- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to AHO on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 29 July 2025 and 16 February 2026, AHO shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AHO to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AHO in response to AHO's feedback (Woodside's email of 24 September 2025 and 4 March 2026).

Reasonable Period

Woodside allowed AHO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to AHO advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AHO 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed AHO a reasonable period for consultation in preparation of the EP as evidenced by AHO's response on 29 July 2025 and 16 February 2026.

Reasonable Opportunity

Woodside allowed AHO a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to AHO as evidenced by its response on 29 July 2025 and 16 February 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AHO provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AHO.
  - Made no changes or inclusions to the EP as a result of consultation with AHO because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.5 Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed AMSA – Marine Pollution a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with AHO. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	Woodside has addressed oil pollution planning and response at Appendix G. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Marine Pollution for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Pollution sufficient information to allow AMSA – Marine Pollution to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to AMSA – Marine Pollution on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to AMSA – Marine Pollution advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Marine Pollution 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed AMSA – Marine Pollution a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AMSA – Marine Pollution is appropriate and adapted to the nature of interests of AMSA – Marine Pollution:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding AMSA – Marine Pollution of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as AMSA – Marine Pollution did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AMSA – Marine Pollution's functions, interests or activities.

4.1.6 Australian Maritime Safety Authority (AMSA) – Marine Safety

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed AMSA – Marine Safety advising of the proposed activity (Record of Consultation, reference 6.1.13), provided a Consultation Information Sheet, a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community', a vessel density map and GIS Shape Files.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 30 July 2025, Woodside emailed AMSA – Marine Safety to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.13.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 22 August 2025, AMSA – Marine Safety responded to Woodside (SI Report A, reference 4.1) thanking them for proving this information and:
  - **(1)** Attached a vessel traffic plot showing that heavy vessel traffic and support craft could be encountered in the area of interest (AOI) for the GWF-4 activities and noted that two AOIs were located on either side of a charted shipping fairway where additional traffic might occur during operations.
  - **(2)** Requested that project and support vessels notify AMSA's Joint Rescue Coordination Centre (JRCC) 24–48 hours before operations commence for promulgation of radio-navigation warnings and provided an email address and phone contact for JRCC.
  - **(3)** Requested that AMSA's ARC be provided vessel details (including name, callsign, MMSI), satellite communication details (including INMARSAT-C and satellite telephone), area of operation, requested clearance from other vessels, and notification when operations start and end.
  - **(4)** Requested that Woodside also notify AHO no less than four working weeks before operations commence for promulgation of related notices to mariners.
  - **(5)** Outlined that vessels should display appropriate lights and shapes to indicate the nature of operations and comply with the International Rules for Preventing Collisions at Sea (COLREGs), including correct AIS navigation status settings.
  - **(6)** Recommended that Woodside evaluate and implement adequate anti-collision measures, which could include additional warnings or lights, installation of AIS units, and deployment of offshore guard vessels to monitor traffic and alert approaching vessels.
- On 24 September 2025, Woodside replied to AMSA – Marine Safety (SI Report A, reference 4.2) thanking them for their response and:
  - **(1)** Acknowledged AMSA – Marine Safety's comments regarding heavy vessel and support craft traffic near the charted shipping fairway and confirmed receipt of the vessel traffic plot.
  - **(2)** Confirmed that Woodside would notify AMSA's Response Centre (ARC) at least 24–48 hours before commencement of operations. Woodside also noted that AMSA – Marine Safety's recent correspondence referenced both ARC and JRCC and requested clarification on whether notifications should reference JRCC for consistency across EPs.
  - **(3)** Noted the required details for notification, including vessel information, satellite communication details, area of operation, requested clearance, and start/end times.
  - **(4)** Confirmed that Woodside would notify AHO with operational details no less than four weeks before commencement to enable generation of temporary Maritime Safety Information Notifications (MSIN) and Notices to Mariners (NTM).
  - **(5)** Noted AMSA – Marine Safety's advice regarding compliance with the International Rules for Preventing Collisions at Sea (COLREGs) and confirmed that compliance with COLREGs and the Navigation Act 2012 was mandated aboard Woodside-chartered vessels, including correct AIS navigation status settings.
  - **(6)** Confirmed that Woodside did not propose additional anti-collision measures for GWF-4 activities at this time but confirmed that a support vessel would remain on standby for the MODU to assist with third-party vessel interactions. Woodside also noted that collision risk mitigation measures were continuously evaluated and implemented across activities as required.
- On 10 February 2026, Woodside emailed AMSA – Marine Safety a consultation update on this EP (Record of Consultation, reference 6.3.17). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with AMSA – Marine Safety. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- On 13 February 2026, AMSA – Marine Safety responded to Woodside (SI Report A, reference 4.3) thanking them for proving this information and:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** Attached a vessel traffic plot showing that heavy vessel traffic and support craft could be encountered in the area of interest (AOI) for the GWF-4 activities and noted that two AOIs were located on either side of a charted shipping fairway where additional traffic might occur during operations, as well as that given the size of the EMBA it covers many heavy vessel traffic, support craft and local vessels.
- **(2)** Requested that project and support vessels notify AMSA's Joint Rescue Coordination Centre (JRCC) 24–48 hours before operations commence for promulgation of radio-navigation warnings and provided an email address and phone contact for JRCC.
- **(3)** Requested that AMSA's JRCC be provided vessel details (including name, callsign, MMSI), satellite communication details (including INMARSAT-C and satellite telephone), area of operation, requested clearance from other vessels, and notification when operations start and end.
- **(4)** Requested that Woodside also notify AHO no less than three working weeks before operations commence for promulgation of related notices to mariners.
- **(5)** Outlined that vessels should display appropriate lights and shapes to indicate the nature of operations and comply with the International Rules for Preventing Collisions at Sea (COLREGs), including correct AIS navigation status settings.
- **(6)** Recommended that Woodside evaluate and implement adequate anti-collision measures, which could include additional warnings or lights, installation of AIS units, and deployment of offshore guard vessels to monitor traffic and alert approaching vessels.

- On 4 March 2026, Woodside replied to AMSA – Marine Safety (SI Report A, reference 4.4) thanking them for their response and:
  - (1) Acknowledged AMSA – Marine Safety's comments regarding heavy vessel and support craft traffic near the charted shipping fairway and confirmed receipt of the vessel traffic plot, as well as AMSA's advice that heavy vessels, support craft and local traffic will be present in the EMBA.
  - (2) Confirmed that Woodside would notify AMSA's Response Centre (ARC) at least 24–48 hours before commencement of operations. Woodside also noted that AMSA – Marine Safety's recent correspondence referenced both ARC and JRCC and requested clarification on whether notifications should reference JRCC for consistency across EPs.
  - (3) Noted the required details for notification, including vessel information, satellite communication details, area of operation, requested clearance, and start/end times.
  - (4) Confirmed that Woodside would notify AHO no less than four weeks before commencement to enable generation of temporary Maritime Safety Information Notifications (MSIN) and Notices to Mariners (NTM).
  - (5) Noted AMSA – Marine Safety's advice regarding compliance with the International Rules for Preventing Collisions at Sea (COLREGs) and confirmed that compliance with COLREGs and the Navigation Act 2012 was mandated aboard Woodside-chartered vessels, including correct AIS navigation status settings.
  - (6) Confirmed that Woodside did not propose additional anti-collision measures for GWF-4 activities at this time but confirmed that a support vessel would remain on standby for the MODU to assist with third-party vessel interactions. Woodside also noted that collision risk mitigation measures were continuously evaluated and implemented across activities as required.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Provided a chart of shipping fairways and outlined that heavy vessels, support craft and local traffic will be present in the EMBA, and that heavy vessel and support craft traffic near the charted shipping fairway.	**(1)** Woodside notes the chart provided by AMSA and notes AMSA's advice regarding the range of vessels present in the EMBA and near the charted shipping fairway.	**(1)** Woodside noted the chart provided and acknowledged AMSA's advice regarding the range of vessels present in the EMBA and near the charted shipping fairway.	**(1)** No additional controls or measures are required. As referenced as C 1.1 of the EP, vessels will comply with Marine Orders for safe vessel operations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Notify JRCC 24-48 hours before activities commence.	**(2)** Woodside commits to notifying the ARC 24-48 hours before activities commence.	**(2)** Woodside confirmed it would notify the ARC 24-48 hours before activities commence.	**(2)** No additional controls or measures are required as a notification to the ARC 24-48 hours before activities commence has been included in the EP as standard, as referenced as PS 1.7 and set out in Table 7-5, Section 7.10.
(3) Requested start of activity notifications.	**(3)** Woodside commits to provide start of activity notification and provide the requested information.	**(3)** Woodside noted the need to provide start of activity notification and provide the requested information.	**(3)** No additional controls or measures are required as a notification to the ARC 24-48 hours before activities commence has been included in the EP as standard, as referenced as PS 1.7 and set out in Table 7-5, Section 7.10.
(4) Requested AHO receive notifications at least three weeks before activities commence.	**(4)** Woodside commits to notifying AHO at least four weeks before activities commence.	**(4)** Woodside confirmed it would notify AHO at least four weeks before activities commence.	**(4)** No additional controls or measures are required as a notification to AHO has been included in the EP as standard, as referenced as PS 1.5 and set out in Table 7-5, Section 7.10.
(5) Ensure vessels exhibit appropriate lights and shapes and comply with the COLREGS.	**(5)** Woodside commits that vessels will exhibit appropriate lights and comply with the COLREGS.	**(5)** Woodside confirmed vessels would exhibit appropriate lights and comply with the COLREGS.	**(5)** No additional controls or measures are required. As referenced as C 1.1 of the EP, vessels will comply with Marine Orders for safe vessel operations
(6) Evaluate and implement adequate anti-collision measures.	**(6)** Woodside has evaluated and will implement adequate anti-collision measures.	**(6)** Woodside confirmed it would implement adequate anti-collision measures and clarified that a support vessel would remain on standby for the MODU to assist with third-party vessel interactions.	**(6)** No additional controls or measures are required. Controls relating to anti-collision measures are set out in Section 6.7.1 of the EP
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the EP relates, as required under Regulation 24.	may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AMSA – Marine Safety for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AMSA – Marine Safety sufficient information to allow AMSA – Marine Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to AMSA – Marine Safety on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 22 August 2025 and 12 February 2026, AMSA – Marine Safety shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable AMSA – Marine Safety to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to AMSA – Marine Safety in response to AMSA – Marine Safety's feedback (Woodside's email of 24 September 2025 and 4 March 2026).

Reasonable Period

Woodside allowed AMSA – Marine Safety a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to AMSA – Marine Safety advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AMSA – Marine Safety 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed AMSA – Marine Safety a reasonable period for consultation in preparation of the EP as evidenced by AMSA – Marine Safety's response on 22 August 2025 and 12 February 2026.

Reasonable Opportunity

Woodside allowed AMSA – Marine Safety a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to AMSA – Marine Safety as evidenced by its response on 22 August 2025 and 12 February 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- AMSA – Marine Safety provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from AMSA – Marine Safety.
  - Made no changes or inclusions to the EP as a result of consultation with AMSA – Marine Safety because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.7 Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DAFF – Fisheries advising of the proposed activity (Record of Consultation, reference 6.1.16), provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed DAFF – Fisheries to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.16.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed DAFF – Fisheries a consultation update on this EP (Record of Consultation, reference 6.3.21). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DAFF – Fisheries. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required. DAFF – Fisheries will receive start and end of activity notifications per standard procedure at PS 1.6 and set out in Table 7-5, Section 7.10

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF – Fisheries for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF – Fisheries sufficient information to allow DAFF – Fisheries to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DAFF – Fisheries on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DAFF – Fisheries a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DAFF – Fisheries advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF – Fisheries 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed DAFF – Fisheries a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF – Fisheries is appropriate and adapted to the nature of interests of DAFF – Fisheries:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding ABF of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF – Fisheries did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Fisheries' functions, interests or activities.

4.1.8 Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 6.1.24), provided a Consultation Information Sheet, a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community', and defence zones maps.
- On 30 July 2025, Woodside emailed DoD to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.24.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed DoD a consultation update on this EP (Record of Consultation, reference 6.3.15). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DoD. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the	Woodside will notify DoD no less than 5 weeks before activities commence, as

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	referenced as PS 1.10 and set out in Table 7-5, Section 7.10. No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DoD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DoD sufficient information to allow DoD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DoD on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DoD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DoD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DoD 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DoD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DoD is appropriate and adapted to the nature of interests of DoD:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DoD of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DoD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DoD's functions, interests or activities.

4.1.9 Department of Foreign Affairs and Trade (DFAT)

Summary of information provided and record of consultation for this EP:

- On 6 February 2026, as a result of additional modelling during the EP development process changes were made to the EMBA and based on those changes, Woodside was now undertaking consultation with DFAT. Woodside emailed DFAT advising of the proposed activity (Record of Consultation, reference 6.3.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 25 February 2026, as no response had been received, Woodside proactively sent a follow-up email as the full 30 day was provided (Record of Consultation, reference 6.4.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DFAT for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given DFAT sufficient information to allow DFAT to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP's consultation update has been publicly available on the Woodside website since January 2026. Woodside gave this information to DFAT on 10 February 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DFAT a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to DFAT advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DFAT 30 days for consultation.
- Consultation for this EP with DFAT commenced approximately 2 months ago.
- In this context, Woodside allowed DFAT a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DFAT is appropriate and adapted to the nature of interests of DFAT:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 25 February 2026, reminding DFAT of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DFAT did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DFAT's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.1.10 Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 6.1.19), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'* and a list of relevant state historical shipwrecks.
- On 30 July 2025, Woodside emailed DPLH to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.19.1).
- On 12 August 2025, DPLH responded to Woodside (SI Report A, reference 5.1) thanking them for the invitation to comment and:
  - **(1)** Confirmed that DPLH had no comments on the proposed activities.
- On 21 August 2025, Woodside replied to DPLH (SI Report A, reference 5.2) thanking them for their response and:
  - **(1)** Noted that DPLH had no comments on the proposed activities.
- On 10 February 2026, Woodside emailed DPLH a consultation update on this EP (Record of Consultation, reference 6.3.11). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DPLH. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No comments on the activities.	**(1)** Woodside accepts DPLH has no concerns regarding the activities.	**(1)** Woodside noted that DPLH had no concerns and thanked DPLH for its feedback.	**(1)** Not required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPLH for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPLH sufficient information to allow DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DPLH on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 12 August 2025, DPLH shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DPLH to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DPLH in response to DPLH's feedback (Woodside's email of 21 August 2025).

Reasonable Period

Woodside allowed DPLH a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DPLH advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPLH 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DPLH a reasonable period for consultation in preparation of the EP as evidenced by DPLH's response on 12 August 2025.

Reasonable Opportunity

Woodside allowed DPLH a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DPLH as evidenced by its response on 12 August 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DPLH provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DPLH.
  - Made no changes or inclusions to the EP as a result of consultation with DPLH because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.11 Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 6.1.25), provided a Consultation Information Sheet, a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community', and information on potential impacts to fisheries.
- On 30 July 2025, Woodside emailed DPIRD to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.25.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed DPIRD a consultation update on this EP (Record of Consultation, reference 6.3.13). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DPIRD. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- On 10 February 2026 DPIRD responded to Woodside (SI Report A, reference 9.1) advising that an individual had moved to another team and that the contact for EIA matters was copied into the forwarded consultation email.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required. DPIRD will receive start and end of activity notifications per standard procedure at PS 1.6 and set out in Table 7-5, Section 7.10.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DPIRD for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DPIRD sufficient information to allow DPIRD to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DPIRD on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DPIRD a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DPIRD advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DPIRD 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DPIRD a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DPIRD is appropriate and adapted to the nature of interests of DPIRD:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DPIRD of the opportunity to provide feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DPIRD did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DPIRD's functions, interests or activities.

4.1.12 Department of Transport and Major Infrastructure (DTMI)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DTMI advising of the proposed activity (Record of Consultation, reference 6.1.20), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'* and a list of relevant state historical shipwrecks.
- On 30 July 2025, Woodside emailed DTMI to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.20.1).
- On 10 February 2026, Woodside emailed DTMI a consultation update on this EP (Record of Consultation, reference 6.2.1). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DTMI. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- **(1)** On 23 February 2026, DTMI responded confirming that they had no feedback and noted Woodside's reference to DTMI's role in relation to maritime incident (SI Report A, reference 6.1).
- On 6 March 2026, Woodside sent DTMI the Oil Pollution First Strike Plan for this EP for DTMI's review and comment (SI Report A, reference 6.2).
- **(1)** On 12 March 2026, Woodside replied to DTMI thanking them for their response and noted that they had no feedback (SI Report A, reference 6.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No feedback.	**(1)** Woodside accepts DTMI has no feedback regarding the changes.	**(1)** Woodside noted that DTMI had no feedback and thanked DTMI for its feedback.	**(1)** Not required
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DTMI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DTMI sufficient information to allow DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DTMI on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 23 February 2026, DTMI shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DTMI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DTMI in response to DTMI's feedback (Woodside's email of 12 March 2026).

Reasonable Period

Woodside allowed DTMI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DTMI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DTMI 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DTMI a reasonable period for consultation in preparation of the EP as evidenced by DTMI's response on 23 February 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

Woodside allowed DTMI a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DTMI as evidenced by its response on 23 February 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DTMI provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DTMI.
  - Made no changes or inclusions to the EP as a result of consultation with DTMI because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.1.13 Pilbara Ports

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Pilbara Ports advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

On 10 February 2026, Woodside emailed Pilbara Ports a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with Pilbara Ports. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara Ports for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara Ports sufficient information to allow Pilbara Ports to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to Pilbara Ports on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara Ports a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to Pilbara Ports advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- methodology allows a 30-day consultation period and Woodside allowed Pilbara Ports 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Pilbara Ports a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara Ports is appropriate and adapted to the nature of interests of Pilbara Ports:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding Pilbara Ports of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara Ports did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara Ports functions, interests or activities.

4.1.14 Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 6.1.22), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community',* and a list of relevant state historical shipwrecks.
- On 30 July 2025, Woodside emailed the WAM to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.22.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed WAM a consultation update on this EP (Record of Consultation, reference 6.3.20). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with WAM. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA and a revised list of relevant state historical shipwrecks.
- On 19 February 2026, WAM responded to Woodside with a letter thanking them for the information regarding this EP (SI Report A, reference 19.1) and:
  - **(1)** Noted Commonwealth Government's Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage (UCH) in Australian Waters and outlined that proponents planning activities in Australian waters have obligations under the *Underwater Cultural Heritage Act 2018.*
  - **(2)** Recommended that DCCEEW be notified directly.
  - **(3)** Recommended that a maritime archaeologist be engaged to undertake an underwater cultural heritage desktop assessment.
  - **(4)** Recommended consultation with Traditional Owners where appropriate.
- On 12 March 2026, Woodside replied to WAM thanking them for providing feedback (SI Report A, reference 19.2) and:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– **(1)** Confirmed that Woodside referred to Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance document regarding assessments and the Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage in Australian Waters.
– **(2)** Confirmed that Woodside has contacted DCCEEW for this EP.
– **(3)** Confirmed it was committed to engaging a qualified maritime archaeologists to complete desktop assessments.
– **(4)** Confirmed that consultation has been undertaken with Traditional Owners for this EP.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Noted Commonwealth Government's Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage (UCH) in Australian Waters.	**(1)** Woodside is aware of the Commonwealth Government's Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage (UCH) in Australian Waters and refers to it in the development of EPs.	**(1)** Woodside confirmed that it refers to Commonwealth Government's Guidelines for Assessing and Managing Impacts to Underwater Cultural Heritage (UCH) in Australian Waters	**(1)** No additional measures or controls are required. Underwater Cultural Heritage is detailed in section 4.9.1.5.3 and Section 6.7.2 of the EP.
(2) Recommended contacting DCCEEW.	**(2)** Woodside notes the recommendation and has contacted DCCEEW for this EP.	**(2)** Woodside confirmed that DCCEEW had been contacted for this EP.	**(2)** No additional measures or controls are required. Consultation with DCCEEW is included in Appendix F, Table 2.
(3) Recommended engaging a maritime archaeologist.	**(3)** Woodside notes the recommendation and has already committed to engaging a qualified maritime archaeologist for desktop assessments.	**(3)** Woodside confirmed that it has already committed to engaging a qualified maritime archaeologist to complete desktop assessments.	**(3)** C 2.5 requires a qualified maritime archaeologist therefore no additional measures or controls are required.
(4) Recommended contacting Traditional Owners.	**(4)** Woodside notes the recommendation and has contacted Traditional Owners, where appropriate, for this EP.	**(4)** Woodside confirmed that Traditional Owners had been consulted for this EP.	**(4)** No additional measures or controls are required. Consultation with Traditional Owners is included in Appendix F, Table 2 and 3.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAM for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAM sufficient information to allow WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to WAM on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 19 February 2026, WAM shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAM to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to WAM in response to WAM's feedback (Woodside's email of 12 March 2026).

Reasonable Period

Woodside allowed WAM a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to WAM advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAM 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed WAM a reasonable period for consultation in preparation of the EP as evidenced by WAM's response on 19 February 2026.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

Woodside allowed WAM a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to WAM as evidenced by its response on 19 February 2026.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAM provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from WAM.
  - Made no changes or inclusions to the EP as a result of consultation with WAM because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2 Commonwealth and WA State Government departments or agencies – environment

4.2.1 Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DAFF – Biosecurity advising of the proposed activity (Record of Consultation, reference 6.1.16), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed DAFF – Biosecurity to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.16.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed DAFF – Biosecurity a consultation update on this EP (Record of Consultation, reference 6.3.21). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DAFF – Biosecurity. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.6 of the EP). No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DAFF – Biosecurity for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DAFF – Biosecurity sufficient information to allow DAFF – Biosecurity to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DAFF – Biosecurity on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed DAFF – Biosecurity a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DAFF – Biosecurity advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DAFF – Biosecurity 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DAFF – Biosecurity a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DAFF – Biosecurity is appropriate and adapted to the nature of interests of DAFF – Biosecurity:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DAFF – Biosecurity of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DAFF – Biosecurity did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DAFF – Biosecurity's functions, interests or activities.

4.2.2 Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 6.1.21), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed DBCA to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.21.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 August 2025, DBCA responded to Woodside (SI Report A, reference 8.1) thanking them for proving relating to proposed activities and:
  - **(1)** Noted that numerous significant ecological areas, including Ningaloo Marine Park, Barrow Island Nature Reserve, Montebello Islands Marine Park and BIAs for several conservation-listed species, were located within the EMBA.
  - **(2)** Stated that areas of high ecological value, including Ningaloo Marine Park, Barrow Island Nature Reserve, Montebello Islands Marine Park, and biologically important areas for several listed marine fauna, were situated within the EMBA and could be affected in the event of a major hydrocarbon release. DBCA therefore considered it essential that the environmental baseline conditions were understood before any operations commenced that might result in hydrocarbon releases.
  - **(3)** Noted that following a desktop review and risk assessment, Woodside should also collect appropriate baseline abundance and distribution data for benthic habitat and marine fauna species in the EMBA. DBCA also noted that where baseline information was lacking, Woodside should evaluate what information was required based on the risk of the proposed activities and determine suitable methods or sources to obtain this information.
  - **(4)** Acknowledged that DBCA conducted monitoring within marine parks and reserves and noted that these datasets were available upon request, but also encouraged Woodside to acquire the necessary information to support a BACI-style monitoring framework, including undertaking independent data collection if required.
  - **(5)** Provided a link to DCCEEW's *National Light Pollution Guidelines for Wildlife* and recommended that Woodside refer to this for managing potential impacts of light pollution on marine fauna.
  - **(6)** Requested Woodside notified DBCA's Pilbara regional office in the event of a hydrocarbon release.
  - **(7)** Noted that it would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated to do so by regulatory decisionmakers, that any advice or assistance from the department would occur on a full cost recovery basis, and that Woodside should commit to monitoring and cleaning up any of DBCA's interests in case they were affected by an oil spill.
  - **(8)** Informed that Woodside should refer to Department of Transport's (DoT's) (now Department of Transport and Major Infrastructure's (DTMI's)) *Offshore Petroleum Industry Guidance Note: Marine Oil Pollution – Response and Consultation Arrangements* (July 2020) and web content on marine pollution.
  - **(9)** Requested that future notifications be sent to a specified DBCA email address.
- On 24 September 2025, Woodside replied to DBCA (SI Report A, reference 8.2) thanking them for their response and:
  - (1) Acknowledged the closeness of the planned activities to several BIAs for conservation-significant marine fauna, as well as to marine parks and coastal reserves identified by DBCA.
  - (2) Noted that Woodside's Oil Spill Scientific Monitoring Program (SMP) operated under the Joint Industry OSM Framework, which will enable quantitative assessment of environmental effects in the event of an unplanned hydrocarbon release, including scenarios where sensitive areas such as Ningaloo Marine Park, Barrow Island Nature Reserve or Montebello Islands Marine Park could be contacted.
  - (3) Described that Woodside had prepared an Operational and Scientific Monitoring Bridging Implementation Plan (OSM-BIP) aligned with the Joint Industry Framework, which outlines:
    - A process for reviewing baseline information and identifying information gaps
    - A commitment to engage with key organisations, including DBCA, early during a spill response to prioritise ecological receptors and shape monitoring design
    - The potential use of a BACI-type monitoring approach, if appropriate baseline information or feasible data collection conditions were present.
  - (3) Noted that the OSM-BIP contained an appendix listing the current environmental baseline studies available to Woodside and stated that these datasets were regularly reassessed and supplemented using a risk-based method to maintain preparedness.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - **(4)** Confirmed Woodside's commitment to ensuring the availability or acquisition of environmental baseline information that was suitable for environmental management needs, including collecting independent datasets where required, and emphasised alignment with recommended monitoring practices and the expectations of relevant stakeholders.
  - **(5)** Confirmed it had considered DCCEEW's *National Light Pollution Guidelines for Wildlife* in line with DBCA's recommendation.
  - **(6)** Confirmed that its Oil Pollution First Strike Plan (FSP) for the proposed activity included a commitment to notify the DBCA Pilbara regional office via the provided phone number soon as practicable if there was potential for oiled wildlife or if the spill was expected to contact land or waters managed by the department.
  - **(7)** Acknowledged that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated by a jurisdictional decision-maker, and that any advice from the DBCA would occur on a full cost recovery basis. Woodside confirmed it would engage with DBCA on monitoring and cleanup of any DBCA-managed lands or waters as required.
  - **(8)** Confirmed it had reviewed and referenced DTMI's maritime environmental emergencies information and provided details hereof.
  - **(9)** Confirmed it would continue to use the provided email address for any future notifications.
- On 10 February 2026, Woodside emailed DBCA a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DBCA. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- On 16 February 2026, DBCA responded to Woodside (SI Report A, reference 8.3) thanking them for proving this information and:
  - **(10)** Advised that feedback provided on 28 August 2025 remains current.
  - **(6)** Requested Woodside notified DBCA's Pilbara regional office in the event of a hydrocarbon release.
  - **(7)** Noted that it would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated to do so by regulatory decisionmakers, that any advice or assistance from the department would occur on a full cost recovery basis, and that Woodside should commit to monitoring and cleaning up any of DBCA's interests in case they were affected by an oil spill.
  - **(8)** Informed that Woodside should refer to Department of Transport's (DoT's) (now Department of Transport and Major Infrastructure's (DTMI's)) *Offshore Petroleum Industry Guidance Note: Marine Oil Pollution – Response and Consultation Arrangements* (July 2020) and web content on marine pollution.
  - **(9)** Requested that future notifications be sent to a specified DBCA email address.
- On 12 March 2025, Woodside replied to DBCA (SI Report A, reference 8.4) thanking them for their response and:
  - Outlined that Woodside has assumed that references to Chevron in DBCA's response are made in error and should reference Woodside, requesting that DBCA advise if this is not the case.
  - **(10)** Woodside noted that DBCA's feedback provided on 28 August 2025 remained current.
  - **(6)** Confirmed that its Oil Pollution First Strike Plan (FSP) for the proposed activity included a commitment to notify the DBCA Pilbara regional office via the provided phone number soon as practicable if there was potential for oiled wildlife or if the spill was expected to contact land or waters managed by the department.
  - **(7)** Acknowledged that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated by a jurisdictional decision-maker, and that any advice from the DBCA would occur on a full cost recovery basis. Woodside confirmed it would engage with DBCA on monitoring and cleanup of any DBCA-managed lands or waters as required.
  - **(8)** Confirmed it had reviewed and referenced DTMI's maritime environmental emergencies information and provided details hereof.
  - **(9)** Confirmed it would continue to use the provided email address for any future notifications.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Noted that that numerous significant ecological areas were located in the EMBA.	**(1)** Woodside considers BIAs, marine parks and coastal reserves as a standard in the development of an EP.	**(1)** Woodside noted the closeness of the planned activities to several BIAs for conservation-significant marine fauna, as well as to marine parks and coastal reserves identified by DBCA	**(1)** No additional controls or measures are required. Woodside considers BIAs and AMPs as standard, including in Section 4.5, 4.8 and Appendix C of this EP.
(2) Stated that areas of high ecological value could be affected in the event of a major hydrocarbon release.	**(2)** Woodside maintains knowledge of areas of ecological importance adjacent to Operational Areas and its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release.	**(2)** Woodside noted that the SMP operated under the Joint Industry OSM Framework will enable quantitative assessment of environmental effects in the event of an unplanned hydrocarbon release, including scenarios where sensitive areas such as Ningaloo Marine Park, Barrow Island Nature Reserve or Montebello Islands Marine Park could be contacted.	**(2)** Appendix G of the EP covers that under the Operational and Scientific Monitoring (OSM) Program, executed under the Joint Industry OSM Framework (AEP, 2021).
(3) Noted that Woodside should collect appropriate baseline abundance and distribution data for benthic habitat and marine fauna species in the EMBA. DBCA also noted that where baseline information was lacking, Woodside should evaluate what information was required.	**(3)** Woodside considers baseline information, including on any potential information gaps, in the development of an EP.	**(3)** Woodside outlined that it had prepared an OSM-BIP aligned with the Joint Industry Framework, which outlines: • reviewing baseline information and identifying gaps • commitment to engage with key organisations early • The potential use of a BACI-type monitoring approach. Woodside further noted that the OSM-BIP contained an appendix listing the current environmental baseline studies available and stated that these datasets were regularly reassessed.	**(3)** No additional controls or measures are required. As a standard, Woodside conducts annual reviews of environmental baseline data, as described in the Oil Spill Preparedness and Response Mitigation Assessment for this EP and Appendix C of the OSM-BIP provides a detailed inventory of baseline environmental studies currently available to Woodside.
(4)	**(4)**	**(4)**	**(4)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Noted that DBCA conducted monitoring within marine parks but encouraged Woodside to acquire the necessary information to support a BACI-style monitoring framework.	Woodside noted the request about implementing a BACI framework and noted it maintains knowledge of areas of ecological importance and its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release.	Woodside confirmed its commitment to ensuring the availability or acquisition of environmental baseline information for environmental management needs, including collecting independent datasets where required, and emphasised alignment with recommended monitoring practices and the expectations of relevant stakeholders.	No additional controls or measures are required, see (3) above.
(5) Recommended that Woodside referred to DCCEEW's guidelines for managing potential impacts of light pollution on marine fauna.	**(5)** Woodside considers DCCEEW's guidelines in the development of an EP.	**(5)** Woodside confirmed it had considered DCCEEW's *National Light Pollution Guidelines for Wildlife* in line with DBCA's recommendation.	**(9)** No additional controls or measures are required. Woodside conducts and impact assessment for light emissions and implements controls as appropriate as a standard, see Section 6.7.3 of the EP.
(6) DBCA requested Woodside notified DBCA's Pilbara regional office in the event of a hydrocarbon release.	**(6)** Woodside agrees to notify DBCA's Pilbara regional office as defined in its Oil Pollution FSP.	**(6)** Woodside confirmed the DBCA Pilbara phone number had been incorporated as part of the Oil Pollution First Strike Plan.	**(6)** DBCA's Pilbara phone number has been incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix H of EP).
(7) DBCA noted that it would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated to do so by regulatory decisionmakers.	**(7)** Woodside notes DBCA will not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated to do so by regulatory decisionmakers.	**(7)** Woodside acknowledged that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator unless mandated by a jurisdictional decision-maker, and that any advice from the DBCA would occur on a full cost recovery basis. Woodside confirmed it would engage with DBCA on monitoring and cleanup of any DBCA-managed lands or waters as required.	**(7)** Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix G).
(8) DBCA informed that Woodside should refer DTMI's *Offshore Petroleum Industry Guidance Note: Marine Oil Pollution – Response and Consultation*	**(8)** Woodside has considered DTMI's *Offshore Petroleum Industry Guidance Note: Marine Oil Pollution – Response and Consultation Arrangements* (July	**(8)** Woodside confirmed it had reviewed and referenced DTMI's maritime	**(8)** No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Arrangements (July 2020) and web content on marine pollution.	2020) and relevant online content in the development of the EP.	environmental emergencies information and provided details hereof.	
(9) Requested that Woodside continued to provide future notifications to a specified email address.	**(9)** Woodside agrees to continue to use the provided email address for any potential future notifications.	**(9)** Woodside confirmed it would continue to use the provided email address for any future contact.	**(9)** No additional controls or measures are required.
(10) Feedback previously provided remains current.	**(10)** Woodside understands that DBCA's feedback provided on 28 August 2025 remains current.	**(10)** Woodside noted that DBCA's feedback remains current.	**(10)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DBCA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DBCA sufficient information to allow DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DBCA on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 28 August 2025 and 16 February 2026, DBCA shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable DBCA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DBCA in response to DBCA's feedback (Woodside's email of 24 September 2025 and 12 March 2026).

Reasonable Period

Woodside allowed DBCA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DBCA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DBCA 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DBCA a reasonable period for consultation in preparation of the EP as evidenced by DBCA's response on 28 August 2025 and 16 February 2026.

Reasonable Opportunity

Woodside allowed DBCA a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DBCA as evidenced by its response on 28 August 2025 and 16 February 2026

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DBCA provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DBCA.
  - Made no changes or inclusions to the EP as a result of consultation with DBCA because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.3 Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 6.1.59), provided a Consultation Information Sheet, a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community', and a list of relevant state and Commonwealth historical shipwrecks.
- On 30 July 2025, Woodside emailed DCCEEW to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.59.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed DCCEEW a consultation update on this EP (Record of Consultation, reference 6.3.12). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DCCEEW. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DCCEEW for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DCCEEW sufficient information to allow DCCEEW to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DCCEEW on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DCCEEW a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DCCEEW advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DCCEEW 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DCCEEW a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DCCEEW is appropriate and adapted to the nature of interests of DCCEEW:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DCCEEW of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DCCEEW did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DCCEEW's functions, interests or activities.

4.2.4 Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 6.1.17), provided a Consultation Information Sheet and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 30 July 2025, Woodside emailed DNP to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.17.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- Between 2 October 2025 and 7 October 2025, Woodside and DNP exchanged three emails arranging and confirming an online meeting for 28 October 2025 (SI Report A, references 7.1 – 7.3).
- On 28 October 2025, Woodside and DNP held an online meeting (SI Report A, reference 7.4). During the meeting:
  - Woodside provided an overview of the GWF-4 Drilling and Subsea Installation EP including:
    - Background of the project and the progression from the OPP to the EP, which includes drilling for up to six wells (nearfield and Wilcox); timing of the activity; location of the activity overlapping the Montebello Marine Park.
    - Noting of a commitment in the OPP that no infrastructure would be installed in the marine park, however there may be anchoring, piling or vessel movement.
    - Noting piling modelling had been redone for the EP.
    - Information on potential seabed disturbance, including that the activity would not disturb more than 0.11km2 of seabed in the marine park.
  - DNP asked whether Woodside was proposing to move the piling from hard substrate areas.
    - Woodside noted that an ALARP assessment will be undertaken for anchor/piling locations *[This feedback is no longer relevant as piling has since been removed from the scope of the EP]*
- On 27 November 2025, DNP responded to Woodside (SI Report A, reference 7.5) thanking them for providing DNP the opportunity to comment and:
  - **(1)** Noted the proposed activity overlapped the Multi Use Zone of the Montebello Marine Park and advised Woodside to be aware of obligations under the class approval and highlighted the *North-west Marine Parks Network Management Plan 2018* that came into effect in 2018.
  - **(2)** Thanked Woodside for considering the '*Petroleum Activities and Australian Marine Parks'* guidance note and advised that the EP should consider all associated activities in the context of the management plan objectives and values, including representativeness and footprint within the marine park.
  - **(3)** Advised of the Australian marine park specific values for Montebello Marine Park, including the ancient coastline at the 125-m depth contour, diverse benthic and pelagic fish communities, migratory pathways for humpback whales, seabird breeding habitat, marine turtle habitats, and whale shark foraging habitat. DNP also noted that further information on marine park values was available in the management plan and spatial data could be accessed via the Australian Marine Spatial Information System.
  - **(4)** Requested that DNP be notified as soon as possible of any oil or gas pollution incidents occurring within or likely to impact a marine park, and indicated that DNP might request daily or weekly Situation Reports depending on the scale and severity of a pollution incident.
  - **(5)** Requested notification to a provided email address if the EP was approved by NOPSEMA, and further requested notification at least 10 days prior to all activities occurring within the marine park (excluding transiting) and at the conclusion of the activity, with information consistent with the guidance note.
- On 10 February 2026, Woodside replied to DNP (SI Report A, reference 7.6) thanking them for their response and:
  - **(1)** Confirmed that Woodside had referred to the North-west Marine Parks Network Management Plan 2018 during the development of the EP and noted DNP's information regarding the Montebello Marine Park and confirmed that Woodside was aware of its obligations under the class approval.
  - **(2)** Confirmed that Woodside had considered the '*Petroleum Activities and Australian Marine* Parks' guidance note while preparing the EP to identify and manage impacts and risks on Australian Marine Park values to an acceptable level, reduce them to ALARP, and demonstrate that the activity would not be inconsistent with the *North-west Marine Parks Network Management Plan 2018*.
  - **(3)** Noted the specific values for the Montebello Marine Park outlined by DNP and noted that spatial information was available through the Australian Marine Spatial Information System.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– **(4)** Confirmed that in the unlikely event of a hydrocarbon release, Woodside would notify DNP within 24 hours if the incident occurred within or was likely to impact a marine park.
– **(5)** Confirmed that Woodside would provide notification to DNP upon acceptance of the EP by NOPSEMA and at least 10 days prior to activities occurring within the marine park (excluding transiting) and at the conclusion of activities.

- As part of the same email on 10 February 2026, Woodside provided DNP a consultation update on this EP. Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DNP. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- **(6)** On 12 February 2026, DNP responded to Woodside (SI Report A, reference 7.7) thanking them for updating DNP on the new modelling and resulting EMBA revision and confirmed they had no further comments.

