarbon release would be breach of the survey vessel's largest fuel tank through collision with a third-party vessel. The total maximum inventory onboard the survey vessel is unknown as the vessel contracting has not been completed.

Industry experience

Registered vessels or foreign flag vessels in Australian waters are required to report events to the Australian Transport Safety Bureau, AMSA or Australian Search and Rescue.

From a review of the Australian Transport Safety Bureau marine safety and investigation reports, one vessel collision occurred in 2011 to 2012 that resulted in a spill of 25 to 30 L of oil into the marine environment as a result of a collision between a tug and support vessel off Barrow Island. Two other vessel collisions occurred in 2010, one in the port of Dampier, where a support vessel collided with a barge being towed. Minor damage was reported and no significant injury to personnel or pollution occurred. The second 2010 collision involved a vessel under pilot control in a port colliding with a vessel alongside a wharf, causing it to sink. No reported pollution resulted from the sunken vessel. These incidents demonstrate the likelihood of only minor volumes of hydrocarbons being released during the event of a vessel collision.

From 2010 to 2011, the Australian Transport Safety Bureau's annual publication defines the individual safety action factors identified in marine accidents and incidents: 42% related to navigation action (2011). Of those, 15% related to poor communication and 42% related to poor monitoring, checking and documentation. Most of these related to the grounding instances.

Credible scenarios

For a vessel collision to result in the worst-case scenario of a hydrocarbon spill potentially impacting an environmental receptor, several factors must align:

- The identified causes of vessel interaction must result in a collision.
- The collision must have enough force to penetrate the vessel hull.
- The collision must be in the exact location of the fuel tank.
- The fuel tank must be full, or at least have a volume higher than the point of penetration.
- The probability of the chain of events described above aligning, to result in a breach of fuel tanks resulting in a spill that could potentially affect the marine environment, is considered highly unlikely.

A collision between the survey vessel and a third-party vessel (i.e. commercial shipping, other petroleum related vessels and commercial fishing vessels) was assessed as being credible, but highly unlikely given the standard vessel operations and equipment in place to prevent collision at sea, and the short duration of the activities.

Given the minimum water depths in the Operational Areas, hydrocarbon release due to grounding is not considered credible. Credible scenarios are outlined in Table 6-12.

Table 6-12: Details of identified hydrocarbon spill scenarios

Scenario	Likelihood	Credible	Volume (m^3)	Justification
Survey-related vessel-to-vessel collision resulting in breach of the survey vessel's hull	N/A	Not credible	<182	Primarily one survey vessel will be operating in the Operational Areas at any one time. Considering the slow speeds travelled (~4 knots), breach of the survey vessel's hull is considered not credible.
Collision with third-party vessel resulting in breach of the survey vessel's hull	Highly unlikely	Credible	<182	Third-party vessels in the survey vicinity may be commercial shipping vessels which will be notified, by Notices to Mariners through AMSA, of the survey activity in the area. All third-party vessels operating in the vicinity will be tracked on radar and alerted (as required) to the presence of the survey vessel operations and therefore collision resulting in breach of the survey vessel's hull is considered highly unlikely
Vessel grounding resulting in breach of the survey vessel's hull	N/A	Not credible	<182	Give the water depths of the Operational Areas, vessel grounding is not considered a credible scenario.

Quantitative hydrocarbon risk assessment

Woodside has commissioned quantitative hydrocarbon spill modelling of two vessel collision scenarios at two different locations as detailed in Table 6-13. The volumes selected for modelling are based on the potential vessels that may be used and represent an instantaneous release.

Table 6-13: Details of identified marine diesel spill scenarios modelled in vicinity of Operational Areas

Location	Coordinates	Volume (m^3)	Justification
Wilcox	20° 00' 41.06"S 115° 30' 50.30"E	182	Closest point to Montebello Islands (modelling already completed for another Woodside activity)
TPA03 wellsite	19° 45' 43.618" S 115° 53' 23.986" E	250	Worst case tank size volume for the proposed activity is 182 m^3, however the modelling was already completed for another Woodside activity in the vicinity Close to Operational Areas A and B

The Wilcox location is within the boundary of the Montebello Multiple Use Zone.

The modelling assessed the extent of a marine diesel spill volume of 182 m^3 for all seasons, using an historic sample of wind and current data for the region. The modelling was conducted by RPS using a three-dimensional hydrocarbon spill trajectory and weathering model (SIMAP, Spill Impact Mapping and Analysis Program) (RPS, 2023a and 2023b).

Hydrocarbon characteristics

Marine diesel is a mixture of both volatile and persistent hydrocarbons. Predicted weathering of marine diesel, based on typical conditions in the region, indicates that about 50% by mass would be expected to evaporate over the first day or two (Figure 6-1). After this time, most of the remaining hydrocarbon is entrained into the upper water column. In calm conditions, entrained hydrocarbons are likely to resurface. Up to 95% of the spill volume is expected to evaporate over time (Figure 6-1). The remaining 5% is persistent and will reduce in concentration through degradation and dissolution.

Given the environmental conditions experienced in the region, marine diesel is expected to undergo rapid spreading. This, together with evaporative loss, is likely to result in the spill rapidly dissipating. Marine diesel distillates tend not to form emulsions at the temperatures found in the region. The characteristics of the marine diesel used in the modelling are given in Table 6-14.

Table 6-14: Characteristics of the marine diesel used in the modelling

Hydrocarbon type	Initial density (g/cm³) at 25°C	Viscosity (cP @ 25°C)	Component boiling point (°C)	Volatiles < 180	Semi volatiles 180 to 265	Low volatility (%) 265 to 380	Residual (%) > 380
				Non-Persistent			***Persistent***

Impact assessment
Environmental value(s) potentially impacted
Environment that may be affected
Surface hydrocarbons
The probability contour figures for floating hydrocarbons indicate that concentrations equal to or greater than the 1 g/m² and 10 g/m² thresholds are less than 1% probability for all receptors for both scenarios except for the Montebello AMP.
Floating hydrocarbons at concentrations equal to or greater than 10 g/m² is not forecast to contact any of the assessed shoreline receptors for either scenario Table 6-15). Floating oil at 10 g/m² present in open waters up to 50 km from spill location.
Entrained hydrocarbons
Entrained oil at concentrations equal to or greater than the 100 ppb threshold is predicted to be found up to around 346 km from the spill site in the worst case scenario (Wilcox). Contact by entrained hydrocarbons at concentrations equal to or greater than 100 ppb is predicted at Montebello AMP (51%), Ningaloo AMP (2%) Barrow Island Marine Park (2%) and the Ningaloo Coast World Heritage Area (2%). Any other receptor potentially contacted is <0.5% and not discussed further.
The maximum entrained oil concentration forecast for any receptor is predicted to be 37,833 ppb at Montebello AMP. The probabilities and concentrations are lower than this for the TPA03 location.
Dissolved hydrocarbons
Dissolved aromatic hydrocarbons at concentrations equal to or greater than the 50 ppb threshold are predicted to be found up to 160 km from the spill site. Contact by dissolved hydrocarbons at concentrations equal to or greater than 100 ppb is predicted at Montebello AMP (12.5%) and Ningaloo Marine Park (18%) from the Wilcox location. All other receptors potentially contacted with probabilities of equal to or less than 2% (Table 6-15).
Accumulated hydrocarbons
Accumulated hydrocarbons above threshold concentrations (≥100 g/m²) were not predicted by the modelling to occur at any location.

Summary of potential impacts to protected species, other habitats and communities, water quality and socio-economic values

The potential impacts of spilled hydrocarbons to species (protected and otherwise), marine primary producers, other habitats and communities, water quality, marine sediment quality, air quality, protected areas and socio-economic values are described below. It is noted that the toxic components in marine diesel include alkylated naphthalenes which can be rapidly accumulated by marine biota including invertebrates such as marine oysters, clams, shrimp, as well as a range of vertebrates, such as finfish. Marine diesel also contains additives that contribute to its toxicity.

Given the localised area of the potential EMBA and the rapid dispersion, dilution and weathering of a marine diesel spill, it is expected that any potential impacts will be low magnitude and temporary in nature.

Protected species – marine mammals

Marine mammals that have direct physical contact with surface, entrained or dissolved aromatic hydrocarbons may suffer surface fouling or ingestion of hydrocarbons and inhalation of toxic vapours. This may result in the irritation of sensitive membranes such as the eyes, mouth, digestive and respiratory tracts and organs, impairment of the immune system or neurological damage (Helm et al., 2015). If prey (fish and plankton) are contaminated, this can result in the absorption of toxic components of the hydrocarbons (polycyclic aromatic hydrocarbons). In a review of cetacean observations in relation to a number of large-scale hydrocarbon spills, Geraci (1988) found little evidence of mortality associated with hydrocarbon spills; however, behavioural disturbance (i.e. avoiding spilled hydrocarbons) was observed in some instances for several species of cetacean. This suggests that cetaceans have the ability to detect and avoid surface slicks.

Cetaceans that may interact with spilled hydrocarbons are most likely to be subject to physical impacts. Given cetaceans maintain thick skin and blubber, external exposure to hydrocarbons may result in irritation to skin and eyes. Entrained hydrocarbons may also be ingested, particularly by baleen whales which feed by filtering large volumes of water.

As identified in Section 4.6, protected species including migrating pygmy blue whales and humpback whales may be encountered near the Operational Areas, and therefore could be impacted in close proximity to the marine diesel spill location, where the volatile, water soluble and most toxic components of the diesel may be present. However, the window for exposure to hydrocarbons with the potential for any toxicity effects in these waters would be limited to a few days following the spill. Potential impacts may include behavioural impacts (e.g. avoidance of impacted areas), sub-lethal biological effects (e.g. skin irritation, irritation from ingestion or inhalation, reproductive failure) and, in rare circumstances, organ or neurological damage leading to death. Given the absence of critical habitats or aggregation areas, cetaceans in the area are expected to be transient, and impacts are expected to be limited to individuals or small groups of animals. Impacts on the overall population viability of cetaceans are not predicted.

Protected species – marine turtles

Adult sea turtles exhibit no avoidance behaviour when they encounter hydrocarbon spills (NOAA, 2010). Contact with entrained (or floating) hydrocarbon can result in hydrocarbon adherence to body surfaces (Gagnon and Rawson, 2010) causing irritation of mucous membranes in the nose, throat and eyes leading to inflammation and infection (NOAA, 2010). Oiling can also irritate and injure skin which is most evident on pliable areas such as the neck and flippers (Lutcavage et al., 1995). A stress response associated with this exposure pathway includes an increase in the production of white blood cells, and even a short exposure to hydrocarbons may affect the functioning of their salt gland (Lutcavage et al., 1995).

Hydrocarbons in surface waters may impact turtles when they surface to breathe and inhale toxic vapours. Their breathing pattern, involving large ‘tidal’ volumes and rapid inhalation before diving, results in direct exposure to petroleum vapours which are the most toxic component of the hydrocarbon spill (Milton and Lutz, 2003). This can lead to lung damage and congestion, interstitial emphysema, inhalant pneumonia and neurological impairment (NOAA, 2010). Contact with entrained hydrocarbons can result in hydrocarbon adherence to body surfaces (Gagnon and Rawson, 2010) causing irritation of mucous membranes in the nose, throat and eyes leading to inflammation and infection (Gagnon and Rawson, 2010). Given the hydrocarbon is expected to weather rapidly when released to the environment, relatively fresh entrained hydrocarbons (which are typically relatively close to the release location) are considered to have the greatest potential for impact.

The EMBA overlaps with habitat critical to the survival of flatback turtles for internesting and BIAs identified in Section 4.6.2, particularly the internesting BIAs for flatback turtles which extend for ~80 km from known nesting locations. Operational Area A also overlaps with an internesting buffer BIA for flatback turtles and is approximately 36 km from designated habitat critical to the survival of flatback turtles for internesting at the Montebello Islands (with peak nesting in December and January). However, it is noted the BIA and habitat critical to the survival of flatback turtles are considered very conservative as they are based on the maximum range of internesting females and many turtles are more likely to remain near their nesting beaches. In the event of a worst-case vessel spill of marine diesel oil, there is a potential that surface and entrained hydrocarbons exceeding impact threshold concentrations (10 g/m² and 100 ppb respectively) will be present in offshore waters extending up to 55 km and 160 km respectively, from the release site. Toxicity of hydrocarbons will be significantly reduced by weathering at over such distances, with the volatile and water soluble (often the most toxic) components expected to have dissipated beyond the vicinity of the spill site. Dissolved aromatic hydrocarbons at concentrations equal to or greater than the 50 ppb threshold are predicted to be limited to the vicinity of the spill site. Low concentrations are only capable of causing sublethal impacts

Summary of potential impacts to protected species, other habitats and communities, water quality and socio-economic values

to the most sensitive marine organisms and no lethal or sub-lethal impacts to marine turtles are expected in the BIAs. The potential for lethal and sub-lethal impacts to marine turtles is limited to small numbers of transient individuals that may be present in offshore waters near the release location.

Protected species – birds

Seabirds and migratory birds are particularly vulnerable to contact with floating hydrocarbons, which may mat feathers. This may lead to hypothermia from loss of insulation and ingestion of hydrocarbons when preening to remove hydrocarbons; both impacts may result in mortality (Hassan and Javed, 2011). The modelled scenario results in highly localised floating hydrocarbons below impact thresholds centred around the release location; hence, the potential for seabird exposure to floating hydrocarbons is considered to be low. Migratory shorebirds are unlikely to interact with spilled hydrocarbons; refer to the sections on Islands and Mainland Coast below for a discussion on the potential impacts to migratory shorebirds.

Offshore waters are potential foraging grounds for seabirds associated with the coastal roosting and nesting habitat, which includes the numerous islands along the Pilbara coast. Seabirds may also be exposed to marine diesel on the sea surface or upper water column, if resting or foraging in waters near to the spill. Impacts may include mortality due to oiling of feathers or the ingestion of hydrocarbons. However, due to the limited spatial extent of a marine diesel spill and limited window for exposure, population level impacts are not expected.

Protected species – sharks

Other protected species that may occasionally transit through the area and may potentially be exposed to a marine diesel spill, include shark and ray species such as whale sharks. Impacts to sharks and rays may occur through direct contact with hydrocarbons and contaminate the tissues and internal organs either through direct contact or via the food chain (consumption of prey). As gill breathing organisms, sharks and rays may be vulnerable to toxic effects of dissolved hydrocarbons (entering the body via the gills) and entrained hydrocarbons (coating of the gills inhibiting gas exchange). In the offshore environment, it is probable that pelagic shark species are able to detect and avoid surface waters underneath hydrocarbon spills by swimming into deeper water or away from the affected areas. Therefore, any impact on sharks and rays is predicted to be minor and localised.

Hydrocarbon contact may affect whale sharks through ingestion (entrained/dissolved hydrocarbons), particularly if feeding. Whale sharks may transit offshore waters when migrating to and from Ningaloo Reef, where they aggregate for feeding from March to July. The EMBA overlaps the whale shark foraging BIA along the NWS, but does not overlap the foraging (high density prey) BIA along the Ningaloo coast. Should sharks or fish be present in offshore waters near the Operational Areas during the spill, direct impacts may occur if foraging within surface slicks or in the upper 20 to 30 m of the water column containing entrained hydrocarbons and dissolved aromatics. Contamination of their food supply and the subsequent ingestion of this prey may also result in long term impacts as a result of bioaccumulation. Impacts are again predicted to be limited to a small number of animals given the low numbers of animals that may transit through the area during the short period when spilled hydrocarbons are present.

Given the limited number of animals that may be impacted and the rapid dispersion of marine diesel, it is considered that any potential impacts will be minor.

Other habitats, species and communities

Within the EMBA for a marine diesel spill resulting from a vessel collision, there is the potential for plankton communities to potentially be impacted where entrained or dissolved hydrocarbon threshold concentrations are exceeded. A range of lethal and sublethal impacts may occur to plankton exposed to entrained or dissolved hydrocarbons within the EMBA. Communities are expected to recover quickly (weeks/months) due to high population turnover (ITOPF, 2011a). It is therefore considered that any potential impacts would be low magnitude and temporary in nature.

Pelagic fish populations in the open water offshore environment of the EMBA are highly mobile and have the ability to move away from a marine diesel spill. The spill-affected area would be confined to the surface layer and upper 20 to 30 m of the water column. It is therefore unlikely that fish populations would be exposed to widespread hydrocarbon contamination. Pelagic fish populations are distributed over a wide geographical area so impacts on populations or species level are considered to be negligible. Combined with these factors and the rapid dispersion of marine diesel, it is considered that any potential impacts will be minor.

Other communities (e.g. demersal fish, benthic infauna and epifauna) and key sensitivities (e.g. KEFs identified in Section 4.7) occur within the EMBA, however they will not be directly exposed or impacted by a marine diesel spill as hydrocarbons are confined to the upper layers of the water column.

Water quality

It is likely that water quality will be reduced at the release location of the spill; however, such impacts to water quality would be temporary and localised in nature due to the rapid dispersion and weathering of marine diesel. The potential impact is therefore expected to be low.

Summary of potential impacts to protected species, other habitats and communities, water quality and socio-economic values
Protected areas Surface entrained and dissolved hydrocarbons at or exceeding impact thresholds have a low probability of contacting the Montebello AMP and the Ningaloo AMP. Surface and entrained hydrocarbons are mostly only predicted within the deep open waters of these protected areas, with no contact to seabed habitats or to shorelines above the ecological impact threshold values. Potential impacts to water quality and the natural values (e.g. mobile protected species) in these areas would be temporary and localised in nature due to the rapid dispersion and weathering of the marine diesel, as described above. ***Socio-economic*** A marine diesel spill is considered unlikely to cause significant direct impacts on the target species fished by Commonwealth and State fisheries (see Section 4.10.1) which overlap with the EMBA. The fisheries that operate within the EMBA predominantly target demersal fish species (demersal finfish and crustaceans) that inhabit waters in the range of >60 to 200 m depth, or pelagic species which are highly mobile. Therefore, a marine diesel spill is expected to only result in negligible impacts, considering that hydrocarbons are confined to the upper layers of the water column. Visible surface hydrocarbons at or exceeding 1 g/m² may also occur up to 82 km from the release site, which may result in fouling of fishing gear and a perception of impacts to fish stocks by fisheries stakeholders and the public. There is the potential that a fishing exclusion zone would be applied in the area of the spill, which would put a temporary ban on fishing activities and therefore potentially lead to subsequent economic impacts on commercial fishing operators if they were planning to fish within the area of the spill. Such measures would likely be in place for less than a week and would not result in widespread or long-term impacts to fishing activities. ***Summary of potential impacts to environmental values*** In the event of an unplanned hydrocarbon release to the marine environment due to vessel collision, it is considered that any potential impact would be localised and temporary in nature to water quality (in comparison to background levels and/or international standards) with localised and temporary impacts to habitats, populations and fishing concerns. The greatest environmental consequence identified when assessing an unplanned hydrocarbon release to the marine environment due to vessel collision, is defined as D, which equates to 'Minor, short-term impact (1 to 2 years) on species, habitat (but not affecting ecosystems function), physical or biological attributes'.

ALARP statement: On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1**)** and Woodside's criteria for demonstrating ALARP (Section 2.6.1), Woodside considers the adopted controls appropriate to manage potential risks associated with an unplanned hydrocarbon release from a vessel collision. As no reasonably practicable additional/alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts/risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The impact assessment has determined that an unplanned loss of hydrocarbon as a result of a vessel collision represents a low current risk rating that is unlikely to result in potential impact greater than localised, minor and temporary disruption to a small proportion of the population, and no impact on critical habitat or activity. Further opportunities to reduce the impacts and risks have been investigated above. The adopted controls are consistent with the most relevant regulatory guidelines and good survey practice/industry best practice. On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating acceptability (Section 2.6.2), Woodside considers risks to be managed to a level that is broadly acceptable.

6.6.2 Physical presence: vessel collision with marine fauna

Context		
Project vessels – Section 3.6	Protected species – Section 4.6	Consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental collision between project vessel and threatened and migratory marine fauna					X		A	E	1	L	LCS GP	Broadly Acceptable	EPO 9

Description of source of impact

The project vessels operating in and around the Operational Areas may present a potential hazard to cetaceans and other protected marine fauna such as whale sharks and marine turtles. Vessel movements can result in collisions between the vessel (hull and propellers) and marine fauna, potentially resulting in superficial injury, serious injury that may affect life functions (e.g. movement and reproduction), or mortality.

The factors that contribute to the frequency and severity of impacts due to collisions vary greatly due to vessel type, vessel operation (specific activity, speed), physical environment (e.g. water depth), the type of animal potentially present and their behaviours. Project vessels are typically moving at low speeds when conducting geophysical and geotechnical survey activities.

Impact assessment

Environmental value(s) potentially impacted

The likelihood of vessel/marine fauna collision being lethal is influenced by vessel speed; the greater the speed at impact, the greater the risk of mortality (Jensen and Silber, 2004; Laist et al., 2001). Vanderlaan and Taggart (2007) found that the chance of lethally injuring a large whale due to a vessel strike increases from about 20% at 8.6 knots to 80% at 15 knots. According to the data of Vanderlaan and Taggart (2007), it is estimated that the risk is less than 10% at a speed of 4 knots. Vessel-whale collisions at this speed are uncommon and, based on reported data contained in the US NOAA database (Jensen and Silber, 2004), there are only two known instances of collisions when the vessel was travelling at less than 6 knots. Both of these were from whale watching vessels that were deliberately placed among whales.

Project vessels are likely to be travelling less than 5 knots in the Operational Areas; therefore, the chance of a vessel colliding with protected species and resulting in a lethal outcome is reduced.

The nearest recognised BIAs for cetaceans (considered to be at risk due to relatively slow movement and proportion of time spent at or near the sea surface) is the humpback whale migration BIA which lies approximately 5 km south-southeast of Operational Area A (refer to Section 4.6.3). The pygmy blue whale migration BIA also lies beyond the Operational Areas (approximately 22 km (at its closest point) northwest of Operational Area A. Adverse interactions between vessels and humpback or pygmy blue whales are considered to be unlikely due to the slow speeds of project vessels within the Operational Areas (mostly <5 knots), and the distance of the Operational Areas from these known BIAs. However, the likelihood of encountering individuals increases during migration periods (June-November).

Whale sharks are at risk from vessel strikes when feeding at the surface or in shallow waters (where there is limited option to dive). Whale sharks may traverse offshore NWS waters including the Operational Areas during their migrations to and from Ningaloo Reef and a BIA for foraging whale sharks overlaps with the Operational Areas. However, it is expected that whale shark presence within the Operational Areas would not comprise of significant numbers given there is no main aggregation area within the vicinity of the Operational Areas, and their presence

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

would be transitory and of a short duration. There are no constraints preventing whale sharks moving away from vessels (e.g. shallow water or shorelines).

With consideration of the absence of potential turtle nesting or foraging habitat (i.e. no emergent islands, reef habitat) but the presence of shallow shoals and the water depth 20 -190 m, it is considered that the Operational Areas are unlikely to represent important habitat for marine turtles other than in the areas around the shallower shoals. It is acknowledged, however, that there are significant nesting sites along the WA mainland coast and islands of the region and that turtles may occur within the Operational Areas in low numbers. There is an internesting buffer BIA for the flatback turtle and flatback turtle habitat critical buffer zone which overlap Operational Area A, which is associated with the Montebello Islands (see Section 4.6.2). The Montebello Islands themselves are located ~34 km south of Operational Area A. This internesting area is a spatially assigned buffer for marine turtles nesting at the Montebello Islands. Therefore, it is unlikely flatback turtles nesting at the Montebello Islands will be found to aggregate in significant numbers more than 36 km away from the Montebello Islands, within the Operational Areas. Notably, the typical response from turtles on the surface to the presence of vessels is to dive (a potential "startle" response), which decreases the risk of collisions (Hazel et al. 2007). As with cetaceans, the risk of collisions between turtles and vessels increases with vessel speed (Hazel et al. 2007). Given the low speeds of vessels undertaking the GPGT Survey Program, along with the expected low numbers of turtles within the Operational Areas, interactions between vessels and turtles are considered to be highly unlikely.

Marine mammals and fish are at risk of mortality through being caught in thrusters during station-keeping operations (DP). The risk of listed marine species getting caught in operating thrusters is unlikely, given the low presence of individuals, combined with the avoidance behaviour commonly displayed during DP operations.

It is unlikely vessel movement associated with the GPGT Survey Program will significantly impact marine fauna populations, given the low presence of transiting individuals, expected avoidance behaviour commonly displayed by whales and turtles combined with the low operating speed of the survey vessels (generally less than five knots or stationary, unless operating in an emergency). Activities are considered unlikely to result in a consequence greater than slight short-term disruption to individuals or a small proportion of the population and anticipated to have no impact on critical habitat or activity supported by BIAs.

6.6.3 Physical presence: disturbance to seabed from dropped objects and equipment loss

Context		
Geophysical equipment deployment – Section 3.7 Geotechnical equipment deployment – Section 3.7.2 Project vessels – Section 3.6	Habitats and biological environment – Section 4.5	Consultation – Section 5

Impact evaluation summary

Source of impact	***Environmental value potentially impacted***						***Evaluation***						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental loss of significant geophysical or geotechnical equipment				X			A	F	1	L	LCS GP	Broadly Acceptable	EPO 10
Dropped objects resulting in seabed disturbance				X			A	F	1	L	LCS GP PJ	Broadly Acceptable	

Description of source of impact

While undertaking the activity, towed or submersible equipment may become detached and lost to the seabed, resulting in disturbance or damage to benthic habitat and/or cultural heritage on the seabed.

In addition, there is the potential for objects to be dropped overboard from the project vessels to the marine environment. Objects that have been dropped during previous offshore projects include small numbers of personnel protective gear (e.g. glasses, gloves, hard hats), small tools (e.g. spanners), hardware fixtures. The spatial extent in which dropped objects can occur is restricted to the Operational Areas.

Impact assessment

Environmental value(s) potentially impacted

In the unlikely event of loss of equipment or dropped objects to the marine environment, potential environmental effects are anticipated to include localised physical impacts on benthic habitats and possible heritage features on the Ancient Landscape. As a result of recovering any dropped objects, impacts to benthic habitats will be temporary in nature. However, if the object cannot be recovered due to health and safety, operational constraints or other factors, then the impact may be longer term or permanent. Impacts to heritage features may be temporary or permanent depending on the nature of the associated values. The areas potentially impacted will depend on the scenario, with equipment loss likely to impact a greater area compared to dropped objects.

The temporary or permanent loss of dropped objects into the marine environment is not likely to have a significant environmental impact on benthic habitats, as the benthic habitats associated with the sand/silt habitats comprising most of the Operational Areas are of low sensitivity and are broadly represented throughout the broader region (Section 4.5). Although there are areas of higher sensitivity associated with shoals survey activities are not planned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

over the shoals and therefore dropped objects over them is not credible. Given the types, size and frequency of dropped objects that could occur, it is unlikely that a dropped object would have a significant impact on the marine environment.

6.6.4 Unplanned discharges: loss of solid hazardous and non-hazardous wastes/equipment

Context		
Project vessels – Section 3.6	Physical environment – Section 4.4 Habitats and biological communities – Section 4.5	Consultation – Section 5

Impact evaluation summary

Source of impact	*Environmental value potentially impacted*						*Evaluation*						
	Marine sediment	Water quality	Air quality (incl odour)	Ecosystems/habitat	Species	Socio-economic	Decision type	Consequence/impact	Likelihood	Risk rating	ALARP tools	Acceptability	Outcome
Accidental loss of hazardous or non-hazardous wastes/ equipment to the marine environment		X		X	X		A	F	3	M	LCS GP	Broadly Acceptable	EPO 11

Description of source of impact

The project vessels will generate a variety of solid wastes including packaging and domestic wastes such as aluminium cans, bottles, paper and cardboard. Hence, there is the potential for solid wastes to be lost overboard to the marine environment. Woodside has not reported any significant loss of solid wastes to the marine environment during the past 12 months of geophysical and/or geotechnical operations. Equipment that has been recorded as being lost (primarily windblown or dropped overboard) have included the loss of a metal pole and hardhat. These have occurred during periods of adverse weather and incorrect waste storage.

Marine debris has been identified as a threat to humpback whales, marine turtles, whale sharks and sawfish (Commonwealth of Australia, 2015a, 2015b TSSC, 2015).

Impact assessment

Environmental value(s) potentially impacted

The potential impacts of solid wastes accidentally discharged to the marine environment include direct pollution and contamination of the environment. Secondary impacts relate to potential contact of marine fauna with wastes, resulting in entanglement or ingestion and leading to injury and death of individual animals. The temporary or permanent loss of waste materials into the marine environment is not likely to have a significant environmental impact, based on the types, size and frequency of wastes that could occur and species present.

Subsea release of hydraulic fluid from geotechnical and geophysical survey equipment	X	X			X		A	F	3	M	LCS GP PJ	Broadly Acceptable	

Description of source of impact

Vessels

Project vessels will need to store small quantities of lubricating oils and hydraulic fluid on the vessel, which have the potential to spill if not appropriately managed. Hydraulic fluid may also potentially be spilled from a leak in hoses or lines on hydraulic equipment such as cranes or winches. Deck spills can result from spills from stored hydrocarbons/chemicals (including those used during geotechnical activities for borehole drilling) or equipment. Due to the short duration of surveys, significant chemical/fluid storage volumes are not anticipated. Storage areas are typically set up with effective primary and secondary bunding to contain any deck spills. Releases from equipment are predominantly from the failure of hydraulic hoses, which can either be located within bunded areas or outside of bunded or deck areas (e.g. over water on cranes).

Woodside's operational experience demonstrates that spills are most likely to originate from hydraulic hoses and have previously been less than 100 L, with an average volume < 10 L.

Geotechnical survey equipment

Project vessels will place equipment on the seabed which may contain relatively small volumes, about 5-10 L, depending on the system, of hydraulic fluid. The hydraulic fluid enables various mechanical functions to be performed.

Some of the equipment requiring the supply of hydraulic fluid includes sources such as PCPT. PCPT involves pushing a penetrometer (probe) into the seabed at a constant rate of penetration to continuously measure the resistance, friction and water pressure. There is the potential for hoses and seals associated with these systems to fail (i.e. hoses burst or crack) during operation, or leaks as a result of shifts in temperature or pressure can result in small volumes of hydraulic fluid being released to the marine environment. Geotechnical equipment is not designed to intentionally release hydraulic fluid in geotechnical operations. If equipment fails, there is the potential for less than 10 L to be released from the hydraulic source.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Towed equipment

If a chirp, boomer or sparker is used, the receiver will consist of individual hydrophone elements located within neutrally buoyant, synthetic hydrocarbon-filled tubing. They typically contain approximately 8 to 12 hydrophone elements evenly spaced in approximately 100 m long, 25 mm diameter tubes. The cable will hold about 5 L of hydrophone fluid. The hydrophone cable has the potential to be punctured, resulting a leakage of fluid for a variety of reasons, including damage during deployment or retrieval.

Impact assessment

Environmental value(s) potentially impacted

Accidental spills of hydrocarbons or chemicals from the vessels and geotechnical and geophysical survey equipment will decrease the water quality in the immediate area of the spill. However, the impacts are expected to be temporary and very localised as only small volumes of hydrocarbons or chemicals are likely to be used which are expected to rapidly disperse and dilute in the marine environment.

Receptors such as marine fauna may be affected if they come in direct contact with a release (i.e. by traversing the immediate spill area). If marine fauna come into contact with a release, they could suffer fouling, ingestion, inhalation of toxic vapours, irritation of sensitive membranes in the eyes, mouth, digestive and respiratory tracts, and organ or neurological damage. Cetaceans may exhibit avoidance behaviour patterns and, given they are smooth skinned, hydrocarbons and other chemicals are not expected to adhere. Given the small area of the potential spill and the dilution and weathering of any spill, the likelihood of ecological impacts to marine fauna (protected species), other communities and habitats is likely to be slight.

No impacts on socio-economic receptors are expected, due to the small volumes of hydrocarbons/chemicals that could be accidentally spilled and the localised and temporary nature of the impacts.

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[38]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
ALARP statement: On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating ALARP (Section 2.6.1), Woodside considers the adopted controls appropriate to manage potential risks associated with an unplanned minor discharge or hydrocarbons as a result of minor deck and subsea spills. As no reasonably practicable additional/alternative controls were identified that would further reduce the impacts without disproportionate sacrifice, the impacts/risks are considered ALARP.				

Demonstration of acceptability
Acceptability statement: The risk assessment has determined that, given the adopted controls an unplanned minor discharge of hydrocarbons as a result of minor deck and subsea spills represents a low risk rating that is unlikely to result in potential impact greater than localised, and temporary disruption to a small proportion of the population, and no impact on critical habitat or activity. Further opportunities to reduce the impacts and risks have been investigated above. The adopted controls are consistent with the most relevant regulatory guidelines and good survey practice/industry best practice. On the basis of the assessment outcomes, use of the relevant tools appropriate to the decision type (i.e. Decision Type A; Section 2.5.1.1) and Woodside's criteria for demonstrating acceptability (Section 2.6.2), Woodside considers risks to be managed to a level that is broadly acceptable.

Invasive species in vessel ballast tanks or on vessels/ submersible equipment				X	X	X	A	E	0	L	LCS GP PJ RBA CV SV	Broadly Acceptable	EPO 13

Description of source of risk

Vessel operations

During the GPGT Survey Program, vessels will be transiting to and from the Operational Areas, which may include traffic mobilising from beyond Australian waters.

All vessels are subject to some level of marine fouling. Organisms attach to the vessel hull, particularly in areas where organisms can find a good attachment surface (e.g. seams, strainers and unpainted surfaces) or where turbulence is lowest (e.g. niches and sea chests). Commercial vessels typically maintain anti-fouling coatings to reduce the build-up of fouling organisms.

Organisms can also be drawn into ballast tanks during onboarding of ballast water as cargo is loaded or to balance vessels under load.

Submersible equipment

The geophysical and geotechnical survey equipment will also be transported to and used within the Operational Areas. As there is the potential for the equipment to be used on other projects before being used on this activity, there is the potential for invasive marine species (IMS) translocation.

During the GPGT Survey Program, project vessels and submersible equipment have the potential to introduce IMS to the Operational Areas through biofouling and ballast water exchange (as described above).

Consequence assessment

Environmental value(s) potentially impacted

Non-indigenous marine species (NIMS) have been introduced into a region beyond their natural biogeographic range and have the ability to survive, reproduce and establish founder populations. Not all NIMS introduced into an area will thrive or cause demonstrable impacts. Indeed, the majority of NIMS around the world are relatively benign and few have spread widely beyond sheltered ports and harbours. Only a subset of NIMS that become abundant and impact on social/cultural, human health, economic and/or environmental values can be considered IMS.

Potential IMS have historically been introduced and translocated around Australia by various natural and human means including biofouling and ballast water. Potential IMS vary from one region to another depending on various environmental factors such as water temperature, salinity, nutrient levels and habitat type, which dictate their survival and invasive capabilities. IMS typically require hard substrate in the photic zone, therefore requiring shallow waters to become established.

Once introduced, IMS may prey on local species which had previously not been subject to this kind of predation, and therefore not have evolved protective measures against the attack. They may outcompete indigenous species for

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

food, space or light and can also interbreed with local species, creating hybrids so the endemic species is lost. These changes to the local marine environment result in changes to the natural ecosystem.

IMS have also proven economically damaging to areas where they have been introduced and established. Such impacts include direct damage to assets (fouling of vessel hulls and infrastructure) and depletion of commercially harvested marine life (e.g. shellfish stocks). IMS have proven particularly difficult to eradicate from areas once established. If the introduction is detected early, eradication may be effective but is likely to be expensive, disruptive and, depending on the method of eradication, harmful to other local marine life.

Survey vessels and submersible equipment have the potential to introduce IMS into the Operational Areas. Due to the shallow water depths in some areas, settlement and establishment of IMS is credible, albeit remote, given control measures in place.

Summary of potential impacts to environmental value(s)

In support of Woodside's assessment of the impacts and risks of IMS introduction associated with the GPGT Survey Program, risk and impact evaluations of the different aspects of marine pest translocation associated with the activity are undertaken. The results of this assessment are presented in the table below. As a result of this assessment Woodside has presented the highest potential consequence as a E (Slight) and likelihood as Remote (0), resulting in an overall Low risk following the implementation of identified controls.

Table 6-16: Credibility, consequence and likelihood of introducing invasive marine species

IMS introduction location	Credibility of introduction	Consequence of introduction	Likelihood
Introduced to Operational Areas/transfer of IMS from infected vessel to Operational Area A and establishment on the seafloor or subsea structures.	Credible There is the potential for IMS to be transferred to the shallow shoal areas in Operational Area A.	Environment – Not Credible The translocation of IMS from a colonised project vessel to shallower environments via natural dispersion is not considered credible given the vessels are not expected to directly interact with the shoals within the Operational Areas and distances of the Operational Areas to shallow nearshore environments is greater than 12 NM (~35 km). There is therefore no credible environmental risk and the assessment is limited to Woodside's reputation. Reputation – E If IMS were to establish on a project vessel this could potentially impact the vessel operationally through the fouling of intakes, result in translocation of an IMS into the Operational Areas and, depending on the species, potentially transfer of an IMS to other project vessels, which would likely result in the quarantine of the vessel until eradication could occur (through cleaning and treatment of infected areas), which would be costly to perform.	Remote (0) Spread of marine pests via ballast water or spawning in these open ocean environments is also considered remote. Survey vessels are not planned to directly interact with shoals within Operational Area A.
Introduced to Operational Areas and establishment on a project vessel.	Credible There is potential for the transfer of marine pests between project vessels within the Operational Areas.		Remote (0) Spread of marine pests via ballast water or spawning in these open ocean environments is also considered remote.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Such introduction would be expected to have slight impact to Woodside's reputation, particularly with Woodside's contractors, and would likely have a reputational impact on future proposals.	
Transfer between project vessels and from project vessels to other marine environments beyond the Operational Areas.	Not Credible This risk is considered so remote that it is not credible for the purposes of the assessment. The transfer of a marine pest between project vessels is considered remote, given the offshore open ocean environment (i.e. transfer pathway discussed above). For a marine pest to then establish a mature spawning population on the new project vessel (which would have been through Woodside's IMS process) and then transfer to another environment is not considered credible. Operational Areas where the vessels will operate are located offshore in an oceanic environment, which is uncongenial to the long-term survival of IMS. In the event of a vessel-to-vessel transfer (considered remote), the marine pest would need to become established on a new vessel with good hygiene (i.e. passed Woodside's vessel IMS risk assessment), survive the transport beyond the Operational Areas, transfer and become established again elsewhere. This scenario is not considered to be credible.

Good practice				
Apply Woodside's IMS risk assessment process[40] to survey	F: Yes.	The IMS risk assessment process will identify potential	Benefits outweigh cost/sacrifice.	Yes C 13.2

[39] Qualitative measure.

[40] The correct management of IMS requires careful consideration of multiple complex factors. These range from an understanding of the vectors through which IMS can be introduced and spread, the maintenance and operational history of vessels and rigs proposed to be used, climatic conditions, existing baseline data of past and proposed transit and Operational Areas and consideration of different regulatory frameworks.

Woodside's approach simplifies the management of IMS into a standardised toolkit that includes an IMS management plan, lists of 'species of concern', risk assessment score sheets, inspection procedures and a Contractor Information Pack to ensure the risk is managed in a simple and efficient manner. Woodside's risk-based process also delivers continued value to Woodside by reducing the risk of project delays and increased operational costs, while delivering excellent marine biosecurity and environmental objectives.

Woodside's approach has been validated through a proactive program that engaged relative persons during development of the methodology. This included Woodside personnel, scientific input and review by experienced external IMS consultants, recognised industry experts and liaison with regulatory agencies and vessel contractors. The result is a fit-for-purpose biofouling management process that is now embedded within Woodside's marine systems, procedures and contractual requirements.

vessels which enter the Operational Areas. Based on the objectives of each IMS risk assessment, implement management measures commensurate with the risk (such as the treating internal systems, IMS inspections or cleaning) to minimise the likelihood of IMS being introduced.	CS: Minimal cost. Standard practice.	risks and additional controls implemented accordingly. In doing so, the likelihood of transferring marine pests between vessels within the Operational Areas is reduced. No change in consequence would occur.		
Professional judgement – eliminate				
No discharge of ballast water during the GPGT Survey Program.	F: No. Ballast water discharges are critical for maintaining vessel stability. Given the nature of the GPGT Survey Program, the use of ballast (including the potential discharge of ballast water) is considered a safety critical requirement. CS: Not assessed, control not feasible.	Not assessed, control not feasible.	Not assessed, control not feasible.	No
Eliminate use of vessels.	F: No. Given vessels must be used to implement project, there is no feasible means to eliminate the source of risk. CS: Loss of the project.	Not assessed, control not feasible.	Not assessed, control not feasible.	No
Professional judgement – substitute				
Source project vessels based in Australia only.	F: Potentially. Limiting activities to only use local project vessels could potentially pose a significant risk in terms of time to source a vessel, and the ability of the local vessels to perform the required tasks. While the project will attempt to source survey vessels locally, it is not always possible. Availability cannot always be guaranteed when considered competing oil and gas activities in	Sourcing vessels from within Australia will reduce the likelihood of introducing IMS from outside Australian waters. However, it does not reduce the likelihood of introducing species native to Australia but alien to the Operational Areas and NWMR, or of IMS that have established elsewhere in Australia. The consequence is unchanged.	Disproportionate. Sourcing survey vessels from Australian waters may reduce the likelihood of introducing IMS to the Operational Areas; however, the potential cost of implementing this control is grossly disproportionate to the minor environmental gain (or reducing an already remote likelihood of introducing IMS) potentially achieved by using only Australian based vessels. Consequently,	No

Demonstration of ALARP				
Control considered	***Control feasibility (F) and cost/sacrifice (CS)[39]***	***Benefit in impact/risk reduction***	***Proportionality***	***Control adopted***
	the region. In addition, sourcing Australian own vessels will increase cost due to completion. CS: Significant cost and schedule impacts due to restrictions of vessel hire opportunities.		this risk is considered not reasonably practicable.	
Inspect all vessels for IMS.	F: Yes. Approach to inspect vessels could be feasible. CS: Significant cost and schedule impacts. In addition, Woodside's IMS risk assessment process is seen to be more cost effective as this control allows Woodside to manage the introduction of marine pests through biofouling, while targeting its efforts and resources to areas of greatest concern.	Inspecting all vessels for IMS would reduce the likelihood of IMS being introduced to the Operational Areas. However, this reduction is unlikely to be significant, given the other control measures implemented. No change in consequence would occur.	Disproportionate. The cost/sacrifice outweighs the benefit gained, as other controls to be implemented achieve an ALARP position.	No

	• internal treatment systems and history • origin and proposed area of operation • number of stationary/slow speed periods >7 days • region of stationary or slow periods • type of activity – contact with seafloor. For submersible equipment: • region of deployment since last thorough clean, particularly coastal locations • duration of deployments • duration of time out of water since last deployment • transport conditions during mobilisation • post-retrieval maintenance regime. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as treating internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.		

6.7 Recovery plan and threat abatement assessment

As described in Section 1.8.2.1, NOPSEMA will not accept an EP that is inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community. This section describes the assessment that Woodside has undertaken to demonstrate that the GPGT Survey Program is not inconsistent with any relevant recovery plans or threat abatement plans. For the purposes of this assessment, the relevant Part 13 statutory instruments (recovery plans and threat abatement plans) are:

- Recovery Plan for Marine Turtles in Australia 2017–2027 (Commonwealth of Australia, 2017)
- Conservation Management Plan for the Blue Whale 2015–2025 (Commonwealth of Australia, 2015a)
- Recovery Plan for the Grey Nurse Shark (*Carcharias taurus*) 2014 (Commonwealth of Australia, 2014)
- Sawfishes and River Sharks Multispecies Recovery Plan (Commonwealth of Australia, 2015b)
- Threat Abatement Plan for the impacts of marine debris on the vertebrate wildlife of Australia's coasts and oceans 2018 (Commonwealth of Australia, 2018).

Table 6-17 lists the objectives and (where relevant) the action areas of these plans, and also describes whether these objectives/action areas are applicable to government, the titleholder, and/or the GPGT Survey

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Program. For those objectives/action areas applicable to the GPGT Survey Program, the relevant actions of each plan have been identified, and an evaluation has been conducted as to whether impacts and risks resulting from the activity are clearly inconsistent with that action or not. The results of this assessment against relevant actions are presented in Table 6-18 to Table 6-22.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Long-term recovery objective: Minimise anthropogenic threats to allow for their conservation status to improve so that they can be removed from the EPBC Act threatened species list	Y	Y	Y
Interim recovery objectives			
The conservation status of blue whale populations is assessed using efficient and robust methodology	Y		
The spatial and temporal distribution, identification of biologically important areas, and population structure of blue whales in Australian waters is described	Y	Y	Y
Current levels of legal and management protection for blue whales are maintained or improved and an appropriate adaptive management regime is in place	Y		
Anthropogenic threats are demonstrably minimised	Y	Y	Y
Action areas			
A. Assessing and addressing threats			
A.1: Maintain and improve existing legal and management protection	Y		
A.2: Assessing and addressing anthropogenic noise	Y	Y	Y
A.3: Understanding impacts of climate variability and change	Y		
A.4: Minimising vessel collisions	Y	Y	Y
B. Enabling and measuring recovery			
B.1: Measuring and monitoring population recovery	Y		
B.2: Investigating population structure	Y

EPBC Act Part 13 statutory instrument	Applicable to:		
	Government	***Titleholder***	***GPGT Survey Program***
B.3: Describing spatial and temporal distribution and defining biologically important habitat	Y	Y	Y
Grey Nurse Shark Recovery Plan			
Overarching objective			
To assist the recovery of the grey nurse shark in the wild, throughout its range in Australian waters, with a view to: • improving the population status, leading to future removal of the grey nurse shark from the threatened species list of the EPBC Act • ensuring that anthropogenic activities do not hinder the recovery of the grey nurse shark in the near future, or impact on the conservation status of the species in the future	Y	Y	Y
Specific objectives			
Develop and apply quantitative monitoring of the population status (distribution and abundance) and potential recovery of the grey nurse shark in Australian waters	Y		
Quantify and reduce the impact of commercial fishing on the grey nurse shark through incidental (accidental and/or illegal) take, throughout its range	Y		
Quantify and reduce the impact of recreational fishing on the grey nurse shark through incidental (accidental and/or illegal) take, throughout its range	Y		
Where practicable, minimise the impact of shark control activities on the grey nurse shark	Y		
Investigate and manage the impact of ecotourism on the grey nurse shark	Y		
Manage the impact of aquarium collection on the grey nurse shark	Y		
Improve understanding of the threat of pollution and disease to the grey nurse shark	Y	Y	N
Continue to identify and protect habitat critical to the survival of the grey nurse shark and reduce the impact of threatening processes within these areas	Y	Y	
Continue to develop and implement research programs to support the conservation of the grey nurse shark	Y	Y	
Promote community education and awareness in relation to grey nurse shark conservation and management	Y

EPBC Act Part 13 statutory instrument	Applicable to:		
	Government	***Titleholder***	***GPGT Survey Program***
Sawfish and River Sharks Recovery Plan			
Primary objective			
To assist the recovery of sawfish and river sharks in Australian waters with a view to: improving the population status leading to the removal of the sawfish and river shark species from the threatened species list of the EPBC Act ensuring that anthropogenic activities do not hinder recovery in the near future, or impact on the conservation status of the species in the future	Y	Y	Y
Specific objectives			
Reduce and, where possible, eliminate adverse impacts of commercial fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of recreational fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of Indigenous fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate the impact of illegal, unregulated and unreported fishing on sawfish and river shark species	Y		
Reduce and, where possible, eliminate adverse impacts of habitat degradation and modification on sawfish and river shark species	Y	Y	Y
Reduce and, where possible, eliminate any adverse impacts of marine debris on sawfish and river shark species noting the linkages with the Threat Abatement Plan for the Impact of Marine Debris on Vertebrate Marine Life	Y	Y	Y
Reduce and, where possible, eliminate any adverse impacts of collection for public aquaria on sawfish and river shark species	Y		
Improve the information base to allow the development of a quantitative framework to assess the recovery of, and inform management options for, sawfish and river shark species	Y		
Develop research programs to assist conservation of sawfish and river shark species	Y	Y	
Improve community understanding and awareness in relation to sawfish and river shark conservation and management	Y

Table 6-18: Assessment against relevant actions of the Marine Turtle Recovery Plan

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	EPO, controls and PS
Marine Turtle Recovery Plan	Action Area A1: Maintain and improve efficacy of legal and management protection	Action: Manage anthropogenic activities to ensure marine turtles are not displaced from identified habitat critical to the survival	Refer to Sections 6.6.2 through 6.6.5 Not inconsistent assessment: The assessment of acoustic emissions, light emissions and potential vessel collisions has considered the potential impacts to marine turtles. Management of the Petroleum Activities Program will ensure that marine turtles are not displaced from identified habitat critical to the survival of marine turtles.	EPO 3, EPO 4, EPO 5 and EPO 9 C 3.1, C5.1 PS 3.1, PS 5.1
		Action: Manage anthropogenic activities in biologically important areas to ensure that biologically important behaviour can continue	Refer to Sections 6.6.2 through 6.6.5 Not inconsistent assessment: The assessment of acoustic emissions, light emissions and potential vessel collisions has considered the potential impacts to marine turtles. Management of the Petroleum Activities Program will ensure that biologically important behaviour can continue in BIAs.	EPO 3, EPO 4, EPO 5 and EPO 9 C 3.1, C5.1 PS 3.1, PS 5.1
	Action Area A3: Reduce the impacts from marine debris	Action: Support the implementation of the Marine Debris Threat Abatement Plan Priority actions at stock level: Green turtle, North West Shelf (G-NWS) – Understand the threat posed to this stock by marine debris Loggerhead turtle, Western Australia (LH-WA) – Determine the extent to which marine debris is impacting loggerhead turtles Flatback turtle, Pilbara (F-Pil) and hawksbill turtle Western Australia (H-WA) – no relevant actions	Refer Section 6.6.4 Not inconsistent assessment: The assessment of the accidental release of solid hazardous and non-hazardous wastes has considered the potential risks to marine turtles. Controls have been implemented to reduce the likelihood of accidental release of solid wastes for the duration of the GPGT Survey Program.	N/A

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	EPO, controls and PS
	Action Area A4: Minimise chemical and terrestrial discharge	Action: Ensure spill risk strategies and response programs adequately include management for marine turtles and their habitats, particularly in reference to 'slow to recover habitats', e.g. nesting habitat, seagrass meadows or coral reefs Priority actions at stock level: G-NWS – Ensure spill risk strategies and response programs include management for turtles and their habitats LH-WA and F-Pil – Ensure spill risk strategies and response programs include management for turtles and their habitats, particularly in reference to slow to recover habitats, e.g. seagrass meadows or corals H-WA – No relevant actions	Refer Sections 6.6.1 and 6.6.5 Not inconsistent assessment: The assessment of accidental release of chemicals/hydrocarbons has considered the potential risks to marine turtles. Spill risk strategies and response program include management measures for turtles and their nesting habitats.	Refer Section 7.10
	Action Area A8: Minimise light pollution	Action: Artificial light within or adjacent to habitat critical to the survival of marine turtles will be managed such that marine turtles are not displaced from these habitats Priority actions at stock level: G-NWS – as above LH-WA – no relevant actions F-Pil and H-WA – Manage artificial light from onshore and offshore sources to ensure biologically important behaviours of nesting adults and emerging/dispersing hatchlings can continue	Refer Section 6.5.5 Not inconsistent assessment: The assessment of light emissions has considered the potential impacts to green, flatback and hawksbill turtles. Internesting, mating, foraging or migrating turtles are not impacted by light from offshore vessels. Vessel light emissions could cause localised and temporary behavioural disturbance to isolated transient individuals, which is unlikely to result in displacement of adult turtles from internesting or nesting habitat critical to the survival of marine turtles.	N/A

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	EPO, controls and PS
	Action Area B1: Determine trends at index beaches	Action: Maintain or establish long-term monitoring programs at index beaches to collect standardised data critical for determining stock trends, including data on hatchling production Priority actions at stock level: G-NWS – Continue long-term monitoring of index beaches LH-WA – Continue long-term monitoring of nesting and foraging populations F-Pil and H-WA – no relevant actions	Not inconsistent assessment: Woodside contributes to Action Area B1 via its support of the Ningaloo Turtle Program[42].	N/A
	Action Area B3: Address information gaps to better facilitate the recovery of marine turtle stocks	Action: Understand the impacts of anthropogenic noise on marine turtle behaviour and biology Priority actions at stock level: G-NWS – Given this is a relatively accessible stock that is likely to be exposed to anthropogenic noise – Investigate the impacts of anthropogenic noise on turtle behaviour and biology and extrapolate findings from the NWS stock to other stocks LH-WA – no relevant actions F-Pil – no relevant actions H-WA – investigate mixed stock genetics at foraging grounds	Refer Section 6.5.3 and 6.5.4 Not inconsistent assessment: The assessment of acoustic emissions has considered the potential impacts to marine turtles. Survey equipment and project vessel acoustic emissions could cause localised and short- term behavioural disturbance to isolated transient individuals, which is unlikely to result in displacement of adult turtles from internesting or nesting habitat critical to the survival of marine turtles.	N/A
Assessment summary The Marine Turtle Recovery Plan has been considered during the assessment of impacts and risks, and the GPGT Survey Program is not considered to be inconsistent with the relevant actions of this plan.

Table 6-19: Assessment against relevant actions of the Blue Whale Conservation Management Plan

Part 13 statutory instrument	Relevant action areas/objectives	Relevant actions	Evaluation	EPO, controls and PS
Blue Whale Conservation Management Plan	Action Area A.2: Assessing and addressing anthropogenic noise	Action 2: Assessing the effect of anthropogenic noise on blue whale behaviour Action 3: Anthropogenic noise in biologically important areas will be managed such that any blue whale continues to use the area without injury, and is not displaced from a foraging area	Refer Section 6.5.3 Not inconsistent assessment: The assessment of acoustic emissions has considered the potential impacts to pygmy blue whales. Acoustic emissions from project vessels will not cause injury to any pygmy blue whale. There are no known or possible foraging areas for pygmy blue whales within or adjacent to the Operational Areas. If the GPGT Survey Program within the Operational Areas overlaps with an individual northbound or southbound migration, they may deviate slightly from the migratory route, but will continue on their migration.	N/A
	Action Area A.4: Minimising vessel collisions	Action 3: Ensure the risk of vessel strikes on blue whales is considered when assessing actions that increase vessel traffic in areas where blue whales occur and, if required, appropriate mitigation measures are implemented	Refer Section 6.6.2 Not inconsistent assessment: The assessment of vessel collision with marine fauna has considered the potential risks to pygmy blue whales. If the GPGT Survey Program within the Operational Areas overlaps with an individual northbound or southbound migration, they may deviate slightly from the migratory route, but will continue on their migration. Vessel collisions with pygmy blue whales are highly unlikely to occur, given the very slow vessel speeds.	EPO 10 C 4.1 PS 4.1
	Action Area B.3: Describing spatial and temporal distribution and defining biologically important habitat	Action 2: Identify migratory pathways between breeding and feeding grounds Action 3: Assess timing and residency within Biologically Important Areas	Not inconsistent assessment: Woodside contributes to Action Area B3 via its support of targeted research initiatives (e.g. satellite tracking of pygmy blue whale migratory movements (Double et al., 2014)[j].	N/A

6.8 First Nations cultural features and heritage values assessment

As described in Section 4, the identification of cultural features and heritage values of the environment as well as the social, economic and cultural features important to First Nation's people is integral to understanding the environment and any potential impacts and risks to the environment.

In line with Woodside's First Nations Communities Policy (Woodside, 2022), Woodside seeks to avoid damage or disturbance to cultural heritage (including intangible heritage) and, if avoidance is not possible, minimise and mitigate the impacts, in consultation with First Nation communities and Traditional Custodians. Please note that the First Nations Communities Policy is reviewed regularly and is updated as required. The First Nations Communities Policy is made available on our website, along with the other Board policies: https://www.woodside.com/who-we-are/corporate-governance-and-policies Mitigation can include any measure or control aimed at ensuring the viability of the intangible cultural heritage and its intergenerational transmission. This can include reducing impacts and risks to environmental features that are associated with intangible cultural heritage (UNESCO, 2003; Australia ICOMOS, 2013).

It is important to note that not all topics raised by First Nations groups/individuals through consultation are considered values for the purpose of the cultural features and heritage values impact assessment below. A number of topics were raised in the context of a general interest in environmental management and ecosystem health (i.e. natural environment interest), where the group/individual was seeking further information about potential impacts and risks from the GPGT Survey Program on a receptor. As these interests relate to the maintenance of the natural environment, these are adequately addressed through impact and risk assessments described in Sections 6.5 and 6.6 respectively and not further assessed below.

Description of source of risk
Physical presence of vessels
To conduct the GPGT Survey Program, at least two project vessels will be present in the Operational Areas. The geophysical surveys are expected to take approximately 40 days to complete and the geotechnical surveys approximately 80 days to complete, this may occur as a single campaign or could be split over a number of campaigns (as defined in Section 3.5).
Vessels do not plan to anchor within the Operational Areas during activities and instead maintain positioning using DP. The physical presence and movement of project vessels within the Operational Areas has the potential to displace other marine users. All vessels will display navigational lighting and external lighting on a 24-hour basis, as required for safe operations.
No support vessels are required for survey activities and no permanent survey equipment is planned to be left on the seabed following completion of the GPGT Survey Program. Geophysical survey equipment is towed at a distance of approximately three times the water depth from the stern and within the 500 m exclusion zone of the vessel. Geotechnical equipment is deployed near vertical and is therefore, in close proximity to the working vessel.
Acoustic emissions from vessels and survey equipment
Vessels and operation of dynamic positioning systems
Project vessels will generate noise both in the air and underwater, due to operating thrusters, engines and moving propellers. These noises will contribute to and can exceed ambient noise levels, which range from around 90 dB re 1 µPa (root mean square sound pressure level (rms SPL)) under very calm, low wind conditions, to 120 dB re 1 µPa (rms SPL) under windy conditions (McCauley, 2005).
Thruster noise (from cavitation caused by propellers) is typically the most significant noise source for vessels holding station, with other noise sources typically relatively minor (McCauley, 1998).
Thruster noise is typically high intensity and broadband in nature. Project vessels will maintain position using main engines and/or thrusters (including use DP systems) for short durations while the vessel is maintaining station prior to and during geotechnical surveying. There is no applicable sound data available for a typical DP vessel; however, based upon past research, frequencies and sound levels are expected to be less than those from DP vessels. Near and far field underwater noise measurements were taken in 2011 for the MAERSK Discoverer DP drill rig used on the NWS. The rig DP system (similar to the system proposed for the survey vessels) emitted tonal signals between 200 Hz and 1.2 kHz, which is within the auditory band width of whales. The measured source level was between 176 and 186 dB re 1 µPa @ 1 m.
Vessels may use DP while the vessel is maintaining position. McCauley (1998) measured underwater broadband noise equivalent to about 182 dB re 1 µPa at 1 m (rms SPL) from a support vessel holding station in the Timor Sea; it is expected that similar noise levels will be generated by vessel used for this GPGT Survey Program.
The physical presence of, and the underwater noise generated by project vessel operations has the potential to cause temporary and localised disturbance to marine fauna (e.g. displace or attract resulting in behavioural changes) in response to received continuous noise levels of 120 dB re1 µPa (rms SPL) (Southall et al., 2007).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Description of source of risk							
Geophysical survey activities Geophysical sources are used for bathymetric mapping and shallow sub-bottom profiling, penetrating to depths of about 60 m below the seabed. The geophysical surveys will use a range of sources (Table 3-3). Underwater sound produced by the geophysical and geotechnical survey instruments has the potential to affect marine fauna that may pass within close proximity to survey operations. There may be potential effects to habitats and ecosystems that have cultural significance (i.e. benthic invertebrate communities, planktonic communities, KEFs). Refer to Sections 6.5.3 and 6.5.4 for more details. ***Unplanned hydrocarbon release from vessel collision (basis of EMBA)*** The GPGT Survey Program will involve primarily one survey vessel undertaking each activity, though allowance for two survey vessels in the Operational Areas at any one time is provided. Support vessels are not proposed as part of the survey and vessel transfer activities are not planned during this survey (except in an emergency). The worst-case credible hydrocarbon release would be breach of the survey vessel's largest fuel tank through collision with a third-party vessel. The EMBA modelling assessed the extent of a marine diesel spill volume of 182 m³ for all seasons, using an historic sample of wind and current data for the region. The modelling was conducted by RPS using a three-dimensional hydrocarbon spill trajectory and weathering model (SIMAP, Spill Impact Mapping and Analysis Program) (RPS, 2023) as described in Section 6.6.1.							
Planned activity aspect	*The potential environmental impact from the GPGT Survey Program to species that have a cultural feature or heritage value have been summarised below to provide the context related cumulative impact on the cultural feature or heritage value.*						
	Impact significance level						
Environmental impact assessment to marine species	Marine mammals	Marine reptiles	Fish	Seabirds	Coral	Seagrass	Mangroves
6.5.3 and 6.5.4 – Routine acoustic emissions	Slight (E)	Negligible (F)	Negligible (F)	N/A	N/A	N/A	N/A
6.5.5 – Routine light emissions: external lighting on MODU and project vessels	N/A	Negligible (F)	Negligible (F)	Slight (E)	N/A	N/A	N/A
Unplanned activity aspect	*The potential environmental risk from the GPGT Survey Program to species that have a cultural feature or heritage value have been summarised below to provide the context related cumulative risk on the cultural feature or heritage value.*						
	Risk rating						
Environmental risk assessment to marine species	Marine mammals	Marine reptiles	Fish	Seabirds	Coral	Seagrass	Mangroves
6.6.1 – Accidental hydrocarbon release: vessel collision	Moderate	Moderate	Moderate	Moderate	Low	Low	Low

Impact and risk assessment

The GPGT Survey Program has the potential impact cultural features and heritage values through the following ways:

Archaeological heritage:

- Places that are identified in the literature for their value as archaeological sites can be assumed to be impacted where there is an impact to the archaeological or scientific values of its tangible elements. This could include damage or disturbance of archaeological material or to the archaeological context.

Intangible cultural heritage:

- Songlines: Songlines can become lost, fragmented, or broken when there is a loss of Country or forced removal from Country (Neale and Kelly, 2020:30). Physical sites that have been identified as comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. It is noted that oil and gas infrastructure exists in many areas of the NWS, and that songlines are still acknowledged and recognised. It is inferred that if there were to be any impacts to surviving songlines these would be significantly more likely to be described as qualitative (i.e. “weaken” a songline) rather than binary or absolute (i.e. destroy a songline).
- Creation/dreaming sites; sacred sites; ancestral beings: Activities that physically alter landscape features may be assumed to potentially impact values of creation/dreaming sites, sacred sites or ancestral beings.
- Ceremonial sites: Activities that prevent the performance of ceremony at these sites will directly impact its values.
- Cultural obligations to care for Country: Environmental impacts may be assumed to impact rights and obligations to care for Sea Country. Exclusion of Traditional Custodians from Sea Country (e.g. by restricting access) or decision-making processes (e.g. by not conducting ongoing consultation) are other potential sources of impact.
- Knowledge of Country/customary law and transfer of knowledge: Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population. Therefore, the transmission of these skills is expected to be impacted where there are impacts at the species/population level. Limitations on access to sites or disruption/relocation of First Nations communities may have implications for the preservation of First Nations knowledge.
- Cultural safety refers to respecting local Lore and culturally significant areas to protect individuals from cultural harm. There are many cultural implications for those (Aboriginal and non-Aboriginal) who do not follow cultural advice or access Country in culturally inappropriate ways.
- Connection to Country: Where people are displaced or disrupted (e.g. during colonisation) or where there is a loss of technical skills or environmental knowledge this may damage connection to Country (McDonald and Phillips, 2021).
- Access to Country: Impacts to access to Country may be classified as temporary (e.g. where exclusion zones exist around activities for safety reasons) or permanent (e.g. where infrastructure obstructs access or navigation). Impacts to access to Country can only occur in areas that were traditionally accessed by Traditional Custodians. As described in Section 4.9, this is anticipated to be focussed on areas adjacent to the coast.
- Kinship systems and totemic species: It is assumed that marine species may have kinship/totemic relationships to Traditional Custodians, but it is understood that these relationships do not prohibit people outside of that “skin group” from hunting or eating that same species (Juluwarlu, 2004). It is therefore inferred that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals.
- Resource collection: Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, marine species (as resources) will be impacted where there is an impact at the species/population level.

Marine ecosystems and species:

- Marine ecosystems may hold both cultural and environmental value (see Section 4.9), with cultural and environmental values intrinsically linked (DCCEEW, 2023; MAC, 2021 as cited in Woodside, 2023a). It necessarily follows that an impact to marine ecosystems has the potential to impact cultural features where the impact is detectable within Sea Country—the seascape which Traditional Custodians view, interact with or hold knowledge of.

Archaeological heritage

Onshore/intertidal archaeological sites

No coastal areas or islands exist within the Operational Areas. A review of the of Department of Planning, Lands and Heritage’s Aboriginal Heritage Inquiry System identified no registered Aboriginal Sites or Other Heritage Places in the EMBA).

Archaeological sites may exist in intertidal landscapes within the EMBA and may be exposed to hydrocarbon from an unplanned spill, however there is no anticipated impact pathway from the presence of hydrocarbons on archaeological values, as this is not expected to impact the fabric or context of sites on an exposed shoreline site. Impacts to the heritage value of fish traps from hydrocarbons in an unplanned spill may occur indirectly through impacts to fish. However, it is expected that continued use of fish traps beyond their archaeological value will be preserved where fish

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact and risk assessment

species and distribution are maintained at a population level. With regard to fish, refer to species specific assessment below.

Submerged archaeological sites

No submerged archaeological sites have been identified beyond terrestrial or intertidal areas, with the exception of two sites at Murujuga in Cape Bruguieres channel and Flying Foam Passage (Benjamin et al., 2020, 2023), which are outside of the EMBA. Nevertheless, there is the potential for submerged archaeological sites on the Ancient Landscape. A maritime archaeologist has completed a desktop review of the available geophysical data and concluded that this activity (including the geotechnical sampling) represents a very low risk to undiscovered UCH (Comber Consultants, 2023). In response to the Comber Consultants report Woodside has implemented Controls C22.2 and C22.3 (cultural heritage awareness induction of relevant marine crew, and implementation of an Underwater Cultural Heritage Unexpected Finds Procedure). Revised areas not encompassed by previous assessment will be assessed consistent with Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (DCCEEW, 2024c).

Submerged archaeological sites (locations undefined) may exist on the Ancient Landscape within the broader EMBA. However, given the EMBA is driven by an unplanned hydrocarbon spill, it is not expected to impact the seabed or archaeological material on or within it. Therefore, there is no anticipated impact pathway to submerged archaeological sites in the broader EMBA from the GPGT Survey Program.

Rivers, waterholes, tidal channels and seeps

Oceanographic studies indicate that both the open ocean and coastal zone off Western Australia are well-mixed and saline. Submerged former water sources (e.g. riverbeds) may exist within the EMBA which are archaeologically prospective or culturally significant. The maritime archaeologist's report notes that there while there are areas within the Operational Areas that have potential for the accumulation of significant deposits of archaeological materials as well as for the development of complex cultural and spiritual associations, the geotechnical and geophysical survey activities present a very low risk to undiscovered UCH (Comber Consultants, 2023). In response to the Comber Consultants report, Woodside has implemented Controls C22.2 and C22.3 (cultural heritage awareness induction of relevant marine crew, and implementation of an Underwater Cultural Heritage Unexpected Finds Procedure).

The EMBA is driven by an unplanned hydrocarbon spill, which is not expected to impact the seabed or features on it. As such, there is no anticipated impact pathway from this activity to submerged water sources in the broader EMBA. In the highly unlikely and unmitigated worst case, unplanned hydrocarbons may contact shorelines and receptors such as mangroves, and shoreline habitats. These habitats may contain brackish or fresh water due to runoff from land. Given hydrocarbon characteristics and rapid weathering, an unplanned release is expected to have no lasting effect on any freshwater sources along the shoreline.

General intangible values

Songlines

Management of intangible cultural heritage can include reducing impacts and risks to environmental features that are associated with intangible cultural heritage (UNESCO, 2003; Australia ICOMOS, 2013). Impacts to marine plants, animals and other cultural features associated with songlines might impact the intergenerational transmission of knowledge of songlines when individuals can no longer witness or interact with the cultural features tied to songlines on Country. Therefore, managing songlines may require environmental controls protecting species at a population level, including migratory routes. Refer to species specific assessment below for further information.

Physical features comprising a component of a songline are important to protect to prevent the fragmenting or breaking apart of songlines and loss of sacred cultural knowledge. Songlines can become lost, fragmented, or broken when there is a loss of Country or impact to culturally important physical features (Neale and Kelly 2020:30). No specific details of songlines within the EMBA have been provided by relevant persons during consultation for this Activity, and no landforms typical of songlines (e.g. mountains, rivers, caves and hills (Higgins 2021)) are anticipated to be impacted by the Activity.

In publicly available literature, Murujuga is acknowledged as a starting point for songlines, including the flying fox songline (MAC, 2023a). Precise location of this songline, and features of this songline that might be impacted, are not clearly articulated in the reviewed sources, but it is stated that "the sea is a source of creation for flying foxes" (DEC, 2013). Although this does not provide the specificity required to determine the location of the flying fox songline or associated sites. Consultation with MAC and other Traditional custodians has not identified the flying fox songline as overlapping the EMBA, and flying foxes do not occur within the EMBA.

Kearney et al. (2023) notes a connection between the Kangaroo songline and a pair of submerged waterholes identified through seabed mapping by the Deep History of Sea Country project, which later found submerged artefacts in Flying Foam passage. Noted that due to the water depth it is not expected that active or former freshwater sources that may connect to the Kangaroo or other songlines would be within the Operational Areas. Consultation with MAC and other Traditional custodians has not identified these songlines as overlapping the EMBA, and these species do not occur within the EMBA.

In publicly available literature, Murujuga is acknowledged as the starting point for the seven sisters songline (Bainger, 2021). Precise location of this songline, and features of this songline that might be impacted, are not clearly

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact and risk assessment

articulated in the reviewed sources. Consultation with MAC and other Traditional custodians has not identified the seven sisters songline as overlapping the EMBA.

While the presence of songlines is generally raised in the literature across several relevant communities, no specific details have been identified. The literature review has also identified culturally important features, which are known to be commonly associated with songlines (e.g. marine species and landforms; Section 4.9.2), and these have been separately assessed. Further assessment of intangible values and marine species are provided below.

Creation/dreaming sites; sacred sites; ancestral beings

Woodside has undertaken all reasonable steps to identify creation and dreaming sites, and places associated with ancestral beings within the EMBA. No such sites have been identified. A review of relevant literature has been undertaken which has identified creation, dreaming and ancestral narratives related to the sea more broadly without confirming where (if anywhere) these overlap the EMBA (see Section 4.9.4). These references are of a general nature, and do not identify any features or values requiring specific protection or management from the proposed activities.

Sea serpents or water serpents are common in Aboriginal creation narratives, and several references were identified in the reviewed literature. The majority of these refer to serpents residing within inland rivers or pools outside of the EMBA (Barber and Jackson, 2011; Dury v Western Australia [2018] FCA 1849, Hayes v Western Australia [2008] FCA 1487; Juluwarlu, 2004; Kalbarri Visitors Centre, 2023; Water Corporation, 2019; Zaunmayr, 2016; Department of Parks and Wildlife, 2014; Yu, 1999; DBCA, 2020). In some versions, the serpent originates from the sea or coast and creates the rivers as it heads inland. Barber and Jackson (2011) also recount a story where a freshwater serpent pushes a sea serpent back into the ocean where it presumably continues to reside. This does not provide the specificity required to determine the location of sea serpents within the sea, and it is possible that the ocean as a whole (out to and beyond other continents) should be viewed generally as housing the sea serpent(s). Consultation with Traditional Custodians have not identified activities of this GPGT Survey Program as having an impact on sea serpents. However, by analogy to other water serpent narratives across Australia, possible impact pathways may include interruption of its path by blocking or reducing flows of water, damaging sacred sites such as thalu or rock art sites or depleting water sources. Relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

No impacts to water flows (either tidal movement or ocean currents) or depletion of water sources are anticipated from this GPGT Survey Program. Features of the landscape with the potential for connection to creation/dreaming stories and ancestral beings are likely within the EMBA on the Ancient Landscape. However, there are no anticipated impact pathways to submerged landscape features within the broader EMBA from the GPGT Survey Program.

Ceremonial sites

All mentions of active ceremonial sites were confined to onshore locations and no direct impacts to onshore ceremonial sites are anticipated from the GPGT Survey Program. However, indirect impacts may occur where ceremonies cannot be performed due to limitations on access, loss of knowledge or impacts to the environment, which are further described below.

Cultural obligations to care for Country

Caring for Country collectively refers to the cultural obligations of individuals and groups, as well as rituals and ceremonies required for the physical and spiritual health of the environment. Lack of access to coastally located cultural sites that carry songlines or remain ceremonially important can impact First Nations people's livelihoods and impact their ability to carry out cultural obligations on Country. While shoreline accumulation were not predicted by the modelling to occur at any location, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

Knowledge of Country/customary law and transfer of knowledge

Cultural knowledge about Sea Country/customary law and the intergenerational transmission of knowledge are important values identified through consultation, assessments and the literature review.

Transfer of knowledge includes continuing traditional practices to pass on practical skills. Direct impact to communities practicing these skills will inherently occur when relevant aspects of the environment disappear, are displaced or suffer a reduction in population—for example traditional fishing methods require the survival of traditional fish resources. Therefore, ensuring the transmission of cultural knowledge may require environmental controls protecting species and migratory pathways at a population level. Refer to species specific assessment below for further information.

Connection to Country

Connection to Country describes the multi-faceted relationship between First Nations people and the landscape, which is envisioned as having personhood and spirit. Connection to Country may be damaged where people are displaced or disrupted (e.g. during colonisation) or where there is a loss of technical skills or environmental knowledge (McDonald and Phillips, 2021). No impacts of this nature are considered to arise from this GPGT Survey Program. Access to Country is discussed below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Access to Country

Access to Country, including Sea Country, is necessary for the continuation of other values including caring for Country and the transfer of traditional knowledge. Access is also a value in its own right, as a continuation of traditional Sea Country access and use.

Access to areas within the Operational Areas may be limited where exclusion zones are established around vessels for safety purposes. However, due to the location offshore, this is not expected to impact on Access to Country. Access to Country within the EMBA would be limited to temporary exclusion in areas where there are hydrocarbons present. However relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

Cultural safety

Cultural safety refers to respecting local Lore and culturally significant areas to protect individuals from cultural harm. There are many cultural implications for those (Aboriginal and non-Aboriginal) who do not follow cultural advice or access Country in culturally inappropriate ways. Cultural safety may include observing gender restricted areas, respecting significant places and restricted areas as well as following the advice from those with cultural authority. Therefore, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

Kinship systems and totemic species

Individuals may have kinship to specific species (Smyth, 2008; Juluwarlu, 2004) or a responsibility to care for species (Muller, 2008). These relationships are understood to impose obligations on Traditional Custodians. It is understood that these obligations do not impose restrictions on other people generally, but it is considered that impacts to species at a population level may inhibit Traditional Custodians with kinship relationships' ability to perform their obligations where this results in reduced or displaced populations. It is therefore considered that the management of totemic or kinship species applies at the species/population level and not to individual plants and animals. As such, impacts to individual marine fauna is not expected to impact on the totemic or kinship cultural connection.

Totemic species identified during consultation include whales, fish, stingrays and octopuses. Refer to species specific assessment below for further information. In the highly unlikely event of a hydrocarbon spill relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

Resource collection

A suite of marine species has been identified through consultation and literature as important resources, particularly as food sources. For example, Sea Country resources of noted relevance to Thalanyji people which may be present in the vicinity of the Montebello Islands include dugongs, majun (marine turtles), turtle eggs, fish and shellfish. Through consultation, Karriyara Aboriginal Corporation similarly identified marine mammals, fish, molluscs including bivalves, gastropods and cephalopods as important for resource collection. Other resource species include seabirds, sea urchins and mangrove seeds.

In addition to their immediate value as sustenance, the gathering and preparation of these resources are informed by cultural knowledge, and an inability to use these resources may result in a loss of ability to transfer that knowledge to future generations. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these communities may be impacted where there is an impact at the species/population level.

Impacts from planned activities on the marine environment, including resources important to First Nations people, is expected to be limited to negligible or slight and therefore impacts that result in population effects (e.g. population decline, changes in migration routes, etc) are not expected. Impacts to potential resources within the EMBA, in the highly unlikely event of hydrocarbon spill, are described and risk assessed in Section 6.6.1 and are not expected to result in species/population level impacts. While shoreline accumulation was not predicted by the modelling to occur at any location, relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G.

Marine ecosystems and species

Marine mammals (whale, dolphins, dugongs)

There are increase ceremonies/rituals for species of animals and plants important to First Nations, to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature were confined to onshore locations, though the values may extend offshore where, for example, the thalu relates to marine species populations. As thalu ceremonies are performed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals. Reviewed literature (Deloitte 2020) also includes information that is marked as information that cannot be copied, reproduced or used without consent. The values described in the literature are environmental in nature, apply to marine mammal behaviours at a population level and are managed through existing environmental controls in Sections 6.5 and 6.6.

Related intangible cultural heritage may include the transmission of cultural knowledge about whales and whale behaviour, including birthing areas, whale communication and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn 2021). Whale symbology expressed through stories, music, and dance can reflect a group's connections with the sea,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact and risk assessment

as well as marine fauna, which then comprise a group's cultural values (Ardler, 2021; Bursill et al., 2007; Cressey, 1998). Whales also speak to a broader connection that exists between First Nation people and their surrounding environment. Beyond mythology and symbolism, whales can be connected with various economic and social functions associated with everyday life. Cultural knowledge of whales, whale migration, behaviour and the related marine environment may all be important in ensuring the continuation of these socio-economic functions and other related activities that remain valuable to First Nations people (Fijn, 2021). No impacts to communities' ability to perform or transmit stories, music or dance are anticipated from the GPGT Survey Program. Where timing or performance is linked to sighting or engaging with these species, impacts may occur where numbers or migration behaviours are impacted at a population level.

First Nations groups have expressed interest about whale migratory routes and studies. Inter-generational transmission of cultural knowledge (including songlines) relating to marine mammals may be impacted where changes to population or behaviour at a population level results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003).

As described in the relevant environmental impact and risk assessments in Sections 6.5 and 6.6 respectively, potential impacts to cetaceans from planned activities are limited to behavioural impact, which may include temporary and localised deviations from migratory pathways for cetaceans. However, no permanent impacts preventing cetaceans from entering or occupying the areas have been identified. These impacts and risks are not considered to be ecologically significant at a population level, and hence are not expected to impact the value of marine mammals, including the transmission of cultural knowledge. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained.

Marine reptiles (turtles, sea snakes, crocodiles)

Turtles and crocodiles have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level.

Intangible cultural heritage may also include the transmission of cultural knowledge about marine reptiles, such as nesting areas, hunting areas and migratory patterns. Cultural knowledge may also be conveyed through stories, such as the turtle being trapped in the sea as a result of its greed for berries as recounted by Department of Biodiversity, Conservation and Attractions (2020). Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021). First Nations groups have expressed an interest regarding turtle monitoring programs and migration patterns. Activities that impact turtle/crocodile populations and their marine environment may have an indirect impact on some Aboriginal communities as this can limit access to cultural sites or deplete hunting areas that would threaten local food security (Delisle et al., 2018:251). Inter-generational transmission of cultural knowledge (including songlines) relating to marine reptiles may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003).

As described in the relevant environmental impact and risk assessments in Sections 6.5 and 6.6, respectively, potential impacts to marine reptiles from planned activities are likely to be restricted to temporary behavioural changes, which are not considered to be ecologically significant at a population level, and hence not expected to impact the value of marine reptiles, including the transmission of cultural knowledge or use as a resource. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained.

Fish and cephalopods

Fish and squid have been identified through consultation and existing literature as an important resource, particularly as food sources. Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level.

Through consultation, fish were identified as important agents in the management of the broader ecosystem. It may be assumed that inter-generational transmission of cultural knowledge relating to fish may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline). In addition, a MAC (2019) identified whale sharks as a culturally important species associated with stories which describe them as guardians of the sea. This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003). Intangible cultural heritage associated with fish and whale sharks, including inter-generational knowledge regarding fishing techniques and migratory patterns, can be managed by reducing impacts to fish in nearshore marine environments to which this cultural knowledge is intrinsically connected.

The octopus is an important totem to Ngarla People and features in the creation story of Solitary Island. There are increase ceremonies/rituals for species of squid and octopus to enhance or maintain populations. Thalu are places where these increase ceremonies are performed. All mentions of active ceremonial sites in the reviewed literature

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact and risk assessment

were confined to onshore locations, though the values may extend offshore where, for example, the thalu relates to marine species populations. As thalu ceremonies are preformed to maintain and increase populations of marine species, it is inferred that management applies at the species/population level and not to individuals.

As described in the relevant environmental impact and risk assessments in Sections 6.5 and 6.6, respectively, the potential impacts from planned activities on fish[43] are considered to be localised and with slight, short-term (<1 year) impact potential on species (or lower), but not affecting ecosystem function, physical or biological attributes. Impact potential is not considered to be ecologically significant at a population level. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained.

Seabirds

Seabirds, specifically shags, have been identified through literature as a culturally significant species (Malgana Land and Sea Management et al., 2021), as well as a resource (seabird eggs; Smyth, 2007). Direct impact to communities using these resources will inherently occur when the resource disappears, is displaced or suffers a reduction in population. Therefore, these species (as resources) will be impacted where there is an impact at the species/population level. Intangible cultural heritage may also include the transmission of cultural knowledge about seabirds, such as nesting areas, hunting areas and migratory patterns. Such cultural knowledge may be associated with various cultural functions and activities that support the social and economic life of a community (Fijn, 2021) Inter-generational transmission of cultural knowledge relating to seabirds may be impacted where changes to population or behaviour results in reduced sightings (e.g. through population decline, changes to migration routes or changes to migration seasonality). This transfer of knowledge may be integral to managing a group's intangible cultural heritage (UNESCO, 2003).

As described in the relevant environmental impact assessments in Sections 6.5 and 6.6, the potential impacts from the GPGT Survey Program on seabirds is limited to slight. The potential for temporary behavioural disturbance localised around vessels from light is not expected to result in a substantial adverse effect on species' population, and light emissions will not seriously disrupt the lifecycle of an ecologically significant proportion any migratory bird species. In terms of risk, as described in Section 6.6.1 a change in marine fauna behaviour or injury/mortality to seabirds and migratory shorebirds may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, expected rapid weathering to below impact thresholds, and the mobile transient nature of individuals, unplanned hydrocarbon releases are not expected to substantially modify important habitat for migratory species. As such, cultural values and intangible cultural heritage associated with these species are expected to be maintained.

Benthic habitats (coral, seagrass)

Through consultation, First Nations groups identified benthic habitats as valuable for their ecological values, including corals attracting fish and seagrass providing shelters for fauna, as well as an important habitat for dugongs.

There is no overlap between the Operational Areas and coral/seagrass habitats as water depth is more than 170 m, and no planned impacts to coral/seagrass habitats from the GPGT Survey Program.

In terms of risk, as described in Section 6.6.1 a change in habitat may occur following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, short-term exposure, as well as the response strategies planned to be deployed, an unplanned release may result in localised impacts coral and seagrass habitats. As such, cultural values and intangible cultural heritage associated with benthic habitats are expected to be maintained.

Shoreline habitats (mangroves/salt marshes)

Through consultation, First Nations groups identified shoreline habitats as valuable for their ecological values, including mangroves for providing shelter to marine invertebrates, which are identified resources, and potential nursery for turtles. In consultation, Kariyarra Aboriginal Corporation identified an interest in coastal native vegetation but did not provide any specific details. Literature notes that shoreline habitats including mangroves are also valued for the flora and fauna they are associated with and support (Commonwealth of Australia 2002) and Smyth (2007) reports that mangrove seeds are used as a resource by Ngarda-Ngarli.

There is no overlap between the Operational Areas and mangrove/salt marsh habitat, and no planned impacts to mangroves from the GPGT Survey Program.

In terms of risk, as described in Section 6.6.1 a change in habitat may occur due to a change in water or sediment quality following an unplanned hydrocarbon release. Given hydrocarbon characteristics, rapid weathering, as well as the response strategies planned to be deployed an unplanned release may result in localised impacts to coral and seagrass habitats. As such, cultural values and intangible cultural heritage associated with shoreline habitats are expected to be maintained.

[43] Squid and octopus are considered to be impacted through similar impact pathways as fish, and hence the conclusion represented here are considered appropriate for cephalopods.

Impact and risk assessment
Marine park/coastal reserves A number of marine parks are jointly managed with First Nation groups. The groups are responsible for sharing management decisions and also for sharing in the overall responsibility of making sure the marine park fulfills its purpose. Operational Area A overlaps the Montebello AMP. In terms of risk, as described in Section 6.6.1, shoreline accumulation was not predicted by the modelling to occur at any location. The relevant cultural authorities will be engaged in the event of a spill that may affect them, as specified in Appendix G. ***Conclusion*** The impact and risk assessment for cultural features and heritage values has determined that the planned activities are unlikely to result in an impact greater than negligible (F) and unplanned activities are assessed to have a residual risk rating of High (or lower).

ALARP demonstration				
As marine ecosystems may hold both cultural and environmental value (see Section 4.9.1), with cultural and environmental values intrinsically linked, in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Sections 6.7 and 6.8 will reduce impacts to cultural features and heritage values, including marine species and habitats.				
Control considered	***Control feasibility (F) and cost/ sacrifice (CS)[44]***	***Benefit in risk reduction***	***Proportionality***	***Control adopted***
Apply a 'living heritage[45]' management approach. Woodside seeks advice and incorporates Traditional Custodian cultural knowledges across our activities. Cultural safety considerations are factored for our workforce and the Traditional Custodian community.	F: Yes. CS: Minimal.	Implementation of the 'living heritage' approach pays acknowledgement and respect to Traditional Custodian communities. It supports the transfer of cultural knowledges and is an effective strategy to manage intangible cultural values.	Benefits outweigh cost/sacrifice.	Yes C 22.1
Project inductions to all relevant marine crew, prior to the individual commencing the activity, will include information on cultural features and heritage values, including tangible and intangible cultural heritage.	F: Yes. CS: Minimal.	Ensures workforce is suitably aware of cultural features and heritage values in the area they are operating.	Benefits outweigh cost/sacrifice.	Yes C 22.2
Unexpected finds of potential UCH are managed in accordance with the Unexpected Finds Procedure set out in Section 7.5.	F: Yes. CS: Minimal.	Allows management of new finds in accordance with legislative requirements, expert advice and community expectations.	Benefits outweigh cost/sacrifice.	Yes C 22.3

[44] Qualitative measure.

[45] Living heritage supports community and individual identity. Intangible cultural heritage is 'living heritage' that is inherited from ancestors and passed on to their descendants. It is comprised of many influences, including oral traditions, art, social practices, rituals and ceremonies, cultural knowledge and practices. It is transmitted from generation to generation, and evolves in response to the environment. Woodside applies a 'living heritage' approach to its cultural heritage management. This includes ensuring that Traditional Custodians are given voice to identify interests, transmit information and express concerns. Woodside works with Traditional Custodians to support and follow appropriate cultural protocols, including calling to Country, conducting smoking ceremonies (in areas where this custom is appropriate) and undertaking cultural awareness. Woodside will collaborate and provide relevant information it holds to groups such as Heritage Management Committees where they are established.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Should it be identified that relevant cultural authorities may be affected in the unlikely event of a spill, Woodside will engage with those parties as appropriate and in alignment with the First Strike Plan.	F: Yes. CS: Minimal.	Engaging with relevant cultural authorities that may be impacted by a spill will allow the Traditional Custodians to identify areas of concern.	Benefits outweigh cost/sacrifice.	Yes Adopted, see Appendix D
Desktop assessment using existing publicly available and Woodside data conducted by a suitably qualified maritime archaeologist to inform areas for survey activities and/or installation of equipment that will cause seabed disturbance (in areas not previously disturbed) at depths of <130 m to avoid or where not possible, minimise physical impacts to cultural heritage areas or prospective areas.	F: Yes. CS: Minimal.	Desktop assessment using existing publicly available and Woodside data conducted by a suitably qualified maritime archaeologist will inform potential exclusion or avoidance areas for seabed disturbance. Implementing this process will protect and minimise any physical impacts to UCH. Additionally, this process is not inconsistent with the Guidelines on the application of the Underwater Cultural Heritage Act 2018: Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters (DCCEEW, 2024a).	Benefits outweigh cost/ sacrifice.	Yes C 23.1
Unexpected finds of potential UCH sites/features, including First Nations UCH are managed in accordance with the Unexpected Finds Procedure set out in Section 7.5.	F: Yes. CS: Minimal.	Allows management of Unexpected Finds in accordance with legislative requirements, (including Underwater Cultural Heritage Guidance for Offshore Developments and the Guidelines to Protect Underwater Cultural Heritage under the Underwater Cultural Heritage Act 2018 (Cth), expert advice and community expectations.	Benefits outweigh cost/sacrifice.	Yes C 23.2
Relevant vessel crew and ROV operators will be advised in an induction of the potential to encounter UCH, and of their requirement to follow the Unexpected Finds Procedure set out in Section 7.5.	F: Yes. CS: Minimal.	Meets legislative requirements and community expectations.	Benefits outweigh cost/sacrifice.	Yes C 23.3
Report any potential UCH finds to relevant stakeholders and authorities in accordance with the Unexpected Finds Procedure, UCH Act and the ATSIHP Act.	F: Yes. CS: Minimal.	Ensures workforce are suitably aware of legal and process requirements for managing cultural features and heritage values.	Benefits outweigh cost/sacrifice.	Yes C 23.4

ALARP statement:

On the basis of the impact and risk assessment outcomes and use of the relevant tools appropriate to the decision type (i.e. Decision Type A, Section 2.5.1.1.1), Woodside considers the adopted controls appropriate to manage the potential impacts and risks to cultural features and heritage values. As no reasonable additional/alternative controls were identified that would further reduce the impacts without grossly disproportionate sacrifice, the impacts are considered ALARP.

Demonstration of acceptability

Acceptability statement:

The impact and risk assessment has determined that, given the adopted controls, planned activities are unlikely to result in an impact greater than negligible and unplanned activities are assessed to have a residual risk rating of moderate (or lower).

The GPGT Survey Program and the EMBA are not expected to have a significant impact (e.g. changes in population levels) on MNES including marine fauna with a First Nations connection with, or traditional use in nearshore areas as defined above. While the Operational Areas and EMBA overlap the Ancient Landscape no impacts are predicted as hydrocarbons are expected to remain within the upper water column.

Woodside has engaged with Traditional Custodians adjacent to the EMBA to understand the cultural features and heritage values that may occur and potential impacts from the activity. In the event of an unplanned loss of hydrocarbons Woodside has committed to engaging with relevant cultural authorities that may be affected (Appendix G).

Further opportunities to reduce the impacts have been investigated above. The potential impacts and risks are considered acceptable if the adopted controls are implemented. Therefore, Woodside considers the adopted controls appropriate to manage the impacts and risks to cultural features and heritage values to a level that is acceptable, if ALARP.

	C 23.4 Report any potential UCH finds to relevant stakeholders and authorities in accordance with the Unexpected Finds Procedure, UCH Act and the ATSIHP Act.	PS 23.4 Report any finds of potential UCH in accordance with the Unexpected Finds Procedure, including to: • DCCEEW underwater archaeology section • Australasian Underwater Cultural Heritage Database via DCCEEW.	MC 23.4 Records of potential UCH finds reported to relevant authorities and stakeholders.

[47] *Permit for Entry into a Protected Zone or to Impact Underwater Cultural Heritage would be acquired under the UCH Act.*

7. IMPLEMENTATION STRATEGY

7.1 Overview

Regulation 22 of the Environment Regulations requires an EP to contain an implementation strategy for the activity. The implementation strategy for the GPGT Survey Program confirms fit-for-purpose systems, practices and procedures are in place to direct, review and manage the activities so that environmental risks and impacts are continually being reduced to ALARP and are acceptable, and that EPOs and PS outlined in this EP are achieved.

Woodside, as operator, is responsible for ensuring that the GPGT Survey Program is managed in accordance with this Implementation Strategy and the WMS (Section 1.7).

7.2 Systems, practice and procedures

All operational activities are planned and carried out in accordance with relevant legislation and internal environment standards and procedures identified in this EP (Section 2.4).

Processes are implemented to verify controls to manage environmental impacts and risks to:

- a level that is ALARP and acceptable
- meet EPOs
- comply with PSs defined in this EP.

The systems, practices and procedures that will be implemented are listed in the PSs contained in this EP. Document names and reference numbers may be subject to change during the statutory duration of this EP; this is managed through a change register and management of change process.

7.2.1 Assessment of project fluids

All chemicals that may be operationally released or discharged to the marine environment by the Petroleum Activity are evaluated using a defined framework and set of tools to ensure the potential impacts are acceptable, ALARP and meet Woodside's expectation for environmental performance.

The chemical assessment process follows the principles outlined in the Offshore Chemical Notification Scheme (OCNS), which manages chemical use and discharge in the United Kingdom (UK) and Netherlands. It applies the requirements of the Convention for the Protection of the Marine Environment of the North-East Atlantic (OSPAR Convention). The OSPAR Convention is widely accepted as best practice for chemical management.

All chemical substances on the OCNS ranked list of registered products have an assigned ranking based on toxicity and other relevant parameters, such as biodegradation and bioaccumulation, in accordance with one of the two schemes (as shown in Figure 7-1):

- Hazard Quotient (HQ) Colour Band: Gold, Silver, White, Blue, Orange or Purple (listed in order of increasing environmental hazard).
- OCNS Grouping: E, D, C, B or A (listed in order of increasing environmental hazard). Used for inorganic substances, hydraulic fluids and pipeline chemicals only.

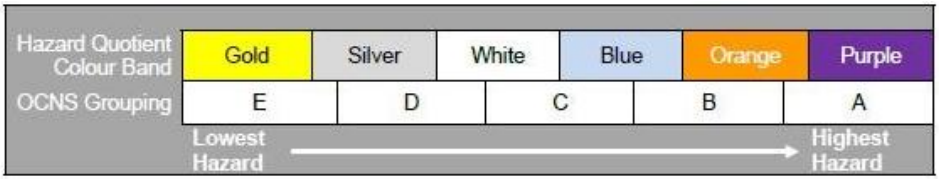

Figure 7-1: Offshore Chemical Notification Scheme ranking

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Chemicals fall into the following assessment types:

- No further assessment: Chemicals with an HQ band of Gold or Silver, or an OCNS ranking of E or D with no substitution or product warnings do not require further assessment. Such chemicals do not represent a significant impact on the environment under standard use scenarios and are therefore considered ALARP and acceptable.
- Further assessment/ ALARP justification required: The following types of chemicals require further assessment to understand the environmental impacts of discharge into the marine environment:
  - chemicals with no OCNS ranking
  - chemicals with an HQ band of White, Blue, Orange or Purple, or an OCNS ranking of A, B or C
  - chemicals with an OCNS product or substitution warning.

This includes assessing the ecotoxicity, biodegradation and bioaccumulation of the chemicals in the marine environment in accordance with the Centre for Environment, Fisheries and Aquaculture Science (CEFAS) Hazard Assessment and Department of Mines and Petroleum (DMP) Chemical Assessment Guide: Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

Chemicals proposed to be selected as part of the petroleum activity will be managed in accordance with the requirements set out by the Australian Government under the Industrial Chemicals Environmental Standard. The standard is a key component of several national reforms to improve approaches to how industrial chemicals are used, produced, imported and managed. Industrial chemicals will be listed on the Industrial Chemicals Environmental Standard Register in one of seven schedules according to their environmental risk.

7.2.1.1 Ecotoxicity

Chemical ecotoxicity is assessed using the criteria used by CEFAS to group chemicals based on their ecotoxicity results Table 7-1. If a chemical has an aquatic or sediment toxicity within the criteria for the OCNS grouping of D or E, this is considered acceptable in terms of ecotoxicity.

Table 7-1: CEFAS OCNS grouping based on ecotoxicity results

Initial grouping	A	B	C	D	E
Results for aquatic-toxicity data (ppm)	<1	>1 to 10	>10 to 100	>100 to 1,000	>1,000
Results for sediment toxicity data (ppm)	<10	>10 to 100	>100 to 1,000	>1,000 to 10,000	>10,000

Note: Aquatic toxicity refers to the Skeletonema costatum EC50, Acartia tonsa LC50 and Scophthalmus maximus (juvenile turbot) LC50 toxicity tests; sediment toxicity refers to Corophium volutator LC50 test.

7.2.1.2 Biodegradation

The biodegradation of chemicals is assessed using the CEFAS biodegradation criteria, which align with the categorization outlined in the DMP Chemical Assessment Guide: Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

CEFAS categorises biodegradation into the following groups:

- readily biodegradable: results of >60% biodegradation in 28 days to an OSPAR harmonised offshore chemical notification format (HOCNF) accepted ready biodegradation protocol
- inherently biodegradable: results >20% and <60% to an OSPAR HOCNF accepted ready biodegradation protocol or result of >20% by OSPAR accepted inherent biodegradation study
- not biodegradable: results from OSPAR HOCNF accepted biodegradation protocol or inherent biodegradation protocol are <20%, or half-life values derived from aquatic simulation test indicate presence.

Chemicals with >60% biodegradation in 28 days to an OSPAR HOCNF accepted ready biodegradation protocol are considered acceptable in terms of biodegradation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.2.1.3 Bioaccumulation

The bioaccumulation of chemicals is assessed using the CEFAS bioaccumulation criteria, which align with the categorization outlined in the DMP Chemical Assessment Guide: Environmental Risk Assessment of Chemicals used in WA Petroleum Activities Guideline.

The following guidance is sued by CEFAS:

- Non-bioaccumulative: Log Pow <3, or BCF ≤100 and molecular weight is ≥700.
- Bioaccumulative: Log Pow ≥3 or BC >100 and molecular weight is <700.

Chemicals that meet the non-bioaccumulative criteria are considered acceptable. If a product has no specific ecotoxicity, biodegradation or bioaccumulation data available, the following options are considered:

- Environmental data for analogous products can be referred to where chemical ingredients and composition are largely identical.
- Environmental data may be referenced for each separate chemical ingredient (if known) within the product.

7.2.1.4 Alternatives

If no environmental data is available for a chemical or if the environmental data does not meet the acceptability criteria outlined above, potential alternatives for the chemical will be investigated, with preference for options with an HQ band of Gold or Silver, or OCNS Group E or D with no substitution or product warnings.

7.2.1.5 Decision

Once the further assessment/ALARP justification has been completed, the relevant environment adviser must concur that the environmental risk as a result of chemical use is ALARP and acceptable.

7.3 Roles and responsibilities

Key roles and responsibilities for Woodside and contractor personnel relating to implementing, managing and reviewing this EP are described in Table 7-2. Roles and responsibilities for oil spill preparation and response are outlined in Appendix G and the Woodside Incident Management Handbook.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-2: Roles and responsibilities

Title (role)	Environmental responsibilities
Office-based personnel	
Woodside Survey Operations Project Manager	• Verify relevant environmental approvals for the activities exist before commencing activity. • Monitor and manage the activity so it is performed as per the relevant standards and commitments in this EP. • Notify the Woodside Environment Adviser in a timely manner of any scope changes. • Liaise with regulatory authorities as required. • Review this EP as necessary and manage change requests. • Ensure all project and support vessel crew members complete a Project (Including HSE) induction. • Verify that contractors meet environmental related contractual obligations. • Liaise with contractors to ensure communication and understanding of environment requirements as outlined in this EP. • Confirm environmental incident reporting meets regulatory requirements (as outlined in this EP) and Woodside's HSE Reporting and Investigation Procedure. • Monitor and close out corrective actions identified during environmental monitoring or audits. • Track compliance with performance outcomes and performance standards as per the requirements of this EP.
Woodside Environmental Adviser	• Prepare environmental component of relevant Induction Package. • Review compliance with performance outcomes and performance standards as per the requirements of this EP. • Ensure relevant Environmental Approvals for the activities exist before commencing activity. • Input to environmental component of relevant Induction Package. • Assist with the review, investigation and reporting of environmental incidents as required. • Assist environmental monitoring and inspections/audits are performed as per the requirements of this EP as required. • Liaise with relevant regulatory authorities as required. • Assist in preparing required external regulatory reports, in line with environmental approval requirements and Woodside incident reporting procedures. • Provide advice to relevant Woodside personnel and contractors to help them understand their environment responsibilities. • Support the Survey Operations Project Manager in ensuring communications and understanding of environment requirements as outlined in this EP. • Provide environmental support for activities through regular engagement with the Woodside Site Representative.
Woodside Corporate Affairs Adviser	• Prepare and implement the Consultation Plan for the GPGT Survey Program. • Report on consultation. • Continuously liaise and provide notification as required as outlined in the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
Woodside Marine Assurance Superintendent	• Source and conduct relevant audit and inspection to confirm vessels comply with relevant Marine Orders and Woodside Marine Charters Instructions requirements.
Woodside Corporate Incident Management Team (CIMT) Duty Manager	On receiving notification of an incident, the Woodside CIMT Duty Manager shall: • Establish and take control of the Incident Management Team and establish an appropriate command structure for the incident. • Assess the situation, identify risks and actions to minimise the risk. • Communicate impact, risk and progress to the Crisis Management Team and stakeholders. • Develop the Incident Action Plan, including objectives for action. • Approve, implement and manage the Incident Action Plan. • Communicate within and beyond the incident management structure. • Manage and review safety of responders. • Address the broader public safety considerations. • Conclude and review activities.
Vessel-based personnel	
Vessels Master	• Ensure the vessel management system and procedures are implemented. • Ensure personnel commencing work on the vessel receive an environmental induction that meets the relevant requirements specified in this EP. • Ensure personnel are competent to perform the work they have been assigned. • Verify SOPEP drills are conducted as per the vessel's schedule. • Ensure the vessel Emergency Response Team has been given sufficient training to implement the SOPEP. • Ensure any environmental incidents or breaches of relevant EPOs or PSs detailed in this EP, are reported immediately to the Party Chief and Woodside Site Representative. • Ensure corrective actions for incidents or breaches are developed, communicated to the Woodside Site Representative, and tracked to closeout in a timely manner. Ensure closeout of actions is communicated to the Woodside Site Representative.
Party Chief/Manager	• Understand and manage environmental aspects of the survey operations per this EP and approval conditions. • Provide copies of documents, records, reports and certifications (as requested by Woodside) in a timely manner to assist in compliance reporting. • Ensure any environmental incidents or breaches of EPOs or PSs detailed in this EP, are reported immediately to the Woodside Site Representative and Woodside Survey Operations Project Manager.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Title (role)	Environmental responsibilities
Woodside Site Representative	• Ensure project personnel adhere to the requirements of this EP so the EPOs are met, and the PSs detailed in this EP are implemented during survey operations. • Ensure environmental incidents or breaches of outcomes or standards are reported as per the Woodside event notification requirements. Corrective actions for incidents and breaches must be developed, tracked and closed out in a timely manner. • Ensure periodic environmental inspections are completed. Monitor and close out corrective actions (Environmental Commitments and Actions Register) identified during environmental monitoring or audits/inspections. • Ensure any environmental incidents or breaches of EPOs or PSs detailed in this EP, are reported immediately to the Woodside Survey Operations Project Manager. • Review Contractors' procedures, input into Toolbox talks and Job Safety Analyses. • Provide environmental support for activities through regular engagement with Woodside Environmental Adviser.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.4 Frontline Offshore Seabird Management Plan

Survey vessels will implement Woodside's Frontline Offshore Seabird Management Plan (SBMP), that aligns with recommendations in the National Light Pollution Guidelines for Wildlife (Commonwealth of Australia, 2023) (see C 5.3). When implemented, the SBMP addresses seabird interaction reporting and management for offshore/inshore activities within the NWMR, specifically where the activity is located within a nocturnal seabird species BIA.

The purpose of the SBMP is to manage interactions with seabirds offshore to ensure any impacts and risks are reduced to ALARP and an acceptable level. The plan also provides frontline workers with guidance to manage seabird interactions and potential impacts resulting from these interactions identified as occurring as a result of Woodside's activities, as demonstrated in Figure 7-2.

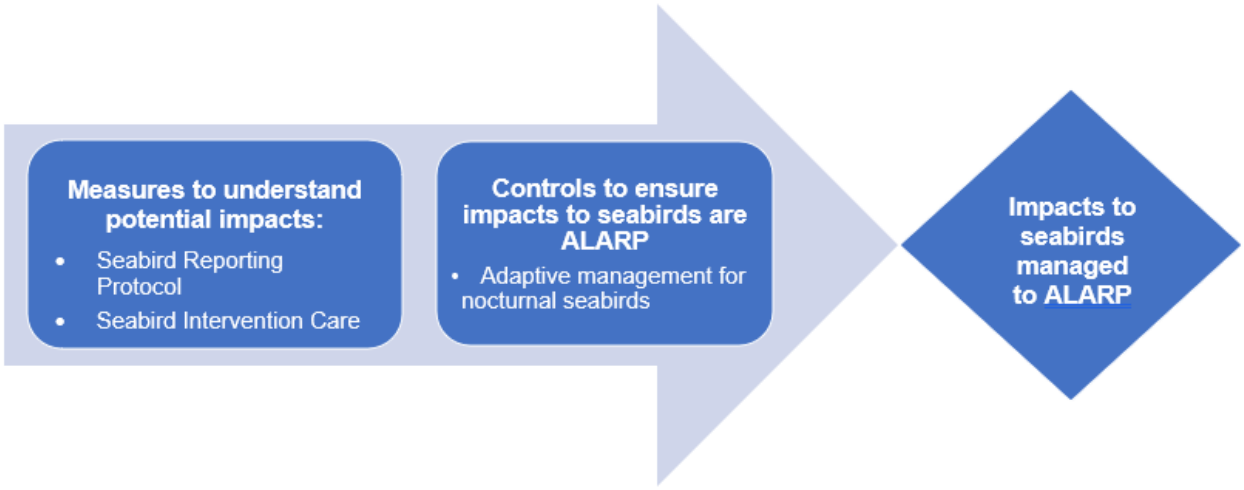

Figure 7-2: Schematic for Seabird Management Plan to manage seabird impacts to ALARP

The SBMP adaptive management framework has been established to manage the uncertainty of the potential impacts of artificial night at light on nocturnal seabirds. Where interactions[48] with nocturnal seabirds are identified, adaptive management controls under the SBMP may be triggered in a tiered approach.

This may include an initial assessment of:

- seabird species important habitat proximity, life cycle seasonality and periods of heightened sensitivity, such as fledgling exodus
- overlap of seabird interactions and inclement weather (for example, post-cyclonic metocean conditions are known to increase seabird groundings).

And the possible consideration of controls and mitigation actions, for example:

- Extinguish outdoor/deck lights not necessary for safety and navigation at night.
- Use block-out-blinds on portholes and windows not necessary for safety and/or navigation.

7.5 Unexpected Finds Procedure

In the event of the discovery of what appears to be UCH (defined as 'any trace of human existence that has a cultural, historical or archaeological character and is located under water'); the following Unexpected Finds Procedure will apply:

- All activities with the potential to impact the suspected UCH must cease immediately. Retain all records of the potential UCH, including any imagery, description and location.
- Person who discovers the heritage object must inform the Activity Supervisor.

[48] *Interaction is defined as a death, injury, entanglement or impact to seabird; or a grounding of a nocturnal seabird.*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Activity Supervisor must notify Woodside's Principal Heritage Adviser.
- Woodside will specify an appropriate buffer around the potential UCH, taking into consideration the nature and scale of the potential UCH and the activities to be managed.
- No seabed disturbance may occur within the buffer area around the potential Underwater Cultural Heritage until approved by Woodside's Principal Heritage Adviser.
- Woodside's Principal Heritage Adviser must notify a qualified maritime archaeologist and provide all available documentation of the potential UCH.
- If the potential Underwater Cultural Heritage appears to be Aboriginal UCH, Woodside's Principal Heritage Adviser must notify the appropriate Traditional Custodians to determine whether it is a heritage site and if so, how the site should be managed.
- If the potential UCH appears to be a shipwreck or aircraft that has been wrecked for more than 75 years, or is otherwise reportable under Section 40 of the UCH Act, Woodside's Principal Heritage Adviser must notify the Minister responsible for the UCH Act, the DCCEEW underwater archaeological section through the Australian Underwater Cultural Heritage Database, and the Western Australian Museum.
- If the suspected heritage object includes human remains, Woodside's Principal Heritage Adviser must also notify:
  - Australian Federal Police (phone: 131 444) of the location of the remains, that the remains are likely to be historic or Aboriginal in origin, and that it may be appropriate that Traditional Custodians and a maritime archaeologist are present during any handling of the remains
  - Office of the Federal Environment Minister in accordance with Section 20 of the ATSIHP Act.
- Work must not recommence in the vicinity of the heritage object until Woodside's Principal Heritage Adviser provides written approval. Woodside's Principal Heritage Adviser must only provide written approval once agreed management measures are implemented consistent with approvals and legislation or where the potential UCH is confirmed to not be UCH.

7.6 Training and competency

7.6.1 Overview

Woodside as part of its contracting process assesses a proposed contractor's environmental management systems to determine the level of compliance with the standard AS/NZ ISO 14001. This assessment is performed for the GPGT Survey Program as part of the pre-mobilisation process. The assessment determines whether there is a clearly defined organisational structure that sets out the roles and responsibilities for key positions. The assessment also assesses whether there is an up-to-date training matrix that defines any corporate and site/activity-specific environmental training and competency requirements.

As a minimum, environmental awareness training is required for all personnel, detailing awareness and compliance with the contractor's environmental policy and environmental management system.

7.6.2 Inductions

Inductions are provided to all relevant personnel (e.g. contractors and Company representatives) before mobilising to or on arrival at the activity location. The induction covers the HSE requirements and environmental information specific to the activity location. Attendance records will be maintained.

The GPGT Survey Program induction may cover information about:

- description of the activity
- ecological and socio-economic values of the activity location
- regulations relevant to the activity
- Woodside's Environmental Management System – HSE and Biodiversity policies
- EP importance/structure/implementation/roles and responsibilities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- main environmental aspects/hazards and potential environmental impacts and related performance outcomes
- oil spill preparedness and response
- monitoring and reporting on performance outcomes and standards using measurement criteria
- incident reporting.

7.6.3 Geophysical and Geotechnical Survey Program specific environmental awareness

Before commencing the GPGT Survey Program, a pre-activity meeting will be held with all relevant personnel. The pre-activity meeting provides an opportunity to reiterate specific environmental sensitivities or commitments associated with the activity. Relevant sections of the pre-activity meeting will also be communicated to the support vessel personnel. Attendance lists are recorded and retained.

During operations, regular HSE meetings will be held. During these meetings, recent environmental incidents are reviewed and awareness material presented.

7.6.4 Management of training requirements

All personnel are required to be competent to perform their assigned positions. This may be in the form of external or 'on the job' training. The vessel Safety Training Coordinator (or equivalent) is responsible for identifying training needs, keeping records of training performed and identifying minimum training requirements.

7.7 Monitoring, auditing, management of non-conformance and review

7.7.1 Monitoring

Woodside and its contractors will undertake a program of periodic monitoring during the Petroleum Activities Program – starting at mobilisation of each activity and continuing through the duration of each activity until activity completion. This information will be collected using tools and systems outlined below, developed based on the environmental performance outcomes, controls, standards and measurement criteria in this EP. The tools and systems will collect, as a minimum, the data (evidence) referred to in the measurement criteria in Section 6 and Appendix I.