(6) On 4 March 2026, Woodside replied to DNP (SI Report A, reference 7.8) thanking them for their feedback and noted that DNP had no further comments beyond those provided in November 2025.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Woodside has obligations under class approval and the *North-west Marine Parks Network Management Plan 2018*.	**(1)** Woodside understands its obligations under the class approval and has referred to the *North-west Marine Parks Network Management Plan 2018* for this EP.	**(1)** Woodside confirmed it was aware of its obligations under the class approval and that it had referred to the *North-west Marine Parks Network Management Plan 2018* during the development of this EP.	**(1)** No additional controls or measures are required.
(2) Ensure the EP identifies and manages all impacts and risks on AMP values, and clearly demonstrates that activities will not be inconsistent with the *North-west Marine Parks Network Management Plan 2018*.	**(2)** Woodside has considered the 'Petroleum Activities and Australian Marine Parks' guidance note to identify and manage impacts and risks to AMPs.	**(2)** Woodside confirmed it had taken into consideration the 'Petroleum Activities and Marine Parks' guidance note to ensure the EP identified and managed all risks on AMP values and demonstrated that activities would not be inconsistent with the *North-west Marine Parks Network Management Plan 2018*.	**(2)** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian Marine Park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.8 of the EP).
(3) Noted that the *North-west Marine Parks Network Management Plan 2018* provided information on values for Montebello Marine Park and that the Australian Marine Spatial Information	**(3)** Woodside considers AMPs in the development of an EP, which for this EP includes the Montebello Marine Park. Woodside references available resources as appropriate, which can include the sources mentioned by DNP,	**(3)** Woodside noted the *North-west Marine Parks Network Management Plan 2018* provided information on specific values for the Montebello Marine Park, and that the Australian Marine Spatial Information	**(3)** No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

System provided spatial information on the values for marine parks.	such as the *North-west Marine Parks Network Management Plan 2018*.	System provided spatial information on marine parks.	
(4) Requested notification as soon as possible of any oil or gas pollution incidents and potential situation reports	**(4)** In the highly unlikely event of a hydrocarbon release, Woodside agrees to notify DNP within 24 hours if the incident occurs within a marine park or was likely to impact a marine park.	**(4)** Woodside confirmed that in the highly unlikely event of a hydrocarbon release, it would notify DNP within 24 hours if the incident occurred within a marine park or was likely to impact a marine park.	**(4)** As described in Section 7 of the EP, Woodside will notify DNP within 24 hours of a hydrocarbon release incident if the incident occurs within a marine park or was likely to impact a marine park.
(5) Requested email notification of EP approval, activity start and end dates.	**(5)** Woodside will notify DNP on acceptance of the EP and at start and end of activities occurring within the marine park (excluding transiting).	**(5)** Woodside confirmed it would provide notification to DNP upon acceptance of the EP, and at least 10 days prior to activities occurring within the marine park (excluding transiting) and at the conclusion of activities.	**(5)** As referenced at PS 1.11 and set out in Table 7-5, Section 7.10, Woodside will notify DNP upon acceptance of this EP by NOPSEMA, and at least 10 days prior to activities occurring within the marine parks (excluding transiting) and at the conclusion of activities.
(6) No additional comments beyond those previously provided.	**(6)** Woodside understands DNP has no additional comments and recognises the comments previously shared.	**(6)** Woodside confirmed that DNP had no further comments beyond what was previously provided.	**(6)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DNP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given DNP sufficient information to allow DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DNP on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 28 October 2025, DNP shared feedback at an online meeting regarding this activity, and on 27 November 2025 and 12 February 2026, DNP shared its feedback via email regarding this activity, indicating the information provided was sufficient to enable DNP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to DNP in response to DNP's feedback (Woodside's email of 10 February 2026 and 4 March 2026).

Reasonable Period

Woodside allowed DNP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DNP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DNP 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DNP a reasonable period for consultation in preparation of the EP as evidenced by DNP's response on 27 November 2025 and 12 February 2026.

Reasonable Opportunity

Woodside allowed DNP a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to DNP as evidenced by its response on 27 November 2025 and 12 February 2026.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- DNP provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from DNP.
  - Based on DNP's feedback, updated Table 7-5 to include notifications to DNP upon acceptance of the EP, at least 10 days prior to activities occurring within the marine park, and at the conclusion of activities.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.2.5 Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed NCWHAC a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with NCWHAC. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with NCWHAC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given NCWHAC sufficient information to allow NCWHAC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to NCWHAC on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed NCWHAC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to NCWHAC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- . Woodside's methodology allows a 30-day consultation period and Woodside allowed NCWHAC 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed NCWHAC a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with NCWHAC is appropriate and adapted to the nature of interests of NCWHAC:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding NCWHAC of the opportunity to provide feedback.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as NCWHAC did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on NCWHAC's functions, interests or activities.

4.3 Commonwealth and WA State Government departments or agencies – industry

4.3.1 Department of Mines, Petroleum and Exploration (DMPE)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed DMPE advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

On 10 February 2026, Woodside emailed DMPE a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DMPE. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DMPE for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given DMPE sufficient information to allow DMPE to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DMPE on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DMPE a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DMPE advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- methodology allows a 30-day consultation period and Woodside allowed DMPE 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DMPE a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DMPE is appropriate and adapted to the nature of interests of DMPE:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DMPE of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DMPE did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on DMPE's functions, interests or activities.

4.3.2 Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

  On 10 February 2026, Woodside emailed DISR a consultation update on this EP (Record of Consultation, reference 6.3.9). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with DISR. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with DISR for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given DISR sufficient information to allow DISR to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to DISR on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed DISR a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to DISR advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed DISR 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed DISR a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with DISR is appropriate and adapted to the nature of interests of DISR:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding DISR of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as DISR did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on DISR's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.4 Commonwealth commercial fisheries and peak representative bodies

4.4.1 Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 6.1.57), provided a Consultation Information Sheet, information on potential impacts on fisheries, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed CFA to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.57.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required. Woodside has assessed the potential for interaction with Commonwealth managed commercial fisheries issues in Section 4.9.2 of the EP. CFA will receive start and end of activity notifications per standard procedure in Table 7-5 in Section 7.10 of the EP.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CFA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CFA sufficient information to allow CFA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to CFA on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CFA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CFA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CFA 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed CFA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CFA is appropriate and adapted to the nature of interests of CFA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding CFA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CFA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CFA's functions, interests or activities.

4.4.2 North West Slope Trawl Fishery

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed North West Slope Trawl Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.57), provided a Consultation Information Sheet, information on potential impacts on fisheries, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed North West Slope Trawl Fishery licence holders to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with North West Slope Trawl Fishery for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given North West Slope Trawl Fishery sufficient information to allow North West Slope Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to North West Slope Trawl Fishery on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed North West Slope Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to North West Slope Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed North West Slope Trawl Fishery 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed North West Slope Trawl Fishery a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with North West Slope Trawl Fishery is appropriate and adapted to the nature of interests of North West Slope Trawl Fishery:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding North West Slope Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as North West Slope Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on North West Slope Trawl Fishery's functions, interests or activities.

4.4.3 Tuna Australia

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 6.1.57), provided a Consultation Information Sheet, information on potential impacts on fisheries, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Tuna Australia to clarify that technical issues may have affected the display of the previous consultation email. Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.57.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 27 August 2025, Tuna Australia responded to Woodside (SI Report A, reference 10.1) and:
  - **(1)** Provided advice on how Woodside can appropriately consult with members and non-members of the tuna fishing community.
  - **(2)** Recommended consulting with Australian Southern Bluefin Tuna Industry Association.
  - **(3)** Noted the planned and unplanned impacts associated with the activities and stated that while standard environmental risks and generic mitigation measures were presented, there were significant gaps requiring further consideration. This included that many mitigation measures relied on general compliance statements or ALARP principles without specific or measurable commitments.
  - Noted the absence of:
    - **(4)** A detailed benthic recovery monitoring program
    - **(5)** A real-time marine fauna monitoring for acoustic impacts,
    - **(6)** clear commitments regarding light minimisation.
  - **(7)** Advised that oil spill response plans were referenced but not described in sufficient detail.
  - **(8)** Stated that greenhouse gas management focused on reporting obligations rather than emission reduction strategies.
  - **(9)** Asserted that cultural heritage impacts were only addressed at a high level.
  - **(10)** Asserted that fisheries impacts were only addressed at a high level.
  - **(11)** Advised that oil spill modelling in the EP defined an EMBA that should be overlaid with tuna egg and larval distribution data to identify seasonal high-risk overlaps and recommended that the OPEP include pre-agreed fishery protection triggers, including dynamic closures and enhanced spill response where spill modelling indicated overlap with tuna larval areas.
  - **(12)** Stated that NOPSEMA enforced compliance under the Offshore Petroleum and Greenhouse Gas Storage framework and that the polluter-pays principle applied.
- On 24 November 2025, Woodside emailed Tuna Australia to arrange a meeting regarding consultation (SI Report A, reference 10.2).
- Between 28 November 2025 – 2 December 2025, Woodside and Tuna Australia exchanged four emails arranging and confirming a meeting for 10 December 2025 (SI Report A, references 10.3 – 10.6).
- On 10 December 2025, Woodside and Tuna Australia met to discuss stakeholder engagement (SI Report A, reference 21.7). During the meeting:
  - Woodside outlined its grievance process for fishery stakeholders.
  - Tuna Australia:
    - Discussed improvements to outreach to members and the tuna community and provided a review of the industry including:
      - Migratory and unpredictable nature of stock.
      - Past consultation challenges.
    - **(1)** Claimed that the AFMA database was incomplete.
    - Stated it currently worked with 15 companies to support consultation with industry and collaborated with other tuna representative bodies.
    - Covered operational insights from its perspective including:
      - Tuna fishing is in Commonwealth waters and is migratory currently with two boats in WA.
      - There were multiple international commitments and agreements which added complexity to management.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

    - Discussed its communications to stakeholders, including its approach for mailouts.
    - Noted that there were potential changes coming for marine parks.
  - **(1)** Woodside agreed to have Tuna Australia send its Service Agreement for review.
- On 26 February 2026, Woodside met with Tuna Australia regarding general consultation matters separate to this EP (SI Report A, reference 10.8).
- On 20 March 2026, Woodside replied to Tuna Australia (SI Report A, reference 10.9) thanking them for their feedback and:
  - **(1)** Acknowledged recent meetings with Tuna Australia regarding consultation and ongoing discussions about progressing a consultation services agreement.
  - **(2)** Confirmed that consultation had also occurred with ASBTIA in relation to the EP.
  - **(3)** Advised that Woodside had undertaken environmental risk assessments for both planned and unplanned activities as part of EP development and noted that the planned and unplanned impacts had been addressed in the Consultation Information Sheet and Section 6 of the EP. Woodside further noted Tuna Australia's comments on mitigation and monitoring and outlined that the EP managed impacts and risks through Environmental Performance Outcomes, Environmental Performance Standards, and Measurement Criteria. Woodside noted that controls, standards, and compliance monitoring measures had been established for planned and unplanned impacts, based on available environmental data and risk assessments.
  - **(4)** Advised that a benthic monitoring program had not been adopted because it was not considered ALARP given the predicted scale and nature of drill cuttings impacts and the availability of baseline data and modelling.
  - **(5)** Confirmed that, if piling was required, trained vessel crew would undertake real-time cetacean monitoring as marine fauna observers, enabling adaptive management including pre-start observations and shutdown procedures (consistent with *EPBC Act Policy Statement 2.1*).
  - **(6)** Advised that light emissions were expected to have negligible impacts on marine fauna due to distance from relevant habitats and that good industry practice controls had been adopted.
  - **(7)** Confirmed that the OPEP, including the Oil Spill Preparedness and Response Mitigation Assessment and Oil Pollution First Strike Plan, would be available for review on the NOPSEMA website once the EP was submitted.
  - **(8)** Noted Tuna Australia's feedback on greenhouse gas management and outlined that emissions were primarily vessel or MODU based, relatively small, and managed through a risk-based ALARP approach including compliance with international maritime requirements such as Marine Orders.
  - **(9)** Noted Tuna Australia's assertion that cultural heritage impacts are only acknowledged superficially and:
    - Outlined that both tangible and intangible cultural heritage values had been considered through consultation with relevant persons and organisations, including First Nations Traditional Custodians.
    - Advised that cultural heritage considerations were supported by reviews of publicly available information, including Marine Park and Healthy Country management plans, with impacts assessed and controls implemented where relevant.
    - Stated that cultural heritage controls included mandatory cultural awareness training and underwater cultural heritage assessments.
  - **(10)** Noted Tuna Australia's assertion regarding fisheries impacts and advised that fisheries interactions had been assessed using baseline information on activity and spatial overlap, fisheries interaction risks had been reduced to ALARP through operational controls, navigational safety measures, and stakeholder notifications.
  - **(11)** Acknowledged the potential for impacts to tuna larvae in the unlikely event of a hydrocarbon release during spawning periods but stated that the environmental performance outcome was to prevent any unplanned hydrocarbon release to the marine environment. Woodside advised that:
    - In the highly unlikely event of a hydrocarbon release, the OSM Framework would guide response activities and science-based monitoring, including a fisheries impact assessment.
    - Seasonal tuna-sensitive scheduling and explicit larval exposure monitoring or modelling had not been applied.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - In the event of a hydrocarbon release, Woodside committed to notifying DPIRD and WAFIC within 24 hours and liaising on appropriate fisheries-related actions.
  - Confirmed membership in the AEP Joint Industry Operational and Scientific Monitoring Framework.
- **(12)** Confirmed that Woodside maintained financial assurance for the duration of its activities and provided evidence to NOPSEMA prior to EP acceptance and advised that financial assurance estimates were prepared using industry methods endorsed by NOPSEMA and consistent with published guidance.

- On 30 March 2026, Tuna Australia emailed thanking Woodside for its response and ongoing engagement (SI Report A, reference 10.10). Tuna Australia:
  - **(3)** Acknowledged Woodside's environment assessment framework but noted its view that impacts to fisheries had not been assessed at an appropriate biological and management scale, and that impacts could not be confined to a defined area or assessed on recent fishing activity.
  - **(11)** Stated that reliance on a performance outcome of no planned release did not address the potential consequence should a release occur.
  - **(10)** Stated that the conclusion that impacts were reduced to ALARP through operational controls and stakeholder notifications did not address potential indirect effects, and noted an expectation of increased fishing activity in the Western Tuna and Billfish Fishery due to changes to WA fishing restrictions.
  - **(7)** Noted that the EP and OPEP were only available following submission to NOPSEMA.
- On 1 April 2026, Woodside responded to Tuna Australia (SI Report A, reference 10.11) thanking them for their feedback and:
  - **(3)** Noted Tuna Australia's comments and clarified that spatial overlap and baseline activity information had been considered in relation to planned activities during the development of the EP through a detailed environmental risk assessment.
  - **(11)** Outlined that potential impact pathways on pelagic fish populations had been considered under the highly unlikely event of a worst-case hydrocarbon spill scenario. Woodside further noted that, in such a scenario, there was potential for impacts to spawning fish and/or nursery areas within the EMBA, and noted that the severity of consequences would depend on the timing, duration and extent of any potential spill relative to key spawning periods and locations.
  - **(10)** Advised that, in the highly unlikely event of a hydrocarbon release, the OSM Framework would guide situational awareness and response activities and support the implementation of comprehensive science-based monitoring programs to assess potential impacts on fisheries, and noted that the OSM Framework was publicly available.
  - **(7)** Stated that, consistent with regulatory requirements, Woodside had provided sufficient information to enable Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- On 1 April 2026, Tuna Australia emailed Woodside thanking them for the response and clarification (SI Report A, reference 10.12). Tuna Australia:
  - **(11)** Requested clarification on how a potential hydrocarbon release had been assessed for tuna and billfish stocks.
- On 9 April 2026, Woodside responded to Tuna Australia (SI Report A, reference 10.13) thanking them for their feedback and:
  - **(11)** Noted that Woodside had assessed potential impacts to fish and fisheries, including pelagic species such as tuna and billfish, within the EP. Woodside also explained the risk assessment process, noted that the EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release, and acknowledged that pelagic fish were migratory in nature and therefore the impact assessment for a potential unplanned hydrocarbon release was based on the assumption that pelagic fish and associated larvae were present within the EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Provided advice on consultation with Tuna fishing community.	**(1)**	**(1)** Woodside acknowledged recent meeting and engagement with Tuna Australia	**(1)** Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside notes Tuna Australia's comments regarding consultation with the Tuna fishing community.	regarding consultation and discussion about entering into a service agreement.	
(2) Recommended contacting ASBTIA.	**(2)** Woodside has already provided consultation material to ASBTIA for this EP.	**(2)** Woodside confirmed that ASBTIA was contacted for this EP.	**(2)** Evidence of consultation with ASBTIA is included in Appendix F, Table 2.
(3) Noted planned and unplanned impacts and stated that gaps existed, as well as the mitigation measures relied on general compliance and ALARP principles and lacked measurable commitments.	**(3)** Section 6 of the EP identifies the potential impacts and risk of the activity, which includes specific mitigation measures and demonstrates that impacts and risks are reduced to ALARP and are of an acceptable level.	**(3)** Woodside advised that environmental risk assessments for both planned and unplanned activities are part of EP development and noted that the planned and unplanned impacts had been addressed in Section 6 of the EP. Woodside further noted Tuna Australia's comments on mitigation and monitoring and outlined that the EP managed impacts and risks. Woodside noted that controls, standards, and compliance monitoring measures had been established for planned and unplanned impacts, based on available environmental data and risk assessments.	**(3)** No additional controls or measures are required. Section 6 of the EP identifies the potential impacts and risk of the activity and includes specific mitigation measures.
(4) Stated that there was an absence of detailed benthic recovery monitoring program.	**(4)** Woodside considered the requirement for a monitoring program and undertook and ALARP demonstration in section 6.7.8 of the EP. This was not considered ALARP given the predicted scale and nature of drill cuttings impacts and the availability of baseline data and modelling.	**(4)** Woodside advised that a benthic monitoring program had not been adopted because it was not considered ALARP given the predicted scale and nature of drill cuttings impacts and the availability of baseline data and modelling.	**(4)** No additional controls or measures are required. The ALARP demonstration in Section 6.7.8 considers a monitoring program.
(5) Stated that there was an absence of real-time fauna monitoring for acoustic impacts	**(5)** Woodside has since removed piling from the scope of the EP and therefore the nature and scale of the predicted noise	**(5)** Woodside advised that if piling was required, trained vessel crew would	**(5)** Not required. Piling has since been removed from the scope of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	impacts (vessel noise) do not require real-time monitoring.	undertake real-time cetacean monitoring. *[Piling has since been removed from the scope of the EP]*	
(6) Stated that there was an absence of clear commitments regarding light minimisation	**(6)** Woodside acknowledges Tuna Australia's interest in light emissions and has considered and managed these in section 6.7.3 of the EP.	**(6)** Woodside advised that light emissions were expected to have negligible impacts on marine fauna due to distance from relevant habitats and good industry practice controls had been adopted.	**(6)** No additional controls or measures are required. Light emissions have been considered and managed in section 6.7.3 of the EP.
(7) Stated that spill response plans were referenced but not described in detail.	**(7)** Woodside notes Tuna Australia's assertion and recognises the OPEP which contains the Oil Spill Preparedness and Response Mitigation Assessment and Oil Pollution First Strike Plan, which is included as part of the EP.	**(7)** Woodside confirmed that the OPEP would be available for review on the NOPSEMA website once the EP was submitted. Woodside further stated that it had provided sufficient information to enable Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.	**(7)** No additional controls or measures are required.
(8) Greenhouse gas management focused on reporting rather than emissions reduction.	**(8)** Woodside has considered atmospheric emissions and managed these in section 6.7.5 of the EP.	**(8)** Woodside noted Tuna Australia's comments on greenhouse gas management and outlined that emissions were primarily vessel or MODU based, relatively small, and managed through a risk-based ALARP approach.	**(8)** No additional controls or measures are required. Atmospheric emissions have been considered and managed in section 6.7.5 of the EP.
(9) Stated that cultural heritage impacts only addressed at a high level.	**(9)** Woodside has identified Cultural values and heritage in section 4.9.1 of the EP and considered and considered and managed any potential impacts throughout section 6.7 and 6.8 of the EP.	**(9)** Woodside noted Tuna Australia's assertion and outlined that cultural heritage values had been considered through consultation, advised that cultural heritage considerations were supported by reviews of publicly available information, and, stated that cultural heritage controls included	**(9)** No additional controls or measures are required. Cultural values and heritage are outlined in section 4.9.1 of the EP and considered and managed and potential impacts throughout section 6.7 and 6.8 of the EP

		mandatory cultural awareness training and underwater cultural heritage assessments.	
(10) Stated that fisheries impacts had only addressed at a high level.	**(10)** Woodside has identified commercial fisheries in section 4.9.2 of the EP and considered and managed the interaction risks in Section 6.7.1 of the EP.	**(10)** Woodside noted Tuna Australia's assertion and advised that fisheries interactions had been assessed using baseline information on activity and spatial overlap, fisheries interaction risks had been reduced to ALARP through operational controls, navigational safety measures, and stakeholder notifications. Woodside further advised that, in the highly unlikely event of a hydrocarbon release, the OSM Framework would guide situational awareness and response activities.	**(10)** No additional controls or measures are required. Commercial fisheries are outlined in section 4.9.2 of the EP and considered and managed the interaction risks in Section 6.7.1 of the EP**.**
(11) Stated that spill modelling should be overlaid with tuna egg and larval distribution.	**(11)** Woodside has considered the potential impacts on fisheries and larva in the EP and these have been assessed in section 6.8.2 of the EP.	**(11)** Woodside acknowledged the potential for impacts to tuna larvae in the highly unlikely event of a hydrocarbon release during spawning periods but stated that the environmental performance outcome was to prevent any unplanned hydrocarbon release to the marine environment. Woodside further outlined that potential impact pathways on pelagic fish populations, under the highly unlikely event of a worst-case hydrocarbon spill scenario, had been considered.	**(11)** No additional controls or measures are required. Potential impacts on fisheries and larva have been assessed in section 6.8.2 of the EP.
(12) Stated that NOPSEMA enforces compliance under the OPGGS framework	**(12)** Woodside maintains financial assurance for the duration of its activities and provides evidence to NOPSEMA prior to the acceptance of an EP.	**(12)** Woodside confirmed that it maintained financial assurance for the duration of its activities and provided evidence to NOPSEMA prior to EP acceptance and advised that financial assurance estimates were prepared using industry	**(13)** Not required.

		methods endorsed by NOPSEMA and consistent with published guidance.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Tuna Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Tuna Australia sufficient information to allow Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Tuna Australia on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 27 August 2025, Tuna Australia shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Tuna Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Tuna Australia in response to Tuna Australia's feedback (Woodside's email of 20 March 2026).

Reasonable Period

Woodside allowed Tuna Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Tuna Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's methodology allows a 30-day consultation period and Woodside allowed Tuna Australia 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Tuna Australia a reasonable period for consultation in preparation of the EP as evidenced by Tuna Australia's response on 27 August 2025.

Reasonable Opportunity

Woodside allowed Tuna Australia a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Tuna Australia as evidenced by its response on 12 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Tuna Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Tuna Australia.
  - Made no changes or inclusions to the EP as a result of consultation with Tuna Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.4.4 Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Western Deepwater Trawl Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.57), provided a Consultation Information Sheet, information on potential impacts on fisheries, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Western Deepwater Trawl Fishery licence holders to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.57.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Deepwater Trawl Fishery sufficient information to allow Western Deepwater Trawl Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Western Deepwater Trawl Fishery on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Deepwater Trawl Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Deepwater Trawl Fishery 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Western Deepwater Trawl Fishery a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Deepwater Trawl Fishery is appropriate and adapted to the nature of interests of Western Deepwater Trawl Fishery:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Western Deepwater Trawl Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Deepwater Trawl Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Deepwater Trawl Fishery's functions, interests or activities.

4.4.5 Western Tuna and Billfish Fishery

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Western Tuna and Billfish Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.57), provided a Consultation Information Sheet, information on potential impacts on fisheries, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Western Tuna and Billfish Fishery licence holders to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.57.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Tuna and Billfish Fishery for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Tuna and Billfish Fishery sufficient information to allow Western Tuna and Billfish Fishery to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Western Tuna and Billfish Fishery on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Western Tuna and Billfish Fishery a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Tuna and Billfish Fishery advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Tuna and Billfish Fishery 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Western Tuna and Billfish Fishery a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Tuna and Billfish Fishery is appropriate and adapted to the nature of interests of Western Tuna and Billfish Fishery:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Western Tuna and Billfish Fishery of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Tuna and Billfish Fishery did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Tuna and Billfish Fishery's functions, interests or activities.

4.4.6 Australian Southern Bluefin Tuna Industry Association (ASBTIA)

Summary of information provided and record of consultation for this EP:

- On 11 August 2025, following advice received by AFMA on 11 August 2025, Woodside emailed ASBTIA advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

		Change and Revision process (see Section 7.8 of the EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ASBTIA or the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ASBTIA sufficient information to allow ASBTIA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to ASBTIA on 11 August 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ASBTIA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to ASBTIA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ASBTIA 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed ASBTIA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ASBTIA is appropriate and adapted to the nature of interests of ASBTIA:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding ASBTIA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ASBTIA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

The measures and controls described in this EP address the potential impact from the proposed activity on ASBTIA's functions, interests or activities.

4.5 State commercial fisheries and peak representative bodies

4.5.1 Aquaculture Council of Western Australia (ACWA)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed ACWA advising of the proposed activity (Record of Consultation, reference 6.1.15), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed ACWA to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.15.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 10 February 2026, Woodside emailed ACWA a consultation update on this EP (Record of Consultation, reference 6.3.18). Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with ACWA. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with ACWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given ACWA sufficient information to allow ACWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to ACWA on 30 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed ACWA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to ACWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed ACWA 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed ACWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with ACWA is appropriate and adapted to the nature of interests of ACWA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback following the initial consultation, Woodside sent a follow-up consultation email on 18 August 2025, reminding ACWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as ACWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on ACWA's functions, interests or activities.

4.5.2 Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 6.1.11), provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 30 July 2025, WAFIC emailed the Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery licence holders (Record of Consultation, reference 6.1.11), advising of the proposed activity, provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 31 July 2025, WAFIC emailed Woodside to advise that the email and Consultation Information Sheet had been distributed to licence holders (SI Report A, reference 11.1).
- On 1 August 2025, Woodside replied to WAFIC thanking them for confirming that consultation had been distributed to licence holders (SI Report A, reference 11.2).
- On 28 August 2025, WAFIC emailed Woodside to provide feedback on the EP (SI Report, reference 11.3). WAFIC:
  - **(1)** Confirmed that no feedback was received from licence holders.
  - **(2)** Sought clarification on the location and habitat characteristic of the anchorages areas associated with EP.
  - **(3)** Advised that fishers had previously raised concerns with WAFIC about the effects of vessel anchoring on benthic habitats, fishers had also informed WAFIC that they had observed proponents anchoring barges and other vessels on coral features to the north-east of the Montebello Islands
  - **(4)** Stated that both WAFIC and fishers considered that the combined impacts of anchoring on sensitive and recovering seabed habitats required more thorough consideration by all proponents operating in the area.
  - **(5)** Noted that it is WAFIC's understanding that Woodside will have a number of measures in place in the event of an unplanned event.
  - **(6)** Requested start of activity notification and to be included in any vessel operations look ahead.
  - Requested that Woodside follow up on an unrelated matter.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 24 September 2025, Woodside replied to WAFIC thanking them for advising that no feedback was received from licence holders (SI Report, reference 11.4) and:
  - **(2)** Outlined that currently anchoring is planned for the MODU and an initiation anchor for flowline installation, however as the Project is still in the engineering phase the exact location of anchor placements is yet to be determined but anchoring will occur within the Operational Area. The benthic habitats in the:
    - South-west of the Operational Area (where wells WCA01 and 02 and associated flowline are located) are a combination of soft sediments and hard substrates with sand veneer (with the potential for filter feeder communities).
    - North-east of the Operational Area (where wells YDA01, ESA01 and TPA04 are located) are predicted to be soft sediments.
  - **(3)** Confirmed that subsea installation and MODU anchoring will not occur on shoals (as identified in the Goodwyn Area Infill Development OPP) within the Operational Area.
  - **(4)** Noted the feedback and confirmed the EP will assess the impacts of anchoring on the expected benthic habitats within the Operational Area and potential recovery.
  - **(5)** Confirmed that in the event of an unplanned event it had the following protocols in place:
    - an Oil Pollution First Strike Plan for all EPs which details potential impacts, notifications and response mitigations that may be executed to manage an emergency event.
    - a list of WA commercial fisheries that have a potential for interaction within the Operational Area and EMBA for this EP.
    - a well-established Operational and Scientific Monitoring Program (OSMP).
  - **(6)** Confirmed that it will provide WAFIC notifications at least 10 days prior to the commencement and following completion of activities.
- On 9 October 2025, WAFIC responded to Woodside thanking them for the responses and advised that there were no further comments (SI Report, reference 11.5).
- On 13 October 2025, Woodside replied to WAFIC noting that WAFIC had no further comments (SI Report, reference 11.6).
- On 10 February 2026, Woodside emailed WAFIC a consultation update on this EP (SI Report, reference 11.7) Woodside advised that additional modelling during the EP development process had resulted in changes to the EMBA and based on those changes, Woodside was undertaking additional consultation with WAFIC. Woodside attached an updated Consultation Information Sheet which included a map of the revised EMBA.
- In the same email on 10 February 2026, Woodside sought WAFIC's advise on whether Specimen Shell Managed Fishery licence holders should be contacted as a result of 2025 data now being included in the FishCube dataset.
- **(7)** On 10 February 2026, WAFIC responded to Woodside and recommended that consultation should be undertaken with Specimen Shell Managed Fishery licence holders (SI Report, reference 11.8).
- **(7)** On 10 February 2026, Woodside emailed WAFIC requesting that WAFIC provide Specimen Shell Managed Fishery licence holders with the Consultation Information Sheet and the covering email (SI Report, reference 11.9).
- On 11 February 2026, WAFIC emailed Specimen Shell Managed Fishery licence holders (Record of Consultation, reference 6.1.63) advising of the proposed activity, provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- On 17 March 2026, Woodside emailed WAFIC requesting confirmation whether feedback had been received by Specimen Shell Managed Fishery licence holders (SI Report, reference 11.10).
- **(1)** On 18 March 2026, WAFIC emailed Woodside confirming that no feedback was received from Specimen Shell Managed Fishery licence holders (SI Report, reference 11.11).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 18 March 2026, Woodside replied to WAFIC thanking them for advising that no feedback was received from Specimen Shell Managed Fishery licence holders (SI Report, reference 11.12).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) No feedback received from licence holders.	**(1)** Woodsides notes that no feedback was received from licence holders.	**(1)** Woodside noted that no feedback had been received by licence holders	**(1)** No additional measures or controls are required.
(2) Sought clarification on anchorage areas	**(2)** Woodside recognises that WAFIC has an interest in anchorage location and associated habitat characteristic.	**(2)** Woodside outlined the current planning for anchoring in the Operational Area, but the exact location of anchor placements is yet to be determined.	**(2)** No additional measures or controls are required and is addressed in Section 6.7.4 of the EP.
(3) Advised that fishers had previously raised concerns regarding proponents anchoring on coral features	**(3)** Woodside acknowledges that WAFIC has concerns regarding the proponents anchoring on shoals.	**(3)** Woodside confirmed that anchoring would not occur on shoals (as identified in the Goodwyn Area Infill Development OPP) within the Operational Area.	**(3)** No additional measures or controls are required. Section 6.7.4 of the EP outlines the control C 3.4 which addresses this.
(4) Stated that combined impacts of anchoring needs to be considered further by all proponents.	**(4)**Woodside understand that WAFIC has an interest in the combined impacts of anchoring on seabed habitats.	**(4)** Woodside confirmed the EP will assess the impacts of anchoring on the expected benthic habitats within the Operational Area and potential recovery.	**(4)** No additional measures or controls are required and is addressed in Section 6.7.4 of the EP.
(5) Noted their understanding of Woodside's management of unplanned events.	**(5)** Woodside recognises WAFIC's concerns related to an unplanned event and notes that its Oil Pollution First Strike Plan and involvement with the industry OSMP addresses the concerns.	**(5)** Woodside confirmed its Oil Pollution First Strike Plan and OSMP.	**(5)** Refer to the First Strike Plan, Appendix H of the EP.
(6) Requested notifications.	**(6)** Woodside understands WAFIC needs to be notified given activities will take place in areas where state fisheries are active.	**(6)** Woodside confirmed WAFIC would receive start and end of activity notifications.	**(6)** Woodside will provide notifications to WAFIC as set out in Section 7.10, Table 7-5, PS 1.6 of the EP.
(7)	**(7)**	**(7)**	**(7)**

Recommended consultation with Specimen Shell Managed Fishery licence holders.	Woodside notes WAFIC's recommendation and proceeded with consultation with Specimen Shell Managed Fishery licence holders.	Woodside requested that WAFIC provide the Consultation Information Sheet and the covering email Specimen Shell Managed Fishery licence holders.	No additional measures or controls are required. Woodside's consultation with Specimen Shell Managed Fishery licence holders is set out in Table 2 of Appendix F.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WAFIC for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WAFIC sufficient information to allow WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 and updated Consultation Information Sheet since January 2026. Woodside gave this information to WAFIC on 29 July 2025, marking the commencement of consultation on this EP and provided a consultation update on 10 February 2026. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 28 August 2025, WAFIC shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable WAFIC to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to WAFIC in response to WAFIC's feedback (Woodside's email of 24 September 2025).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed WAFIC a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence and in the consultation update to WAFIC advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WAFIC 30 days for the initial consultation and an additional 17 days for the consultation update in February 2026.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed WAFIC a reasonable period for consultation in preparation of the EP as evidenced by WAFIC's response on 28 August 2025.

Reasonable Opportunity

Woodside allowed WAFIC a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to WAFIC as evidenced by its response on 28 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- WAFIC provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from WAFIC.
  - Made no changes or inclusions to the EP as a result of consultation with WAFIC because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.5.3 Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, WAFIC, on behalf of Woodside, emailed Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.62), provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- As per advice from WAFIC regarding its consultation guidelines, no follow-up email was required for Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 August 2025, WAFIC emailed Woodside confirming that no feedback had been received from licence holders in the Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery (SI Report A, reference 11.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with licence holders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to licence holders on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed licence holders 30 days for consultation.
- Consultation for this EP commenced 8 months ago.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Woodside facilitated consultation with licence holders via WAFIC.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders functions, interests or activities.

4.5.4 Pearl Producers Association (PPA)

Summary of information provided and record of consultation for this EP:

- On 25 February 2026, as a result of additional modelling during the EP development process changes were made to the EMBA and based on those changes, Woodside undertook consultation with PPA as the representative body for the Pearl Oyster Fishery. Woodside emailed PPA advising of the proposed activity (Record of Consultation, reference 6.3.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 16 March 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.4.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with PPA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given PPA sufficient information to allow PPA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to PPA on 25 February 2026, marking the commencement of consultation for PPA on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed PPA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to PPA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed PPA 30 days for consultation.
- Consultation for this EP commenced 1 month ago.
- In this context, Woodside allowed PPA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with PPA is appropriate and adapted to the nature of interests of PPA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 16 March 2026, reminding PPA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as PPA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on PPA's functions, interests or activities.

4.5.5 Specimen Shell Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 11 February, WAFIC, on behalf of Woodside, emailed Specimen Shell Managed Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.63), provided a Consultation Information Sheet, information on potential impacts to fisheries, and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'.
- As per advice from WAFIC regarding its consultation guidelines, no follow-up email was required for Specimen Shell Managed Fishery.
- On 18 March 2026, WAFIC emailed Woodside confirming that no feedback had been received from licence holders in the Specimen Shell Managed Fishery (SI Report A, reference 11.11).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Specimen Shell Managed Fishery licence holders (referred to as licence holders below) for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. WAFIC, on behalf of Woodside, sent this information to licence holders on 11 February 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed licence holders 30 days for consultation.
- Consultation for this EP commenced 1 month ago.
- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- Woodside facilitated consultation with licence holders via WAFIC.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders functions, interests or activities.

4.5.6 West Coast Rock Lobster Fishery

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside sent a letter to West Coast Rock Lobster Fishery licence holders advising of the proposed activity (Record of Consultation, references 6.1.61), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up letter (Record of Consultation, references 6.2.3).
- On 15 September 2025, a licence holder emailed Woodside noting that their address had changed (SI Report A, reference 12.1).
- On 15 September 2025, Woodside responded thanking the licence holder of advising them of this change and confirmed that their records had been updated (SI Report A, reference 12.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with West Coast Rock Lobster Fishery licence holders (referred to licence holders below) for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given licence holders sufficient information to allow licence holders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to licence holders on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed licence holders a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to licence holders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed licence holders 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed licence holders a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with licence holders is appropriate and adapted to the nature of interests of licence holders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding licence holders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as licence holders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on licence holders' functions, interests or activities.

4.5.7 Western Rock Lobster Council

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Western Rock Lobster Council advising of the proposed activity (Record of Consultation, reference 6.1.18), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed Western Rock Lobster Council to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.18.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Western Rock Lobster Council for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Western Rock Lobster Council sufficient information to allow Western Rock Lobster Council to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Western Rock Lobster Council on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

Woodside allowed Western Rock Lobster Council a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Western Rock Lobster Council advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Western Rock Lobster Council 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Western Rock Lobster Council a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Western Rock Lobster Council is appropriate and adapted to the nature of interests of Western Rock Lobster Council:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Western Rock Lobster Council of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Western Rock Lobster Council did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Western Rock Lobster Council's functions, interests or activities.

4.6 Recreational marine users and peak representative bodies

4.6.1 Gascoyne Recreational Marine Users

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed or sent a letter to Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, references 6.1.60 and 6.1.61), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Gascoyne Recreational Marine Users to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.60.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1 and 6.2.3),

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Gascoyne Recreational Marine Users sufficient information to allow Gascoyne Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Gascoyne Recreational Marine Users on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to Gascoyne Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Gascoyne Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Gascoyne Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Gascoyne Recreational Marine Users is appropriate and adapted to the nature of interests of Gascoyne Recreational Marine Users:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Gascoyne Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Gascoyne Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Gascoyne Recreational Marine Users functions, interests or activities.

4.6.2 Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 6.1.60), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed Marine Tourism WA to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Marine Tourism WA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Marine Tourism WA sufficient information to allow Marine Tourism WA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Marine Tourism WA on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Marine Tourism WA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Marine Tourism WA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Marine Tourism WA 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Marine Tourism WA a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Marine Tourism WA is appropriate and adapted to the nature of interests of Marine Tourism WA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Marine Tourism WA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Marine Tourism WA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Marine Tourism WA's functions, interests or activities.

4.6.3 Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed or sent a letter to Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, references 6.1.60 and 6.1.61), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Pilbara/Kimberley Recreational Marine Users to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.60.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1 and 6.2.3),

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of	No additional measures or controls are required.

		Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Pilbara/Kimberley Recreational Marine Users sufficient information to allow Pilbara/Kimberley Recreational Marine Users to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Pilbara/Kimberley Recreational Marine Users on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Pilbara/Kimberley Recreational Marine Users advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Pilbara/Kimberley Recreational Marine Users 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Pilbara/Kimberley Recreational Marine Users a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Pilbara/Kimberley Recreational Marine Users is appropriate and adapted to the nature of interests of Pilbara/Kimberley Recreational Marine Users:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Pilbara/Kimberley Recreational Marine Users of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Pilbara/Kimberley Recreational Marine Users did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Pilbara/Kimberley Recreational Marine Users functions, interests or activities.

4.6.4 Recfishwest

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 6.1.14), provided a Consultation Information Sheet and a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 July 2025, Woodside emailed Recfishwest to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.14.1).
- On 14 August 2025, Recfishwest responded to Woodside (SI Report A, reference 14.1) thanking them for the email and:
  - Noted the proposed activities covered by the EP
  - **(1)** Noted that although the activities were planned to occur approximately 140 km northwest of Karratha, the proximity to the Montebello Islands meant that the area is still accessed by the charter sector and recreational fishers using larger vessels.
  - **(2)** Requested to be kept informed as the activities progressed, particularly when specific timing for activities was confirmed, so that Recfishwest could pass on relevant information to the recreational fishing community.
- On 1 September 2025, Woodside replied to Recfishwest (SI Report A, reference 14.2) thanking them for their response and:
  - **(1)** Noted Recfishwest's comments regarding the activities proximity to the Montebello Islands
  - **(2)** Confirmed that Woodside would continue to keep Recfishwest updated as the activities progressed via Woodside's notifications protocol.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Activities were planned to occur in close proximity to the Montebello Islands.	**(1)** Woodside is aware that the activities are planned in proximity to the Montebello Islands and notes that potential impacts	**(1)**	**(1)** No additional controls or measures are required as Woodside has considered potential impacts on the Marine Park

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	on Marine Parks will be assessed in the EP.	Woodside noted Recfishwest's comments regarding the activities proximity to the Montebello Islands.	throughout section 6.7 and 6.8 of the EP.
(2) Requested to be kept informed as activities progress.	**(2)** Woodside acknowledges Recfishwest's request to be informed as the activities progress.	**(2)** Woodside confirmed it would provide notifications so Recfishwest could pass on relevant information to the recreational fishing community.	**(2)** Woodside will provide notifications to Recfishwest as set out in Section 7.10, Table 7-5, PS 1.6 of the EP.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Recfishwest for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Recfishwest sufficient information to allow Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Recfishwest on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 14 August 2025, Recfishwest shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Recfishwest to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Recfishwest in response to Recfishwest's feedback (Woodside's email of 1 September 2025).

Reasonable Period

Woodside allowed Recfishwest a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Recfishwest advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Recfishwest 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Recfishwest a reasonable period for consultation in preparation of the EP as evidenced by Recfishwest's response on 14 August 2025.

Reasonable Opportunity

Woodside allowed Recfishwest a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Recfishwest as evidenced by its response on 14 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Recfishwest provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Recfishwest.
  - Made no changes or inclusions to the EP as a result of consultation with Recfishwest because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.6.5 WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 6.1.60), provided a Consultation Information Sheet, a link to NOPSEMA's brochure *'Consultation on offshore petroleum environment plans: Information for the community'*.
- On 30 July 2025, Woodside emailed WA Game Fishing Association to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.60.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with WA Game Fishing Association for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given WA Game Fishing Association sufficient information to allow WA Game Fishing Association to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to WA Game Fishing Association on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed WA Game Fishing Association a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to WA Game Fishing Association advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed WA Game Fishing Association 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed WA Game Fishing Association a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with WA Game Fishing Association is appropriate and adapted to the nature of interests of WA Game Fishing Association:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding WA Game Fishing Association of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as WA Game Fishing Association did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on WA Game Fishing Association's functions, interests or activities.

4.7 Titleholders and operators

4.7.1 3D Energi, Allasso Energy, Beagle No 1, Bounty Oil and Gas, BP Developments Australia, Carbon CQ, Carnarvon Energy, Coastal Oil and Gas, Energy Resources, Exxon Mobil Australia Resources Company, Finder No 9 /10/16/17, INPEX Alpha, Jadestone, JX Nippon O&G Exploration (Australia), Longreach Capital Investment, KATO Energy / KATO Corowa/ KATO NWS / KATO Amulet, KUFPEC, Kyushu Electric Wheatstone, OMV Australia / Sapura OMV Upstream, Pelsart Resources, PE Wheatstone, SK Earthon, Shell Australia, Skye Napoleon/Skye Resources, Tanami Energy, Vermilion Energy, Western Gas

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed titleholders advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with titleholders for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given titleholders sufficient information to allow titleholders to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to titleholders on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed titleholders a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to titleholders advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed titleholders 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed titleholders a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with titleholders is appropriate and adapted to the nature of interests of titleholders:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding titleholders of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as titleholders did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on titleholders functions, interests or activities.

4.7.2 Melbana Exploration, and Pathfinder Energy

Summary of information provided and record of consultation for this EP:

- On 6 February 2026, as a result of additional modelling during the EP development process changes were made to the EMBA and based on those changes, Woodside undertook consultation with Melbana Exploration and Pathfinder Energy. Woodside emailed Melbana Exploration and Pathfinder Energy advising of the proposed activity (Record of Consultation, reference 6.3.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 25 February 2026, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.4.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Melbana Exploration and Pathfinder Energy for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Melbana Exploration and Pathfinder Energy sufficient information to allow Melbana Exploration and Pathfinder Energy to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Melbana Exploration and Pathfinder Energy on 6 February 2026, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Melbana Exploration and Pathfinder Energy a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Melbana Exploration and Pathfinder Energy advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Melbana Exploration and Pathfinder Energy 30 days for consultation.
- Consultation for this EP commenced approximately 2 months ago.
- In this context, Woodside allowed Melbana Exploration and Pathfinder Energy a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Melbana Exploration and Pathfinder Energy is appropriate and adapted to the nature of interests of Melbana Exploration and Pathfinder Energy:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 25 February 2026, reminding Melbana Exploration and Pathfinder Energy of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Melbana Exploration and Pathfinder Energy did not provide feedback for this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Melbana Exploration and Pathfinder Energy's functions, interests or activities.

4.7.3 Chevron Australia / JERA Gorgon / MidOcean Gorgon / Osaka Gas Gorgon

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Chevron advising of the proposed activity (Record of Consultation, reference 6.1.23), provided a Consultation Information Sheet and a link to NOPSEMA's brochure 'Consultation on offshore petroleum environment plans: Information for the community'. Woodside also included GIS Shape Files and asked that the consultation information be forwarded to Chevron's Joint Venture participants Jera Gorgon, MidOcean Gorgon and Osaka Gas Gorgon for feedback.
- On 30 July 2025, Woodside emailed Chevron to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, reference 6.1.23.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- **(1)** On 28 August 2025, Chevron thanked Woodside for the considering their functions, interests, activities in relation to the planned activities and confirmed they had reviewed the materials provided and no issues were identified (SI Report A, reference 15.1).
- **(1)** On 29 August 2025, Woodside thanked Chevron for their feedback and noted that they had reviewed the information and had identified no issues (SI Report A, reference 15.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed that no issues were identified with the EP.	**(1)** Woodside accepts Chevron has no feedback on this EP.	**(1)** Woodside thanked Chevron for confirming it had identified no issues with the EP.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Chevron for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Chevron sufficient information to allow Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Chevron on 29 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 28 August 2025, Chevron shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Chevron to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Chevron in response to Chevron's feedback (Woodside's email of 29 August 2025).

Reasonable Period

Woodside allowed Chevron a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Chevron advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Chevron 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Chevron a reasonable period for consultation in preparation of the EP as evidenced by Chevron's response on 28 August 2025.

Reasonable Opportunity

Woodside allowed Chevron a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Chevron as evidenced by its response on 28 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Chevron provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Chevron.
  - Made no changes or inclusions to the EP as a result of consultation with Chevron because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.4 InCapture

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed InCapture advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- **(1)** On 30 July 2025, InCapture thanked Woodside for notifying them of upcoming activities and confirmed they had no objections (SI Report A, reference 16.1).
- **(1)** On 5 August 2025, Woodside thanked InCapture for their response and noted that they had no objections to the proposed activities (SI Report A, reference 16.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed no objections with the EP.	(1)Woodside accepts InCapture has no objections with the EP.	(1)Woodside thanked InCapture for confirming it had no objections with the EP.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with InCapture for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given InCapture sufficient information to allow InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to InCapture on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 30 July 2025, InCapture shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable InCapture to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to InCapture in response to InCapture's feedback (Woodside's email of 5 August 2025).

Reasonable Period

Woodside allowed InCapture a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to InCapture advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed InCapture 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed InCapture a reasonable period for consultation in preparation of the EP as evidenced by InCapture's response on 30 July 2025.

Reasonable Opportunity

Woodside allowed InCapture a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to InCapture as evidenced by its response on 30 July 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- InCapture provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from InCapture.
  - Made no changes or inclusions to the EP as a result of consultation with InCapture because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.5 OPIC Australia

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed OPIC Australia advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- **(1)** On 19 August 2025, OPIC Australia thanked Woodside and confirmed they had no comments on the EP (SI Report A, reference 17.1).
- **(1)** On 20 August 2025, Woodside thanked OPIC Australia for their response and noted that they had no comments on the EP (SI Report A, reference 17.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed no comments on the EP.	**(1)** Woodside accepts OPIC Australia has no comments on the EP.	**(1)** Woodside thanked OPIC Australia for confirming it had no comments on the EP.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its	No additional controls or measures are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with OPIC Australia for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given OPIC Australia sufficient information to allow OPIC Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to OPIC Australia on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 19 August 2025, OPIC Australia shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable OPIC Australia to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to OPIC Australia in response to OPIC Australia's feedback (Woodside's email of 20 August 2025).

Reasonable Period

Woodside allowed OPIC Australia a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to OPIC Australia advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed OPIC Australia 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed OPIC Australia a reasonable period for consultation in preparation of the EP as evidenced by OPIC Australia's response on 19 August 2025.

Reasonable Opportunity

Woodside allowed OPIC Australia a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to OPIC Australia as evidenced by its response on 19 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- OPIC Australia provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from OPIC Australia.
  - Made no changes or inclusions to the EP as a result of consultation with OPIC Australia because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.7.6 Santos NA Energy Holdings / Santos Ltd / Santos WA Northwest / Santos Offshore / Santos WA Southwest / Santos (BOL) / Santos WA PVG

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- **(1)** On 2 September 2025, Santos thanked Woodside and confirmed they had no objections or claims related to the planned activity (SI Report A, reference 18.1).
- **(1)** On 3 September 2025, Woodside thanked Santos for their response and noted that they had no objections or claims related to the planned activities (SI Report A, reference 18.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Confirmed no objections or claims.	**(1)** Woodside accepts Santos has no objections or claims related to the planned activities.	**(1)** Woodside thanked Santos for confirming it had no objections or claims related to the planned activities.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing	No additional controls or measures are required.

	the EP relates, as required under Regulation 24.	consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Santos for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Santos sufficient information to allow Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Santos on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 2 September 2025, Santos shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Santos to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Santos in response to Santos' feedback (Woodside's email of 3 September 2025).

Reasonable Period

Woodside allowed Santos a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Santos advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Santos 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Santos a reasonable period for consultation in preparation of the EP as evidenced by Santos' response on 2 September 2025.

Reasonable Opportunity

Woodside allowed Santos a reasonable opportunity for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Santos as evidenced by its response on 2 September 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Santos provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Santos.
  - Made no changes or inclusions to the EP as a result of consultation with Santos because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.8 Peak industry representative bodies

4.8.1 Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with AEP for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given AEP sufficient information to allow AEP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to AEP on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed AEP a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to AEP advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed AEP 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed AEP a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with AEP is appropriate and adapted to the nature of interests of AEP:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding AEP of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as AEP did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on AEP's functions, interests or activities.

4.9 Local government and elected parliamentary representatives, community groups or organisations

4.9.1 Broome Chamber of Commerce and Industry (Broome CCI)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Broome CCI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Broome CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Broome CCI sufficient information to allow Broome CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Broome CCI on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
- A timeframe for consultation and the provision of feedback.
- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Broome CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Broome CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Broome CCI 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Broome CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Broome CCI is appropriate and adapted to the nature of interests of Broome CCI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Broome CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Broome CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Broome CCI's functions, interests or activities.

4.9.2 Carnarvon Chamber of Commerce and Industry (Carnarvon CCI)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Carnarvon CCI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Carnarvon CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Carnarvon CCI sufficient information to allow Carnarvon CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Carnarvon CCI on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Carnarvon CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Carnarvon CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Carnarvon CCI 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Carnarvon CCI a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Carnarvon CCI is appropriate and adapted to the nature of interests of Carnarvon CCI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Carnarvon CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Carnarvon CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Carnarvon CCI's functions, interests or activities.

4.9.3 Exmouth Chamber of Commerce and Industry (Exmouth CCI)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Exmouth CCI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CCI sufficient information to allow Exmouth CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Exmouth CCI on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CCI 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Exmouth CCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CCI is appropriate and adapted to the nature of interests of Exmouth CCI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Exmouth CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as Exmouth CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CCI's functions, interests or activities.

4.9.4 Karratha and Districts Chamber of Commerce and Industry (KDCCI)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed KDCCI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with KDCCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given KDCCI sufficient information to allow KDCCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to KDCCI on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed KDCCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to KDCCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed KDCCI 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed KDCCI a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with KDCCI is appropriate and adapted to the nature of interests of KDCCI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding KDCCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as KDCCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on KDCCI's functions, interests or activities.

4.9.5 Onslow Chamber of Commerce and Industry (Onslow CCI)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Onslow CCI advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Onslow CCI for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Onslow CCI sufficient information to allow Onslow CCI to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Onslow CCI on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Onslow CCI a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Onslow CCI advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Onslow CCI 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Onslow CCI a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Onslow CCI is appropriate and adapted to the nature of interests of Onslow CCI:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Onslow CCI of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Onslow CCI did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Onslow CCI's functions, interests or activities.

4.9.6 Exmouth Community Liaison Group (Exmouth CLG)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Exmouth CLG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 12 November 2025, Woodside presented to the Exmouth CLG on EP consultation requirements and Woodside activities. In addition, slides on past EPs were presented to the group (SI Report A, reference 20.1).
  - No feedback was received on the EP.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 10 CLG members attended the meeting representing:
    - Shire of Exmouth
    - Gascoyne Development Commission
    - WA Country Health Service
    - Exmouth Chamber of Commerce and Industry
    - PHI
    - St John WA
- On 28 November 2025, Woodside's November presentation pack was emailed to CLG members regardless of their attendance at the meeting.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Exmouth CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Exmouth CLG sufficient information to allow Exmouth CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 Woodside gave this information to Exmouth CLG on 30 July 2025 marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Exmouth CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Exmouth CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Exmouth CLG 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Exmouth CLG a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Exmouth CLG is appropriate and adapted to the nature of interests of Exmouth CLG:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media. Woodside also presented EP information at the Exmouth CLG meeting in November 2025.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Exmouth CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Exmouth CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Exmouth CLG's functions, interests or activities.

4.9.7 Karratha Community Liaison Group (Karratha CLG)

Summary of information provided and record of consultation for this EP:

- On 20 June 2025, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 21.1).
- Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons. In addition, Woodside flagged upcoming consultation on the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation EP.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 9 CLG members attended the meeting representing:
    - City of Karratha
    - Department of Education
    - Murujuga Aboriginal Corporation
    - Department of Communities
    - Development WA
    - Dampier Community Association

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

    - Karratha Central Healthcare
    - Karratha & Districts Chamber of Commerce and Industry
    - Community member.
  - No feedback was provided for this EP.
- On 30 July 2025, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 31 July 2025, a CLG member from the Dampier Community Association emailed Woodside to advise that another member of the organisation is attending these meetings and to remove this email from the contact list (SI Report A, reference 21.2).
- On 18 August 2025, as no response on the EP had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).
- On 1 September 2025, Woodside responded to the CLG member and advised that the contact details for the Dampier Community Association had been updated (SI Report A, reference 21.3).
- On 26 September 2025, Woodside's June presentation to the CLG was emailed to the CLG members regardless of their attendance at the meeting.
- On 25 September 2025, Woodside presented to the Karratha CLG on EP consultation requirements and Woodside activities, including activities for this EP (SI Report A, reference 21.4).
- Woodside presented slides on how it consults relevant persons in the course of preparing EPs and provided information on relevant persons and EMBAs. In addition, slides on past EPs were presented to the group.
  - The slides included a QR code and a URL for the Consultation Activities page of the Woodside website.
  - 9 CLG members attended the meeting representing:
    - City of Karratha
    - Department of Education
    - Dampier Community Association
    - Karratha Central Healthcare
    - Karratha & Districts Chamber of Commerce and Industry
    - Pilbara Ports
    - Department of Creative Industries, Tourism and Sport
    - Community member x 2
  - No feedback was provided for this Environment Plans.
- On 26 September 2025, the following day, Woodside's September presentation summary pack to the CLG was emailed to the CLG members regardless of their attendance at the meeting.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP.	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Karratha CLG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Karratha CLG sufficient information to allow Karratha CLG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025 Woodside gave this information to Karratha CLG on 30 July 2025 marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Karratha CLG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Karratha CLG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Karratha CLG 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Karratha CLG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Karratha CLG is appropriate and adapted to the nature of interests of Karratha CLG:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media. Woodside also presented EP information at the Karratha CLG meetings in June and September 2025,
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Karratha CLG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Karratha CLG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Karratha CLG's functions, interests or activities.

4.9.8 City of Karratha

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the City of Karratha advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with City of Karratha for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the City of Karratha sufficient information to allow the City of Karratha to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the City of Karratha on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed City of Karratha a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the City of Karratha advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed City of Karratha 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the City of Karratha a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with City of Karratha is appropriate and adapted to the nature of interests of the City of Karratha:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding City of Karratha of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- No additional measures were considered as a result of consultation as City of Karratha did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on City of Karratha's functions, interests or activities.

4.9.9 Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 6.1.64), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 21 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Ashburton for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the Shire of Ashburton sufficient information to allow the Shire of Ashburton to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the Shire of Ashburton on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Ashburton a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the Shire of Ashburton advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Ashburton 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the Shire of Ashburton a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Ashburton is appropriate and adapted to the nature of interests of the Shire of Ashburton:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 21 August 2025, reminding Shire of Ashburton of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Ashburton did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Ashburton's functions, interests or activities.

4.9.10 Shire of Broome

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the Shire of Broome advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Broome for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the Shire of Broome sufficient information to allow the Shire of Broome to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the Shire of Broome on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Broome a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the Shire of Broome advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Broome 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the Shire of Broome a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Broome is appropriate and adapted to the nature of interests of the Shire of Broome:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Shire of Broome of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Broome did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Broome's functions, interests or activities.

4.9.11 Shire of Carnarvon

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the Shire of Carnarvon advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Carnarvon for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the Shire of Carnarvon sufficient information to allow the Shire of Carnarvon to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the Shire of Carnarvon on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Carnarvon a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the Shire of Carnarvon advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Carnarvon 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the Shire of Carnarvon a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Carnarvon is appropriate and adapted to the nature of interests of the Shire of Carnarvon:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Shire of Carnarvon of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Carnarvon did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Carnarvon's functions, interests or activities.

4.9.12 Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Exmouth for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the Shire of Exmouth sufficient information to allow the Shire of Exmouth to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the Shire of Exmouth on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Exmouth a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the Shire of Exmouth advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Exmouth 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the Shire of Exmouth a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Exmouth is appropriate and adapted to the nature of interests of the Shire of Exmouth:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Shire of Exmouth of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Exmouth did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Exmouth's functions, interests or activities.

4.9.13 Shire of Shark Bay

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed the Shire of Shark Bay advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Shire of Shark Bay for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given the Shire of Shark Bay sufficient information to allow the Shire of Shark Bay to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to the Shire of Shark Bay on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'.*
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Shire of Shark Bay a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to the Shire of Shark Bay advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Shire of Shark Bay 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed the Shire of Shark Bay a reasonable period for consultation in preparation of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Shire of Shark Bay is appropriate and adapted to the nature of interests of the Shire of Shark Bay:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Shire of Shark Bay of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Shire of Shark Bay did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Shire of Shark Bay's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10 Other non-government groups or organisations (NGOs) or individuals

4.10.1 Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCWA for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CCWA sufficient information to allow CCWA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to CCWA on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCWA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CCWA advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCWA 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed CCWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCWA is appropriate and adapted to the nature of interests of the CCWA:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Pilbara and Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding CCWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCWA's functions, interests or activities.

4.10.2 Telstra

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed Telstra advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and a map of the submarine communication cables in the vicinity of the Operational Area.
- On 1 August 2025, Telstra responded to Woodside advising that the information had been forwarded on to the appropriate stakeholders in Telstra and comments would be provided by 28 August 2025 (SI Report A, reference 23.1).
- On 1 August 2025, Telstra responded to Woodside thanking them for the opportunity to comment and that comments will be provided later in the month (SI Report A, reference 23.2).
- On 28 August 2025, Telstra responded to Woodside (SI Report A, reference 23.3) and:
  - **(1)** Stated that after reviewing the documents, it had become evident that the Geotechnical Survey activities might create risks for Telstra's subsea network cables.
  - **(2)** Advised that confirming the exact positions of Telstra's subsea network cables before beginning any geotechnical survey work would be prudent.
  - **(3)** Requested that if any survey activities were planned near subsea network cables, Telstra should be notified so that liaison could occur and an appropriate safety buffer could be maintained around the cables. Telstra also advised that CMART Requests might need to be raised so that Telstra could monitor the cables for any possible damage.
- On 15 September 2025, Woodside replied to Telstra thanking them for their response (SI Report A, reference 23.4) and:
  - **(1, 2)** Noted Telstra's comments about geotechnical survey activities and the need to identify Telstra's subsea cable assets.
  - **(2)** Outlined that the Pipeline Crossing Contract between Telstra and Woodside was still under negotiation and indicated that it recognised the planned route for the Wilcox flowline and umbilical, which intersected with two fibre-optic cables owned by Telstra. Woodside also advised that the flowline and umbilical would be installed in line with the terms of the Agreement, with work expected to be completed by mid-2028. Woodside further advised Telstra of their primary contact for the Agreement.
  - **(3)** Woodside also confirmed that Telstra would receive notifications in accordance with the Pipeline Crossing Contract.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Stated that geotechnical survey activities could pose risks to Telstra's subsea network cables.	**(1)** Woodside notes Telstra's comments in relation to geotechnical surveys.	**(1)** Woodside noted Telstra's comments in relation to geotechnical surveys and subsea network cables.	**(1)** No additional controls or measures are required.
(2) Advised that the location of subsea network cables should be confirmed before beginning geotechnical surveys.	**(2)** Woodside notes the need to confirm the location of subsea network cables, and that Woodside and Telstra have negotiated a Pipeline Crossing Contract which identifies the location of subsea network cables.	**(2)** Woodside outlined that the Pipeline Crossing Contract under negotiation with Telstra recognises the planned route for the flowlines and umbilicals and that these would be installed in line with the Agreement.	**(2)** No additional controls or measures are required. Section 3.8.3.8 of the EP provides the locations for the infrastructure crossing.
(3)	**(3)**	**(3)**	**(3)**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Requested that Telstra be notified of any survey activities planned near subsea network cables.	Woodside notes the need to notify Telstra of activities occurring in proximity to subsea network cables.	Woodside confirmed that Telstra would receive appropriate notifications in accordance with the Pipeline Crossing Contract.	No additional controls or measures are required as notifications will occur in accordance with the Pipeline Crossing Contract.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional controls or measures are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Telstra for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Telstra on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- On 1 August 2025 and 28 August 2025, Telstra shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable Telstra to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition to the information in the Consultation Information Sheet, Woodside provided additional information to Telstra in response to Telstra's feedback (Woodside's email of 15 September 2025).

Reasonable Period

Woodside allowed Telstra a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was stated in the initial correspondence to Telstra advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Telstra 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Telstra a reasonable period for consultation in preparation of the EP as evidenced by Telstra's response on 1 August 2025 and 28 August 2025.

Reasonable Opportunity

Woodside allowed Telstra a reasonable opportunity for consultation in the preparation of this EP because:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside considers a reasonable opportunity was provided to Telstra as evidenced by its response on 1 August 2025 and 28 August 2025.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Telstra provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from Telstra.
  - Made no changes or inclusions to the EP as a result of consultation with Telstra because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.10.3 The Wilderness Society (TWS)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed TWS advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, 6.2.1).
- On 25 August 2025, TWS responded to Woodside (SI Report A, reference 22.1) thanking them for the opportunity to comment and:
  - **(1)** Noted that they have an interest in companies, including Woodside, demonstrating full life-cycle planning for infrastructure, from installation through to decommissioning.
  - **(2)** Outlined NOPSEMA's "*Planning for proactive decommissioning Information Paper*".
  - **(3)** Asked what the cessation-of-production date would be.
  - **(4)** Asked when and how the infrastructure would be removed.
  - **(5)** Asked whether Woodside intended to leave any infrastructure in the marine environment.
  - **(6)** Requested information about the financial assurance in place to cover decommissioning costs
- On 20 March 2026, Woodside replied to TWS (SI Report A, reference 22.2) thanking them for their feedback and:
  - **(1)** Noted TWS' interest in decommissioning and full lifecycle planning.
  - **(2)** Noted the content from NOPSEMA's "*Planning for proactive decommissioning Information Paper*".
  - **(3)** Advised that end-of-field-life decommissioning for the Greater Western Flank Phase 4 Project would occur after the reservoirs reached the end of their economic lifespan, with the indicative timeframe currently estimated to be around 2040 in alignment with the approved end-of-life date for the Goodwyn Alpha Facility under the *Goodwyn Alpha Facility Operations Environment Plan*.
  - **(4)** Outlined that decommissioning planning typically commenced between two and 10 years prior to cessation of production and that future technical feasibility studies would be undertaken closer to end-of-field-life to determine optimal recovery methods for the subsea infrastructure.
  - **(5)** Advised that Woodside's current planning is based on subsea infrastructure above the mudline being removed from the title area.
  - **(6)** Noted that Woodside had recognised provisions for future decommissioning costs within its financial statements, and that these were reviewed on an annual basis.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
(1) Noted an interest in full life-cycle planning and decommissioning.	**(1)** Woodside understands that TWS has an interest in decommissioning.	**(1)** Woodside noted TWS' interest in decommissioning.	**(1)** No additional measures or controls are required.
(2) Outlined NOPSEMA's "*Planning for*	**(2)** Woodside is aware of NOPSEMA's	**(2)** Woodside noted the content from	**(2)** No additional measures or controls are

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

proactive decommissioning Information Paper".	"*Planning for proactive decommissioning Information Paper*".	NOPSEMA's "*Planning for proactive decommissioning Information Paper*".	required.
(3) Asked what the cessation of production date would be.	**(3)** Cessation of production is outside the scope of this EP.	**(3)** Woodside advised that the indicative end of field life is estimated to be around 2040 in alignment with the approved end of life date for the Goodwyn Alpha Facility, under the *Goodwyn Alpha Facility Operations Environment Plan.*	**(3)** Not required.
(4) Asked how the infrastructure would be removed.	**(4)** Decommissioning, including infrastructure removal, is outside the scope of this EP.	**(4)** Woodside advised that decommissioning planning typically takes place closer to end of field life and future technical feasibility studies would inform the optimal recovery methods.	**(4)** Not required.
(5) Asked whether Woodside intended to leave infrastructure behind.	**(5)** Decommissioning, including infrastructure removal, is outside of the scope of this EP. All subsea structures installed during the Petroleum Activity have been designed to be removed above the mudline.	**(5)** Woodside advised that decommissioning planning typically takes place closer to end of field life, however current planning was based on subsea infrastructure above the mudline being removed from the title area.	**(5)** Not required. Information on subsea structures is outlined in Section 3.8.7 of the EP.
(6) Requested information on financial assurance to cover decommissioning cost.	**(6)** Financial assurance for decommissioning is outside the scope of this EP.	**(6)** Woodside noted that there are recognised provisions for future decommissioning cost within its financial statements, these are reviewed annually.	**(6)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with TWS for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically: **Sufficient Information** Woodside has given TWS sufficient information to allow TWS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because: • The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to TWS on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included: – The purpose of consultation and set out what was being sought through consultation. – A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures. – A timeframe for consultation and the provision of feedback. – A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans*'. – Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations). • On 25 August 2025, TWS shared its feedback, claims or objections regarding this activity, indicating the information provided was sufficient to enable TWS to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. • In addition to the information in the Consultation Information Sheet, Woodside provided additional information to TWS in response to TWS' feedback (Woodside's email of 20 March 2026). **Reasonable Period** Woodside allowed TWS a reasonable period for consultation in the preparation of this EP because: • A consultation period was stated in the initial correspondence to TWS advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission. • Woodside's methodology allows a 30-day consultation period and Woodside allowed TWS 30 days for consultation. • Consultation for this EP commenced 8 months ago. • In this context, Woodside allowed TWS a reasonable period for consultation in preparation of the EP as evidenced by TWS' response on 25 August 2025. **Reasonable Opportunity** Woodside allowed TWS a reasonable opportunity for consultation in the preparation of this EP because: • Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation. • Woodside considers a reasonable opportunity was provided to TWS as evidenced by its response on 25 August 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- TWS provided feedback but no objections or claims. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
  - Responded to feedback from TWS.
  - Made no changes or inclusions to the EP as a result of consultation with TWS because appropriate measures are already included in the EP.

Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

4.11 Research institutes and local conservation groups or organisations

4.11.1 Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed CCG advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with CCG for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to CCG on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.
  - A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community'*.
  - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to CCG advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCG 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of interests of the CCG:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding CCG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

4.11.2 Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and considers consultation with Protect Ningaloo for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests or activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since July 2025. Woodside gave this information to Protect Ningaloo on 30 July 2025, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
  - The purpose of consultation and set out what was being sought through consultation.
  - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
  - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Protect Ningaloo a reasonable period for consultation in the preparation of this EP because:

- A consultation period was stated in the initial correspondence to Protect Ningaloo advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Protect Ningaloo 30 days for consultation.
- Consultation for this EP commenced 8 months ago.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of interests of the Protect Ningaloo:

- Woodside published advertisements in 7 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran a targeted social media campaign (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- From 2 August 2025 to 18 October 2025, Woodside held, or hosted information stalls at, a number of community events and roadshows in regional areas including the Gascoyne to raise awareness of the EP and provide another opportunity for feedback. These events were promoted in local newspapers and on social media.
- In the absence of feedback, Woodside sent a follow-up consultation email on 18 August 2025, reminding Protect Ningaloo of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12 Traditional custodians and nominated representative corporations

4.12.1 Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC)

BJNAC is established under the *Native Title Act 1993* by the Bardi and Jawi People to represent the Bardi and Jawi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed BJNAC advising of the proposed activity (Record of Consultation, reference 6.1.27). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how BJNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for BJNAC to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 19 August 2025, Woodside emailed BJNAC a reminder about the proposed activity (SI Report B, reference 1.1.1). The email included:
  - A reference to the original consultation email for this EP sent to BJNAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how BJNAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with BJNAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to BJNAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of BJNAC's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with BJNAC on 28 July 2025 and requested BJNAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to BJNAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on BJNAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (30 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with BJNAC members as well as the BJNAC Board.
  - Asked BJNAC to advise how it would like Woodside to engage and whether BJNAC required further information.
- Throughout the consultation period, Woodside and BJNAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, BJNAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.2 Bundi Yamatji Aboriginal Corporation (BYAC)

BYAC is established under the *Native Title Act 1993* (Cth) by the Bundi Yamatji people to represent the Bundi Yamatji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

The Yamatji Southern Regional Corporation (YSRC) is responsible for fulfilling the contractual obligations under the ILUA on behalf of the Yamatji Nation Community, and as such, BYAC is a part of YSRC's corporate structure. In preparation for this EP, YSRC informed Woodside that all correspondence to BYAC relating to EP consultation, is forwarded, in the first instance, to YSRC's office holders.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed BYAC advising of the proposed activity (Record of Consultation, reference 6.1.28). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values relating to BYAC that Woodside considers relevant to the activity:
    - **(1)** Migratory marine animals.
    - **(2)** Sea Country management: Yamatji sea connections and impacts to heritage values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - **(1, 2)** A request from Woodside that BYAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how BYAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for BYAC to provide information about the proposed activity to other individuals as required.
- On 28 July 2025, in response to Woodside emailing the Record of Consultation for this activity, Woodside received an email from BYAC notifying that the email address/account would no longer be active from 4 July 2025. The email identified an alternative email address for heritage related enquiries (SI Report B, reference 1.2.1).
- On 28 July 2025, in response to an automated email from BYAC, Woodside emailed BYAC the Record of Consultation to an alternative email address (SI Report B, reference 1.2.2).
- On 19 August 2025, Woodside emailed BYAC a reminder about the proposed activity (SI Report B, reference 1.2.3). The email included:
  - A reference to the original consultation email for this EP sent to BYAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by BYAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how BYAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 19 August 2025, in response to Woodside emailing the reminder email about EP consultation regarding the proposed activity to BYAC, Woodside received an email from BYAC (via Yamatji Southern Regional Corporation [YSRC]) notifying that the email address/account would no longer be active from 4 July 2025. The email identified an alternative email address for heritage related enquiries (SI Report B, reference 1.2.4).
- On 19 August 2025, in response to an automated email from BYAC (via YSRC), Woodside emailed the reminder email about EP consultation regarding the proposed activity to BYAC, confirming that Woodside had updated the contact details for BYAC so that future communications are emailed to the alternative email address and offering to discuss the matter further (SI Report B, reference 1.2.5).
- On 19 August 2025, BYAC (via YSRC) emailed Woodside confirming receipt of the email sent earlier that day and that it looked forward to keeping informed about the project and any matters relating to Yamaji Heritage, rangers and the ILUA (SI Report B, reference 1.2.6).
- On 19 August 2025, Woodside telephoned BYAC (YSRC) to understand the relationship between YSRC and BYAC and the process for notifying BYAC about Woodside's EP consultations (SI Report B, reference 1.2.7). YSRC and Woodside discussed the appropriate persons to contact for both YSRC and BYAC.
- On 19 August 2025, BYAC (via YSRC) emailed Woodside thanking for the telephone conversation and welcoming the opportunity to meet and discuss Woodside's activities and how YSRC can collaborate with Woodside, and provided additional contact details for YSRC office holders (SI Report B, reference 1.2.8).
- On 19 August 2025, Woodside emailed BYAC (via YSRC) referring to previous communications with YSRC about the best process for notifying YSRC and BYAC about Woodside's activities (SI Report B, reference 1.2.9). Woodside requested confirmation of the most appropriate process for sharing information about Woodside's

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

EPs for both PBCs and the most suitable approach that ensures that YSCR and BYAC are informed about Woodside's activities and the opportunities to share the information. Woodside also included previous emails and information about the proposed activity.