The collection of this data will form part of the permanent record of compliance maintained by Woodside and will act as the basis for demonstrating that the EPOs and PS are met, which will be summarised in a series of routine reporting documents.

7.7.1.1 Source-based impacts and risks

The tools and systems to monitor environmental performance, where relevant, will include:

- daily reports which include leading indicator compliance
- periodic review of waste management and recycling records
- use of contractor's risk identification program that requires personnel to record and submit safety and environment risk observation cards routinely (frequency varies with contractor)
- collection of evidence of compliance with the controls detailed in the EP relevant to offshore activities by the Woodside Offshore HSE Adviser (other compliance evidence is collected onshore)
- environmental discharge reports that record volumes of planned and unplanned discharges to ocean and atmosphere
- monitoring of progress against key performance indicators
- internal auditing and assurance program, as described in Section 7.7.2.

Throughout this activity, Woodside will continuously identify new source-based risks and impacts through the monitoring and auditing systems and tools described above and in Section 7.7.2.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.7.1.2 Management of knowledge

Review of knowledge relevant to the existing environment is undertaken to identify changes relating to the understanding of the environment or legislation that supports the risk and impact assessments for EPs (in-force and in-preparation). Relevant knowledge is defined as:

- environmental science supporting the description of the existing environment
- socio-economic environment and stakeholder information
- environmental legislation.

The frequency and record of reviews, communication of relevant new knowledge and consideration of management of change are documented in the WMS Environment Plan Guideline. Any relevant new information on cultural values will be assessed using the EP Management of Change Process (refer to Section 7.8).

Under the oil spill Operational and Scientific Monitoring Program preparedness, an annual review and update to the environmental baseline studies database is completed and documented. Periodic location-focused environmental studies and baseline data gap analyses are completed and documented. Any subsequent studies scoped and executed as a result of such gap analysis are managed by the Woodside Biodiversity and Science Team and tracked via the Corporate Environment Baseline Database.

7.7.2 Auditing

Environmental performance auditing will be performed to:

- identify potential new, or changes to existing environmental impacts and risk, and methods for reducing those to ALARP
- confirm mitigation measures detailed in this EP are effectively reducing environmental impacts and risk, that mitigation measures proposed are practicable and provide appropriate information to verify compliance
- confirm compliance with the Performance Outcomes, Controls and Standards detailed in this EP.

The internal audits/inspections and reviews, combined with the ongoing monitoring described in Section 7.7.1, and collection of evidence for measurement criteria are used to assess environmental performance outcomes and standards.

As part of Woodside's Environmental Management System and/or assurances processes, activities are periodically selected for environmental audits as per Woodside's internal auditing process. Audit, inspection and review findings relevant to continuous improvement of environmental performance are tracked through the Environmental Commitments and Actions Register. This register is used to track compliance with EP commitments, including any findings and corrective actions.

Non-conformances identified will be reported and/or tracked in accordance with Section 7.7.3.

7.7.2.1 Vessel activities

No vessel activities associated with the GPGT Survey Program other than those directly associated with survey activities, described in Section 7.7.2.2.

7.7.2.2 Survey activities

The following internal auditing will be performed for the survey activities:

Pre-mobilisation inspection/audit report will be conducted by a relevant person (before commencing). The scope of the audits are risk-based and specific to the relevant activity, but will generally focus on aspects relating to ensuring appropriate understanding of environmental commitments and the operational readiness of the activity scope, including appropriate environmental controls in place. All primary vessels associated with the GPGT Survey Program will be audited by Woodside.

At least one operational compliance audit relevant to applicable EP commitments will be conducted by a Woodside Environment Adviser for the survey activity. The audit may be conducted offshore or office-based, subject to the duration of the activity and logistics of performing the audit offshore for short duration scopes.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Vessel-based HSE inspections will be conducted fortnightly by vessel HSE personnel. Each inspection will focus on a specific risk area relevant to the project activity and a formal report will be issued (for example, bunkering controls, chemical and discharge management, cetacean reporting).

The internal audits and reviews, combined with the ongoing monitoring described in Section 7.7.1, and collection of evidence for MC are used to assess EPOs and PSs.

As part of Woodside's Environmental Management System and/or assurances processes, activities may also be periodically selected for environmental audits as per Woodside's internal auditing process. Audit, inspection and review findings relevant to continuous improvement of environmental performance are tracked through the Environmental Commitments and Actions Register.

This Environmental Commitments and Actions Register is used to track vessel and survey activity compliance with EP commitments, including any findings and corrective actions.

Non-conformances identified will be reported and/or tracked in accordance with Sections 7.7.3 and 7.7.4.

7.7.2.3 Marine assurance

Woodside's marine assurance is managed by the Marine Assurance Team of the Logistics Function in accordance with Woodside's Marine Offshore Vessel Assurance Procedure. The Woodside process is based on industry standards and consideration of guidelines and recommendations from recognised industry organisations such as Oil Companies International Marine Forum and International Maritime Contractors Association.

The process is mandatory for all vessels (other than tankers and floating production storage and offloading vessels) hired for Woodside operations, including for short term hires (i.e. <3 months in duration). It defines applicable marine offshore assurance activities, ensuring all vessel operators operate seaworthy vessels that meet the requirements for a defined scope of work and are managed with a robust safety management system.

The process is multi-faceted and encompasses the following marine assurance activities:

- offshore vessel management system assessment (OVMSA)
- DP system verification
- vessel inspections
- Offshore Vessel Inspection Database or condition and suitability assessment
- project support for tender review, evaluation and pre/post contract award.

Vessel inspections are used to verify actual levels of compliance with the company's Safety Management System, the overall condition of the vessel and the status of the planned maintenance system onboard. Woodside Marine Assurance Specialist will conduct a risk assessment on the vessel to determine the level of assurance applied and the type of vessel inspection required.

Methods of vessel inspection may include:

- Woodside Marine Vessel Inspection
- Oil Companies International Marine Forum Offshore Vessel Inspection Database Inspection
- International Maritime Contractors Association Common Marine Inspection Document
- Marine Warranty Survey.

Upon completion of the marine assurance process, to confirm that identified concerns are addressed appropriately and conditions imposed are managed, the Woodside Marine Assurance Team will issue the vessel a statement of approval. Should a vessel not meet the requirements of the Woodside Marine Offshore Vessel Assurance Process and be rejected, there does exist an opportunity to further scrutinise the proposed vessel.

Where a vessel inspection and/or OVMSA verification review is not available and all reasonable efforts based on time and resource availability have been made to complete this (e.g. short-term vessel hire), the Marine Assurance Specialist Offshore may approve the use of an alternate means of inspection, known as a risk assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.7.2.4 Risk assessment

Woodside conducts a risk assessment of vessels where either an OVMSA Verification Review and/or vessel inspection cannot be completed. This is not a regular occurrence and is typically used when the requirements of the assurance process are unable to be met or the processes detailed are not applicable to a proposed vessel(s). The Marine Vessel Risk Assessment will be conducted by the Marine Assurance Specialist, where the vessel meets the short term hire prerequisites.

The risk assessment is a semi-quantitative method of determining what further assurance process activity, if any, is required to assure a vessel for a particular task or role. The process compares the level of management control a vessel is subject to against the risk factors associated with the activity or role.

Several factors are assessed as part of a vessel risk assessment, including:

- management control factors:
  - company audit score (i.e. management system)
  - vessel HSE incidents
  - vessel Port State Control deficiencies
  - instances of Port State Control vessel detainment
  - years since previous satisfactory vessel inspection
  - age of vessel
  - contractors' prior experience operating for Woodside
- activity risk factors:
  - people health and safety risks (a function of the nature of the work and the area of operation)
  - environmental risks (a function of environmental sensitivity, activity type and magnitude of potential environment damage (e.g. largest credible oil spill scenario)
  - value risk (likely time and cost consequence to Woodside if the vessel becomes unusable)
  - reputation risk
  - exposure (i.e. exposure to risk based on duration of project)
  - industrial relations risk.

The acceptability of the vessel or requirement for further vessel inspections or audits is based on the ratio of vessel score to activity risk. If the vessel management control is not deemed to appropriately manage activity risk, a satisfactory company audit and/or vessel inspection may be required before awarding work.

The risk assessment is valid for the period a vessel is on hire and for the defined scope of work.

7.7.3 Management of non-conformance

Woodside classifies non-conformances with EPOs and standards in this EP as environmental incidents. Woodside employees and contractors are required to report all environmental incidents, and these are managed as per Woodside's HSE Event Reporting and Investigation Procedure which includes learning requirements.

An internal computerised database called First Priority is used to record and report these incidents. Details of the event, immediate action taken to control the situation, investigation outcomes and corrective actions to prevent reoccurrence are all recorded. Corrective actions are monitored using First Priority and closed out in a timely manner.

Woodside uses a consequence matrix for classification of environmental incidents, with the significant categories being A, B and C (as detailed in Section 2). Detailed investigations are completed for all categories A, B, C and high potential environmental incidents.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.7.4 Review

7.7.4.1 Management review

Within the Environment Function, senior management regularly monitor and review environmental performance and the effectiveness of managing environmental risks and performance. Within each Function and Business Unit Leadership Team (e.g. Global Wells and Seismic), managers review environmental performance regularly, including through quarterly HSE review meetings.

Woodside's Projects Environment Team will perform six-monthly reviews of the effectiveness of the implementation strategy and associated tools. This will involve reviewing the:

- survey activity key performance indicators
- tools and systems to monitor environmental performance (detailed in Section 7.7.1)
- lessons learned about implementation tools and throughout each campaign
- reviews of oil spill arrangements and testing are performed in accordance with Section 7.10.

7.7.4.2 Learning and knowledge sharing

Learning and knowledge sharing occurs via a number of different methods, including:

- event investigations
- event bulletins
- after action review conducted at the end of each well, including review of environmental incidents as relevant
- ongoing communication with vessel operators
- formal and informal industry benchmarking
- cross asset learnings
- engineering and technical authorities discipline communications and sharing.

7.7.4.3 Review of impacts, risks and controls across the life of the environment plan

If activities described in this EP do not occur continuously or sequentially, before recommencing activities after a cessation period greater than 12 months, impacts, risks and controls will be reviewed.

The process will identify or review impacts and risks associated with the newly-commencing activity, and will identify or review controls to ensure impacts and risks remain/are reduced to ALARP and acceptable levels. Information learned from previous activities conducted under this EP will be considered. Controls which have previously been excluded on the basis of proportionality will be reconsidered. Any required changes will be managed by the Management of Change process outlined below (Section 7.8).

7.8 Management of change and revision

7.8.1 Environment Plan management of change

Changes to the GPGT Survey Program are managed in accordance with Woodside's Environmental Approval Requirements Australia Commonwealth Guideline. Management of changes relevant to this EP, concerning the scope of the activity description (Section 3) including: review of advances in technology at stages where new equipment may be selected such as vessel contracting; changes in understanding of the environment, DCCEEW EPBC Act listed threatened and migratory species status, Part 13 statutory instruments (recovery plans, threat abatement plans, conservation advice, wildlife conservation plans) and current requirements for AMPs (Section 4); and potential new advice from external stakeholders (Section 5), will be managed in accordance with Regulation 39 of the Environment Regulations.

Risk will be assessed in accordance with the environmental risk management methodology (Section 2.6) to determine the significance of any potential new environmental impacts or risks not provided for in this EP. Risk assessment outcomes are reviewed in compliance with Regulation 39 of the Environment Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Minor changes where a review of the activity and the environmental risks and impacts of the activity do not trigger a requirement for a formal revision under Regulation 38 or 39 of the Environment Regulations, will be considered a 'minor revision'. Minor administrative changes to this EP, where an assessment of the environmental risks and impacts is not required (e.g. document references, phone numbers, etc.), will also be considered a 'minor revision'. Minor revisions as defined above will be made to this EP using Woodside's document control process. Minor revisions will be tracked in a Management of Change Register to ensure visibility of cumulative risk changes, as well as enable internal EP updates/reissuing as required. This document will be made available to NOPSEMA during regulator environment inspections.

7.8.2 Oil Pollution Emergency Plan management of change

Relevant documents from the OPEP will be reviewed in the following circumstances:

- implementation of improved preparedness measures
- a change in the availability of equipment stockpiles
- a change in the availability of personnel that reduces or improves preparedness and the capacity to respond
- the introduction of a new or improved technology that may be considered in a response for this activity
- to incorporate, where relevant, lessons learned from exercises or events
- if national or state response frameworks and Woodside's integration with these frameworks changes.

Where changes are required to the OPEP, based on the outcomes of the reviews described above, they will be assessed against Regulation 38 and 39 to determine if EP, including OPEP, resubmission is required (see Section 7.8.1). Changes with potential to influence minor or technical changes to the OPEP are tracked in management of change records, project records and incorporated during internal updates of the OPEP or the five-year revision.

7.9 Record-keeping

Compliance records (outlined in MC in Section 6) will be maintained.

Record keeping will be in accordance with Regulation 22(15) that addresses maintaining records of emissions and discharges.

7.10 Reporting

To meet the EPOs and standards outlined in this EP, Woodside reports at a number of levels, as outlined in the next sections.

7.10.1 Routine reporting (internal)

7.10.1.1 Daily progress reports and meetings

Daily reports for survey activities are prepared and issued to key support personnel and stakeholders, by relevant managers responsible for the activity. The report provides performance information about the survey activities, heath, safety and environment, and current and planned work activities.

Meetings between key personnel are used to transfer information, discuss incidents, agree plans for future activities and develop plans and accountabilities for resolving issues.

7.10.1.2 Regular health, safety and environment meetings

Regular dedicated HSE meetings are held with the offshore and office-based management and advisers to address targeted HSE incidents and initiatives. Minutes of these meetings are produced and distributed as appropriate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.10.1.3 Performance reporting

Monthly and quarterly performance reports are developed and reviewed by the Function and Business Unit Leadership Teams (e.g. Global Wells and Seismic). These reports cover a number of subject matters, including:

- HSE incidents (including high potential incidents and those related to this EP) and recent activities
- corporate key performance indicators, which include environmental metrics
- outstanding actions as a result of audits or incident investigations
- technical high and low lights.

7.10.2 Routine reporting (external)

7.10.2.1 Ongoing consultation

Although consultation for the purpose of Regulation 25 is complete, in accordance with Regulation 22(9) of the Environment Regulations, the implementation strategy must provide for appropriate consultation with relevant authorities of the Commonwealth, a State or Territory and other relevant interested persons or organisations.

Woodside proposes to undertake the engagements with directly impacted relevant persons and additional persons listed in Table 7-3. Relevant new information identified during ongoing consultation will be assessed using the EP Management of Knowledge (refer to Section 7.7.1.2 and Management of Change Process (refer to Section 7.8).

Woodside hosts community forums at which members are provided updates on Woodside activities on a regular basis (for example community reference group meetings). Representatives who present at those meetings are from community and industry and include Woodside, State Government (for instance relevant Regional Development Commissions), Local Government, Indigenous Groups, industry representative bodies, Community and industry organisations.

Relevant persons, additional persons and those who are merely interested in the activities, can otherwise remain up to date on this activity through subscribing to the Woodside website, or by reading the publicly available version of the EP on NOPSEMA's website, where available.

Should consultation feedback be received following EP acceptance that identifies a measure or control that requires implementation or update to meet the intended outcome of consultation (see **Error! Reference s ource not found.**), Woodside will apply its EP Management of Knowledge process (refer to Section 7.7.1.2 and Management of Change Process (refer to Section 7.8), as appropriate.

Woodside has established and maintains a publicly available, up to date and interactive map to provide stakeholders with updated information on activities being conducted as part of the GPGT Survey Program particularly during SIMOPS. The interactive map is available on Woodside's website.

The ongoing consultation engagements that Woodside intends to progress for this EP are set out in Table 7-3.

Table 7-3: Ongoing consultation engagements

Report/ information	Recipient	Purpose	Frequency	Content
Program of Ongoing Engagement with Traditional Custodians (**Error! R eference source not found.**)	Relevant cultural authorities.	Identification, assessment and consideration of cultural values relevant to the Operational Areas or EMBA	Ongoing	Assessment of cultural values Any relevant new information on cultural values will be assessed using the EP management of knowledge (Section 7.7.1.2) and management of change (Section 7.8) processes.

Notification (email)	All relevant persons to the proposed activity	Notification of significant change	As appropriate	Notification of significant change

7.10.2.2 Start and end notifications of the Geophysical and Geotechnical Survey Program

In accordance with Regulation 54, Woodside will notify NOPSEMA of the commencement of the GPGT Survey Program at least ten days before the activity commences, and will notify NOPSEMA within ten days of completing the activity.

7.10.2.3 Environmental performance review and reporting

In accordance with applicable environmental legislation for the activity, Woodside is required to report information about environmental performance to the appropriate regulator. Regulatory reporting requirements are summarised in Table 7-4.

Table 7-4: Routine external reporting requirements

Report	Recipient	Frequency	Content
Monthly Recordable Incident Reports	NOPSEMA	Monthly, by the 15th of each month.	Details of recordable incidents that have occurred during the GPGT Survey Program for previous month (if applicable).
Environmental Performance Report	NOPSEMA	Annually, with the first report submitted within 12 months of the commencement of the GPGT Survey Program covered by this EP (as per the requirements of Regulation 22(7).	Compliance with EPOs, controls and standards outlined in this EP, in accordance with the Environment Regulations.

7.10.2.4 End of the Environment Plan

The EP will end when Woodside notifies NOPSEMA that the GPGT Survey Program has ended and all of the obligations identified in this EP have been completed, and NOPSEMA has accepted the notification, in accordance with Regulation 46 of the Environment Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

7.10.3 Incident reporting (internal)

The process for reporting environmental incidents is described in Section 7.10.4 of this EP. It is the responsibility of the Woodside Project Manager to ensure reporting of environmental incidents meets Woodside and regulatory reporting requirements as detailed in the Woodside HSE Event Reporting and Investigation Procedure and this section of this EP.

7.10.4 Incident reporting (external) – reportable and recordable

7.10.4.1 Reportable incidents

7.10.4.1.1 Definition

A reportable incident is defined under Regulation 5 of the Environment Regulations as:

- ‘an incident relating to the activity that has caused, or has the potential to cause, moderate to significant environmental damage’.

A reportable incident for the GPGT Survey Program is:

- an incident that has caused environmental damage with a Consequence Level of Moderate (C) or above (as defined under Woodside’s Risk Table (refer to Section 2.5))
- an incident that has the potential to cause environmental damage with a Consequence Level of Moderate (C) or above (as defined under Woodside’s Risk Table (refer to Section 2.5)).

The environmental risk assessment for the GPGT Survey Program (Section 2.5) has not identified any risks with a potential consequence level of C+ for environment. All incidents with actual or potential environmental consequences will be investigated fully. Where an actual or potential environment consequence of C+ is identified this incident will still be classified as a reportable incident and appropriate notifications completed.

Any such incidents represent potential events which would be reportable incidents. Incident reporting is performed with consideration of NOPSEMA (2014) , stating ‘if in doubt, notify NOPSEMA’, and assessed on a case-by-case basis to determine if they trigger a reportable incident as defined in this EP and by the Environment Regulations.

7.10.4.1.2 Notification

NOPSEMA will be notified of all reportable incidents, according to the requirements of Regulations 47, 48 and 49 of the Environment Regulations. Woodside will:

- Report all reportable incidents to the regulator (orally) as soon as practicable (ASAP), but within two hours of the incident or of its detection by Woodside.
- Provide a written record of the reported incident to NOPSEMA, the National Offshore Petroleum Titles Administrator and the department of the responsible State Minister (DMPE) ASAP after orally reporting the incident.
- Complete a written report for all reportable incidents using a format consistent with the NOPSEMA Form FM0831 – Reportable Environmental Incident which must be submitted to NOPSEMA ASAP, but within three days of the incident or of its detection by Woodside.
- Provide a copy of the written report to the National Offshore Petroleum Titles Administrator and DMPE, within seven days of the written report being provided to NOPSEMA.

AMSA will be notified of oil spill incidents ASAP after their occurrence, and DCCEEW notified if MNES are to be affected by the oil spill incident.

7.10.4.2 Recordable incidents

Definition

A recordable incident as defined under Regulation 5 of the Environment Regulations is an incident arising from the activity that ‘breaches an environmental performance outcome or environmental performance standard, in the EP that applies to the activity, that is not a reportable incident’.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Notification

NOPSEMA will be notified of all recordable incidents, according to the requirements of Regulation 50(4), no later than 15 days after the end of the calendar month using the NOPSEMA Form – Recordable Environmental Incident Monthly Summary Report detailing:

- all recordable incidents that occurred during the calendar month
- all material facts and circumstances concerning the recordable incidents that the operator knows or is able, by reasonable search or enquiry, to find out
- any action taken to avoid or mitigate any adverse environment impacts of the recordable incidents
- the corrective action that has been taken, or is proposed to be taken, to prevent similar recordable incidents
- the action that has been taken, or is proposed to be taken, to prevent a similar incident occurring in the future.

7.10.4.3 Other external incident reporting requirements

In addition to the notification and reporting of environmental incidents defined under the Environment Regulations and Woodside requirements, Table 7-5 describes the incident reporting requirements that also apply in the Operational Areas.

Table 7-5: External incident reporting requirements

Event	Responsibility	Notifiable party	Notification requirements	Contact	Contact detail
Any marine incidents during GPGT Survey Program	Vessel Master	AMSA	Incident Alert Form 18 as soon as reasonably practicable Within 72 hours after becoming aware of the incident, submit Incident Report Form 19	AMSA	reports@amsa.gov.au
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA Rescue Coordination Centre (RCC)	As per Article 8 and Protocol I of MARPOL within two hours via the national emergency 24-hour notification contacts and a written report within 24 hours of the request by AMSA	AMSA RCC Australia	If the ship is at sea, reports are to be made to: Free call: 1800 641 792 Phone: 08 9430 2100 (Fremantle)
Oil pollution incidents in Commonwealth waters	Vessel Master	AMSA	Without delay as per *Protection of the Sea Act*, part II, section 11(1), AMSA RCC notified verbally via the national emergency 24-hour notification contact of the hydrocarbon spill; follow up with a written Pollution Report ASAP after verbal notification	RCC Australia	Phone: 1800 641 792 or +61 2 6230 6811 AFTN: YSARYCYX
Any oil pollution incident which has the potential to enter a National Park or requires oil spill response activities to be conducted	Vessel Master	DCCEEW	Reported verbally, ASAP	Director of National Parks	Phone: 02 6274 2220

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Event	Responsibility	Notifiable party	Notification requirements	Contact	Contact detail
within a National Park					
Activity causes unintentional death of or injury to fauna species listed as Threatened or Migratory under the EPBC Act	Vessel Master	DCCEEW	Within seven days of becoming aware	Secretary of DCCEEW	Phone: 1800 803 772 Email: protected.species@environment.gov.au

The following activities should also be reported to AMSA via RCC Australia by the Vessel Master:

- loss of plastic material
- garbage disposed of in the sea within 12 NM of land (garbage includes food, paper, bottles, etc)
- any loss of hazardous materials.

For oil spill incidents, other agencies and organisations will be notified as appropriate to the nature and scale of the incident as per procedures and contact lists in the Hydrocarbon Spill Australia Regulatory Framework (Appendix K) and the Oil Pollution First Strike Plan (Appendix G).

External incident reporting requirements under the *OPGGS (Safety) Regulations*, including under Sub-regulation 2.42, notices and reports of dangerous occurrences will be reported to NOPSEMA under the approved activity safety cases.

In the unlikely event of a spill, Woodside must notify appropriate cultural authorities that may be affected; with the purpose of mitigating potential risks to cultural heritage values in accordance with its Oil Pollution First Strike Plan (See Appendix G).

7.11 Emergency preparedness and response

7.11.1 Overview

Under Regulation 22(8), the implementation strategy must contain an OPEP and provide for updating the OPEP. Regulation 22(9) outlines the requirements for the OPEP which must include adequate arrangements for responding to and monitoring of oil pollution.

A summary of how this EP and supporting documents address the various requirements of Environment Regulations relating to oil pollution response arrangements is shown in Table 7-6.

Table 7-6: Oil pollution preparedness and response overview

Content	Environment Regulations reference	Document/section reference
Details (oil pollution response) control measures that will be used to reduce the impacts and risks of the activity to ALARP and an acceptable level	Regulation 21 (5), (6), 22(2)	Oil Spill Preparedness and Response Mitigation Assessment (**Error! Reference source not found.**).
Describes the OPEP	Regulation 22(8)	Environment Plan: Woodside's oil pollution emergency plan has the following components: Hydrocarbon Spill Australia Regulatory Framework (Appendix K) Oil Pollution First Strike Plan (Appendix G) Oil Spill Preparedness and Response Mitigation Assessment (**Error! Reference source not found.**).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Content	Environment Regulations reference	Document/section reference
Details the arrangements for responding to and monitoring oil pollution (to inform response activities), including control measures	Regulation 22(9)	Oil Spill Preparedness and Response Mitigation Assessment (**Error! Reference source not found.**). Oil Pollution First Strike Plan (Appendix G).
Details the arrangements for updating and testing the oil pollution response arrangements	Regulation 22(8), (12), (13) and (14)	Environment Plan: Section 7.11.7. Oil Spill Preparedness and Response Mitigation Assessment (**Error! Reference source not found.**).
Details provisions for monitoring impacts to the environment from oil pollution and response activities	Regulation 22(10)	Oil Spill Preparedness and Response Mitigation Assessment (**Error! Reference source not found.**).
Demonstrates that the that the response arrangements in the oil pollution emergency plan are consistent with the national system for oil pollution preparedness and response	Regulation 22(11)	Hydrocarbon Spill Australia Regulatory Framework (Appendix K)

7.11.2 Emergency response training

Regulation 22(4) requires that the implementation strategy includes measures to ensure that employees and contractors have the appropriate competencies and training. Woodside has conducted a risk-based training needs analysis on positions required for effective emergency response.

Table 7-7: Emergency response training requirements

IMT position	Minimum competency
CIMT Incident Commander and Deputy Incident Commander	• IMT Fundamentals Course (internal course) or equivalent • ICS 100/200 • IMO3 or equivalent spill response specialist level with an oil spill response organisation • Participation in Level 2 activation, exercise or skills maintenance
Operations, Planning, Logistics and Finance sections, and other rostered member of the CIMT	• IMT Fundamentals Course or equivalent • ICS 100/200 • Oil Spill theory • Participation in Level 2 activation, exercise or skills maintenance
Environment Unit Lead	• IMT Fundamentals course • ICS 100/200 • IMO2 or equivalent spill response specialist level with an oil spill response organisation • Participation in Level 2 activation, exercise or skills maintenance

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Note on competency/equivalency
In 2023 Woodside undertook a review of incident and crisis systems, processes and tools to assess whether these were fit-for purpose and has rolled out a change to the Crisis and Emergency Management training and the oil spill response training requirements for CIMT roles. The revised IMT Fundamentals training Program aligns with the performance requirements of the PMAOMIR320 – Manage Incident Response Information and PMAOM0R418 - Coordinate Incident Response. In 2023, Woodside took the decision to align its global incident command arrangements to the Incident Command System (ICS). As such all rostered members of the Incident Management Team are trained up to ICS 200. In addition to baseline incident management training, all rostered members of the CIMT undertake a level of hydrocarbon spill response training. Depending upon the role, this may take the form of IMO training or completion of Woodside's internal oil spill training course (Oil Spill Response Skills Enhancement Course) which involves the completion of two online AMSA Modules (*Introduction to National Plan and Incident Management; and Introduction to Oil Spills*) and face-to-face training. Woodside Learning Services is responsible for collating and maintaining personnel training records. The Crisis and Emergency Management Dashboard reflects the competencies required for each oil spill role (IMT/operational).

7.11.3 Emergency response preparation

The Emergency Operations Centre, based in Woodside's head office, is the onshore coordination point for an offshore emergency. The Emergency Operations Centre is staffed by an appropriately skilled team available on call 24 hours a day. The purpose of the team is to coordinate incidents, maintain the safety of personnel, minimise damage to the environment and facilities, and to liaise with external agencies. Woodside's Incident Command Structure is included in the Oil Pollution First Strike Plan (Appendix G) and response arrangements are further detailed in the Hydrocarbon Spill Australia Regulatory Framework (Appendix K).

Woodside will have an Emergency Response Plan in place relevant to the activity. The plan provides procedural guidance specific to the asset and location of operations to control, coordinate and respond to an emergency or incident. The Emergency Response Plan will contain instructions for vessel emergency, medical emergency, search and rescue, reportable incidents, incident notification, contact information and activation of the contractor's emergency centre and Woodside Communication Centre.

In an emergency of any type, the Vessel Master will assume overall onsite command and act as the Incident Controller (IC). All persons aboard the vessel will be required to act under the IC's directions. The vessel will maintain communications with the onshore Project Manager and other emergency services. Emergency response support can be provided by the contractor's emergency centre or Woodside Communication Centre if requested by the IC.

The GWA Geophysical and Geotechnical Survey Emergency Response Plan will contain instructions for vessel emergency, medical emergency, search and rescue, reportable incidents, incident notification, contact information and activation of the Contractor's emergency centre and Woodside Communication Centre.

7.11.4 Initial response to incident

In an emergency of any type, the Vessel Master will assume overall onsite command and act as the IC. All persons aboard the vessel will be required to act under the IC's directions. The vessel will maintain communications with the onshore Project Manager and/or other emergency services. Emergency response support can be provided by the Contractor's emergency centre or Woodside Communication Centre if requested by the IC.

The survey vessels will have on-board equipment for responding to emergencies including medical, firefighting and hydrocarbon spill response equipment.

7.11.5 Oil and other hazardous materials spill

A significant hydrocarbon spill during the GPGT Survey Program is unlikely. Should such an event occur, it has the potential to cause serious environmental and reputational damage if not managed properly. The Woodside Hydrocarbon Spill Australia Regulatory Framework (Appendix K), supported by the GWA Geophysical and Geotechnical Survey Oil Pollution First Strike Plan, which provides tactical response guidance to the activity (Appendix G) of this EP, covers spill response for this GPGT Survey Program.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The Crisis and Emergency Management Team is responsible for the management of Woodside's hydrocarbon spill response equipment and for the maintenance of hydrocarbon spill preparedness and response documentation. In the event of a major spill, Woodside will enact first strike response actions, in liaison with the relevant Control Agency, as detailed in the activity-specific Oil Pollution First Strike Plan. Vessels will have SOPEPs in accordance with the requirements of MARPOL 73/78 Annex I. These plans outline responsibilities, specify procedures and identify resources available in the event of a hydrocarbon or chemical spill from vessel activities. The GWA Geophysical and Geotechnical Survey Oil Pollution First Strike Plan is intended to work in conjunction with the SOPEPs, if hydrocarbons are released to the marine environment from a vessel.

Woodside has established EPOs, PSs and MCs to be used for hydrocarbon spill response during the GPGT Survey Program, as detailed in Appendix I.

7.11.6 Emergency and spill response

Woodside categorises incidents in relation to response requirements as follows:

- Level 1 Incident – Level 1 incidents are those that can be resolved through the use of existing resources, equipment and personnel. A Level 1 incident is contained, controlled and resolved by site/regionally based teams using existing resources and functional support services.
- Level 2 Incident – Level 2 incidents are characterised by a response that requires external operational support to manage the incident. It is triggered in the event the capabilities of the tactical level response are exceeded. This support is provided to the activity via the activation of all, or part of, the responsible CIMT.
- Level 3 Incident – A Level 3 incident or crisis is identified as a critical event that seriously threatens the organisation's People, the Environment, company Assets, Reputation, Livelihood or essential Services. At Woodside, the CIMT manages the strategic impacts in order to respond to and recover from the threat to the company (material impacts, litigation, legal & commercial, reputation etc.). The CIMT may also be activated as required to manage the operational response to the Level 3 Incident.

7.11.7 Emergency and spill response drills and exercises

Testing of Woodside's capability to respond to incidents will be conducted in alignment with the Emergency and Crisis Management Procedure. The frequency of these tests will be conducted as prescribed in Table 7-8. The company emergency response testing regime is aligned to existing or developing risks associated with Woodside's operations and activities. Corporate hazards/risks outlined in the corporate risk register, respective Safety Cases or project Risk Registers, are the key reference point for emergency management and crisis management exercise development. External participants may be invited to attend crisis exercises and may include government agencies, specialist service providers, oil spill response organisations or industry members with which we have mutual aid arrangements.

The overall objective of exercises is to test procedures, skills and the teamwork of the Emergency Response and Command Teams in their ability to respond to major accident and major environment events. After each exercise, the team holds a debriefing session, during which the exercise is reviewed. Any lessons learned or areas for improvement are identified and incorporated into revised procedures, where appropriate.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Table 7-8: Testing of response capability

Response category	Scope	Response testing frequency	Response testing objective
Level 1 Response	Exercises are vessel specific	At least one Level 1 First Strike drill must be conducted during an activity. For campaigns with an operational duration of greater than one month, this will occur within the first 2 weeks of commencing the hire period and then at least every 6-month hire period thereafter.	Comprehensive exercises test elements of the Oil Pollution First Strike Plan (Appendix G). Emergency drills are scheduled to test other aspects of the Emergency Response Plan.
Level 2 Response	Exercises are vessel specific	Level 2 Emergency Management exercises are relevant to activities with an operational duration of one month or greater. At least one Emergency Management exercise per vessel per campaign must be conducted within the first month of commencing the hire period and then at every 6-month hire period thereafter, where applicable based on duration.	Testing both the facility IMT response and/or that of the CIMT following handover of incident control.
Level 3 Response	Exercises are relevant to all Woodside assets	The number of CIMT exercises conducted each year is determined by the Chief Executive Officer, in consultation with the Vice President of Security and Emergency Management.	Test Woodside's ability to respond to and manage a crisis level incident.

The activity specific GWA Geophysical and Geotechnical Survey Oil Pollution First Strike Plan will be tested in alignment with Table 7-8. This ensures personnel are familiar with spill response procedures, reporting requirements and roles/responsibilities.

7.11.8 Hydrocarbon spill response testing of arrangements

Woodside is required to test hydrocarbon spill response arrangements as per Regulations 22(12), 22(13) and 22(14) of the Environment Regulations. Woodside's arrangements for spill response are common across its Australian operating assets and activities to ensure the controls are consistent. The overall objective of testing these arrangements is to ensure that Woodside maintains an ability to respond to a hydrocarbon spill, specifically to:

- ensure relevant responders, contractors and key personnel understand and practise their assigned roles and responsibilities
- test response arrangements and actions to validate response plans
- ensure lessons learned are incorporated into Woodside's processes and procedures and improvements are made where required.

If new response arrangements are introduced, or existing arrangements significantly amended, additional testing is undertaken accordingly. Additional activities or activity locations are not anticipated to occur; however, if they do, testing of relevant response arrangements will be undertaken as soon as practicable.

In addition to the testing of response capability described in Table 7-8, up to eight formal exercises are planned annually, across Woodside, to specifically test arrangements for responding to a hydrocarbon spill to the marine environment.

7.11.8.1 Testing of arrangements schedule

Woodside's Testing of Arrangements Schedule (Figure 7-3) aligns with international good practice for spill preparedness and response management; the testing is compatible with the International Petroleum Industry Environmental Conservation Association Good Practice Guide and the Australian Institute for Disaster Resilience Australian Emergency Management Arrangements Handbook. If a spill occurs, enacting these

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

arrangements will underpin Woodside's ability to implement a response across its petroleum and greenhouse gas activities.

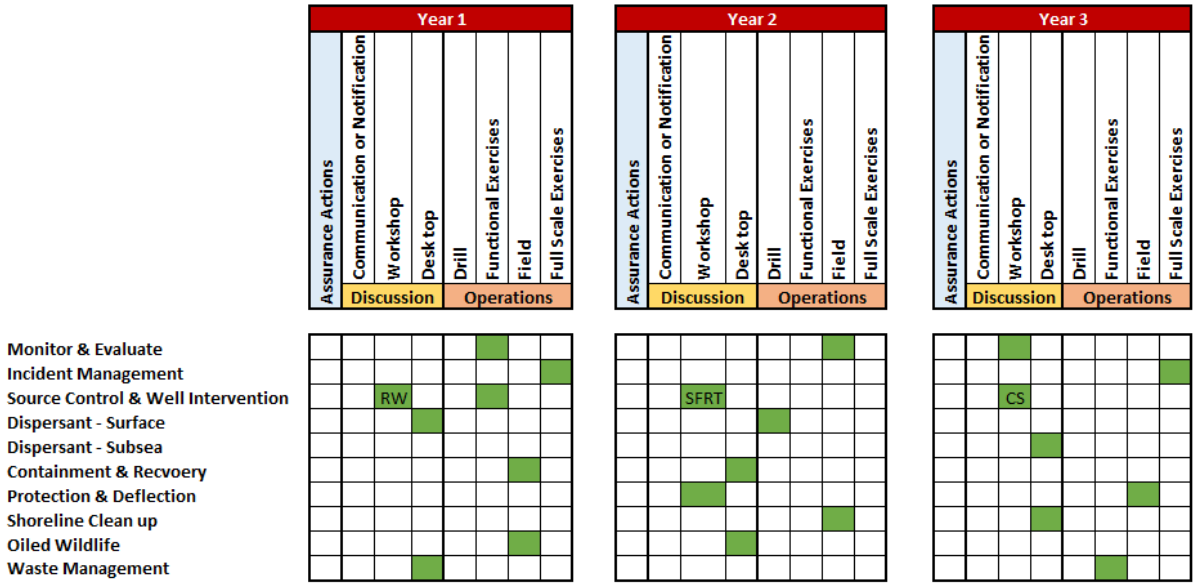

Figure 7-3: Indicative three-yearly testing of arrangements schedule

The hydrocarbon spill arrangements shown in the rows of the schedule are tested against Woodside's regulatory commitments. Each arrangement has a support agency/company and an area to be tested (e.g. capability, equipment and personnel). For example, an arrangement could be to test Woodside's personnel capability for conducting operational and scientific monitoring, or the ability of the Australian Marine Oil Spill Centre to provide response personnel and equipment.

The vertical columns relate to how hydrocarbon spill arrangements will be tested over the three-year rolling schedule. The sub-heading for the column describes the standard method of testing likely to be undertaken (e.g. discussion exercise, desktop exercise), and the green cells indicate the arrangements that could be tested for each method.

Some arrangements may be tested across multiple exercises (e.g. critical arrangements) or via other 'additional assurance' methods outside the formal Testing of Arrangements Schedule that also constitute sufficient evidence of testing of arrangements (e.g. audits, no-notice drills, internal exercises, assurance drills).

7.11.9 Cyclone and dangerous weather preparation

Tropical cyclones and other severe weather events are a potential risk to the safety and health of personnel and can potentially cause spills of hazardous materials into the environment from infrastructure or damaged vessels.

The survey vessels receive regular forecasts from the Bureau of Meteorology. If a cyclone (or severe weather event) is forecast, the path and its development will be plotted and monitored using the Bureau of Meteorology data. If there is the potential for the cyclone (severe weather event) to affect the GPGT Survey Program, the vessel's Cyclone Contingency Plan will be actioned. If required, vessels can transit from the proposed track of the cyclone (severe weather event).

9. LIST OF TERMS AND ACRONYMS

Term/acronym	Definition
µm	micrometre
ABARES	Australian Bureau of Agricultural and Resource Economics and Sciences
AFMA	Australian Fisheries Management Authority
AHO	Australian Hydrographic Office
AIMS	Australian Institute of Marine Science
AINJ	auditory injury
ALARP	as low as reasonably practicable
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
APPEA	Australian Petroleum Production and Exploration Association
ARC	AMSA's Response Centre
ASAP	as soon as practicable
AS/NZS	Australian Standard/New Zealand Standard
ATSIHP	Aboriginal and Torres Strait Islander Heritage Protection
AUV	autonomous underwater vehicle
BIA	biologically important areas
CAES	Catch and Effort System
CALM	Department of Conservation and Land Management
CIMT	Corporate Incident Management Team
CPT	cone penetration testing
CPTU	piezocone penetration test
CS	cost/sacrifice
CSIRO	Commonwealth Scientific and Industrial Research Organisation
CV	company values
DAFF	Department of Agriculture, Fisheries and Forestry
DAWE	Department of Agriculture and Water Resources
Db	decibel
DBCA	Department of Biodiversity, Conservation and Attractions
DCCEEW	Department of Climate Change, Energy, the Environment and Water
DEC	Department of Environment and Conservation
DEWHA	Department of the Environment, Water, Heritage and the Arts
DMPE	Department of Mines, Petroleum and Exploration (formerly Department of Energy, Mines, Industry Regulation and Safety)
DNP	Director of National Parks
DoT	Department of Transport
DP	dynamic positioning
DPIRD	Department of Primary Industries and Regional Development

APPENDIX A WOODSIDE ENVIRONMENT AND BIODIVERSITY POLICY

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Climate Policy

BACKGROUND

The Intergovernmental Panel on Climate Change has stated that "it is unequivocal that human influence has warmed the atmosphere, ocean and land". An objective of the Paris Agreement is to hold "the increase in the global average temperature to well below 2ºC above pre-industrial levels" and to pursue "efforts to limit the temperature increase to 1.5ºC". Many countries have set targets to reduce greenhouse gas emissions, including by changing the way they produce and consume energy.

OBJECTIVE

Woodside's objective is to thrive in this energy transition as a low cost, lower carbon energy provider.

PRINCIPLES

Woodside aims to achieve the objective by:

- Setting science-based[1] near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned[2] scenarios, covering equity scope 1 and 2 emissions, both operated and non-operated.[3]
- Developing and operating oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Investing in new energy products and lower carbon services to reduce customers' emissions (part of Woodside's Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publishing transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Aligning our advocacy to the principles of this Climate Policy.

[1] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "science-based" (published 2021) which states "targets are considered 'science-based' if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement—limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.". See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[2] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "Paris-aligned scenarios" (published 2021) which states "scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures- prototype.pdf (Appendix A).

[3] Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside's ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside's ownership interest.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venture participants engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

Risk Management Policy

OBJECTIVES

Woodside recognises that risk is inherent in our business and the effective management of risk is vital to deliver our strategic objectives, continued growth and success. We are committed to managing risks in a proactive and effective manner as a source of competitive advantage.

Our approach protects us against potential negative impacts, enables us to take risk for reward and improves our resilience against emerging risks. The objective of our risk management framework is to provide a single consolidated view of risks across the company to understand our full risk exposure and prioritise risk management and governance.

The success of our approach lies in the responsibility placed on everyone at all levels to proactively identify, assess and treat risks relating to the objectives they are accountable for delivering.

PRINCIPLES

Woodside achieves these objectives by:

- Applying a structured and comprehensive framework for the identification, assessment and treatment of current risks and response to emerging risks;
- Ensuring line of sight of financial and non-financial risks at appropriate levels of the organisation;
- Demonstrating leadership and commitment to integrating risk management into our business activities and governance practices;
- Recognising the value of stakeholder engagement, best available information and proactive identification of potential changes in external and internal context;
- Embedding risk management into our critical business processes and control framework;
- Understanding our exposure to risk and tolerance for uncertainty to inform our decision making and assure that Woodside is operating with due regard to the risk appetite endorsed by the Board; and
- Evaluating and improving the effectiveness and efficiency our approach.

APPLICABILITY

The Managing Director of Woodside is accountable to the Board of Directors for ensuring this Policy is effectively implemented.

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2024.

Environment and Biodiversity Policy

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision-making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new activities[1] within the boundaries of natural sites on the UNESCO World Heritage List.[2]
- Not undertaking new activities within IUCN Protected Areas[3] unless compatible with management plans in place for the area.
- Achieving net zero deforestation[4] for new activities.
- Developing Biodiversity Management Plans for all new major projects (CAPEX >US$2 billion).
- Supporting positive biodiversity outcomes in regions and areas in which we undertake activities.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Revised by the Woodside Energy Group Ltd Board in December 2024.

[1] Does not include non-industrial and existing activities that are compatible with maintenance of the listed outstanding universal values.

[2] New UNESCO World Heritage Listings that overlap existing activities will be assessed at the time of listing.

[3] New IUCN Protected Areas that overlap existing activities will be assessed at the time of listing.

[4] Definition of Forest: ‘native trees higher than 5 metres and a canopy cover of more than 10 percent on the land to be cleared’.

APPENDIX B RELEVANT REQUIREMENTS

Commonwealth Legislation	Legislation Summary
Aboriginal and Torres Strait Islander Heritage Protection Act 1984	The Act seeks to "preserve and protect places, areas and objects of particular significance" to Aboriginal people. Under the Section 9 and 10 provisions of the Act, the Minister for the Environment may declare significant Aboriginal areas temporarily or permanently protected if they are considered under threat. Similar declarations regarding Aboriginal objects can be made under Section 12. Under Section 22 of the Act, the contravention of any of these declarations is an offence. Additionally, the discovery of any Aboriginal remains must be reported to the Minister under Section 20. Damage or interference with Aboriginal objects or places is not an offence under the ATSIHP Act except within Victoria under Section 21U.
Air Navigation Act 1920 • Air Navigation Regulations 1947 • Air Navigation (Aerodrome Flight Corridors) Regulations 1994 • Air Navigation (Aircraft Engine Emissions) Regulations 1995 • Air Navigation (Aircraft Noise) Regulations 1984 • Air Navigation (Fuel Spillage) Regulations 1999	This Act relates to the management of air navigation.
Australian Maritime Safety Authority Act 1990	This Act establishes a legal framework for AMSA, which represents the Australian Government and international forums in the development, implementation and enforcement of international standards including those governing ship safety and marine environment protection. AMSA is responsible for administering the Marine Orders in Commonwealth waters.
Australian Radiation Protection and Nuclear Safety Act 1998	This Act relates to the protection of the health and safety of people, and the protection of the environment from the harmful effects of radiation.
Biosecurity Act 2015 • Quarantine Regulations 2000 • Biosecurity Regulation 2016 • Australian Ballast Water Management Requirements 2017 • Biosecurity Amendment (Biofouling Management) Regulations 2021	This Act provides the Commonwealth with powers to take measures of quarantine, and implement related programs as are necessary, to prevent the introduction of any plant, animal, organism or matter that could contain anything that could threaten Australia's native flora and fauna or natural environment. The Commonwealth's powers include powers of entry, seizure, detention and disposal. This Act includes mandatory controls on the use of seawater as ballast in ships and the declaration of sea vessels voyaging out of and into Commonwealth waters. The Regulations stipulate that all information regarding the voyage of the vessel and the ballast water is declared correctly to the quarantine officers. The Biofouling Management Regulations requires ships to report information about biofouling management and the voyage history of the ship in the past 12 months through a pre-arrival report.
Environment Protection and Biodiversity Conservation Act 1999 • Environment Protection and Biodiversity Conservation Regulations 2000	This Act protects matters of national environmental significance (NES). It streamlines the national environmental assessment and approvals process, protects Australian biodiversity and integrates management of important natural and culturally significant places.

Commonwealth Legislation	Legislation Summary
	Under this Act, actions that may be likely to have a significant impact on matters of NES must be referred to the Commonwealth Environment Minister.
Environment Protection (Sea Dumping) Act 1981 • Environment Protection (Sea Dumping) Regulations 1983	This Act provides for the protection of the environment by regulating dumping matter into the sea, incineration of waste at sea and placement of artificial reefs.
Industrial Chemicals (Notification and Assessment Act) 1989 • Industrial Chemicals (Notification and Assessment) Regulations 1990	This Act creates a national register of industrial chemicals. The Act also provides for restrictions on the use of certain chemicals which could have harmful effects on the environment or health.
National Environment Protection Measures (Implementation) Act 1998 • National Environment Protection Measures (Implementation) Regulations 1999	This Act and Regulations provide for the implementation of National Environment Protection Measures to protect, restore and enhance the quality of the environment in Australia and ensure that the community has access to relevant and meaningful information about pollution. The National Environment Protection Council has made National Environment Protection Measures relating to ambient air quality, the movement of controlled waste between states and territories, the national pollutant inventory, and used packaging materials.
National Greenhouse and Energy Reporting Act 2007 • National Greenhouse and Energy Reporting (Safeguard Mechanism) Rule 2015	This Act and associated Rule establishes the legislative framework for the National Greenhouse and Energy Reporting Scheme for reporting greenhouse gas emissions and energy consumption and production by corporations in Australia.
Navigation Act 2012 • Marine Order 12 – Construction (subdivision and stability, machinery and electrical installations) • Marine Order 30 – Prevention of collisions • Marine Order 47 – Offshore industry units • Marine Order 57 – Helicopter operations • Marine Order 91 – Marine pollution prevention—oil • Marine Order 93 – Marine pollution prevention—noxious liquid substances • Marine Order 94 – Marine pollution prevention—packaged harmful substances • Marine Order 96 – Marine pollution prevention—sewage • Marine Order 97 – Marine pollution prevention—air pollution	This Act regulates navigation and shipping including Safety of Life at Sea. The Act will apply to some activities of the MODU and project vessels. This Act is the primary legislation that regulates ship and seafarer safety, shipboard aspects of marine environment protection and pollution prevention.
Offshore Petroleum and Greenhouse Gas Storage Act 2006 • Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 • Offshore Petroleum and Greenhouse Gas Storage (Resource Management and Administration) Regulations 2011 • Offshore Petroleum and Greenhouse Gas Storage (Safety) Regulations 2009	This Act is the principal Act governing offshore petroleum exploration and production in Commonwealth waters. Specific environmental, resource management and safety obligations are set out in the Regulations listed.
Ozone Protection and Synthetic Greenhouse Gas Management Act 1989	This Act provides for measures to protect ozone in the atmosphere by controlling and ultimately reducing the manufacture, import and export of ozone depleting substances (ODS) and synthetic greenhouse gases, and

Commonwealth Legislation	Legislation Summary
• Ozone Protection and Synthetic Greenhouse Gas Management Regulations 1995	replacing them with suitable alternatives. The Act will only apply to Woodside if it manufactures, imports or exports ozone depleting substances.
Protection of the Sea (Powers of Intervention) Act 1981	This Act authorises the Commonwealth to take measures for the purpose of protecting the sea from pollution by oil and other noxious substances discharged from ships and provides legal immunity for persons acting under an AMSA direction.
Protection of the Sea (Prevention of Pollution from Ships) Act 1983 Protection of the Sea (Prevention of Pollution from Ships) (Orders) Regulations 1994 • Marine Order 91 – Marine pollution prevention—oil • Marine Order 93 – Marine pollution prevention—noxious liquid substances • Marine Order 94 – Marine pollution prevention—packaged harmful substances • Marine Order 95 – Marine pollution prevention—garbage • Marine Order 96 – Marine pollution prevention—sewage *Maritime Legislation Amendment (Prevention of Air Pollution from Ships) Act 2007* MARPOL Convention	This Act relates to the protection of the sea from pollution by oil and other harmful substances discharged from ships. Under this Act, discharge of oil or other harmful substances from ships into the sea is an offence. There is also a requirement to keep records of the ships dealing with such substances. The Act applies to all Australian ships, regardless of their location. It applies to foreign ships operating between 3 NM off the coast out to the end of the Australian Exclusive Economic Zone (200 NM). It also applies within the 3 NM of the coast where the State/Northern Territory does not have complementary legislation. All the Marine Orders listed, except for Marine Order 95, are enacted under both the Navigation Act and the *Protection of the Sea (Prevention of Pollution from Ships) Act*. This Act is an amendment to the *Protection of the Sea (Prevention of Pollution from Ships) Act 1983*. This amended Act provides the protection of the sea from pollution by oil and other harmful substances discharged from ships.
Protection of the Sea (Harmful Antifouling Systems) Act 2006 • Marine Order 98 – Marine pollution—anti-fouling systems	This Act relates to the protection of the sea from the effects of harmful anti-fouling systems. It prohibits the application or reapplication of harmful anti-fouling compounds on Australian ships or foreign ships that are in an Australian shipping facility.
Recycling and Waste Reduction (Mandatory Product Stewardship—Mercury-added Products) Rules 2021 (Minamata Convention on Mercury 2017)	This convention is an agreement to protect human and environmental health from the effects of releases of mercury and mercury-containing compounds to the environment. The convention is not yet ratified by Australia, and hence is not currently implemented in Commonwealth law. Australia has signed the convention and is currently undertaking an assessment process prior to ratification.
Underwater Cultural Heritage Act 2018 • Underwater Cultural Heritage Guidance for Offshore Developments • DRAFT Guidelines to Protect Underwater Cultural Heritage	This Act prescribes penalties for damage to protected underwater cultural heritage without a permit under Section 30 or in contravention of a permit in Section 28. Protected underwater cultural heritage is prescribed in Section 16 to automatically include the remains and associated artefacts of any vessel or aircraft that has been in Australian waters for 75 years, whether known or unknown. This protection is also extended to underwater cultural heritage in Commonwealth waters specified by the Environment Minister under Section 17. Without a declaration under this section, Aboriginal underwater cultural heritage is not protected under the UCH Act.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	27
Listed Migratory Species:	43

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	73
Whales and Other Cetaceans:	29
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	44
Key Ecological Features (Marine):	2
Biologically Important Areas:	7
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text

Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pandion haliaetus		
Osprey [952]		Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Macronectes giganteus		
Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pandion haliaetus		
Osprey [952]		Species or species habitat may occur within area
Phaethon lepturus		
White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus		
Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda		
Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Fish		
Acentronura larsonae		
Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni		
Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus		
Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma		
Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus		
Muiron Island Pipefish [66196]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Whales and Other Cetaceans		[Resource Information]

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardenna tenuirostris Short-tailed Shearwater [84292]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	1
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	20
Listed Migratory Species:	38

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	59
Whales and Other Cetaceans:	24
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	31
Key Ecological Features (Marine):	1
Biologically Important Areas:	4
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Natator depressus		
Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardenna tenuirostris		
Short-tailed Shearwater [84292]	Breeding	Known to occur
Sharks		
Rhincodon typus		
Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Migration	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	1
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	23
Listed Migratory Species:	39

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	62
Whales and Other Cetaceans:	24
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	23
Key Ecological Features (Marine):	2
Biologically Important Areas:	4
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
[Sternula nereis nereis](#)		
Australian Fairy Tern [82950]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
[Balaenoptera borealis](#)		
Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
[Balaenoptera musculus](#)		
Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
[Balaenoptera physalus](#)		
Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
[Aipysurus apraefrontalis](#)		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
[Aipysurus foliosquama](#)		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
[Caretta caretta](#)		
Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
[Chelonia mydas](#)		
Green Turtle [1765]	Vulnerable	Species or species habitat likely to occur within area
[Dermochelys coriacea](#)		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
[Eretmochelys imbricata](#)		
Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
[Natator depressus](#)		
Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
SHARK		

Scientific Name	Threatened Category	Presence Text
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Pristis pristis		
Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai		
Omura's Whale [87136]		Species or species habitat likely to occur within area

Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel		
Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
[Fregata minor](#) Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
[Phaethon lepturus](#) White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
[Phaethon rubricauda](#) Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Migratory Marine Species		
[Anoxypristis cuspidata](#) Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
[Balaenoptera edeni](#) Bryde's Whale [35]		Species or species habitat likely to occur within area
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
[Carcharhinus longimanus](#) Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
[Carcharias taurus](#) Grey Nurse Shark [64469]		Species or species habitat likely to occur within area
[Carcharodon carcharias](#) White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat likely to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat likely to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Scientific Name	Threatened Category	Presence Text
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pandion haliaetus		
Osprey [952]		Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat may occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area overfly marine area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pandion haliaetus Osprey [952]		Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Fish		
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Reptile		

Scientific Name	Threatened Category	Presence Text
[Aipysurus apraefrontalis](#) Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
[Aipysurus duboisii](#) Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
[Aipysurus foliosquama](#) Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
[Aipysurus laevis](#) Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
[Aipysurus mosaicus as Aipysurus eydouxii](#) Mosaic Sea Snake [87261]		Species or species habitat may occur within area
[Aipysurus tenuis](#) Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Species or species habitat likely to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Species or species habitat likely to occur within area
[Crocodylus porosus](#) Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
[Ephalophis greyae as Ephalophis greyi](#) Mangrove Sea Snake [93738]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Megaptera novaeangliae](#) Humpback Whale [38]		Breeding known to occur within area
[Orcinus orca](#) Killer Whale, Orca [46]		Species or species habitat may occur within area
[Peponocephala electra](#) Melon-headed Whale [47]		Species or species habitat may occur within area
[Physeter macrocephalus](#) Sperm Whale [59]		Species or species habitat may occur within area
[Pseudorca crassidens](#) False Killer Whale [48]		Species or species habitat likely to occur within area
[Stenella attenuata](#) Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
[Stenella coeruleoalba](#) Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
[Stenella longirostris](#) Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
[Steno bredanensis](#) Rough-toothed Dolphin [30]		Species or species habitat may occur within area
[Tursiops aduncus](#) Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat may occur within area
[Tursiops aduncus (Arafura/Timor Sea populations)](#) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Habitat Critical to the Survival of Marine Turtles		[Resource Information]
Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur

Extra Information

EPBC Act Referrals			[Resource Information]
Title of referral	Reference	Referral Outcome	Assessment Status
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
DAVROS MC 3D marine seismic survey northwaet of Dampier, WA	2013/7092		Completed
Deep Water Northwest Shelf 2D Seismic Survey	2007/3260		Completed
Development of Mutineer and Exeter petroleum fields for oil production, Permit	2003/1033		Completed
Project Highclere Cable Lay and Operation	2022/09203		Completed
Controlled action			
Development of Angel gas and condensate field, North West Shelf	2004/1805	Controlled Action	Post-Approval
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Glomar Shoals	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Marine Turtles		
Natator depressus		
Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardenna tenuirostris		
Short-tailed Shearwater [84292]	Breeding	Known to occur
Sharks		
Rhincodon typus		
Whale Shark [66680]	Foraging	Known to occur
Whales		
Megaptera novaeangliae		
Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	1
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	49
Listed Migratory Species:	63

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	1
Listed Marine Species:	102
Whales and Other Cetaceans:	31
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	3
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	10
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	149
Key Ecological Features (Marine):	6
Biologically Important Areas:	32
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Commonwealth Marine Area	[Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species		[Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii		
Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Malurus leucopterus edouardi White-winged Fairy-wren (Barrow Island), Barrow Island Black-and-white Fairy-wren [26194]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pezoporus occidentalis Night Parrot [59350]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat likely to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
FISH		
Milyeringa justitia Barrow Cave Gudgeon [86867]	Endangered	Species or species habitat likely to occur within area
Milyeringa veritas Cape Range Cave Gudgeon, Blind Gudgeon [66676]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur Barrow and Boodie Islands subspecies Boodie, Burrowing Bettong (Barrow and Boodie Islands) [88021]	Vulnerable	Translocated population known to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Eubalaena australis](#)		
Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
[Isoodon auratus barrowensis](#)		
Golden Bandicoot (Barrow Island) [66666]	Vulnerable	Species or species habitat known to occur within area
[Lagorchestes conspicillatus conspicillatus](#)		
Spectacled Hare-wallaby (Barrow Island) [66661]	Vulnerable	Species or species habitat known to occur within area
[Orcaella heinsohni](#)		
Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
[Osphranter robustus isabellinus](#)		
Barrow Island Wallaroo, Barrow Island Euro [89262]	Vulnerable	Species or species habitat likely to occur within area
[Petrogale lateralis lateralis](#)		
Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat known to occur within area
[Rhinonicteris aurantia (Pilbara form)](#)		
Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat may occur within area
[Sousa sahulensis](#)		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
[Aipysurus apraefrontalis](#)		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
[Aipysurus foliosquama](#)		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
[Caretta caretta](#)		
Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Ctenotus zastictus Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
SHARK		
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Congregation or aggregation known to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
null		
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharias taurus Grey Nurse Shark [64469]		Congregation or aggregation known to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Largetooth Sawfish, Freshwater Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Endangered	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica		
Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State

Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon lepturus fulvus		
Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Phaethon rubricauda		
Red-tailed Tropicbird [994]		Species or species habitat likely to occur within area
Pterodroma mollis		
Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area
Rostratula australis as Rostratula benghalensis (sensu lato)		
Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii		
Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons as Sterna albifrons		
Little Tern [82849]	Vulnerable	Breeding known to occur within area
Sternula nereis as Sterna nereis		
Fairy Tern [82949]		Breeding known to occur within area
Thalassarche carteri		
Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis		
Lesser Crested Tern [66546]		Breeding known to occur within area
Thalasseus bergii as Sterna bergii		
Greater Crested Tern [83000]		Breeding known to occur within area
Fish		
Acentronura larsonae		
Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni		
Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		

Scientific Name	Threatened Category	Presence Text
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera omurai Omura's Whale [87136]		Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]	Vulnerable	Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]	Vulnerable	Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Ziphius cavirostris](#) Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Gascoyne	Multiple Use Zone (IUCN VI)
Montebello	Multiple Use Zone (IUCN VI)
Ningaloo	Recreational Use Zone (IUCN IV)

Habitat Critical to the Survival of Marine Turtles [Resource Information]

Scientific Name	Behaviour	Presence
All year (Jun - Aug)		
[Natator depressus](#) Flatback Turtle [59257]	Nesting	Known to occur
Nov-Feb		
[Caretta caretta](#) Loggerhead Turtle [1763]	Nesting	Known to occur
Oct - Feb		
[Eretmochelys imbricata](#) Hawksbill Turtle [1766]	Nesting	Known to occur
Oct - Mar		
[Chelonia mydas](#) Green Turtle [1765]	Nesting	Known to occur

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west
Glomar Shoals	North-west

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Breeding	Known to occur
Dugong dugon Dugong [28]	Calving	Known to occur
Dugong dugon Dugong [28]	Foraging (high density seagrass beds)	Known to occur

Scientific Name	Behaviour	Presence
Dugong dugon Dugong [28]	Nursing	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Caretta caretta Loggerhead Turtle [1763]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Aggregation	Known to occur
Chelonia mydas Green Turtle [1765]	Basking	Known to occur
Chelonia mydas Green Turtle [1765]	Foraging	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Mating	Known to occur
Chelonia mydas Green Turtle [1765]	Nesting	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Foraging	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Mating	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Nesting	Known to occur

Scientific Name	Behaviour	Presence
Natator depressus Flatback Turtle [59257]	Aggregation	Known to occur
Natator depressus Flatback Turtle [59257]	Foraging	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Mating	Known to occur
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Seabirds		
Ardenna tenuirostris Short-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Rhincodon typus Whale Shark [66680]	Foraging (high density prey)	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae		
Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

Search Criteria

No Aboriginal Cultural Heritage (ACH) Register in Shapefile - Pluto Operations and Drilling - Petroleum Activities Area. Warning: Search area complex so results may be inaccurate. Contact DPLH for assistance.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department..
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- **Culturally Sensitive Nature:**
  - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
  - **Men only:** Only *males* can view restricted information.
  - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.
Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Coordinates

Map coordinates are based on the GDA 94 Datum.

1. CONSULTATION APPROACH

Consultation under regulation 25 of the OPGGS(E) Regulations provides that a titleholder must consult each relevant person (regulation 25(1)), must give each relevant person sufficient information to allow the relevant person to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of the relevant person (regulation 25(2)), and must allow a relevant person a reasonable period for consultation (regulation 25(3)).

A titleholder must also give a relevant person a reasonable opportunity to consult – this means that a titleholder will need to demonstrate that what it did constituted consultation appropriate and adapted to the nature of the interests of the relevant person (see Tipakalippa Full Court paragraph 104). The Environment Plan (EP) must contain a report that contains an assessment of the merits of any objection or claim about the adverse impact of each activity to which the EP relates and a statement of the titleholder's response, or proposed response, if any, to each objection or claim (regulation 24(b)).

The criteria for acceptance of an EP includes that the EP demonstrates that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate (regulation 34(g)).

For the Goodwyn Alpha Geophysical and Geotechnical Surveys EP, Woodside has taken a broad and proactive tiered consultation approach over a period of 7 months.

This approach was aimed at raising public awareness of the consultation opportunity and to enable self-identification. It included a social media campaign and advertising in national, state, regional and Indigenous newspapers.

The tiered consultation approach discharges regulation 25 of the Environment Regulations' requirements. The approach is proactive, extended, has enabled self-identification, and has raised broad awareness of Woodside's activities related to this EP.

1.1 Tiered consultation approach

Regulation 25	Woodside's consultation approach assessed and identified relevant persons, enabled two-way dialogue and engagement, and included email and phone call follow up. The approach taken comfortably satisfies the requirements of regulation 25: to give relevant persons sufficient information and allow a reasonable period of time for consultation (see Section 5 in the EP).
Proactive	To raise awareness of the consultation process, and to enable grass-roots consultation, Woodside undertook advertised regional consultation roadshows and facilitated consultation at regional community events.
Broad Understanding	Broad communication activities were undertaken to build awareness of consultation and enable self-identification, supported by targeted education materials.

1.2 Building on the existing consultation approach

For this EP, Woodside has built on its consultation methodology and undertaken additional consultation activities throughout the consultation period to ensure a reasonable period of time and sufficient information has been provided to relevant persons so that they can make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

The approach for this included:

- a consultation period of up to seven months
- undertaking proactive consultation activities to provide sufficient information to relevant persons
- raising awareness of the consultation process and opportunity to provide feedback
- driving participation in the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

An overview of this approach is shown below:

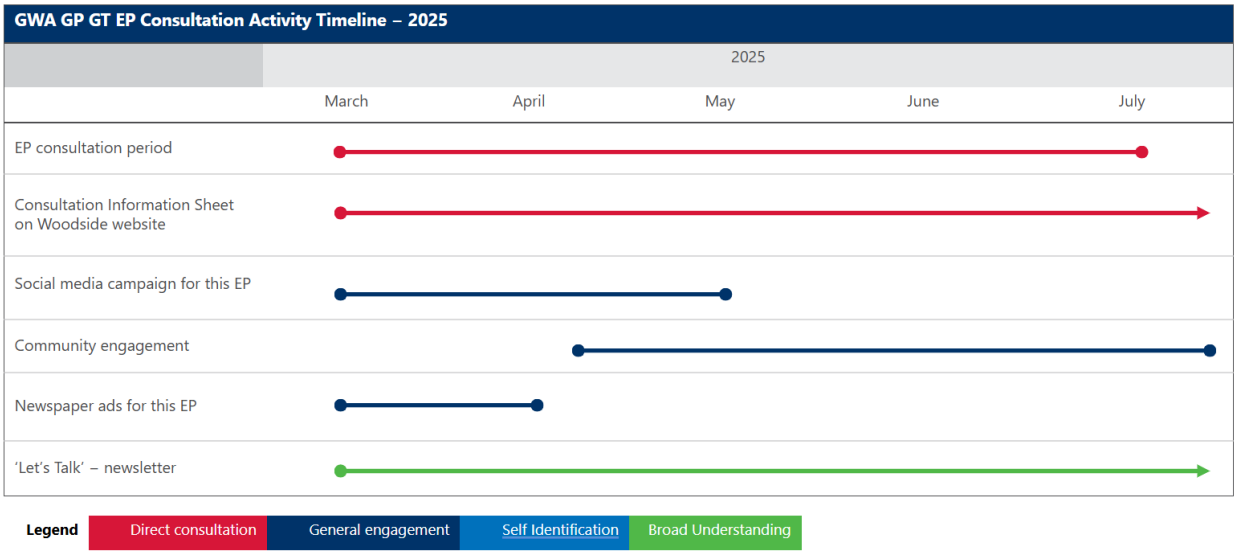

Figure 1-1: Goodwyn Alpha Geophysical and Geotechnical Surveys EP consultation activity

1.3 Traditional custodian consultation approach

Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement. To this end, consultation on any particular EP, including the Goodwyn Alpha Geophysical and Geotechnical Surveys EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians based on availability, cultural protocols and the preferred method of consultation for each relevant person.

1.4 NGO consultation approach

Woodside has an established history of consulting with environmental non-government organisations (NGOs) as part of its EP consultation. In its methodology (Section 5.3.4, Table 5-2), NGOs are considered "Other non-government groups or organisations" and "Research institutes and local conservation groups or organisations". Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside:

- advertised the consultation period (social and traditional media)
- directly consulted NGOs
- participated in regional community events (which were advertised) in the Pilbara which could be attended by any NGOs including local groups (if NGOs attended these sessions, they did not identify themselves).

1.5 NGO response

During consultation for the Goodwyn Alpha Geophysical and Geotechnical Surveys EP, no responses from NGOs were received.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2. RELEVANCY ASSESSMENT

2.1 Assessment of relevant persons for the proposed activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25(1) of the Environment Regulations is outlined below at Table 1 and Table 2.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion in accordance with Section 5.3.7 in the EP or self-identified and Woodside assessed as not relevant are summarised below at Table 1 and Table 3.

As per Woodside's methodology (Section 5 in the EP), assessment of relevant persons is informed by the EMBA, shown in Figure 2-1.

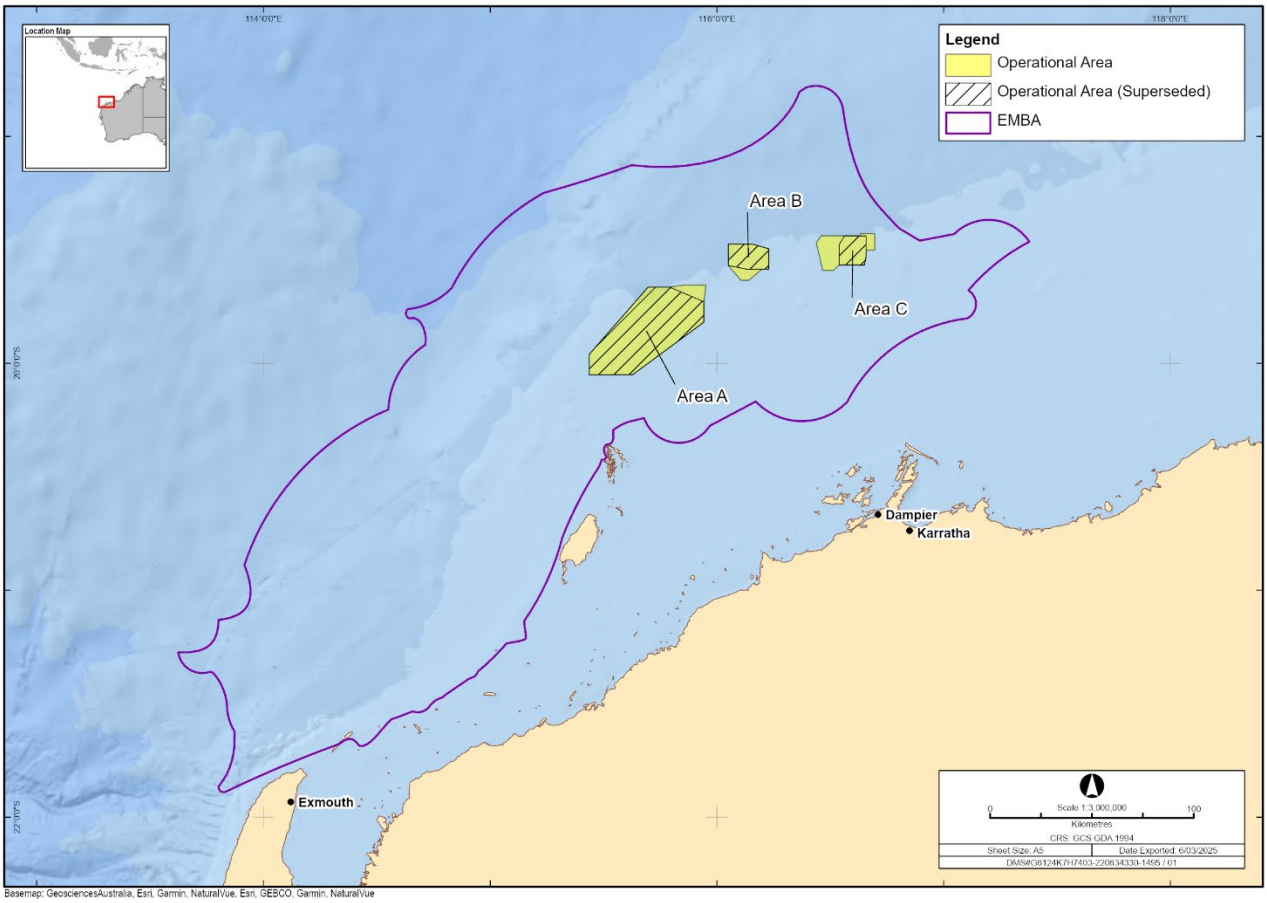

Figure 2-1: Operational Area and EMBA for the Goodwyn Alpha Geophysical and Geotechnical Surveys EP

2.2 Table 1: Assessment of relevance

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there may be telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. No Commonwealth fisheries are active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Safety	Statutory agency for vessel safety and navigation.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Safety's responsibilities may be relevant to the activity as there	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		are proposed vessel activities.	
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. No Commonwealth fisheries are active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. DAFF – Fisheries responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. DPLH's responsibilities may be relevant to the activity as there is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Trap Managed Fishery, and Pilbara Line Fishery have been active in the Operational Area within the past 5 years. The Exmouth Gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery, and West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the past 5 years. DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Transport (DoT)	Legislated responsibility for oil pollution response in State waters.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DoT response in State waters.	Yes
Pilbara Ports Authority (PPA)	PPA encompasses the Ports of Ashburton, Dampier, Port Hedland and Varanus Island. PPA oversees the operation of the greenfield ports of Anketell, Balla Balla, Cape Preston East, Cape Preston West and Urala. PPA oversees the Shipping and Pilotage Act 1967 (SPA) ports of Barrow Island, Cape Preston, Onslow and Port Walcott.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has the potential to impact PPA's responsibilities as the EMBA overlaps the PPA's area of responsibility in respect to Ashburton Port.	Yes
Western Australian Museum (WAM)	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast.	Woodside has applied its methodology for 'Historical cultural heritage groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There are known shipwrecks overlapping the EMBA for which the Western Australian Museum may be responsible.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Clean Energy Regulator (CER)	The CER administers schemes legislated by the Australian Government for measuring, managing, reducing or offsetting Australia's carbon emissions, determined by climate change law.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. CER's responsibilities are not relevant to non-operational EPs.	No
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	DAFF administers, implements and enforces the Biosecurity Act 2015. DAFF requests to be consulted where an activity has the potential to transfer marine pests. DAFF also has inspection and reporting requirements to ensure that all	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health regulations and that any biosecurity risk is managed. DAFF requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.		
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The DBCA's responsibilities may be relevant to the activity as the EMBA overlaps WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Department of Climate Change, Energy, the Environment and Water (DCCEEW)	Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage. Administers the Underwater Cultural Heritage Act 2018 in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within Australian Marine Parks (AMPs), and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		on offshore petroleum activities if they occur in, or may impact on, the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The NCWHAC's responsibilities may be relevant to the activity as the EMBA overlaps the Ningaloo Marine Park.	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)	Department of relevant State Minister.	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Commonwealth commercial fisheries and peak representative bodies			
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	Represents the interests of the Southern Bluefin Tuna Fishery and Western Skipjack Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Southern Bluefin Tuna Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Southern Bluefin Tuna Fishery, the ASBTIA has also been assessed as not relevant.	No
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. No Commonwealth Fisheries are active in the Operational Area. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA. CFA's functions may be relevant to the activity as the North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

North West Slope and Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the past 5 years.	Yes
Pearl Producers Association (PPA)	Peak representative organisation of The Australian South Sea Pearling Industry, with members in Western Australia and the Northern Territory.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Pearl Oyster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Pearl Oyster Managed Fishery, the PPA has been assessed as not relevant.	No
Southern Bluefin Tuna Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the Southern Bluefin Tuna Fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the proposed activity will present a risk to licence holders, given since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). In addition, given fishing methods by licence holders for species fished in this fishery (Australia has a 35% share of total global allowable catch of Southern Bluefin Tuna, which is value-added through tuna ranching near Port Lincoln (South Australia), or fishing effort in New South Wales (Australian Southern Bluefin Tuna Industry Association).	No
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Western Tuna and Billfish Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Western Tuna and Billfish Fishery, Tuna Australia has also been assessed as not relevant.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Western Deepwater Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the past 5 years.	Yes
Western Skipjack Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the activity will present a risk to licence holders, given the fishery spans the Australian Fishing Zone west of Victoria and the Torres Strait. The Fishery is not currently active and no fishing has occurred since 2009 (Patterson et al., 2022). In addition, interactions are not expected given the species' pelagic distribution fishing methods for species fished by licence holders.	No
Western Tuna and Billfish Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the past 5 years.	No
State commercial fisheries and peak representative bodies			
Aquaculture Council of Western Australia (ACWA)	State peak body for WA's aquaculture industry.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. ACWA's members are active within the EMBA. As the peak body for WA's aquaculture industry, ACWA's functions may be relevant to the activity as ACWA members are active in the EMBA.	Yes
Western Australian Fishing Industry Council (WAFIC)	Represents the interests of commercial fishers with licences in State waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Mackerel Managed Fishery, (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Trap Managed Fishery, and Pilbara Line Fishery have been active in the Operational Area within the past 5 years.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The Exmouth Gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery and West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the past 5 years. WAFIC's functions may be relevant to the activity as the peak representative body for State fisheries. Under an agreement, WAFIC issued consultation materials to relevant commercial fisheries licence holders. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would be undertaken only in the event of an unplanned emergency scenario.	
Exmouth Gulf Prawn Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Mackerel Managed Fishery (Area 2)	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	
Marine Aquarium Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Nickol Bay Prawn Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Onslow Prawn Managed Fishery (Area 1 and 2)	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Pilbara Crab Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Demersal Scalefish Fishery: Pilbara Trawl Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Demersal Scalefish Fishery: Pilbara Trap Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
Demersal Scalefish Fishery: Pilbara Line Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and the EMBA and has been active in the Operational Area and EMBA within the past 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting fisheries that are assessed as having a potential for interaction in the Operational Area via WAFIC.	Yes
South West Coast Salmon Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Although the fishery overlaps the Operational Area and the EMBA, the fishery has not been active in the Operational Area or EMBA within the past 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	
Specimen Shell Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area but has not been active in the Operational Area within the past 5 years. The fishery overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
WA North Coast Shark Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area but has not been active in the Operational Area within the past 5 years. The fishery overlaps the EMBA but has not been active in the EMBA within the past 5 years. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
West Coast Deep Sea Crustacean Managed Fishery	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. This fishery overlaps the Operational Area but has not been active in the Operational Area within the past 5 years. This fishery overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Western Australian Sea Cucumber Fishery (Beche-de-mer Fishery)	State commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Recreational marine users and peak representative bodies			
Gascoyne Recreational Marine Users	Gascoyne-based dive, tourism and charter operators.	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. Andro Maritime Services Australia, Aquatic Adventure Exmouth, Birds Eye View, Blue Horizon Charters, Blue Lightning Charters, Cape Immersion Tours, Coastal Adventure Tours, Coral Bay Ecotours, Cruise Ningaloo, Dampier Island Tourism, Dive Ningaloo, Evolution Fishing Charters, Exmouth Adventure Co, Exmouth Dive Centre, Indian Chief Charters, Innkeeper Sport Fishing, Innkeeper Sport Fishing Charter, Kings Ningaloo Reef Tours, Live Ningaloo, Mahi Mahi Fishing Charters, Montebello Island Safaris, Ningaloo Aviation, Ningaloo Blue, Ningaloo Coral Bay Boats, Ningaloo Discovery, Ningaloo Ecology Cruises, Ningaloo Fly Fishing, Ningaloo Marine Interaction, Ningaloo Reef Dive, Ningaloo Reef To Range Tours, Ningaloo Safari Tours, Ningaloo Sportfishing Charters, Ningaloo Whaleshark N Dive, Ningaloo Whaleshark Swim, Ocean Eco Adventures, Peak Sportfishing Charters, Pelican Charters, Sail Ningaloo, Sea Force Charters, Set The Hook, Three Islands, Top Gun Charters, Ultimate Watersports, Venture Ningaloo, View Ningaloo, Warrior Princess Charters, Yardi Creek Boat Tours, Aoa International Pty Ltd, Aspa Pastrikos, Austanley Pty Ltd, Blue Juice Tours Pty Ltd, Bondall Pty Ltd, C Emery Fishing Pty Ltd, Chapel Nominees Pty Ltd, D & N Nominees Pty Ltd, Eco-Abrolhos Pty Ltd, Fawesome Expeditions Pty Ltd, Fire Tiger Pty Ltd, G. City of Karratha	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Baynton, Baynton West, Bulgarra, Cossack, Dampier, Gap Ridge, Karratha, Karratha Industrial Estate, Jingarri, Madigan, Millars Well, Nickol, Pegs Creek, Point	Woodside has applied its methodology for 'Local government, elected Parliamentary representatives, community groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The City of Karratha's area of responsibility overlaps the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Samson, Roebourne, Whim Creek and Wickham.		
Shire of Ashburton	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Onslow, Pannawonica, Paraburdoo and Tom Price.	Woodside has applied its methodology for 'Local government, elected Parliamentary representatives, community groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Ashburton's area of responsibility overlaps the EMBA.	Yes
Shire of Exmouth	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Exmouth, Learmonth and North West Cape.	Woodside has applied its methodology for 'Local government, elected Parliamentary representatives, community groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Exmouth's area of responsibility overlaps the EMBA.	Yes
Other non-government groups or organisations (NGOs) or individuals			
Australian Conservation Foundation (ACF)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine ACF's relevance for the proposed activity. Woodside has assessed that ACF does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact ACF at its discretion in line with Section 5.3.7 of the EP.	No
Australian Marine Conservation Society (AMCS)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine AMCS' relevance for the proposed activity. Woodside has assessed that AMCS does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact AMCS at its discretion in line with Section 5.3.7 of the EP.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Conservation Council of Western Australia (CCWA)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine CCWA's relevance for the proposed activity. Woodside has assessed that CCWA does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact CCWA at its discretion in line with Section 5.3.7 of the EP.	No
Greenpeace Australia Pacific (GAP)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine GAP's relevance for the proposed activity. Woodside has assessed that GAP does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact GAP at its discretion in line with Section 5.3.7 of the EP.	No
Australasian Centre for Corporate Responsibility (ACCR)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine ACCR's relevance for the proposed activity. Woodside has assessed that ACCR does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact ACCR at its discretion in line with Section 5.3.7 of the EP.	No
Doctors for the Environment Australia (DEA) /	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine DEA's relevance for the proposed activity. Woodside has assessed that DEA does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions,	No

Doctors for the Environment WA (DEAWA)		interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact DEA at its discretion in line with Section 5.3.7 of the EP.	
Market Forces	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine Market Forces' relevance for the proposed activity. Woodside has assessed that Market Forces does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact Market Forces at its discretion in line with Section 5.3.7 of the EP.	No
The Wilderness Society (TWS)	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations to determine TWS' relevance for the proposed activity. Woodside has assessed that TWS does not have a publicly available statement (or purpose), website or social media material that demonstrates its functions, interests or activities are relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4 of the EP). Woodside chose to contact TWS at its discretion in line with Section 5.3.7 of the EP.	No
Telstra	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Telstra's relevance for the proposed activity. There are known Telstra communication cables that intersect within the Operational Area.	Yes
Vocus	Non-government organisation.	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine Vocus' relevance for the proposed activity.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		There are no known communication cables that intersect within the Operational Area however Woodside chose to contact Vocus at its discretion in line with Section 5.3.7 of the EP.	
Research institutes and local conservation groups or organisations			
Australian Institute of Marine Science (AIMS)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There may be research being undertaken by AIMS that intersects within the EMBA. Woodside chose to contact AIMS at its discretion in line with Section 5.3.7 of the EP.	No
Commonwealth Scientific and Industrial Research Organisation (CSIRO)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is no known research being undertaken by CSIRO that intersects within the EMBA. Woodside chose to contact CSIRO at its discretion in line with Section 5.3.7 of the EP.	No
Western Australian Marine Science Institution (WAMSI)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is no known research being undertaken by WAMSI that intersects within the EMBA. Woodside chose to contact WAMSI at its discretion in line with Section 5.3.7 of the EP.	No
University of Western Australia (UWA)	Research institute.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is no known research being undertaken by UWA that intersects within the EMBA. Woodside chose to contact UWA at its discretion in line with Section 5.3.7 of the EP.	No
Cape Conservation	Local conservation group focused on	Woodside has applied its methodology for 'Research institutes and local	Yes

Group (CCG)	protecting the terrestrial and marine environment of the North West Cape.	conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. CCG's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps the North West Cape.	
Protect Ningaloo	Local conservation group focused on protecting the Exmouth Gulf and Ningaloo Reef and Cape Range.	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Protect Ningaloo's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps the North West Cape and Ningaloo Reef.	Yes
Traditional Custodians and nominated representative corporations			
Balanggarra Aboriginal Corporation (BAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. BAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps nor is adjacent to the EMBA; and/or is not a party to an Indigenous Land Use Agreement (ILUA) and/or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact BAC at its discretion in line with Section 5.3.7 of the EP.	No
Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. BJNAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact BJNAC at its discretion in line with Section 5.3.7 of the EP.	No
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Thalanyji Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which BTAC is the Registered Native Title Body Corporate. BTAC is also party to the Ashburton Salt Project ILUA and the Macedon ILUA, which are both coastally adjacent to the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Dambimangari Aboriginal Corporation (DAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. DAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact DAC at its discretion in line with Section 5.3.7 of the EP.	No
Gogolanyngor Aboriginal Corporation (GAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. GAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact GAC at its discretion in line with Section 5.3.7 of the EP.	No
Karajarri Traditional Lands Association (KTLA)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. KTLA has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact KTLA at its discretion in line with Section 5.3.7 of the EP.	No
Kariyarra Aboriginal Corporation (KAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Kariyarra Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the KAC is the Registered Native Title Body Corporate. KAC is also party to the Kariyarra and State ILUA, which is coastally adjacent to the EMBA.	Yes
Malgana Aboriginal Corporation (Malgana)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Malgana has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Malgana at its discretion in line with Section 5.3.7 of the EP.	
Mayala Inninalang Aboriginal Corporation (MIAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. MIAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact MIAC at its discretion in line with Section 5.3.7 of the EP.	No
Murujuga Aboriginal Corporation (MAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Under regulation 25(1)(e) of the Environment Regulations, Woodside, at its discretion, chose to assess MAC as a relevant person. MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA). The EMBA does not overlap the Murujuga National Park. MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no Native Title being found over the lands subject to the BMIEA or below the low water mark. MAC also owns and co-manages the Murujuga National Park, and is responsible for the Dampier Archipelago National Heritage Place and progressing the World Heritage nomination of the Murujuga Cultural Landscape.	Yes
Nanda Aboriginal Corporation (Nanda)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Nanda has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Nanda at its discretion in line with Section 5.3.7 of the EP.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People Native Title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. NTGAC and YAC are the Registered Native Title Body Corporates holding Native Title on behalf of the Baiyungu, Thalanyji and Yinggarda people. NTGAC is party, with the WA State Government, to the Ningaloo Conservation Estate ILUA, which is coastally adjacent to the EMBA. NTGAC is responsible for the joint management of the inner Ningaloo Marine Park (State Waters), the Cape Range National Park and new conservation areas extending along the Ningaloo Coast, which runs in parallel to the outer Ningaloo Marine Park in Commonwealth waters. NTGAC is also party to the Nganhurra Thanardi Garrbu Aboriginal Corporation Conservation Estate ILUA, which is coastally adjacent to the EMBA. NTGAC's nominated representative is the Yamatji Marlpa Aboriginal Corporation (YMAC) and the NTGAC executive officer and contact officer pursuant to the *Corporations (Aboriginal and Torres Strait Islander) Act 2006* is employed by YMAC. Woodside has therefore consulted NTGAC (via YMAC).	Yes
Ngarluma Aboriginal Corporation (NAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma People Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC is the Registered Native Title Body Corporate. The Ngarluma/Yindjibarndi People Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Body Corporates. NAC is also party to the Anketell Port, Infrastructure Corridor and Industrial Estates Agreement and RTIO Ngarluma ILUA (Body Corporate Agreement), which are coastally adjacent to the EMBA.	Yes
Nimanburr Aboriginal Corporation (Nimanburr)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Nimanburr has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Nimanburr at its discretion in line with Section 5.3.7 of the EP.	
Nyangumarta Karajarri Aboriginal Corporation (NKAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. NKAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact NKAC at its discretion in line with Section 5.3.7 of the EP.	No
Nyangumarta Warrarn Aboriginal Corporation (NWAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. NWAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact NWAC at its discretion in line with Section 5.3.7 of the EP.	No
Nyul Nyul Aboriginal Corporation (Nyul Nyul)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Nyul Nyul has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Nyul Nyul at its discretion in line with Section 5.3.7 of the EP.	No
Robe River Kuruma Aboriginal Corporation (RRKAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The RRKAC is party to the KM & YM ILUA and RTIO Kuruma Mathudunera People ILUA, which are coastally adjacent to the EMBA.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Wanjina-Wunggurr (Native Title) Aboriginal Corporation (WWAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. WWAC has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact WWAC at its discretion in line with Section 5.3.7 of the EP.	No
Wanparta Aboriginal Corporation (Wanparta)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Wanparta has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Wanparta at its discretion in line with Section 5.3.7 of the EP.	No
Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Yaburara & Mardudhunera People Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which WAC is the Registered Native Title Body Corporate. WAC is party to the Cape Preston Project Deed (YM Mardie ILUA), Cape Preston West Export Facility and KM and YM ILUA, which are coastally adjacent to the EMBA.	Yes
Yawuru Aboriginal Corporation (Yawuru)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. Yawuru has been assessed as not relevant to the proposed activity because its Native Title claim neither overlaps and/ or is adjacent to the EMBA; and/ or is not a party to an ILUA and/ or marine park that overlaps or is adjacent to the EMBA. Woodside chose to contact Yawuru at its discretion in line with Section 5.3.7 of the EP.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/Yindjibarndi People Native Title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Body Corporates.	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d). The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People Native Title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. NTGAC and YAC are the Registered Native Title Body Corporates holding Native Title on behalf of the Baiyungu, Thalanyji and Yinggarda people. YAC nominated representative is Gumala Aboriginal Corporation.	Yes
Native Title Representative Bodies			
Kimberley Land Council (KLC)	Native Title Representative Body.	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. KLC is the Native Title Representative Body for the Kimberley region of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist Native Title claimants and holders. KLC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	Yes
Yamatji Marlpa Aboriginal Corporation (YMAC)	Native Title Representative Body.	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist Native Title claimants and holders. The NTGAC nominated representative is YMAC. Woodside has therefore consulted the NTGAC (via YMAC). YMAC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Self-identified First Nations groups			
Ngarluma Yindjibarndi Foundation Ltd (NYFL)	Representative Aboriginal Corporation.	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma and Yindjibarndi People, the NWS JVs and Woodside entered into an agreement on 22 December 1998 (Agreement). NYFL was subsequently incorporated under the terms of the Agreement to act as trustee for the trust established to benefit the Ngarluma and Yindjibarndi People and the Roebourne Aboriginal Community. Subsequent to that, the Ngarluma people settled their Native Title claim and established their nominated representative corporation, NAC; and the Yindjibarndi people settled their Native Title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation. NAC Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests. NYFL's functions may be relevant to the proposed activity in relation to its functions under the Agreement.	Yes
Other First Nations Groups			
Save Our Songlines (SOS) and/or [Individual 2]	Representatives of Non-Government Organisation Save Our Songlines and/or [Individual 2].	Woodside has applied its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations to determine SOS and/or [Individual 2] relevance for the proposed activity. SOS and/or [Individual 2]'s stated interest is to stop or pause Scarborough gas and to stop new industry on the Burrup; and oppose planned expansion of the Burrup Hub industry by Woodside, Perdaman and Yara. In addition, their stated interests also include the protection of Murujuga rock art. As SOS and/ or [Individual 2] have raised concerns relating to the processing of greenhouse gases on Murujuga, Woodside considers that SOS and/or [Individual 2] are relevant for this activity.	Yes

3. CONSULTATION ACTIVITIES

3.1 Goodwyn Alpha Geophysical and Geotechnical Surveys EP consultation activities

Woodside has been conducting extensive consultation with relevant persons and other parties for this EP since March 2025 when consultation commenced with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside's proposed opportunities.

A broad consultation process has been undertaken with relevant persons for the Goodwyn Alpha Geophysical and Geotechnical Surveys EP. Consultation aims to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken by email, letter, phone call and/or meetings and through advertising.

3.2 Discharging Regulation 25 of the Environment Regulations

Woodside advertised the planned activities proposed for this EP in national, state and relevant local newspapers as per the table below (also see Record of Consultation 6.3). Regional newspapers do not require subscription and are available directly to households. All communities within or adjacent to the EMBA had access to this information via this information.

No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Readership	Publication dates
1. The Australian	National	Weekly – 453,000	2 April 2025
2. The West Australian	Regional (WA)	Daily – 364,000	31 March 2025
3. Pilbara News	Local (WA)	Weekly – 17,611	2 April 2025
4. Midwest Times	Local (WA)	Weekly – 50,534	2 April 2025
5. Koori Mail	Indigenous	Monthly – 80,000	9 April 2025
6. National Indigenous Times	Indigenous	Monthly – 1,484,340	29 March 2025

A Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Sections 5.3.4 and 5.3.7 of the EP), which included details such as an activity overview, maps, a summary of key risks and/or impacts and management measures (Record of Consultation, reference 6.1.1).

Since the commencement of the initial consultation period (March 2025), the stakeholder Consultation Information Sheet has been available on Woodside's website. Consultation Information Sheets include a toll-free 1800 phone number and Woodside's feedback email address consultation@feedback.woodside.com

The Woodside Consultation Activities webpage (accessible on the Consultation Information Sheet via a QR code, banners at community events and via social media content and advertisements) includes Consultation Information Sheets for the EPs on which Woodside is currently consulting, including this EP. The website page also features a subscribe field for EP-focussed communications from Woodside.

Additional targeted information was provided to select relevant persons based on their roles and responsibilities such as a vessel density map (Record of Consultation, reference 6.1.4), GIS shape files, shipwreck information (Record of Consultation, reference 6.1.5 and 6.1.6), a submarine communication cable map (Record of Consultation, reference 6.1.7) and a defence zone map (Record of Consultation, reference 6.1.3).

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Where appropriate, targeted follow-up emails were sent to relevant persons who had not provided a response prior to the close of the target feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.2 of the EP).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement undertaken with persons or organisations Woodside assessed as not relevant but chose to contact (see Section 5.3.7 of the EP) or self-identified and Woodside assessed as not relevant are summarised at Appendix F, Table 3.

From March 2025, Woodside commenced a geotargeted sponsored social media campaign (Record of Consultation, reference 6.4.1) covering various local government authorities within, or coastally adjacent to, the EMBA for the proposed activities.

The campaign consisted of 3 bursts on the dates in the results table below and brought the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they can find out about Woodside's proposed activities by visiting Woodside's website.

Platforms	Audience	Campaign Dates	Results
Meta (Facebook and Instagram)	Exmouth, Onslow, Roebourne, Karratha, Coral Bay 40-km pin radius 18-65+ age range	24-hr blast dates • 31/03/2025 • 1/04/2025 • 03/05/2025	Reach: 54,021 Impressions: 103,635 All clicks: 486 All CTR (Click Through Rate) %: 0.47% Link clicks: 300 Link CTR%: 0.29%

Below is a summary of comments and reactions to the social media campaign. Please note comments and reactions are limited on Instagram.

3.3 Proactive consultation

3.3.1 Community engagement

The Community Information Sessions or community events that Woodside has conducted or attended are outlined below (and captured in more detail in Record of Consultation, reference 6.5). To support attendance, Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media.

Date	Location	Event (if applicable)
6 April 2025	Dampier	Dampier Beachside Markets
4 May 2025	Dampier	Dampier Beachside Markets

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Date	Location	Event (if applicable)
15, 16 May 2025	Karratha	REAF Red Earth Arts Festival
15 June 2025	Dampier	Dampier Beachside Markets
28 June 2025	Exmouth	Ningaloo Sky Festival
2 to 3 August 2025	Karratha	FeNaCING Festival
5 October 2025	Exmouth	Exmouth Community Markets

3.3.2 Community Liaison Group engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha region. Woodside regularly meets with these two CLGs to discuss a range of issues including consultation of specific EPs. For this EP, see 4.9.4 for consultation with Exmouth CLG and 4.9.5 for Karratha CLG.

3.3.3 Newsletters

Woodside's EP-focussed newsletter *Let's Talk* is designed to reach existing and potential stakeholders and encourage self-identification about Woodside's EP-related activities. The newsletter provides quarterly updates about EP consultation activities, case studies on effective consultation with relevant persons and other EP-related information such as forthcoming events where Woodside personnel will be consulting with the local community. *Let's Talk* is distributed in a variety of locations as well as across digital platforms including Woodside's website and social media channels. People can also subscribe to receive it on Woodside's website. (Record of Consultation, reference 6.6.1).

Woodside also publishes the *Karratha Community Update* newsletter quarterly which includes a QR code and encourages people to go to the Consultation Activities page on Woodside's website to subscribe and find information on EPs. (Record of Consultation, reference 6.6.2).

3.4 Traditional Custodian specific consultation

In addition to the approaches above including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (see Section 5.5.4 of the EP). Consultation undertaken specifically with Traditional Custodians for this EP includes direct engagement with nominated representative bodies via the contact listed on the Office of the Registrar of Indigenous Corporations (ORIC) website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:

- meetings with directors, Elders and any nominated representatives, on Country or in Perth
- requests and offers of resourcing to enable and support consultation
- exchange of written feedback and correspondence
- Summary Information Sheets, developed and reviewed by Woodside's First Nations team in collaboration with technical experts to ensure content is appropriate to the intended recipients, was provided to relevant Traditional Custodian groups (Record of Consultation, reference 6.1.2) and phone calls to provide context to the consultation made.

Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and, in some cases, physical visits.

Consultation meetings with attendees decided by Traditional Custodian groups and supported by senior Woodside representatives, subject matter experts and First Nations advisers with skills and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

experience in community engagement. Meetings are developed through a two-way consultation process to ensure effective information sharing via:

- mutually agreed agenda avoiding time pressure
- encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback
- visual aids such as posters, presentations, simplified technical videos and real-world pictures and footage
- emphasis on potential planned and unplanned risks and impacts of the activity
- ample opportunity for questions and feedback
- discussion about ongoing relationship development and opportunities
- distribution of hard-copy Consultation Information Sheets (Record of Consultation, reference 6.1.1) and Summary Consultation Information Sheets (Record of Consultation, reference 6.1.2)
- meeting all costs such as sitting fees, travel, legal support and executive support and other support required
- advertising in Indigenous publications such as the Koori Mail and The National Indigenous Times (Record of Consultation, reference 6.3.5 and 6.3.6)

Newspaper	Coverage	Publication dates
Koori Mail	Indigenous	9 April 2025
National Indigenous Times	Indigenous	29 March 2025

- Woodside also ran a geotargeted sponsored social media campaign (Record of Consultation, reference 6.4) to various communities that are coastally adjacent to the EMBA for the proposed activities. The wide-reaching campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can find out about Woodside's proposed activities by visiting Woodside's website, which details the intent of consultation with relevant persons under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). The campaign reached around 54,000 people and was viewed close to a million times to date across various regions as shown in Record of Consultation, reference 6.4.1. These social media posts were developed with input from Indigenous representatives. Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life (Professor Carlson, 2021). Advertisements used language and information appropriate to Indigenous audiences and feedback from community engagements indicates a high level of penetration for this process.

Woodside has employed a diverse range of techniques to allow relevant persons to become aware of the proposed activity and how it may affect their functions, activities or interests, and to understand their ability to provide feedback. The combination of PBC engagement meetings, traditional print media, social media and face-to face community interaction was designed with input from Indigenous representatives and adapted to the audience, so that it provides a wide-ranging opportunity to consult.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. TABLE 2: CONSULTATION REPORT WITH RELEVANT PERSONS OR ORGANISATIONS

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 2 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

4.1 Commonwealth and WA State Government departments or agencies – marine

4.1.1 Australian Border Force (ABF)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the ABF advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ABF for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ABF sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to ABF on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ABF a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ABF advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ABF 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed ABF a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ABF is appropriate and adapted to the nature of interests of ABF:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding ABF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ABF did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ABF's functions, interests or activities.

4.1.2 Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, a submarine communication cables map (Record of Consultation, reference 6.1.7) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 2 April 2025, ACMA responded (SI Report A, reference 1.1) and stated:
  - **(1)** It regulated the submarine cable regime as set out in Schedule 3A to the Telecommunications Act 1997.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** The Operational Area identified was not in the vicinity of any existing protection zones declared by ACMA but noted Telstra and Vocus submarine cables were in the area and might overlap the proposed survey area.
- **(3)** Recommended consulting Telstra and Vocus to minimise potential risks of damage to submarine cables.
- **(4)** Recommended contacting Australian Hydrographic Office (AHO) for location details of submarine cables that may be impacted by the proposed activities. **(4)** Not required.
- **(5)** It did not require further consultation on this EP.

- On 14 April 2025, Woodside responded (SI Report A, reference 1.2) and:
  - **(1)** Noted ACMA's responsibilities regarding Schedule 3A to the Telecommunications Act 1997.
  - **(2)** Noted the absence of existing protection zones around the potential Operational Areas for this EP.
  - **(3)** Confirmed it had consulted Telstra and Vocus.
  - **(5)** Noted no further consultation on this EP was required.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) ACMA is responsible for administering submarine cable protection regime as per the Telecommunications Act 1997.	**(1)** Woodside acknowledges ACMA's role is to regulate the submarine cable regime as per the Telecommunications Act.	**(1)** Woodside noted ACMA's responsibilities regarding Schedule 3A to the Telecommunications Act 1997.	**(1)** Not required.
(2) The Operational Area was not in the vicinity of any ACMA protection zones but Telstra and Vocus submarine cables in the area might overlap the survey area.	**(2)** Woodside accepts that the Operational Area identified is not in the vicinity of any existing protection zones, is also aware Telstra and Vocus submarine cables might overlap the proposed survey area, and has been in contact with both for this EP.	**(2)** Woodside noted the absence of existing protection zones around the potential Operational Areas for this EP.	**(2)** Communications infrastructure located in the vicinity of the Operational Area is set out in Section 4.10.6 of the EP.
(3) Recommended consulting Telstra and Vocus to minimise potential risks of damage to submarine cables.	**(3)** Woodside is aware of cable infrastructure in the area owned by Telstra and Vocus and has contacted both parties in regard to this EP.	**(3)** Woodside confirmed it had consulted Telstra and Vocus for this EP.	**(3)** Consultation with Telstra is set out in Table 2 and with Vocus in Table 3 of Appendix F of the EP.
(4) Recommended consulting AHO for location details of submarine cables.	**(4)** Woodside is aware AHO can be contacted for location details for cables.	**(4)** Woodside noted the availability of information from AHO.	**(4)** Not required.
(5)	**(5)**	**(5)**	**(5)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

ACMA does not require further consultation on this EP.	Woodside acknowledges ACMA does not require further consultation on this EP.	Woodside noted no further consultation with ACMA was required on this EP.	Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACMA sufficient information to allow ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to ACMA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 2 April 2025, ACMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable ACMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to ACMA in response to ACMA's feedback (Woodside's email of 14 April 2025).

Reasonable Period

Woodside allowed ACMA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ACMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACMA 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed ACMA a reasonable period for consultation in preparation of the EP as evidenced by ACMA's response on 2 April 2025.

Reasonable Opportunity

Woodside allowed ACMA a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to ACMA as evidenced by its response on 2 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- ACMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from ACMA.
  - Made no changes or inclusions to the EP as a result of consultation with ACMA because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.3 Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 6.1.29), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 7 April 2025, AFMA thanked Woodside for the consultation information (SI Report A, reference 2.1) and:
  - **(1)** Advised it had no further comments at the time.
  - **(2)** Confirmed the Commonwealth Fisheries identified as relevant for this EP were correct.
- On 8 April 2025, Woodside responded to AFMA (SI Report A, reference 2.2) and:
  - **(1)** Thanked AFMA for its feedback.
  - **(2)** Thanked AFMA for confirming the relevancy of the listed Commonwealth Fisheries.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AFMA advised it had no feedback.	**(1)** Woodside accepts AFMA has no feedback for this EP.	**(1)** Woodside thanked AFMA for advising it had no comments on this EP.	**(1)** Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) AFMA confirmed the Commonwealth Fisheries identified as relevant for this EP were correct.	**(2)** AFMA agreed and confirmed the Commonwealth Fisheries - North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are relevant for this EP.	**(2)** Woodside thanked AFMA for confirming the relevancy of North West Slope Trawl Fishery and Western Deepwater Trawl Fishery for this EP.	**(2)** Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of the EP. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are listed as relevant Commonwealth Fisheries for this EP as per Appendix F, Table 1.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside will notify AFMA (as per Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities as referenced as PS 1.4 of this EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AFMA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AFMA sufficient information to allow AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to AFMA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 7 April 2025, AFMA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AFMA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AFMA in response to AFMA's feedback (email of 8 April 2025).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed AFMA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AFMA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AFMA 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed AFMA a reasonable period for consultation in preparation of the EP as evidenced by AFMA's response on 7 April 2025.

Reasonable Opportunity

Woodside allowed AFMA a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to AFMA as evidenced by its response on 8 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AFMA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AFMA.
  - Aside from including AFMA in the notifications table, made no changes or inclusions to the EP as a result of consultation with AFMA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.4 Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the AHO advising of the proposed activity (Record of Consultation, reference 6.1.16), provided a Consultation Information Sheet, GIS shape files, a vessel density map (Record of Consultation, reference 6.1.4) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 2 April 2025, AHO thanked Woodside for the invitation to comment and advised (SI Report A, reference 3.1):
  - **(1)** AHO had no concerns with any of the activities proposed.
  - **(2)** Going forward, AHO only required further updates once activity was due to begin and directed Woodside to a Fact Sheet for reference in this regard.
- On 8 April 2025, Woodside responded and (SI Report A, reference 3.2):

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– **(1)** Acknowledged AHO had no feedback.
– **(2)** Noted that in future AHO only required further updates once activity was due to begin and AHO's Fact Sheet.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) AHO had no concerns with the activities proposed.	**(1)** Woodside accepts AHO has no concerns with the activities proposed.	**(1)** Woodside acknowledged AHO's feedback.	**(1)** Not required.
(2) AHO only required updates once activity was due to begin.	**(2)** Woodside understands that AHO only requires further updates once activity is due to begin and notes AHO's Fact Sheet in this regard.	**(2)** Woodside noted that AHO only requires further updates once activity is due to begin and noted AHO's Fact Sheet.	**(2)** Woodside will notify the AHO (see Table 7-2 of this EP) no less than four weeks prior to commencement of activities as referenced as PS 1.2 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AHO for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AHO sufficient information to allow AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to AHO on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  – The purpose of consultation and set out what was being sought through consultation.
  – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  – A timeframe for consultation and the provision of feedback.
  – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 2 April 2025, AHO shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AHO in response to AHO's feedback (Woodside's email of 8 April 2025).

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AHO 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP as evidenced by AHO's response on 2 April 2025.

Reasonable Opportunity

Woodside allowed AHO a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to AHO as evidenced by its response on 2 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AHO provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AHO.
  - Aside from including AHO in the notifications table, made no changes or inclusions to the EP as a result of consultation with AHO because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.5 Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has addressed oil spill preparedness and response strategy in Appendix I. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Marine Pollution for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Pollution sufficient information to allow AMSA – Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to AMSA – Marine Pollution on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AMSA – Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Marine Pollution 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Marine Pollution is appropriate and adapted to the nature of interests of AMSA – Marine Pollution:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding AMSA – Marine Pollution of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution's functions, interests or activities.

4.1.6 Australian Maritime Safety Authority (AMSA) – Marine Safety

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the AMSA − Marine Safety advising of the proposed activity (Record of Consultation, reference 6.1.10), provided a Consultation Information Sheet, GIS shape files, a vessel density map (Record of Consultation, reference 6.1.4) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 2 April 2025, AMSA − Marine Safety responded and (SI Report A, reference 4.1):
  - **(1)** Noted that heavy traffic would be encountered throughout the EMBA areas of interest for both the surveys with vessels travelling along the charted shipping fairways. Support, fishing, passenger and local vessels would also be encountered and attached a PDF showing AIS data for the Areas of Interest.
  - **(2)** Requested that the MODU, survey vessel and associated support craft notify AMSA's Response Centre (ARC) for promulgation of radio-navigation warnings 24-48 hours before operations commence. AMSA's ARC would require vessel details, satellite communications details, area of operation, requested clearance from other vessels and would need to be advised when operations start and end.
  - **(3)** Advised the AHO must be contacted no less than four working weeks before operations commenced for the promulgation of related notices to mariners.
  - **(4)** Advised that for shipping data, Woodside could visit AMSA's spatial data gateway to download digital data sets and maps and a form for requesting customised information and data. AMSA also asked Woodside to note that the Nautical Advice inbox was no longer used or monitored.
- On 11 April 2025, Woodside thanked AMSA − Marine Safety for its email and (SI Report A, reference 4.2):
  - (1) Noted AMSA's comments in regard to heavy vessel traffic and thanked AMSA for providing the PDF showing the AIS data.
  - (2) Advised that Woodside would notify AMSA's Response Centre (ARC) 24-48 hours before operations commence and would provide vessel details, satellite communications details, area of operation, requested clearance from other vessels and advise when operations start and end.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– **(3)** Advised that Woodside would notify AHO no less than four working weeks before operations commenced for the promulgation of related notices to mariners.
– **(4)** Noted AMSA's advice regarding shipping data and that the Nautical.Advice@amsa.gov.au inbox was no longer used or monitored.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Heavy traffic would be encountered throughout the EMBA and attached AIS data.	**(1)** Woodside notes AMSA's comments in regard to heavy vessel traffic and accepts the PDF of AIS data.	**(1)** Woodside noted AMSA's comments regarding heavy vessel traffic and thanked AMSA for providing the PDF showing the AIS data.	**(1)** As per section 6.5.1 of the EP, the EP impact assessment acknowledges the presence of commercial shipping vessels in the OA and EMBA.
(2) The MODU, survey vessel and support craft to notify AMSA's Response Centre (ARC) for promulgation of radio-navigation warnings 24-48 hours before operations commence. ARC requires vessel details, area of operation, requested clearance from other vessels and will need to be advised when operations start and end.	**(2)** Woodside accepts that the MODU, survey vessel and associated support craft must notify AMSA's ARC for promulgation of radio-navigation warnings 24-48 hours before operations commence and that it will require vessel details, satellite communications details, area of operation, requested clearance from other vessels and will need to be advised when operations start and end.	**(2)** Woodside advised it would notify AMSA's ARC for promulgation of radio-navigation warnings 24-48 hours before operations commence and would provide vessel details, satellite communications details, area of operation, requested clearance from other vessels and advice when operations start and end.	**(2)** Woodside will notify AMSA–Marine Safety (see Table 7-2 of this EP) at least 24-48 hours before operations commence as referenced as PS 1.3 in the EP.
(3) The AHO is to be contacted no less than four working weeks before operations commence for the promulgation of related notices to mariners.	**(3)** Woodside accepts that it is required to contact the AHO no less than four working weeks before operations commenced for the promulgation of related notices to mariners.	**(3)** Woodside confirmed it would notify AHO no less than four working weeks before operations commence for the promulgation of related notices to mariners.	**(3)** Woodside will notify the AHO (see Table 7-2 of this EP) no less than four working weeks prior to commencement of activities as referenced as PS 1.2 of this EP.
(4) Woodside to visit AMSA's spatial data gateway and portal for shipping data and the Nautical Advice inbox is longer in use.	**(4)** Woodside accepts AMSA's advice regarding shipping data and that the Nautical Advice inbox was no longer used or monitored.	**(4)** Woodside acknowledged AMSA's advice regarding shipping data and that the Nautical Advice inbox was no longer used or monitored.	**(4)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA − Marine Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA − Marine Safety sufficient information to allow AMSA − Marine Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to AMSA − Marine Safety on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 2 April 2025, AMSA − Marine Safety shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AMSA − Marine Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AMSA − Marine Safety in response to AMSA−Marine Safety's feedback (email of 11 April 2025).

Reasonable Period

Woodside allowed AMSA − Marine Safety a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AMSA − Marine Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA − Marine Safety 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed AMSA − Marine Safety a reasonable period for consultation in preparation of the EP as evidenced by AMSA−Marine Safety's response on 2 April 2025.