- On 26 August 2025, BYAC (via YSRC) emailed Woodside with the contact details when sending information about EPs (SI Report B, reference 1.2.10).
- On 26 August 2025, Woodside emailed BYAC (via YSRC) confirming contact details had been received and noted for future EP correspondence (SI Report B, reference 1.2.11).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Migratory marine animals.	**(1)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside invited BYAC to make changes or provide additional information about these cultural values (ROC, 6.1.25). BYAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Whale migration has been included in Section 4.9 of the EP. Controls have been adopted where appropriate in Sections 6.7 and 6.8 of the EP.
(2) Sea Country management: • Yamatji sea connections and impacts to heritage values.	**(2)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside invited BYAC to make changes or provide additional information about these cultural values (ROC, 6.1.25). BYAC did not request changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. Controls have been adopted where appropriate in Sections 6.7 and 6.8 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with BYAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to BYAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of BYAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of BYAC interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with BYAC on 28 July 2025 and requested BYAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to BYAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on BYAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with BYAC members as well as the BYAC Board.
  - Asked BYAC to advise how it would like Woodside to engage and whether BYAC required further information.
- Throughout the consultation period, Woodside and BYAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has incorporated cultural values previously provided by BYAC into the EP.
- During the past 8 months, BYAC has raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.3 Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the *Native Title Act 1993 (*Cth*)* by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed BTAC advising of the proposed activity (Record of Consultation, reference 6.1.29). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - information on the cultural values relating to BTAC that Woodside considers relevant to the activity:
    - **(1)** BTAC's cultural obligation to care for the environmental values of Sea Country – connection to, access to and transfer of knowledge:
      - Enduring deep connection north of Onslow, extending out to Islands off the Pilbara coast including the Montebello, Barrow and Mackerel Islands.
      - Cultural obligation to care for environment and values of Sea Country.
      - Resources including fish, shellfish, crabs, crustaceans, sea urchins, eggs, turtles, dugongs, flora and fauna associated with mangrove communities.
      - Artefacts and burials in coastal sand dunes.
      - Archaeological sites on Barrow and Montebello Islands.
      - Archaeological evidence of use of resources including fish, turtles, marine mammals, crocodiles, crabs and sea urchins.
      - Ceremonial sites (Thalu) for the increase of turtle, shark, ray, fish, squid, octopus, hill kangaroo and emu.
  - **(1)** A request from Woodside that BTAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how BTAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for BTAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 20 August 2025, Woodside emailed BTAC a reminder about the proposed activity (SI Report B, reference 1.3.1). The email included:
  - A reference to the original consultation email for this EP sent to BTAC on 29 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by BTAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how BTAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Values: Sea Country – connection to, access to and transfer of knowledge: • Enduring deep connection north of Onslow, extending out to Islands off the Pilbara coast including the Montebello, Barrow and Mackerel Islands. • Cultural obligation to care for environment and values of Sea Country. • Resources including fish, shellfish, crabs, crustaceans, sea urchins, eggs, turtles, dugongs, flora and fauna associated with mangrove communities. • Artefacts and burials in coastal sand dunes.	**(1)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside invited BTAC to make changes or provide additional information about these cultural values (ROC, 6.1.26). BTAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls in Sections 6.7 and 6.8.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Archaeological sites on Barrow and Montebello Islands. • Archaeological evidence of use of resources including fish, turtles, marine mammals, crocodiles, crabs and sea urchins. • Ceremonial sites (Thalu) for the increase of turtle, shark, ray, fish, squid, octopus, hill kangaroo and emu.			
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and/ or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with BTAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to BTAC on 29 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of BTAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of BTAC's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with BTAC on 29 July 2025 and requested BTAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to BTAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on BTAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with BTAC members as well as the BTAC Board.
  - Asked BTAC to advise how it would like Woodside to engage and whether BTAC required further information.
- Throughout the consultation period, Woodside and BTAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by BTAC into the EP.
- During the past 8 months, BTAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.4 Gogolanyngor Aboriginal Corporation (GAC)

GAC is established under the *Native Title Act 1993 (Cth)* by the Jabirr Jabirr/Ngumbarl and Bindunbur people to represent the Jabirr Jabirr/Ngumbarl and Bindunbur people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed GAC advising of the proposed activity (Record of Consultation, reference 6.1.30). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how GAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for GAC to provide information about the proposed activity to other individuals as required.
- On 28 July 2025, GAC emailed Woodside acknowledging receipt of Woodside's email sent earlier the same day (SI Report B, reference 1.4.1).
- On 19 August 2025, Woodside emailed GAC a reminder about the proposed activity (SI Report B, reference 1.4.2). The email included:
  - A reference to the original consultation email for this EP sent to GAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how GAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No action required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with GAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to GAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of GAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with GAC on 28 July 2025 and requested GAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to GAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on GAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with GAC members as well as the GAC Board.
  - Asked GAC to advise how it would like Woodside to engage and whether GAC required further information.
- Throughout the consultation period, Woodside and GAC have had direct contact lines to each other.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, GAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.5 Karajarri Traditional Lands Association (KTLA) (Aboriginal Corporation)

KTLA is established under the *Native Title Act 1993 (Cth)* by the Karajarri people to represent the Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed KTLA advising of the proposed activity (Record of Consultation, reference 6.1.31). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how KTLA would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for KTLA to provide information about the proposed activity to other individuals as required.
- On 19 August 2025, Woodside emailed KTLA a reminder about the proposed activity (SI Report B, reference 1.5.1). The email included:
  - A reference to the original consultation email for this EP sent to KTLA on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how KTLA would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with KTLA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to KTLA on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of KTLA's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with KTLA on 28 July 2025 and requested KTLA provide feedback by 27 August 2025for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to KTLA for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on KTLA's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with KTLA members as well as the KTLA Board.
  - Asked KTLA to advise how it would like Woodside to engage and whether KTLA required further information.
- Throughout the consultation period, Woodside and KTLA have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, KTLA has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.6 Kariyarra Aboriginal Corporation (KAC)

KAC is established under the *Native Title Act 1993* (Cth) by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 6.1.32). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values that KAC has previously provided to Woodside considered relevant to the activity:
    - **(1)** Marine animals:
      - Turtles – management of sea turtle nesting.
      - Whales - impacts to whale migration, connected to Songlines.
    - **(2)** Sea Country:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

    - Cultural obligations to care for Country.
    - Secret habitat totems.
    - Access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.
  - **(3)** Yinta:
    - Significant cultural/spiritual sites.
    - Cultural rights to land.
  - **(4)** Marine species as resources:
    - Marine mammals.
    - Fish.
    - Molluscs.
  - **(5)** Potential impacts on coastal landforms and vegetation.
  - **(6)** Heritage sites associated with the coast and ocean including the presence of mythical snakes.
  - **(7)** Transfer of knowledge to future generations:
    - Impacts of species reduction.
    - Temporary exclusion to areas in the case of an oil spill.
  - **(8)** Islands of the coast of Port Hedland are significant:
    - Little Turtle.
    - North Turtle
    - Bedout.
- **(1, 2, 3, 4, 5, 6, 7, 8)** A request from Woodside that KAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on how KAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for KAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 29 July 2025, KAC emailed Woodside acknowledging the receipt of the Record of Consultation email the day before and stating that KAC may arrange for a consultation meeting regarding the proposed activity (SI Report B, 1.6.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed KAC stating that KAC is welcome to consult on relevant EPs for the life of the plans, and that Woodside can organise a meeting at a time convenient to the Kariyarra community and provide further information about the proposed activity (SI Report B, reference 1.6.2).
- On 29 July 2025, KAC emailed Woodside requesting a consultation meeting with the KAC Board, and to discuss possible dates so a quote can be sent to Woodside for approval (SI Report B, reference 1.6.3).
- On 29 July 2025, Woodside telephoned KAC and it was confirmed that KAC's Board of Directors had requested an EP consultation about the proposed activity, and were available on 21 August 2025. Woodside and KAC also discussed consultation meeting logistics and attendance by Woodside subject matter experts (SI Report B, reference 1.6.4).
- On 30 July 2025, KAC emailed Woodside a quote for EP consultation meeting costings for approval, and its policy for meeting with proponents (SI Report B, reference 1.6.5).
- On 6 August 2025, Woodside emailed KAC, approving the quote for meeting costs and stating that Woodside would be in contact leading up to the meeting to discuss the meeting particulars (SI Report B, reference 1.6.6).
- Between 12 – 20 August 2025, KAC and Woodside exchanged emails and telephone calls regarding the planned EP consultation meeting scheduled for 21 August 2025. During this exchange KAC requested Woodside include details about presenting this proposed activity and EP during the meeting, as well as meeting costs, attendees and logistics (SI Report B, references 1.6.7 – 1.6.21). There was also a reminder email on the 19 August 2025 about the about the proposed activity which included:
  - A reference to the original consultation email for this EP sent to KAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by KAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how KAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 21 August 2025, Woodside met with KAC in Port Hedland to consult on this EP and another (SI Report B, reference 1.6.22). During the meeting:
  - Woodside provided an explanation of EPs and regulatory requirements.
  - Woodside discussed how modelling was used to determine EMBAs.
  - **(9)** KAC enquired about EMBAs in regard to extreme weather events such as cyclones and spill response times. **(9)** Woodside stated that there are many factors that affect spill modelling for EMBAs including weather conditions, ocean currents, and the type of vessels. Woodside took the query about cyclone data being included in EMBA modelling on notice.
  - **(10)** KAC asked about timeframes around plugging and abandonment or drilling because the Board needs to be aware of the circumstances that may impact cultural values and the environment. **(10)** Woodside stated that it puts plans in place to mitigate impacts to cultural values and the environment in EPs, and that is why consultation about cultural values is important.
  - **(11)** KAC asked about cement being used for plug and abandonment activities and if there is an environmental risk of cement degradation over time. **(11)** Woodside took the question on notice.
  - **(12)** KAC queried where Woodside had collated its list of KAC's cultural values. **(12)** Woodside stated it had sourced KAC's cultural values via consultation and feedback from KAC when consulting on other EPs and desktop research.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** KAC provided addition information on marine species identified as cultural values which include: shellfish, cockles, oysters, clam shells, con shells, mullets and sea cow (dugong), as well as the importance of **(13)** river systems as food chains. **(1, 13)** Woodside acknowledged this new information and advised it would update it records and current and future EPs accordingly.
- **(14)** KAC asked if Woodside considered historical mapping of cultural values and prehistoric coastlines when understanding the closeness of the activity to KAC's Native Title determination. **(14)** Woodside stated that maritime archaeologists are often engaged to assess potential underwater archaeological material prior to undertaking its activities.

- On 26 August 2025, Woodside emailed KAC to clarify the names of people present during the 21 August 2025 meeting. KAC replied with the names of attendees (SI Report B, references 1.6.23 – 1.6.24).
- On 17 September 2025, Woodside emailed KAC updated information about its record of Cultural Values for KAC and responses to questions taken on notice during their 21 August 2025 meeting (SI Report B, reference 1.6.25):
  - **(9)** Information about consideration of cyclone events in spill modelling. The modelling does capture large-scale ocean changes caused by cyclones.
  - **(11)** Information about the use of cement to plug wells. Cement is non-corrosive and resistant to chemical degradation. it will not pose significant damage or harm to the immediate surrounding marine environment.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: Marine Animals • Management of sea turtle nesting. • Impacts to whale migration (whales are connected to Songlines). Additional species identified during consultation for this EP include: • Shellfish • Cockles • Oysters • Clam shells • Con shells • Mullets • Sea cow (dugong).	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). During consultation for this EP, KAC identified additional species. Woodside has updated its records and the EP to reflect this feedback.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. Whale migration and turtle nesting has been included in Section 4 of the EP. Controls have been adopted where appropriate in Sections 6.7 and 6.8 of the EP.
(2) Cultural Value: Sea Country	**(2)** This value has been identified through Woodside's data collection processes	**(2)** At the beginning of consultation for this EP, Woodside invited KAC to make	**(2)** Woodside has updated Section 4.9 to record these interests and cultural

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Cultural obligations to care for Country. • Secret habitat totems. • Access required for fishing, trapping, crabbing, catching turtle, hunting dugong, using stingray barbs for spears, collecting shellfish and visiting offshore islands at low tide.	(consultation and reviews of publicly available literature).	changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(3) Cultural Value: Yinta • Significant cultural/spiritual sites. • Cultural rights to land.	**(3)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(4) Cultural Value: Marine species as resources • Marine mammals • Fish • Molluscs.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate including controls, in Sections 6.7 and 6.8.
(5) Cultural Value: • Potential impacts on coastal landforms and vegetation.	**(5)** This value has been identified through Woodside's data collection processes (consultation).	**(5)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate including controls, in Sections 6.7 and 6.8.
(6) Cultural Value: • Heritage sites associated with the coast and ocean including the presence of mythical snakes.	**(6)** This value has been identified through Woodside's data collection processes (consultation and reviews of publicly available literature).	**(6)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29).	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

		KAC did not request changes.	including controls, in Sections 6.7 and 6.8.
(7) Cultural Value: Transfer of knowledge to future generations • Impacts of species reduction. • Temporary exclusion to areas in the case of an oil spill etc.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	**(7)** Woodside recorded this cultural value in section 4.9 of the EP. Measures relating to oil spills are covered in Appendix G - Oil Spill Preparedness and Response Strategy Selection and Evaluation, and Appendix H – First Strike Plan.
(8) Islands off the coast of Port Hedland are extremely important to KAC (Little Turtle, North Turtle and Bedout).	**(8)** This value has been identified through Woodside's data collection processes (consultation).	**(8)** At the beginning of consultation for this EP, Woodside invited KAC to make changes or provide additional information about this cultural value (See ROC, 6.1.29). KAC did not request changes.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate including controls, in Sections 6.7 and 6.8.
(9) KAC enquired about EMBAs in regard to extreme weather events such as cyclones and spill response times.	**(9)** Spill modelling for EMBAs includes assessment of weather conditions, ocean currents and vessel types.	**(9)** Woodside provided information about EMBA spill modelling during its meeting on 21 August 2025, further information was provided via email on 17 September 2025.	**(9)** Spill modelling is described in Section 6.8.1 of the EP and measures relating to oil spills are covered in Appendix G - Oil Spill Preparedness and Response Strategy Selection and Evaluation, and Appendix H – First Strike Plan.
(10) KAC asked about timeframes around plugging and abandonment or drilling because the Board needs to be aware of the circumstances that may impact cultural values and the environment.	**(10)** Woodside stated that it puts in place plans to mitigate impacts to cultural values and the environment in EPs	**(10)** Woodside provided information about timeframes to KAC in the Summary Information Sheet (ROC, 6.1.2). Woodside explained that consultation about Cultural Values is important so appropriate mitigation measures can be put in place.	**(10)** Woodside records cultural values in section 4.9 of the EP. Mitigation measures are in Sections 6.7 and 6.8.
(11) KAC asked about cement being used for plug and abandonment activities and if	**(11)** Cement is non-corrosive and resistant to chemical degradation, making it a	**(11)** The use of any environment/cement plugs for decommissioning activities considers that any potential minor	**(11)** No additional measures or controls are required

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

there is an environmental risk of cement degradation over time.	suitable and reliable choice for permanent well abandonment (P&A).	degradation of cement over significantly long periods (hundreds of years) will not pose significant damage or harm to the immediate surrounding marine environment. Woodside provided additional information about cement to KAC via email on 17 September 2025.	
(12) KAC queried how Woodside had collated its list of KAC's cultural values.	**(12)** At the start of consultation, Woodside provided KAC with information about the Cultural Values it had collated for the group through consultation and publicly available literature (See ROC, 6.1.29).	**(12)** Woodside explained to KAC that it had sourced KAC's cultural values via consultation and feedback from KAC when consulting on other EPs and desktop research.	**(12)** No further action required.
(13) River systems are important to the food chain.	**(13)** Woodside assesses environmental impacts of its EPs and puts in place appropriate mitigation measures. River systems are not relevant for this EP.	**(13)** Woodside has informed KAC that it will update it records and current and future EPs accordingly.	**(13)** Cultural values relating to river systems are documented in Section 4.9.
(14) KAC asked if Woodside considered historical mapping of cultural values and prehistoric coastlines when understanding the closeness of the activity to KAC's Native Title determination.	**(14)** Woodside conducts a thorough assessment of coastlines when developing EPs.	**(14)** Woodside has informed KAC that that maritime archaeologists are often engaged to assess potential for underwater archaeological material prior to undertaking its activities.	**(14)** Cultural values relating to historical mapping of prehistorical coastlines are in Section 4.9. Mitigation measures relating to coastlines are in Sections 6.7 and 6.8.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of the feedback to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with KAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to KAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of KAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of KAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with KAC on 28 July 2025 and requested KAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to KAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on KAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with KAC members as well as the KAC Board.
  - Asked KAC to advise how it would like Woodside to engage and whether KAC required further information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Throughout the consultation period, Woodside and KAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by KAC into the EP.
- Additional cultural values were identified during consultation for this EP including shellfish, cockles, oysters, clam shells, con shells, mullets and sea cow (dugong). Section 4.9 in the EP has been updated to record these cultural interest and values.
- During the past 8 months, KAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.
- KAC raised concerns during an EP consultation meeting about the noise produced by the activity and the safety of marine fauna during surveying activities. Woodside provided responses to the concerns during the meeting, and where appropriate, controls have been included in the EP.
- KAC has provided no additional feedback or claims during consultation.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.7 Malgana Aboriginal Corporation (Malgana)

Malgana is established under the *Native Title Act 1993 (Cth)* by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. YMAC provides Malgana with administrative assistance.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Malgana advising of the proposed activity (Record of Consultation, reference 6.1.33). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Interest in Shark Bay:
      - Environment, stromatolites and microbial mats.
    - **(2)** Access to Country for resources:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Bird and turtle eggs.
- Dugongs.
- Turtles.
- Fish including sharks.
- Shellfish including crabs.

▪ **(3)** Freshwater seeps – traditional knowledge.

▪ **(4)** Cultural significant species:

- Green sea turtles.
- Dugongs.
- Shags.
- Bottlenose dolphins.

▪ **(5)** Knowledge – sharing and controlling, transfer of knowledge to younger generations.

– **(1, 2, 3, 4, 5)** A request from Woodside that Malgana confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.

– A request for information on how Malgana would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.

– A request for feedback by 27 August 2025 for the purposes of preparation of this EP.

– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

– Woodside's commitment to managing gender-restricted or other culturally sensitive information.

– A request for Malgana to provide information about the proposed activity to other individuals as required.

- On 19 August 2025, Woodside emailed Malgana a reminder about the proposed activity (SI Report B, reference 1.7.1). The email included:

– A reference to the original consultation email for this EP sent to Malgana on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by Malgana to Woodside.

– A reminder that consultation for the preparation of this EP closes on 27 August 2025.

– A request for information on how Malgana would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.

– Woodside's commitment to managing gender-restricted or other culturally sensitive information.

– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value:	**(1)**	**(1)** At the beginning of consultation for this EP, Woodside invited Malgana to make	**(1)** Woodside has updated Section 4.9 to record these interests and cultural

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• Interest in Shark Bay – environment and stromatolites and microbial mats.	This value has been identified through Woodside's data collection processes (consultation).	changes or provide additional information about this cultural value (ROC, 6.1.30). Malgana did not request changes.	values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(2) Cultural Value: • Access to Country for resources – bird and turtle eggs, dugongs, turtle, fish including sharks, shellfish, crabs.	**(2)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (See ROC, 6.1.30). Malgana did not request changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(3) Cultural Value: • Freshwater seeps – traditional knowledge.	**(3)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(3)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (See ROC, 6.1.30). Malgana did not request changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8. Freshwater seeps are not present in the Operational Area.
(4) Cultural significant species: • green sea turtles • dugongs • shags • bottlenose dolphins.	**(4)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (See ROC, 6.1.30). Malgana did not request changes.	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(5) Cultural Value Knowledge: • Sharing and controlling of knowledge. • Transfer of knowledge to younger generations.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside invited Malgana to make changes or provide additional information about this cultural value (See ROC, 6.1.30). Malgana did not request changes.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and/ or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Malgana for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Malgana on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of Malgana's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Malgana's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Malgana on 28 July 2025 and requested Malgana provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Malgana for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Malgana's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Malgana members as well as the Malgana Board.
  - Asked Malgana to advise how it would like Woodside to engage and whether Malgana required further information.
- Throughout the consultation period, Woodside and Malgana have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by Malgana into the EP.
- During the past 8 months, Malgana has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.8 Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values. In July 2025, United Nations Educational, Scientific and Cultural Organization (UNESCO) inscribed the Murujuga Cultural Landscape on the World Heritage list.

Historical Information:

- **(1)** On 2 August 2024, MAC emailed a letter to Woodside about an unrelated EP. In the letter, MAC requested separate assessments for the protection of environmental and cultural values.
- **(1)** On 17 September 2024, Woodside replied to MAC's letter and explained that Woodside assesses cultural impacts collaboratively with environmental impacts and controls in an EP.

Please see Julimar Operations Environment Plan App F and SI for further details.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 6.1.34). The email included:
  - A Summary Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to the Consultation Information Sheet.
- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- Information on the cultural values that MAC has previously provided to Woodside considered relevant to the activity:
  - **(2)** Ecosystem and health of Mermaid Sound.
  - **(3)** Marine species:
    - Whales
    - Dolphins.
    - Dugongs.
    - Fish.
    - Sea snakes.
    - Turtles.
    - Coral.
    - Seagrass.
  - **(4)** Marine eco-systems:
    - Mangroves.
    - Macroalgal (seaweed) communities.
    - Subtidal soft bottom communities.
    - Intertidal sand and mudflat communities.
    - Rocky shores.
  - **(5)** Fish traps in Conzinc Bay, and Angel and Gidley Islands.
  - **(6)** Harvesting squid around Conzinc Bay.
  - **(7)** MAC is the appropriate cultural authority for Murujuga.
  - **(8)** Potential impact on Jinna (Songlines) on the submerged landscape.
- **(2, 3, 4, 5, 6, 7, 8)** A request from Woodside that MAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on how MAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for MAC to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 July 2025, Woodside received an out of office email notification from MAC, in response to the Record of Consultation email for this activity (SI Report B, reference 1.8.1).
- On 19 August 2025, Woodside emailed MAC a reminder about the proposed activity (SI Report B, reference 1.8.2). The email included:
  - A reference to the original consultation email for this EP sent to MAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by MAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2925.
  - A request for information on how MAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 22 August 2025, MAC emailed Woodside stating it had reviewed the proposed activity's Summary Information Sheet and Consultation Information Sheet, and queried where MAC could find the cultural values listed in Appendix A, which had been collated by Woodside (SI Report B, reference 1.8.3).
- On 22 August 2025, Woodside emailed MAC advising that Woodside would respond to MAC's query regarding the collation of cultural values (SI Report B, reference 1.8.4).
- On 22 August 2025, Woodside emailed MAC with an Appendix A attachment listing MAC's cultural values known to Woodside (SI Report B, reference 1.8.5).
- On 22 August 2025, MAC responded via email to Woodside requesting clarification on its cultural values including (SI Report B, reference 1.8.6):
  - **(3)** Species identified by Woodside as being significant to MAC was too narrow. Stingrays, sharks, crustaceans, octopus, sea stars, sea urchins, sponges and molluscs are also culturally valued species.
  - **(9)** Any changes to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.
  - **(8)** Submerged landscape: potential impact to aboriginal heritage, the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.
  - **(5)** It is not clear why fish traps at Conzinc, Angel and Gidley have been singled out as significant amongst Murujuga's fish traps.
  - **(6)** It is not clear why harvesting squid at Conzinc Bay is singled out above other subsistence activities that have been and continue to be practiced across the archipelago.
- On 28 August 2025, Woodside responded by email to MAC's feedback about this EP and another (SI Report B, reference 1.8.7). Woodside:
  - **(3, 5, 6, 8, 9)** Provided MAC with an expanded Cultural Values table which included new information provided by MAC and details about sources.
  - **(5, 6)** Explained how Woodside sources information about Cultural Values for EPs.
  - **(3, 5, 6, 8, 9)** Invited MAC to review the Cultural Values table and provide further feedback if necessary.
- On 19 March 2026, Traditional Owner members from MAC, NAC and Yindjibarndi attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside provided information about the EP consultation process (SI Report B, reference 5.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) MAC requested separate assessments for the protection of environmental and cultural values.	**(1)** Woodside undertakes assessments for both environmental and cultural values. These are considered individually and collaboratively.	**(1)** Woodside has advised MAC that it assesses environmental and cultural values both individually and collaboratively.	**(1)** Woodside discusses cultural value sin Section 4.9. Potential impacts and mitigation measures in relation to these values are documented in Section 6.7 and 6.8 of this EP.
(2) Cultural Value: • Ecosystem and health of Mermaid Sound.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (see ROC, 6.1.31). MAC did not request changes.	**(2)** Woodside has record these interests and cultural values in Section 4.9 to and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.
(3) Cultural Value – marine species: • whales, totemic importance. • dolphins, cultural ceremonies. • dugongs, food source. • fish, cultural ceremonies. • sea snakes, culturally important. • turtles, Songlines • coral, attract fish and other species • seagrass, provide protection for animals • locations include Conzinc Bay, and between Angel and Gidley Islands. On 22 August 2025, MAC advised Woodside that these species also had cultural value: • stingrays • sharks • crustaceans	**(3)** This value has been identified through Woodside's data collection processes (consultation). On 28 August 2025, Woodside informed MAC that is updated its record of MAC's cultural values, and provided MAC the opportunity to provide further feedback.	**(3)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.31). On 22 August 2025, MAC advised Woodside that this list was too narrow and provided more details. Woodside has amended its records and informed MAC of these changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• octopus • sea star • sea urchins • sponges • molluscs.			
(4) Cultural Value – marine eco-systems: • Mangroves. • Macroalgal (seaweed) communities. • Subtidal soft bottom communities. • Intertidal sand and mudflat communities. • Rocky shores.	**(4)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(4)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.31) MAC did not request changes.	**(4)** Woodside has recorded these interests and cultural in Section 4.9 to values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.
(5) Cultural Value: • Fish traps in Conzinc Bay, and Angel and Gidley Islands. On 22 August 2025, MAC queried this cultural value.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature). Although this area is not within the EP EMBA Woodside has noted this value in the EP. On 28 August 2025, Woodside informed MAC that is updated its record of MAC's cultural values, explained our values were sourced and provided MAC the opportunity to provide further feedback.	**(5)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.31) On 22 August 2025, MAC queried this cultural value.	**(5)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.
(6) Cultural Value: • Harvesting squid around Conzinc Bay.	**(6)** This value has been identified through Woodside's data collection processes (publicly available literature). On 28 August 2025, Woodside informed MAC that is updated its record of MAC's	**(6)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or	**(6)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

On 22 August 2025, MAC queried this cultural value.	cultural values, explained our values were sourced and provided MAC the opportunity to provide further feedback.	provide additional information (See ROC,6.1.31). On 22 August 2025, MAC queried this cultural value.	
(7) Cultural Value: • MAC is the appropriate cultural authority for Murujuga.	**(7)** This value has been identified through Woodside's data collection processes (consultation).	**(7)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.31). MAC did not request changes.	**(7)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 in this EP.
(8) Cultural Value: • Potential impact on Jinna (Songlines) on the submerged landscape. On 22 August MAC provided this additional detail: • Potential impact to Aboriginal heritage, the submerged coastline at initial occupation of the region, landscape features that would have defined the first travel routes used to move through Country.	**(8)** This value has been identified through Woodside's data collection processes (consultation). On 28 August 2025, Woodside informed MAC that is updated its record of MAC's cultural values, and provided MAC the opportunity to provide further feedback.	**(8)** At the beginning of consultation for this EP, Woodside provided MAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.31). On 22 August 2025, MAC provided additional information about this Cultural Value. Woodside has amended its records and informed MAC of these changes.	**(8)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7. and 6.8 in this EP.
(9) Any changes to the feeding, breeding or migratory behaviour of culturally significant species would impact significantly on subsistence, cultural and ceremonial activities.	**(9)** Woodside acknowledges this feedback and has updated its Cultural Values records for MAC. Woodside has also included this information in the EP.	**(9)** Woodside has provided MAC with details of Woodside's updated Cultural Values records.	**(9)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7. and 6.8 in this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of the feedback to which the EP relates, as required under Regulation 24.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with MAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to MAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of MAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of MAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with MAC on 28 July 2025 and requested MAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to MAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on MAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with MAC members as well as the MAC Board.
  - Asked MAC to advise how it would like Woodside to engage and whether MAC required further information.
- Throughout the consultation period, Woodside and MAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values provided by MAC into the EP.
- Additional cultural values were identified during consultation for this EP including stingrays, sharks, crustaceans, octopus, sea stars, sea urchins, sponges and molluscs. Section 4.9 in the EP has been updated to record these cultural interests and values.
- During the past 8 months, MAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.9 Nanda Aboriginal Corporation (Nanda)

Nanda was established under the *Native Title Act 1993* (Cth) by the Nanda people to represent the Nanda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

YMAC is the Native Title Representative Body for Nanda.

Historical engagement:

- On 12 May 2025, Woodside and Nanda (via YMAC) met in-person at the YMAC Geraldton office to consult on an unrelated EP. Matters raised relevant to the proposed activity include:
  - **(1)** Nanda asked about whale migration pathways. **(1)** Woodside explained the mitigation methods employed where activities overlap migration pathways.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** Nanda noted that the Abrolhos Islands are culturally significant noting the presence of artefacts and historical significance. **(2)** Woodside acknowledged this and explained the opportunities with industry, universities, and government to support sea mapping. Woodside invited Nanda to discuss this further.
- **(3)** Nanda raised concerns around retaining cultural knowledge and the implications of sharing cultural values. **(3)** Woodside explained that it is the decision of Nanda whether cultural values are shared or not.
- **(4, 5)** Nanda shared further cultural values which include white snow crabs, North Island artefacts and food sources. **(4)** Woodside acknowledged these cultural values.

- On 10 June 2025, Woodside emailed Nanda (via YMAC) following up from the consultation from 12 May 2025. Woodside thanked Nanda for the meeting and acknowledged the cultural values shared which include:
  - **(2, 4)** White snow crabs of Shark Bay, North Island artefacts and the importance of food sources.
  - **(2)** Abrolhos Islands, noting the presence of artefacts and their historical significance.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Nanda advising of the proposed activity (Record of Consultation, reference 6.1.35). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values previously provided by Nanda that Woodside consider relevant for consultation:
  - **(5)** Connection to Country:
    - Kalbarri Coastal Cliffs have Dreamtime and creation stories.
    - Archaeological sites.
    - Red sandstone outcrops.
    - Freshwater springs.
    - Abundance of artefacts on islands adjacent to the state marine park.
  - **(6)** Shorelines are culturally significant.
  - **(1)** Whales and migration patterns.
  - **(1, 5, 6)** A request from Woodside that Nanda confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how Nanda would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Nanda to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 19 August 2025, Woodside emailed Nanda a reminder about the proposed activity (SI Report B, reference 1.9.1). The email included:
  - A reference to the original consultation email for this EP sent to Nanda on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by Nanda to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how Nanda would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural value • whales • whale migration patterns.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (ROC, 6.1.32). Nanda did not request any changes. Woodside acknowledges Nanda's previously raised cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(1)** No action required.
(2) Cultural value: Abrolhos Islands and North Island • artefacts • historical significance	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** Woodside acknowledges Nanda's cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(2)** No action required

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(3) Nanda raised concerns around retaining cultural values.	**(3)** Woodside explained that it is the decision of Nanda whether cultural values are conveyed to Woodside or not.	**(3)** Woodside acknowledges Nanda's feedback. As Nanda is not considered a relevant person for this EP, Woodside has made note of this feedback.	**(3)** No action required.
(4) Cultural value: significance of: • white snow crabs • food sources.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** Woodside acknowledges Nanda's cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(4)** No action required
(5) Cultural Value: Connection to Country: • Kalbarri Coastal Cliffs: Dreamtime, mythological/ creation stories • archaeological sites • red sandstone outcrops • freshwater springs • abundant artefacts on islands adjacent to the state marine park.	**(5)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(5)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (ROC, 6.1.32). Nanda did not request any changes. Woodside acknowledges Nanda's previously raised cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	**(5)** No action required
(6) Cultural value: • shorelines.	**(6)** This value has been identified through Woodside's data collection processes (consultation).	**(6)** At the beginning of consultation for this EP, Woodside invited Nanda to make changes or provide additional information about this cultural value (ROC, 6.1.32). Nanda did not request any changes.	**(6)** No action required

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside acknowledges Nanda's previously raised cultural values. As Nanda's determination falls outside of the EMBA for this EP, Woodside has made note of this information, but has not included this value or any associated mitigation measures in the EP.	
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Nanda for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Nanda on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of Nanda's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Nanda's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Nanda on 28 July 2025 and requested Nanda provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Nanda for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Nanda's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Nanda members as well as the Nanda Board.
  - Asked Nanda to advise how it would like Woodside to engage and whether Nanda required further information.
- Throughout the consultation period, Woodside and Nanda have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by Nanda into the EP.
- During the past 8 months, Nanda has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.10 Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the *Native Title Act 1993* (Cth) by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 July 2025, Woodside emailed NTGAC advising of the proposed activity (Record of Consultation, reference 6.1.36). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Interests in marine ecosystems and species:
      - Invasive marine species.
      - Chemicals released into the water (ballast water discharges).
      - Risks to marine parks.
  - **(1)** A request from Woodside that NTGAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how NTGAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for NTGAC to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 19 August 2025, Woodside emailed NTGAC a reminder about the proposed activity (SI Report B, reference 1.10.1). The email included:
  - A reference to the original consultation email for this EP sent to NTGAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by NTGAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how NTGAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 19 August 2025, NTGAC emailed Woodside requesting that email contact details for NTGAC be updated for future and ongoing correspondence (SI Report B, reference 1.10.2).
- On 19 August 2025, Woodside emailed NTGAC confirming that NTGAC's email contact details had been updated (SI Report B, reference 1.10.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) Cultural Value: Interests in marine ecosystems and species: • Invasive marine species. • Chemicals released into the water – ballast water discharge. • Marine parks – risks.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided NTGAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.33). NTGAC did not request changes.	**(1)** Woodside recorded cultural values in Section 4.9 of the EP. The management of ballast water discharges is covered in Section 6.78 in this EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and/ or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with NTGAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to NTGAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of NTGAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of NTGAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with NTGAC on 28 July 2025 and requested NTGAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to NTGAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on NTGAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NTGAC members as well as the NTGAC Board.
  - Asked NTGAC to advise how it would like Woodside to engage and whether NTGAC required further information.
- Throughout the consultation period, Woodside and NTGAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by NTGAC into the EP.
- During the past 8 months, NTGAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.11 Ngarluma Aboriginal Corporation (NAC)

NAC is established under the *Native Title Act 1993 (Cth)* by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 6.1.37). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information, and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
  - **(1)** Onshore heritage.
  - **(2)** Potential of submerged heritage.
  - **(1, 2)** A request from Woodside that NAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how NAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for NAC to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 29 July 2025, Woodside telephoned NAC to discuss a range of matters including the proposed activity (SI Report B, reference 1.11.1). Woodside enquired if NAC received information about the proposed activity and would like to meet and further discuss. Woodside and NAC also discussed engagement between NAC and Woodside. NAC acknowledged Woodside's willingness to engage and consult, and confirmed NAC's resourcing constraints had impacted their ability to meet. NAC expressed gratitude for Woodside's patience and suggested meeting to discuss ways to develop engagement opportunities.
- On 19 August 2025, Woodside emailed NAC a reminder about the proposed activity (SI Report B, reference 1.11.2). The email included:
  - A reference to the original consultation email for this EP sent to NAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by NAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how NAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 3 September 2025, Wong Goo Tt Oo, WAC and NAC attended Woodside's Quarterly Heritage Meeting (SI Report B, reference 6.1). Matters discussed relating to this EP included:
  - Cultural heritage update.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Training and contracting opportunities.
- Project updates.

- On 2 December 2025, Woodside emailed NAC an invitation to Woodside's Quarterly Heritage Meeting on 3 December 2025, as an opportunity for Woodside to provide updates on Woodside's activities to Traditional Owner groups and to receive feedback from the community (SI Report B, reference 1.11.3).
- On 3 December 2025, NAC attended Woodside's Quarterly Heritage Meeting, at which Woodside stated that consultation for future EPs would recommence in Q1 2026 and showed an example of new animations videos used to support EP consultation (SI Report B, reference 6.2).
- On 28 January 2026, Woodside emailed NAC a reminder for the Heritage Meeting scheduled for 4 March 2026 (SI Report B, reference 1.11.4).
- On 5 February 2026, Woodside emailed NAC, WAC and Wong-Goo-Tt-Oo dates of upcoming heritage meetings (SI Report B, reference 1.11.5).
- On 17 February 2026, Woodside emailed NAC to confirm attendance numbers for the Quarter 1 Heritage Meeting scheduled for the 4 March 2026 (SI Report B, reference 1.11.6).
- On 25 February 2026, Woodside distributed an invitation to a community luncheon to NAC, WAC and NYFL. The invitation stated that the event in Roebourne on 19 March 2026 was an opportunity for groups to share stories and receive updates from Woodside (SI Report B, reference 5.1).
- On 4 March 2026, NAC and Wong-Goo-Tt-Oo attended a Quarterly Heritage Meeting (SI Report B, reference 6.3). Matters discussed included:
  - Woodside explained the consultation process for all EPs.
  - Woodside requested information about cultural values.
  - Woodside emphasised that consultation is a two-way dialogue.
- On 19 March 2026, Traditional Owner members from MAC, NAC and Yindjibarndi attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside provided information about the EP consultation process (SI Report B, reference 5.2).

• Summary of Feedback, Objection or Claim	**Woodside's Assessment of Merits of Feedback, Objection or Claim**	**Woodside's Response**	**Inclusion in Environment Plan**
(1) Cultural Value: • Onshore Heritage.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided NAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.34). NAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 of the EP. Onshore Heritage is not present in the Operational Area but may be contacted in the event of a large hydrocarbon spill (Section 6.8).
(2) Cultural Value: • Potential of submerged heritage.	**(2)**	(2) At the beginning of consultation for this EP, Woodside provided NAC with a list	**(2)** Woodside has updated Section 4.9 to record these interests and cultural

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	This value has been identified through Woodside's data collection processes (consultation).	of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.34). NAC did not request changes.	values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 in this EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with NAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to NAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of NAC's cultural values, previously provided to Woodside during consultation on unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of NAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with NAC on 28 July 2025 and requested NAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has addressed and responded to NAC for more than 8 months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on NAC’s preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NAC members as well as the NAC Board.
  - Asked NAC to advise how it would like Woodside to engage and whether NAC required further information.
- Throughout the consultation period, Woodside and NAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by NAC into the EP.
- During the past 8 months, NAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.12 Nhuwala Claim Group (Nhuwala)

The Nhuwala Claim Group Native Title claim is in Western Australia’s Pilbara region within the Shire of Ashburton. The application area covers around 3,475 square kilometres near the town of Onslow. Nhuwala is represented by YMAC. On 19 August 2025, YMAC telephoned Woodside to confirm that YMAC is supporting the Nhuwala Native Title claim and to discuss EP consultation.

Before consultation commenced for this EP, Nhuwala (via YMAC) requested an EP consultation meeting with Woodside on 22 September 2025 to discuss other EPs. When informed about being a relevant person for consultation for this EP on 8 September 2025, Nhuwala requested the proposed activity to be included for discussion at the meeting.

The meeting was rescheduled and booked for 4 November 2025 but was cancelled by Nhuwala (via YMAC) on 30 October 2025, with a request for the meeting to be postponed to the week beginning 17 November 2025. Woodside informed Nhuwala (via YMAC) that formal consultation for this EP closed on 24 October 2025 and any feedback received during the meeting would be considered ongoing consultation. This context and process demonstrates that Woodside’s consultation approach with Nhuwala is appropriate and adapted to its nature and interests.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 26 August 2025, Woodside emailed Nhuwala Claim Group (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.38). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how Nhuwala would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 25 September 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Nhuwala to provide information about the proposed activity to other individuals as required.
- On 26 August 2025, Nhuwala (via YMAC) emailed Woodside acknowledging receipt of the consultation email for this activity and informing Woodside that the activity would be added to an EP consultation meeting agenda (SI Report B, reference 1.12.1). YMAC also proposed a meeting date, time and venue, as well as stating it would send a meeting budget for Woodside's review and approval.
- On 27 August 2025, Woodside sent a text message to Nhuwala (via YMAC) requesting a change to the meeting date due to subject matter expert availability (SI Report B, reference 1.12.2).
- On 5 September 2025, Woodside emailed Nhuwala (via YMAC) to follow-up on the request for a proposed new meeting date on 22 September 2025 to accommodate resourcing and travel arrangements (SI Report B, reference 1.12.3).
- On 8 September 2025, Nhuwala (via YMAC) emailed Woodside regarding the proposed EP consultation meeting, confirming the new date of 22 September 2025 in Karratha. YMAC included a cost estimate for the meeting (SI Report B, reference 1.12.4).
- On 11 September 2025, Nhuwala (via YMAC) emailed Woodside to follow-up on its cost estimates budget for a proposed meeting on 22 September 2025 (SI Report B, reference 1.12.5).
- On 11 September 2025, Woodside emailed Nhuwala (via YMAC) in response to an earlier email regarding cost estimates for a proposed EP consultation meeting on 22 September 2025 (SI Report B, reference 1.12.6). Woodside advised YMAC that the proposed cost exceeded the limits set by Woodside's policies in relation to funding consultation meetings and requested YMAC submit a revised quote.
- On 11 September 2025, Nhuwala (via YMAC) emailed Woodside thanking for the feedback regarding the budget for the proposed consultation meeting (SI Report B, reference 1.12.7) and:
  - Acknowledging that Woodside has policies that may limit the funding for such meetings.
  - Stating that Nhuwala required the ability to select the venue for consultation meetings to ensure its members felt comfortable and safe.
  - Stating that Nhuwala has nominated a specific number of members for the consultation committee based on their cultural knowledge, experience, and expertise.
  - Advising that YMAC would bring Woodside's meeting proposal to the next meeting of Nhuwala members in mid-October.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Stating that a legal representative is required to attend the first meeting with Woodside to support the Nhuwala group, and costs associated with this representative should be funded by Woodside.
  - Informing Woodside that the originally proposed date of 22 September was not achievable.
  - Reiterating Nhuwala's strong desire to be consulted on EPs, to build a good working relationship with Woodside, and looked forward to finding a mutually agreeable path forward.
- On 23 September 2025, Woodside emailed Nhuwala (via YMAC), and in response to Nhuwala's previous email, provided information about Woodside's position on sitting fees, cost allocations, location and date of the upcoming meeting, and Woodside's commitment to consulting on EPs (SI Report B, reference 1.12.8). Woodside proposed to reschedule the meeting date to 22 or 23 October 2025.
- Between 1 – 15 October 2025, YMAC and Woodside exchanged emails relating to a proposed EP consultation meeting (SI Report B, reference 1.12.9 – 1.12.14). The correspondence included the following:
  - Woodside's proposal for a meeting on 22 October 2025.
  - Nhuwala (via YMAC) providing a budget estimate according to the requirements outlined by Woodside on 23 September 2025.
- On 16 October 2025, Nhuwala (via YMAC) emailed Woodside and requested that the meeting on 22 October 2025 be rescheduled to 4 or 5 November 2025. YMAC also noted it was aware that the closing date for the outstanding EPs was the end of October and requested a short extension for these matters to be addressed (SI Report B, reference 1.12.15).
- On 16 October 2025, Woodside emailed Nhuwala (via YMAC) agreeing to Nhuwala's request to postpone the planned meeting to early November but explained that consultation periods for this EP and others would have closed by this time. Woodside explained that feedback received during the meeting would be assessed and any measures or controls considered as required will be applied via Woodside's Management of Change and Review process (SI Report B, reference 1.12.16).
- Between 16 – 30 October 2025, Nhuwala (via YMAC) and Woodside exchanged emails about meeting in early November. During the exchange, a new meeting date of 4 November 2025 was confirmed, and logistics including catering and budgets were discussed (SI Report B, references 1.12.17 – 1.12.28).
- On 30 October 2025, Nhuwala (via YMAC) emailed Woodside and cancelled the planned meeting for 4 November 2025. Nhuwala requested the meeting be postponed until the week of 17 November 2025 (SI Report B, reference 1.12.29).
- Between 30 October and 6 November 2025, Nhuwala (via YMAC) exchanged emails about postponing the meeting scheduled for 4 November 2025. During the exchange it was agreed that the meeting would be postponed to 20 November 2025. Woodside explained that consultation for this EP would be closed by that date and feedback received would be considered as ongoing consultation (SI Report B, references 1.12.30 – 1.12.34).
- Between 7 and 14 November 2025, Woodside and Nhuwala (via YMAC) exchanged emails about logistics relating to the rescheduled meeting on 20 November 2025 (SI Report B, references 1.12.35 – 1.12.42).
- On 20 November 2025, Woodside met in-person with Nhuwala and YMAC in Karratha to present information about the proposed activity and other unrelated EPs (SI Report B, reference 1.12.43). During the meeting:
  - Woodside provided an explanation of EPs, the role of NOPSEMA, the purpose of the meeting and EP consultation – including understanding and learning about Nhuwala's cultural values, important areas and stories.
  - Woodside explained the modelling scenarios and development of EMBAs.
  - Specific information and discussions relating to the proposed activity and EP included:
    - Woodside provided an overview of the activity including a video about offshore exploration and drilling, and explained onshore accumulation.
    - Woodside provided the distances from the Nhuwala Native Title Claim to the proposed activity's Operational Area and EMBA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside explained the potential impacts and controls relating to the proposed activity including the fluids associated with drilling.
- **(1)** Nhuwala asked how noise impacts differ between seismic activities and drilling operations, and how far sound travels. **(1)** Woodside explained that that noise from seismic activities is generated from the survey vessels and acoustic impulses, which are received differently by marine fauna. Drilling activities are not a significant contributor to noise impacts, with the majority of noise generated by the activity's vessels. In regard to how far sound travels, Woodside stated that there are many variables, which is why Woodside conducts modelling to measure the sound generated by the drilling vessels using ecological thresholds to determine how noise affects different marine fauna.
- **(2)** Nhuwala questioned if there have been changes to marine life pathways due to sound. **(2)** Woodside stated there have been studies that have indicated no change in marine fauna migration routes.
- **(3)** Nhuwala asked about disturbances to the ground (seabed). **(3)** Woodside stated it had conducted research and studies about the impact to sea life and continues to improve its practices. Nuhwala asked a follow-up question if Woodside shares its studies and findings with other researchers and if it is required to do so. Woodside confirmed that it shares its research with various agencies.

– Throughout the meeting, Woodside engaged with Nhuwala and YMAC, addressing questions and comments regarding the proposed activity, as well as other unrelated EPs being discussed at the meeting.

- On 21 November 2025, YMAC emailed Woodside with an invoice for a meeting with Nhuwala the previous day (SI Report B, reference 1.12.44).
- On 28 November 2025, Woodside emailed Nhuwala (via YMAC) answers to questions taken on notice during the 20 November 2025 meeting (SI Report B, reference 1.12.45). The email included:
  – Links to videos shared during the meeting.
  – Links to Consultation Information Sheets for EPs discussed during the meeting.
  – Information about Woodside's Cultural Heritage Assessment Process.
  – An explanation about "ongoing consultation".
  – A request for any further information about Nhuwala's cultural values.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Nhuwala asked how noise impacts differ between seismic activities and drilling operations, and how far sound travels.	**(1)** Woodside assesses potential acoustic impacts of noise in the EP. Assessments are based on a number of factors including current research, best practice and learnings from previous offshore exploration and drilling activities.	**(1)** Woodside explained that noise from seismic activities is generated from the survey vessels and acoustic impulses. Drilling activities are not a significant contributor to noise impacts, with the majority of noise generated by the activity's vessels. Woodside stated that there are many variables in determining the distance sound travels. Woodside conducts modelling to measure the sound generated by the drilling vessels using	**(1)** Woodside has assessed the potential impacts of noise/acoustic in Section 6.7.4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		ecological thresholds to determine how noise affects different marine fauna.	
(2) Nhuwala questioned if there have been changes to marine life pathways due to sound.	**(2)** Woodside assesses potential acoustic impacts of noise on marine fauna in the EP. Assessments are based on a number of factors including current research, best practice and learnings from undertaking previous offshore exploration and drilling activities.	**(2)** Woodside stated there have been studies that have indicated no change in marine fauna migration routes.	**(2)** Woodside has assessed the potential impacts of noise/acoustic emissions on marine life in Section 6.7.4 of the EP.
(3) Nhuwala asked about disturbances to the ground (seabed) and if it shares its studies and findings with other researchers and if it is required to do so.	**(3)** Woodside assesses potential seabed disturbance in the EP. Assessments are based on a number of factors including current research, scientific studies, best practice and learnings from undertaking previous offshore exploration and drilling activities.	**(3)** Woodside has conducted research and studies, including environmental surveys in the Operational Area and continues to improve its practices. Woodside confirmed that it shares its research, where relevant, with various agencies.	**(3)** Woodside has assessed the potential disturbance to the seabed, supported by relevant studies in Section 6.7.3 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Nhuwala (via YMAC) for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because: • On 26 August 2025, Woodside made the Consultation Information Sheet available on the Woodside website. • Woodside provided information to Nhuwala (via YMAC) on 26 August 2025 when consultation commenced. Woodside provided:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Nhuwala's interests and how the activity could impact those interests.
- A request for the consultation and information sheets to be distributed to members and individuals as required.
- An offer to provide more specific information, maps and images if required.

- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Nhuwala (via YMAC) on 26 August 2025 and requested Nhuwala (via YMAC) provide feedback by 25 September 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Nhuwala (via YMAC) for more than 7 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Nhuwala's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 7 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 26 August 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Nhuwala members.
  - Asked Nhuwala (via YMAC) to advise how it would like Woodside to engage and whether Nhuwala required further information.
- Throughout the consultation period, Woodside and Nhuwala (via YMAC) have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 7 months, Nhuwala (via YMAC) has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.13 Nimanburr Aboriginal Corporation (Nimanburr)

Nimanburr is established under the *Native Title Act 1993 (Cth)* by the Nimanburr people to represent the Nimanburr people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Nimanburr advising of the proposed activity (Record of Consultation, reference 6.1.39). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values relating to Nimanburr that Woodside considers relevant to the activity:
    - **(1)** Valentine Island has cultural value.
  - **(1)** A request from Woodside that Nimanburr confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how Nimanburr would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Nimanburr to provide information about the proposed activity to other individuals as required.
- On 19 August 2025, Woodside emailed Nimanburr a reminder about the proposed activity (SI Report B, reference 1.13.1). The email included:
  - A reference to the original consultation email for this EP sent to Nimanburr on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by Nimanburr to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how Nimanburr would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(1) Cultural Value: • Valentine Island.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature). Although this area is not within the EP EMBA Woodside has noted this value in the EP.	**(1)** At the beginning of consultation for this EP, Woodside provided Nimanburr with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.36). Nimanburr did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. No additional measures or controls are required.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Nimanburr for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Nimanburr on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of Nimanburr's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Nimanburr's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Nimanburr on 28 July 2025 and requested Nimanburr provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Nimanburr for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Nimanburr's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Nimanburr members as well as the Nimanburr Board.
  - Asked Nimanburr to advise how it would like Woodside to engage and whether Nimanburr required further information.
- Throughout the consultation period, Woodside and Nimanburr have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by Nimanburr into the EP.
- During the past 8 months, Nimanburr has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.14 Nyangumarta Karajarri Aboriginal Corporation (NKAC)

NKAC is established under the *Native Title Act 1993 (Cth)* by the Nyangumarta and Karajarri people to represent the Nyangumarta and Karajarri people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. KLC assists NKAC with administrative matters.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed NKAC advising of the proposed activity (Record of Consultation, reference 6.1.40). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how NKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for NKAC to provide information about the proposed activity to other individuals as required.
- On 19 August 2025, Woodside emailed NKAC a reminder about the proposed activity (SI Report B, reference 1.14.1). The email included:
  - A reference to the original consultation email for this EP sent to NKAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how NKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 19 August 2025, NKAC emailed Woodside confirming that the reminder consultation email had been forwarded to the NKAC's directors (SI Report B, reference 1.14.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with NKAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to NKAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of NKAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with NKAC on 28 July 2025 and requested NKAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to NKAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on NKAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NKAC members as well as the NKAC Board.
  - Asked NKAC to advise how it would like Woodside to engage and whether NKAC required further information.
- Throughout the consultation period, Woodside and NKAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, NKAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.15 Nyangumarta Warrarn Aboriginal Corporation (NWAC)

NWAC is established under the *Native Title Act 1993 (Cth)* by the Nyangumarta people to represent the Nyangumarta people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed NWAC advising of the proposed activity (Record of Consultation, reference 6.1.41). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** Eighty Mile Beach has cultural and ecological value to the Nyangumarta Custodians.
    - **(2)** Resource collection:
      - Impacts to migrating birds, whales, turtles and vegetation.
  - **(1, 2)** A request from Woodside that NWAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how NWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for NWAC to provide information about the proposed activity to other individuals as required.
- On 19 August 2025, Woodside emailed NWAC a reminder about the proposed activity (SI Report B, reference 1.15.1). The email included:
  - A reference to the original consultation email for this EP sent to NWAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by NWAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

– A request for information on how NWAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
– Woodside's commitment to managing gender-restricted or other culturally sensitive information.
– Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Eighty Mile Beach has cultural and ecological value to the Nyangumarta Custodians.	**(1)** This value has been identified through Woodside's data collection processes (consultation). Although this area is not within the EP EMBA Woodside has noted this value in the EP.	**(1)** At the beginning of consultation for this EP, Woodside provided NWAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.38). NWAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. These receptors are only predicted to be contacted in the event of a large hydrocarbon spill. Mitigation measures have been included in Section 6.8 in this EP.
(2) Cultural Value: • Resource collection – impacts to migrating birds, whales, turtles and vegetation.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided NWAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.38). NWAC did not request changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with NWAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to NWAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of NWAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of NWAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with NWAC on 28 July 2025 and requested NWAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to NWAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on NWAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NWAC members as well as the NWAC Board.
  - Asked NWAC to advise how it would like Woodside to engage and whether NWAC required further information.
- Throughout the consultation period, Woodside and NWAC have had direct contact lines to each other.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by NWAC into the EP.
- During the past 8 months, NWAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.16 Nyul Nyul PBC Aboriginal Corporation (Nyul Nyul)

Nyul Nyul is established under the *Native Title Act 1993 (Cth)* by the Nyul Nyul people to represent the Nyul Nyul people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Woodside consults with NNAC via KLC.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Nyul Nyul advising of the proposed activity (Record of Consultation, reference 6.1.42). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how Nyul Nyul would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Nyul Nyul to provide information about the proposed activity to other individuals as required.
- On 28 July 2025, Woodside emailed Nyul Nyul requesting that the initial consultation email for this activity (Record of Consultation, reference 6.1.39) is forwarded to Nyul Nyul's Chairperson (SI Report B, reference 1.16.1).
- On 19 August 2025, Woodside emailed Nyul Nyul a reminder about the proposed activity (SI Report B, reference 1.16.2). The email included:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A reference to the original consultation email for this EP sent to Nyul Nyul on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of this EP closes on 27 august 2025.
- A request for information on how Nyul Nyul would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Nyul Nyul for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Nyul Nyul on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Nyul Nyul's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside commenced consultation on this EP with Nyul Nyul on 28 July 2025 and requested Nyul Nyul provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Nyul Nyul for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Nyul Nyul's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Nyul Nyul members as well as the Nyul Nyul Board.
  - Asked Nyul Nyul to advise how it would like Woodside to engage and whether Nyul Nyul required further information.
- Throughout the consultation period, Woodside and Nyul Nyul have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, Nyul Nyul has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.17 Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the *Native Title Act 1993 (Cth)* by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 6.1.43). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- Information on the cultural values that Woodside consider relevant to the activity:
  - **(1)** Concerns about underwater heritage – impacts at shoreline.
  - **(2)** The coastline.
- **(1, 2)** A request from Woodside that RRKAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- A request for information on how RRKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for RRKAC to provide information about the proposed activity to other individuals as required.

- On 28 July 2025, Woodside received an out of office email from RRKAC, informing that the recipient would return to the office on 8 August 2025 when emails would be addressed (SI Report B, reference 1.17.1).
- On 19 August 2025, Woodside emailed RRKAC a reminder about the proposed activity (SI Report B, reference 1.17.2). The email included:
  - A reference to the original consultation email for this EP sent to RRKAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by RRKAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how RRKAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Concerns about underwater heritage – impacts at shoreline.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided RRKAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.40). RRKAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. These receptors are only predicted to be contacted in the event of a large hydrocarbon spill. Mitigation measures have been included in Section 6.8 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(2) Cultural Value: • The coastline.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** At the beginning of consultation for this EP, Woodside provided RRKAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.40). RRKAC did not request changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. These receptors are only predicted to be contacted in the event of a large hydrocarbon spill. Mitigation measures have been included in Section 6.8 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with RRKAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to RRKAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of RRKAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of RRKAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with RRKAC on 28 July 2025 and requested RRKAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to RRKAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on RRKAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with RRKAC members as well as the RRKAC Board.
  - Asked RRKAC to advise how it would like Woodside to engage and whether RRKAC required further information.
- Throughout the consultation period, Woodside and RRKAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by RRKAC into the EP.
- During the past 8 months, RRKAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.18 Thalanyji / Nhuwala People

The Thalanyji / Nhuwala People Native Title claim is in Western Australia's Pilbara region within the Shire of Ashburton. The application area consists of multiple parts with a total combined area of around 2,058 square kilometres in an area surrounding Onslow. The Thalanyji / Nhuwala People have legal representation and are associated with BTAC. Woodside has consulted with the Thalanyji / Nhuwala People via BTAC. This context and process

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

demonstrates that Woodside's consultation approach with The Thalanyji / Nhuwala People is appropriate and adapted to the nature and interests of the Thalanyji / Nhuwala People.

Summary of information provided and record of consultation for this EP:

- On 26 August 2025, Woodside emailed Thalanyji / Nhuwala People (via BTAC) advising of the proposed activity (Record of Consultation, reference 6.1.44). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how Thalanyji / Nhuwala People would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 25 September 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Thalanyji / Nhuwala People to provide information about the proposed activity to other individuals as required.
- On 16 September 2025, Woodside emailed Thalanyji / Nhuwala People (via BTAC) a reminder about the proposed activity (SI Report B, reference 1.18.1). The email included:
  - A reference to the original consultation email for this EP sent to Thalanyji / Nhuwala People on 26 August 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 25 September 2025.
  - A request for information on how Thalanyji / Nhuwala People would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Thalanyji / Nhuwala People (via BTAC) for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Thalanyji / Nhuwala People (via BTAC) on 26 August 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Thalanyji / Nhuwala People's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Thalanyji / Nhuwala People (via BTAC) on 26 August 2025 and requested Thalanyji / Nhuwala People (via BTAC) provide feedback by 25 September 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Thalanyji / Nhuwala People (via BTAC) for more than 7 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Thalanyji / Nhuwala People's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 7 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 11 August 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Thalanyji / Nhuwala People members as well as the Thalanyji / Nhuwala People Board.
  - Asked Thalanyji / Nhuwala People (via BTAC) to advise how it would like Woodside to engage and whether Thalanyji / Nhuwala People required further information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Throughout the consultation period, Woodside and Thalanyji / Nhuwala People (via BTAC) have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 7 months, Thalanyji / Nhuwala People (via BTAC) has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.19 Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the *Native Title Act 1993 (Cth)* by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 6.1.45). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values that Woodside consider relevant to the activity:
    - **(1)** A connection to and cultural obligation to look after Sea Country.
    - **(2)** Dreamtime stories connected to nearshore islands particularly Solitary Island / Jarrkunpungu.
    - **(3)** Sea (fresh and salt water) – dreaming stories, a responsibility to look after the ocean.
    - **(4)** Totemic species – kestrel, octopus, spiny brim, sting ray.
  - **(1, 2, 3, 4)** A request from Woodside that Wanparta confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how Wanparta would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for Wanparta to provide information about the proposed activity to other individuals as required.

- On 7 August 2025, Wanparta emailed Woodside confirming receipt of the Record of Consultation email sent on 28 July 2025 and circulation of the email to the Wanparta Board (SI Report B, reference 1.19.1). Wanparta advised it would provide any comment and feedback to Woodside.
- On 19 August 2025, Woodside emailed Wanparta a reminder about the proposed activity (SI Report B, reference 1.19.2). The email included:
  - A reference to the original consultation email for this EP sent to Wanparta 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by Wanparta to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how Wanparta would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 19 August 2025, Wanparta emailed Woodside stating it had received the Record of Consultation email on 28 July 2025 and circulated the email to the Board for consideration and comment (SI Report B, reference 1.19.3). Wanparta stated it had not received any comments but will advise if there were changes before the consultation end date.
- On 20 August 2025, Woodside emailed Wanparta thanking for the response, and stating that Wanparta can contact Woodside at any time of there were questions or if the Board wished to provide feedback (SI Report B, reference 1.19.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • A connection to and cultural obligation to look after Sea Country. • A healthy Sea Country leads to healthy marine life and healthy Ngarla People.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided Wanparta with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.42).	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 of the EP.
(2) Cultural Value: • Dreamtime stories connected to nearshore islands particularly Solitary Island / Jarrkunpungu. • There is ethnohistorical evidence of Ngarla occupation on these islands.	**(2)** This value has been identified through Woodside's data collection processes (consultation). Although this area is not within the EP EMBA Woodside has noted this value in the EP.	**(2)** At the beginning of consultation for this EP, Woodside provided Wanparta with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (see ROC, 6.1.42). Wanparta provided further information about this value during	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values. These receptors are only predicted to be contacted in the event of a large hydrocarbon spill. Mitigation measures have been included in Section 6.8 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		consultation for this EP. Woodside has updated relevant sections of this EP to record interests and cultural values and assessed the potential impact on these and included controls.	
(3) Cultural Value: Sea (fresh and salt water): • Dreaming stories. • A responsibility to look after the ocean.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided Wanparta with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.42) Wanparta did not request changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8 of the EP.
(4) Cultural Value: Totemic species: • Kestrel. • Octopus. • Spiny brim. • Sting ray.	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided Wanparta with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.41). Wanparta did not request changes.	**(4)** Woodside updated Section 4.9 to record these interests and cultural values and where appropriate assessed the potential impacts on these, included controls in in Sections 6.7 and 6.8 of the EP.
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8).	No additional measures or controls are required.
Summary Report – Consultation Complete			
Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Wanparta for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: **Sufficient Information** Sufficient information has been provided because:			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Wanparta on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of Wanparta's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Wanparta's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Wanparta on 28 July 2025 and requested Wanparta provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Wanparta for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Wanparta's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Wanparta members as well as the Wanparta Board.
  - Asked Wanparta to advise how it would like Woodside to engage and whether Wanparta required further information.
- Throughout the consultation period, Woodside and Wanparta have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by Wanparta into the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- During the past 8 months, Wanparta has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.20 Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the *Native Title Act 1993 (Cth)* by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 6.1.46). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Information on the cultural values relating to WAC that Woodside considers relevant to the activity:
    - **(1)** Marine species:
      - Whales – migration and potential impact of noise on whale communication.
      - Turtles – general interest around management and monitoring.
    - **(2)** Rock art – potential impact of emissions from activities.
    - **(3)** Underwater heritage – impacts particularly given recent finding of artefacts.
    - **(4)** Onshore heritage – management of sites.
  - **(1, 2, 3, 4)** A request from Woodside that WAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
  - A request for information on how WAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for WAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 20 August 2025, Woodside emailed WAC a reminder about the proposed activity (SI Report B, reference 1.20.1). The email included:
  - A reference to the original consultation email for this EP sent to WAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet and listed cultural values previously provided by WAC to Woodside.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how WAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 3 September 2025, Wong Goo Tt Oo, WAC and NAC attended Woodside's Quarterly Heritage Meeting (SI Report B, reference 6.1). Matters discussed relating to this EP included:
  - Cultural heritage update.
  - Training and contracting opportunities.
  - Project updates.
- On 2 December 2025, Woodside emailed WAC an invitation reminder to Woodside's Quarterly Heritage Meeting on 3 December 2025, as an opportunity for Woodside to provide updates on Woodside's activities to Traditional Owner groups and to receive feedback from the community (SI Report B, reference 1.20.2)
- On 3 December 2025, WAC attended Woodside's Quarterly Heritage Meeting, at which Woodside stated that consultation for future EPs would recommence in Q1 2026 and showed an example of new animations videos used to support EP consultation (SI Report B, reference 6.2).
- On 5 February 2026, Woodside emailed NAC, WAC and Wong-Goo-Tt-Oo dates of upcoming heritage meetings (SI Report B, reference 1.20.3)
- On 6 February 2026, Woodside sent WAC a text message to follow-up on correspondence sent about the quarterly heritage meetings (SI Report B, reference 1.20.4).
- On 25 February 2026, Woodside distributed an invitation to a community luncheon to WAC, NAC and NYFL. The invitation stated that the event in Roebourne on 19 March 2026 was an opportunity for groups to share stories and receive updates from Woodside (SI Report B, reference 5.1).
- Between 5 and 6 March 2026, Woodside and WAC exchanged emails and phone calls about the Quarterly Heritage meeting held on 4 March 2026, which WAC did not attend (SI Report B, reference 1.20.5 – 1.20.9).
- On 10 March 2026, Woodside emailed WAC a copy of the Quarterly Heritage Meeting minutes from 4 March 2026 (SI Report B, reference 1.20.10).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Marine species:	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** At the beginning of consultation for this EP, Woodside provided WAC with a list of the cultural values known to Woodside that it believed relevant to the	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate

	included based on consultation and / or literature review.	consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with WAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to WAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of WAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of WAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with WAC on 28 July 2025 and requested WAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to WAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on WAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with WAC members as well as the WAC Board.
  - Asked WAC to advise how it would like Woodside to engage and whether WAC required further information.
- Throughout the consultation period, Woodside and WAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by WAC into the EP.
- During the past 8 months, WAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.21 Yamatji Marlpa Barna Baba Maaja Aboriginal Corporation (Yamatji Land and Sea Council) (YMBBMAC)

In the Cape Range National Park Management Plan (2010), YMBBMAC (Yamatji Land and Sea Council) is noted as the Native Title representative Aboriginal body for the park. Correspondence to YMBBMAC (Yamatji Land and Sea Council) is via YMAC.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed YMBBMAC (via YMAC) advising of the proposed activity (Record of Consultation, reference 6.1.48). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how YMBBMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for YMBBMAC to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 19 August 2025, Woodside emailed YMBBMAC (via YMAC) a reminder about the proposed activity (SI Report B, reference 1.21.1). The email included:
  - A reference to the original consultation email for this EP sent to YMBBMAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how YMBBMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with YMBBMAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to YMBBMAC (via YMAC) on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of YMBBMAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with YMBBMAC (via YMAC) on 28 July 2025 and requested YMBBMAC provide feedback by 19 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to YMBBMAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on YMBBMAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YMBBMAC members as well as the YMBBMAC Board.
  - Asked YMBBMAC (via YMAC) to advise how it would like Woodside to engage and whether YMBBMAC required further information.
- Throughout the consultation period, Woodside and YMBBMAC (via YMAC) have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, YMBBMAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.22 Yawuru Native Title Holders Aboriginal Corporation (Yawuru)

Yawuru is established under the *Native Title Act 1993 (Cth)* by the Yawuru people to represent the Yawuru people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Yawuru advising of the proposed activity (Record of Consultation, reference 6.1.50). The email included:
  - A Summary Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to the Consultation Information Sheet.
- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- A request for information on how Yawuru would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for Yawuru to provide information about the proposed activity to other individuals as required.

- On 19 August 2025, Woodside emailed Yawuru a reminder about the proposed activity (SI Report B, reference 1.22.1). The email included:
  - A reference to the original consultation email for this EP sent to Yawuru on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how Yawuru would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Yawuru for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Yawuru on 28 July 2025 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Yawuru's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Yawuru on 28 July 2025 and requested Yawuru provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Yawuru for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Yawuru's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Yawuru members as well as the Yawuru Board.
  - Asked Yawuru to advise how it would like Woodside to engage and whether Yawuru required further information.
- Throughout the consultation period, Woodside and Yawuru have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, Yawuru has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.12.23 Yindjibarndi Aboriginal Corporation (Yindjibarndi)

Yindjibarndi AC is established under the *Native Title Act 1993 (Cth)* by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

For this consultation, Woodside asked Yindjibarndi how it wished to be consulted, if it required support to participate in consultation, whether there are additional persons that Yindjibarndi believed should be consulted and requested that all information shared with Yindjibarndi be cascaded to its members.

Yindjibarndi has formally notified Woodside that all oil and gas matters/correspondence relating to Yindjibarndi are to be directed to the Ngarluma Yindjibarndi Foundation Ltd (NYFL), which is Yindjibarndi's Native Title Representative Body.

This context and process demonstrates that Woodside's consultation approach with Yindjibarndi is appropriate and adapted to the nature and interests of Yindjibarndi.

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Yindjibarndi (via NYFL) advising of the proposed activity (Record of Consultation, reference 6.1.55). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how Yindjibarndi (via NYFL) would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for Yindjibarndi (via NYFL) to provide information about the proposed activity to other individuals as required.
  - Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.
- On 20 August 2025, Woodside emailed Yindjibarndi (via NYFL) a reminder about the proposed activity (SI Report B, reference 1.23.1). The email included:
  - A reference to the original consultation email for this EP sent to Yindjibarndi (via NYFL) on 29 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for information on how Yindjibarndi (via NYFL) would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

- On 19 March 2026, Traditional Owner members from MAC, NAC and Yindjibarndi attended Woodside's Monthly Community Luncheon for Traditional Owners held in Roebourne. During the lunch Woodside provided information about the EP consultation process (SI Report B, reference 5.2).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Yindjibarndi (via NYFL) for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Yindjibarndi (via NYFL) on 29 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Yindjibarndi's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside commenced consultation on this EP with Yindjibarndi (via NYFL) on 29 July 2025 and requested Yindjibarndi (via NYFL) provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Yindjibarndi (via NYFL) for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Yindjibarndi's (via NYFL) preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Yindjibarndi members as well as the Yindjibarndi Board.
  - Asked Yindjibarndi (via NYFL) to advise how it would like Woodside to engage and whether Yindjibarndi (via NYFL) required further information.
- Throughout the consultation period, Woodside and Yindjibarndi (via NYFL) have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, Yindjibarndi (via NYFL) has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.24 Yinggarda Aboriginal Corporation (YAC)

YAC is established under the *Native Title Act 1993 (Cth)* by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed YAC (via legal representative) advising of the proposed activity (Record of Consultation, reference 6.1.51). The email included:
  - A Summary Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to the Consultation Information Sheet.
- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- Information on the cultural values that Woodside consider relevant to the activity:
  - **(1)** Right and responsibility to speak and care for Country.
  - **(2)** Use of Country for cultural activities:
    - Fishing.
    - Camping.
    - Hunting and gathering.
  - **(3)** Health of ecosystems:
    - Plants, animals, seagrass is an important food source for dugongs.
  - **(4)** Marine mammals:
    - Dugongs.
    - Whales (potential impact to migration patterns and potential collisions with vessels).
- **(1, 2, 3, 4)** A request from Woodside that YAC confirm if there were any changes or additional information regarding cultural values that Woodside should consider in the preparation for this EP.
- Acknowledgement that discussions relating to a draft consultation agreement with YAC and ongoing, and continue to occur in parallel to EP consultation.
- A request for information on how YAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for YAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP

- On 20 August 2025, Woodside emailed YAC (via legal representative) a reminder about the proposed activity (SI Report B, reference 1.24.1). The email included:
  - A reference to the original consultation email for this EP sent to YAC on 29 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how YAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Cultural Value: • Right and responsibility to speak and care for Country.	**(1)** This value has been identified through Woodside's data collection processes (publicly available literature).	**(1)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.48). YAC did not request changes.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(2) Cultural Value – use of Country for cultural activities: • Fishing • Camping • Hunting and gathering.	**(2)** This value has been identified through Woodside's data collection processes (consultation and publicly available literature).	**(2)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.48). YAC did not request changes.	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values.
(3) Cultural Value – health of ecosystems • Plants and animals. • Seagrass is an important food. source for dugongs.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or provide additional information (See ROC, 6.1.48). YAC did not request changes.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values. These receptors are only predicted to be contacted in the event of a large hydrocarbon spill. Mitigation measures have been included in Section 6.8 of the EP.
(4) Cultural Value – marine mammals: • Dugongs. • Whales (potential impact to migration patterns and potential collisions with vessels).	**(4)** This value has been identified through Woodside's data collection processes (consultation).	**(4)** At the beginning of consultation for this EP, Woodside provided YAC with a list of the cultural values known to Woodside that it believed relevant to the group and invited it to make changes or	**(4)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		provide additional information (See ROC, 6.1.48). YAC did not request changes.	
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation and / or literature review.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with YAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to YAC on 29 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - A list of YAC's cultural values, previously provided to Woodside during consultation of unrelated EPs.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of YAC's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with YAC on 28 July 2025 and requested YAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has addressed and responded to YAC for more than 8 months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on YAC’s preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YAC members as well as the YAC Board.
  - Asked YAC to advise how it would like Woodside to engage and whether YAC required further information.
- Throughout the consultation period, Woodside and YAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by YAC into the EP.
- During the past 8 months, YAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.12.25 Yued Aboriginal Corporation (Yued)

Yued is established under the *Native Title Act 1993 (Cth)* by the Yued people to represent the Yued people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values. The Yued region refers to the Noongar language group north of Perth, towards the south of Yued is Whadjuk, to the east is Ballardong.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed Yued advising of the proposed activity (Record of Consultation, reference 6.1.52). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- A request for information on how Yued would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for Yued to provide information about the proposed activity to other individuals as required.

- On 30 July 2025, Yued emailed Woodside acknowledging receipt of the email about the proposed activity sent on 28 July 2025 (SI Report B, reference 1.25.1).
- On 19 August 2025, Woodside emailed Yued a reminder about the proposed activity (SI Report B, reference 1.25.2). The email included:
  - A reference to the original consultation email for this EP sent to Yued on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how Yued would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with Yued for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to Yued on 28 July 2025 when consultation commenced. Woodside provided:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of Yued's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with Yued on 28 July 2025 and requested Yued provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to Yued for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on Yued's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with Yued members as well as the Yued.
  - Asked Yued to advise how it would like Woodside to engage and whether Yued required further information.
- Throughout the consultation period, Woodside and Yued have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, Yued has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13 Native Title representative bodies

4.13.1 Kimberley Land Council (KLC)

KLC is the Native Title Representative Body for the Kimberley region of Western Australia. As such, it is not a Prescribed Body Corporate or Registered Native Title Body Corporate but exists to assist Native Title claimants and holders.

This context and process demonstrates that Woodside's consultation approach with KLC is appropriate and adapted to the nature and interests of KLC.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed KLC advising of the proposed activity (Record of Consultation, reference 6.1.53). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how KLC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for KLC to provide information about the proposed activity to other individuals as required.
- Between 28 July – 5 August 2025, Woodside and KLC exchanged emails about forwarding information to NKAC about the proposed activity (SI Report B, reference 2.1.1 – 2.1.2).
- On 19 August 2025, Woodside emailed KLC a reminder about the proposed activity (SI Report B, reference 2.1.3). The email included:
  - A reference to the original consultation email for this EP sent to KLC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how KLC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 19 August 2025, KLC emailed Woodside confirming it had forwarded the consultation reminder email to KLC's directors (SI Report B, reference 2.1.4).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with KLC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to KLC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of KLC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with KLC on 28 July 2025 and requested KLC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to KLC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on KLC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with KLC members as well as the KLC Board.
  - Asked KLC to advise how it would like Woodside to engage and whether KLC required further information.
- Throughout the consultation period, Woodside and KLC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, KLC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13.2 Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders.

YMAC is also the primary contact for the Nhuwala Claim Group.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 6.1.48). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how YMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for YMAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 19 August 2025, Woodside emailed YMAC a reminder about the proposed activity (SI Report B, reference 2.2.1). The email included:
  - A reference to the original consultation email for this EP sent to YMAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how YMAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with YMAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to YMAC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of YMAC's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with YMAC on 28 July 2025 and requested YMAC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to YMAC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on YMAC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YMAC members as well as the YMAC Board.
  - Asked YMAC to advise how it would like Woodside to engage and whether YMAC required further information.
- Throughout the consultation period, Woodside and YMAC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, YMAC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.13.3 Yamatji Southern Regional Corporation (YSRC)

YSRC was established in 2020 following a settlement agreement with the Western Australian Government, and acts as a Regional Entity to manage the ILUA Agreement. The agreement provides the people of the Yamatji Nation, which includes Amangu, Badimia, Hutt River, Mullewa Wadjari, Naaguja, Nhanda,

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Nhanaghardi, Wajarri, Wattandee, Widi Mob and Wilunyu Peoples, with a range of benefits that compensates for Acts that have impaired or extinguished their Native Title.

BYAC is part of YSRC corporate structure. YSRC informed Woodside, in the preparation of this EP, that correspondence relating to EP consultation to BYAC is forwarded to YSRC office holders.

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed YSRC advising of the proposed activity (Record of Consultation, reference 6.1.54). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how YSRC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for YSRC to provide information about the proposed activity to other individuals as required.
- On 19 August 2025, Woodside telephone YSRC to discuss the most suitable approach and contact persons for YSRC and BYAC when regarding EP consultation (SI Report B, reference 2.3.1).
- On 19 August 2025, Woodside emailed YSRC a reminder about the proposed activity (SI Report B, reference 2.3.2). The email included:
  - A reference to the original consultation email for this EP sent to YSRC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how YSRC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 26 August 2025, Woodside emailed to relevant YRSC office holders the proposed activity's consultation activity reminder (originally sent on 19 August 2025) and confirmed that Woodside noted that the email had been sent to YRSC's Heritage team email address (SI Report B, reference 2.3.3).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with YSRC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to YSRC on 28 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of YSRC's interests and how the activity could impact those interests.
  - A request for the information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with YSRC on 28 July 2025 and requested YSRC provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to YSRC for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

- Woodside sought direction on YSRC's preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside's initial email about this EP on 28 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with YSRC members as well as the YSRC Board.
  - Asked YSRC to advise how it would like Woodside to engage and whether YSRC required further information.
- Throughout the consultation period, Woodside and YSRC have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, YSRC has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4.14 Self-identified First Nations groups

4.14.1 Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the *Northwest Shelf Agreement 1998* struck between the Ngarluma and Yindjibarndi registered Native Title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi Native Title claim. NYFL's purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi Native Title claim was settled with the Federal Court appointing, at the request of the common law Native Title holders, the NAC as the PBC to represent the communal interests of the Ngarluma people, and the Yindjibarndi Aboriginal Corporation (Yindjibarndi) as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP.

NYFL is self-identified and has advised it is relevant for this EP. Yindjibarndi has requested all correspondence about EPs be directed to NYFL.

Since March 2024, Woodside and NYFL have been in communication about a draft consultation agreement. Woodside and NYFL have exchanged the draft consultation agreement a number of times during this period. Woodside has also travelled to Roebourne to meet with NYFL to progress negotiations and provided funding to NYFL for legal advice to finalise the agreement. During consultation for other EPs, NYFL has claimed that formal consultation had not taken place due to the absence of a finalised consultation agreement. Woodside has reiterated to NYFL on a number of occasions, including during consultation for this EP, that a consultation agreement is not a pre-requisite for consultation and that negotiations relating to a consultation agreement have and continue to occur in parallel to EP consultation. Discussions between Woodside and NYFL in relation to finalising this agreement remain ongoing.

Woodside has continually informed NYFL that it is open to receiving or being notified of feedback, claims or objections on EPs.

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 6.1.55). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Acknowledgement that discussions relating to a draft consultation agreement with NYFL and ongoing, and continue to occur in parallel to EP consultation.
  - A request for information on how NYFL would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for NYFL to provide information about the proposed activity to other individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

- On 20 August 2025, Woodside emailed NYFL a reminder about the proposed activity (SI Report B, reference 3.1.1). The email included:
  - A reference to the original consultation email for this EP sent to NYFL on 29 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how NYFL would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- **(1)** On 23 September 2025, NYFL emailed Woodside in response to being consulted on the proposed activity, to follow-up on previous correspondence relating to unrelated EPs, to meet and discuss the draft consultation agreement (SI Report B, reference 3.1.2).
- **(1)** On 24 September 2025, Woodside emailed NYFL to confirm that an online meeting can be scheduled to discuss the draft consultation agreement. Woodside stated it would not provide further funding for NYFL's legal advice on the matter (SI Repot B, reference 3.1.3). Woodside reminded NYFL that negotiation towards a consultation agreement can and does occur in parallel with consultation about individual EPs, which NFYL may be relevant for the purposes of consultation as a result of the EMBA.
- On 25 September 2025, NYFL emailed Woodside thanking for the response the day before and seeking further advice on funding scope (SI Report B, reference 3.1.4).
- On 25 February 2026, Woodside distributed an invitation to a community luncheon to NYFL, NAC and WAC. The invitation stated that the event in Roebourne on 19 March 2026 was an opportunity for groups to share stories and receive updates from Woodside (SI Report B, reference 5.1).