Reasonable Opportunity

Woodside allowed AMSA − Marine Safety a reasonable opportunity for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to AMSA − Marine Safety as evidenced by its response on 2 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA − Marine Safety provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AMSA−Marine Safety.
  - Aside from including AMSA − Marine Safety in the notifications table, made no changes or inclusions to the EP as a result of consultation with AMSA − Marine Safety because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.7 Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DAFF – Fisheries advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of the EP. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are listed as relevant Commonwealth Fisheries for this EP as per Appendix F, Table 1. Woodside will notify DAFF − Fisheries (see Table 7-2 of this EP) 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

			No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF – Fisheries for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF – Fisheries sufficient information to allow DAFF – Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DAFF – Fisheries on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF – Fisheries a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DAFF – Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF – Fisheries 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DAFF – Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF – Fisheries is appropriate and adapted to the nature of interests of DAFF–Fisheries:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DAFF – Fisheries of the opportunity to provide feedback.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF – Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Fisheries' functions, interests or activities.

4.1.8 Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 6.1.30), provided a Consultation Information Sheet, defence area map (Record of Consultation, reference 6.1.3) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.17).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside will notify DoD (see Table 7-2 of this EP) no less than five weeks prior to commencement of activities, as referenced as PS 1.5 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DoD on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DoD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

4.1.9 Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DPLH advising of the proposed activity (Record of Consultation, reference 6.1.25), provided a Consultation Information Sheet, details of WA shipwrecks (Record of Consultation, reference 6.1.5) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.13).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DPLH on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPLH is appropriate and adapted to the nature of interests of DPLH:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2024, reminding DPLH of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPLH did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPLH's functions, interests or activities.

4.1.10 Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 6.1.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.12). Woodside noted in this email that during the course of developing this EP, it had further assessed the potential for interaction with State fisheries and had identified 2 additional fisheries relevant to the Operational Area, namely Marine Aquarium Fish Managed Fishery and Onslow Prawn Managed Fishery and had provided consultation information to these fisheries via WAFIC.
- On 9 May 2025, DPIRD responded using Woodside's online consultation form (SI Report A, reference 5.1) and:
  - **(1)** Stated that DPIRD's functions, interests and activities related to the proposed activity because it would involve interactions with fish and fishers.
  - **(2)** Described consequences of the proposed activity as:
    - Disturbance to seabed, increase in sedimentation and turbidity, resuspension of contaminates in the water column, reduced water quality, burial and disturbance of benthic habitat, underwater noise and impact from seabed sampling.
    - Possible hydrocarbon and contaminant spills that could cause detrimental effects on fish and fish resources.
    - Increased vessel movements and heightened risk of spread of pests and diseases.
    - Exclusion zone around the operational area could disrupt fishing operations in the area.
  - Stated the actions or controls DPIRD considered appropriate included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

        - **(3)** Consultation − DPIRD recommended that Woodside consulted:
            - Peak fishing sector bodies and Traditional Owners and included specific start and end dates, and the spatial extent of the proposed activities (including any exclusion zones) to minimise disruption to fishing activities.
            - The charter fishing sector and provided contact details for Marine Tourism WA.
            - DBCA with regards to matters that fell under their jurisdictions.
        - **(4)** Spill Contingency – DPIRD requested:
            - Prompt reporting of an incident to DoT's Maritime Environmental Emergencies phone line at (08) 9480 9924, and by email to environment@dpird.wa.gov.au within 24 hours of Woodside reporting an incident to the appropriate authority.
            - When developing the Oil Spill Contingency Plan (OSCP), that Woodside collected baseline marine data to compare against any post-spill monitoring to determine the nature and extent of any potential impacts. Data should be made available to DPIRD upon request and DPIRD directed Woodside to guidance information.
            - Strategies developed in the EP and/or OSCPs to mitigate risks and noted fish species which may be spawning within the area of the proposed activities.
        - **(5)** Biosecurity – DPIRD advised:
            - Management plans should consider reducing risk of pest and aquatic diseases and bifouling kept to a minimum.
            - Suspected or confirmed presence of any marine pest or disease to be reported within 24 hours to aquatic.biosecurity@dpird.wa.gov.au or by phone to FishWatch on 1800 815 507, and information forwarded directly to all vessel operators associated with the project.
        - **(6)** Threatened and migratory species that may be impacted included the Grey nurse shark, Scalloped hammerhead, Dwarf sawfish, Freshwater sawfish, Green sawfish and Whale sharks. These should be considered in the EP.
        - **(7)** DPIRD recommended the EP considered marine protected areas within or adjacent to Montebello Islands Marine Park, Barrow Islands Marine Park and Marine Management Area, Muiron Islands Marine Management Area, Ningaloo Coast World Heritage Area and Marine Park and the North-West Network of Australian Marine Parks.
    - **(8)** Requested that the EP acknowledged all potential impacts to fisheries, fish resources and the aquatic environment, with strategies to mitigate or minimise impacts.
    - **(9)** Advised if any significant and relevant changes affecting fisheries occurred prior to completion of Woodside's operations, DPIRD reserved the right to request further consultation and resolution, as appropriate.
- On 28 May 2025, Woodside responded to DPIRD (SI Report A, reference 5.2) and:
    - **(1)** Noted DPIRD's role and responsibilities in relation to sustainable management of fish and fish resources in Western Australia and confirmed DPIRD was a relevant person for this EP.
    - **(2)** Acknowledged DPIRD's comments regarding potential impacts and risks of the proposed activity as outlined in the Consultation Information Sheet and advised that as per the Environment Regulations, the EP demonstrated that potential impacts were reduced to ALARP and acceptable levels.
    - **(3)** Regarding consultation, Woodside advised that for this EP it had:
        - Provided consultation information to WAFIC, ACWA, and Recfishwest. Information included the planned timing and duration of activities and the spatial extent of the proposed activities (including any exclusion zones).
        - Consulted individual fishing licence holders based on WAFIC's guidance and advice.
        - Consulted with relevant Traditional Owners, Marine Tourism and DBCA in the preparation of this EP.
    - Woodside acknowledged DPIRD's information and resources in relation to fishing activities and individual commercial fishers and advised it would notify DPIRD regarding start and end of survey activities, as outlined in the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(4)** Regarding Spill Contingency – Woodside advised:
  - As per its Oil Pollution First Strike Plan (FSP), Woodside would notify DoT and DPIRD and additional relevant persons such as commercial fishers or tourism operators that may be affected during a spill event.
  - It mitigated risk of spill events through controls which reduced likelihood of a spill event to an unlikely level including deploying monitoring techniques of commercially important fish species spawning and aggregation areas.
  - The Joint Industry Operational and Scientific Monitoring (OSM) Framework guided Woodside's spill response and Woodside's Operational and Scientific Monitoring Bridging Implementation Plan bridged this framework and was currently under assessment with NOPSEMA as part of another EP submission.
- **(5)** Regarding Biosecurity, Woodside advised:
  - It was not the operator of the vessels described in the EP but worked closely with contractors to ensure compliance with DPIRD requirements.
  - DPIRD would be notified within 24 hours of suspected or confirmed presence of marine pest or disease and this would be captured in the EP and communicated to vessel operators.
  - All vessels were required to comply with biosecurity regulations to prevent introducing invasive marine species (IMS) in accordance with Woodside's Invasive Marine Species Management Plan.
- **(6)** Woodside advised it had considered threatened and migratory species including the Grey nurse shark, Scalloped hammerhead, Dwarf sawfish, Freshwater sawfish, Green sawfish and Whale sharks within the EP and that in line with the Environment Regulations, the EP demonstrates that potential impacts from the proposed activity have been reduced to ALARP and acceptable levels.
- **(7)** Woodside confirmed in developing the EP, it had considered marine protected areas within or adjacent to Montebello Islands Marine Park including Barrow Islands Marine Park and Marine Management Area, Muiron Islands Marine Management Area, Ningaloo Coast World Heritage Area and Marine Park and the North-West Network of Australian Marine Parks.
- **(8)** Woodside confirmed that potential impacts to fisheries, fish resources and the aquatic environment were considered in the EP, with strategies to mitigate or minimise impacts to acceptable levels and ALARP.
- **(9)** Woodside advised that, should any significant and relevant changes affecting fisheries occur prior to the completion of activities, DPIRD reserved the right to request further consultation and resolution, as appropriate.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) DPIRD stated that its functions, interests and activities related to the proposed activity because it involved interactions with fish and fishers.	**(1)** Woodside notes DPIRD's role and responsibilities and acknowledges DPIRD as a relevant person for this EP.	**(1)** Woodside noted DPIRD's role and responsibilities in relation to sustainable management of fish and fish resources in Western Australia and confirmed it had considered DPIRD a relevant person for this EP.	**(1)** DPIRD is considered a relevant person for this EP as noted in Appendix F, Table 1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Described the consequences and potential impacts of the activity including oil spill; increased vessel movements and risk of introduced pest and diseases; and the exclusion zone around the operational area causing disruption for fishing operations in the area.	**(2)** Woodside has considered potential impacts and risks of the proposed activity in the Consultation Information Sheet and in the EP which demonstrates how these impacts are reduced to ALARP and acceptable levels.	**(2)** Woodside acknowledged DPIRD's comments regarding the potential impacts and risks of the proposed activity as outlined in the Consultation Information Sheet and advised that consistent with the Environment Regulations, the EP demonstrated that potential impacts from the proposed activity are reduced to ALARP acceptable levels.	**(2)** Planned and unplanned impacts are described in Section 6 of the EP.
(3) Recommended consultation with peak fishing sector bodies, Traditional Owners, Marine Tourism WA and DBCA.	**(3)** Woodside has consulted WAFIC, ACWA, and Recfishwest for this EP and has provided information regarding planned timing and duration of activities and the spatial extent of the proposed activities (including any exclusion zones). Woodside has also consulted individual fishing licence holders based on WAFIC's advice, as well as relevant Traditional Owners, Marine Tourism and DBCA for this EP.	**(3)** Woodside advised DPIRD it had consulted WAFIC, ACWA, and Recfishwest for this EP and had included information regarding planned timing and duration of activities and the spatial extent of the proposed activities (including any exclusion zones). Woodside has also consulted individual fishing licence holders based on WAFIC's advice, as well as relevant Traditional Owners, Marine Tourism and DBCA in the preparation of this EP.	**(3)** Woodside's summary of consultation for this EP is set out in Appendix F, Tables 2 and 3.
(4) Prompt incident reporting to DoT and DPIRD and strategies in the EP and/or OSCPs to mitigate risks. DPIRD noted fish species which may be spawning within the area of the proposed activities.	**(4)** The Oil Pollution First Strike Plan (FSP) includes measures for notifying DoT, DPIRD and relevant persons and organisations in the case of a spill event and includes measure to mitigate the risk of spill events through the adoption of a range of preventative controls, including to monitor commercially important fish species spawning and aggregation areas	**(4)** Woodside advised it would notify DoT and DPIRD in the event of a marine pollution incident as per its FSP and any additional relevant persons such as commercial fishers or tourism operators that may be affected. Woodside also advised it mitigated risk of spill events through preventative controls which reduced likelihood of a spill event to an unlikely level, including deploying monitoring techniques of commercially important fish species spawning and aggregation areas. The Joint Industry Operational and Scientific Monitoring (OSM) Framework guided Woodside's spill response and	**(4)** As per the FSP (Appendix J) Woodside will notify DoT, DPIRD, and additional relevant persons and organisations including commercial fishers or tourism operators in the event of a spill incident.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside's Operational and Scientific Monitoring Bridging Implementation Plan bridged this framework and was currently under assessment with NOPSEMA as part of another EP submission.	
(5) Consideration of biosecurity issues including reducing risk of pest and aquatic diseases and keeping bifouling to a minimum.	**(5)** Woodside is not the operator of vessels described in the EP but works closely with contractors to ensure compliance with DPIRD requirements. DPIRD will be notified within 24 hours if the presence of marine pest or disease is suspected or confirmed and this will be communicated to vessel operators. All vessels are required to comply with biosecurity regulations to prevent introduction of invasive marine species (IMS) in accordance with Woodside's Invasive Marine Species Management Plan.	**(5)** Woodside advised it was not the operator of the vessels described in the EP but worked closely with contractors to ensure compliance with DPIRD's requirements. DPIRD's request for notification within 24 hours of suspected or confirmed presence of marine pest or disease would be captured in the EP and communicated to vessel operators. All vessels were required to comply with biosecurity regulations to prevent introduction of invasive marine species (IMS) in accordance with Woodside's Invasive Marine Species Management Plan.	**(5)** Biosecurity is considered in Section 6.6.6 o**f** the EP.
(6) Threatened and Migratory Species that may be impacted include the Grey nurse shark, Scalloped hammerhead, Dwarf sawfish, Freshwater sawfish, Green sawfish and Whale sharks should be considered in the EP.	**(6)** Woodside has considered threatened and migratory species in the EP.	**(6)** Woodside advised it had considered threatened and migratory species including the Grey nurse shark, Scalloped hammerhead, Dwarf sawfish, Freshwater sawfish, Green sawfish and Whale sharks in the EP and that in line with the Environment Regulations, the EP demonstrates that potential impacts from the proposed activity have been reduced to ALARP and acceptable levels.	**(6)** Species that may be impacted are considered in Section 4 of the EP.
(7) Consideration in the EP given to marine protected areas within or adjacent to Montebello Islands Marine Park, Barrow Islands Marine Park and Marine Management Area, Muiron Islands Marine Management Area, Ningaloo Coast World	**(7)** Woodside has considered AMPs in the development of this EP.	**(7)** Woodside confirmed it had considered marine protected areas within or adjacent to Montebello Islands Marine Park including Barrow Islands Marine Park and Marine Management Area, Muiron Islands Marine Management Area, Ningaloo Coast	**(7)** Marine protected areas within or adjacent to AMPs are considered in Sections 4 and 6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Heritage Area and Marine Park and the North-West Network of Australian Marine Parks.		World Heritage Area and Marine Park and the North-West Network of Australian Marine Parks in the EP.	
(8) All potential impacts to fisheries, fish resources and the aquatic environment acknowledged in the EP, with strategies to mitigate or minimise impacts.	**(8)** Woodside has considered potential impacts to fisheries, fish resources and the aquatic environment in the EP and has outlined strategies to mitigate or minimise impacts to acceptable and ALARP.	**(8)** Woodside confirmed that potential impacts to fisheries, fish resources and the aquatic environment were considered in the EP with strategies outlined to mitigate or minimise impacts to acceptable and ALARP.	**(8)** Potential impacts to fisheries, fish resources and the aquatic environment are considered in Section 6 of the EP.
(9) DPIRD reserved the right to request further consultation if anything significantly changed affecting fisheries prior to completion of activities.	**(9)** Woodside understands that DPIRD may request further consultation and resolution if anything changed significantly affecting fisheries prior to completion of activities.	**(9)** Woodside acknowledged DPIRD's right to further consultation if significant and relevant changes affecting fisheries occurred prior to completion of activities.	**(9)** Woodside will provide notification of significant change to relevant persons including DPIRD, as referenced as in Table 7-2 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has consulted DPIRD, WAFIC, and individual licence holders (via WAFIC). Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of the EP. Woodside will notify DPIRD (see Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities, as referenced as PS 1.4 of this EP. No additional controls or measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DPIRD on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 9 May 2025, DPIRD shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DPIRD in response to DPIRD's feedback (email of 28 May 2025).

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP as evidenced by DPIRD's response on 9 May 2025.

Reasonable Opportunity

Woodside allowed DPIRD a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DPIRD as evidenced by its response on 9 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPIRD provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DPIRD.
  - Aside from including DPIRD in the notifications table, made no changes or inclusions to the EP as a result of consultation with DPIRD because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.11 Department of Transport (DoT)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DoT advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email. (Record of Consultation, reference 6.2.14)
- On 23 May 2025, Woodside emailed DoT (SI Report A, reference 6.1) and provided a copy of the Oil Pollution First Strike Plan (FSP) (Appendix J) for this EP and invited DoT to comment on the plan.
- On 9 June 2025, as no response had been received to Woodside's email of 23 May 2025, Woodside sent DoT a follow-up email. (Record of Consultation, reference 6.2)
- On 11 June 2025, DoT advised it would provide feedback if required after reviewing consultation information with new DoT environmental officer (SI Report A, reference 6.3)
- On 11 June 2025, Woodside thanked DoT and asked whether future spill plans should be copied to other DoT representatives going forward and for DoT to advise best point(s) of contact. (SI Report A, reference 6.4)
- **(1)** On 13 June 2025, DoT responded and queried whether there were any changes to the FSP (First Strike Plan) or to the EP that was approved by NOPSEMA in 2024 that altered any requirements listed in Appendix 6 (page 41) of the DoT Offshore Petroleum Industry Guidance Note, MOP – Response and Consultation Arrangements (other than the operational area expansion). If there were changes, or if any other potential impacts to State waters from these amendments, DoT asked for these to be provided. (SI Report A, reference 6.5)
- **(1)** On 13 June 2025, Woodside confirmed there were no changes to the FSP or to this EP that altered any of the requirements listed in DoT's Offshore Petroleum Industry Guidance Note, however in regard to point 7 of the Note, whilst the spill risk had not changed in volume or extent from the modelling outputs provided to DoT in June 2023, Woodside had since moved to providing more detailed stochastic modelling outputs which cover all the hydrocarbon phases i.e. shoreline, floating, entrained and dissolved, and utilising the modelling report figures that more clearly show estimated time to enter State waters. In the email, Woodside provided the additional outputs from the same modelling reports previously provided to DoT for this activity. (SI Report A, reference 6.6)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Requested an email outlining any changes to the FSP or the EP that altered any of DOT's requirements (other than the OA expansion) or if there were any other potential impacts to State waters due to the amendments.	**(1)** Woodside has not made any changes to the FSP or the EP that alter any of DoT's requirements but is providing more detailed stochastic modelling outputs and utilising modelling report figures that more clearly show estimated time to enter State waters.	**(1)** Woodside confirmed there were no changes to the FSP or to this EP that altered any of the requirements listed in DoT's Guidance Note however in regard to point 7 of Note, whilst the spill risk had not changed in volume or extent from the modelling outputs provided to DoT in June 2023, Woodside had since moved to providing more detailed stochastic modelling outputs and utilising the modelling report figures that more clearly show estimated time to enter State waters.	**(1)** Measures relating to oil spills are covered in Appendix I - Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoT for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoT sufficient information to allow DoT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DoT on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 13 June 2025, DoT shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DoT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DoT in response to DoT's feedback (email of 13 June 2025).

Reasonable Period

Woodside allowed DoT a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DoT advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoT 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DoT a reasonable period for consultation in preparation of the EP as evidenced by DoT's response on 13 June 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

Woodside allowed DoT a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DoT as evidenced by its response on 11 June 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DoT provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DoT.
  - Aside from including DoT in the notifications table, made no changes or inclusions to the EP as a result of consultation with DoT because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.12 Pilbara Ports Authority (PPA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed PPA advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- **(1)** On 7 April 2025, PPA advised it had no comments on the information provided. (SI Report A, reference 7.1)
- **(1)** On 8 April 2025, Woodside thanked PPA for its feedback. (SI Report A, reference 7.2)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) PPA advised it had no comment to provide.	**(1)** Woodside accepts PPA has no comment to provide on this activity.	**(1)** Woodside thanked PPA for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with PPA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PPA sufficient information to allow PPA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to PPA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 7 April 2025, PPA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable PPA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to PPA in response to PPA's feedback (email of 8 April 2025).

Reasonable Period

Woodside allowed PPA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to PPA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed PPA 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed PPA a reasonable period for consultation in preparation of the EP as evidenced by PPA's response on 7 April 2025.

Reasonable Opportunity

Woodside allowed PPA a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside considers a reasonable opportunity was provided to PPA as evidenced by its response on 7 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- PPA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from PPA.
  - Made no changes or inclusions to the EP as a result of consultation with PPA because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.13 Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the WAM advising of the proposed activity (Record of Consultation, reference 6.1.15), provided a Consultation Information Sheet, details of WA shipwrecks (Record of Consultation, reference 6.1.5) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.5).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAM for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WAM is appropriate and adapted to the nature of interests of WAM:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding WAM of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WAM did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WAM's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.2 Commonwealth and WA State Government departments or agencies – environment

4.2.1 Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DAFF – Biosecurity advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email. (Record of Consultation, reference 6.2.2)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.6.6 of the EP). No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF − Biosecurity for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF− Biosecurity sufficient information to allow DAFF − Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DAFF − Biosecurity on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF − Biosecurity a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DAFF − Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF − Biosecurity 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DAFF − Biosecurity a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF − Biosecurity is appropriate and adapted to the nature of interests of DAFF − Biosecurity:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DAFF − Biosecurity of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF − Biosecurity did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Biosecurity's functions, interests or activities.

4.2.2 Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DBCA advising of the proposed activity (Record of Consultation, reference 6.1.27), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.15).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DBCA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DBCA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DBCA is appropriate and adapted to the nature of interests of DBCA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DBCA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DBCA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DBCA's functions, interests or activities.

4.2.3 Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DCCEEW advising of the proposed activity (Record of Consultation, reference 6.1.14), provided a Consultation Information Sheet, details of Commonwealth shipwrecks (Record of Consultation, reference 6.1.6) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required. Woodside will notify DCCEEW (see Table 7-2 of this EP) 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow ABF to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DCCEEW on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DCCEEW 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DCCEEW of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.2.4 Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 6.1.28), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 15 April 2025, DNP thanked Woodside for the opportunity to comment on the information on the revised EP and (SI Report A, reference 8.1):
  - **(1)** Noted the activity overlapped part of the Montebello Marine Park but that the extension of the Operational Area in this revision did not overlap any more of the marine park, therefore DNP's previous advice on the EP remained relevant and Woodside should be aware of its obligations under the class approval for which NOPSEMA was the assessor.

    (2) Requested the EP addressed risk to cetaceans displaying Biologically Important Behaviours during time of activities, particularly in relation to any equipment used within hearing range of cetaceans, and addressed the risk of vessel strikes and impacts to marine turtles.
  - **(3)** Noted that:
    - In accordance with the Management Plan, mining operations were not allowed in Habitat Protection Zones, Recreational Use Zones, National Park Zones or Sanctuary Zones.
    - The North-west Marine Parks Network Management Plan 2018 provided further information on values for the Montebello Marine Park.
    - To assist with preparing an EP, NOPSEMA and Parks Australia had published a guidance note for titleholders (and included a link to the online document) and that Woodside should consider all activities associated with the operation of surveys in the EP.
    - Titleholders were expected to consider impacts and risks of activities in the context of the management plan objectives and values including the representativeness of the relevant values and the activity footprint on the representative area of the Australian marine park. The EP should identify and manage all impacts and risks on Australian marine park values to an acceptable level and consider all options to avoid or reduce them to ALARP; and clearly demonstrate that the activity will not be inconsistent with the management plan.
  - **(4)** Regarding emergency responses, asked to be made aware of oil/gas pollution incidences which occur within a marine park or are likely to impact on a marine park as soon as possible and that notification should be provided to the 24 hour Marine Compliance Duty Officer.
  - **(5)** Requested notification regarding:
    - EP approval, and
    - At least 10 days prior to activities commencing within the marine park and at the conclusion of the activities.
- On 24 April 2025, Woodside responded to DNP and confirmed (SI Report A, reference 8.2):
  - **(1)** It recognised that the proposed activity overlapped part of the Montebello Marine Park, it was aware of its obligations under the class approval, and that no activities were planned to occur in Habitat Protection Zones, Recreational Use Zones, National Park Zones or Sanctuary Zones.
  - **(2)** The EP assessed potential impacts and risks to cetaceans and turtles from noise emissions as well as the potential for vessel strikes and that the impact assessment determined that these were unlikely to result in a consequence greater than slight short-term disruption to individuals and were reduced to ALARP.
  - **(3)** In developing the EP, it had considered the values for the Montebello Marine Park to demonstrate that the impacts and risks on the marine park values were reduced to ALARP, were of an acceptable level and not inconsistent with the North-west Marine Parks Network Management Plan 2018.
  - **(4)** It would notify DNP if details regarding the activity change and result in a new impact to a marine park, or for emergency responses.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– (5) It would notify DNP upon EP approval, and 10 days prior to any work occurring within the marine park and at the conclusion of activity, consistent with the guidance note.			
Summary of Feedback, Objection or Claim	**Woodside's Assessment of Merits of Feedback, Objection or Claim**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
(1) The activity overlapped part of the Montebello Marine Park but the extension of the Operational Area in this revision did not overlap any more of the marine park, thus DNP's previous advice on the EP remained.	**(1)** Woodside recognises that the proposed activity overlaps part of the Montebello Marine Park and is aware of its obligations under the class approval. The portion of the Montebello Marine Park that overlaps the Operational Area is a multi-use zone, and no activities are planned to occur in Habitat Protection Zones, Recreational Use Zones, National Park Zones or Sanctuary Zones.	**(1)** Woodside advised it recognised that the proposed survey activities overlapped part of the Montebello Marine Park, it was aware of its obligations under the class approval and the portion of the Montebello Marine Park that overlapped the Operational Area was a multi-use zone, and no activities were planned to occur in Habitat Protection Zones, Recreational Use Zones, National Park Zones or Sanctuary Zones.	**(1)** The EP describes protected places within the Operational Areas and EMBA including AMPs for this EP (see Section 4 of the EP).
(2) The EP should address risk to cetaceans in the area during activities, risk of vessel strikes and impacts to marine turtles.	**(2)** Woodside has assessed that potential impacts and risks to cetaceans and turtles from noise emissions and vessel strikes were unlikely to result in a consequence greater than slight short-term disruption to individuals and have been reduced to ALARP.	**(2)** Woodside advised that the EP had assessed potential impacts and risks to cetaceans and turtles from noise emissions and from vessel strikes and that the impact assessment had determined these were unlikely to result in a consequence greater than slight short-term disruption to individuals and had been reduced to ALARP.	**(2)** The EP demonstrates how Woodside will identify and manage all impacts of noise emissions/vessel collisions to ALARP and acceptable level (see Sections 6.5 and 6.6 of the EP).
(3) DNP noted: • the North-west Marine Parks Network Management Plan 2018 did now allow mining operations in Habitat Protection Zones, Recreational Use Zones, National Park Zones or Sanctuary Zones; • the Management Plan provided information on values for the Montebello Marine Park;	**(3)** In the development of the EP, Woodside has considered the values for the Montebello Marine Park to demonstrate that the impacts and risks on the marine park values have been reduced to ALARP, are of an acceptable level and are not inconsistent with the Management Plan.	**(3)** Woodside noted that in the development of the EP, it had considered the values for the Montebello Marine Park to demonstrate that the impacts and risks on the marine park values were reduced to reasonably practicable, were of an as low as acceptable level and were not inconsistent with the North-west Marine Parks Network Management Plan 2018.	**(3)** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian Marine Park values to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• its guidance note designed to assist titleholders in preparing EPs; • The EP should identify and manage all impacts and risks on Australian marine park values to an acceptable level and consider all options to ALARP.			
(4) Notification regarding an emergency should be made as soon as possible to the 24 hour Marine Compliance Duty Officer.	**(4)** Woodside accepts it will notify DNP if details regarding the activity change and result in a new impact to a marine park, or for emergency responses.	**(4)** Woodside stated it would notify DNP if details regarding the activity changed and resulted in a new impact to a marine park, or if there was an emergency.	**(4)** Woodside will provide notification of significant change, as appropriate, to relevant persons as referenced in Table 7-2 of the EP. Woodside will ensure DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix J).
(5) Requested notification upon EP approval, and 10 days prior to activity commencement and at the conclusion of the activities.	**(5)** Woodside is committed to notify DNP upon EP approval, and also 10 days prior to any work occurring within the marine park and at the conclusion of activity, which is consistent with the guidance note.	**(5)** Woodside confirmed it would notify DNP upon EP approval, and 10 days prior to any work occurring within the marine park and at the conclusion of activity, consistent with DNP's guidance note.	**(5)** Woodside will notify DNP (as per Table 7-2 of this EP) 10 days before and on completion of activities occurring within the Montebello Multiple Use Zone, and on approval of the EP, as referenced as PS 1.6 of the EP. No additional controls or measures are required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside considers the measures and controls in the EP are appropriate. No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DNP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DNP on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 15 April 2025, DNP shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DNP in response to DNP's feedback (email of 24 April 2025).

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP as evidenced by DNP's response on 15 April 2025.

Reasonable Opportunity

Woodside allowed DNP a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DNP as evidenced by its response on 15 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DNP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Aside from including DNP in the notifications table, made no changes or inclusions to the EP as a result of consultation with DNP because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.5 Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the NCWHAC advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with NCWHAC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to NCWHAC on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to NCWHAC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed NCWHAC 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding NCWHAC of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC's functions, interests or activities.

4.3 Commonwealth and WA State Government departments or agencies – industry

4.3.1 Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DEMIRS advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside will notify DEMIRS (as per Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities as referenced as PS 1.4 of this EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DEMIRS for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DEMIRS sufficient information to allow DEMIRS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DEMIRS a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DEMIRS advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DEMIRS 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DEMIRS a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DEMIRS is appropriate and adapted to the nature of interests of DEMIRS:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DEMIRS of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DEMIRS did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DEMIRS's functions, interests or activities.

4.3.2 Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the DISR advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to DISR on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DISR 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

4.4 Commonwealth commercial fisheries and peak representative bodies

4.4.1 Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the CFA advising of the proposed activity (Record of Consultation, reference 6.1.29), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.16).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with Commonwealth-managed fisheries in Section 4.10.1 of the EP. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are listed as relevant Commonwealth Fisheries for this EP as per Appendix F, Table 1. Woodside will notify CFA (see Table 7-2 of this EP) 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CFA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to CFA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CFA 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

4.4.2 North West Slope Trawl Fishery

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed the North West Slope Trawl Fishery advising of the proposed activity (Record of Consultation, reference 6.1.29), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.16).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with Commonwealth-managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with North West Slope Trawl Fishery for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given North West Slope Trawl Fishery sufficient information to allow North West Slope Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to North West Slope Trawl Fishery on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed North West Slope Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to North West Slope Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed North West Slope Trawl Fishery 30 days for consultation.
- Consultation for this EP commenced seven months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed North West Slope Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with North West Slope Trawl Fishery is appropriate and adapted to the nature of interests of North West Slope Trawl Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding North West Slope Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as North West Slope Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on North West Slope Trawl Fishery's functions, interests or activities.

4.4.3 Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Western Deepwater Trawl Fishery advising of the proposed activity (Record of Consultation, reference 6.1.29), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.16).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with Commonwealth-managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Deepwater Trawl Fishery sufficient information to allow Western Deepwater Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Western Deepwater Trawl Fishery on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Deepwater Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Deepwater Trawl Fishery 30 days for consultation.
- Consultation for this EP commenced Western Deepwater Trawl Fishery seven months ago.
- In this context, Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Deepwater Trawl Fishery is appropriate and adapted to the nature of interests of Western Deepwater Trawl Fishery:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Western Deepwater Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Deepwater Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on Western Deepwater Trawl Fishery's functions, interests or activities.

4.5 State commercial fisheries and peak representative bodies

4.5.1 Aquaculture Council of Western Australia (ACWA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the ACWA advising of the proposed activity (Record of Consultation, reference 6.1.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.10).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with State-managed commercial fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACWA sufficient information to allow ACWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to ACWA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
– Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ACWA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ACWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACWA 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed ACWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACWA is appropriate and adapted to the nature of interests of ACWA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding ACWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ACWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ACWA's functions, interests or activities.

4.5.2 Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed WAFIC advising of the proposed activity and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'* and requested that WAFIC provided the information to the individual licence holders of state fisheries identified as relevant for this EP by Woodside namely Mackerel Managed Fishery Area 2, Pilbara Line Fishery, Pilbara Trap Fishery and Pilbara Trawl Fishery (Record of Consultation, reference 6.1.31).
- On 9 April 2025, as no response had been received, Woodside emailed WAFIC to confirm it had received the information for this and another Woodside EP as Woodside wanted to ensure individual licence holders for relevant state fisheries had 30 days to provide feedback on this EP (SI Report A, reference 9.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 10 April 2025, WAFIC apologised for the delay and confirmed it would send the information and a confirmation email to Woodside (SI Report A, references 9.2).
- On 10 April 2025, Woodside thanked WAFIC (SI Report A, reference to 9.3).
- On 10 April 2025, WAFIC emailed the relevant individual licence holders (Mackerel Managed Fishery Area 2, Pilbara Line Fishery, Pilbara Trap Fishery, Pilbara Trawl Fishery) consultation information in regard to this EP (SI Report A, reference 9.4) and later emailed Woodside to confirm information was distributed to the individual licence holders and provided an invoice for this service (SI Report A, reference 9.5 and 9.5.1).
- On 14 April 2025, Woodside thanked WAFIC (SI Report reference 9.6).
- On 16 April 2025, Woodside emailed WAFIC to advise it had further assessed the potential for interaction with State fisheries and had identified 2 additional fisheries relevant to the Operational Area and requested WAFIC distribute the information for this EP to Marine Aquarium Fish Managed Fishery and Onslow Prawn Managed Fishery (SI Report A, reference 9.7).
- On 16 April 2025, WAFIC agreed to send the information to the additional 2 fisheries (SI Report A, reference 9.8) and on the same day Woodside thanked WAFIC (SI Report A, reference 9.9).
- On 16 April 2025, WAFIC emailed Woodside to confirm consultation information had been distributed to the individual licence holders for the additional 2 fisheries (SI Report A, reference 9.10).
- On 22 April 2025, Woodside thanked WAFIC for sending the information to the additional fisheries (SI Report A, reference 9.11).
- **(1)** On 9 May 2025, WAFIC advised it had not received any feedback from industry regarding this EP (SI report A, reference 9.12) and:
  - **(2)** Asked how many vessels would be involved in the surveys, and for clarification around timing and duration of the surveys.
  - **(3)** Requested to be included in any vessel operation look ahead associated with this EP.
- WAFIC also listed its expectations regarding unplanned events as follows:
  - **(4)** WAFIC to be included within the Oil spill response planning documents to ensure contact is made within 24 hours of an event notification. WAFIC also stated it could assist Woodside with communication with the fishing industry if required.
  - **(5)** Woodside to retain a current list of WA commercial fisheries that could potentially be impacted by unplanned spill scenarios.
  - **(6)** Woodside to have a suitable Operational and Scientific Monitoring Program (OSMP) for determining impacts and monitoring marine environment recovery and referred Woodside to (and provided a link for) WAFIC's position regarding consultation with the WA fishing industry for unplanned events.
  - WAFIC advised it had no further comments relating to the activity and asked Woodside to follow up on its invoice for this EP.
- **(1)** On 21 May 2025, Woodside thanked WAFIC for advising there was no feedback from industry on this EP (SI Report A, reference 9.13). In regard to the proposed activities Woodside advised:
  - **(2)** Survey vessels were yet to be confirmed but there was likely be a multi-purpose survey vessel for the geophysical and geotechnical surveys, and a geotechnical drilling vessel or a vessel able to deploy subsea drilling/ testing equipment. The number of vessels had not been determined but this, and timing and duration of the surveys, would be provided to WAFIC prior to activities commencing as per Woodside's usual notification process.
  - **(3)** Woodside would notify WAFIC prior to and on completion of the survey activities.
- In the event of an unplanned event, Woodside advised:
  - **(4)** It had an Oil Pollution First Strike Plan (FSP) in place that detailed potential impacts, notifications and response mitigations to manage an emergency event and in an unplanned event, Woodside would engage with WAFIC in line with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for this EP. Woodside noted that WAFIC was able to assist with communication with the fishing industry if required.
  - **(5)** It maintained a list of WA commercial fisheries that had a potential for interaction within the Petroleum Activities Area (PAA) and EMBA for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– **(6)** It had a well-established OSMP and was a founding member of the OSMP. Woodside noted WAFIC's position regarding consultation with the WA fishing industry for unplanned events.
– Woodside acknowledged that WAFIC had no further comments on this EP and that a Woodside representative wished to contact WAFIC in regard to the invoice.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No feedback received from industry for this EP.	**(1)** Woodside notes that WAFIC has not received any feedback from the WA fishing industry for this EP.	**(1)** Woodside acknowledged there was no feedback from industry for this EP.	**(1)** Not required.
(2) Asked how many vessels would be involved in the surveys, and requested clarification around survey timing and duration.	**(2)** Woodside has not confirmed the vessels used to conduct the surveys but there will likely be a multi-purpose survey vessel for geophysical and geotechnical surveys, and either a geotechnical drilling vessel or a vessel that is able to deploy subsea drilling/ testing equipment. The number of vessels is also not yet determined.	**(2)** Woodside advised that survey vessels had not been confirmed but a multi-purpose survey vessel was likely and either a geotechnical drilling vessel or a vessel able to deploy subsea drilling/ testing equipment. The number of vessels had not been determined but this, and timing and duration of surveys, would be provided to WAFIC prior to activities commencing as per Woodside's usual notification process.	**(2)** Woodside will notify WAFIC (see Table 7-2 of this EP) 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP.
(3) Requested inclusion in any vessel operation look ahead for this EP.	**(3)** Woodside will notify WAFIC prior to and on completion of the survey activities as per the usual notification process.	**(3)** Woodside confirmed it would notify WAFIC prior to and on completion of survey activities.	**(3)** Woodside will notify WAFIC (see Table 7-2 of this EP) 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP.
(4) Wants to be included in oil spill response planning documents to ensure contact is made with WAFIC within 24 hours of an event notification and, WAFIC could assist with communication with the fishing industry if required.	**(4)** Woodside has an Oil Pollution FSP in place that details potential impacts, notifications and response mitigations to manage an emergency event and in an unplanned event, Woodside will engage with WAFIC in line with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for this EP. Woodside is aware that WAFIC is able to	**(4)** Woodside advised it had an Oil Pollution FSP in place that detailed potential impacts, notifications and response mitigations to manage an emergency event and in an unplanned event, and that Woodside would engage with WAFIC in line with the OSPRMA for this EP. Woodside also noted WAFIC's offer that WAFIC can assist with communication with the fishing industry if required.	**(4)** Woodside has addressed oil spill preparedness and response strategy in Appendix I.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	assist with communication with the fishing industry if required.		
(5) Woodside to retain a current list of WA commercial fisheries that could potentially be impacted by unplanned spill scenarios.	**(5)** Woodside maintains a list of WA commercial fisheries that have a potential for interaction within the PAA and EMBA for this EP.	**(5)** Woodside advised WAFIC it maintained a list of WA commercial fisheries that have a potential for interaction within the PAA and EMBA for this EP.	**(5)** Woodside has assessed the potential for interaction with State-managed commercial fisheries in Section 4.10.1 of the EP.
(6) Woodside to have a suitable OSMP in place. WAFIC provided a link for its position regarding consultation with the WA fishing industry for unplanned events.	**(6)** Woodside has a well-established Operational and Scientific Monitoring Program (OSMP) and is aware of WAFIC's position regarding consultation with the WA fishing industry for unplanned events.	**(6)** Woodside confirmed it had a well-established Operational and Scientific Monitoring Program (OSMP); advised it was one of the founding members of the OSMP, and noted WAFIC's position regarding consultation with the WA fishing industry for unplanned events.	**(6)** The operational and scientific monitoring program is addressed within Appendix I.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with State-managed commercial fisheries in Section 4.10.1 of the EP. Woodside has updated its assessment of relevancy for consultation purposes (see Appendix F, Table 1) to reflect WAFIC's advice and consultation guidelines. Woodside considers the measures and controls in the EP are appropriate.
Summary Report – Consultation Complete			
Sufficient Information Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to WAFIC on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 9 May 2025, WAFIC shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to WAFIC in response to WAFIC's feedback (email of 21 May 2025).

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAFIC more than 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP as evidenced by WAFIC's response on 9 May 2025.

Reasonable Opportunity

Woodside allowed WAFIC a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to WAFIC as evidenced by its response on 9 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from WAFIC.
  - Aside from including WAFIC in the notifications table, made no changes or inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.5.1 Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery (Area 1 and 2), Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery

Summary of information provided and record of consultation for this EP:

- On 10 April 2025, Woodside emailed Mackerel Managed Fishery (Area 2), Pilbara Trawl Fishery, Pilbara Trap Fishery and Pilbara Line Fishery (State Fishery individual licence holders) via WAFIC advising of the proposed activity, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*. (Record of Consultation, reference 6.1.60).
- On 16 April 2025, WAFIC emailed Marine Aquarium Fish Managed Fishery and Onslow Prawn Managed Fishery (State Fishery individual licence holders) via WAFIC advising of the proposed activity, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'. (Record of Consultation, reference 6.1.61).
- **(1)** On 9 May 2025, WAFIC confirmed there was no feedback from the State Fishery individual licence holders. (SI Report A, reference, reference 9.12)
- **(1)** On 21 May, Woodside thanked WAFIC for its comments and confirmed it did not receive any feedback from the WA fishing industry. (SI Report A, reference 9.13)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed no feedback from fishing industry members.	**(1)** Woodside notes that WAFIC did not get any feedback from its fishing industry members.	**(1)** Woodside acknowledged that WAFIC did not receive any feedback resulting from consultation with fishing industry members.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of the EP. No additional measures or controls are required.
Summary Report – Consultation Complete			

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery (Area 1 and 2), Pilbara Trawl Fishery, Pilbara Trap Fishery and Pilbara Line Fishery (State Fishery individua licence holders) for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has given State Fishery individual licence holders via WAFIC sufficient information to allow the State Fishery individual licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to State Fishery individual licence holders via WAFIC on 10 and 16 April 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed State Fishery individual licence holders a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to State Fishery individual licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed State Fishery individual licence holders 30 days for consultation.
- Consultation for this EP commenced 2.5 months ago.
- In this context, Woodside allowed State Fishery individual licence holders a reasonable period for consultation in preparation of the EP as evidenced by WAFIC's response on 9 May 2025.

Reasonable Opportunity

Woodside allowed State Fishery individual licence holders a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to State Fishery individual licence holders as evidenced by WAFIC's response on 9 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC on behalf of State Fishery individual licence holders provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from WAFIC, noting that the State Fishery individual licence holders had no feedback.
  - Made no changes or inclusions to the EP as a result of consultation with State Fishery individual licence holders via WAFIC because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.6 Recreational marine users and peak representative bodies

4.6.1 Gascoyne Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 31 March 2025, Woodside sent a letter to Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.7).
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, reference 6.2.8).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Gascoyne Recreational Marine Users sufficient information to allow Gascoyne Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since 31 March 2025. Woodside gave this information to Gascoyne Recreational Marine Users on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Gascoyne Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Gascoyne Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Gascoyne Recreational Marine Users is appropriate and adapted to the nature of interests of Gascoyne Recreational Marine Users:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email and letter on 24 April 2025, reminding Gascoyne Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Gascoyne Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Gascoyne Recreational Marine Users' functions, interests or activities.

4.6.2 Marine Tourism WA

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.7).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Marine Tourism WA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Marine Tourism WA on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Tourism WA 30 days for consultation.
- Consultation for this EP commenced seven months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

– Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
– Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
– In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Marine Tourism WA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

4.6.3 Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 31 March 2025, Woodside sent a letter to Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- **(1)** On 11 April 2025, an individual licence holder asked to be removed from Woodside's mailing list (SI Report A, reference 10.1)
  (1) On 11 April 2025, Woodside confirmed the removal (SI Report A, reference 10.2).
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.7).
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, reference 6.2.8).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) An individual licence holder asked to be removed from Woodside's mailing list.	**(1)** Woodside accepted the individual licence holder's request to be removed from its mailing list.	**(1)** Woodside confirmed the individual licence holder had been removed from its mailing list.	**(1)** Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Pilbara/Kimberley Recreational Marine Users on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 11 April 2025, one Pilbara/Kimberley Recreational Marine User shared feedback regarding this activity, indicating the information provided was sufficient to enable Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to the one Pilbara/Kimberley Recreational Marine User in response to the Pilbara/Kimberley Recreational Marine Users' feedback (email of 11 April 2025).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced seven months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP as evidenced by the one Pilbara/Kimberley Recreational Marine Users' response on 11 April 2025.

Reasonable Opportunity

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Woodside considers a reasonable opportunity was provided to Pilbara/Kimberley Recreational Marine Users as evidenced by the one response on 11 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Pilbara/Kimberley Recreational Marine Users provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Pilbara/Kimberley Recreational Marine Users.
  - Made no changes or inclusions to the EP as a result of consultation with Pilbara/Kimberley Recreational Marine Users because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable

4.6.4 Recfishwest

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Recfishwest advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.7).
- On 9 May 2025, Recfishwest responded (SI Report A, reference 11.1) and noted that:
  - **(1)** As the area was still accessed by the charter industry and recreational fishers in larger vessels, as captured in Section 4.10.3 of the EP, Woodside should consider the increase in recreational fishing in recent years; that the Pilbara has the highest per capita boat ownership in Australia; that recreational fishing contributes approximately $190m to the WA economy annually.
  - **(2)** Recfishwest should be kept informed as activities continued so relevant details could be communicated to the recreational fishing community, including the operational area and exclusion zone.
- On 16 May 2025, Woodside responded (SI Report A, reference 11.2) and:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– (1) Noted Recfishwest's comments regarding the increase in offshore recreational fishing in recent years; the Pilbara region's status as the area with the highest per capita boat ownership in Australia, and that recreational fishing contributes approximately $190m to the WA economy annually.
– (2) Confirmed Woodside would keep Recfishwest informed as activities progressed via Woodside's notifications protocol so that Recfishwest could communicate relevant details to the recreational fishing community, including regarding the Operational Area and exclusion zone.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Woodside should consider the increase in recreational fishing; that the Pilbara has the highest per capita boat ownership in Australia; that recreational fishing contributes approximately $190m to the WA economy annually.	**(1)** Woodside is aware of the increase in recreational fishing in recent years; of the Pilbara's status as having the highest per capita boat ownership in Australia; and that recreational fishing is a large contributor to the WA economy.	**(1)** Woodside noted Recfishwest's comments regarding the increase in offshore recreational fishing; that the Pilbara area has the highest per capita boat ownership in Australia, and that recreational fishing contributes approximately $190m to the WA economy annually.	**(1)** Not required.
(2) Recfishwest should be informed as activities continue.	**(2)** Woodside accepts that Recfishwest should be kept informed as activities continued so that relevant details can be communicated to the recreational fishing community, including the Operational Area and exclusion zone.	**(2)** Woodside confirmed it would keep Recfishwest informed as activities for this EP continued so relevant details could be communicated to the recreational fishing community, including regarding the Operational Area and exclusion zone.	**(2)** Woodside will notify Recfishwest (see Table 7-2 of this EP) at least 10 days prior to commencement, and following completion of activities as referenced as PS 1.4 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recfishwest for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Recfishwest on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 9 May 2025, Recfishwest shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Recfishwest in response to Recfishwest's feedback (email of 16 May 2025).

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Recfishwest 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP as evidenced by Recfishwest's response on 9 May 2025.

Reasonable Opportunity

Woodside allowed Recfishwest a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including Karratha to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Woodside considers a reasonable opportunity was provided to Recfishwest as evidenced by its response on 9 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Recfishwest.
  - Aside from including Recfishest in the notifications table, made no changes or inclusions to the EP as a result of consultation with Recfishwest because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.5 WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email. (Record of Consultation, reference 6.2.7)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WA Game Fishing Association for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to WA Game Fishing Association on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WA Game Fishing Association 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding WA Game Fishing Association of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.7 Titleholders and operators

4.7.1 Carbon CQ, INPEX Alpha, Jadestone Energy, JX Nippon O&G Exploration (Australia), KATO Energy / KATO Corowa / KATO NWS / KATO Amulet, KUFFPEC, Kyushu Electric Wheatstone, Longreach Capital Investments / Beagle No. 1 Pty Ltd, OMV Australia / Sapura OMV Upstream, Melbana Exploration, Pelsart Resources, PE Wheatstone, Shell Australia, SK Earthon Australia, Skye Napoleon, Tanami Energy, Vermilion Energy (relevant titleholders and operators).

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed relevant titleholders and operators for this EP advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Carbon CQ, INPEX Alpha, Jadestone Energy, JX Nippon O&G Exploration (Australia), KATO Energy / KATO Corowa / KATO NWS / KATO Amulet, KUFFPEC, Kyushu Electric Wheatstone, Longreach Capital Investments / Beagle No. 1 Pty Ltd, OMV Australia / Sapura OMV Upstream, Melbana Exploration, Pelsart Resources, PE Wheatstone, Shell Australia, SK Earthon Australia. Skye Napoleon, Tanami Energy, Vermilion Energy (relevant titleholders and operators) for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given relevant titleholders and operators sufficient information to allow relevant titleholders and operators to make an informed assessment of the possible consequences of the activity on their functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to relevant titleholders and operators on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed relevant titleholders and operators a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to relevant titleholders and operators advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed relevant titleholders and operators 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed relevant titleholders and operators a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with relevant titleholders and operators is appropriate and adapted to the nature of interests of relevant titleholders and operators:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding relevant titleholders and operators of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as relevant titleholders and operators did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on relevant titleholders and operators' functions, interests or activities.

4.7.2 Chevron Australia/ Osaka Gas Gorgon/ MidOcean Gorgon/ JERA Gorgon (Chevron)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Chevron advising of the proposed activity, provided a Consultation Information Sheet, GIS Shape File, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*', and requested Chevron forward the information to its Joint Venture participants Osaka Gas Gorgon, MidOcean Gorgan and JERA Gorgon for feedback. (Record of Consultation, reference 6.1.17)
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.6).
- **(1)** On 15 May 2025, Chevron responded to advise it had no feedback on activity for this EP (SI Report A, reference 12.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1) On 16 May 2025, Woodside thanked Chevron for advising it had no feedback on activity for this EP (SI Report A, reference 12.2).
- On 16 September 2025, Woodside advised Chevron the EP was under assessment and that Woodside was seeking confirmation from adjacent titleholders in regard to the Operational Area for the activity which extended into Chevron G-9-AP permit area adjacent to Woodside permit WA11-L and WA-3-L, and attached an updated titles map showing G-9-AP (SI Report A, reference 12.3). Woodside:
  - Advised activities which might overlap the titles included geophysical and geotechnical surveys including associated vessel line turns and that current planning did not include any survey acquisition in these adjacent permit areas but if this changed, Woodside would apply for appropriate permits.
  - Advised that adjacent/overlapping titleholders would be included in Start and End of Activity notifications for this EP.
  - Requested feedback on any other control measures related to the activities on the periphery of these titles.
- **(1)** On 17 September 2025, Chevron advised it would respond to Woodside as soon as possible (SI Report, reference 12.4).
- On 23 September 2025, Chevron emailed Woodside (SI Report, reference 12.5) and:
  - **(1)** Advised it had no issues regarding the information provided in relation to the G-9-AP permit area.
  - **(2)** Asked whether Woodside had shared this information with Santos as the operator for the G-9-AP permit area.
- (2) On 24 September 2025, Woodside responded to confirm it had shared the information with Santos (SI Report, reference 12.6).
- **(2)** On 24 September 2025, Chevron replied to enquire with whom at Santos the information had been shared as Chevron's counterparts within Santos were not aware of the EP/request (SI Report, reference 12.7).
- (2) On 24 September 2025, Woodside advised it provided information to Santos using the usual Santos email address for consultation and that initial information for this EP was sent on to Santos on 31 March 2025, and a subsequent reply was received from Santos on 10 April 2025, advising that Santos had no objections or claims regarding the planned activity. Woodside asked Chevron to provide a different email address if required (SI Report, reference 12.8).
- On 25 September 2025, Chevron (SI Report, reference 12.9):
  - **(2)** Advised there was no need to send information to another Santos address; Chevron would advise Santos via its commercial/CCS team which address Woodside used to send consultation information.
  - **(3)** Asked if Woodside had received an RFI (Request For Information) on this aspect of the EP (SI Report, reference 12.9).
- (3) On 25 September 2025, Woodside responded that an unrelated RFI item led Woodside to provide Chevron and Santos with further clarity regarding G-9-AP permit area in relation to the proposed activities for this EP and that the updated map and information had been sent for completeness (SI Report, reference 12.10).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No feedback on initial consultation information sent (31 March 2025) and on updated information regarding Operational Area overlap of G-9-AP permit area (sent 16 September 2025).	**(1)** Woodside accepts Chevron has no feedback on this EP.	**(1)** Woodside acknowledged Chevron had no feedback on this EP.	**(1)** Not required. Woodside will notify Chevron (see Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities, as referenced as PS 1.4 in the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Queried whether Woodside had shared G-9-AP permit area information with Santos as the operator for the permit area and to whom at Santos it had been sent.	**(2)** Woodside sent information and a revised titles map to Santos regarding the G-9-AP permit area overlap on the same date that it sent the information to Chevron using the usual email address for Santos consultation.	**(2)** Woodside advised Chevron that it had also sent the information to Santos as the operator for the G-9-AP permit area using the usual consultation email address for Santos.	**(2)** Not required.
(3) Asked if Woodside had received an RFI on this aspect of the EP (i.e. G-9-AP permit area).	**(3)** Woodside has not received an RFI specifically on permit area G-9-AP but an unrelated title query in an RFI for this EP prompted Woodside to provide additional clarity for the purposes of completeness to both Chevron and Santos in regard to this permit area.	**(3)** Woodside advised that it had not received an RFI regarding the G-9-AP permit area but an unrelated RFI item led Woodside to provide Chevron and Santos with further clarity regarding the G-9-AP permit area in relation to the proposed activities for this EP and the updated map and information had been sent for completeness.	**(3)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Chevron for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chevron sufficient information to allow Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Chevron on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 15 May 2025, Chevron shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Chevron in response to Chevron's feedback (email of 16 May 2025).

Reasonable Period

Woodside allowed Chevron a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Chevron advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Chevron 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Chevron a reasonable period for consultation in preparation of the EP as evidenced by Chevron's response on 15 May 2025.

Reasonable Opportunity

Woodside allowed Chevron a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Chevron as evidenced by its response on 15 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Chevron.
  - Made no changes or inclusions to the EP as a result of consultation with Chevron because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.3 Exxon Mobil Australia Resources Company (Exxon Mobil)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed Exxon Mobil advising of the proposed activity (Record of Consultation, reference 6.1.21), and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*. Woodside also attached a map of adjacent titleholders (Record of Consultation, reference 6.1.8) and noted that:
  - The Operational Area for the activity extended into Mobil WA-17-L permit area adjacent to Woodside permit WA-1- L and Woodside was seeking to confirm adjacent titleholder understanding of the proposed activities, specifically with respect to the Operational Area which extended into permit areas adjacent to Woodside permits.
  - Activities covered by the EP which might overlap the titles included geophysical and geotechnical surveys including the vessel line turns associated with such activities. Current planning did not include any survey acquisition in the adjacent permit areas and if this were to change Woodside would apply for appropriate permits before performing the work.
  - To reduce the potential impact on adjacent titleholders, Woodside would include adjacent titleholders in Start and End of Activity notifications.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.9).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside will notify Exxon Mobil (see Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities, as referenced as PS 1.4 in the EP. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exxon Mobil for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exxon Mobil sufficient information to allow Exxon Mobil to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Exxon Mobil on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Exxon Mobil a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exxon Mobil advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exxon Mobil 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Exxon Mobil a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exxon Mobil is appropriate and adapted to the nature of interests of Exxon Mobil:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Exxon Mobil of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Aside from including Exxon Mobil in the notifications table, no additional measures were considered as a result of consultation as Exxon Mobil did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exxon Mobil's functions, interests or activities.

4.7.4 InCapture

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed InCapture advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 9 April 2025, InCapture responded and provided feedback that did not relate to an adverse impact of the proposed activity. (SI Report A, reference 14.1)
- On 10 April 2025, Woodside thanked InCapture for its response regarding feedback. (SI Report A, reference 14.2)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with InCapture for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given InCapture sufficient information to allow InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to InCapture on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 9 April 2025, InCapture shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to InCapture in response to InCapture's feedback (email of 10 April 2025).