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) NYFL has acknowledged it supports an agreement to enable a process of consultation.	**(1)** Separate from consultation under Regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation. Woodside notes that a consultation agreement is not a prerequisite for consultation and consultation for the preparation of environment plans can and does occur concurrently with agreement negotiations (if any). Sufficient information to allow informed assessment has already been provided by other means. Woodside has an	**(1)** Woodside sent a 7-page draft consultation framework to NYFL in March 2024 for its consideration. In November 2024, Woodside met with NYFL to discuss a number of matters relating to the draft consultation agreement, with NYFL agreeing to provide Woodside with feedback on 7 April 2025, NYFL notified Woodside that it would be sending the draft agreement in due course. On 15 June 2025, Woodside emailed NYFL amendments to a draft consultation agreement. In the email	**(1)** Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	existing engagement framework in place with NYFL which enables regular (quarterly) communication.	Woodside reiterated that consultation for the preparation of environment plans occurs concurrently with agreement negotiations. In September 2025, Woodside and NYFL exchanged emails to confirm meeting to progress the draft consultation agreement.	
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with NYFL for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to NYFL on 29 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of NYFL's interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with NYFL on 29 July 2025 and requested NYFL provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has addressed and responded to NYFL for more than 8 months, demonstrating a “reasonable period” of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside’s approach to consultation is appropriate and adapted because:

- Woodside sought direction on NYFL’s preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside’s initial email about this EP on 29 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside’s Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with NYFL members as well as the NYFL Board.
  - Asked NYFL to advise how it would like Woodside to engage and whether NYFL required further information.
- Throughout the consultation period, Woodside and NYFL have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- During the past 8 months, NYFL has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

4.15 Other First Nations groups

4.15.1 Save Our Songlines (SOS)

SOS and/or [Individual 1] do not squarely fall within the consultation categories in the current Woodside methodology and are therefore considered in their own category.

SOS is an organisation formed by [Individual 1], who Woodside currently understands is the group’s primary spokesperson. The stated interests of [Individual 1] and SOS include the conservation of Murujuga rock art, and opposition to expansion of projects on the Burrup Peninsula. [Individual 1] and SOS are together represented by lawyers from Johnson Legal Pty Ltd. Woodside understands that the views expressed by SOS align with the views of [Individual 1]. Woodside therefore approaches communication with SOS and/or [Individual 1] as communication with SOS and has consulted them concurrently.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside understands [Individual 1] is a Mardudhunera woman and a Traditional Custodian of Murujuga. Woodside has consulted with the Kuruma and Mardudhunera people including through consultation with MAC, WAC, NAC and RRKAC. [Individual 1] and SOS have expressly stated to Woodside that their views and positions differ from that of MAC and other Elders. Woodside has observed social media statements and news articles from Traditional Owner groups with cultural authority over Murujuga expressing a view that the views held by SOS and/or [Individual 1] are not views held by community [Ref for example, 9 August 2025 - The Saturday Paper and MAC LinkedIn]. Woodside has advised SOS and/or [Individual 1] that any cultural information shared with Woodside by [Individual 1] and SOS would need to be verified with the appropriate cultural authority.

Conversations and meetings with SOS and/or [Individual 1] have been occurring since around 2021, dating back to when [Individual 1] was a Board member of MAC and when SOS was first established. During this time, SOS and/or [Individual 1] have been actively engaged in consultation on Woodside's EPs and environmental approvals. SOS and/or [Individual 1] have provided information for Woodside's consideration in various forms and forums. As evidenced by Woodside's publicly available EPs, Woodside has, and continues to, review, assess and consider SOS's and/or [Individual 1's] information when developing EPs.

Historical engagement:

During previous consultation for other activities, SOS and/or [Individual 1] has provided information relating to its cultural values which Woodside deem relevant to this EP:

- **(1)** Threats to Murujuga Rock Art and Cultural Heritage:
  - Emissions, movement and potential damage.
  - Impacts on sites of cultural and spiritual significance.
- **(1)** Woodside has noted the cultural significant of Murujuga Rock Art and assessed risks in its EPs.
- **(2)** Cultural and Environmental Significance
  - Songlines, Dreaming, and energy lines.
  - Cultural features related to marine life including whales, marine mammals, seagrass, turtles.
  - Importance of the meeting of freshwater and saltwater.
  - Connection to Sea Country and the sea.
- **(2)** Woodside has recorded matters of cultural and environmental significance in its EPs.
- **(3)** Environmental Protection and Cultural Values:
  - Caring for country, significance of eagle, kangaroo, bungarra.
  - Importance of offshore islands, including Rosemary Island.
  - Disturbance of seabed, noise, and pollution.
  - Relationship between environmental protection and cultural values.
- **(3)** Woodside has included matters of cultural and environmental significance in its EPs.

Please see Scarborough Offshore Facility and Trunkline (Operations) EP and North West Shelf Phase 1 Plug and Abandonment and TPA03 Well Intervention (Appendix F and SI Report) for further details of this correspondence.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 July 2025, Woodside emailed SOS and/or [Individual 1] advising of the proposed activity (Record of Consultation, reference 6.1.56). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.
  - An overview of the proposed activity.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - A request for information on how SOS and/or [Individual 1] would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - A request for SOS and or [Individual 1] to provide information about the proposed activity to other individuals as required.
- On 20 August 2025, Woodside emailed SOS and/or [Individual 1] a reminder about the proposed activity (SI Report B, reference 4.1.1). The email included:
  - A reference to the original consultation email for this EP sent to SOS and/or [Individual 1] on 29 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
  - A reminder that consultation for the preparation of this EP closes on 27 August 2025.
  - A request for information on how SOS and/or [Individual 1] would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
  - Woodside's commitment to managing gender-restricted or other culturally sensitive information.
  - Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- On 8 September 2025, SOS and/or [Individual 1] (via legal representative) emailed Woodside about unrelated EPs (SI Report B, reference 4.1.2). Matters relevant to the proposed activity included:
  - **(4)** A letter in which SOS and/or [Individual 1] disputes Woodside's assertion that they are not an appropriate authority in relation to cultural information about the Murujuga area.
  - **(4)** A submission about a different EP, not related to the proposed activity, stating SOS' and [Individual 1's] view that [Individual 1] is a Mardudhunera lore woman, Elder and a traditional custodian of Murujuga and is therefore a person who is required to be consulted.
- On 24 October 2025, SOS and/or [Individual 1] (via legal representative) emailed Woodside a submission about an unrelated EP (SI Report B, reference 4.1.3). Matters relevant to the proposed activity included:
  - **(4)** That [Individual 1] asserts they are a Mardudhunera woman, Elder and Traditional Custodian and has a cultural heritage connection, responsibilities and obligations to the lands and seas of the northwest region of Australia.
  - **(2)** That there are impacts to [Individual 1's] cultural heritage arising from harm caused by seismic testing to marine animals, particularly whales, which are central to Dreaming stories, Songlines and energy lines.
- **(4)** On 28 October 2025, Woodside emailed a reply to SOS and/or [Individual 1] in response to an unrelated EP which included a response relevant to this activity (SI Report B, reference 4.1.4). In the response, Woodside stated that it understands [Individual 1] to be a Mardudhunera woman and a Traditional Custodian of Murujuga.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside also stated that it considers MAC to be the cultural authority authorised to represent the views and knowledge of the five language groups of Murujuga. MAC has also provided confirmation to Woodside that they are the relevant cultural authority over Murujuga. This is set out in previous publicly available EPs and set out in previous consultations with SOS and/or [Individual 1]. Woodside reiterated to SOS and/or [Individual 1] that any feedback provided by SOS and/or [Individual 1] is assessed and incorporated into EPs.

- On 27 November 2025, Woodside emailed SOS and/or [Individual 1] (via legal representative) a response to the submission emailed to Woodside on 24 October 2025 about an unrelated EP which included a response relevant to this activity (SI Report B, reference 4.1.5). Details of Woodside's response relating to this activity included:
  - **(4)** Woodside understands [Individual 1] as a Mardudhunera woman. As has been previously communicated to SOS and/or [Individual 1], Woodside considers MAC to be the cultural authority authorised to represent the views and knowledge of the five language groups of Murujuga. MAC has also provided confirmation to Woodside that they are the relevant cultural authority over Murujuga.
  - **(2)** Cultural values provided by SOS and/or [Individual 1] have been reviewed, assessed, and incorporated into EPs where appropriate. Woodside also provided a list of cultural values previously provided to by SOS and/or [Individual 1] which includes marine species (whales, turtles, dugongs, plankton, seagrass, pelagic fish, sharks, seabirds), totemic species (bungarra, eagle, kangaroo), caring for Sea Country and Songlines, Dreaming and energy lines.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
(1) Threats to Murujuga Rock Art and Cultural Heritage: • Emissions, movement and potential damage. • Impacts on sites of cultural and spiritual significance.	**(1)** This value has been identified through Woodside's data collection processes (consultation).	**(1)** Potential impacts due to onshore emissions is not considered as an activity for this EP. No rock art will be moved during this activity. Woodside acknowledges the cultural significance of Murujuga Rock Art.	**(1)** Woodside has updated Section 4.9 to record these interests and cultural values. No further action required.
(2) Cultural and Environmental Significance: • Songlines, Dreaming, and energy lines. • Cultural features related to marine life including whales, marine mammals, seagrass, turtles. • Importance of the meeting of freshwater and saltwater. • Connection to Sea Country and the sea.	**(2)** This value has been identified through Woodside's data collection processes (consultation).	**(2)** Woodside notes these cultural values in Section 4.9 of the EP. In response to an unrelated EP, Woodside stated cultural values provided by SOS and/or [Individual 1] have been reviewed, assessed, and incorporated into the EP where appropriate. Woodside has also provided a list of cultural values previously provided to by SOS and/or [Individual 1] which includes marine species (whales, turtles, dugongs, plankton, seagrass, pelagic fish, sharks,	**(2)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In response to unrelated EPs, SOS and/or [Individual 1] stated that there are impacts to [Individual 1's] cultural heritage arising from harm caused by Woodside's activities to marine animals, particularly whales, which are central to Dreaming stories, Songlines and energy lines.		seabirds), totemic species (bungarra, eagle, kangaroo), caring for Sea Country and Songlines, Dreaming and energy lines.	
(3) Environmental Protection and Cultural Values: • Caring for country, significance of eagle, kangaroo, bungarra. • Importance of offshore islands, including Rosemary Island. • Disturbance of seabed, noise, and pollution. • Relationship between environmental protection and cultural values.	**(3)** This value has been identified through Woodside's data collection processes (consultation).	**(3)** Woodside has noted these cultural values in section 4.9 and assessed risks and mitigation measures in Section 6.	**(3)** Woodside has updated Section 4.9 to record these interests and cultural values and assessed the potential impacts on these and where appropriate included controls, in Sections 6.7 and 6.8.
(4) That [Individual 1] is a Mardudhunera lore woman, Elder and a Traditional Custodian of Murujuga. SOS and/or [Individual 1] disputes Woodside's assertion that they are not an appropriate authority in relation to cultural information about the Murujuga area. Furthermore, in response to unrelated EPs, SOS and/or [Individual 1] stated that [Individual 1] is a Mardudhunera woman, Elder and Traditional Custodian and has a cultural heritage connection, responsibilities and obligations to the lands and seas of the northwest region of Australia.	**(4)** Woodside understands [Individual 1] to be a Mardudhunera woman and a Traditional Custodian of Murujuga.	**(4)** Woodside has informed SOS and/or [Individual 1] on a number of occasions in response to previous EP consultations, that Woodside considers MAC to be the cultural authority authorised to represent the views and knowledge of the five language groups of Murujuga. MAC has also provided confirmation to Woodside that they are the relevant cultural authority over Murujuga. This is set out in previous publicly available EPs and set out in previous consultations with SOS and/or [Individual 1]. Woodside has reiterated to SOS and/or [Individual 1] that any feedback provided by SOS and/or	**(4)** No action required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		[Individual 1] is assessed and incorporated into the EP.	
No feedback, objections or claims about the adverse impact of the activity received despite follow-up.	Although no feedback, objections or claims were provided for this EP, historical cultural values considered relevant have been identified and included based on consultation.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environmental Regulations and consultation with SOS and/ or [Individual 1] for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

Sufficient Information

Sufficient information has been provided because:

- On 28 July 2025, Woodside made the Consultation Information Sheet available on the Woodside website.
- Woodside provided information to SOS and/or [Individual 1] on 29 July 2025 when consultation commenced. Woodside provided:
  - A Summary Information Sheet developed specifically for Indigenous groups and reviewed by a member of the Indigenous Affairs Engagement team. This sheet included an overview of the proposed activity, the location of the activity, the timing of the activity, the potential risks and impacts of the activity, diagrams and details about how to provide feedback.
  - Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
  - Confirmation of the purpose of consultation, what was being sought by Woodside through consultation including understanding the nature of SOS's and/or [Individual 1] interests and how the activity could impact those interests.
  - A request for the consultation and information sheets to be distributed to members and individuals as required.
  - An offer to provide more specific information, maps and images if required.
- Woodside provided contact information for Woodside and NOPSEMA.

Reasonable Period

A reasonable period for consultation in the preparation of the EP has been provided because:

- Woodside commenced consultation on this EP with SOS and/or [Individual 1] on 29 July 2025 and requested SOS and/or [Individual 1] provide feedback by 27 August 2025 for the purposes of preparation of the EP in line with Woodside's methodology of a 30-day period for consultation.
- Woodside has addressed and responded to SOS and/or [Individual 1] for more than 8 months, demonstrating a "reasonable period" of consultation.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided and Woodside's approach to consultation is appropriate and adapted because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on SOS's and/ or [Individual 1] preferred method of consultation and has consulted in a way that Woodside understands is appropriate for Indigenous groups.
- Woodside has made information on this EP publicly available for more than 8 months. This has included publishing advertisements in national, state and local newspapers including Indigenous newspapers, the Koori Mail (30 July 2025) and National Indigenous Times (29 July 2025) advising of the proposed activities and requesting comments or feedback.
- Woodside's initial email about this EP on 29 July 2025:
  - Included a general email address and telephone number for Woodside, as well as a direct email and telephone number for a dedicated focal person from Woodside's Indigenous Affairs Engagement team. Woodside also provided contact details for NOPSEMA.
  - Offered for Woodside to speak with SOS and/or [Individual 1].
  - Asked SOS and/or [Individual 1] to advise how it would like Woodside to engage and whether SOS and/ or [Individual 1] required further information.
- Throughout the consultation period, Woodside and SOS and/or [Individual 1] have had direct contact lines to each other.

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Woodside has incorporated cultural values previously provided by SOS and/or [Individual 1] into the EP.
- During the past 8 months, SOS and/or [Individual 1] has not raised objections or claims about the adverse impact of the activity to which this EP relates.

Woodside engages in ongoing consultation once an EP has been submitted for assessment as well as throughout the life of an EP. Should feedback be received after the EP has been accepted (including relevant new information relating to cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5. TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the 'Summary of information provided and record of consultation for this EP' in Table 3 denotes an item raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside's response to that issue.

5.1 Commonwealth commercial fisheries and peak representative bodies

5.1.1 Southern Bluefin Tuna Fishery

Summary of information provided and record of consultation for this EP:

- On 11 August 2025, following advice received by AFMA on 11 August 2025, Woodside emailed Southern Bluefin Tuna Fishery licence holders advising of the proposed activity (Record of Consultation, reference 6.1.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While Southern Bluefin Tuna Fishery licence holders were not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Southern Bluefin Tuna Fishery licence holders to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2 Local government and elected parliamentary representatives, community groups or organisations

5.2.1 RAC Monkey Mia Dolphin Resort

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed RAC Monkey Mia Dolphin Resort advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While RAC Monkey Mia Dolphin Resort is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for RAC Monkey Mia Dolphin Resort to provide feedback during the consultation process.

5.2.2 Dirk Hartog Island

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Dirk Hartog Island advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Outcomes of Consultation
While Dirk Hartog Island is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Dirk Hartog Island to provide feedback during the consultation process.

5.2.3 Shark Bay Community Resource Centre

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Shark Bay Community Resource Centre advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation
While Shark Bay Community Resource Centre is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Community Resource Centre to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2.4 Shark Bay Coastal Tours

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Shark Bay Coastal Tours advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While Shark Bay Coastal Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Coastal Tours to provide feedback during the consultation process.			

5.2.5 Shark Bay Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to Shark Bay Recreational Marine Users advising of the proposed activity (Record of Consultation, references 6.1.60), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Shark Bay Recreational Marine Users to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.60.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1),

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP.	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	
Outcomes of Consultation			
While Shark Bay Recreational Marine Users are not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Recreational Marine Users to provide feedback during the consultation process.			

5.2.6 Naturetime Tours

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Naturetime Tours advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While Naturetime Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Naturetime Tours to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.2.7 Wula Gura Nyinda Eco Cultural Tours

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed Wula Gura Nyinda Eco Cultural Tours advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While Wula Gura Nyinda Eco Cultural Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Wula Gura Nyinda Eco Cultural Tours to provide feedback during the consultation process.

5.3 Other non-government groups or organisations (NGOs) or individuals

5.3.1 Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	
Outcomes of Consultation			
While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.			

5.3.2 Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AMCS to provide feedback during the consultation process.			

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.3.3 Greenpeace Australia Pacific (GAP)

Summary of information provided and record of consultation for this EP:

- On 30 July 2025, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 6.1.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.
Outcomes of Consultation			
While GAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GAP to provide feedback during the consultation process.			

5.3.4 Vocus

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 6.1.9), provided a Consultation Information Sheet, a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community',* and a map of the submarine communication cables in the vicinity of the Operational Area.
- On 29 July 2025 and 30 July 2025, Woodside was copied into internal Vocus emails forwarding the information to the appropriate area in Vocus (SI Report A, reference 25.1 and 25.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	

Outcomes of Consultation
While Vocus is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Vocus to provide feedback during the consultation process.

5.4 Research institutes and local conservation groups or organisations

5.4.1 Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to AIMS advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed AIMS to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1),

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation
While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.2 Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to CSIRO advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed CSIRO to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While CSIRO is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CSIRO to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.3 University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to UWA advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed UWA to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While UWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for UWA to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.4 Western Australian Marine Science Institution (WAMSI)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to WAMSI advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed WAMSI to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.5 Curtin University

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to Curtin University advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed Curtin University to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While Curtin University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Curtin University to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.6 Edith Cowan University (ECU)

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to ECU advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 30 July 2025, Woodside emailed ECU to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended (Record of Consultation, references 6.1.58.1).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6.2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While ECU is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ECU to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

5.4.7 Murdoch University

Summary of information provided and record of consultation for this EP:

- On 29 July 2025, Woodside emailed to Murdoch University advising of the proposed activity (Record of Consultation, references 6.1.58), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure '*Consultation on offshore petroleum environment plans: Information for the community*'.
- On 29 July 2025, Murdoch University responded requesting that an email be removed from Woodside's mailing list (SI Report A, reference 24.1).
- On 30 July 2025, Woodside emailed Murdoch University to clarify that technical issues may have affected the display of the previous consultation email, Woodside re-issued the full consultation email, outlined that the Consultation Information Sheet is available on Woodside's website, and advised that the consultation period had been extended.
- On 1 August 2025, Woodside replied and confirmed that the email had been removed from Woodside's mailing list (SI Report A, reference 24.2).
- On 18 August 2025, as no response had been received, Woodside proactively sent a follow-up email or letter (Record of Consultation, references 6..2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim	Woodside's Statement of Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.		Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of the EP).	No additional measures or controls are required.

Outcomes of Consultation

While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.

5.5 Traditional custodians and nominated representative corporations

5.5.1 Wunambal Gaambera Aboriginal Corporation (WGAC)

Summary of information provided and record of consultation for this EP:

- On 28 July 2025, Woodside emailed WGAC advising of the proposed activity (Record of Consultation, reference 6.1.47). The email included:
  - A Summary Information Sheet.
  - A link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- An overview of the proposed activity.
- Links to the NOPSEMA *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information*, and contact details.
- A request for information on how WGAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- A request for feedback by 27 August 2025 for the purposes of preparation of this EP.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- A request for WGAC to provide information about the proposed activity to other individuals as required.
- Acknowledgement that discussions relating to Woodside's consultation framework agreement has been ongoing and that these discussions will progress in parallel with consultation for the proposed activity's EP.

• On 19 August 2025, Woodside emailed WGAC a reminder about the proposed activity (SI Report B, reference 1.20.1). The email included:

- A reference to the original consultation email for this EP sent to WGAC on 28 July 2025, which included a Summary Information Sheet and a link to the Consultation Information Sheet.
- A reminder that consultation for the preparation of this EP closes on 27 August 2025.
- A request for information on how WGAC would like to engage with Woodside about the proposed activity, including the opportunity to meet face-to-face.
- Woodside's commitment to managing gender-restricted or other culturally sensitive information.
- Advice that feedback can continue to be provided to Woodside during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA.

Summary of Feedback, Objection or Claim	Woodside's Assessment of Merits of Feedback, Objection or Claim	Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP.	Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.8 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While WGAC is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WGAC to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6. RECORD OF CONSULTATION

6.1 Initial consultation

6.1.1 Consultation information sheet.

Woodside Energy

Consultation Information Sheet
July 2025

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan

Carnarvon Basin, North-West Australia

Activity Overview

The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility. The GWF-4 Drilling and Subsea Installation Environment Plan (EP) comprises drilling offshore wells in nearfields and the Wilcox Field which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells. The EP will also cover installation and pre-commissioning of subsea infrastructure.

Location

In Commonwealth waters ~140 km north-west of Karratha, WA (Figure 2)

Water depth

~70-160 m deep.

Timing

Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days)

- Contingency 2029

Subsea Installation:

- Nearfield Infill: Q3 2027 to Q1 2028 ~ 3 months
- Wilcox: Q4 2027 to Q2 2028 ~6 months
- Contingency 2029

Decommissioning is not planned during the next 5 years.

Duration

When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations of drilling and subsea installation activities may occur. Inspection, Monitoring, Maintenance and Repair (IMMR) activities take place as required.

Joint Venture

Operator – Woodside Energy Ltd.

Joint Venture - Woodside Energy Ltd, BP Developments Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Ltd, and Shell Developments (Australia) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to be consulted and provide feedback.

Woodside consults relevant persons when developing an Environment Plan (EP) to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is carried out in a manner consistent with the principles of ecologically sustainable development and carried out in a manner by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the activities under this EP, we would like to hear from you by **27 August 2025**.

consultation@feedback.woodside.com
Toll free: 1800 442 977
woodside.com

A summary of the activity and location is found in **Table 1** and **2.**

Figure 1: The Goodwyn Alpha (GWA) platform. The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing GWA facility.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

Table 1 – Activity and Location Summary

Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	• Mooring installation for the MODU (including piling). • Development drilling. • Pre and post- lay survey activities. • Installation of subsea infrastructure. • IMMR. • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6.
Infrastructure	Subsea: • Wilcox: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield Infill: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules. MODU: moored, hybrid (moored and DP) MODU will be used.
Vessels	• PIV for installing the subsea infrastructure • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels.
Operational area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area includes: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels.
Communication with mariners	Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby. Commercial fishers and other marine users are permitted to use the Operational Area but are prohibited from entering a 500 m petroleum safety zone around the riser turret mooring system and wells to avoid interactions between vessels and the operations, unless authorised by Woodside.
Distance to nearest marine park/nature reserve	• Montebello Islands Marine Park (WA) overlaps south west of the Operational Area. • Montebello Marine Park – Multiple Use Zone (Cth) overlaps the south west of the Operational Area. • Dampier Marine Park – Habitat Protection Zone (Cth) ~115 km south east of the Operational Area.

Activity Location

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence on the surrounding environment. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA was developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well containment and vessel collision. The EMBA is depicted in Figure 3.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA, please see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling at **www.nopsema.gov.au**.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures are summarised in **Table 3**. Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to inform our decision-making.

Table 3. Summary of key impacts and risks and proposed management measures*

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical presence: ***interaction with other marine users***	• Physical presence of the MODU and subsea wells/Infrastructure as well as offshore support vessels. • Activity execution may occur at any time during the project timeline.	• Localised impact with no lasting effect arising from: – Subsea wells and infrastrcture with the potential to interact with marine users such as commercial fisheries where fishing methods are at or close to the seabed. – Displacement or exclusion of other marine users when the MODU or vessels are in the field.	• Vessels adhere to regulatory requirements for navigational safety. • Notify relevant government departments, fishing industry representative bodies and licence holders of activities prior to commencement and on completion of activities. • Notify the Australian Hydrographic Service (AHS) prior to commencement of the activity to enable them to update maritime charts ensuring marine users are aware of the activity. • Where activities overlap a defence area. notify Department of Defence of activities no less than five weeks before the scheduled activity commencement date. • Consult with relevant persons so they are informed of the proposed activities.
Physical presence: ***disturbance to seabed***	Seabed disturbance may result from: • Drilling operations (including preparation activities). • Installation of subsea infrastructure. • Contingency activities (including well interventions, workovers).	• Localised impact to seabed and associated benthic communities, arising from: – Localised modification of seabed habitat within the Operational Area. – Localised change in habitat, water quality, and sediment quality, which may affect fauna.	• Assessments of seabed sensitivities will be undertaken to support subsea Infrastructure placement. • Infrastructure will be placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. • Infrastructure wet parked (temporarily placed) on the seabed will be tracked and removed. • MODU well site locations will consider seabed sensitivities.
Routine acoustic emissions: generation of noise during routine operations - generation continuous	Noise generated in the Operation Area from: • MODU and support vessel thruster engines, propellers. • Drilling operations. • Contingency activities. • Positioning equipment.	Localised minor impact arising from: • Behavioural changes to marine fauna around MODU, Installation vessel, and support vessels. • Behavioural changes to marine fauna during piling Installation.	• Project vessels comply with *EPBC Regulations 2000 – Part 8 Division 8.1 Interacting with cetaceans.* • Implement an adaptive management procedure prior to support vessels coming alongside the MODU and installation vessel.
Routine acoustic emissions: generation of noise during routine operations - generation impulse	Noise generated in the Operation Area from: • Geotechnical surveys (SSS, MBES, SBP). • Drilling transponders. • Piling Installation.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine discharges: project vessels	• Sewage, greywater and macerated food waste will be discharged from project vessels and the MODU. • Bilge water, deck drainage and brine and cooling water may also be discharged.	Localised impact with no lasting effect arising from: • Change in marine water quality, which may affect marine fauna.	• MODU, subsea Installation vessel and support vessels will comply with Marine Orders. • Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline.
Routine and Non-routine discharges: Drill cuttings and Drilling Fluids ***Routine and non-routine discharges: cement, cementing fluids, subsea well fluids, produced water, unused bulk product and subsea chemicals*** ***Routine and non-routine discharges: produced water.***	Routine and non-routine drilling discharges such as: NWBM, swarf, cements, cuttings, drilling chemicals, well fluids, bulk products during and produced water (if discharge from MODU required).	• Localised impact arising from: – Temporary reduction in water quality. – Sediment deposition. – Accumulation of drill cuttings resulting in minor and short term impacts to benthic communities. – Potential contamination and toxicity effects to benthic and in-water biota.	• Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline. • No top-hole locations within the Montebello Marine Park. • Options for use of excess bulk cement, bentonite and barite will be managed as per Woodside's Management process for excess bulk product. • Displacement, brine, intervention, or returned well fluids contaminated with hydrocarbons will be treated prior to discharge or contained. If discharge specification cannot be met the fluid will be returned to shore. • Maintain average OOC at <6.9% by weight on wet cuttings (for sections drilled with NWBM). • Solids Control Equipment (SCE) used to treat drill cuttings returned to the MODU prior to discharge. • During well unloading and completion activities, if produced water is not flared, it will be processed through a water filtration treatment package prior to discharge to the environment.
Routine and non-routine atmospheric and Greenhouse Gas (GHG) emissions	• Atmospheric and GHG emissions generated from flaring or venting, power generation, and fuel combustion.	• Localised impact with no lasting effect arising from: – Localised reduction in air quality in the immediate vicinity. – Contribution to global GHG emissions.	• Comply with regulatory requirements relating to GHG emissions and reporting. • Vessels comply with Marine Orders for pollution prevention to air.
Routine light emissions	• External light emissions from MODU and project vessels and submersible equipment. • Light emissions from MODU operations - flaring.	• Localised impact with no lasting effect arising from: – Change in ambient light resulting in change in fauna behaviour.	• Lighting to be limited to the minimum required for navigational and safety requirements except for emergency events. • Implementation of Woodside Offshore Seabird Management Plan. • Flaring restricted to a duration necessary to achieve the well objectives, eliminating unnecessary flared volumes and corresponding light emissions.
Unplanned events (accidents / incidents)			
Physical presence (unplanned): interaction with marine fauna and avifauna	• Accidental collision between project vessels/MODU and protected marine fauna. • potential changes to avifauna behaviour.	• Potential minor impact with high recoverability arising from: – Injury or death to marine fauna (single individual) including protected species. – Behavioural changes on seabirds utilising vessels as resting points.	• Adhere to the EPBC Regulations 2000 – Part 8 Division 8.1 Interacting with cetaceans. • Environmental induction of all relevant vessel crew.
Physical presence (unplanned): Introduction of Invasive Marine Species (IMS)	• Vessels and submersible equipment have the potential to introduce IMS to the Operational Area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange.	• Potential moderate impact with moderate recoverability arising from: – Introduction and establishment of IMS in the Operational Area.	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements (international vessels), as applicable. • Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Physical Presence: (unplanned) Seabed Disturbance	• Dropped objects (including wellhead). • Loss of station-keeping of MODU leading to seabed disturbance.	• Potential localised impact arising from: – Localised disturbance to benthic habitat (fish, benthic communities, Key Ecological Features). – Reduction in water and sediment quality. – Disruption to marine fauna.	• Station-keeping systems and mooring system testing implemented as per project-specific Mooring Design Analysis. • Dropped objects to be recovered where safe and practicable to do so.
Unplanned discharges: hazardous and non-hazardous solid waste/equipment	• Accidental, unplanned loss of hazardous or non-hazardous solid wastes/equipment to the marine environment may occur if dropped or blown overboard.	• Potential localised impact with no lasting effect arising from: – Reduction in water and sediment quality. – Disruption to marine fauna.	• Comply with Marine Orders for the prevention of marine pollution. • Implement waste management procedures which provide for safe handling and transportation, segregation and storage and appropriate classification of waste generated. • Lost waste or dropped objects will be recovered, where safe and practicable.
Unplanned discharges: Hydrocarbon and Chemicals	• Accidental discharge of hydrocarbons/chemicals from MODU or project vessels deck activities and equipment. • Accidental discharge of WBM or NWBM to marine environment due to failure of slip joint packers, bulk transfer hose/fitting, emergency disconnect system or from routine MODU operations.	• Potential minor level impact arising from: – Reduction in water and sediment quality. – Disruption to marine fauna. – Archaeological and intangible cultural heritage damage.	• Comply with Marine Orders for the prevention of marine pollution. • Where there is potential for loss of primary containment of oil and chemicals on the project vessels, deck drainage must be collected via a deck drainage management system. • Spill kits positioned in high-risk locations around the vessel (near potential spill points such as transfer stations). • Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline.
Unplanned Hydrocarbon Release: Gas/Condensate	• Loss of hydrocarbons to the marine environment due to loss of well control.	• Potential moderate level impact arising from: – Reduction in water and sediment quality. – Disruption to marine fauna including protected species. – Potential archaeological and intangible cultural heritage damage. – Potential disturbance to tourism, recreation, and commercial fisheries.	**Preventing loss of well control**: • OPGGS (Resource Management and Administration) Regulations 2011: accepted WOMP which describes the well integrity outcomes, control measures and performance criteria used to demonstrate how the risk of loss of well integrity is managed to ALARP including the well design and barriers to be used to prevent a loss of well integrity, which aligns with industry guidance and good practice. • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well. • Subsea BOP specification, installation and testing compliant with Woodside Standards. **Spill response arrangements**: • Develop a project specific Oil Pollution Emergency Preparation document (OPEP) including first strike response plan. • Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned.
Unplanned hydrocarbon release: Marine diesel	Loss of marine diesel to the environment during vessel and MODU operations arising from: • Bunkering/refuelling. • Vessel collision (e.g. MODU, support vessels, or other marine users).	• Potential minor level impact with high recovery arising from: – Reduction in water quality. – Disruption to marine fauna including protected species. – Interference with or displacement of other marine users including activities of other regional petroleum activities.	**Preventing loss of marine diesel**: • Project vessel comply with Marine orders for safe vessel operations. • Establishment of a temporary 500 m exclusion zone around MODU /Installation vessel and communicated to marine users. • Support vessel on standby as per the MODU safety case during the Petroleum Activity. **Spill response arrangements**: • Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned. • Emergency response activities would be implemented in line with the OPEP.

**These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.*

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **27 August 2025** via:

consultation@feedback.woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.

Your feedback and our response will be included in our EP for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:
woodside.com/what-we-do/consultation-activities

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

6.1.2 Summary information sheet

Woodside Energy

Summary Consultation Information Sheet
July 2025

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan

Carnarvon Basin, North-West Australia (Commonwealth Waters)

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

Have Your Say

We want to talk, share ideas, and yarn with local communities who have a deep connection to the land and sea. Your knowledge helps us do our work better!

We want to understand the environments we want to work in. We want to work in a way which manages the environmental impacts and risks of the activities appropriately. By working together, we want to help protect cultural heritage and keep the Land and Sea Country healthy.

We welcome feedback from First Nations communities and stakeholders whose functions, interests and activities may be affected by our activities under this Environment Plan (EP). If you'd like to share your views, please contact us before **27 August 2025**.

Email: **feedback@woodside.com**
Call: **1800 442 977 (toll-free)**
Visit: **woodside.com/what-we-do/consultation-activities**

Your feedback will be included in our EP submissions to NOPSEMA (National Offshore Petroleum Safety and Environmental Management Authority) and will help guide responsible environmental decision-making.

Figure 1: The Goodwyn Alpha (GWA) platform

Activity Overview

- The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility.
- The GWF-4 Drilling and Subsea Installation EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure.
- Woodside plans to drill up to six wells.
- The EP will also cover installation and pre-commissioning of subsea infrastructure.

Location

- In Commonwealth waters ~140 km north-west of Karratha, WA (**Figure 2**).

Water Depth

- ~40 m – 160 m deep.

Timing

- Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days).
  - Contingency 2029.
- Subsea Installation:
  - Nearfield: Q3 2027 to Q1 2028, ~3 months.
  - Wilcox Field: Q4 2027 to Q2 2028, ~6 months.
  - Contingency 2029.
- Decommissioning is not planned during the next 5 years.

Duration

- When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations of drilling and subsea installation activities may occur.
- Inspection, Monitoring, Maintenance and Repair (IMMR) activities take place as required.

Joint Venture

- Operator – Woodside Energy Ltd.
- Joint Venture – Woodside Energy Ltd, BP Developments Australia Pty Ltd, Woodside Energy (North-West Shelf) Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Ltd, and Shell Developments (Australia) Pty Ltd.

Greater Western Flank (GWF-4) Drilling and Subsea Installation Environment Plan | July 2025

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Activity Location

The EP explains how Woodside will manage environmental risks and impacts while carrying out our activities. These plans help us conduct operations safely and responsibly, with respect for the environment and cultural heritage. The location where the work will be done is known as the Operational Area (**Figure 2**).

Woodside must consult with relevant persons, including Traditional Custodian groups whose functions, interests or activities may be affected by the activities to be carried out under the EP or that are considered relevant, to listen to concerns and, where required, incorporate feedback into the EP.

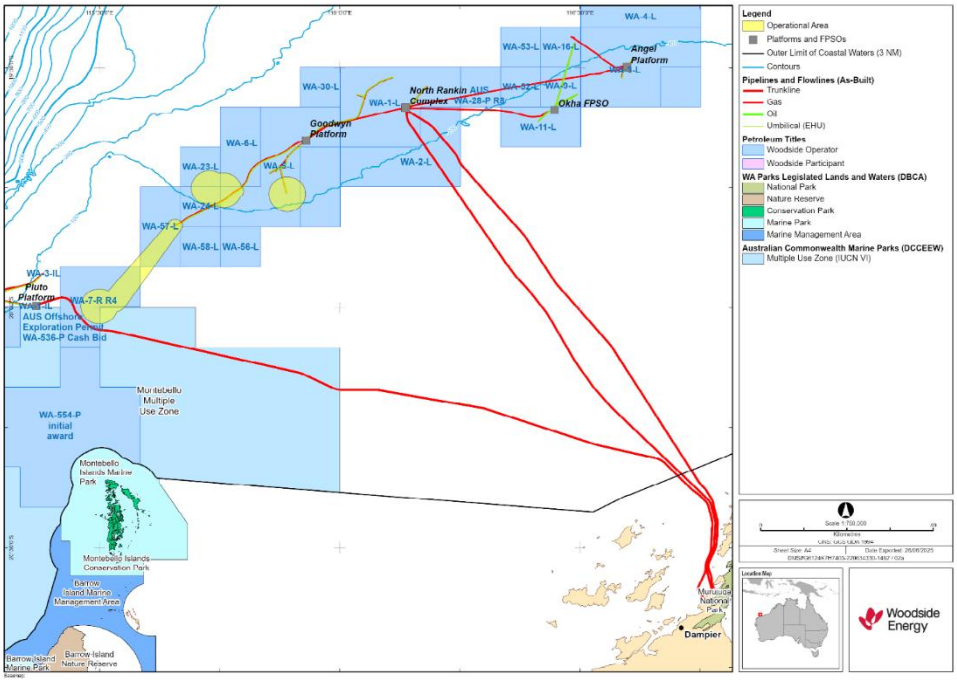

Figure 2: Location of the activity, including Operational Area and associated infrastructure

Planned Activities and Unplanned Events

We assess both planned activities and unplanned events which may result in environmental risks and impacts.

Planned activities are activities that Woodside knows will happen as part of the work under the EP. This could include generating underwater noise, light emissions, associated atmospheric emissions or routine discharges (such as sewage, waste, and deck drainage). We take steps so that planned activities comply with legislative and regulatory requirements.

Unplanned events are very unlikely. They may be the result of an accident, incident or emergency, such as a spill of fuel or oil from a ship (vessel) collision, a spill on the deck of a vessel (like during refuelling), unplanned seabed and/or marine life disturbance, or accidental introduction of invasive species from outside the region.

Planned and unplanned activities, potential impacts, and management measures are included in the Consultation Information Sheet for this activity, available at www.woodside.com/what-we-do/consultation-activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA map (**Figure 3**) is a model of the largest spatial area where the activity could have a potential environmental impact. It combines multiple modelling outputs for both planned and unplanned activities in the highly unlikely event of an oil and natural gas (hydrocarbon) release to the environment. The modelling scenarios that inform the EMBA are loss of well containment and vessel collision.

The EMBA does not show the predicted impact of a single event - it is the merged area of many possible scenarios that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time. This means that if a hydrocarbon release was to occur, the whole EMBA would not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of a release.