Reasonable Period

Woodside allowed InCapture a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to InCapture advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed InCapture 30 days for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed InCapture a reasonable period for consultation in preparation of the EP as evidenced by InCapture's response on 9 April 2025.

Reasonable Opportunity

Woodside allowed InCapture a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to InCapture as evidenced by its response on 9 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- InCapture provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from InCapture.
  - Made no changes or inclusions to the EP as a result of consultation with InCapture because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable

4.7.5 Finder Energy (Finder No 9/10/16/17)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Finder Energy advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- **(1)** On 30 April 2025, Finder Energy advised it had no feedback. (SI Report A, reference 13.1)
- **(1)** On 2 May 2025, Woodside thanked Finder Energy for its response confirming it had no feedback. (SI Report A, reference 13.2)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No feedback	**(1)** Woodside accepts Finder Energy has no feedback on this EP.	**(1)** Woodside thanked Finder Energy for advising if had no feedback on this EP.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the	Woodside engages in ongoing consultation throughout the life of an EP.	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Finder Energy for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Finder Energy sufficient information to allow Finder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Finder Energy on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 30 April 2025, Finder Energy shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Finder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Finder Energy in response to Finder Energy's feedback of 30April 2025.

Reasonable Period

Woodside allowed Finder Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Finder Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Finder Energy 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Finder Energy a reasonable period for consultation in preparation of the EP as evidenced by Finder Energy's response on 30 April 2025.

Reasonable Opportunity

Woodside allowed Finder Energy a reasonable opportunity for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Finder Energy as evidenced by its response on 30 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Finder Energy provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Finder Energy.
  - Made no changes or inclusions to the EP as a result of consultation with Finder Energy because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable

4.7.6 Santos NA Energy Holdings / Santos Ltd / Santos WA Northwest / Santos Offshore / Santos WA Southwest / Santos (BOL) / Santos WA PVG (Santos)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 6.1.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*. Woodside also attached a map of adjacent titleholders (Record of Consultation, reference 6.1.8) and noted that:
  - The Operational Area for the activity extended into Santos WA-546-P permit area adjacent to Woodside permit WA-2-L and Woodside was seeking to confirm adjacent titleholder understanding of the proposed activities, specifically with respect to the Operational Area which extended into permit areas adjacent to Woodside permits.
  - Activities covered by the EP which might overlap the titles included geophysical and geotechnical surveys including the vessel line turns associated with such activities. Current planning did not include any survey acquisition in the adjacent permit areas and if this were to change Woodside would apply for appropriate permits before performing the work.
  - To reduce the potential impact on adjacent titleholders, Woodside would include adjacent titleholders in Start and End of Activity notifications.
- On 10 April 2025, Santos advised (SI Report A, reference 15.1):
  - **(1)** It had no objections or claims in relation to the planned activity.
  - **(2)** Santos had recently relinquished exploration permit WA-546-P.
- On 11 April 2025, Woodside thanked Santos for its feedback and (SI Report A, reference 15.2):
  - **(1)** Acknowledged Santos had no feedback.
  - **(2)** Noted that Santos had relinquished exploration permit WA-546-P.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 16 September 2025, Woodside advised Santos the EP was under assessment and that Woodside was seeking confirmation from adjacent titleholder in regard to the Operational Area for the activity which extended into Santos G-9-AP permit area adjacent to Woodside permit WA11-L and WA-3-L, and attached an updated titles map showing G-9-AP (SI Report A, reference 15.3):. Woodside:
  - Advised activities which might overlap the titles included geophysical and geotechnical surveys including associated vessel line turns and that current planning did not include any survey acquisition in these adjacent permit areas but if this changed, Woodside would apply for appropriate permits.
  - Advised adjacent/overlapping titleholders would be included in Start and End of Activity notifications.
  - Requested feedback on any other control measures related to the above activities on the periphery of these titles.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Santos advised it had no feedback.	**(1)** Woodside accepts Santos has no feedback on this activity.	**(1)** Woodside acknowledged Santos' feedback.	**(1)** Not required.
(2) Advised it had relinquished exploration permit WA-546-P.	**(2)** Woodside notes Santos has relinquished exploration permit WA-546-P and that Operational Area B no longer overlaps Santos' title.	**(2)** Woodside noted that Santos has relinquished exploration permit WA-546-P.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside will notify Santos (see Table 7-2 of this EP) at least 10 days prior to commencement and following completion of activities, as referenced as PS 1.4 in the EP. No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Santos for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Santos on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 10 April 2025, Santos shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Santos in response to Santos' feedback (email of 11 April 2025).

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP as evidenced by Santos' response on 10 April 2025.

Reasonable Opportunity

Woodside allowed Santos a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Santos attended Woodside's Exmouth CLG meeting on 13 March 2025 where this EP was discussed providing Santos with another opportunity to provide feedback.
- Woodside considers a reasonable opportunity was provided to Santos as evidenced by its response on 11 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.8 Peak industry representative bodies

4.8.1 Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the AEP advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AEP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to AEP on 31 August 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed AEP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AEP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AEP 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2024, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

4.9 Local government and elected parliamentary representatives, community groups or organisations

4.9.1 Exmouth Chamber of Commerce and Industry (Exmouth CCI)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Exmouth CCI advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CCI sufficient information to allow Exmouth CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Exmouth CCI on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CCI 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Exmouth CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CCI is appropriate and adapted to the nature of interests of Exmouth CCI:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- The Exmouth CCI attended Woodside's Exmouth CLG meeting on 13 March 2025 where this EP was discussed providing Exmouth CCI with another opportunity to provide feedback.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Exmouth CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CCI's functions, interests or activities.

4.9.2 Karratha and Districts Chamber of Commerce and Industry (KDCCI)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the KDCCI advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with KDCCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given KDCCI sufficient information to allow KDCCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to KDCCI on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'. – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). **Reasonable Period** Woodside allowed KDCCI a reasonable period for consultation in the preparation of this EP because: • A consultation period was stated in the initial correspondence to KDCCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed KDCCI 30 days for consultation. • Consultation for this EP commenced seven months ago. • In this context, Woodside allowed KDCCI a reasonable period for consultation in preparation of the EP. **Reasonable Opportunity** A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KDCCI is appropriate and adapted to the nature of interests of KDCCI: • Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media. • KDCCI attended Woodside's Karratha CLG meeting on 20 March 2025 where this EP was discussed providing the KDCCI with another opportunity to provide feedback. • In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding KDCCI of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as KDCCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on KDCCI's functions, interests or activities.

4.9.3 Onslow Chamber of Commerce and Industry (Onslow CCI)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Onslow CCI advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Onslow CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow CCI sufficient information to allow Onslow CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Onslow CCI on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Onslow CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow CCI 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Onslow CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow CCI is appropriate and adapted to the nature of interests of Onslow CCI:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Onslow CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Onslow CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow CCI's functions, interests or activities.

4.9.4 Exmouth Community Liaison Group (Exmouth CLG)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 13 March 2025, Woodside presented to the Exmouth CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 16.1). Slides shown explained how Woodside consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs, on upcoming EP's including on activities for this EP.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website. Copies of the latest edition of *Let's Talk* (Record of Consultation, 6.6.1) were provided in hard copy and sent electronically with the minutes and slide pack.
  - 7 individuals attended the meeting representing:
    - Shire of Exmouth
    - Gascoyne Development Commission
    - Exmouth Chamber of Commerce and Industry (CCI)
    - Australia's Coral Coast/Regional Development Authority
    - Exmouth community
    - PHI Helicopters
    - Santos.
  - No feedback was provided for this EP.
- On 31 March 2025, Woodside emailed the Exmouth CLG advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 22 April 2025, Woodside's presentation was emailed to the Exmouth CLG members, regardless of their attendance at the meeting. (see presentation slides in SI report, reference 16.1)
- On 24 April 2025, as no response had been received to the consultation email of 31 March 2025, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 26 June 2025, Woodside presented to the Exmouth CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 16.2)
  - Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. In addition, slides on past EPs were presented to the group including the Goodwyn Alpha Geophysical and Geotechnical Surveys−Revision EP.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 8 individuals attended the meeting representing:
    - Shire of Exmouth
    - Exmouth Chamber of Commerce and Industry
    - Australia's Coral Coast/Regional Development Authority
    - PHI Helicopters
    - Local councillor
    - St John Exmouth Subcentre
    - Exmouth Freight and Logistics
    - Santos.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No feedback was provided for this EP.

- On 10 July 2025, Woodside's presentation was emailed to the CLG members, regardless of their attendance at the meeting.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG sufficient information to allow Exmouth CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CLG 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Exmouth CLG a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG is appropriate and adapted to the nature of interests of Exmouth CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Exmouth CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CLG's functions, interests or activities.

4.9.5 Karratha Community Liaison Group (Karratha CLG)

Summary of information provided and record of consultation for this EP:

- On 21 March 2025, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 17.1). Slides shown explained how Woodside consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs, on upcoming EPs including on activities for this EP.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website. Copies of the latest edition of *Let's Talk* (Record of Consultation, reference 6.6.1) were provided in hard copy and sent electronically with the minutes and slide pack.
  - 8 CLG members attended the meeting representing:
    - City of Karratha – staff representatives
    - Murujuga Aboriginal Corporation
    - Regional Development Australia Pilbara
    - Karratha and Districts Chamber of Commerce and Industry
    - Department of Education
    - Development WA
    - Dampier Community Association.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - No feedback was provided for this EP.
- On 31 March 2025, Woodside emailed the Karratha CLG advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
- On 24 April 2025, as no response had been received to the consultation email of 31 March 2025, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 20 May 2025, Woodside's March presentation to the CLG was emailed to the CLG members regardless of their attendance at the meeting.
- On 20 June 2025, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 17.2). Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 9 CLG members attended the meeting representing:
    - City of Karratha
    - Department of Education
    - Murujuga Aboriginal Corporation
    - Department of Communities
    - Development WA
    - Dampier Community Association
    - Karratha Central Healthcare
    - Karratha & Districts Chamber of Commerce and Industry
    - Community member.
  - No feedback was provided for this EP.
- On 26 September 2025, Woodside's June presentation to the CLG was emailed to the CLG members regardless of their attendance at the meeting.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Karratha CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG sufficient information to allow Karratha CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Karratha CLG on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Karratha CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Karratha CLG 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Karratha CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG is appropriate and adapted to the nature of interests of Karratha CLG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Karratha CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as Karratha CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha CLG's functions, interests or activities.

4.9.6 City of Karratha

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the City of Karratha advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- **(1)** On 5 May 2025, the City of Karratha responded to advise it did not anticipate any significant additional risks to the environment, tourism, or the community based on the information provided for this EP. (SI Report A, reference 18.1)
- **(1)** On 5 May 2025, Woodside thanked the City of Karratha for its email and for advising that the City did not anticipate any significant additional risks to the environment, tourism, or the community in regards to this EP. (SI Report A, reference 18.2)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No significant additional risks anticipated based on the information provided for this EP.	**(1)** Woodside accepts the City of Karratha does not have any feedback for this EP.	**(1)** Woodside acknowledged the City of Karratha does not anticipate any significant additional risks to the environment, tourism, or the community based on the information Woodside has provided for this EP.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside considers the measures and controls in the EP are appropriate.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with City of Karratha for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given City of Karratha sufficient information to allow City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to City of Karratha on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 5 May 2025, City of Karratha shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to City of Karratha in response to City of Karratha's feedback (email of 5 May 2025).

Reasonable Period

Woodside allowed City of Karratha reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to City of Karratha advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed City of Karratha 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed City of Karratha a reasonable period for consultation in preparation of the EP as evidenced by City of Karratha's response on 5 May 2025.

Reasonable Opportunity

Woodside allowed City of Karratha a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- The City of Karratha attended Woodside's Karratha CLG meeting on 20 March 2025 where this EP was discussed providing the City with another opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside considers a reasonable opportunity was provided to City of Karratha as evidenced by its response on 5 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- City of Karratha provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from City of Karratha.
  - Made no changes or inclusions to the EP as a result of consultation with City of Karratha because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.9.7 Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 6.1.23), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.11).
- On 5 May 2025, Shire of Ashburton acknowledged the opportunity to provide input regarding this EP and provided feedback as follows (SI Report A, reference 19.1):
  - **(1)** Environmental Management and Risk Mitigation – the Shire urged Woodside to rigorously manage and mitigate potential risks by adhering to the highest regulatory standards, and
  - **(2)** Encouraged continued transparency in relation to:
    - Measures for unplanned hydrocarbon releases and potential spills, particularly in sensitive ecological areas
    - The effectiveness of management strategies to minimise disruptions to marine fauna, particularly species identified in Biologically Important Areas (BIAs)
    - Any additional environmental safeguards beyond regulatory compliance to further protect the surrounding marine and coastal ecosystems
    - Given that vessel operations may intersect with several natural marine fauna cycles, such as annual turtle nesting (November to March) and whale shark migration (July to November), Shire of Ashburton advised that Woodside should critically assess how these activities overlap and schedule activities to achieve ALARP impacts
    - If there was an unavoidable overlap between vessel movements and marine fauna cycles, additional steps were needed to minimise the risk of an adverse impact.
  - Consultation with Traditional Owners and Community Engagement – Shire of Ashburton recommended:
    - **(3)** Continued and meaningful engagement with local Indigenous groups to ensure cultural values and heritage were respected and incorporated into project planning
    - **(4)** Opportunities for co-designed monitoring programs involving Traditional Owners and Community in assessing the long-term environmental impact of operations.
  - Monitoring and Reporting – Shire of Ashburton requested continued clarity on:
    - **(5)** The frequency and accessibility of environmental performance reports to the public.
    - **(6)** The mechanisms available for the public to engage with Woodside in addressing any potential concerns.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(7)** Communication with appropriate emergency management agencies at either/or National, State, District and Local levels on potential hazards and risks around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability, and sustainability of response activities and escalation triggers.

– **(8)** Decommissioning – Shire of Ashburton proposed Woodside considered the Pilbara Regional Waste Management Facility for decommissioning, recycling, and waste disposal.

- On 2 June 2025, Woodside responded to Shire of Ashburton's feedback (and offered to meet to discuss consultation for this EP and how it could engage with Shire of Ashburton on EPs generally) as follows (SI Report A, reference 19.2):
  – **(1)** Woodside was required to manage environmental impacts and risks to the EMBA to ALARP and to an acceptable level, as per the Environment Regulations, through the implementation of the EP submitted to NOPSEMA.
    - **(2)** Woodside would manage and mitigate potential risks as per the Consultation Information Sheet (sent 31 March 2025) and would provide continued transparency regarding risks which would be expanded in the EP which would be publicly available upon submission to NOPSEMA and Woodside would provide ongoing consultation in the form of significant updates regarding the activity, when relevant.
  – **(3)** Woodside routinely utilised DPLH's Aboriginal Cultural Heritage Inquiry System (ACHIS) as part of EP development and review to identify locations and information about known Aboriginal heritage in Western Australia. This information was included as an appendix to the EP and assessed within the EP where potential interactions with the activity arose.
    - Woodside had sought feedback from 30 Traditional Owner groups about cultural values and heritage including Buurabalayji Thalanyji Aboriginal Corporation, Nganhurra Thanardi Garrbu Aboriginal Corporation, Robe River Kuruma Aboriginal Corporation and Wirrawandi Aboriginal Corporation. Woodside advised this information would be recorded in the Cultural Values and Heritage Section of the EP.
    - **(4)** Woodside supports measures to increase the capability and capacity of Traditional Custodian groups for the ongoing protection of Country for example, social investment in ranger programs and Indigenous oil spill response capability.
  – **(5)** Woodside reported on its environmental performance annually in its Annual Report and website which included an Environment data table highlighting performance through the year.
    - **(6)** The public could enquire or raise concerns via the online form on Woodside's website, via phone or email or provide feedback on EPs via consultation@feedback.woodside.com, via phone or the website feedback form or by a means which suits the individual.
    - **(7)** In relation to emergency management, Woodside outlined its Oil Pollution First Strike Plan (FSP), and that it consults with relevant jurisdictional authorities and controlling agencies, including DoT, AMSA, at times relevant port authorities, during the process to revise the EP, to verify and update appropriate mitigation and management measures to include for the activity. Woodside might also consult with other relevant external emergency management agencies such as Local Emergency Management Committee (LEMC) to ensure effective emergency management plans are in place.
  – **(8)** No decommissioning activities would occur under this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Urged Woodside to rigorously manage and mitigate potential risks by adhering to highest regulatory standards.	**(1)** Woodside acknowledges its obligation to manage and mitigate potential environmental risks to the EMBA for this activity to ALARP and to an acceptable	**(1)** Woodside confirmed it was required to manage environmental impacts and risks to the EMBA to ALARP and to an acceptable level, as per the Environment Regulations, through the implementation	**(1)** Section 6 of the EP describes planned and unplanned risks for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	level as per the Environmental Regulations, through the EP.	of the EP submitted to NOPSEMA for acceptance.	
(2) Encouraged Woodside to continue to be transparent regarding: • Measures for unplanned hydrocarbon releases and potential spills, particularly in sensitive ecological areas • Effectiveness of management strategies to minimise disruptions to marine fauna, particularly species identified in Biologically Important Areas (BIAs) • Any additional environmental safeguards beyond regulatory compliance to further protect the surrounding marine and coastal ecosystems • In regard to vessels, Woodside to assess any overlap of activities and marine fauna cycles (annual turtle nesting, Nov-Mar, whale shark migration, July-Nov) to achieve ALARP impacts.	**(2)** Woodside acknowledges it will manage and mitigate potential risks and will continue to be transparent regarding these risks which are outlined in the Consultation Information Sheet and which will be publicly available in the EP upon submission to NOPSEMA. Further transparency measures in place include the provision for ongoing consultation where Woodside will continue to provide the Shire with significant updates with respect to the activity, when relevant.	**(2)** Woodside confirmed it would manage potential risks and would continue transparency in regard to the risks outlined in the Consultation Information Sheet which would be publicly available in the EP upon submission to NOPSEMA. Further transparency measures included provision for ongoing consultation where Woodside would continue to provide the Shire with significant updates with respect to the activity, when relevant.	**(2)** Woodside's Ongoing consultation engagements are set out in Table 7-2 of the EP.
(3) Shire of Ashburton recommended continued and meaningful engagement with local Indigenous groups to ensure cultural values and heritage were respected and part of project planning.	**(3)** Woodside routinely utilises the DPLH ACHIS as part of EP development and review to identify locations and information about known Aboriginal heritage in Western Australia. This information is included as an appendix to the EP and assessed within the EP where potential interactions with the activity arise.	**(3)** Woodside advised it utilised the DPLH ACHIS as part of EP process to identify locations and information about known Aboriginal heritage in Western Australia. This information was included as an appendix to the EP and assessed within the EP where potential interactions with the activity arose. Woodside advised it was committed to ongoing engagement and support of Traditional Custodians' capacity to care and manage country and Sea Country. For	**(3)** A search of DPLH's ACHIS was undertaken for this EP (see Appendix D of this EP). Woodside had sought feedback from 30 Traditional Owner groups (see Table 2) which is recorded in the Cultural Values and Heritage Section of the EP, Section 4.9.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		this EP, Woodside had sought feedback from 30 Traditional Owner groups recorded in the Cultural Values and Heritage Section of the EP.	
(4) Shire of Ashburton recommended Woodside considered opportunities for co-designed monitoring programs involving Traditional Owners and Community in assessing long term environmental impacts.	**(4)** Woodside supports measures to increase the capability and capacity of Traditional Custodian groups for the ongoing protection of Country, for example, by its social investment in ranger programs and Indigenous oil spill response capability.	**(4)** Woodside advised it also supports measures to increase the capability and capacity of Traditional Custodian groups for the ongoing protection of Country for example via its social investment in ranger programs and Indigenous oil spill response capability.	**(4)** Not required.
(5) Shire of Ashburton requested continued clarity on: • Frequency and accessibility of environmental performance reports to the public.	**(5)** Woodside reports on its environmental performance in its Annual Report and on its website which includes an environment data table highlighting Woodside's performance through the year.	**(5)** Woodside advised it reported on its environmental performance in its Annual Report and on its corporate website in the environment and biodiversity area which included an environment data table highlighting Woodside's performance through the year in key metrics that Woodside tracks and referred Shire of Ashburton to pages 63-38 in the Annual Report 2024.	**(5)** Not required.
(6) • Mechanisms available for the public to engage with Woodside in addressing any potential concerns.	**(6)** Woodside provides various mechanisms for the public to engage including website forms, email and phone. Woodside will also consider feedback via a means that suits the relevant person.	**(6)** Woodside advised the public could enquire or raise concerns via the online form on Woodside's website, via phone or email on communities@woodside.com.au Feedback on EPs could be provided via consultation@feedback.woodside.com, phone or the website feedback form or by a means suitable for the individual.	**(6)** Woodside's consultation process and approach to accepting feedback is outlined in Sections 5.2 and 5.6 of the EP.
(7) • Communication with appropriate emergency management agencies at National, State, District and Local levels on potential hazards and risks	**(7)** In the course of developing the EP, Woodside reviews oil spill preparedness and response position to ensure it continues to follow best practice including	**(7)** Woodside advised that it reviews its Oil Pollution FSP, and consults with relevant jurisdictional authorities and controlling agencies, including DoT, AMSA, at times	**(7)** Measures relating to oil spills are covered in Appendix I - Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability, and sustainability of response activities and escalation triggers.	review and revision of the Oil Pollution FSP. Woodside consults with DoT, AMSA, at times relevant port authorities to update appropriate mitigation and management measures to include for the activity and may also consult with for e.g. LEMC to ensure emergency management plans are in place.	relevant port authorities, while developing the EP to ensure to revise the EP, to verify and update appropriate mitigation and management measures are included to include for the activity and. Woodside might also consult with other relevant external emergency management agencies such as LEMC to ensure effective emergency management plans are in place.	
(8) Woodside could consider the Pilbara Regional Waste Management Facility for decommissioning, recycling, and waste disposal.	**(8)** No decommissioning activities will occur under this EP.	**(8)** Woodside advised that the EP related to surveys being undertaken to inform planning for future decommissioning scopes and that no decommissioning activities would be carried out under this EP.	**(8)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Ashburton for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Ashburton sufficient information to allow Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Shire of Ashburton on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 5 May 2025, Shire of Ashburton shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Shire of Ashburton in response to Shire of Ashburton's feedback (email of 2 June 2025).

Reasonable Period

Woodside allowed Shire of Ashburton a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shire of Ashburton advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Ashburton 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Shire of Ashburton a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

Woodside allowed Shire of Ashburton a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Woodside considers a reasonable opportunity was provided to Shire of Ashburton as evidenced by its response on 5 May 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Shire of Ashburton provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Shire of Ashburton.
  - Made no changes or inclusions to the EP as a result of consultation with Shire of Ashburton because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.9.8 Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Exmouth for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Shire of Exmouth sufficient information to allow Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Shire of Exmouth on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
- The purpose of consultation and set out what was being sought through consultation.
- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Shire of Exmouth advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Exmouth 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Shire of Exmouth a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of interests of Shire of Exmouth:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- The Shire of Exmouth attended Woodside's Exmouth CLG meeting on 13 March 2025 where this EP was discussed providing the Shire with another opportunity to provide feedback.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Shire of Exmouth of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

4.10 Other non-government groups or organisations (NGOs) or individuals

4.10.1 Telstra

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Telstra advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, a submarine communication cables map (Record of Consultation, reference 6.1.7) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 3 April 2025, Telstra advised (SI Report A, reference 20.1):
  - **(1)** If survey activities were to occur near subsea network cables, Telstra must be informed to allow proper liaison to ensure an adequate safety zone is maintained.
  - **(2)** CMART Requests would potentially need to be established to monitor cables for any potential damage.
- On 11 April 2025, Woodside thanked Telstra for its feedback (SI Report A, reference 20.2) and stated:
  - **(1)** Woodside would provide Telstra with start and end notifications 4 weeks prior to, and following completion of, mobilisation for any planned activities that might cause equipment to contact the seabed within 500 metres of Telstra cables.
  - **(2)** Notifications would allow Woodside and Telstra to confirm necessary requirements including safety zones and CMART requests.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Telstra must be informed if survey activities occur near any subsea network cables to ensure an adequate safety zone is maintained.	**(1)** Woodside's notifications process will inform Telstra with mobilisation information for any planned activities that might cause equipment to contact the seabed within 500 metres of Telstra cables.	**(1)** Woodside would provide Telstra with start and end notifications regarding mobilisation for any planned activities that might cause equipment to contact the seabed within 500 metres of Telstra cables.	**(1)** Woodside will notify Telstra (see Table 7-2 of this EP) 4 weeks prior to, and following completion of, mobilisation for any planned activities that might cause equipment to contact the seabed within 500 metres of Telstra cables, as per PS 1.8 of the EP.
(2) CMART requests would potentially be required to monitor cables for any potential damage.	**(2)** Woodside's notifications process would trigger the CMART request process should it become necessary.	**(2)** Woodside's notifications process would allow Woodside and Telstra to confirm necessary requirements including safety zones and CMART requests.	**(2)** Woodside will notify Telstra (see Table 7-2 of this EP) as per PS 1.8 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Woodside considers the measures and controls in the EP are appropriate.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Telstra for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Telstra on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 3 April 2025, Telstra shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Telstra in response to Telstra's feedback (email of 11 April 2025).

Reasonable Period

Woodside allowed Telstra a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Telstra advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Telstra 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Telstra a reasonable period for consultation in preparation of the EP as evidenced by Telstra's response on 3 April 2025.

Reasonable Opportunity

Woodside allowed Telstra a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Telstra as evidenced by its response on 3 April 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Telstra provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 of the EP and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Telstra.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Aside from including Telstra in the notifications table, made no changes or inclusions to the EP as a result of consultation with Telstra because appropriate measures are already included in the EP.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.11 Research institutes and local conservation groups or organisations

4.11.1 Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed CCG advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to CCG on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CCG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCG 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of interests of CCG:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding CCG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

4.11.2 Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed the Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Protect Ningaloo for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since March 2025. Woodside gave this information to Protect Ningaloo on 31 March 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Protect Ningaloo a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Protect Ningaloo advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Protect Ningaloo 30 days for consultation.
- Consultation for this EP commenced seven months ago.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of interests of Protect Ningaloo:

- Woodside published advertisements in 6 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 6 April 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 24 April 2025, reminding Protect Ningaloo of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

4.12 Traditional custodians and nominated representative corporations

4.12.1 Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the *Native Title Act 1993 (Cth)* by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with BTAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside also has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with BTAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback.

Further, at the start of consultation, Woodside provided BTAC a table of cultural values previously identified for BTAC through consultation and reviews of publicly available literature. Woodside invited BTAC to make changes or provide additional information about these cultural values. BTAC did not request any changes. This context and process demonstrates that Woodside's consultation approach with BTAC is appropriate and adapted to the nature and interests of BTAC.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed BTAC advising of the proposed activity (Record of Consultation, reference 6.1.36), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values that BTAC had previously provided that Woodside consider relevant to the activity:
    - **(1)** BTAC's cultural obligation to care for the environmental values of Sea Country, such as archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Mackerel Islands.
    - **(1)** A request from Woodside that BTAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how BTAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for BTAC to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed BTAC a reminder about the proposed activity (SI Report B, reference 1.1). The email included:
  - A reference to the original consultation email for this EP sent to BTAC on 31 March 2025, which included a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how BTAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 April 2025, Woodside sent BTAC a copy of the Summary Information Sheet for this EP and another (SI Report B, reference 1.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: Sea Country – connection to, access to and transfer of knowledge: • Enduring deep connection north of Onslow, extending out to Islands off the Pilbara coast including the Montebello, Barrow and Mackerel Islands.	**(1)** These values have been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside invited BTAC to make changes or provide additional information about these cultural values (Record of Consultation, reference 6.1.36). BTAC did not request any changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate included controls in Sections 6.5 and 6.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Cultural obligation to care for environment and values of Sea Country. • Resources including fish, shellfish, crabs, crustaceans, sea urchins, eggs, turtles, dugongs, flora and fauna associated with mangrove communities. • Artefacts and burials in coastal sand dunes. • Archaeological sites on Barrow and Montebello Islands. • Archaeological evidence of use of resources including fish, turtles, marine mammals, crocodiles, crabs and sea urchins. • Ceremonial sites (Thalu) for the increase of turtle, shark, ray, fish, squid, octopus, hill kangaroo and emu.			
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with BTAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • Woodside has provided BTAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters. • In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. • On 31 March 2025, Woodside commenced consultation with BTAC on this EP. Woodside provided BTAC:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
  - An overview of the activity and proposed timing.
  - Maps showing the location and EMBA.
  - A summary of the risks and impacts of the activity.
  - Diagrams.
  - Details about how to provide feedback.
- The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of BTAC's interests and how the activity could impact those interests.
- That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
- Woodside asked BTAC to forward the information to its members.
- Woodside offered to provide more specific information, maps and images to BTAC if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with BTAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to BTAC's queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to BTAC during Woodside's initial email on 31 March 2025. BTAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for BTAC's input into how BTAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with BTAC members as well as the BTAC Board.
  - Asked BTAC to advise how it would like Woodside to engage and whether BTAC required further information.
  - Asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- BTAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated BTAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.2 Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Woodside has an existing relationship with MAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has also assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with MAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites MAC to monthly luncheons.

At the start of consultation, Woodside provided MAC a table of cultural values previously identified for MAC through consultation and reviews of publicly available literature. Woodside invited MAC to make changes or provide additional information about these cultural values. During consultation for an unrelated EP, MAC shared additional cultural values with Woodside. We understand these new values to also be relevant to the activities described within this EP and have updated the EP to reflect this, with potential impacts assessed and relevant controls applied. This context and process demonstrates that Woodside's consultation approach with MAC is appropriate and adapted to the nature and interests of MAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 6.1.42), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values MAC had previously provided that Woodside consider relevant to the activity:
    - **(1)** Ecosystem and health of Mermaid Sound.
    - **(2)** Marine species – whales, dolphins, dugongs, fish, sea snakes, turtles, coral, seagrass.
    - **(3)** Marine eco-systems – mangroves, macroalgal (seaweed) communities, subtidal soft bottom communities, intertidal sand and mudflat communities, rocky shores.
    - **(4)** Fish traps in Conzinc Bay, and Angel and Gidley Islands.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

        - **(5)** Harvesting squid around Conzinc Bay.
        - **(6)** MAC is the appropriate cultural authority for Murujuga.
        - **(7)** Potential impact on Jinna (Songlines) on the submerged landscape.
        - **(1, 2, 3, 4, 5, 6 ,7)** A request from Woodside that MAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
    - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
    - A request for information on how MAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
    - That feedback can continue to be accepted by Woodside for the life of the EP.
    - A request for MAC to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed MAC an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, Yawuru and WAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 28 April 2025, Woodside emailed MAC a reminder about the proposed activity (SI Report B, reference 3.1). The email included:
    - A reference to the original consultation email for this EP sent to MAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
    - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
    - A request for information on how MAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
    - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
    - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Ongoing Consultation:

- On 22 August 2025, MAC responded to an email sent by Woodside about an unrelated EP and clarified cultural values provided by MAC (SI Report B, reference 3.2). Matters relevant to this EP included:
    - **(2)** Additional culturally valued species: stingrays, sharks, crustaceans, octopus, sea stars, sea urchins, sponges and molluscs.
    - **(8)** Any changes to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.
    - **(7)** Submerged landscape: potential impact to Aboriginal heritage, the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.
    - **(4)** Feedback that fish traps are not limited to Conzinc, Angel and Gidley as significant.
    - **(5)** Feedback that harvesting squid at Conzinc Bay is one of many subsistence activities that have been and continue to be practiced across the archipelago.
- On 22 August 2025, MAC emailed Woodside a letter. In the letter, MAC provided feedback about an unrelated EP (SI Report B, reference 3.3). Matters relevant to this EP include:
    - **(9)** Protection of environmental values should be assessed separately to protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(8)** Activities that could potentially affect the natural movement, migration and/or other behaviour of marine species (including sea birds) may have an impact on the cultural interpretation of the seasonal landscape and seascape and associated cultural behaviours.
- **(10)** MAC expects to be consulted on future projects located closer to Murujuga. **(10)** Woodside consults MAC on EPs when the operational area overlaps or is adjacent to the Murujuga cultural landscape.

- On 28 August 2025, Woodside responded by email to MAC's feedback about the unrelated EP (SI Report B, reference 3.4). Woodside:
  - **(2,4,5,7,8)** Provided MAC with an expanded cultural values table which included new information provided by MAC and details about sources.
  - **(4,5,9)** Explained how Woodside sources information about cultural values for EPs, being via consultation with MAC or through researching publicly available literature.
  - **(2,4,5,7,8)** Invited MAC to review the cultural values table and provide further feedback if necessary.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Ecosystem and health of Mermaid Sound.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). MAC did not request any changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value: Marine species: • Whales, totemic importance. • Dolphins, cultural ceremonies. • Dugongs, food source. • Fish, cultural ceremonies. • Sea Snakes, culturally important. • Turtles, Songlines. • Coral, attract fish and other species • Seagrass, provide protection for animals. Locations include Conzinc Bay and between Angel and Gidley Islands.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). On 22 August 2025, MAC advised Woodside that this list was too narrow and provided more details. Woodside has amended its records and informed MAC of these changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

On 22 August 2025, MAC advised Woodside that these species also had cultural value: • Stingrays • Sharks • Crustaceans • Octopus • Sea star • Sea urchins • Sponges • Molluscs			
(3) Cultural Value: Marine eco-systems • Mangroves. • Macroalgal (seaweed) communities. • Subtidal soft bottom communities. • Intertidal sand and mudflat communities. • Rocky shores.	**(3)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). MAC did not request any changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(4) Cultural Value: • Fish traps in Conzinc Bay, and Angel and Gidley Islands.	**(4)** This value has been identified through Woodside's data collection processes (publicly available literature). Although this area is not within the EP EMBA, Woodside has noted this value in the EP.	**(4)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). During consultation for an unrelated EP MAC queried this cultural value. Woodside explained how it sources information about Cultural Values for EPs.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(5) Cultural Value: • Harvesting squid around Conzinc Bay	**(5)**	**(5)** At the beginning of consultation for this EP, Woodside provided MAC with a list of	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	This value has been identified through Woodside's data collection processes (publicly available literature). Although this area is not within the EP EMBA, Woodside has noted this value in the EP.	the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). During consultation for an unrelated EP MAC queried this cultural value. Woodside explained how it sources information about Cultural Values for EPs.	Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(6) Cultural Value: • MAC is the appropriate cultural authority for Murujuga.	**(6)** This value has been identified through Woodside's data collection processes (consultation).	**(6)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). MAC did not request any changes.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(7) Cultural Value: • Potential impact on Jinna (Songlines) on the submerged landscape. On 22 August MAC provided this additional detail: • Potential impact to Aboriginal heritage, the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.42). On 22 August 2025, MAC provided additional information about this Cultural Value. Woodside has amended its records and informed MAC of these changes.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(8) Any changes to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities	**(8)** Woodside acknowledges this feedback and has updated its Cultural Values records for MAC. Woodside has also included this information in the EP.	**(8)** Woodside has provided MAC with details of Woodside's updated Cultural Values records.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(9) MAC requested separate assessments for the protection of environmental and cultural values.	**(9)** Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively.	**(9)** Woodside has advised MAC that it assesses environmental and cultural values both individually and collaboratively.	**(9)** Woodside has addressed the environmental and cultural impacts and controls outlined in Section 4.9 and 6.8 of this EP.
(10) MAC expects to be consulted on future projects located closer to Murujuga.	**(10)** Woodside acknowledges MAC's advice that it should be consulted about any activity located near Murujuga.	**(10)** Under Woodside's methodology, MAC is considered a relevant person for all EPs with operational areas that overlap or are adjacent to Murujuga.	**(10)** No action required.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical as well as further cultural values provided for another EP were considered relevant and have been identified and included based on consultation and literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with MAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided MAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with MAC on this EP. Woodside provided MAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of MAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked MAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to MAC if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with MAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to MAC's queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to MAC during Woodside's initial email on 31 March 2025. MAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for MAC's input into how MAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with MAC members as well as the MAC Board.
  - Asked MAC to advise how it would like Woodside to engage and whether MAC required further information.
  - Asked MAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites MAC to monthly luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- MAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated MAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.3 Kariyarra Aboriginal Corporation (KAC)

The KAC was established under the *Native Title Act 1993* (Cth) by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and their communal interests, including, management and protection of cultural values.

Woodside has an existing relationship with KAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners focuses on building and maintaining long-term relationships with each group. Woodside also has an assigned First Nations Engagement team member as a dedicated focal person for EP consultation with KAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback.

At the start of consultation, Woodside provided KAC a table of cultural values previously identified through consultation and reviews of publicly available literature. Woodside invited KAC to make changes or provide additional information about these cultural values. KAC did not request changes about these specific values but suggested further additions. During consultation for an unrelated EP, KAC shared additional cultural values with Woodside. We understand these new values to also be relevant to the activities described within this EP and have updated the EP to reflect this, with potential impacts assessed and relevant controls applied.

When Woodside met with KAC in person for this and another EP, KAC had engaged a new legal representative to lead aspects of the in-person consultation. During this meeting, KAC confirmed it would like to enter a Consultation Agreement. Woodside understands that an agreement like this is useful to outline consultation norms for KAC. However, these discussions occur in parallel to consultation for EPs. This context and engagement in this process demonstrates that Woodside's consultation approach with KAC is appropriate and adapted to the nature and interests of KAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 6.1.38), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values that KAC has previously provided that Woodside considered relevant to the activity:
  - **(1)** Marine Animals – management of sea turtle nesting, impacts to whale migration (whales are connected to Songlines).
  - **(2)** Sea Country – cultural obligations to care for Country, Secret habitat totems, access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.
  - **(3)** Yinta – significant cultural/spiritual sites, cultural rights to land.
  - **(4)** Marine species as resources – marine mammals, fish, molluscs.
  - **(5)** Potential impacts on coastal landforms and vegetation.
  - **(6)** Heritage sites associated with the coast and ocean including the presence of mythical snakes.
  - **(7)** Transfer of knowledge to future generations – impacts of species reduction and temporary exclusion to areas in the case of an oil spill etc.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - **(1, 2, 3, 4, 5, 6, 7)** A request from Woodside that KAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how KAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for KAC to provide information about the proposed activity to other individuals, as required.
- On 1 April 2025, KAC emailed Woodside to request a meeting to discuss this EP (SI Report B, reference 2.1).
- On 1 April 2025, Woodside called KAC (SI Report B, reference 2.2). During the discussion both parties tentatively agreed to meet on 30 April 2025 to discuss this EP and another.
- Between 1 April 2025 and 16 April 2025, Woodside and KAC exchanged email correspondence to discuss details of the upcoming consultation meeting to confirm a calendar invite had been sent for 30 April 2025 for a meeting to discuss this and another EP (SI Report B, reference 2.3 – 2.5).
- On 28 April 2025, Woodside emailed KAC to confirm details for a meeting on 30 April 2025 to discuss this EP and another (SI Report B, reference 2.6). Woodside reminded KAC of the consultation closing date for this EP including other information that was emailed in the original consultation email dated 31 March 2025.
- On 29 April 2025, Woodside emailed KAC the presentation Woodside intended to present at the meeting scheduled for 30 April 2025. (SI Report B, reference 2.7)
- On 30 April 2025, Woodside met KAC in Port Hedland (SI Report B, reference 2.8). Matters discussed relating to this EP include:
  - Woodside explained EPs, consultation processes and EMBAs.
  - **(8)** KAC advised it did not consider the meeting to be consultation. **(8)** Woodside stated that the meeting would be considered consultation and offered to conduct further consultation if KAC required further information.
  - Woodside presented cultural values that KAC had previously provided.
  - **(9)** KAC sought clarity of impacts to the health of food sources and other marine life including whether there were any diseases that could threaten sea life as a result of an adverse event. **(9)** Woodside answered questions about these issues during the meeting and offered to provide information in a written response.
  - **(10)** KAC queried the role of Traditional Owners in the event of a spill. **(10)** Woodside provided an overview on its emergency response process and how it was working with the Government to implement additional training opportunities for ranger groups.
  - **(11)** KAC queried which shipping channels are used as they wanted to understand the risks associated with ships travelling closely to their determination. **(11)** Woodside took the question on notice.
  - **(12)** KAC expressed a desire to enter into a consultation agreement. **(12)** Woodside accepted this as an ongoing action noting that these discussions would not delay EP submission deadlines.
  - **(13)** KAC requested Woodside provide a copy of information it planned to input into its EPs, including environmental data prior to submission. **(13)** Woodside took this request on notice.
  - **(14)** Islands off the coast of Port Hedland are extremely important to KAC (Little Turtle, North Turtle and Bedout). **(14)** Woodside advised it will note this in the EP.
  - **(15)** KAC raised concerns about historic unplanned incidents (not involving Woodside) and asked for details about improvements to processes. **(15)** Woodside explained that since these historic incidents, governments have set up regulatory bodies including NOPSEMA to regulate industry.
- On 5 May 2025, Woodside emailed KAC to confirm matters discussed during the 30 April 2025 meeting (SI Report B, reference 2.9) this included:
  - **(12)** KAC's desire to enter into a consultation agreement. **(12)** Woodside notes this as an ongoing action noting that these discussions occur in parallel to EP consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - **(9)** KAC sought clarity of impacts to the health of food sources and other marine life that could threaten sea life.
  - **(11)** KAC queried which shipping channels are used as it wanted to understand the risks associated with ships travelling closely to its determination.
  - **(10)** KAC queried contact points in the event of a spill.
  - **(15)** KAC raised concerns about historic unplanned incidents (not involving Woodside) and asked for details about improvements to processes.
  - **(13)** KAC requested Woodside provide a copy of information it planned to input into its EPs prior to submission.
- Between 20 and 27 May 2025, Woodside and KAC exchanged emails, phone calls, texts and met online to follow-up on matters raised during the 30 April 2025 meeting (SI Report B, references 2.10 – 2.13).
- On 28 May 2025, Woodside and KAC spoke on the phone where the following items (SI Report B, reference 2.14), relevant to this EP were discussed:
  - KAC confirmed the accuracy of the questions taken on notice from the consultation meeting.
  - **(12)** KAC's desire to enter into a consultation agreement and requested Woodside to resend the most recent consultation agreement draft for KAC to consider and respond. **(12)** Woodside noted this was an ongoing action noting that these discussions occur in parallel to EP consultation.
  - Woodside offered to host a consultation 'learning' workshop to help build an understanding of the EP consultation process.
  - Woodside noted a commitment to provide a response to KAC by the end of May.
- On 3 June 2025, Woodside emailed KAC responses to questions raised during their meeting on 30 April 2025 (SI Report B, reference 2.15). Responses included:
  - **(8)** Woodside clarified that its meeting on 30 April 2025 formed part of consultation with KAC on this EP and another.
  - **(12)** Woodside noted that it had provided KAC with a draft consultation agreement in February 2024 and that discussions about this agreement had occurred in parallel to consultation for this EP and another.
  - **(9)** Woodside acknowledged KAC's connection to Sea Country and provided details about risks and mitigation measures in both EPs that related to the ecological integrity of marine fauna.
  - **(10)** Woodside provided information about contact procedures in the highly unlikely event of a spill.
  - **(11)** Woodside provided information about shipping channels, noting that ships were sometimes required to travel from Dampier to the operational area for this and another EP.
  - **(13)** Woodside provided details of material that would be included in this and another EP and provided links to both active EPs on NOPSEMA's website.
  - **(14)** Woodside acknowledged that islands off Port Hedland are culturally important to KAC - Little Turtle, North Turtle and Bedout. This information would be recorded in both this and another EP.
  - **(15)** Woodside provided information about two historic incidents not related to Woodside that had been raised by KAC in the 30 April meeting. Woodside explained the role of NOPSEMA and that it took a robust and systematic approach to the environmental management of petroleum activities.
- On 3 June 2025, Woodside emailed KAC to clarify the date that consultation begun on this EP (SI Report B, reference 2.16).

Ongoing Consultation:

- On 29 July 2025, in response to Woodside sending information about unrelated EPs, KAC emailed Woodside and requested a consultation meeting with its Board (SI Report B, reference 2.17).
- On 21 August 2025, Woodside met with KAC to consult on unrelated EPs (SI Report B, reference 2.18). Matters relevant to this EP include:
  - Woodside provided an explanation of EPs and regulatory requirements.
  - Woodside discussed how modelling was used to determine EMBAs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(16)** KAC enquired about EMBAs regarding extreme weather events such as cyclones and spill response times. **(16)** Woodside stated that there are many factors that affect spill modelling for EMBAs including weather conditions, ocean currents, and the type of vessels. Woodside took the query about cyclone data being included in EMBA modelling on notice.
- **(17)** KAC queried where Woodside had collated its list of KAC's cultural values. **(17)** Woodside stated it had sourced KAC's cultural values via consultation and feedback from KAC when consulting on other EPs and desktop research.
- **(1)** KAC provided addition information on marine species identified as cultural values which include: shellfish, cockles, oysters, clam shells, con shells, mullets and sea cow (dugong), as well as the importance of **(18)** river systems as food chains and reiterated the importance in maintaining healthy river systems. **(1,18)** Woodside acknowledged this new information and would update it records and current and future EPs accordingly.

- **(16)** On 17 September 2025, Woodside emailed KAC updated information about its record of Cultural Values and responses to questions taken on notice during their 21 August 2025 meeting (SI Report B, reference 2.19) This included an answer to a query about consideration of cyclone events in spill modelling. Woodside provided information about how modelling captures large-scale ocean changes caused by cyclones.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Marine Animals. • Management of sea turtle nesting. • Impacts to whale migration (whales are connected to Songlines). Additional species identified during ongoing consultation: • Shellfish • Cockles • Oysters • Clam shells, • Con shells • Mullets • Sea cow (dugong)	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.38). KAC requested changes during ongoing consultation for an unrelated EP. Woodside amended its records and the EP to reflect this new information.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value: • Sea Country. • Cultural obligations to care for Country. • Secret habitat totems.	**(2)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural

• Access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.		Consultation, 6.1.38). KAC did not request any changes.	values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(3) Cultural Value: • Yinta • Significant cultural/spiritual sites. • Cultural rights to land.	**(3)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.38). KAC did not request any changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(4) Cultural Value: • Marine species as resources • Marine mammals. • Fish. • Molluscs.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.38). KAC did not request any changes.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(5) Cultural Value: • Potential impacts on coastal landforms and vegetation.	**(5)** This value has been identified through Woodside's data collection processes (consultation).	**(5)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.38). KAC did not request any changes.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(6) Cultural Value: • Heritage sites associated with the coast and ocean including the presence of mythical snakes.	**(6)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(6)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.38). KAC did not request any changes.	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(7) Cultural Value:	**(7)**	**(7)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information	**(7)** Woodside recorded this cultural value in section 4.9 of the EP. Measures relating to oil spills are covered in Appendix I - Oil

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Transfer of knowledge to future generations. • Impacts of species reduction. • Temporary exclusion to areas in the case of an oil spill etc.	This value has been identified through Woodside's data collection processes (consultation).	about this cultural value (Record of Consultation, 6.1.38). KAC did not request any changes.	Spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.
(8) KAC said it did not consider its meeting on 30 April 2025 to discuss this and another EP to be consultation.	**(8)** Woodside has clearly stated to KAC that consultation for this EP began on 31 March 2025. Woodside has provided KAC with sufficient information, a reasonable period of time and reasonable opportunity to provide feedback.	**(8)** Woodside stated that the meeting would be considered consultation and offered to conduct further consultation if KAC required further information.	**(8)** No action required.
(9) KAC sought clarity of impacts to the health of food sources and other marine life including whether there were any diseases that could threaten sea life as a result of an adverse event.	**(9)** Woodside acknowledges KAC's connection to Sea Country. Woodside has identified potential impacts and risks to the ecological integrity of marine fauna and put in place mitigation measures.	**(9)** Woodside has provided a written response to KAC explaining risks to marine life from this EP. Woodside has categorised these risks as highly unlikely events. Woodside has explained that clean up and remediation response activities would commence from the outset of an incident in line with Woodside's Oil Pollution First Strike Plan.	**(9)** KAC's connection to Sea Country is identified in Section 4.9 of the EP. Risks and mitigation measures relating to marine life are detailed in Sections 6.5 and 6.6. Measures relating to oil spills are covered in Appendix I – Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.
(10) KAC queried the role of Traditional Owners in the event of a spill.	**(10)** In the highly unlikely event of a spill, Woodside would enact its First Strike Plan, which includes contacting the regulator, NOPSEMA and any relevant cultural authorities that may be affected.	**(10)** Woodside provided KAC with details of its First Strike plan and contact procedures.	**(10)** Measures relating to oil spills are covered in Appendix I - Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.
(11) KAC queried which shipping channels are used as they wanted to understand the risks associated with ships travelling closely to their determination.	**(11)** Ships are sometimes required to travel from the mainland (Dampier) to the operational area of this EP.	**(11)** Woodside has informed KAC that the distance from KAC's determination to the EP operational area is 130kms. Woodside has also provided KAC with details about regulations governing vessel transport. Woodside has also provided details about its First Strike Plan.	**(11)** Measures relating to vessels are referred in Sections 4.10.4, 6.5 and 6.6 of the EP. Measures relating to oil spills are covered in Appendix I – Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(12) KAC expressed a desire to enter into a consultation agreement.	**(12)** Woodside provided KAC with a draft consultation agreement in February 2024.	**(12)** Woodside notes that while discussions about this agreement are ongoing, a consultation agreement is not a prerequisite for consultation, and consultation for this EP and others has occurred in parallel.	**(12)** No action required.
(13) KAC requested Woodside provide a copy of information it planned to input into its EPs, including environmental data prior to submission.	**(13)** The in-force EP is available on the NOPSEMA website. The revised EP will become available on NOPSEMA's website	**(13)** Woodside has informed KAC that the revised EP will contain records of all consultation that has occurred with KAC. This will include copies of correspondence exchanged and meeting notes. This consultation information will be summarised in Appendix F. Woodside will also provide NOPSEMA with full text copies of all consultation that has occurred in a separate document which is not available publicly. Information about cultural values will be included in Section 4 of the EP.	**(13)** No action required.
(14) Cultural value: • Islands off the coast of Port Hedland are extremely important to KAC (Little Turtle, North Turtle and Bedout).	**(14)** Woodside acknowledges that islands off Port Hedland have cultural value to KAC.	**(14)** Woodside has updated its records to reflect these cultural values and will include this information in Appendix F and Section 4.9 of the EP.	**(14)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(15) KAC raised concerns about historic unplanned incidents (not involving Woodside) and asked for details about improvements to processes.	**(15)** Woodside takes a robust and systematic approach to environmental management of petroleum activities.	**(15)** Woodside explained that since these historic incidents, governments have set up regulatory bodies including NOPSEMA to oversee industry. In the highly unlikely event of a spill, Woodside would enact its First Strike Plan which would include contacting NOPSEMA and any affected cultural authorities. Woodside has oil pollution	**(15)** Measures relating to oil spills are covered in Appendix I – Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		emergency plans and implements training and capability building programs in the regions where it operates.	
(16) KAC enquired about EMBAs in regard to extreme weather events such as cyclones and spill response times.	**(16)** Spill modelling for EMBAS includes assessment of weather conditions, ocean currents and vessel types.	**(16)** Woodside provided information about EMBA spill modelling during its meeting on 21 August 2025, further information was provided via email on 17 September 2025.	**(16)** Measures relating to oil spills are covered in Appendix I - Oil spill Preparedness and Response and Appendix J – Oil Pollution First Strike Plan.
(17) KAC queried where Woodside had collated its list of KAC's cultural values	**(17)** At the start of consultation, Woodside provided KAC with information Cultural Values it had collated for the group through consultation and publicly available literature.	**(17)** Woodside explained to KAC that it had sourced KAC's cultural values via consultation and feedback from KAC when consulting on other EPs and desktop research.	**(17)** No further action required.
(18) Cultural value: • River systems are important to the food chain.	**(18)** Woodside assesses environmental impacts of its EPs and puts in place appropriate mitigation measures. Woodside notes that river systems are not considered relevant for this EP.	**(18)** Woodside has informed KAC that it will update it records and current and future EPs accordingly.	**(18)** River systems are not relevant for this EP. Cultural values relating to river systems are noted in Section 4.9.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	Based on the engagement to date, no additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with KAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided KAC with relevant consultation documents, including *NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with KAC on this EP. Woodside provided KAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of KAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked KAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to KAC if required.
  - Information on the cultural values that KAC has provided to Woodside previously.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with KAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside and KAC have engaged in consultation for three months, demonstrating a "reasonable period" of consultation, where a genuine two-way dialogue has occurred through both written and face-to-face exchanges on this activity.
- A consultation period was communicated to KAC during Woodside's initial email on 31 March 2025. KAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.
- Woodside commenced consultation with KAC on 31 March 2025. Woodside has addressed and responded to KAC queries over seven months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for KAC's input into how KAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with KAC members as well as the KAC Board.
  - Asked KAC to advise how it would like Woodside to engage and whether KAC required further information.
  - Asked KAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Throughout the consultation period, Woodside and KAC have exchanged multiple emails, had phone calls and met on a number of occasions.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KAC provided feedback during consultation for this EP relating to cultural values. Woodside has incorporated KAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.4 Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the *Native Title Act 1993 (Cth)* by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NTGAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with NTGAC who is responsible for building a consultative relationship and is readily available to provide information and take feedback. YMAC provides NTGAC with administrative assistance.

At the start of consultation, Woodside provided NTGAC (via YMAC) a table of cultural values previously identified for NTGAC through consultation and reviews of publicly available literature. Woodside invited NTGAC to make changes or provide additional information about these cultural values. NTGAC did not request any changes.

During consultation for this EP, Woodside became aware that NTGAC was undergoing an organisational restructure. This ultimately meant that a face-to-face consultation may not be possible for this EP. Because of this Woodside offered to travel to any location and reminded NTGAC that Woodside is readily available to answer any questions and that it accepts feedback for the life of an EP. Woodside's focus is on supporting NTGAC through the period of change whilst enabling NTGAC to consult and remain informed about Woodside's, activities including activities proposed to be undertaken for this EP. This context and process demonstrates that Woodside's consultation approach with NTGAC is appropriate and adapted to the nature and interests of NTGAC.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NTGAC (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.45), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values previously provided by NTGAC that Woodside consider relevant to the activity:
    - **(1)** Interests in marine ecosystems and species – invasive marine species, chemicals released into the water (ballast water discharges), risks to marine parks.
    - (1) A request from Woodside that NTGAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how NTGAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for NTGAC to provide information about the proposed activity to other individuals, as required.
- On 2 April 2025, Woodside phoned NTGAC (via YMAC) who confirmed the receipt of consultation materials and that they had been forwarded to relevant parties. It was advised that NTGAC was undergoing an organisational restructure, leading to potential delays in face-to-face meetings. Woodside acknowledged these delays and offered to meet with Traditional Owners at their convenience (SI Report B, reference 4.1).
- On 3 April 2025, NTGAC (via YMAC) emailed Woodside confirming that the consultation material has been forwarded to the NTGAC Board (SI Report B, reference 4.2).
- On 3 April 2025, Woodside replied to NTGAC (via YMAC) offering an opportunity to raise any questions in relation to this EP (SI Report B, reference 4.3).
- On 1 May 2025, Woodside emailed NTGAC (via YMAC) a reminder about the proposed activity (SI Report B, reference 4.4). The email included:
  - A reference to the original consultation email for this EP sent to NTGAC (via YMAC) on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how NTGAC (via YMAC) would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Ongoing Consultation:

- On 19 August 2025, NTGAC (via YMAC) emailed Woodside new contact information for NTGAC, Woodside acknowledged this and amended its records (SI Report B, 4.5-4.6).
- On 27 August 2025, Woodside called NTGAC (via YMAC) to provide an introduction to the new focal and to organise a time to meet in person (SI Report B, reference 4.7).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value:	**(1)**	**(1)**	**(1)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Interests in marine ecosystems and species: • invasive marine species • chemicals released into the water (ballast water discharges) • risks to marine parks.	This value has been identified through Woodside's data collection processes (consultation).	At the beginning of consultation for this EP, Woodside provided NTGAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.45). NTGAC did not request any changes.	Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided NTGAC (via YMAC) with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with NTGAC (via YMAC) on this EP. Woodside provided:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NTGAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked NTGAC (via YMAC) to forward the information to its members.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside offered to provide more specific information, maps and images to NTGAC (via YMAC), if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with NTGAC (via YMAC) on 31 March 2025 and provided information on the EP on that date. Since that date, Woodside has provided an opportunity to address and respond to NTGAC queries over seven months, demonstrating a “reasonable period” of consultation.
- A consultation period was communicated to NTGAC (via YMAC) during Woodside’s initial email on 31 March 2025. NTGAC (via YMAC) was asked to provide feedback by 9 May 2025 in line with Woodside’s methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for input from NTGAC (via YMAC) into how it would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside’s initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with NTGAC members as well as the NTGAC Board.
  - Asked NTGAC (via YMAC) to advise how it would like Woodside to engage and whether NTGAC required further information.
  - Asked NTGAC (via YMAC) if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside offered to travel to any location to consult with NTGAC.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- NTGAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated NTGAC’s interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.5 Ngarluma Aboriginal Corporation (NAC)

NAC is established under the *Native Title Act 1993 (Cth)* by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with NAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with NAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites NAC to monthly luncheons and Quarterly Heritage Meetings.

At the start of consultation, Woodside provided NAC a table of cultural values previously identified for NAC through consultation and reviews of publicly available literature. Woodside invited NAC to make changes or provide additional information about these cultural values. NAC did not request any changes. This context and process demonstrates that Woodside's consultation approach with NAC is appropriate and adapted to the nature and interests of NAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 6.1.44), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Onshore heritage.
    - **(2)** Potential of submerged heritage.
    - **(1, 2)** A request from Woodside that NAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how NAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for NAC to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed NAC an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, Yawuru and WAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 28 April 2025, Woodside emailed NAC a reminder about the proposed activity (SI Report B, reference 5.1). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A reference to the original consultation email for this EP sent to NAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of this EP closes on 9 May 2025.
- A request for information on how NAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 28 April 2025, Woodside sent a follow-up email to NAC clarifying that consultation for this EP begun on 31 March 2025 (SI Report B, reference 5.2).
- On 15 May 2025, Woodside emailed NAC an invitation to Woodside's Quarterly Heritage Meeting on 4 June 2025, as an opportunity for Woodside to provide updates on Woodside's activities to Traditional Owner groups and to receive feedback from the community (SI Report B, reference 5.3).
- On 4 June 2025, Woodside hosted a Quarterly Heritage Meeting with Traditional Owners including members of NAC and WAC (SI Report B, reference 30.1). Matters discussed relevant to this EP included:
  - Woodside provided an overview of this EP and the consultation process with relevant First Nations persons.

Ongoing Engagement:

- On 4 July 2025, Woodside met the NAC chairperson, acting CEO and Direction of NAC to discuss the appointment of the new CEO who will be commencing in the role on 7 July 2025 (SI Report B, reference 5.4).
- On 3 September 2025, Wong Goo Tt Oo, WAC and NAC attended Woodside's Quarterly Heritage Meeting (SI Report B, reference 30.2). Matters discussed relating to this EP included:
  - Woodside reminded attendees that it accepts feedback for the life of an EP.
  - Woodside is available to schedule meetings for EP consultation.
  - Cultural heritage updates.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Onshore Heritage	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided NAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.44). NAC did not request any changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value:	**(2)**	**(2)** At the beginning of consultation for this EP, Woodside provided NAC with a list of	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Potential of submerged heritage	This value has been identified through Woodside's data collection processes (consultation).	the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.44). NAC did not request any changes.	Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided NAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with NAC on this EP. Woodside provided NAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked NAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to NAC, if required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with NAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to NAC queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to NAC during Woodside's initial email on 31 March 2025. NAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for NAC's input into how NAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with NAC members as well as the NAC Board.
  - Asked NAC to advise how it would like Woodside to engage and whether NAC required further information.
  - Asked NAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites NAC to monthly luncheons.
- Woodside invites NAC to Quarterly Heritage Meetings.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- NAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated NAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.6 Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the *Native Title Act 1993 (Cth)* by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with RRKAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with RRKAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites RRKAC to monthly luncheons.

At the start of consultation, Woodside provided RRKAC a table of cultural values previously identified for RRKAC through consultation and reviews of publicly available literature. Woodside invited RRKAC to make changes or provide additional information about these cultural values. RRKAC did not request any changes. This context and process demonstrates that Woodside's consultation approach with RRKAC is appropriate and adapted to the nature and interests of RRKAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 6.1.51), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values previously provided by RRKAC that Woodside consider relevant to the activity:
    - **(1)** Concerns about underwater heritage – impacts at shoreline.
    - **(2)** The coastline.
    - **(1, 2)** A request from Woodside that RRKAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how RRKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for RRKAC to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed RRKAC an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 28 April 2025, Woodside emailed RRKAC a reminder about the proposed activity (SI Report B, reference 6.1). The email included:
  - A reference to the original consultation email for this EP sent to RRKAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– A request for information on how RRKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
– Woodside's commitment to managing gender-restricted or other culturally sensitive information.
– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: Concerns about underwater heritage: • impacts at shoreline.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided RRKAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited RRKAC to make changes or provide additional information (Record of Consultation, 6.1.51). RRKAC did not request any changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value: • The coastline.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided RRKAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited RRKAC to make changes or provide additional information (Record of Consultation, 6.1.51). RRKAC did not request any changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with RRKAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided RRKAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with RRKAC on this EP. Woodside provided RRKAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of RRKAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked RRKAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to RRKAC if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with RRKAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to RRKAC queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to RRKAC during Woodside's initial email on 31 March 2025. RRKAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for RRKAC's input into how RRKAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with RRKAC members as well as the RRKAC Board.
  - Asked RRKAC to advise how it would like Woodside to engage and whether RRKAC required further information.
  - Asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites RRKAC to monthly luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- RRKAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated RRKAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.7 Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the *Native Title Act 1993 (Cth)* by the Mardudhunera and Yaburara (YM) people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with WAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with WAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites WAC to monthly luncheons and Quarterly Heritage Meetings.

During consultation for an unrelated State EP, WAC communicated its Board's request to be consulted on EPs radius significantly beyond WAC's Native Title determination. Woodside confirmed that this request did not align with Woodside's established methodology for determining relevant persons and was unable to be accommodated.

At the start of consultation, Woodside provided WAC a table of cultural values previously identified for WAC through consultation and reviews of publicly available literature. Woodside invited WAC to make changes or provide additional information about these cultural values. During consultation for an unrelated EP, WAC shared additional information with Woodside. We understand this new information to also be relevant to the activities described within this EP and have updated the EP to reflect this, with potential impacts assessed and relevant controls applied. This context and process demonstrates that Woodside's consultation approach with WAC is appropriate and adapted to the nature and interests of WAC.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 6.1.55), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Marine species – whales, turtles.
    - **(2)** Potential impact of emissions on rock art.
    - **(3)** Underwater and onshore heritage.
    - **(1, 2, 3)** A request from Woodside that WAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how WAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for WAC to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed WAC an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, Yawuru and WAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 28 April 2025, Woodside emailed WAC a reminder about the proposed activity (SI Report B, reference 7.1). The email included:
  - A reference to the original consultation email for this EP sent to WAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how WAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 16 May 2025, Woodside emailed WAC a reminder about the Quarterly Heritage Meeting scheduled for 4 June 2025 (SI Report B, reference 7.2).
- On 4 June 2025, Woodside hosted a Quarterly Community Heritage meeting with Traditional Owners including members of NAC and WAC (SI Report B, reference 30.1). Matters discussed relevant to this EP included:
  - Woodside provided an overview of this EP and the consultation process with relevant First Nations persons.

Ongoing Consultation:

- On 22 July 2025, Woodside met with WAC to discuss two unrelated EPs (SI Report B, reference 7.3). Matters relevant to this EP include:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - **(4)** WAC sought clarity on Woodside's collection and use of cultural heritage information and whether cultural values were considered in the broader EMBA area and how Traditional Owners are informed. **(4)** Woodside confirmed its processes.
  - **(5)** WAC sought information about a recent incident involving a hydrocarbon release during decommissioning. **(5)** Woodside provided information about the release and took further questions about the incident on notice.
  - **(6)** WAC asked about potential damage to mangroves in the event of a spill and asked about mangrove research. **(6)** Woodside explained mitigation measures and that EPs include impact assessments on mangroves and nursery habitats.
  - **(1)** WAC asked about the mitigation measures for whales including how whales are spotted at night. **(1)** Woodside explained mitigation measures for noise, whale and marine sightings, and vessel maintenance.
  - **(7)** WAC expressed interest in being involved in ranger programs and the potential for ranger fee-for-service opportunities. **(7)** Woodside acknowledged this and encouraged WAC to remain in contact with Woodside.
- On 29 July 2025, WAC emailed Woodside a follow up to the consultation meeting for the unrelated EPs (SI Report B, reference 7.4). In the email:
  - **(8)** WAC stated that it should be consulted by proponents in respect of EPs where the relevant EMBA intersects within a general radius of 120km from the mouth of the Fortescue River.
- **(5)** On 11 August 2025, Woodside emailed WAC to provide further information about an unrelated incident raised during the 22 July 2025 meeting, not relevant to this EP (SI Report B, reference 7.5).
- On 28 August 2025, Woodside emailed WAC a response in relation to WAC's email from 29 July 2025 (SI Report B, reference 7.6). Items relevant to this EP include:
  - **(8)** Woodside noted that a radius of 120km from the mouth of the Fortescue River is significantly beyond the Yaburara and Mardudhunera Native Title determination and therefore is not consistent with Woodside's methodology for determining interested persons for the purposes of consultation on the EPs. Woodside advised it will continue with its existing and established methodology for determining WAC's relevance in relation to consultation for EPs.
  - **(7)** Woodside stated that it is developing a Ranger Funding Program to support Traditional Owner groups in areas associated with Woodside activities and WAC's request will be assessed in line with the Program's criteria once implemented.
- On 3 September 2025, Wong Goo Tt Oo, WAC and NAC attended Woodside's Quarterly Heritage Meeting (SI Report B, reference 30.2). Matters discussed relating to this EP included:
  - Woodside reminded attendees that it accepts feedback for the life of an EP.
  - Woodside is available to schedule meetings for EP consultation.
  - Cultural heritage updates.
- On 1 October 2025, WAC emailed Woodside a response to its email dated 28 August 2025 (SI Report B, reference 7.7). Items relevant to this EP include:
  - WAC appreciates the constructive relationship with Woodside.
  - **(9)** WAC is supportive of a consultation framework agreement.
  - **(8)** WAC reiterated its request to be considered a relevant person for the purpose of consultation for EPs where the EMBA intersects a radius of approximately 120km from the mouth of the Fortescue River.
- On 2 October 2025, Woodside emailed WAC stating that a full response would follow after returning from planned leave (SI Report B, reference 7.8).
- On 20 October 2025, Woodside emailed WAC a response to its email dated 1 October 2025 (SI Report B, reference 7.9). Items relevant to this EP include:
  - **(9)** Woodside noted WAC's request for a consultation framework agreement and noted it is not a pre-requisite for consultation. Woodside advised that it will continue to reasonably support WAC to participate in consultation for EPs and was not inclined to continue negotiations for a framework agreement at this time.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– (8) Woodside reiterated that WAC's request relating to the methodology for determining relevant persons for EPs was outside of the established methodology used by Woodside and was unable to be accommodated.

- On 20 October 2025, Woodside emailed WAC to request a meeting to progress the Woodside and WAC relationship (SI Report B, reference 7.10).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: Marine species: • Whales • Turtles.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided WAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.55). WAC did not request any changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value: • Potential impact of emissions on rock art.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided WAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.55). WAC did not request any changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(3) Cultural Value: • Underwater and onshore heritage.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided WAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.55). WAC did not request any changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(4) During consultation for unrelated EPs, WAC sought clarity on Woodside's collection and use of cultural heritage information	**(4)** Woodside collects cultural values and records them within the EP. Woodside also assesses the potential impacts on	**(4)** Woodside explained the process of collecting cultural heritage information and how it is used within EPs.	**(4)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	these interests and cultural values, and where appropriate, includes controls.		
(5) During consultation for unrelated EPs, WAC sought information about a recent incident involving a hydrocarbon release during decommissioning.	**(5)** Woodside stood up its Crisis Incident Management team and implemented the activity's regulator accepted First Strike Plan. Woodside notes that this was unrelated to the EP.	**(5)** Woodside explained response within the consultation meeting and also sent a follow up email providing further information.	**(5)** No action required.
(6) During consultation for unrelated EPs, WAC asked about potential damage to mangroves in the event of a spill and asked about mangrove research.	**(6)** Woodside addresses potential impacts to mangroves in Section 6.6 of the EP.	**(6)** Woodside explained mitigation measures and that EPs include impact assessments on mangroves and nursery habitats.	**(6)** Woodside addresses potential impacts to mangroves in Section 6.6 of the EP.
(7) WAC is interested in Ranger Programs.	**(7)** Woodside is developing a Ranger Funding Program to support Traditional Owner groups in areas associated with Woodside activities.	**(7)** Woodside acknowledge WAC's interest. WAC's request will be assessed in line with the Program's criteria once implemented.	**(7)** No action required.
(8) In an email for unrelated EPs, WAC stated that it should be consulted by proponents in respect of EPs where the relevant EMBA intersects within a general radius of 120km from the mouth of the Fortescue River.	**(8)** Woodside understands that this area extends significantly beyond the YM Native Title determination.	**(8)** Woodside emailed WAC noting that this request is not consistent with Woodside's methodology for determining interested persons for the purposes of consultation on the EPs.	**(8)** No action required.
(9) WAC is supportive of a framework agreement for consultation.	**(9)** Woodside is currently assessing the effectiveness of negotiating framework agreements with stakeholders. To date, no framework agreements have been finalised. Woodside notes that this is not required to undertake and/or complete consultation in the course of preparing this EP.	**(9)** Woodside has provided WAC a draft framework agreement on 6 March 2024 for consideration by WAC and notes it has not yet been actioned.	**(9)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Owners, (Appendix G).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with WAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided WAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with WAC on this EP. Woodside provided WAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of WAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked WAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to WAC, if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with WAC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to WAC's queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to WAC during Woodside's initial email on 31 March 2025. WAC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for WAC's input into how WAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with WAC members as well as the WAC Board.
  - Asked WAC to advise how it would like Woodside to engage and whether WAC required further information.
  - Asked WAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites WAC to monthly luncheons.
- Woodside invites WAC to Quarterly Heritage Meetings

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated WAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.8 Yindjibarndi Aboriginal Corporation (Yindjibarndi)

Yindjibarndi is established under the *Native Title Act 1993 (Cth)* by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with Yindjibarndi which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated

focal person for EP consultation with Yindjibarndi, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Aside from regular consultation about EPs, Woodside invites Yindjibarndi to monthly luncheons.

Yindjibarndi during previous consultation has requested Woodside to refer all correspondence about EPs to the Ngarluma Yindjibarndi Foundation Ltd (NYFL). This context and process demonstrates that Woodside's consultation approach with Yindjibarndi is appropriate and adapted to the nature and interests of Yindjibarndi.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Yindjibarndi (via NYFL) advising of the proposed activity (Record of Consultation, reference 6.1.58), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how Yindjibarndi would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for Yindjibarndi to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed Yindjibarndi an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, Yawuru and WAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 28 April 2025, Woodside emailed Yindjibarndi (via NYFL) a reminder about the proposed activity (SI Report B, reference 8.1). The email included:
  - A reference to the original consultation email for this EP sent to Yindjibarndi (via NYFL) on 31 March 2025, which included a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how Yindjibarndi would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 April 2025, Woodside sent Yindjibarndi (via NYFL) a follow up email with copy of the Summary Information Sheet for this EP and another (SI Report B, reference 8.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

		Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with Yindjibarndi for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided Yindjibarndi (via NYFL) with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with Yindjibarndi (via NYFL) on this EP. Woodside provided:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of Yindjibarndi's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked Yindjibarndi (via NYFL) to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to Yindjibarndi (via NYFL), if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with Yindjibarndi (via NYFL) on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to Yindjibarndi queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to Yindjibarndi (via NYFL) during Woodside's initial email on 31 March 2025. Yindjibarndi was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Yindjibarndi has requested Woodside consult with it (via NYFL), Woodside has complied with this request.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with Yindjibarndi members, as well as the Yindjibarndi Board.
  - Asked Yindjibarndi (via NYFL) to advise how it would like Woodside to engage and whether Yindjibarndi required further information.
  - Asked Yindjibarndi (via NYFL) if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites Yindjibarndi to Monthly Luncheons.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Yindjibarndi did not provide feedback or information during consultation for this EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.9 Yinggarda Aboriginal Corporation (YAC)

YAC is established under the *Native Title Act 1993 (Cth)* by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside has an existing relationship with YAC which extends prior to consultation for this EP. Woodside's consultation approach for Traditional Owners has a focus on building and maintaining long-term relationships with each group. Woodside has assigned a First Nations Engagement team member as a dedicated focal person for EP consultation with YAC, who is responsible for building a consultative relationship and is readily available to provide information and take feedback. Woodside notes that YAC has legal representation and therefore Woodside defers consultation material to the legal representative on behalf of YAC.

At the start of consultation, Woodside provided YAC a table of cultural values previously identified for YAC through consultation and reviews of publicly available literature. Woodside invited YAC to make changes or provide additional information about these cultural values. YAC did not request any changes. This context and process demonstrates that Woodside's consultation approach with YAC is appropriate and adapted to the nature and interests of YAC.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed YAC (via legal representative) advising of the proposed activity (Record of Consultation, reference 6.1.59), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values previously provided by YAC that Woodside consider relevant to the activity:
    - **(1)** Right and responsibility to speak and care for Country.
    - **(2)** Use of Country for cultural activities – fishing, camping hunting and gathering.
    - **(3)** Health of ecosystems – plants, animals, seagrass is an important food source for dugongs.
    - **(4)** Marine mammals – dugongs, whales (potential impact to migration patterns and potential collisions with vessels).
    - **(1, 2 ,3 ,4)** A request from Woodside that YAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how YAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for YAC to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed YAC (via legal representative) a reminder about the proposed activity (SI Report B, reference 9.1). The email included:
  - A reference to the original consultation email for this EP sent to YAC (via legal representative) on 31 March 2025, which included a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how YAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 April 2025, Woodside sent YAC (via legal representative) a follow-up email with copy of the Summary Information Sheet for this EP and another (SI Report B, reference 9.2).

Ongoing Consultation:

- On 26 August 2025, YAC emailed Woodside and provided updated contact details for receiving EP information (SI Report B, reference 9.3).
- On 27 August 2025 Woodside emailed YAC to confirm it had updated its contact details (SI Report B, reference 9.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value:	**(1)**	**(1)** At the beginning of consultation for this EP, Woodside provided YAC with a list of	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Right and responsibility to speak and care for Country.	This value has been identified through Woodside's data collection processes (publicly available literature).	the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.59). YAC did not request any changes.	Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural Value: Use of Country for cultural activities: • Fishing • Camping • Hunting and gathering.	**(2)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.59). YAC did not request any changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(3) Cultural Value: Health of ecosystems: • Plants and animals. • Seagrass is an important food source for dugongs	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.59). YAC did not request any changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(4) Cultural Value: • Marine mammals • Dugongs • Whales (potential impact to migration patterns and potential collisions with vessels).	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.59). YAC did not request any changes.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and literature.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will	No additional measures or controls are required.

		apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with YAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided YAC (via legal representative) with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with YAC (via legal representative) on this EP. Woodside provided:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked YAC (via legal representative) to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to YAC (via legal representative), if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with YAC (via legal representative) on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to YAC queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to YAC (via legal representative) during Woodside's initial email on 31 March 2025. YAC (via legal representative) was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for input into how YAC (via legal representative) would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with YAC members, as well as the YAC Board.
  - Asked YAC (via legal representative) to advise how it would like Woodside to engage and whether YAC required further information.
  - Asked YAC (via legal representative) if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- YAC did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated YAC's interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13 Native Title representative bodies

4.13.1 Kimberley Land Council (KLC)

KLC is the Native Title Representative Body for the Kimberley region of Western Australia. As such, it is not a Prescribed Body Corporate or Registered Native Title Body Corporate but exists to assist Native Title claimants and holders. Woodside has consulted with KLC in its capacity as a relevant person and also in its capacity as a representative for Nyangumarta Karajarri Aboriginal Corporation, Mayala Aboriginal Corporation and Nyul Nyul Aboriginal Corporation.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed KLC advising of the proposed activity (Record of Consultation, reference 6.1.39), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
- A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
- A request for information on how KLC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- That feedback can continue to be accepted by Woodside for the life of the EP.
- A request for KLC to provide information about the proposed activity to other individuals, as required.

- On 10 April 2025, Woodside met with KLC to discuss this and another EP. KLC informed Woodside that it did not intend to respond to Woodside's request for feedback (SI Report B, reference 10.1).
- On 28 April 2025, Woodside emailed KLC a reminder about the proposed activity (SI Report B, reference 10.2). The email included:
  - A reference to the original consultation email for this EP sent to KLC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how KLC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Woodside has also corresponded with KLC in its capacity as a representative for Nyangumarta Karajarri Aboriginal Corporation, Nyul Nyul Aboriginal Corporation and Mayala Inninalang Aboriginal Corporation. Details of this correspondence is included in the summary and SI Reports for each group.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with KLC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided KLC with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside commenced consultation with KLC on this EP. Woodside provided KLC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of KLC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked KLC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to KLC, if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with KLC on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to KLC queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to KLC during Woodside's initial email on 31 March 2025. KLC was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for KLC's input into how KLC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with KLC members as well as the KLC Board.
  - Asked KLC to advise how it would like Woodside to engage and whether KLC required further information.
  - Asked KLC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside met with KLC to discuss this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- KLC did not provide feedback or information during consultation for this EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13.2 Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist Native Title claimants and holders. Woodside has consulted with YMAC in its capacity as a relevant person and also in its capacity as a representative for Nganhurra Thanardi Garrbu Aboriginal Corporation, Malgana Aboriginal Corporation, Nanda Aboriginal Corporation and Nyangumarta Warrarn Aboriginal Corporation.

Summary of information provided and record of consultation for this EP:

- On 14 April 2025, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 6.1.57), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 14 May 2025.
  - A request for information on how YMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for YMAC to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed YMAC a reminder about the proposed activity (SI Report B, reference 11.1). The email specifically to YMAC included:
  - A reference to the original consultation email for this EP, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 14 May 2025.
  - A request for information on how YMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 1 May 2025, Woodside emailed YMAC to the capacity in which it was being consulted and confirm contact information for YMAC (SI Report B, reference 11.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please note, Woodside has also corresponded with YMAC in its capacity as a representative for Malgana Aboriginal Corporation, Nanda Aboriginal Corporation, and Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC). Details of this correspondence is included in the summaries and SI Reports for these groups.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with YMAC for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided YMAC with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 14 April 2025, Woodside commenced consultation with YMAC on this EP. Woodside provided YMAC:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of YMAC's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked YMAC to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to YMAC, if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside commenced consultation with YMAC in April 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to YMAC queries over seven months, demonstrating a “reasonable period” of consultation.
- A consultation period was communicated to YMAC during Woodside’s initial email on 14 April 2025. YMAC was asked to provide feedback by 9 May 2025 in line with Woodside’s methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for YMAC’s input into how YMAC would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside’s initial email about this EP on 14 April 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with YMAC members as well as the YMAC Board.
  - Asked YMAC to advise how it would like Woodside to engage and whether YMAC required further information.
  - Asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- YMAC did not provide feedback or information during consultation for this EP.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.14 Self-identified First Nations groups

4.14.1 Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as trustee for the trust created pursuant to the Northwest Shelf Agreement 1998 (agreed between the Ngarluma and Yindjibarndi registered Native Title claimants, the NWS JVs, and Woodside) prior to the resolution of the Ngarluma and Yindjibarndi Native Title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In 1999 the Ngarluma and Yindjibarndi Native Title claim was settled with the Federal Court appointing, at the request of the Native Title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP. The Yindjibarndi Aboriginal Corporation has requested all correspondence about EPs be directed to NYFL.

NYFL self-identified and has advised it is relevant for this EP. In March 2024, Woodside provided NYFL with the draft terms of a consultation agreement between NYFL and Woodside. Discussions between Woodside and NYFL in relation to this agreement are ongoing, and have occurred in parallel to consultation for this EP.

In addition to consultation for specific EPs relevant to NYFL, Woodside also consults NYFL through Quarterly Heritage Meetings and monthly luncheons. Woodside has continually confirmed it is open to receiving or being notified of feedback, claims or objections on EPs. This context and process demonstrates that Woodside's consultation approach with NYFL is appropriate and adapted to the nature and interests of NYFL.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 6.1.46), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how NYFL would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for NYFL to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, NYFL emailed Woodside an update about a draft consultation agreement (SI Report B, reference 12.1).
- On 7 April 2025, Woodside emailed NYFL an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, Yawuru and WAC attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 10 April 2025, NYFL emailed Woodside a draft consultation agreement, previously provided by Woodside, which incorporated NYFL changes (SI Report B, reference 12.2).
- **(1)** On 24 April 2025, NYFL emailed Woodside stating that NYFL had not been consulted on this EP and explained that NYFL looks forward to consulting on EPs once the consultation agreement had been progressed (SI Report B, reference 12.3).
- On 28 April 2025, Woodside emailed NYFL a reminder about the proposed activity (SI Report B, reference 12.4). The email included:
  - A reference to the original consultation email for this EP sent to NYFL on 31 March 2025, which included a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how NYFL would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 28 April 2025, Woodside sent NYFL a copy of the Summary Information Sheet for this EP and another (SI Report B, reference 12.5).
- On 28 April 2025, NYFL emailed Woodside a response to its follow-up email about this EP and another (SI Report B, reference 12.6). NYFL noted it looked forward to consulting on this EP and another once the draft consultation agreement was executed.
- On 21 May 2025, Woodside emailed NYFL about another matter unrelated to consultation for this EP (SI Report B, reference 12.7). **(1)** Woodside updated NYFL about its review of NYFL's amendments to the draft consultation agreement and reminded NYFL that consultation for any EPs occurs in parallel to negotiations about the agreement.
- **(1)** On 15 June 2025, Woodside emailed NYFL amendments to a draft consultation agreement (SI Report B, reference 12.8). In the email, Woodside reiterated that consultation for the preparation of EPs can and does occur concurrently with agreement negotiations.

Ongoing Consultation:

- **(1)** On 16 June 2025, NYFL emailed Woodside to acknowledge receipt of Woodside's amendments to a draft consultation agreement (SI Report B, reference 12.9).
- **(1)** On 16 June 2025, NYFL emailed Woodside about an unrelated EP and further confirmed that a consultation agreement is the appropriate framework to engage in consultation and provided availability to discuss the consultation agreement (SI Report B, reference 12.10).
- **(1)** On 19 June 2025, NYFL emailed Woodside and advised Woodside's amendments to a draft consultation were under review (SI Report B, reference 12.11).
- **(1)** On 3 July 2025, NYFL emailed Woodside in response to an unrelated EP noting that as per an email dated 16 May, NYFL looks forward to finalising the consultation agreement and undertaking consultation in regard to the unrelated EP (SI Report B, reference 12.12). Woodside understands that NYFL is referring to correspondence dated 16 June 2025 as outlined above not 16 May.
- **(1)** On 4 July 2025, Woodside emailed NYFL to state that the preparation of EPs can and does occur concurrently with agreement negotiations (SI Report B, reference 12.13).
- **(1)** On 24 July 2025, NYFL emailed Woodside and offered to meet online to discuss the consultation agreement and enquired about legal costs (SI Report B, reference 12.14).
- **(1)** On 23 September 2025, NYFL emailed Woodside to follow-up on its earlier offer to meet to discuss the consultation agreement (SI Report B, reference 12.15).
- **(1)** On 24 September 2025, Woodside emailed NYFL to confirm an online meeting could be held to discuss the consultation agreement however Woodside would not provide funding for legal advice. Woodside reminded NYFL that negotiation towards a consultation agreement can and does occur in parallel with consultation about individual EPs (SI Report B, reference 12.16).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) NYFL has stated no formal consultation had taken place between NYFL and Woodside on this EP. NYFL advised it would progress consultation on this EP once the draft consultation agreement was finalised.	**(1)** Woodside rejects NYFL's assertion that it has not been consulted on this EP. Woodside began consulting NYFL on 31 March 2025 and has provided sufficient information, a reasonable period of time, and reasonable opportunity for NYFL to provide feedback. Woodside has clearly communicated to NYFL on a number of occasions that consultation for this EP has	**(1)** The information provided by Woodside meets the requirements of regulation 25 of the Environment Regulations for the reasons set out above.	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	occurred in parallel to negotiations about the draft consultation agreement.		
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with NYFL for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- Woodside has provided NYFL with relevant consultation documents, including NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters.
- In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website.
- On 31 March 2025, Woodside commenced consultation with NYFL on this EP. Woodside provided NYFL:
  - A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included:
    - An overview of the activity and proposed timing.
    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of NYFL's interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside asked NYFL to forward the information to its members.
  - Woodside offered to provide more specific information, maps and images to NYFL if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with NYFL on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to NYFL queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to NYFL during Woodside's initial email on 31 March 2025. NYFL was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for NYFL's input into how NYFL would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months and has been in regular dialogue with NYFL over this period. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Offered for Woodside to speak with NYFL members as well as the NYFL Board.
  - Asked NYFL to advise how it would like Woodside to engage and whether NYFL required further information.
  - Asked NYFL if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- Woodside invites NYFL to Monthly Luncheons

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- NYFL did not provide feedback or information during consultation for this EP relating to cultural values. NYFL has stated no formal consultation had taken place between NYFL and Woodside on this EP and that NYFL would progress consultation on this EP once the draft consultation agreement was finalised. Woodside rejects NYFL's assertion that it has not been consulted on this EP. Woodside began consulting NYFL on 31 March 2025 and has provided sufficient information, a reasonable period of time, and reasonable opportunity for NYFL to provide feedback. Woodside has clearly communicated to NYFL that consultation for this EP has occurred in parallel to negotiations about the draft consultation agreement.
- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.15 Other First Nations groups

4.15.1 Save Our Songlines (SOS)

SOS and/ or [Individual 2] do not squarely fall within the consultation categories in the current Woodside methodology and are therefore considered in their own category.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

SOS is an organisation formed by [Individual 2], who we currently understand is the group's primary spokesperson. [Individual 2] and/ or SOS are together represented by lawyers from the Environment Defenders Office (EDO). Woodside understands that the views expressed by SOS align with the views of [Individual 2]. Woodside therefore approaches communication with SOS and/or [Individual 2] as communication with SOS and has consulted them concurrently.

The stated interests of [Individual 2] and/or SOS include the conservation of Murujuga rock art, and opposition to expansion of projects on the Burrup Peninsula. On the information available to us, we understand that SOS and/or [Individual 2] have also been members of Aboriginal corporations who have been separately consulted as relevant persons by Woodside. This is relevant because it confirms that cultural values or interests of those groups have been consulted on and assessed in preparing this EP. This context and process demonstrates that Woodside's consultation approach with SOS is appropriate and adapted to the nature and interests of SOS.

Historical engagement:

During previous consultation for other activities, SOS and/or [Individual 2] has provided information relating to its cultural values which Woodside deem relevant to this EP:

- **(1)** Threats to Murujuga Rock Art and Cultural Heritage:
  - Emissions, movement and potential damage.
  - Impacts on sites of cultural and spiritual significance.
- (1) Woodside has noted the cultural significant of Murujuga Rock Art and assessed risks in the EP.
- **(2)** Cultural and Environmental Significance:
  - Songlines, Dreaming, and energy lines.
  - Cultural features related to marine life including whales, marine mammals, seagrass, turtles.
  - Importance of the meeting of freshwater and saltwater.
  - Connection to Sea Country and the sea.
- (2) Woodside has recorded matters of cultural and environmental significance in this EP.
- **(3)** Environmental Protection and Cultural Values:
  - Caring for country, significance of eagle, kangaroo, bungarra.
  - Importance of offshore islands, including Rosemary Island.
  - Disturbance of seabed, noise, and pollution.
  - Relationship between environmental protection and cultural values.
- (3) Woodside has included matters of cultural and environmental significance in the EP.

Please see Scarborough Offshore Facility and Trunkline (Operations) EP and North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 31 March 2025, Woodside emailed SOS and/ or [Individual 2] advising of the proposed activity (Record of Consultation, reference 6.1.52), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how SOS and/ or [Individual 2] would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for SOS and/ or [Individual 2] to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed SOS and/ or [Individual 2] a reminder about the proposed activity (SI Report B, reference 13.1). The email included:
  - A reference to the original consultation email for this EP sent to SOS and/ or [Individual 2] on 31 March 2025, which included a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how SOS and/ or [Individual 2] would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 April 2025, Woodside sent SOS and/ or [Individual 2] a follow-up email with a copy of the Summary Information Sheet for this EP and another EP (SI Report B, reference 13.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Threats to Murujuga Rock Art and Cultural Heritage: • Emissions, movement and potential damage. • Impacts on sites of cultural and spiritual significance.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** Woodside acknowledges the cultural significance of Murujuga Rock Art. No rock art will be moved during this activity.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
(2) Cultural and Environmental Significance: • Song lines, dreaming, and energy lines. • Cultural features related to marine life including whales, marine mammals, seagrass, turtles.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** Woodside has noted these cultural values in Section 4.9 and assessed risks and mitigation measures in Sections 6.5 and 6.6 of the EP.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Importance of the meeting of freshwater and saltwater. • Connection to Sea Country and the sea.			
(3) Environmental Protection and Cultural Values: • Caring for country, significance of eagle, kangaroo, bungarra. • Importance of offshore islands, including Rosemary Island. • Disturbance of seabed, noise, and pollution. • Relationship between environmental protection and cultural values.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** Woodside has noted these cultural values in Section 4.9 and assessed risks and mitigation measures in Sections 6.5 and 6.6 of the EP.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. Woodside has also assessed the potential impacts on these interests and cultural values, and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under Regulation 25 of the Environment Regulations and consultation with SOS and/ or [Individual 2] for the purpose of Regulation 25 is complete. Sufficient information and a reasonable period and reasonable opportunity have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • Woodside has provided SOS and/ or [Individual 2] with relevant consultation documents, including NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, informing stakeholders on how consultation is conducted and providing avenues for providing information on sensitive matters. • In March 2025, Woodside made the Consultation Information Sheet about this EP publicly available on the Woodside website. • On 31 March 2025, Woodside commenced consultation with SOS and/ or [Individual 2] on this EP. Woodside provided SOS: – A Summary Information Sheet developed specifically for First Nations groups and reviewed by a First Nations staff member. This sheet included: ▪ An overview of the activity and proposed timing.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

    - Maps showing the location and EMBA.
    - A summary of the risks and impacts of the activity.
    - Diagrams.
    - Details about how to provide feedback.
  - The purpose of consultation, and what was being sought by Woodside through consultation including understanding the nature of SOS and/ or [Individual 2]'s interests and how the activity could impact those interests.
  - That Woodside had undertaken assessments to identify potential impacts and risks to the marine environment and developed mitigation and management measures.
  - Woodside offered to provide more specific information, maps and images to SOS and/ or [Individual 2], if required.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside commenced consultation with SOS and/ or [Individual 2] on 31 March 2025 and provided information on the EP on that date. Since then, Woodside has provided an opportunity to address and respond to SOS's queries over seven months, demonstrating a "reasonable period" of consultation.
- A consultation period was communicated to SOS and/ or [Individual 2] during Woodside's initial email on 31 March 2025. SOS and/ or [Individual 2] was asked to provide feedback by 9 May 2025 in line with Woodside's methodology of a 30-day consultation period. This period enabled Woodside to assess feedback before the EP was submitted.
- Woodside continues to receive and accept feedback in relation to the EP.

Reasonable Opportunity

A reasonable period for consultation in the preparation of this EP has been provided because:

- Woodside asked for SOS and/ or [Individual 2]'s input into how SOS and/ or [Individual 2] would like to engage in consultation and has consulted in a way that Woodside understands is appropriate for First Nations groups.
- Woodside has made information on the EP publicly available for over seven months. This included publishing advertisements in Indigenous, national, state and local newspapers (Appendix F, reference 6.3).
- Woodside ran a social media campaign (Appendix F, reference 6.4).
- Woodside's initial email about this EP on 31 March 2025:
  - Included a general email address and telephone number for Woodside as well as a direct email address and telephone number for a dedicated focal person from the Woodside First Nations Engagement team. It also included contact details for NOPSEMA.
  - Asked SOS and/ or [Individual 2] to advise how it would like Woodside to engage and whether SOS and/ or [Individual 2] required further information.
  - Asked SOS and/ or [Individual 2] if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- SOS and/ or [Individual 2] did not provide feedback or information during consultation for this EP relating to cultural values but has done so in consultation for other activities. Woodside has incorporated SOS and/ or [Individual 2]'s interests and cultural values in Section 4.9 and assessed potential impact on these and where appropriate, included controls, in Sections 6.5 and 6.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside engages in ongoing consultation, once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 3 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

5.1 Other non-government groups or organisations (NGOs) or individuals

5.1.1 Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.1.2 Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP: • On 31 March 2025, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*. • On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).			
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AMCS to provide feedback during the consultation process.			

5.1.3 Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP: • On 31 March 2025, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*. • On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).			
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Revision process (see Section 7.8 of the EP).	
Outcomes of Consultation			
While CCWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CCWA to provide feedback during the consultation process.			

5.1.4 Greenpeace Australia Pacific (GAP)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While GAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GAP to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.1.5 Australasian Centre for Corporate Responsibility (ACCR)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed ACCR advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback during the consultation process.

5.1.6 Doctors for the Environment Australia (DEA) / Doctors for the Environment WA (DEAWA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DEA advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Revision process (see Section 7.8 of the EP).	
Outcomes of Consultation			
While DEA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for DEA to provide feedback during the consultation process.			

5.1.7 Market Forces

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Market Forces advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While Market Forces is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Market Forces to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.1.8 The Wilderness Society (TWS)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed TWS advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While TWS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for TWS to provide feedback during the consultation process.

5.1.9 Vocus

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, a submarine communication cables map (Record of Consultation, reference 6.1.7) and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 4 April 2025, Vocus thanked Woodside for its email and advised (SI Report A, reference 21.1):
  - **(1)** Advised it was hard to determine if there would be an effect on Vocus' system without knowing the northernmost points of the survey area. Advised that most survey activities would not affect the system, but any seabed activity could put the Highclere Cable System at risk and therefore should not be executed within 5km of the Cable System without written agreement with Vocus.
  - **(2)** Queried if the Highclere Cable was the 'SCA Fibre Optic Cable' and that it was no longer proposed, but now active.
- On 8 April 2025, Woodside thanked Vocus for its response (SI Report A, reference 21.2) and:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– (1) Advised it had calculated the distance between the Highclere Cable and the Operational Areas by measuring the shortest distance between them and that the shortest distance between the Highclere Cable and Operational Area B was 9.17km so well beyond the 5km distance Vocus required. Operational Areas A and C were further away from the Cable. – (2) Confirmed the 'SCA Fibre Optic Cable' was the Highclere Cable and that Woodside was aware the cable was active.			
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim**	**Woodside's Statement of Response**	**Inclusion in Environment Plan**
(1) Any seabed activity could put the Highclere Cable System at risk and should not be executed within 5km of Vocus' Cable System without written agreement with Vocus.	**(1)** Woodside has calculated that the distance Vocus' cable system and the Operational Areas the nearest one - Operational Area B is 9.17km away so well beyond the 5km distance Vocus requires.	**(1)** Woodside confirmed it had calculated the distance between the Highclere Cable and the Operational Areas by measuring the shortest distance between them and that the nearest cable was 9.17km away so well beyond the 5km distance Vocus required.	**(1)** Not required.
(2) The SCA Fibre Optic Cable' was no longer proposed; it was active.	**(2)** The SCA Fibre Optic Cable is the Highclere Cable and Woodside is aware it is active.	**(2)** Woodside confirmed the SCA Fibre Optic Cable was the Highclere Cable and that it was aware it was active	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While Vocus is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Vocus to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2 Research institutes and local conservation groups or organisations

5.2.1 Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.

5.2.2 Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	
Outcomes of Consultation			
While CSIRO is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CSIRO to provide feedback during the consultation process.			

5.2.3 Western Australian Marine Science Institution (WAMSI)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2.4 University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 24 April 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While UWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for UWA to provide feedback during the consultation process.

5.3 Traditional custodians and nominated representative corporations

5.3.1 Balanggarra Aboriginal Corporation (BAC)

BAC is established under the *Native Title Act 1993 (Cth)* by the Balanggarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed BAC advising of the proposed activity (Record of Consultation, reference 6.1.32), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
- A request for information on how BAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- That feedback can continue to be accepted by Woodside for the life of the EP.
- A request for BAC to provide information about the proposed activity to other individuals, as required.

- On 28 April 2025, Woodside emailed BAC a reminder about the proposed activity (SI Report B, reference 14.1). The email included:
  - A reference to the original consultation email for this EP sent to BAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how BAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 28 April 2025, BAC replied to Woodside noting that the consultation reminder email will be forwarded to the corporation (SI Report B, reference 14.2).
- On 28 April 2025, Woodside replied to BAC seeking advice on relevant persons who should be included in consultation emails and provided an opportunity to meet with BAC (SI Report B, reference 14.3)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While BAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for BAC to provide feedback during the consultation process.			

5.3.2 Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC)

BJNAC is established under the *Native Title Act 1993 (Cth)* by the Bardi and Jawi People to represent the Bardi and Jawi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed BJNAC advising of the proposed activity (Record of Consultation, reference 6.1.33), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how BJNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for BJNAC to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside briefly met with BJNAC, during the meeting BJNAC invited Woodside to its next Board meeting (SI Report B, reference 15.1).
- On 28 April 2025, Woodside emailed BJNAC a reminder about the proposed activity (SI Report B, reference 15.2). The email included:
  - An opportunity to meet in the coming week.
  - A reference to the original consultation email for this EP sent to BJNAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how BJNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While BJNAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for BJNAC to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.3 Dambimangari Aboriginal Corporation (DAC)

DAC is established under the *Native Title Act 1993 (Cth)* by the Dambimangari people to represent the Dambimangari people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed DAC advising of the proposed activity (Record of Consultation, reference 6.1.34), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how DAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for DAC to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed DAC a reminder about the proposed activity (SI Report B, reference 16.1). The email included:
  - A reference to the original consultation email for this EP sent to DAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how DAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
While DAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for DAC to provide feedback during the consultation process.

5.3.4 Gogolanyngor Aboriginal Corporation (GAC)

GAC was established under the *Native Title Act 1993* (Cth) by the Jabirr Jabirr/Ngumbarl and Bindunbur people to represent the Jabirr Jabirr/Ngumbarl and Bindunbur people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed GAC advising of the proposed activity (Record of Consultation, reference 6.1.35), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how GAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for GAC to provide information about the proposed activity to other individuals, as required.
- On 1 April 2025, GAC emailed Woodside notifying of staffing changes. GAC also confirmed that the EP information will be provided to Directors at the next Board meeting (SI Report B, reference 17.1).
- On 1 April 2025, Woodside emailed GAC to acknowledge GACs staffing updates (SI Report B, reference 17.2).
- On 1 April 2025, GAC telephoned Woodside to explain that the EP information was too technical to understand. Woodside offered to meet with the Board to explain the EP and EMBA, and subsequently a meeting was confirmed on 3 April 2025 (SI Report B, reference 17.3).
- On 1 April 2025, GAC emailed Woodside, asking Woodside to confirm that the meeting invite had been received (SI Report B, reference 17.4).
- On 1 April 2025, Woodside emailed GAC confirming receipt of the invite and requesting meeting details (SI Report B, reference 17.5).
- On 3 April 2025, Woodside met in-person with GAC in Broome to consult on this EP and another (SI Report B, reference 17.6). Matters relevant to this EP included:
  - An overview of this EP and another, including potential impacts.
  - An explanation of the EMBA and its methodology.
  - Advice that Woodside are willing to pay reasonable costs to support GAC to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** Possibility of activities causing vibrations in the water. (1) Woodside explained the seismic testing process and what measures are in place to mitigate the impact on marine animals.
- **(2)** GAC stated that funding for ranger programs was difficult to access.
- GAC advised they were pleased to be able to meet with Woodside at short notice to discuss EPs and are open to consistency in engagement moving forward.

- On 8 April 2025, Woodside emailed GAC to thank GAC for the meeting on 3 April 2025 (SI Report B, reference 17.7).
- On 28 April 2025, Woodside emailed GAC a reminder about the proposed activity (SI Report B, reference 17.8). The email included:
  - A reference to the original consultation email for this EP sent to GAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - An opportunity to meet to further discuss this EP and to discuss an unrelated project.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how GAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- (2) On 7 May 2025, Woodside visited GAC's office and provided an update on a ranger funding proposal (SI Report B, reference 17.9).
- (2) On 20 May 2025, Woodside telephoned GAC and provided information about ranger funding available from a Commonwealth government agency (SI Report B, reference 17.10).
- On 30 May 2025, Woodside visited the GAC office however it was closed (SI Report B, reference 17.11).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) GAC enquired about the possibility of activities causing vibrations in the water.	**(1)** Woodside confirms there is no seismic testing in this EP.	**(1)** During a meeting on 3 April 2025, Woodside confirmed there was no seismic testing for this EP and explained the measures in the EP to mitigate the impact of noise on marine animals. As GAC is not considered a relevant person for this EP, Woodside has made note of this feedback from GAC.	**(1)** No action required.
(2) GAC stated that funding for ranger programs was difficult to access.	**(2)** Woodside sees the value of groups having ranger programs.	**(2)** Woodside is in the process of developing a ranger funding program. GAC's request will be evaluated in accordance with the program's criteria upon its implementation. As GAC is not considered a relevant	**(2)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		person for this EP, Woodside has made note of this feedback	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Summary Report – Consultation Complete			
While GAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for GAC to provide feedback during the consultation process.			

5.3.5 Karajarri Traditional Lands Association (KTLA) (Aboriginal Corporation)

KTLA is established under the *Native Title Act 1993 (Cth)* by the Karajarri people to represent the Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed KTLA advising of the proposed activity (Record of Consultation, reference 6.1.37), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how KTLA would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for KTLA to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed KTLA a reminder about the proposed activity (SI Report B, reference 18.1). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– A reference to the original consultation email for this EP sent to KTLA on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
– A reminder that consultation for the preparation of this EP closes on 9 May 2025.
– A request for information on how KTLA would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
– Woodside's commitment to managing gender-restricted or other culturally sensitive information.
– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.

Summary Report – Consultation Complete

While KTLA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for KTLA to provide feedback during the consultation process.

5.3.6 Malgana Aboriginal Corporation (Malgana)

Malgana is established under the *Native Title Act 1993 (Cth)* by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. YMAC is the Native Title Representative body for Malgana.

At the start of consultation, Woodside provided Malgana a table of cultural values previously identified for Malgana through consultation and reviews of publicly available literature. Woodside invited Malgana to make changes or provide additional information about these cultural values. Malgana did not request any changes.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Malgana (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.40), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
- Information on the cultural values previously provided by Malgana that Woodside consider relevant for consultation:
  - **(1)** Interest in Shark Bay – environment, stromatolites and microbial mats.
  - **(2)** Access to Country for resources – bird and turtle eggs, dugongs, turtle, fish including sharks, shellfish, crabs.
  - **(3)** Freshwater seeps – traditional knowledge.
  - **(4)** Cultural significant species – green sea turtles, dugongs, shags, bottlenose dolphins.
  - **(5)** Knowledge – sharing and controlling, transfer of knowledge to younger generations.
  - **(1 ,2, 3, 4, 5)** A request from Woodside that Malgana confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
- A request for information on how Malgana would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- That feedback can continue to be accepted by Woodside for the life of the EP.
- A request for Malgana to provide information about the proposed activity to other individuals, as required.

- On 1 April 2025, Woodside emailed Malgana (via YMAC) to confirm if its initial consultation email had been received and offered a further opportunity to meet (SI Report B, reference 19.1).
- On 28 April 2025, Woodside emailed Malgana (via YMAC) a reminder about the proposed activity (SI Report B, reference 19.2). The email included:
  - A reference to the original consultation email for this EP sent to Malgana (via YMAC) on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how Malgana would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Interest in Shark Bay – environment and stromatolites and microbial mats.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.40). Malgana did not request any changes. Woodside acknowledges Malgana's previously raised cultural values. As Malgana's determination falls outside of	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
(2) Cultural Value: Access to country for resources: • bird and turtle eggs • dugongs • turtle • fish including sharks, shellfish, crabs.	**(2)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.40). Malgana did not request any changes. Woodside acknowledges Malgana's previously raised cultural values. As Malgana's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(2)** No action required.
(3) Cultural Value: Freshwater seeps: • traditional knowledge	**(3)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.40). Malgana did not request any changes. Woodside acknowledges Malgana's previously raised cultural values. As Malgana's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(3)** No action required.
(4) Cultural Value: Cultural significant species: • Green sea turtles. • Dugongs.	**(4)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (ROC, 6.1.40). Malgana did not request any changes.	**(4)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Shags • Bottlenose dolphins.		Woodside acknowledges Malgana's previously raised cultural values. As Malgana's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
(5) Cultural Value: Knowledge: • Sharing and controlling of knowledge. • Transfer of knowledge to younger generations.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.40). Malgana did not request any changes. Woodside acknowledges Malgana's previously raised cultural values. As Malgana's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(5)** No action required.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While Malgana is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for Malgana to provide feedback during the consultation process.			

5.3.7 Mayala Inninalang Aboriginal Corporation (MIAC)

MIAC is established under *the Native Title Act 1993 (Cth)* by the Mayala people to represent the Mayala people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. KLC is the Native Title Representative Body for MIAC.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed MIAC (via KLC) advising of the proposed activity (Record of Consultation, reference 6.1.41), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how MIAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for MIAC to provide information about the proposed activity to other individuals, as required.
- On 31 March 2025, Woodside emailed MIAC (via KLC) to confirm the focal point (SI Report B, reference 20.1).
- On 1 April 2025, KLC emailed Woodside confirming that consultation material had been forwarded to the corporation for consideration (SI Report B, reference 20.2)
- On 28 April 2025, Woodside emailed MIAC (via KLC) requesting that consultation emails are forwarded to the appropriate persons. Woodside also provided an opportunity to meet face-to-face to discuss this EP (SI Report B, reference 20.3)
- On 28 April 2025, Woodside emailed MIAC (via KLC) a reminder about the proposed activity (SI Report B, reference 20.4). The email included:
  - A reference to the original consultation email for this EP sent to MIAC (via KLC) on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how MIAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 29 April 2025, KLC emailed Woodside confirming that the EP consultation reminder has been forwarded to the correct persons. It was also conveyed that responses can be delayed due to organisational factors (SI Report B, reference 20.5)

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
While MIAC (via (KLC) is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for MIAC (via KLC) to provide feedback during the consultation process.

5.3.8 Nanda Aboriginal Corporation (Nanda)

Nanda was established under the *Native Title Act 1993* (Cth) by the Nanda people to represent the Nanda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. YMAC is the Native Title Representative Body for Nanda.

Summary of information provided and record of consultation for this EP:

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Nanda (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.43), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A link to the Consultation Information Sheet.
  - Information on the cultural values previously provided by Nanda that Woodside consider relevant for consultation:
  - **(1)** Connection to Country including that Kalbarri Coastal Cliffs have Dreamtime and creation stories, archaeological sites, red sandstone outcrops, freshwater springs and abundant artefacts on islands adjacent to the state marine park.
  - **(2)** Shorelines are culturally significant.
  - **(3)** Whales and migration patterns.
  - **(1, 2, 3)** A request from Woodside that Nanda confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how Nanda would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside during the life of the EP.
  - A request for Nanda to provide information about the proposed activity to other individuals, as required.
- On 1 April 2025, Woodside telephoned Nanda (via YMAC), who confirmed it had received the EP information and will discuss this with the Board (SI Report B, reference 21.1).
- On 11 April 2025, Woodside and Nanda (via YMAC) exchanged emails to discuss details and costs allocation for a meeting in Geraldton scheduled on 12 May 2025 (SI Report B, references 21.2 - 21.4).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 April 2025, Woodside emailed Nanda (via YMAC) a reminder about the proposed activity (SI Report B, reference 21.5). The email included:
  - A reference to the original consultation email for this EP sent to Nanda (via YMAC) on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how Nanda (via YMAC) would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Between 1 and 5 May 2025, Woodside and Nanda (via YMAC) emailed to discuss details for the upcoming consultation meeting (SI Report B, references 21.6 – 21.12).
- On 12 May 2025, Woodside and Nanda (via YMAC) met in-person at the YMAC Geraldton office to consult on this EP (SI Report B, reference 21.12). Relevant matters raised include:
  - **(4)** Nanda sought clarity on how an EMBA is determined. **(4)** Woodside provided an explanation of the EMBA and how it is determined through spill scenario modelling.
  - **(3)** Nanda asked about whale migration pathways. **(3)** Woodside explained the mitigation methods employed where activities overlap migration pathways.
  - **(5)** Nanda asked about spill response training. **(5)** Woodside explained the proposal process for funding and provided Nanda an opportunity to explore what that might look like.
  - **(6)** Nanda noted that the Abrolhos Islands are culturally significant noting the presence of artefacts and historical significance. **(6)** Woodside acknowledged this and explained the opportunities with industry, universities, and government to support sea mapping. Woodside invited Nanda to discuss this further.
  - **(7)** Nanda raised concerns around retaining cultural knowledge and the implications of sharing cultural values. **(7)** Woodside explained that it is the decision of Nanda whether cultural values are shared or not.
  - **(1, 8)** Nanda shared further cultural values which include white snow crabs, North Island artefacts and food sources. **(8)** Woodside acknowledged these cultural values.
- On 21 May 2025, Woodside emailed Nanda (via YMAC) to request the attendee names from the consultation meeting (SI Report B, reference 21.14).
- On 10 June 2025, Woodside emailed Nanda (via YMAC) following up from the consultation from 12 May 2025 (SI Report B, 21.15). Woodside thanked Nanda for the meeting and acknowledged the cultural values shared which include:
  - **(6, 8)** White snow crabs of Shark Bay, North Island artefacts and the importance of food sources.
  - **(6)** Abrolhos Islands, noting the presence of artefacts and their historical significance.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: Connection to Country: • Kalbarri Coastal Cliffs: Dreamtime, mythological/ creation stories • archaeological sites • red sandstone outcrops	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.43). Nanda did not request any changes. Woodside acknowledges Nanda's previously raised cultural values. As	**(1)** No action required

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• freshwater springs • abundant artefacts on islands adjacent to the state marine park.		Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
(2) Cultural value: • shorelines.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.43). Nanda did not request any changes. Woodside acknowledges Nanda's previously raised cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(2)** No action required
(3) Cultural value: whales • whale migration patterns.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.43). Nanda did not request any changes. Woodside acknowledges Nanda's previously raised cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(3)** No action required
(4) Nanda asked about how the EMBA is determined.	**(4)** Woodside explained how an EMBA is determined through spill modelling.	**(4)** Woodside acknowledges Nanda's feedback. As Nanda is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(4)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(5) Nanda asked about spill response training.	**(5)** Woodside sees the value of groups having spill response training.	**(5)** Woodside acknowledges Nanda's feedback. Woodside explained the first responder training for traditional owner groups and provided an opportunity for Nanda to explore this further.	**(5)** No action required.
(6) Cultural value: Abrolhos Islands and North Island • artefacts • historical significance	**(6)** This value has been identified through Woodside's data collection processes (consultation).	**(6)** Woodside acknowledges Nanda's cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(6)** No action required
(7) Nanda raised concerns around retaining cultural values.	**(7)** Woodside explained that it is the decision of Nanda whether cultural values are conveyed to Woodside or not.	**(7)** Woodside acknowledges Nanda's feedback. As Nanda is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(7)** No action required.
(8) Cultural value: significance of: • white snow crabs • Food sources	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** Woodside acknowledges Nanda's cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(8)** No action required
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While Nanda is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Nanda to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.9 Nimanburr Aboriginal Corporation (Nimanburr)

Nimanburr is established under the *Native Title Act 1993 (Cth)* by the Nimanburr people to represent the Nimanburr people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

At the start of consultation, Woodside provided Nimanburr a table of cultural values previously identified for Nimanburr through consultation and reviews of publicly available literature. Woodside invited Nimanburr to make changes or provide additional information about these cultural values. Nimanburr did not request any changes.