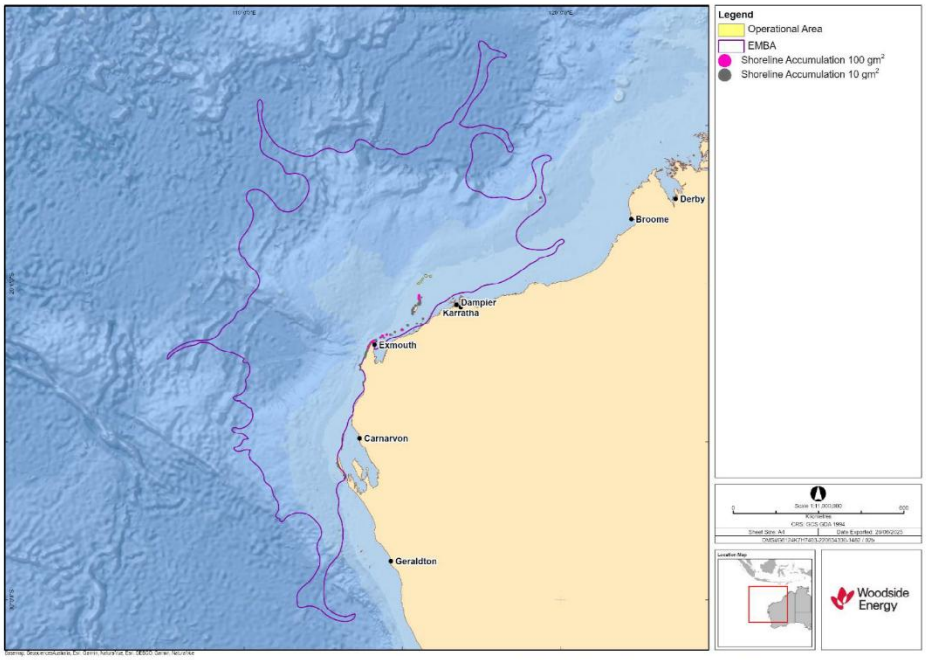

Figure 3: The Operational Area and Environment that May Be Affected (EMBA) map for the GWF-4 Drilling and Subsea Installation EP

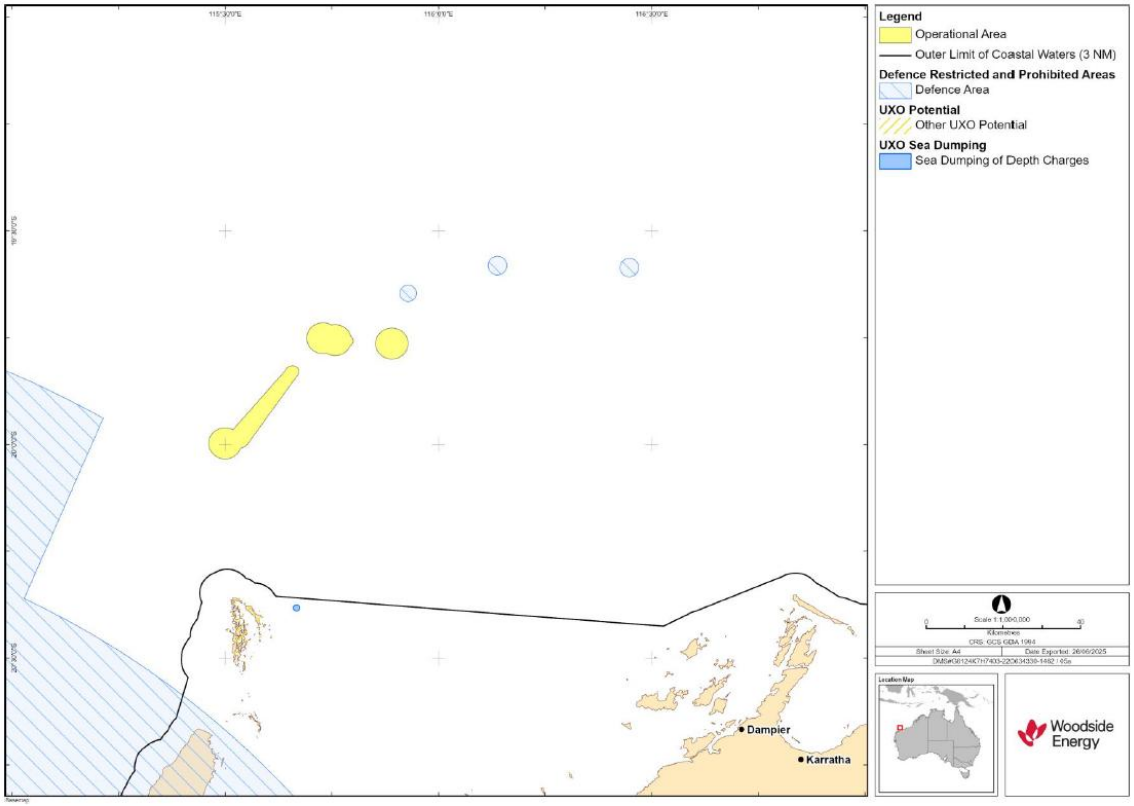
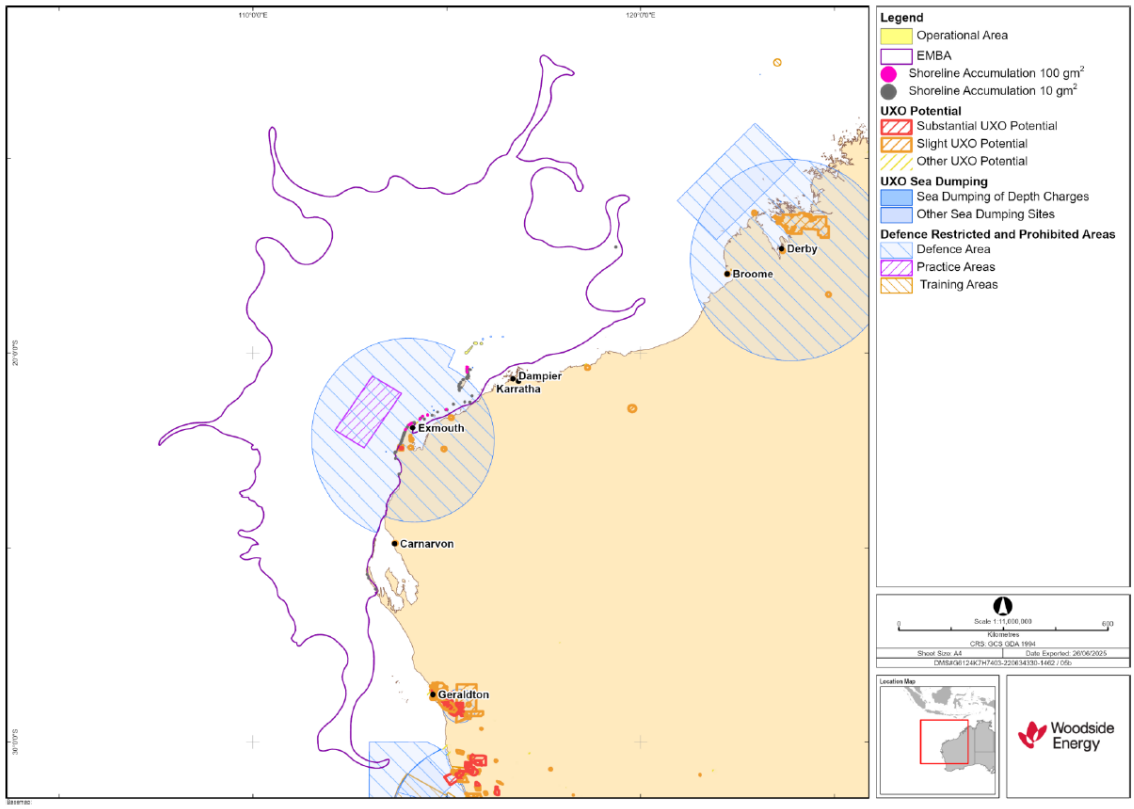
Your Feedback is Important

Woodside consults with relevant persons during the preparation of EPs to notify them about the activity and hear their feedback. By working together, we aim to protect biodiversity and maintain the health of ecosystems while carrying out our projects.

Your feedback helps shape the EP by:



- Identifying additional possible measures to reduce environmental impacts.
- Helping us consider cultural heritage and environmental values.
- Providing information that may help improve Woodside's environmental practices.



If there is particular information that you provide during consultation that you'd prefer not to be published, please let us know. We'll make your request known to NOPSEMA.

We'll manage any personal information collected during our consultation with you in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand more, please visit www.woodside.com/what-we-do/consultation-activities.

6.1.6 Commonwealth shipwrecks

Commonwealth shipwrecks – GWF-4 Drilling and Subsea Installation Environment Plan

Vessel name	Vessel type	When lost	Where lost	Latitude	Longitude
Olive	Sailing vessel	1916	Dorre Island, Carnarvon	-24.85	112.9166667
Olive	Sailing vessel	1893	Exmouth Gulf	-21.75	114.0833333
Parks Lugger	Sailing vessel		Hermite Island. Montebello Islands	-20.477082	115.528518
Patience	Trawler	1959	Geraldton	-26.66666667	112
Pearl	Sailing vessel	1896	Exmouth Gulf, Meda Creek	-21.75	114.0833333
Pearline	Sailing vessel	1893	Shark Bay	-24.5	113
Perseverant's Boat	Unknown	1841	South of Java Head	-24.25	112
The Two Friends	Sailing vessel	1925	Off Dirk Hartog Island	-25.31666667	112.7833333
Two Sons	Sailing vessel	1902	Shark Bay	-24.5	113
Vergo	Sailing vessel	1893	Shark Bay area	-24.25	112
Vianen	Sailing vessel	1628	Barrow Island Area	-20	115.1666667
Stranger	Sailing vessel	1893	Shark Bay	-24.5	113
Strathmore	Sailing vessel	1870	Point Cloates	-22.55	113.5
Sydney HMAS	Cruiser	1941	113 n miles W of Steep Point	-26.24361111	111.2175
Prince Charlie	Sailing vessel	1850	Shark Bay	-24.5	113
Puffin	Unknown	1964	Near Geraldton	-26.66666667	112
Queen	Sailing vessel	1891	Off Point Cloates	-22.55	113.5
Rapid	Sailing vessel	1811	Ningaloo Reef	-22.739438	113.692643
Rosella	Sailing vessel	1928	Near Geraldton	-26.66666667	112
Viking	Trawler	1958	Horrock's Beach	-26.66666667	112
Vittoria	Unknown	1929	Dorre Island	-24.83333333	112.9333333
Wild Wave (China)	Sailing vessel	1873	Monte Bello Island	-20	115.1666667
Zvir	Twin screw steamer	1902	Point Cloates	-22.60916667	113.626
S.S.S.	Unknown	1901	Off Point Cloates	-22.65	113.5833333
Scout	Sailing vessel	1918	Geraldton	-26.66666667	112
Seagull	Sailing vessel	1893	Shark Bay area	-24.25	112
Shunsei Maru	Unknown	1931	Carbaddaman Passage, north of Point Cloates	-22.41666667	113.6833333
Smuggler	Sailing vessel	1893	Exmouth Gulf	-21.75	114.0833333
Gift	Sailing vessel	1898	Shark Bay Area	-24.25	112
Haw Kiet	Unknown	2003		-18.45816667	117.2583333
Hawk	Sailing vessel		Around 55 kilometres south of the Cape at Carbaddaman Passage	-22.45	113.73333
Helena Mena	Sailing vessel	1898	Dirk Hartog Island	-25.31666667	112.7833333
Hildas	Sailing vessel	1893	Shark Bay	-24.5	113
Idahlia	Sailing vessel	1898	Shark Bay, Willieman	-24.25	112
Jane Bay One Unidentified	Unknown		Jane Bay	-22.732317	113.73212
Julie Dawn	Trawler	1971	Near Geraldton	-26.66666667	112
Junee	Trawler	1967	Geraldton	-26.66666667	112
Kadna	Unknown	1902	1902	-17.96166667	112.2363833
Mabel	Sailing vessel	1893	Exmouth Gulf	-21.75	114.0833333
Marietta	Unknown	1905	Barrow Island	-20	115.1666667
Marutta	Unknown	1905		-20.72783333	115.4261667
Matchless	Sailing vessel	1893	Shark Bay	-24.5	113
May	Sailing vessel	1872	Geraldton	-26.66666667	112
Koombana	Twin screw steamer	1912	Port Hedland and Broome, Bedout Island	-19.4	118.9

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **29 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: ▪ Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	▪ Development drilling. ▪ Pre- and post- lay survey activities. ▪ Installation of subsea infrastructure. ▪ Inspection, monitoring, maintenance and repair (IMMR). ▪ Tie-in to existing subsea infrastructure. ▪ Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	▪ Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. ▪ Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. ▪ Decommissioning is not planned during the next 5 years.
Duration	▪ When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. ▪ IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: ▪ Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. ▪ Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: ▪ Installation vessel for installing the subsea infrastructure. ▪ Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. ▪ Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. ▪ MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: ▪ A radius of 4,000 m from each well to allow for MODU mooring. ▪ 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. ▪ 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **29 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.1.9 Email sent to Australian Communication Management Authority (ACMA); Telstra; Vocus – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please also find attached a map of the submarine communication cables in the vicinity of the Operational Area.

Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. · Subsea Installation: – Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. · Decommissioning is not planned during the next 5 years.
Duration	· When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. · IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: · Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. · Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Woodside Energy Consultation

6.1.10 Email sent to Australian Hydrographic Authority (AHO) – 29 July 2025

Dear AHO

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with AHO to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for AHO and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Please also find attached a vessel density map and GIS Shape Files.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.

Woodside Energy Consultation

6.1.11 Email sent to Western Australian Fishing Industry Council – 29 July 2025

Dear [Individual 3]

Please see below consultation information for the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The consultation period is due to close on **28 August 2025**.

A Consultation Information Sheet is also attached.

Under the fee-for-service agreement, can WAFIC please provide the consultation information to the following fisheries based on active fishing (Fishcube data) in the Operational Area:

- Mackerel Managed Fishery (Area 2)
- Marine Aquarium Fish Managed Fishery
- Onslow Prawn Managed Fishery
- Pilbara Trap Managed Fishery
- Pilbara Line Fishery (Condition)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Draft email for WAFIC to send to Individual Licence Holders

Dear Licence Holders

Woodside is planning to submit the Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

The table below provides a summary of the proposed activities under this EP. The attached Consultation Information Sheet provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures. This is also available on Woodside's website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licences: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029.

Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Notifications

Please let WAFIC know if you require notification prior to and on completion of the proposed activities.

Feedback

Please provide feedback specific to the proposed activities described to [Individual 3]@wafic.org.au by **28 August 2025**.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published and if so, Woodside will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit Woodside's website.

Kind regards,

Woodside Energy Consultation

6.1.12 Email sent to Shire of Ashburton – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with Shire of Ashburton to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for Shire of Ashburton and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
	· 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response

In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport and Major Infrastructure (DTMI), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage

Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

Woodside Energy Consultation

6.1.13 Email sent to Australian Maritime Safety Authority (AMSA) – Marine Safety – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with AMSA to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for AMSA and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: ▪ Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). ▪ Development drilling. ▪ Pre- and post- lay survey activities. ▪ Installation of subsea infrastructure. ▪ Inspection, monitoring, maintenance and repair (IMMR). ▪ Tie-in to existing subsea infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	▪ Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	▪ Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. ▪ Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. ▪ Decommissioning is not planned during the next 5 years.
Duration	▪ When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. ▪ IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: ▪ Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. ▪ Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: ▪ Installation vessel for installing the subsea infrastructure. ▪ Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. ▪ Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. ▪ MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: ▪ A radius of 4,000 m from each well to allow for MODU mooring. ▪ 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. ▪ 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This

means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.13.1 Email sent to Australian Maritime Safety Authority (AMSA) – Maritime Safety – 30 July 2025

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet, a vessel density map and GIS Shape Files were also attached to yesterday's email. A copy of the Consultation Information Sheet is available here on our website.

We have extended the consultation period until **29 August 2025**.

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.14 Email sent to Recfishwest – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with Recfishwest to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for Recfishwest and we will make arrangements for a meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.14.1 Email sent to Recfishwest – 30 July 2025

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

	• MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

EMBA Overlap

Woodside is providing this information to the Aquaculture Council of Western Australia as our mapping data shows the EMBA for this EP overlaps with pearl farm leases in the Montebello Islands and Dailey Shoal, and an aquaculture site in the Mackerel Islands.

Notifications

Please let us know if you require notification prior to and on completion of the proposed activities.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Commonwealth fisheries

Commonwealth fisheries active in the Operational Area:

- None

Commonwealth fisheries active in the EMBA:

- North-West Slope Trawl Fishery
- Western Deepwater Trawl Fishery
- Western Tuna and Billfish Fishery

Please note that Woodside has provided consultation information directly to licence holders it has assessed as ‘relevant persons’ for this EP, as well as relevant fishery representative bodies.

Biosecurity

With respect to the biosecurity matters, please note the following information below:

Environment description	
• Vessels transiting to the Operational Area may be subject to marine fouling whereby organisms attach to the vessel hull. • Organisms may also be drawn into ballast tanks during onboarding of ballast water. • Submersible equipment may be subject to marine fouling.	
Potential IMS risk	**IMS mitigation management**
The offshore open waters of the Operational Areas more than 35 km from a shoreline and in waters ranging from 40 to 160 m deep, these areas are not typically conducive to the settlement and establishment of IMS. Noting that the shallower areas of the Operational Area (~40 m) have a slightly increased risk	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements (international vessels), as applicable.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

however the majority of the Operational Area has water depths greater than 70 m.	• Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.16.1 Email sent to Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries; Department of Agriculture, Fisheries and Forestry (DAFF) - Biosecurity – 30 July 2025

Dear DAFF

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

We have extended the consultation period until **29 August 2025.**

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.17 Email sent to Director of National Parks (DNP) – 29 July 2025

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with DNP to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for DNP and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.17.1 Email to Director of National Parks (DNP) – 30 July

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

We have extended the consultation period until **29 August 2025.**

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.18 Email sent to Western Rock Lobster Council – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

EMBA Overlap

Woodside is providing this information to the Western Rock Lobster Council as our mapping data shows the EMBA for this EP overlaps the Western Rock Lobster Managed Fishery. Woodside has also consulted individual licence holders of the Western Rock Lobster Managed Fishery..

Notifications

Please let us know if you require notification prior to and on completion of the proposed activities.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

6.1.19 Email sent to Department of Planning, Lands and Heritage – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Please also find attached the details of WA shipwrecks that are relevant for this EP.

Given the proximity of the proposed activities to Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for this EP. Woodside is also consulting with the Western Australian Museum and provided it with relevant shipwreck information for this EP.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

If there is a risk of a spill impacting State waters, Woodside will further consult the Department of Transport and Major Infrastructure as outlined in the Department's Offshore Petroleum Guidance Note - *Marine Oil Pollution: Response and Consultation Arrangements (July 2020)*.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.20.1 Email sent to Department of Transport and Major Infrastructure – 29 July 2025

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please see below for the full text of the email. The Consultation Information Sheet, which was attached to yesterday's email, is also available here on our website.

We have extended the consultation period until 29 August 2025.

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.21 Email sent to Department of Biodiversity, Conservation and Attraction (DBCA) – 30 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with DBCA to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for DBCA and we will make arrangements for a meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure.

Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Environmental knowledge

Woodside maintains knowledge and an understanding of the environment within and adjacent to the Operational Area. An information system to track current existing environment knowledge is regularly updated and covers the following topics:

- EPBC Act Matters of National Ecological Significance (MNES) including threatened and migratory listed species
- WA Biodiversity Conservation Act 2016 – threatened and priority fauna list, the Part 13 Instruments, i.e., threatened species recovery plans and Biodiversity Regulations 2018
- EPBC Act threatened Species, Recovery Plans and Conservation advice
- State protected areas information and management plans on the habitats and associated fish and benthic communities.

The sources of information include credible published scientific research, industry and research agencies (government and university) study reports including baseline and monitoring programs. Woodside is also committed to sharing knowledge and contributes to the Index of Marine Surveys for Assessment (IMSA) hosted by the Department of Water and Environmental Regulation (WA) and supported by WAMSI.

National Light Pollution Guidelines

The lighting associated with the GWF-4 Drilling and Subsea Installation EP activity vessels is required as a priority for safe operation. Woodside has considered the Commonwealth Department of Climate Change, Energy, the Environment and Water's National Light Pollution Guidelines for Wildlife (NLPG; Commonwealth of Australia 2023) with respect to vessel activities. The assessment of potential impacts to seabird and turtle behaviour, is based on recommendations in the NLPG. This impact assessment determined that the impacts of lighting are as low as reasonably practicable (ALARP).

Operational and Scientific Monitoring Program

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program, executed under the Joint Industry OSM Framework (AEP, 2021), provides for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors including but not limited to the Ningaloo Marine Park (M 2), Montebello Islands Marine Park (M 9) and the Barrow Island Nature Reserve (R 11648). The OSM comprises ten scientific monitoring programs (SMPs) and six operational monitoring programs (OMPs). The SMPs are targeted environmental monitoring programs to assess and quantify the environmental impact of a hydrocarbon spill range of physical-chemical (water and sediment) and biological (species and habitats) receptors, including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs address a range of receptors most vulnerable to the impacts of a hydrocarbon release. The actual design and execution of the OSM program will be dependent on the nature and scale of the spill and the receptors predicted to be impacted. One of the priority focus areas in the early phase of an incident would be to identify and execute OSM at First Strike Monitoring Priorities.

Incidents and emergency response

Woodside's Oil Pollution First Strike Plan for this activity includes a commitment that the DBCA will be notified via phone call as soon as practicable if there is potential for oiled wildlife or the spill is expected to

contact land or waters managed by WA DBCA. Woodside has incorporated the DBCA Pilbara regional office phone number as part of the notifications as listed in the Oil Pollution First Strike Plan.

This plan describes the incident management structure, notification and reporting requirements, the Operational Area, activity specific credible spill scenarios, and the hydrocarbon spill response strategies available for the protection of priority receptors. Links are included in the plan to a suite of existing Operational Plans and Tactical Response Plans (TRPs) to commence the mobilisation of response resources immediately, including 'monitor and evaluate' services, operational and scientific monitoring, and shoreline clean-up where required. Woodside understands that DBCA will not implement an oiled wildlife management response on behalf of a petroleum operator.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.21.1 **Email sent to** Department of Biodiversity, Conservation and Attraction – 30 July 2025

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

We have extended the consultation period until **29 August 2025.**

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.22 Email sent to Western Australian Museum – 29 July 2025

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

As per the *Underwater Cultural Heritage Act 2018 (Cwth),* Woodside will contact the Commonwealth regulator, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), regarding this EP.

Woodside also refers to the Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance document regarding assessments and the draft Guidelines for Working in Near and Offshore Environment to Protect Underwater Cultural Heritage.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

6.1.25 Email sent to Department of Primary Industries and Regional Development – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Following our meeting on 18 June 2025, Woodside would like to meet again with DPIRD to discuss this EP and other upcoming Woodside EPs. Please advise if this is still convenient for DPIRD and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

- Pilbara Fish Trawl (Interim) Managed Fishery
- Shark Bay Beach Seine and Mesh Net Managed Fishery
- Shark Bay Crab Managed Fishery
- Shark Bay Prawn Managed Fishery
- Shark Bay Scallop Managed Fishery
- Specimen Shell Managed Fishery
- West Coast Deep Sea Crustacean Managed Fishery
- Exmouth Gulf Beach Seine and Mesh Net Managed Fishery
- Open Access in the North Coast and Gascoyne Coast
- Pearl farm leases in the Montebello Islands and Dailey Shoal
- Aquaculture site in the Mackerel Islands.

Please note that Woodside has provided consultation information to the Western Australian Fishing Industry Council (WAFIC), Aquaculture Council of Western Australia (ACWA) and Recfishwest. Information provided to these bodies includes the planned timing and duration of the activities, and the spatial extent of the proposed activities (including any exclusion zones).

Woodside consults individual fishing license holders based on WAFIC's guidance and advice, whereby WAFIC:

- directly consults fishery licence holders that are assessed as having a potential for interaction in the Operational Area
- consults fisheries that are assessed as having a potential for interaction in the EMBA only in the event of an unplanned emergency scenario.

Woodside also consults with relevant Traditional Owners in the preparation of this EP.

Spill Contingency Plans

Within Woodside's Oil Pollution First Strike Plan (FSP), Woodside commits to notifying Department of Transport and Major Infrastructure (DTMI) within 2 hours of becoming aware of a marine pollution incident that occurs in or may impact State waters. Woodside also consults DTMI in the development of the FSP.

Woodside commits to notify DPIRD within 24 hours of our reporting the incident to the appropriate authority. We have noted this contact as environment@dpird.wa.gov.au and placed this in the Notification section of the FSP.

In addition, within the FSP, Woodside commits to identify and notify additional relevant persons and organisations such as, but not limited to, commercial fishers or tourism operators that may be affected during a spill event. Woodside would, at the relevant time, engage with these parties as appropriate and will re-assess relevant persons and organisations throughout the response period.

Woodside mitigates the risk of spill events through the adoption of a range of preventative controls (including engineering design) that all contribute to reducing the likelihood of a spill event to an unlikely level. The potential for hydrocarbons to reach coastal regions would be further minimised in the event of a spill by offshore response actions. Such responses would be aimed at reducing hydrocarbon contact with sensitive coastal areas, including commercially important fish species spawning and aggregation areas.

Woodside's oil spill Operational and Scientific Monitoring (OSM) Program is executed under the Joint Industry OSM Framework (AEP, 2021). In the event of a spill, the OSM Framework will guide the situational awareness and response as well as undertake a suite of comprehensive science-based monitoring programs to evaluate environmental damage. One such program is dedicated to the impacts on fisheries. The fisheries impact assessment has two objectives – to assess any physiological impacts to important fish and shellfish species and to assess targeted fish and shellfish species for hydrocarbon contamination.

Feedback

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.25.1 Email sent to Department of Primary Industries and Regional Development – 30 July 2025

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet, which was attached to yesterday's email, is also available here on our website.

We have extended the consultation period until 29 August 2025.

Kind regards,
Woodside Energy Consultation

[Initial email content attached]

6.1.26 Email sent to Australian Southern Bluefin Tuna Industry Association (ASBTIA); Southern Bluefin Tuna Fishery license holders – 11 August 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **10 September 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	• Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Commonwealth fisheries

Commonwealth fisheries active in the Operational Area:

- None

Commonwealth fisheries active in the EMBA:

- North-West Slope Trawl Fishery
- Western Deepwater Trawl Fishery
- Western Tuna and Billfish Fishery

Notifications

Please let us know if you require notification prior to and on completion of the proposed activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **10 September 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Kind regards,
Woodside Energy Consultation

6.1.27 Email sent to Bardi and Jawi Niimidiman Aboriginal Corporation – 28 July 2025

I hope you are well mate.

We are contacting you as the delegated representative for Bardi and Jawi Niimidiman Aboriginal Corporation.

Woodside would like to consult with Bardi and Jawi Niimidiman Aboriginal Corporation as a 'relevant person' that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- Inform you about our plans for the activity.
- Invite you to submit feedback about the activity.
- Provide an opportunity to discuss the activity.
- Discuss further ways to consult and engage with you about the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

· How the activity could impact your cultural values, interests, and activities.

· Protection of the environment and its relationship to your cultural values.

· Your concerns about the proposed activity.

· Other elements we should consider in the Environment Plan.

· Any other individuals, groups, or organisations we should talk to about this activity.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

· Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

· Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

· Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of Bardi and Jawi Niimidiman Aboriginal Corporation, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the consultation framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards,

6.1.28 Email sent to Bundi Yamatji Aboriginal Corporation – 28 July 2025

I hope you are well and had an enjoyable weekend.

We are contacting you as the delegated representative for Bundi Yamatji Aboriginal Corporation (BYAC).

Woodside would like to consult with BYAC as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:
· Inform you about our plans for the activity.
· Invite you to submit feedback about the activity.
· Provide an opportunity to discuss the activity.
· Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

6.1.31 Email sent to Karajarri Traditional Lands Association (Aboriginal Corporation) – 28 July 2025

I am sending the environment information on behalf of Dewayne Ball who is currently on leave.

We are contacting you as the delegated representative for Karajarri Traditional Lands Association (KTLA).

Woodside would like to consult with KTLA as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

· Inform you about our plans for the activity.

· Invite you to submit feedback about the activity.

· Provide an opportunity to discuss the activity.

· Discuss further ways to consult and engage with you about the activity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

· How the activity could impact your cultural values, interests, and activities.

· Protection of the environment and its relationship to your cultural values.

· Your concerns about the proposed activity.

· Other elements we should consider in the Environment Plan.

· Any other individuals, groups, or organisations we should talk to about this activity.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

· Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)

· Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

· Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of KTLA, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards,

6.1.32 Email sent to Kariyarra Aboriginal Corporation – 28 July 2025

I Hope you are both well and had time to relax over the weekend.

We are contacting you as the delegated representative for Kariyarra Aboriginal Corporation (KAC).

Woodside would like to consult with KAC as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:
· Inform you about our plans for the activity.
· Invite you to submit feedback about the activity.
· Provide an opportunity to discuss the activity.
· Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and

Ongoing Feedback

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of NTGAC, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the consultation framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call or send through guidance on next steps.

Sincerely,

6.1.37 Email sent to Ngarluma Aboriginal Corporation – 28 July 2025

I hope you are well and had time to enjoy the weekend.

Can you please let me know if you would like me to include the NAC CEO in any future correspondence relating to Woodside and its activities.

We are contacting you as the delegated representative for Ngarluma Aboriginal Corporation (NAC).

Woodside would like to consult with NAC as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

* Inform you about our plans for the activity.
* Invite you to submit feedback about the activity.
* Provide an opportunity to discuss the activity.
* Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

* How the activity could impact your cultural values, interests, and activities.
* Protection of the environment and its relationship to your cultural values.
* Your concerns about the proposed activity.
* Other elements we should consider in the Environment Plan.
* Any other individuals, groups, or organisations we should talk to about this activity.

Cultural values

We have collated information in relation to cultural values that have either been provided to Woodside during previous EP consultation or via publicly available literature. These are outlined in Appendix A.

If there are any changes or additional information about NAC's cultural values that you would like Woodside to consider in the preparation of this EP, please let us know by Wednesday 27 August 2025. Please also get in touch if you'd like to know more about how we have collected this information.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of

6.1.43 Email sent to Robe River Kuruma Aboriginal Corporation – 28 July 2025

I hope you are well and had time to relax over the weekend.

We are contacting you as the delegated representative for Robe River Kuruma Aboriginal Corporation (RRKAC).

Woodside would like to consult with RRKAC as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

* Inform you about our plans for the activity.
* Invite you to submit feedback about the activity.
* Provide an opportunity to discuss the activity.
* Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

* How the activity could impact your cultural values, interests, and activities.
* Protection of the environment and its relationship to your cultural values.
* Your concerns about the proposed activity.
* Other elements we should consider in the Environment Plan.
* Any other individuals, groups, or organisations we should talk to about this activity.

Cultural values

We have collated information in relation to cultural values that have either been provided to Woodside during previous EP consultation or via publicly available literature. These are outlined in Appendix A.

If there are any changes or additional information about RRKAC's cultural values that you would like Woodside to consider in the preparation of this EP, please let us know by Wednesday 27 August 2025. Please also get in touch if you'd like to know more about how we have collected this information.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

* Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
* Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

* Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of RRKAC, Traditional Owners and other people and organisations who may be interested.

We also acknowledge our discussions relating to the consultation framework agreement have been ongoing and appreciate that these discussions will progress in parallel with consultation for this EP.

I look forward to your response and please feel free to call or send through guidance on next steps.

Sincerely,

6.1.44 Email sent to Thalanyji / Nhuwala People (via BTAC) – 26 August 2028

We are contacting Buurabalayji Thalanyji Aboriginal Corporation (BTAC) as the delegated representative for the Thalanyji/Nhuwala People Native Title Claim.

We note that Blackshield Legal is listed as the representative for the Thalanyji/Nhuwala People and that communications are to be directed via BTAC. Please let me know if this email should be sent to any additional representatives.

Woodside would like to consult with the Thalanyji/Nhuwala People as a ‘relevant person’ that may be affected by **Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation** (the activity) Environment Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation with the Thalanyji/Nhuwala People for this activity closes on **Thursday 25 September 2025**.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

- Inform you about our plans for the activity.
- Invite you to submit feedback about the activity.
- Provide an opportunity to discuss the activity.
- Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities.
- Protection of the environment and its relationship to your cultural values.
- Your concerns about the proposed activity.
- Other elements we should consider in the Environment Plan.
- Any other individuals, groups, or organisations we should talk to about this activity.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

I look forward to your response and please feel free to call or send through guidance on next steps.

6.1.45 Email sent to Wanparta Aboriginal Corporation – 28 July 2025

I hope you and the Wanparta Community are well.

We are contacting you as the delegated representative for Wanparta Aboriginal Corporation.

Woodside would like to consult with Wanparta Aboriginal Corporation as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

* Inform you about our plans for the activity.

the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of the Yamatji Southern Regional Corporation, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.50 Email sent to Yawuru Native Title Holders Aboriginal Corporation – 28 July 2025

I hope this finds you well.

I will reach out again soon, to see if you have time to meet when I am next in Broome.

We are contacting you as the delegated representative for Yawuru Native Title Holders Aboriginal Corporation.

Woodside would like to consult with Yawuru Native Title Holders Aboriginal Corporation as a ‘relevant person’ that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity opens on Monday 28 July 2025 and closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

· Inform you about our plans for the activity.

· Invite you to submit feedback about the activity.

· Provide an opportunity to discuss the activity.

· Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

- How the activity could impact your cultural values, interests, and activities.
- Protection of the environment and its relationship to your cultural values.
- Your concerns about the proposed activity.
- Other elements we should consider in the Environment Plan.
- Any other individuals, groups, or organisations we should talk to about this activity.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to feedback@woodside.com, via telephone on 1800 442 977 or directly to me.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au.

Further information about NOPSEMA

as appropriate.

Please feel free to forward this email and the attached document to members of the Yawuru Native Title Holders Aboriginal Corporation, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards,

6.1.51 Email sent to Yinggarda Aboriginal Corporation (via legal representative) – 29 July 2025

We are contacting you as the delegated representative for Yinggarda Aboriginal Corporation (YAC).

Woodside would like to consult with YAC as a 'relevant person' that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

Consultation for this activity closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

* Inform you about our plans for the activity.

* Invite you to submit feedback about the activity.

* Provide an opportunity to discuss the activity.

* Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

* How the activity could impact your cultural values, interests, and activities.
* Protection of the environment and its relationship to your cultural values.
* Your concerns about the proposed activity.
* Other elements we should consider in the Environment Plan.
* Any other individuals, groups, or organisations we should talk to about this activity.

Cultural values

We have collated information in relation to cultural values that have either been provided to Woodside during previous EP consultation or via publicly available literature. These are outlined in Appendix A.

If there are any changes or additional information about YAC's cultural values that you would like Woodside to consider in the preparation of this EP, please let us know by Wednesday 27 August 2025. Please also get in touch if you'd like to know more about how we have collected this information.

Consultation preferences

Please let us know your preferred method of consultation including whether you would like to meet face-to-face. We welcome the opportunity to meet and speak with Board members, Elders, office holders and other interested parties about this activity.

Woodside provides various forms of assistance to organisations, Traditional Custodian groups and individuals to support participation in EP consultation. If you would like us to meet with you as part of Woodside's consultation on this activity, please contact me to discuss and confirm details.

How to contact us and further information

Information can be sent to feedback@woodside.com , via telephone on 1800 442 977 or directly to me.

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au .

6.1.56 Email sent to Save Our Songlines (via legal representative) – 29 July 2025

We would like to consult with Save Our Songlines and yourself, as a 'relevant person' that may be affected by Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation (the activity) Environment Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation for this activity closes on Wednesday 27 August 2025.

Your feedback, opinions and comments provided by the consultation closing date will be reflected in the EP and considered by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

The purpose of this email is to:

* Inform you about our plans for the activity.

* Invite you to submit feedback about the activity.

* Provide an opportunity to discuss the activity.

* Discuss further ways to consult and engage with you about the activity.

Overview of the activity

The GWF-4 Project intends to partially fill the unused production capacity at the existing Goodwyn Alpha (GWA) facility.

GWF-4 EP comprises drilling offshore wells in nearfields and the Wilcox Field, which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells.

The EP will also cover installation and pre-commissioning of subsea infrastructure.

The attached Summary Consultation Information Sheet has been developed for a First Nations audience and provides a high-level overview of the activity, including the Environment that May Be Affected (EMBA) map.

We have also linked the Consultation Information Sheet here with further details including an assessment of the potential impacts and risks relevant to the activity, as well as mitigation and management measures.

Consultation with Woodside

We'd like to gather your feedback about:

* How the activity could impact your cultural values, interests, and activities.

* Protection of the environment and its relationship to your cultural values.

* Your concerns about the proposed activity.

* Other elements we should consider in the Environment Plan.

* Any other individuals, groups, or organisations we should talk to about this activity.

Consultation preferences

We note your previously stated preference for consultation to occur in written format (as set out in an email dated 10 April 2024). Woodside also welcomes the opportunity to meet face-to-face.

How to contact us and further information

Woodside manages gender-restricted or other culturally sensitive information carefully and will work with you to understand how you would like your information to be managed. If you would prefer to provide the information directly to NOPSEMA, please do so by phoning (08) 6188 8700 or via email at communications@nopsema.gov.au .

Further information about NOPSEMA

The following NOPSEMA publications may be of assistance to support understanding of the requirements to participate in consultation for Commonwealth EPs:

* Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)

* Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au)

* Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au)

Ongoing Feedback

Feedback can continue to be provided during the life of an EP, including after consultation for the EP has closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to claims and objections from relevant persons throughout the life of the EP. Should a claim or objection be received following the acceptance of an EP that Woodside assesses, and which identifies a measure or control that Woodside considers requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.

Please feel free to forward this email and the attached document to members of Save Our Songlines, Traditional Owners and other people and organisations who may be interested.

I look forward to your response and please feel free to call or send through guidance on next steps.

Kind regards

6.1.57 Email sent to Australian Fisheries Management Authority (AFMA), Commonwealth Fisheries Association (CFA), North-West Slope Trawl Fishery licence holders, Tuna Australia, Western Deepwater Trawl Fishery licence holders, Western Tuna and Billfish Fishery licence holders – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Consultation information

The Consultation Information Sheet provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). Contingency 2029. • Subsea Installation: • Nearfield: Q3 2027 to Q1 2028 ~ 3 months. • Wilcox Field: Q4 2027 to Q2 2028 ~6 months. • Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Commonwealth fisheries

Commonwealth fisheries active in the Operational Area:

- None

Commonwealth fisheries active in the EMBA:

- North-West Slope Trawl Fishery
- Western Deepwater Trawl Fishery
- Western Tuna and Billfish Fishery

Please note that Woodside has provided consultation information directly to licence holders it has assessed as ‘relevant persons’ for this EP, as well as relevant fishery representative bodies.

Notifications

Please let us know if you require notification prior to and on completion of the proposed activities.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.57.1 Email sent to AFMA, Commonwealth Fisheries Association (CFA), North-West Slope Trawl Fishery licence holders, Tuna Australia, Western Deepwater Trawl Fishery licence holders, Western Tuna and Billfish Fishery licence holders – 30 July 2025

Dear Stakeholder,

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet, which was attached to yesterday's email, is also available here on the website.

We have extended the consultation period until 29 August 2025.

Kind regards,

Woodside Energy Consultation

[Initial email content attached]

6.1.58 Email sent to Australian Institute of Marine Science (AIMS), Commonwealth Scientific and Industrial Research Organisation (CSIRO), Western Australian Marine Science Institution (WAMSI), Curtin University, Edith Cowan University (ECU), Murdoch University, University of Western Australia (UWA) – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF- 4 Project, which covers Production licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

6.1.60.1 Email sent to Pilbara/Kimberley recreational marine users, Gascoyne recreational marine users – 30 July 2025

Dear Stakeholder,

Due to technical issues, you may have experienced some display errors in the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan consultation email we sent you yesterday. We apologise for this.