Summary of information provided and record of consultation for this EP:

- On 3 April 2025, after several telephone calls to Nimanburr with no response, members from Woodside's First Nations Engagement team left a business card at the residence of a member of the Nimanburr community, requesting the individual contact Woodside (SI Report B, reference 22.1). Woodside was then approached by a resident of the property who confirmed that Nimanburr had been receiving the previously provided EP information from Woodside. The resident also stated that a Nimanburr Board meeting was being planned for the near future and Nimanburr would be in contact to provide an invite to Woodside to speak to its Board members. On the same day, 3 April 2025, Woodside provided the individual with a copy of the Record of Consultation email and the Summary Information sheet for this EP to deliver to Nimanburr (Record of Consultation, reference 6.1.47). The email and Summary Information Sheet included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A link to the Consultation Information Sheet.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Valentine Island has cultural value.
    - **(1)** A request from Woodside that Nimanburr confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how Nimanburr would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside during the life of the EP.
  - A request for Nimanburr to provide information about the proposed activity to other individuals, as required.
- On 3 April 2025, Nimanburr emailed Woodside to confirm that it would review the information shared and invited Woodside to the next Directors meeting scheduled on 2 May 2025 (SI Report B, reference 22.2).
- On 28 April 2025, Woodside emailed Nimanburr a reminder about the proposed activity (SI Report B, reference 22.3). The email included:
  - A reference to the original consultation email for this EP handed to Nimanburr on 3 April 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A reminder that consultation for the preparation of this EP closes on 9 May 2025.
- A request for information on how Nimanburr would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 6 May 2025, Woodside met with Nimanburr (SI Report B, reference 22.4). During the meeting Nimanburr informed Woodside that its Directors/Board meeting would potentially be held on 30 May 2025.Matter relevant to this EP included:
  - An overview of this and another EP.
  - An overview of NOPSEMA as well as the consultation process and requirements.
  - Woodside's offer to cover reasonable costs.
- On 26 May 2025, Woodside and Nimanburr exchanged emails about IT facilities for a meeting scheduled for 30 May 2025 (SI Report B, references 22.5 – 22.6).
- On 30 May 2025, Nimanburr cancelled a meeting with Woodside and its Board had been scheduled for later that day due to Nimanburr being unable to secure a quorum of Board members (SI Report B, reference 22.7).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Valentine Island.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature). Although this area is not within the EP EMBA, Woodside has noted this value in the EP.	**(1)** At the beginning of consultation for this EP, Woodside provided Nimanburr with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (Record of Consultation, 6.1.47). Nimanburr did not request any changes. Woodside acknowledges Nimanburr's previously raised cultural values. As Nimanburr's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(1)** No action required.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
While Nimanburr is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for Nimanburr to provide feedback during the consultation process.

5.3.10 Nyangumarta Karajarri Aboriginal Corporation (NKAC)

NKAC is established under the *Native Title Act 1993 (Cth)* by the Nyangumarta and Karajarri people to represent the Nyangumarta and Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. KLC is the Native Title Representative body for NKAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NKAC (via KLC) advising of the proposed activity (Record of Consultation, reference 6.1.48), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how NKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for NKAC to provide information about the proposed activity to other individuals, as required.
- On 31 March 2025, KLC emailed Woodside confirming that consultation material had been forwarded to NKAC for consideration. It was also conveyed that responses can be delayed due to organisational factors (SI Report B, reference 23.1).
- On 28 April 2025, Woodside emailed NKAC (via KLC) a reminder about the proposed activity (SI Report B, reference 23.2). The email included:
  - A reference to the original consultation email for this EP sent to NKAC (via KLC) on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how NKAC (via KLC) would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 29 April 2025, KLC emailed Woodside confirming that the EP consultation reminder has been forwarded to the correct persons (SI Report B, reference 23.3).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 16 May 2025, Woodside emailed NKAC (via KLC) to clarify that consultation for this EP began on 31 March 2025, not 7 April 2025 as noted in the email dated 28 April 2025 (SI Report B, reference 23.4).
- On 21 May 2025, KLC emailed Woodside confirming that the updated EP consultation reminder has been forwarded to the correct persons (SI Report B, reference 23.5).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While NKAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for NKAC to provide feedback during the consultation process.			

5.3.11 Nyangumarta Warrarn Aboriginal Corporation (NWAC)

NWAC is established under the *Native Title Act 1993 (Cth)* by the Nyangumarta people to represent the Nyangumarta people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NWAC advising of the proposed activity (Record of Consultation, reference 6.1.49), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values previously provided by NWAC that Woodside consider relevant for consultation:
  - **(1)** Eighty Mile Beach has cultural value.
  - **(2)** Resource collection and impacts to migrating birds, whales, turtles and vegetation.
  - **(1,2)** A request from Woodside that NWAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for information on how NWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- That feedback can continue to be accepted by Woodside for the life of the EP.
- A request for NWAC to provide information about the proposed activity to other individuals, as required.

- On April 7 2025, NWAC emailed Woodside with updated contact information for future consultation (SI Report B, reference 24.1).
- On 7 April 2025, Woodside emailed NWAC confirming future correspondence will be directed to the nominated contact as requested (SI Report B, reference 24.2).
- On 28 April 2025, Woodside emailed NWAC a reminder about the proposed activity (SI Report B, reference 24.3). The email included:
  - A reference to the original consultation email for this EP sent to NWAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how NWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 7 May 2025, NWAC (via YMAC) emailed Woodside a response to Woodside's email about this EP on 28 April 2025 (SI Report B, reference 24.4). NWAC stated:
  - **(3)** NWAC wanted to develop a consultation protocol.
  - **(4)** NWAC requested Woodside amend its records to reflect that NWAC had not consulted with Woodside.
- On 9 May 2025, Woodside responded to NWAC (via YMAC)'s email advising NWAC's request for a consultation protocol would be reviewed by a manager (SI Report, reference 24.5).
- On 22 May 2025, NWAC (via YMAC) emailed Woodside requesting an update on its request for a consultation protocol (SI Report B, reference 24.6).
- On 22 June 2025, Woodside responded to NWAC (via YMAC)'s email from 7 May 2025 (SI Report B, reference 24.7).

  Woodside stated:
  - **(4)** Woodside did not agree with NWAC's assertion that consultation had not occurred for this EP. Consultation had occurred in accordance with Commonwealth regulations. NWAC had been provided with sufficient information, a reasonable period of time and a reasonable opportunity to provide feedback, claims or objections about the adverse impacts (if any) relating to this EP.
  - **(3)** A consultation protocol is not a prerequisite for consultation and is not required for Woodside to provide reasonable support to NWAC to enable it to participate in consultation. Woodside advised it was not inclined to enter into new negotiations for protocols at this time.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Eighty Mile Beach.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited NWAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.49). NWAC did not	**(1)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		request any changes. Woodside acknowledges NWAC's previously raised cultural values. As NWAC's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
(2) Cultural Value: • Resource collection • impacts to migrating birds, whales, turtles and vegetation.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside invited NWAC to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.49). NWAC did not request any changes. Woodside acknowledges NWAC's previously raised cultural values. As NWAC's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(2)** No action required.
(3) NWAC requested a consultation protocol with Woodside	**(3)** A consultation protocol is not a prerequisite for consultation and is not required to enable Woodside to provide reasonable support to NWAC to participate in consultation	**(3)** Woodside has advised NWAC that it is not inclined to enter into new negotiations for protocols at this time. Woodside has advised NWAC that its approach for Environment Plan consultation invites stakeholders to advise Woodside how they would like to be consulted, offers to meet in person or online, and to pay reasonable costs for time when participating in consultation meetings. This approach is also underpinned by the regulations for which the Environment Plan relates.	**(3)** No action required.
(4)	**(4)** Woodside does not agree with NWAC's assertion that consultation has not	**(4)** Woodside has advised NWAC that consultation has occurred and that	**(4)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

NWAC stated consultation had not occurred.	occurred for this EP. Woodside has consulted NWAC in the preparation of the EP in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth).	Woodside has provided NWAC with sufficient information, a reasonable period of time and reasonable opportunity to provide feedback, claims or objections. Woodside's email on 31 March 2025 clearly confirmed the start of consultation	
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of any objection or claim (if any) about the adverse impact of the activity to which the EP relates as required under Regulation 24.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While NWAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for NWAC to provide feedback during the consultation process.			

5.3.12 Nyul Nyul PBC Aboriginal Corporation (NNAC)

NNAC is established under the *Native Title Act 1993 (Cth)* by the Nyul Nyul people to represent the Nyul Nyul people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. KLC is the Native Title Representative body for NNAC.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed NNAC (via KLC) advising of the proposed activity (Record of Consultation, reference 6.1.50), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how NNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for NNAC to provide information about the proposed activity to other individuals, as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 April 2025, Woodside emailed NNAC (via KLC) noting that a follow up email regarding this EP would be sent in due course. Woodside requested it to be forwarded to relevant persons and provided a further opportunity to meet (SI Report B, reference 25.1).
- On 28 April 2025, Woodside emailed NNAC (via KLC) a reminder about the proposed activity (SI Report B, reference 25.2). The email included:
  - A reference to the original consultation email for this EP sent to NNAC on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how NNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While NNAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for NNAC to provide feedback during the consultation process.			

5.3.13 Wanjina-Wunggurr (Native Title) Aboriginal Corporation (WWAC)

WWAC is established under the *Native Title Act 1993 (Cth)* by the Wanjina and Wunggur people to represent the Wanjina and Wunggur people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed WWAC advising of the proposed activity (Record of Consultation, reference 6.1.53), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
- A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
- A request for information on how WWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- That feedback can continue to be accepted by Woodside for the life of the EP.
- A request for WWAC to provide information about the proposed activity to other individuals, as required.

- On 1 April 2025, Woodside emailed WWAC to resend the Record of Consultation email due to a system error where the email was blocked. Woodside extended the consultation window to 10 May 2025, due to the error (SI Report B, reference 26.1).
- On 28 April 2025, Woodside emailed WWAC a reminder about the proposed activity (SI Report B, reference 26.2). The email included:
  - A reference to the original consultation email for this EP sent to WWAC on 1 April 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 10 May 2025.
  - A request for information on how WWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While WWAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for WWAC to provide feedback during the consultation process.			

5.3.14 Wanparta Aboriginal Corporation (Wanparta)

Wanparta was established under the *Native Title Act 1993* (Cth) by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 6.1.54), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - Information on the cultural values previously provided to Woodside that Woodside consider relevant to consultation:
    - **(1)** A connection to and cultural obligation to look after Sea Country.
    - **(2)** Dreamtime stories connected to nearshore islands particularly Solitary Island/ Jarrkunpungu.
    - **(3)** Sea (fresh and salt water) – dreaming stories, a responsibility to look after the ocean.
    - **(4)** Totemic species – kestrel, octopus, spiny brim, sting ray.
    - **(1, 2 ,3 ,4)** A request from Woodside that Wanparta confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation of this EP.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how Wanparta would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for Wanparta to provide information about the proposed activity to other individuals, as required.
- On 28 April 2025, Woodside emailed Wanparta a reminder about the proposed activity (SI Report B, reference 27.1). The email included:
  - A reference to the original consultation email for this EP sent to Wanparta on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how Wanparta would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 29 April 2025, Woodside and Wanparta exchanged emails and texts to discuss details regarding the upcoming consultation meeting on 9 May 2025 (SI Report B, references 27.2 – 27.5).
- On 1 May 2025, Wanparta emailed Woodside a draft agenda for the upcoming consultation meeting (SI Report B, reference 27.6).
- Between 2 and 8 May 2025, Wanparta and Woodside exchanged emails about arrangements for the 9 May 2025 meeting, including Woodside's PowerPoint presentation (SI Report B, references 27.7 – 27.12).
- On 9 May 2025, Woodside met with Wanparta to discuss this EP and another (SI Report B, reference 27.13). Relevant matters included:
  - Woodside provided an overview of this EP and another.
  - **(5)** Wanparta enquired about oil spill procedures including:
    - Oil spill response times.
    - Dispersant procedures.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

    - Gas and condensate behave during a spill or loss of well control.
    - **(5)** Woodside responded that response times are subject to circumstances, and that dispersant spray is used as a part of a suite of responses in the unlikely event of an oil spill. Woodside noted that condensate has different properties, and that the behaviour of the condensate depends on the specific type of product, the location of its release and other factors.
  - **(6)** Wanparta asked about vessel discharges. **(6)** Woodside noted that maritime legislation dictates how discharges are managed.
  - **(7)** Wanparta enquired about whale and turtle breeding and migration pathways. **(7)** Woodside explained that it takes factors such as these into consideration and puts mitigation measures in place to address this.
  - **(8)** Wanparta asked if Woodside records whale observations. **(8)** Woodside noted it uses available research and that staff have a duty to report wildlife sightings.
  - **(9)** Wanparta provided feedback that more visual learning material would aid consultation. **(9)** Woodside acknowledged the importance of visual aids and noted that animation videos are currently being developed to support Traditional Owners with the EP consultation process.
  - **(10)** Wanparta enquired about support for Ranger Programs. **(10)** Woodside provided a Ranger Program update.
  - **(1)** Wanparta noted that a healthy Sea Country = a healthy marine life = Ngarla food source = healthy Ngarla People. **(1)** Woodside acknowledged this feedback.
  - **(11)** Wanparta noted concerns around maintaining sustainable fish stock post operations during decommissioning. **(11)** Woodside noted that the EPs being discussed are not in relation to decommissioning and that it assesses the environmental impacts of removing infrastructure.
  - **(6)** Wanparta asked if the release of waste products on vessels creates an artificial environment. **(6)** Woodside noted that sea life may aggregate.
  - **(12)** Wanparta questioned if Woodside monitors islands, in particular nesting shore birds. **(12)** Woodside took the question on notice.
  - **(2)** Wanparta noted that there is ethnohistorical evidence of Ngarla occupation on islands. **(2)** Woodside acknowledged this cultural value.
  - **(13)** Wanparta asked to engage an independent expert to verify the effect of dispersant in the unlikely case of an oil spill. **(13)** Woodside took the question on notice.
- On 16 May 2025, Wanparta emailed Woodside a letter that summarised outcomes of a meeting between Wanparta and Woodside on 9 May 2025 (SI report B, reference 27.14).
- On 10 June 2025, Woodside emailed Wanparta responding to its email of 16 May 2025 (SI Report B, reference 27.15). The letter included Woodside's responses to the summarised outcomes raised by Wanparta, as well as questions Woodside took on notice from the consultation meeting on 9 May 2025:
  - **(12)** Wanparta asked if Woodside will monitor the islands within the Ngarla Determination Area. **(12)** Woodside noted that it does not currently monitor islands within the Ngarla Determination Area under the proposed activity program for this EP and another EP, noting that the islands are outside of the EMBA.
  - **(13)** Wanparta questioned if it would be able to engage an independent expert to verify the effect of dispersant usage on the health of the ocean. **(13)** Woodside noted that if Wanparta wish to engage an independent expert to verify the effects of dispersant usage they are welcome to do so.
  - **(5)** Wanparta sought clarity on how gas and condensate behave during a spill or loss of well control. **(5)** Woodside explained that in the highly unlikely event of a hydrocarbon spill, weathering processes are influenced by the specific properties of the substance spilled and the specific conditions of the release.
  - **(1)** Wanparta raised that in the Ngarla People's view healthy Sea Country = a healthy marine life = Ngarla food source = healthy Ngarla People. **(1)** Woodside has noted these interests.
  - **(11)** Wanparta noted that Woodside should maintain sustainable fish stocks post operations. **(11)** Woodside recognises the importance of maintaining sustainable fish stocks post operations and acknowledges that offshore platforms and pipelines can become habitats for various fish species over time. Woodside also provided further details of research underway and provided details of Woodsides regulatory expectations.
  - **(14)** Wanparta requested that Woodside attends at least one Board meeting per calendar year. **(14)** Woodside appreciates Wanparta's invitation to attend at least one annual Board meeting and remains open to additional engagement opportunities as they arise.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(12)** Woodside took a question on notice to seek more information on research activities relating to the monitoring of shorebirds. **(12)** Woodside provided Wanparta with information on shorebirds and noted that since 2016, Woodside has partnered with BirdLife Australia on programs focused on migratory shorebirds.
- **(10)** Woodside took a question on notice to continue discussion on social investment opportunities and ranger programs. **(10)** Woodside is in the process of developing a Ranger Funding Program. Woodside noted that Wanparta's request will be evaluated in accordance with the Program's criteria upon its implementation.

- **(1)** On 12 June 2025, Wanparta emailed Woodside requesting an extract of Section 4.9 of this EP and another (SI Report B, reference 27.16).
- **(1)** On 19 June 2025, Woodside responded to Wanparta advising that as this EP and another are still being prepared, it is unable to provide an extract of Section 4.9 of the EP. Woodside provided a list of the cultural values that Woodside has considered for Wanparta in preparation of this EP and provided information relating to an in-force and publicly available EP with complete information in Section 4.9 that would be similar to that being prepared for this EP and another (SI Report B, reference 27.17).

Ongoing Consultation:

- On 1 July 2025, Wanparta emailed Woodside confirming receipt of the attachment Woodside provided to outline Ngarla's cultural values as communicated during consultations (SI Report B, reference, 27.18).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • A connection to and cultural obligation to look after Sea Country. • A healthy Sea Country leads to healthy marine life and healthy Ngarla People.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited Wanparta to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.54). During consultation, Wanparta provided additional information in relation to this cultural value. Woodside acknowledges Wanparta's cultural values. As Wanparta's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(1)** No action required.
(2) Cultural Value: • Dreamtime stories connected to nearshore islands particularly Solitary Island / Jarrkunpungu. • There is ethnohistorical evidence of Ngarla occupation on these islands.	**(2)** This value has been identified through Woodside's data collection processes (consultation). Although this area is not within the EP EMBA Woodside has noted this value in the EP.	**(2)** At the beginning of consultation for this EP, Woodside invited Wanparta to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.54). Wanparta did not request any changes. Woodside acknowledges Wanparta's cultural values. As Wanparta's	**(2)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
(3) Cultural Value: • Sea (fresh and salt water) • Dreaming stories. • A responsibility to look after the ocean.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside invited Wanparta to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.54). Wanparta did not request any changes. Woodside acknowledges Wanparta's cultural values. As Wanparta's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(3)** No action required.
(4) Cultural Value: • Totemic species • Kestrel. • Octopus. • Spiny brim. • Sting ray.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside invited Wanparta to make changes or provide additional information about this cultural value (Record of Consultation, 6.1.54). Wanparta did not request any changes. Woodside acknowledges Wanparta's cultural values. As Wanparta's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(4)** No action required.
(5) Wanparta enquired about oil spill procedures including: • Oil spill response times.	**(5)** Woodside provided an explanation of oil spill procedures during the consultation meeting.	**(5)** Woodside acknowledges Wanparta's feedback. As Wanparta is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(5)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Dispersant procedures. • Gas and condensate behave during a spill or loss of well control.			
(6) Wanparta asked about vessel discharges, in particular if waste products on vessels creates an artificial environment.	**(6)** Woodside adheres to maritime legislation with regard to how discharges are managed.	**(6)** Woodside advised Wanparta that it complies with maritime legislation with regard to management of discharges. As Wanparta is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(6)** No action required.
(7) Wanparta enquired about whale and turtle breeding and migration pathways.	**(7)** Woodside assesses risks to marine life and puts in place mitigation measures.	**(7)** Woodside advised Wanparta that it assesses risks to marine life and puts in place mitigation measures. As Wanparta is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(7)** No action required.
(8) Wanparta asked if Woodside records whale observations	**(8)** Woodside continues to use all available research and staff have a duty to report whale sightings.	**(8)** Woodside explained to Wanparta how whale sightings are managed. As Wanparta is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(8)** No action required.
(9) Wanparta provided feedback that more visual learning material would aid consultation	**(9)** Woodside welcomes this feedback and is committed to consulting with Traditional Owners in an appropriate way.	**(9)** Woodside acknowledged the importance of visual aids and confirmed it is developing materials such as animations to further support future consultation. As Wanparta is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(9)** No action required.
(10) Wanparta enquired about support for Ranger Programs	**(10)** Woodside sees the value of groups having ranger programs.	**(10)** Woodside is in the process of developing a ranger funding program. Wanparta's request will be evaluated in accordance	**(10)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		with the program's criteria upon its implementation.	
(11) Cultural value: maintaining sustainable fish stock post operations during decommissioning**.**	**(11)** Woodside recognises the importance of maintain sustainable fish stocks post operations and acknowledges that offshore platforms and pipelines can become habitats for fish over time.	**(11)** Woodside acknowledges Wanpartas's cultural values. As Wanparta's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(11)** No action required.
(12) Wanparta questioned if Woodside monitors islands within the Ngarla Determination area, in particular nesting shore birds	**(12)** Woodside does not currently monitor these islands and notes they are outside the EMBA for this EP.	**(12)** Woodside advised Wanparta that it does not currently monitor islands outside of the EMBA within this EP.	**(12)** No action required.
(13) Wanparta asked to engage an independent expert to verify the effect of dispersant in the unlikely case of an oil spill.	**(13)** Wanparta is welcome to engage an independent expert if it wishes to do so.	**(13)** Woodside has advised Wanparta it is welcome to engage an expert on the effect of oil dispersants if it wishes to do so.	**(13)** No action required.
(14) Wanparta requested that Woodside attends at least one Board meeting per calendar year.	**(14)** Woodside appreciates Wanparta's invitation to attend at least one annual Board meeting and remains open to additional engagement opportunities as they arise.	**(14)** Woodside appreciates Wanparta's invitation to attend at least one Board meeting annually.	**(14)** No action required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete
While Wanparta is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for Wanparta to provide feedback during the consultation process.

5.3.15 Yawuru Native Title Holders Aboriginal Corporation (Yawuru)

Yawuru is established under the *Native Title Act 1993 (Cth)* by the Yawuru people to represent the Yawuru people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 31 March 2025, Woodside emailed Yawuru advising of the proposed activity (Record of Consultation, reference 6.1.56), which included the activity's Summary Information Sheet and a linked Consultation Information Sheet. The email included:
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information,* and contact details.
  - A request for feedback by 9 May 2025 for the purposes of preparation for this EP.
  - A request for information on how Yawuru would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - That feedback can continue to be accepted by Woodside for the life of the EP.
  - A request for Yawuru to provide information about the proposed activity to other individuals, as required.
- On 7 April 2025, Woodside emailed Yawuru an invitation to share stories and receive updates from Woodside at its Monthly Community Luncheon for Traditional Owners to be held in Roebourne on 8 April 2025 (SI Report B, reference 29.1). This brochure was also displayed at a number of locations including Woodside's Roebourne office.
- On 8 April 2025, Traditional Owner members from MAC, NYFL, NAC, Yindjibarndi, WAC and Yawuru attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside requested feedback from all attendees about EPs and provided information about the consultation process (SI Report B, reference 29.2).
- On 29 April 2025, Woodside emailed Yawuru a reminder about the proposed activity (SI Report B, reference 28.1). The email included:
  - A reference to the original consultation email for this EP sent to Yawuru on 31 March 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 9 May 2025.
  - A request for information on how Yawuru would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No action required.
Summary Report – Consultation Complete			
While Yawuru is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information, a reasonable period and a reasonable opportunity outside of regulatory requirements for Yawuru to provide feedback during the consultation process.

6. RECORD OF CONSULTATION

6.1 Initial consultation

6.1.1 Consultation Information Sheet

Woodside Energy

Consultation Information Sheet
March 2025

Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan

Carnarvon Basin, North-West Australia

Activity overview

- Woodside is submitting a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024.
- In this revision, the Operational Area has been expanded to encompass survey activities that will support future decommissioning activities.
- As included under the existing in force EP, the revised EP will also make provision for surveys to be undertaken to support other scopes including the Goodwyn Alpha Infill development.

Location

- In Commonwealth waters, approximately ~120 km north-west of Dampier (Figure 2).

Water depth

- ~20 m - 190 m deep.

Timing

- Survey activities may occur at any point during the 5-year life of the EP. Timing of proposed activities is subject to approvals, project schedule requirements, vessel availability and weather or other unforeseen circumstances.

Duration

- When activities occur they will be 24 hours a day, 7 days a week.

Joint Venture

- Operator – Woodside Energy Ltd.
- NWS JV – Woodside Energy Ltd, BP Developments Australia Pty Ltd, Chevron Australia Pty Ltd, Shell Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Limited.
- NWS Australia Oil - Woodside Energy Ltd, Chevron Australia Pty Ltd, BP Developments Australia Pty Ltd, Shell Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Limited, Jadestone Energy (CWLH) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback.

Woodside must consult relevant persons when developing an EP to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is consistent with the principles of ecologically sustainable development, by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and to an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this EP, we would like to hear from you by 9 May 2025.

consultation@feedback.woodside.com

woodside.com

A summary of the activity and location is found in **Table 1** and **2**.

Figure 1

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

1 Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan | March 2025

Activity locations

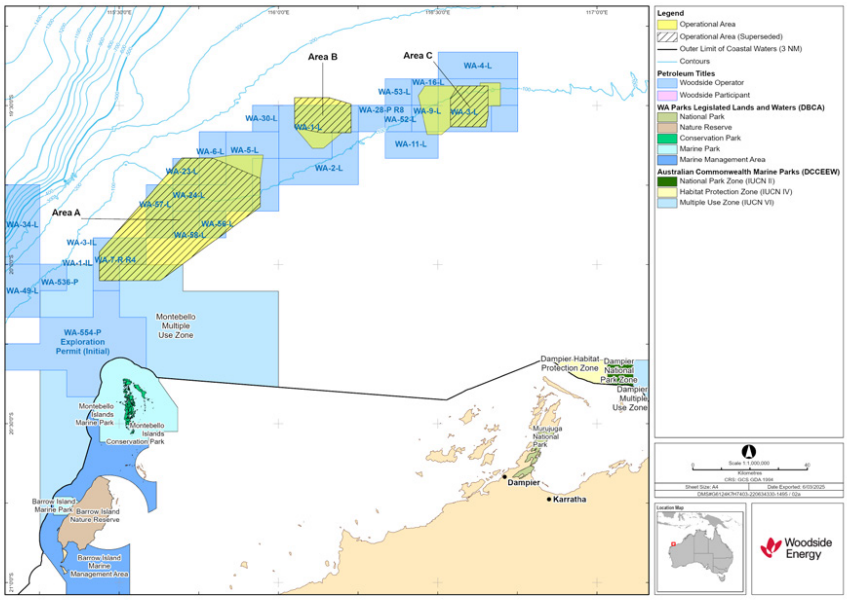

Figure 2. Location of the activity, including Operational Area and nearby infrastructure as presented in the Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan

Table 1 – Activity and location summary

Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan		
Activity details	**Overview** Activities include geophysical and geotechnical surveys in multiple title blocks adjacent to the GWA Platform and other existing associated subsea infrastructure, and a drill site for a potential future exploration well. These surveys will be undertaken in 3 operational areas. The surveys will assist to inform the engineering design for flowline and umbilical routes, subsea structure foundations, Mobile Offshore Drilling Unit (MODU) anchor planning and jack up suitability for any potential future development and future plug and abandonment (P&A) operations for decommissioned wells.	
	Geophysical Survey – methods may include: • Multibeam Echo Sounder • Side Scan Sonar • Magnetometer • Sub-Bottom Profiler	**Geotechnical Survey** – methods may include: • Box Cores/ Grab Sample • Piston/ Gravity/ Vibro Cores • Drilled Core Holes • Cone Penetrometer Tests
Titles	• WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP	
Vessels	• The vessels used to conduct surveys have not yet been confirmed but will likely be a multi-purpose survey vessel for geophysical and geotechnical surveys, and either a geotechnical drilling vessel or a vessel that is able to deploy subsea drilling/ testing equipment. • The vessel being used to undertake any geotechnical core holes will have dynamic positioning capabilities to hold station over the activity site.	
Operational area and exclusion zones	• An approximate 2,040 km² Operational Area (cumulative area encompassing Operational Areas A, B and C) will apply during geophysical and geotechnical survey activities. • A 500 m safety exclusion zone will apply around the survey vessels to manage vessel movements.	
Communication with mariners	• Marine users are permitted to use but should take care when entering the Operational Area and remain clear of the 500 m safety exclusion zone.	
Distance to nearest marine park/nature reserve	• ~ 32 km north-west of the Montebello Islands at the closest point (Operational Area A). • Operational Area A is within the Montebello Marine Park - Multiple Use Zone (Cth).	

Table 2 – Approximate locations of the Goodwyn Alpha Geophysical and Geotechnical Surveys EP Operational Areas

Operational Area	Water Depth (m)	Area (km²)	Latitude[1]	Longitude[1]	Titles
Operational Area A ~123 km north-west of Dampier	~20 - 190	~1,410	19° 50'20" S	115° 42'42" E	WA-5-L, WA-6-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, WA-7-R
Operational Area B ~ 128 km north-west of Dampier	~120 - 140	~267	19°32'29" S	116°07'54" E	WA-1-L, WA-2-L, WA-17-L
Operational Area C ~120 km north-west of Dampier	~60 - 125	~363	19° 29'50" S	116° 33'57" E	WA-3-L, WA-4-L, WA-9-L, WA-11-L, WA-16-L, G-10-AP

[1]*Note: Latitude and longitude points presented in Table 2 are approximately the centre of each Operational Area.*

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenario that informs the EMBA is a vessel collision. The EMBA is depicted in **Figure 3.**

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling on its website at www.nopsema.gov.au.

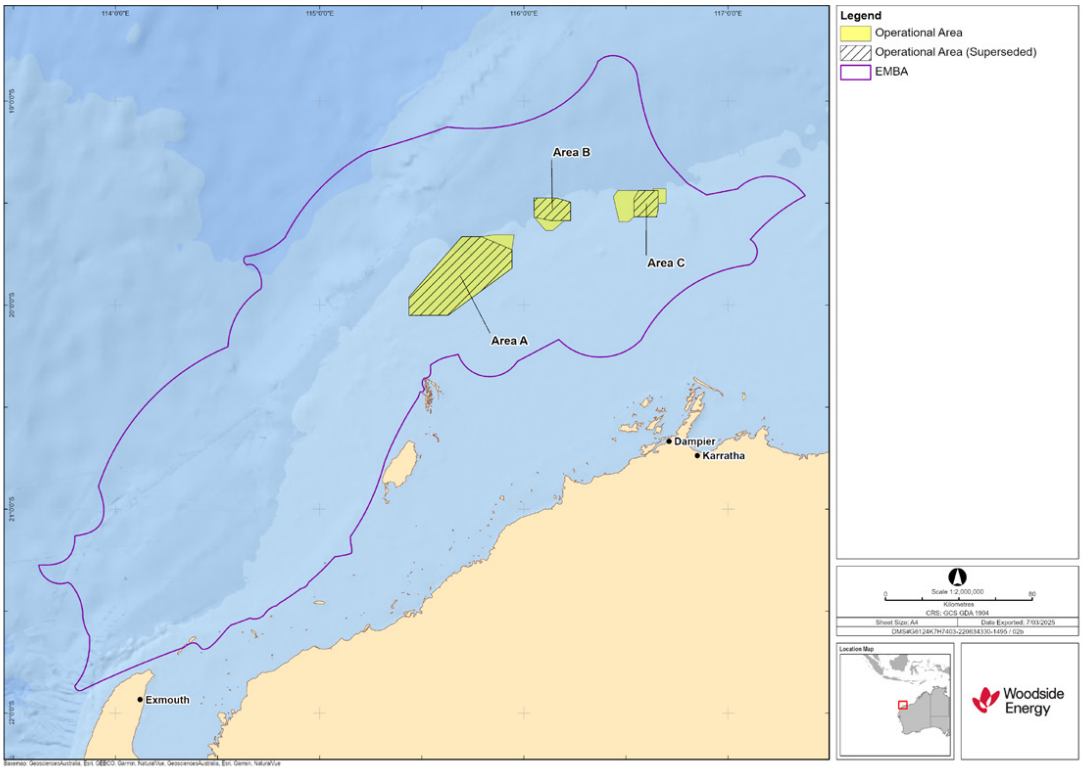

Figure 3. Environment that May Be Affected (EMBA) as presented in the Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to inform our decision-making.

Table 3 – Summary of key impacts and risks and proposed management measures

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical presence: ***interaction with other marine users***	• Physical presence and movement of the survey vessels within the Operational Area. • Activity may not be executed as a single survey, meaning vessel-based activities may occur at any time during the approval period of the EP.	• Potential temporary displacement of other marine users. • Due to the offshore location and the localised nature of the activity, if there is an interaction it is expected to be negligible with no lasting effect.	• Vessels are compliant with Marine Orders for safe vessel operation. • Notify relevant stakeholders of activity commencement. • Notify the Australian Hydrographic Office prior to commencement of the activity so that marine users are aware of the activity. • Consult with relevant persons so they are informed of the proposed activities. • Establish a 500 m safety exclusion zone around the survey vessels to manage vessel movements.
Physical presence: ***disturbance to seabed from geotechnical and geophysical surveys***	• Physical presence of geotechnical survey equipment including penetration testing and coring.	• Habitat modification because of seabed disturbance could occur within a localised radius of surveyed area. Near this area, it is possible that benthic communities may be reduced or altered, leading to a highly localised, short-term impact to epifauna and infauna benthic communities present.	• No routine anchoring will be implemented. • Continuous monitoring of inventory deployed during field activity and tracking of equipment removal during activity. • Geotechnical survey activities will not be undertaken outside of the Operational Area. • Underwater Cultural Heritage desktop assessment of the Operational Area by maritime archaeologist using available public and Woodside data prior to commencement of activities. Outcomes and recommendations will be assessed and further activities and/ or mitigations implemented where appropriate. • Comply with regulatory requirements for Underwater Cultural Heritage.
Routine acoustic emissions: ***generation of noise from survey vessels and geophysical and geotechnical surveys***	• Generation of noise from: – Survey vessels through the operation of thrusters, engines, propellers and on-board machinery etc. – Geophysical survey instruments such as sub-bottom profiler, multibeam echo sounder, side-scan sonar and ultra short baseline positioning system, and – Geotechnical surveys such as core penetration tests, geotechnical boreholes, box core sampling and piston/ push sampling.	• Elevated underwater noise can affect marine fauna, including marine mammals (cetaceans), turtles and fish in the following ways: – short-term, behavioural disturbance – masking or interfering with other biologically important sounds – direct physical effects, including injury or hearing impairment. • The sound generated by the various geophysical and geotechnical survey instruments and survey vessels may result in localised and temporary behavioural changes to marine fauna within tens or hundreds of metres. • Potential behavioural effects will not have a lasting impact on protected species, ecosystems, and functions.	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions including EPBC Regulations 2000 – Part 8. • Implement Environment Protection and Biodiversity Conservation Act (EPBC) regulations and guidance for interactions with marine fauna. • Crew conduct prestart visual observations for whales prior to start-up of noise emitting survey equipment. Start-up delayed if a whale is sighted within the observation zone.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine atmospheric and Greenhouse gas (GHG) emissions	• Atmospheric emissions and greenhouse gases will be generated by the survey vessels from internal combustion engines and incineration activities.	• Emissions associated with the vessels could result in temporary, localised reduction in air quality in the immediate vicinity.	• Comply with legislative and regulatory requirements for marine air pollution and air emissions.
Routine and non-routine discharges: ***survey vessels***	• Sewage, greywater, and putrescible waste will be discharged from survey vessels. • Bilge water, deck drainage, brine and cooling water will also be discharged.	• Short-term, highly localised decrease in water quality around the vessel given the minor quantities involved, the expected localised mixing zone and high level of dilution into the open water marine environment of the Operational Area.	• Marine discharges managed in accordance with regulatory requirements. • Chemicals selected with the lowest practicable environmental impacts subject to technical constraints and approved through the Woodside chemical assessment process.
Routine and non-routine discharges: ***drill cuttings and drilling fluids***	• Drill cuttings and fluids will be discharged at the borehole location for geotechnical surveys. • Drilling fluid will consist primarily of seawater and may include low toxicity additives.	• Routine and non-routine discharges of drill cuttings and drilling fluids from coring operations. • May result in an increase in turbidity in the water column and a temporary reduction in water quality, subject to rapid dispersion and dilution by prevailing currents.	• Chemicals selected with the lowest practicable environmental impacts subject to technical constraints and approved through the Woodside chemical assessment process.
Routine light emissions	• Light emissions from vessels.	• Light emissions may affect fauna (such as marine turtles and birds) in two main ways: – behaviour: artificial lighting has the potential to create a constant level of light at night that can override natural levels and cycles. – orientation: if an artificial light source is brighter than a natural source, the artificial light may override natural cues, leading to disorientation.	• Lighting to be limited to the minimum required for navigational and safety requirements except for emergency events. • Implementation of the Woodside Seabird Management Plan.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Unplanned events (accidents / incidents)			
Unplanned hydrocarbon release: ***vessel collision***	• Loss of hydrocarbons to marine environment due to vessel collision (e.g., other vessels or marine users). • For a collision to result in the worst-case scenario diesel release, several factors must occur as follows: 1. identified causes of vessel interaction must result in a collision, 2. the collision has enough force to penetrate the vessel hull and in the exact location of the fuel tank, and 3. the fuel tank must be full or at least a volume which is higher than the point of penetration.	• In the highly unlikely event of a vessel collision causing a release of hydrocarbons, impacts to water quality and marine ecosystems could occur. • Modelling of a surface release of marine diesel at the closest point to the Montebello Islands within ~200 m from Operational Area A was used to understand potential impacts. • Marine diesel is a relatively volatile, non-persistent nature hydrocarbon with up to 24% evaporating within the first 24 hours. • Potential impacts across the whole EMBA were assessed including receptors such as plankton, fish, marine turtles, marine mammals, seabirds and migratory shorebirds, marine sediment, marine primary producers, tourism, recreation, commercial fisheries, commercial shipping and cultural heritage. • Considering receptor sensitivity, the receptors were rated as having a potential consequence level of minor or less (slight or negligible).	**Preventing vessel collision** • Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements. • Establish safety exclusion zones around vessels which are communicated to marine users to reduce likelihood of collision. • Notify fisheries of vessel activities and locations, in accordance with stakeholder notification requirements. • Notify AMSA and AHO of vessel activities and locations. • Develop Simultaneous Operations Plan (SIMOPs) if more than one Woodside contracted vessel is operating in the Operational Area at any time. **Spill response arrangements** • In the event of a spill emergency response activities implemented in accordance with the Oil Pollution Emergency Plan (OPEP). • First Strike Plan. • Arrangements supporting the activities in the OPEP will be tested so that the OPEP can be implemented as planned.
Unplanned discharge: ***deck and subsea spills***	• Accidental release of chemicals/ hydrocarbons from the survey vessel's deck. • Subsea release of hydrocarbons, drilling fluids or hydraulic fluids from geotechnical and geophysical survey equipment.	• Chemicals/hydrocarbons from survey vessels – Unplanned discharges of chemicals and hydrocarbons may decrease the water quality in the immediate vicinity of the release. – Only small volumes (<100 L) would be expected to potentially occur, resulting in very short-term impacts to water quality and limited to the immediate release location. – No significant impacts from the accidental discharges described anticipated due to the offshore, open water locations, low sensitivity of surrounding environment and high level of dilution into the open water marine environment of the Operational Area. • Subsea release from geotechnical and geophysical equipment: – Survey vessels will place equipment on the seabed during the surveys which may contain relatively small volumes (about 5-10 L) of hydraulic fluids, which in an event may be released.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes. • Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. • Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/ moved temporarily. • Spill kits positioned in high-risk locations around the vessels (near potential spill points such as transfer stations). **Spill response arrangements** • In the event of a spill emergency, response activities implemented as appropriate for the nature and scale of the release.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Unplanned discharges: ***hazardous and non-hazardous solid wastes/equipment***	• Accidental, unplanned loss of solid wastes generated by vessels including packaging, domestic wastes and hazardous wastes such as oil rags, batteries and waste oil.	• The potential impacts of hazardous or non-hazardous solid wastes and equipment accidentally discharged to the marine environment include contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. • The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact, based on the location of the activity, the types, size and frequency of wastes that could occur, and species present.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes. • Implement a Vessel Waste Management Plan. • Solid waste/ equipment dropped to the marine environment will be recovered where safe and practicable to do so.
Physical presence: ***dropped objects and equipment loss***	• Accidental objects dropped from survey vessels may result in seabed disturbance. • Accidental loss of significant geophysical or geotechnical equipment.	• Unplanned seabed disturbance may result in localised changes to water and sediment quality or a localised temporary impact to benthic communities.	• Survey vessel inductions include control measures for dropped object prevention. • Apply safe work procedures to prevent dropped objects from vessels and during deployment and retrieval of equipment. • Dropped objects and geophysical/ geotechnical equipment to be recovered and relocated where safe and practicable to do so.
Physical presence: ***unplanned interactions with marine fauna***	• Accidental collision between support vessel and marine fauna.	• Vessel movements have the potential to result in accidental collisions between the vessel (hull and propellers) and marine fauna. • The risk of vessel collision with marine fauna is present year-round but is seasonally elevated during migration periods and within migration and foraging BIAs. • Given the short duration of activities within the Operational Area, and the slow speeds at which survey vessels operate, collisions with cetaceans are considered highly unlikely.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring.
Physical presence: ***introduction of invasive marine species (IMS)***	• Survey vessels and submersible equipment have the potential to introduce IMS to the Operational Area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange.	• The likelihood of IMS being introduced and establishing viable populations within the Operational Area or immediate surrounds is considered remote. • Introduction of IMS may result in changes to the ecology of the Operational Area and competition with existing biota.	• Ballast water and biofouling will be managed according to the Australian Ballast Water Management Requirements and the Australian Biofouling Management Requirements as applicable. • Woodside's IMS risk assessment process will be applied to vessels and immersible equipment entering the Operational Area.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **9 May 2025** via:

consultation@feedback.woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.

Your feedback and our response will be included in our EP for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:
woodside.com/what-we-do/consultation-activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.2 Summary Information Sheet

Woodside Energy

Summary Information Sheet
March 2025

Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan

Carnarvon Basin, North-West Australia

Activity overview

- Woodside is submitting a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024.
- In this revision, the Operational Area has been expanded to include survey activities that will support future decommissioning activities.
- As included under the existing in force EP, the revised EP will also make provision for surveys to be undertaken to support other scopes including the Goodwyn Alpha Infill development.

Location

- In Commonwealth waters, approximately ~120 km north-west of Dampier (Figure 2).

Water depth

- ~20 m - 190 m deep.

Timing

- Survey activities may occur at any point during the 5-year life of the EP. Timing of proposed activities is subject to approvals, project schedule requirements, vessel availability and weather or other unforeseen circumstances.

Duration

- When activities occur they will be 24 hours a day, 7 days a week.

Joint Venture

- Operator – Woodside Energy Ltd.
- NWS JV – Woodside Energy Ltd, BP Developments Australia Pty Ltd, Chevron Australia Pty Ltd, Shell Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Limited.
- NWS Australia Oil - Woodside Energy Ltd, Chevron Australia Pty Ltd, BP Developments Australia Pty Ltd, Shell Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Limited, Jadestone Energy (CWLH) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback.

Woodside must consult relevant persons when developing an EP to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is consistent with the principles of ecologically sustainable development, by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and to an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this EP, we would like to hear from you by **9 May 2025**.

feedback@woodside.com

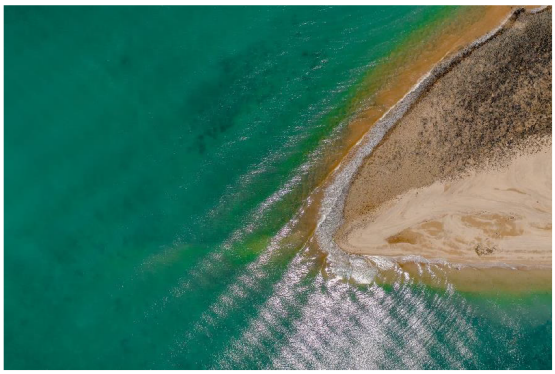

Figure 1

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

Activity Location

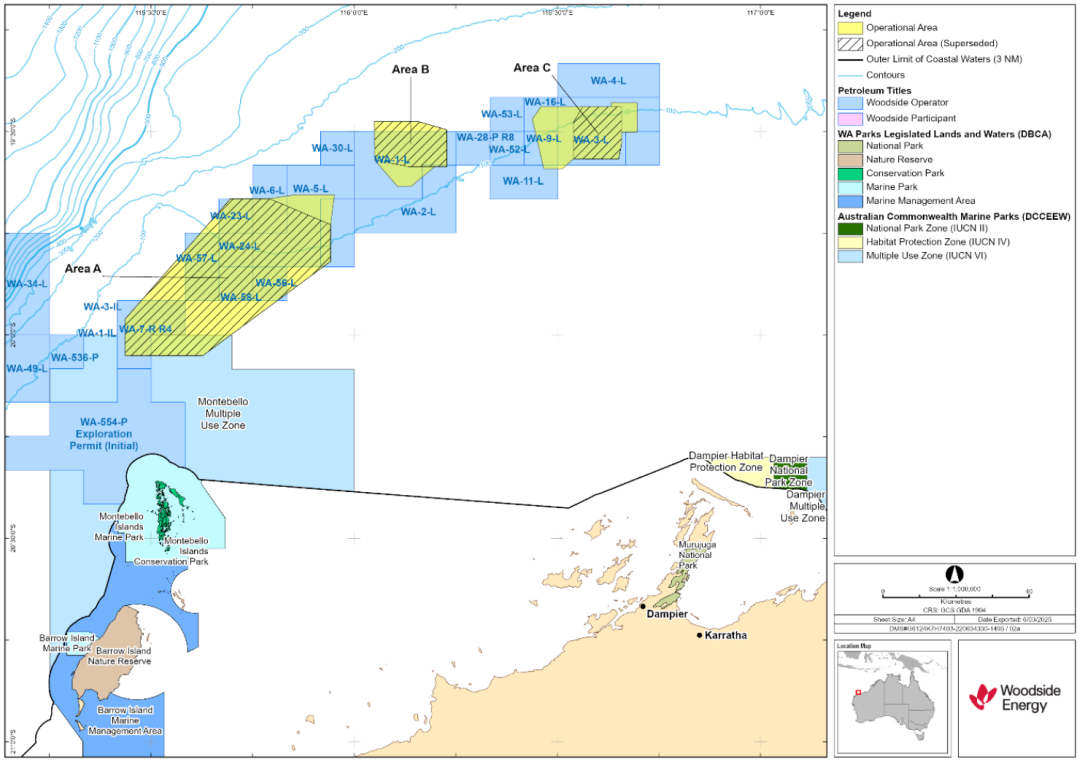

Figure 2. Location of the activity, including Operational Area and nearby infrastructure as presented in the Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan

Environmental Impacts and Management

The work includes planned activities that may impact the environment. Unplanned events, such as accidents, may also result in environmental risks. Woodside manages the work to reduce impacts and risks to as low as reasonably practicable (ALARP) and to an acceptable level.

Planned activities are activities Woodside knows will happen as part of this work program. For example, planned activities include other users of the sea being temporarily stopped from accessing the work area, or the vessels used for the work will generate underwater noise, light emissions, atmospheric emissions, and routine discharges (such as sewage, waste, and deck drainage). These planned activities will comply with legislative and regulatory requirements.

Unplanned events are not planned as part of the work program, but may be the result of an accident, incident or emergency. It is very unlikely that there will be an unplanned event. Unplanned events might include a spill of fuel or oil from a vessel collision, a spill on the deck of a vessel (such as during refueling), unplanned seabed and/or marine life disturbance, waste entering the environment and accidental introduction of invasive species from outside the region.

A table showing planned activities and unplanned events, impacts and management measures is included in the Goodwyn Alpha Geophysical and Geotechnical Surveys Consultation Information Sheet (March 2025), which is available here: https://www.woodside.com/what-we-do/consultation-activities

The area over which unplanned events could have environmental impacts is shown in the map below (**Figure 3**). This is referred to as the Environment that May Be Affected (EMBA). The location where the work will be done is known as the Operational Area. The Operational Area is also shown on the maps (**Figures 2 and 3**).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenario that informs the EMBA is a vessel collision. The EMBA is depicted in **Figure 3**.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling on its website at www.nopsema.gov.au.

Napoleon, Tanami Energy, The Wilderness Society (TWS), Vermilion Energy – 31 March 2025

Woodside is planning to submit a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024. In this revision, the Operational Area will be expanded to encompass survey activities that will support future decommissioning activities. The revised EP will also make provision for the surveys to be undertaken to support other scopes including the Goodwyn A (GWA) Infill development.

The Operational Area is in Titles WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP, in Commonwealth waters approximately 120 km north-west of Dampier, Western Australia, at the closest point.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity. If you would like to comment on the proposed activity, please contact Woodside by 9 May 2025 using the details below.

Overview

Activities include geophysical and geotechnical surveys in multiple title blocks adjacent to the GWA Platform and other existing associated subsea infrastructure, and a drill site for a potential future exploration well. The surveys will be undertaken in 3 Operational Areas and will assist to inform the engineering design for flowline and umbilical routes, subsea structure foundations, Mobile Offshore Drilling Unit (MODU) anchor planning and jack up suitability for any potential future development and future plug and abandonment (P&A) operations for decommissioned wells.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan	
Activity details	Activities include: Geophysical Surveys – methods may include: • Multibeam Echo Sounder • Side Scan Sonar • Magnetometer • Sub-Bottom Profiler Geotechnical Surveys – methods may include: • Box Cores/ Grab Sample • Piston/ Gravity/ Vibro Cores • Drilled Core Holes • Cone Penetrometer Tests.
Titles	WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP
Location	~120 km north-west of Dampier at the closest point
Water depth	~20 m – 190 m
Timing	Survey activities may occur at any point during the 5-year life of the EP
Duration	When activities occur, they may be 24 hours a day, 7 days a week

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Vessels	The vessels used to conduct surveys have not yet been confirmed but will likely be a multi-purpose survey vessels for geophysical and geotechnical surveys, and either a geotechnical drilling vessel or a vessel that is able to deploy subsea drilling/ testing equipment.
Operational Area and exclusion zones	An approximate 2,040 km^2 Operational Area (cumulative area encompassing Operational Areas A, B and C) will apply during geophysical and geotechnical survey activities. A 500 m safety exclusion zone will apply around the survey vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenario that informs the EMBA is vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by 9 May 2025. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

6.1.10 Email to Australian Maritime Safety Authority (AMSA) – Marine Safety – 31 March 2025

Woodside is planning to submit a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024. In this revision, the Operational Area will be expanded to encompass survey activities that will support future decommissioning activities. The revised EP will also make provision for the surveys to be undertaken to support other scopes including the Goodwyn A (GWA) Infill development.

6.1.11 Email to Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity, marine pests, vessels, aircraft and personnel, Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries – 31 March 2025

Woodside is planning to submit a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024. In this revision, the Operational Area will be expanded to encompass survey activities that will support future decommissioning activities. The revised EP will also make provision for the surveys to be undertaken to support other scopes including the Goodwyn A (GWA) Infill development.

The Operational Area is in Titles WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP, in Commonwealth waters approximately 120 km north-west of Dampier, Western Australia, at the closest point.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity. If you would like to comment on the proposed activity, please contact Woodside by 9 May 2025 using the details below.

Overview

Activities include geophysical and geotechnical surveys in multiple title blocks adjacent to the GWA Platform and other existing associated subsea infrastructure, and a drill site for a potential future exploration well. The surveys will be undertaken in 3 Operational Areas and will assist to inform the engineering design for flowline and umbilical routes, subsea structure foundations, Mobile Offshore Drilling Unit (MODU) anchor planning and jack up suitability for any potential future development and future plug and abandonment (P&A) operations for decommissioned wells.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan	
Activity details	Activities include: Geophysical Surveys – methods may include: • Multibeam Echo Sounder • Side Scan Sonar • Magnetometer • Sub-Bottom Profiler Geotechnical Surveys – methods may include: • Box Cores/ Grab Sample • Piston/ Gravity/ Vibro Cores • Drilled Core Holes • Cone Penetrometer Tests.
Titles	WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP
Location	~120 km north-west of Dampier at the closest point
Water depth	~20 m – 190 m
Timing	Survey activities may occur at any point during the 5-year life of the EP
Duration	When activities occur, they may be 24 hours a day, 7 days a week
Vessels	The vessels used to conduct surveys have not yet been confirmed but will likely be a multi-purpose survey vessels for geophysical and geotechnical surveys, and either a geotechnical drilling vessel or a vessel that is able to deploy subsea drilling/ testing equipment.
Operational Area and exclusion zones	An approximate 2,040 km^2 Operational Area (cumulative area encompassing Operational Areas A, B and C) will apply during geophysical and geotechnical survey activities. A 500 m safety exclusion zone will apply around the survey vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenario that informs the EMBA is vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Commonwealth fisheries

There are no Commonwealth fisheries active in the Operational Area.

Commonwealth fisheries active in the EMBA:

- North West Slope Trawl Fishery
- Western Deepwater Trawl Fishery

Please note that Woodside has provided consultation information directly to licence holders it has assessed as 'relevant persons' for this EP, as well as relevant fishery representative bodies.

Biosecurity

With respect to the biosecurity matters, please note the following information below:

Environment description	
The Operational Area lies on the outer continental shelf in waters approximately 20 to 190 m deep. The bathymetry within the Operational Areas is generally flat, which is consistent with the broader NWS Province shelf region **(**Baker et al. 2008**)**. Operational Area A displays a significant increase in depth at the north-west end of the area. The seabed has a gentle (0.05o) seaward gradient extending to a steep distal slope occurring between 200 to 300 km offshore in water depths of around 200 m (Dix et al. 2005). The continental slope then descends more rapidly from the shelf edge to depths greater than 1,000 m to the north-west (James et al. 2004). Operational Area A also includes Rankin Bank and Wilcox Shoal.	
Potential IMS risk	**IMS mitigation management**
The introduction and establishment of invasive marine species has the potential to impact ecosystems/habitat, native species survival and socio-economic values, although the risk and impact assessment completed by Woodside identifies the likelihood of IMS introduction from various location potentials has remote or low likelihood of occurring.	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan. Woodside's Invasive Marine Species Management Plan includes a risk assessment process that is applied to vessels undertaking activities. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced. Woodside recognises the requirement to manage biosecurity risk to domestic conveyances, the requirements under the Biosecurity Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016. Woodside notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination". Woodside works closely with our suppliers and contractors to address the risks and assure awareness of the obligations outlined above

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by 9 May 2025. Alternatively, Woodside is willing to consider and accept your feedback via a means which suits you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the EP made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

6.1.12 Email to Santos – 31 March 2025

Woodside is planning to submit a revision to the in force Goodwyn Alpha Geophysical and Geotechnical Surveys Environment Plan (EP) accepted by NOPSEMA in May 2024. In this revision, the Operational Area will be expanded to encompass survey activities that will support future decommissioning activities. The revised EP will also make provision for the surveys to be undertaken to support other scopes including the Goodwyn A (GWA) Infill development.

The Operational Area is in Titles WA-1-L, WA-2-L, WA-3-L, WA-4-L, WA-5-L, WA-6-L, WA-7-R, WA-9-L, WA-11-L, WA-16-L, WA-23-L, WA-24-L, WA-56-L, WA-57-L, WA-58-L, G-10-AP, in Commonwealth waters approximately 120 km north-west of Dampier, Western Australia, at the closest point.

We are seeking feedback from relevant persons whose functions, interests or activities may be affected by the proposed activity. If you would like to comment on the proposed activity, please contact Woodside by 9 May 2025 using the details below.

Overview