Please see below for the full text of the email. The Consultation Information Sheet, which was attached to yesterday's email, is also available here on our website.

We have extended the consultation period until 29 August 2025.

Kind regards,

Woodside Energy Consultation

Dear Stakeholder

GREATER WESTERN FLANK 4 DRILLING AND SUBSEA INSTALLATION ENVIRONMENT PLAN

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **27 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is enclosed, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website at www.woodside.com/what-we-do/consultation-activities.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: • Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR). • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	• Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. • Subsea Installation: – Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. • Decommissioning is not planned during the next 5 years.
Duration	• When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. • IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: • Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: • Installation vessel for installing the subsea infrastructure. • Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form at www.woodside.com/what-we-do/consultation-activities by **27 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. You can access the brochure online through the QR code below.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit www.woodside.com/what-we-do/consultation-activities.

Regards

6.1.62 Email sent to Mackerel Managed Fishery (Area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Line Fishery, Pilbara Trap Fishery licence holders – 30 July 2025

Dear Licence Holders,

Woodside is planning to submit the Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

· Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

· The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

· The installation and pre-commissioning of subsea infrastructure.

Consultation information

The table below provides a summary of the proposed activities under this EP. The attached Consultation Information Sheet provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures. This is also available on Woodside's website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licences: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029.

6.1.64 Email sent to Shire of Ashburton – 29 July 2025

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **28 August 2025** using the details below.

Woodside would also like to propose a meeting with Shire of Ashburton to discuss this EP and other upcoming Woodside EPs. Please advise if this is convenient for Shire of Ashburton and we will make arrangements for an online meeting in the near future.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

· Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

· The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

· The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licences: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. · Subsea Installation:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
	– Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. · Decommissioning is not planned during the next 5 years.
Duration	· When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. · IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: · Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. · Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response

In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport and Major Infrastructure (DTMI), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage

Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **28 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards

The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

Additional information on the EP is provided in the email below and in the Consultation Information Sheet attached, which is also available on Woodside's website.

Feedback

If you would like to provide feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **29 August 2025**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.2.2 Email sent to Shire of Ashburton – 21 August 2025

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

Dear Stakeholder

GREATER WESTERN FLANK PHASE 4 DRILLING AND SUBSEA INSTALLATION EP

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~140 km north-west of Karratha, Western Australia.

Further information on the proposed activities is provided in the Consultation Information Sheet which is available via the QR code below:

If you have feedback specific to the activities and the proposed EP, Woodside welcomes it at consultation@feedback.woodside.com or via phone call at 1800 442 977 by 27 August 2025.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit www.woodside.com/what-we-do/consultation-activities.

Regards

Woodside Consultation

6.3 Consultation Update

6.3.1 Consultation Information Sheet – January 2026

Woodside Energy

Consultation Information Sheet
January 2026

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan

Carnarvon Basin, North-West Australia

Activity overview

The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility. The GWF-4 Drilling and Subsea Installation Environment Plan (EP) comprises drilling offshore wells in nearfields and the Wilcox Field which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells. The EP will also cover installation and pre-commissioning of subsea infrastructure.

Location

- In Commonwealth waters ~140 km north-west of Karratha, WA (Figure 2).

Water depth

- ~ 40 m -160 m deep.

Timing

Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days)

- Contingency 2029

Subsea Installation:

- Nearfield: Q3 2027 to Q1 2028 ~ 3 months
- Wilcox Field: Q4 2027 to Q2 2028 ~ 6 months
- Contingency 2029

Decommissioning is not planned during the next 5 years.

Duration

- When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous operations of drilling and subsea installation activities may occur. Inspection, Monitoring, Maintenance and Repair (IMMR) activities will take place as required.

Joint Venture

- Operator – Woodside Energy Ltd.
- Joint Venture - Woodside Energy Ltd, BP Developments Australia Pty Ltd, Woodside Energy (North West Shelf) Pty Ltd, Chevron Australia Pty Ltd, Japan Australia LNG (MIMI) Pty Ltd, CNOOC NWS Private Ltd, and Shell Developments (Australia) Pty Ltd.

We would like to hear from you

We would like relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to be consulted and provide feedback.

Woodside consults relevant persons when developing an Environment Plan (EP) to confirm current measures or identify additional measures, which could lessen or avoid potential adverse effects of the proposed activity on the environment.

Woodside aims to ensure the proposed activity is carried out in a manner consistent with the principles of ecologically sustainable development and carried out in a manner by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level.

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the activities under this EP, we would like to hear from you by **27 February 2026.**

consultation@feedback.woodside.com
Toll free: 1800 442 977
woodside.com

A summary of the activity and location is found in **Table 1** and **2**.

Figure 1: The Goodwyn Alpha (GWA) platform. The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing GWA facility.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's First Peoples. We acknowledge their connection to land, waters and the environment and pay our respects to ancestors and Elders, past and present. We extend this recognition and respect to First Nations peoples and communities around the world.

1 Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan | January 2026

Table 1 – Activity and Location Summary

Greater Western Flank 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	• Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). • Development drilling. • Pre- and post- lay survey activities. • Installation of subsea infrastructure. • IMMR. • Tie-in to existing subsea infrastructure. • Pre-commissioning testing.
Titles	Production Licences: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Infrastructure	Subsea: • Wilcox: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. • Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	• Installation vessel for installing the subsea infrastructure. • IMMR vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. • Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. • MODU: Moored, or hybrid (moored and DP) MODU will be used.
Operational area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area includes: • A radius of 4,000 m from each well to allow for MODU mooring. • 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. • 500 m safety exclusion zone around the MODU and installation vessel.
Communication with mariners	Marine notices will be issued prior to activity commencement to alert vessels which may be operating in waters nearby. Commercial fishers and other marine users are permitted to use the Operational Area but are prohibited from entering the 500 m safety exclusion zone to avoid interactions between vessels and the operations, unless authorised by Woodside.
Distance to nearest marine park/nature reserve	• Montebello Islands Marine Park (WA) is approximately 29 km south of the Operational Area. • Montebello Marine Park – Multiple Use Zone (Cth) overlaps the south west of the Operational Area. • Dampier Marine Park – Habitat Protection Zone (Cth) ~115 km south east of the Operational Area.

Activity Location

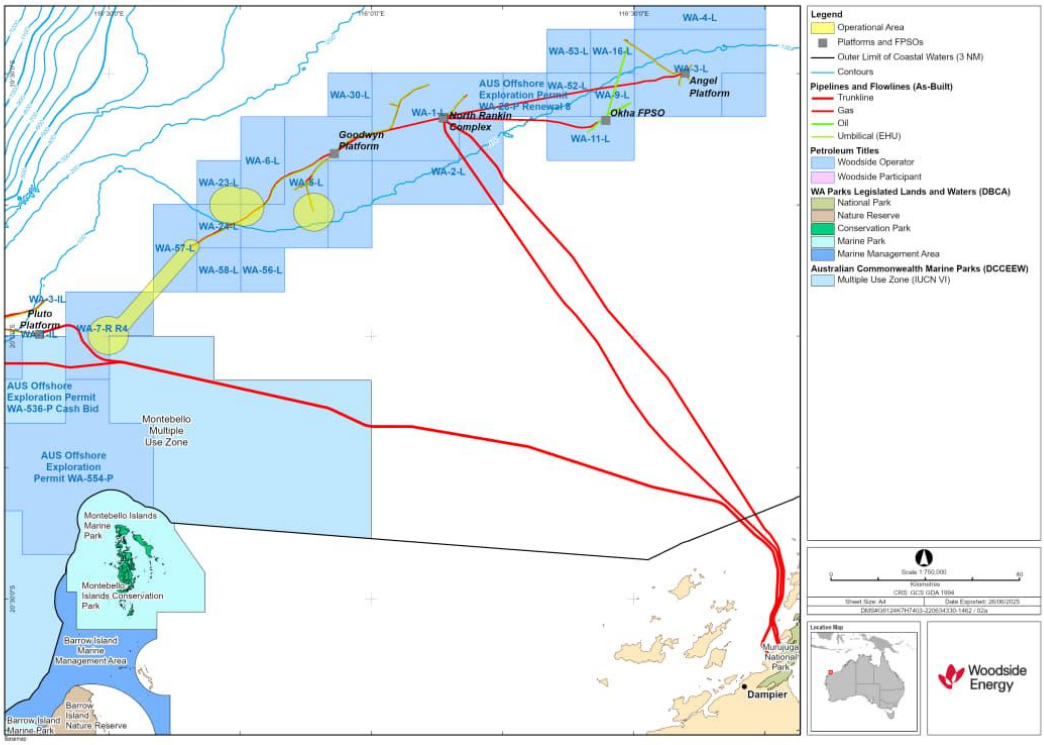

Figure 2. Location of the activity, including Operational Area and associated infrastructure.

Table 2 – Approximate locations of key infrastructure within the scope of the GWF-4 Drilling and Subsea Installation EP

Structure	Water Depth (m)	Latitude	Longitude	Titles
New Wells and Manifolds				
WCA01	~ 74	19°59'55.28"S	115°29'55.97"E	WA-7-R
WCA02	~ 74	19°59'53.66"S	115°29'55.99"E	WA-7-R
YDA01	~ 131	19°45'00.50"S	115°43'49.73"E	WA-24-L
ESA01	~ 126	19°45'15.46"S	115°45'26.64"E	WA-24-L
TPA04	~ 112	19°45'49.54"S	115°53'26.05"E	WA-5-L
Contingent WCA	~ 74	Within 500m of Wilcox manifold, outside the Montebello Marine Park		WA-7-R
Wilcox manifold	~ 74	19°59'48.35"S	115°30'02.71"E	WA-7-R
Echo Yodel manifold	~ 128	19°45'16.62"S	115°45'30.89"E	WA-24-L
Existing Manifolds				
LPA manifold	~ 78 (m LAT)	19°49'45.90"S	115°39'29.10"E	WA-57-L
KDA manifold	~ 123 (m LAT)	19°45'28.12"S	115°47'07.62"E	WA-5-L
TPA manifold	~ 113 (m LAT)	19°45'44.29"S	115°53'24.40"E	WA-5-L
Flowlines				
Wilcox (starting point)	~ 74	19°59'48.35"S	115°30'02.71"E	WA-7-R
Wilcox (end point)	~ 74	19°49'47.04"S	115°39'25.55"E	WA-57-L
Flowlines and flexibles		Flowlines will connect wells to YDA and then to KDA and TPA. The exact location may vary during installation.		

Figure 3: The Goodwyn Alpha (GWA) platform. The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing GWA facility.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence on the surrounding environment. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA was developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well containment and vessel collision. The EMBA is depicted in Figure 4.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release. To learn more about an EMBA, please see the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) video on oil spill modelling at **www.nopsema.gov.au**.

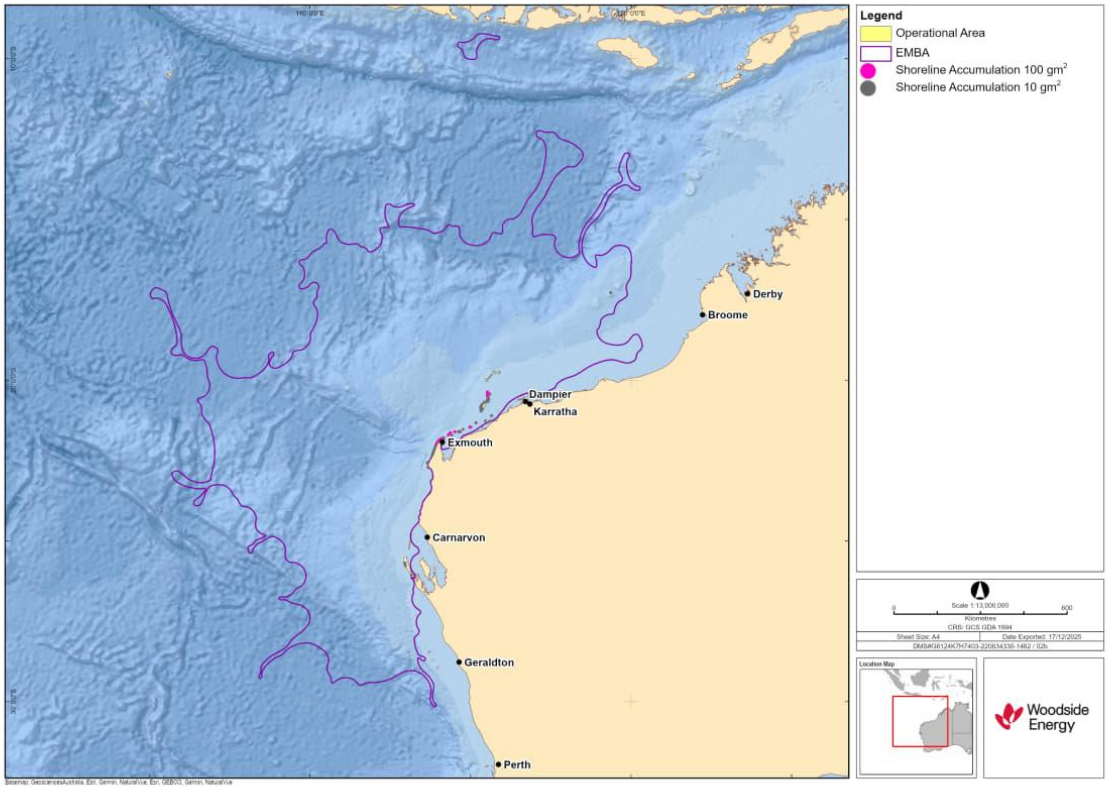

Figure 4: The Operational Area and Environment that May Be Affected (EMBA) by the GWF-4 Drilling and Subsea Installation EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impacts/Risks, and Mitigation and/or Management Measures

Woodside assessed the impacts and risks to the environment arising from the planned activities and unplanned events. This assessment considers the timing, duration and location of the activities. Proposed mitigation and management measures are summarised in **Table 3**. Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental, social and cultural impacts and risks associated with the proposed activities, and Woodside seeks your feedback to inform our decision-making.

Table 3. Summary of key impacts and risks and proposed management measures*

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Planned activities (routine and non-routine)			
Physical presence: interaction with other marine users	• Physical presence of the MODU and subsea wells/Infrastructure as well as offshore support vessels. • Activity execution may occur at any time during the project timeline.	• Localised impact with no lasting effect arising from: – Subsea wells and infrastructure with the potential to interact with marine users such as commercial fisheries where fishing methods are at or close to the seabed. – Displacement or exclusion of other marine users when the MODU or vessels are in the field.	• Vessels adhere to regulatory requirements for navigational safety. • Notify relevant government departments, and nominated fishing industry representative bodies and licence holders of activities prior to commencement and on completion of activities. • Notify the Australian Hydrographic Office (AHO) prior to commencement of the activity to enable them to update maritime charts ensuring marine users are aware of the activity. • Consult with relevant persons so they are informed of the proposed activities.
Physical presence: disturbance to seabed	Seabed disturbance may result from: • Drilling operations (including preparation activities). • Installation of subsea infrastructure. • Contingency activities (including well interventions, workovers).	• Localised impact to seabed and associated benthic communities, arising from: – Localised modification of seabed habitat within the Operational Area. – Localised change in habitat, water quality, and sediment quality, which may affect fauna.	• Assessments of seabed sensitivities will be undertaken to support subsea infrastructure placement. • Infrastructure will be placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. • Infrastructure wet parked (temporarily placed) on the seabed will be tracked and removed. • MODU well site locations will consider seabed sensitivities.
Routine acoustic emissions: generation of noise during routine operations - generation continuous	Noise generated in the Operational Area from: • MODU and support vessel thruster engines, propellers. • Drilling operations. • Contingency activities. • Positioning equipment.	Localised minor impact arising from: • Behavioural changes to marine fauna around MODU, installation vessel, and support vessels. • Behavioural changes to marine fauna during piling installation.	• Project vessels comply with *EPBC Regulations 2000 – Part 8 Division 8.1 Interacting with cetaceans.* • Implement an adaptive management procedure prior to support vessels coming alongside the MODU and installation vessel.
Routine acoustic emissions: generation of noise during routine operations - generation impulse	Noise generated in the Operational Area from: • Geotechnical surveys (SSS, MBES, SBP). • Drilling transponders. • Piling Installation.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Routine and non-routine discharges: project vessels	· Sewage, greywater and macerated food waste will be discharged from project vessels and the MODU. · Bilge water, deck drainage and brine and cooling water may also be discharged.	Localised impact with no lasting effect arising from: · Change in marine water quality, which may affect marine fauna.	· MODU, subsea installation vessel and support vessels will comply with Marine Orders. · Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline.
Routine and non-routine discharges: drill cuttings and Drilling Fluids ***Routine and non-routine discharges: cement, cementing fluids, subsea well fluids, produced water, unused bulk product and subsea chemicals*** ***Routine and non-routine discharges: produced water.***	Routine and non-routine drilling discharges such as: Non-Water Based Muds (NWBM), swarf, cements, cuttings, drilling chemicals, well fluids, bulk products during and produced water (if discharge from MODU required).	· Localised impact arising from: – Temporary reduction in water quality. – Sediment deposition. – Accumulation of drill cuttings resulting in minor and short term impacts to benthic communities. – Potential contamination and toxicity effects to benthic and in-water biota.	· Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline. · No wellhead locations within the Montebello Marine Park. · Options for use of excess bulk cement, bentonite and barite will be managed as per Woodside's Management process for excess bulk product. · Displacement, brine, intervention, or returned well fluids contaminated with hydrocarbons will be treated prior to discharge or contained. If discharge specification cannot be met the fluid will be returned to shore. · Maintain average OOC at <6.9% by weight on wet cuttings (for sections drilled with NWBM). · Solids Control Equipment (SCE) used to treat drill cuttings returned to the MODU prior to discharge. · During well unloading and completion activities, if produced water is not flared, it will be processed through a water filtration treatment package prior to discharge to the environment.
Routine and non-routine atmospheric and Greenhouse Gas (GHG) emissions	· Atmospheric and GHG emissions generated from flaring or venting, power generation, and fuel combustion.	· Localised impact with no lasting effect arising from: – Localised reduction in air quality in the immediate vicinity. – Contribution to global GHG emissions.	· Comply with regulatory requirements relating to GHG emissions and reporting. · Vessels comply with Marine Orders for pollution prevention to air.
Routine light emissions	· External light emissions from MODU and project vessels and submersible equipment. · Light emissions from MODU operations - flaring.	· Localised impact with no lasting effect arising from: – Change in ambient light resulting in change in fauna behaviour.	· Lighting to be limited to the minimum required for navigational and safety requirements except for emergency events. · Implementation of Woodside Offshore Seabird Management Plan. · Flaring restricted to a duration necessary to achieve the well objectives, eliminating unnecessary flared volumes and corresponding light emissions.
Unplanned events (accidents / incidents)			
Physical presence (unplanned): interaction with marine fauna and avifauna	· Accidental collision between project vessels/MODU and protected marine fauna. · Potential changes to avifauna behaviour.	· Potential minor impact with high recoverability arising from: – Injury or death to marine fauna (single individual) including protected species. – Behavioural changes on seabirds utilising vessels as resting points.	· Adhere to the EPBC Regulations 2000 – Part 8 Division 8.1 Interacting with cetaceans. · Environmental induction of all relevant vessel crew.
Physical presence (unplanned): Introduction of Invasive Marine Species (IMS)	· Vessels and submersible equipment have the potential to introduce IMS to the Operational Area through marine biofouling (containing IMS), as well as within high-risk ballast water exchange.	· Potential moderate impact with moderate recoverability arising from: – Introduction and establishment of IMS in the Operational Area.	· Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements (international vessels), as applicable. · Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Impact/Risk	Description of Source of Impact/Risk	Description of Impact/Risk	Proposed Mitigation and/or Management Measure
Physical presence: (unplanned) Seabed Disturbance	· Dropped objects (including wellhead). · Loss of station-keeping of MODU leading to seabed disturbance.	· Potential localised impact arising from: – Localised disturbance to benthic habitat (fish, benthic communities, Key Ecological Features). – Reduction in water and sediment quality. – Disruption to marine fauna.	· Station-keeping systems and mooring system testing implemented as per project-specific Mooring Design Analysis. · Dropped objects to be recovered where safe and practicable to do so.
Unplanned discharges: hazardous and non-hazardous solid waste/equipment	· Accidental, unplanned loss of hazardous or non-hazardous solid wastes/equipment to the marine environment may occur if dropped or blown overboard.	· Potential localised impact with no lasting effect arising from: – Reduction in water and sediment quality. – Disruption to marine fauna.	· Comply with Marine Orders for the prevention of marine pollution. · Implement waste management procedures which provide for safe handling and transportation, segregation and storage and appropriate classification of waste generated. · Lost waste or dropped objects will be recovered, where safe and practicable.
Unplanned discharges: hydrocarbon and chemicals	· Accidental discharge of hydrocarbons/ chemicals from MODU or project vessels deck activities and equipment. · Accidental discharge of Water Based Mud (WBM) or NWBM to marine environment due to failure of MODU pipework, bulk transfer hose/fitting, emergency disconnect system or from routine MODU operations.	· Potential minor level impact arising from: – Reduction in water and sediment quality. – Disruption to marine fauna. – Archaeological and intangible cultural heritage damage.	· Comply with Marine Orders for the prevention of marine pollution. · Where there is potential for loss of primary containment of oil and chemicals on the project vessels, deck drainage must be collected via a deck drainage management system. · Spill kits positioned in high-risk locations around the vessel (near potential spill points such as transfer stations). · Assessment of chemicals used following Woodside's Chemical Selection and Assessment Environment Guideline.
Unplanned hydrocarbon release: gas/condensate	· Loss of hydrocarbons to the marine environment due to loss of well control.	· Potential moderate level impact arising from: – Reduction in water and sediment quality. – Disruption to marine fauna including protected species. – Potential archaeological and intangible cultural heritage damage. – Potential disturbance to tourism, recreation, and commercial fisheries.	**Preventing loss of well control:** · OPGGS (Resource Management and Administration) Regulations 2011: accepted WOMP which describes the well integrity outcomes, control measures and performance criteria used to demonstrate how the risk of loss of well integrity is managed to ALARP including the well design and barriers to be used to prevent a loss of well integrity, which aligns with industry guidance and good practice. · An approved Source Control Emergency Response Plan will be prepared prior to drilling each well. · Subsea Blow Out Preventer (BOP) specification, installation and testing compliant with Woodside Standards. **Spill response arrangements:** · Develop a project specific Oil Pollution Emergency Preparation document (OPEP) including first strike response plan. · Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned.
Unplanned hydrocarbon release: marine diesel	Loss of marine diesel to the environment during vessel and MODU operations arising from: · Bunkering/refuelling. · Vessel collision (e.g. MODU, support vessels, or other marine users).	· Potential minor level impact with high recovery arising from: – Reduction in water quality. – Disruption to marine fauna including protected species. – Interference with or displacement of other marine users including activities of other regional petroleum activities.	**Preventing loss of marine diesel:** · Project vessels comply with Marine Orders for safe vessel operations. · Establishment of a temporary 500 m exclusion zone around MODU /Installation vessel and communicated to marine users. · Support vessel on standby as per the MODU safety case during the Petroleum Activity. **Spill response arrangements:** · Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned. · Emergency response activities would be implemented in line with the OPEP.

**These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.*

Feedback

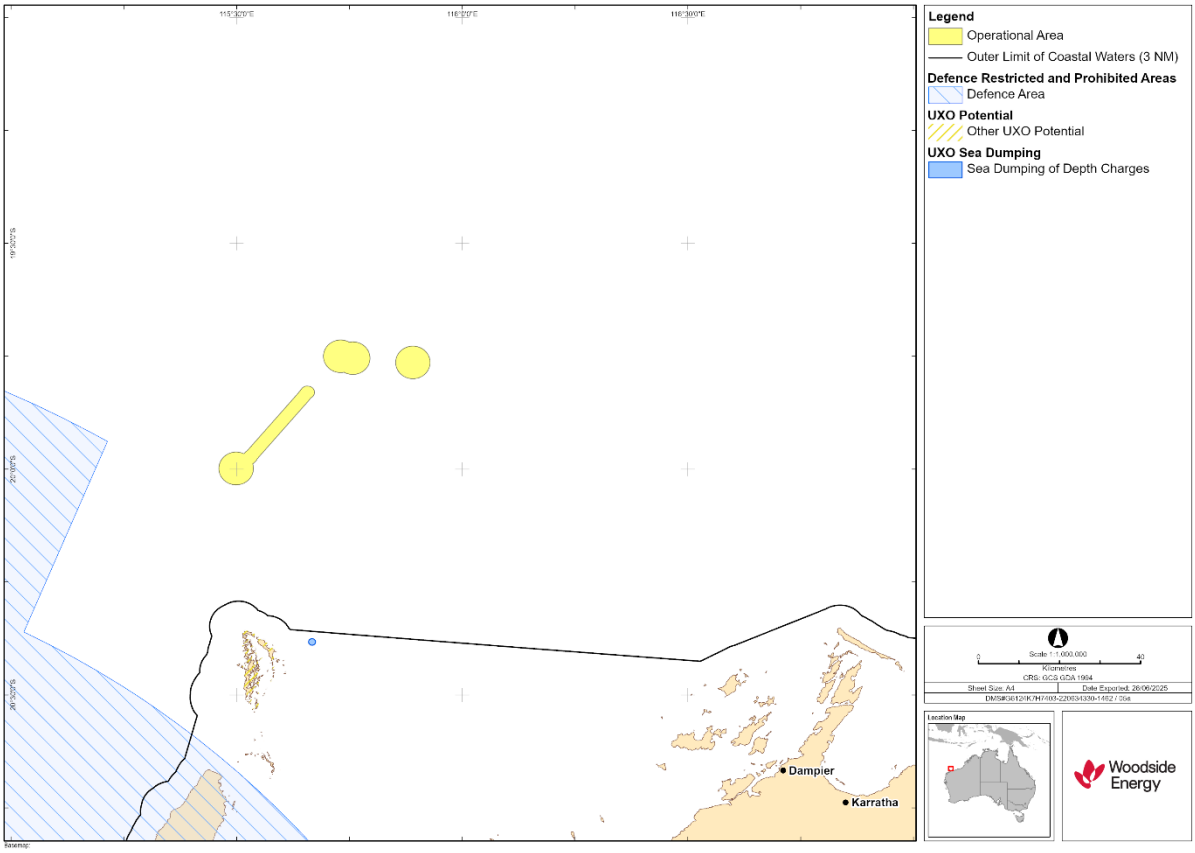
Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **27 February 2026** via:

consultation@feedback.woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:
woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to NOPSEMA as required under legislation. Woodside will communicate any material changes to the proposed activity to affected relevant persons as relevant and appropriate.



Your feedback and our response will be included in our EP for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit:

6.3.6 Submarine communication cables map

6.3.7 Email sent to Department of Foreign Affairs and Trade (DFAT) – 6 February 2026

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **9 March 2026** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

· Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

· The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

· The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

International Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside's approach to international consultation has been developed following advice provided by the Department of Foreign Affairs and Trade (DFAT) during consultation on the Pyrenees Facility Operations Environment Plan, Stybarrow Plug and Abandonment Environment Plan and WA-34-L Pyxis Drilling and Subsea Installation Environment Plan Revision.

Woodside acknowledges that DFAT is responsible for the management of communications and sensitivities with other countries, and that DFAT has requested Woodside not contact foreign embassies directly. Following this guidance, Woodside consults DFAT if there is the highly unlikely chance that environmental impacts may extend beyond Australia's jurisdiction.

Woodside is providing consultation information as the Environment that may be affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP overlaps with Indonesia's Exclusive Economic Zone (200nm). The EMBA does not overlap with Indonesia's Territorial Sea (12nm).

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. · Subsea Installation: – Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. · Decommissioning is not planned during the next 5 years.
Duration	· When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. · IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	· Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. · Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well integrity, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **9 March 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.8 Email sent to Melbana Exploration; Pathfinder Energy – 6 February 2026

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **9 March 2026** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

· Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

· The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

· The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. · Subsea Installation: – Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. · Decommissioning is not planned during the next 5 years.
Duration	· When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. · IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: · Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. · Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well containment, and vessel collision.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **9 March 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.9 Email sent to Department of Industry, Science and Resources (DISR); Australian Maritime Safety Authority (AMSA – Marine Pollution; Department of Mines, Petroleum and Exploration (DMPE); Pilbara Ports; Ningaloo Coast World Heritage Advisory Committee (NCWHAC); Department of Transport and Major Infrastructure (DTMI); Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries; Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity; Department of Biodiversity, Conservation and Attractions (DBCA) – 10 February 2026

Woodside previously consulted DBCA on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet which includes an updated map for the revised EMBA.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.10 Email sent to Australian Border Force (ABF); Australian Fisheries Management Authority (AFMA) – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet (CIS) which includes an updated map for the revised EMBA.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Wilcox Flowline

As outlined in the attached CIS, Woodside plans to install a subsea flowline (Wilcox Flowline) to tieback the Wilcox Field to the existing Greater Western Flank subsea infrastructure.

Feedback received regarding this activity may, where relevant, be used to support Woodside's application for a Pipeline Licence under the *Offshore Petroleum and Greenhouse Gas Storage (OPGGS) Act* for the construction and operation of the Wilcox Flowline.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.11 Email to Department of Planning, Lands and Heritage (DPLH) – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet which includes an updated map for the revised EMBA. Please also find attached the details of WA shipwrecks that are relevant for this EP.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Woodside Energy Consultation

6.3.14 Email sent to Australian Communications Management Authority (ACMA) – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet (CIS) which includes an updated map for the revised EMBA. Please also find attached a map of the submarine communication cables in the vicinity of the Operational Area.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Wilcox Flowline

As outlined in the attached CIS, Woodside plans to install a subsea flowline (Wilcox Flowline) to tieback the Wilcox Field to the existing Greater Western Flank subsea infrastructure.

Feedback received regarding this activity may, where relevant, be used to support Woodside's application for a Pipeline Licence under the *Offshore Petroleum and Greenhouse Gas Storage (OPGGS) Act* for the construction and operation of the Wilcox Flowline.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.15 Email sent to Department of Defence (DoD) – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet (CIS) which includes an updated map for the revised EMBA, please also refer to the attached defence zone maps.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Wilcox Flowline

As outlined in the attached CIS, Woodside plans to install a subsea flowline (Wilcox Flowline) to tieback the Wilcox Field to the existing Greater Western Flank subsea infrastructure.

Feedback received regarding this activity may, where relevant, be used to support Woodside's application for a Pipeline Licence under the *Offshore Petroleum and Greenhouse Gas Storage (OPGGS) Act* for the construction and operation of the Wilcox Flowline.

Feedback

Regards,

Woodside Energy Consultation

6.3.17 Email sent to Australian Maritime Safety Authority (AMSA) – Marine Safety – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).
- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet (CIS) which includes an updated map for the revised EMBA. Please also find attached a vessel density map and GIS Shape Files.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

Wilcox Flowline

As outlined in the attached CIS, Woodside plans to install a subsea flowline (Wilcox Flowline) to tieback the Wilcox Field to the existing Greater Western Flank subsea infrastructure.

Feedback received regarding this activity may, where relevant, be used to support Woodside's application for a Pipeline Licence under the *Offshore Petroleum and Greenhouse Gas Storage (OPGGS) Act* for the construction and operation of the Wilcox Flowline.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Personal information collected in the course of consultation will be handled in accordance with Woodside's Environment Plan Privacy Collection Notice. To understand how personal information will be handled, please visit our website.

Regards,

Woodside Energy Consultation

6.3.18 Email sent to Aquaculture Council of Western Australia – 10 February 2026

Woodside previously consulted you on its plans to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP).

The GWF-4 Drilling and Subsea Installation petroleum activities include:

- Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.
- The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The installation and pre-commissioning of subsea infrastructure.

EMBA Revision

As part of the EP development process, Woodside has undertaken additional modelling which has resulted in changes to the Environment that May Be Affected (EMBA) for the GWF-4 Drilling and Subsea Installation EP.

Because of this change, Woodside is providing an update to Stakeholders.

The EMBA is the largest area where activities could potentially have a direct or indirect impact on the environment. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP the EMBA is based on a loss of well containment and a vessel collision. Releases of these kinds are highly unlikely to occur.

Please see the attached updated Consultation Information Sheet which includes an updated map for the revised EMBA.

Other details regarding this activity remain the same as during the initial consultation, including the activity description, location of the activity, timing of the activity, impacts and risks associated with the activity, and proposed mitigation and management measures.

EMBA Overlap

Woodside is providing this information to the Aquaculture Council of Western Australia as our mapping data shows the EMBA for this EP overlaps with pearl farm leases in the Montebello Islands, Dailey Shoal and Bennett Shoal, and aquaculture sites in the Mackerel Islands, Exmouth, and Shark Bay.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 February 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

NOPSEMA has published the brochure *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Woodside Energy Consultation

6.3.19 Email sent to Pearl Producers Association – 25 February 2026

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is planning to submit the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan. The GWF-4 Project, which covers Production Licences WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L, intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility and is located in Commonwealth waters ~ 140 km north-west of Karratha, Western Australia.

If you would like to comment on the proposed activity, please provide feedback to Woodside by **27 March 2026** using the details below.

Overview

The GWF-4 Drilling and Subsea Installation petroleum activities include:

· Subsea tiebacks from nearfields and the Wilcox Field to existing GWF subsea infrastructure.

· The drilling of up to six wells (WCA01, WCA02, YDA01, ESA01, TPA04 and contingent well WCA).

· The installation and pre-commissioning of subsea infrastructure.

Consultation information

A Consultation Information Sheet is attached, which provides additional background on the proposed activities including summaries of potential key impacts and risks and associated management measures. This is also available on our website.

Activity and location summary

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan	
Activity details	Activities include: · Mooring installation for the Mobile Offshore Drilling Unit (MODU) (including piling). · Development drilling. · Pre- and post- lay survey activities. · Installation of subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR). · Tie-in to existing subsea infrastructure. · Pre-commissioning testing.
Titles	Production Licence: WA-7-R, WA-57-L, WA-24-L, WA-5-L, WA-23-L, WA-6-L.
Location	In Commonwealth waters ~140 km north-west of Karratha, Western Australia.
Water depth	~ 40 m - 160 m deep
Timing	· Drilling activities: Q3 2026 to Q2 2028 (~90 days per well, up to an expected total of 450 days). – Contingency 2029. · Subsea Installation: – Nearfield: Q3 2027 to Q1 2028 ~ 3 months. – Wilcox Field: Q4 2027 to Q2 2028 ~6 months. – Contingency 2029. · Decommissioning is not planned during the next 5 years.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Duration	· When activities occur, operations will run 24 hours a day, 7 days a week. Simultaneous Operations (SIMOPS) of drilling and subsea installation activities may occur. · IMMR activities will take place as required.
Infrastructure	Key infrastructure includes, but is not limited to: · Wilcox Field: Xmas trees and wellheads, flowlines, electro-hydraulic umbilicals (EHUs), manifolds, pipeline end terminations (PLETs), flowline end termination (FLET), umbilical termination assemblies (UTAs), electrical flying leads (EFLs), hydraulic flying leads (HFLs), flexible pipe jumpers, rigid spools, subsea intensifiers. · Nearfield: Flowlines, UTAs, EFLs, HFLs, flexible pipe jumpers, cooling skids, pressure protection systems, and accumulator modules.
Vessels	Key vessels include, but are not limited to: · Installation vessel for installing the subsea infrastructure. · Inspection, monitoring, maintenance and repair (IMMR) vessel for Xmas tree installation, isolation testing, IMMR or contingent activities. · Support vessels including barge(s), heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and general supply/support vessels. · MODU: Moored, or hybrid (moored and dynamic positioning) MODU will be used.
Operational Area and exclusion zones	The location of infrastructure is marked on nautical charts. The Operational Area and exclusion zones include: · A radius of 4,000 m from each well to allow for MODU mooring. · 1.5 km radius (3,000 m corridor) around subsea installation locations in which subsea installation and pre-commissioning activities will occur, to allow for the movement and position of vessels. · 500 m safety exclusion zone around the MODU and installation vessel.

Environment that May Be Affected (EMBA)

The EMBA is the largest geographic area where an unplanned event could potentially have an environmental consequence. The broadest extent of the EMBA takes into consideration planned activities and unplanned events. The EMBA has been developed combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. The modelling scenarios that inform the EMBA are loss of well containment, and vessel collision.

The EMBA does not represent the extent of the predicted impact of a highly unlikely hydrocarbon release. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, which depends on the weather and ocean conditions at the time of a release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known if there is a release.

Feedback

If you have feedback specific to the proposed activities, we welcome your feedback via email at consultation@feedback.woodside.com, via phone call at 1800 442 977 or via the feedback form on our website by **27 March 2026**. Alternatively, Woodside is willing to consider and accept your feedback via a means which suit you.

Your feedback and our response will be included in our EP, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

You may request that particular information you provide during consultation not be published in the Environment Plan made available on the NOPSEMA website. Please let us know if you request that particular information not be published, and we will make your request known to NOPSEMA.

6.5.1.1 The Australian – 28 July 2025

THE AUSTRALIAN MONDAY, JULY 28, 2025

Up in smoke: busts smash illicit tobacco trade

EXCLUSIVE

MOHAMMAD ALFARES

Tobacco smugglers have been stripped of more than 2.5 billion cigarettes and thousands of tonnes of tobacco at the nation's borders, costing the federal government more than $4bn in lost duty.

The volume of tobacco intercepted between July 2024 and June 2025 represents $4.36bn in lost duty, marking the largest annual bust on record and a turning point to the scale of tobacco smuggling in Australia.

While the number of interceptions dropped, the quantity of tobacco seized surged to its highest level, a shift that's attributed to better targeting of high-volume sea cargo shipments linked to transnational organised crime.

The latest Australian Border Force data obtained by The Australian reveals a more than four-fold increase of seizures in half a decade – from 598 million sticks in 2020-21 to a record 2.5 billion in 2024-25.

The figures eclipse last year's record haul of 1.86 billion cigarettes and reflect a consistent upward trend, including 898 million seized in 2021-22 and 867 million in 2022-23.

The federal government collected just $9.7bn in tobacco excise last financial year – a 40 per cent drop from the 2019–20 peak of $16.3bn, and the lowest return since 2014-15, according to federal Treasury data.

The promise of massive profits has driven the rise of corner stores selling illicit tobacco and nicotine products, fuelling a wave of firebombings and violent turf wars as gangs and Middle Eastern crime syndicates battle for control of the booming black market.

Most of the intercepted product was shipped through ports in Victoria and NSW and originated from China, Hong Kong, Singapore and the United Arab Emirates. A single container of illicit cigarettes can cost $400,000 to ship from overseas and return profits of up to $10m.

AARON FRANCIS (MAIN), JAKE NOWAKOWSKI

Australian Border Force officers display seized shipping containers containing millions of illegally imported cigarettes

Authorities believe many of the syndicates behind the shipments are also involved in drug trafficking and money laundering, using tobacco as a low-risk, high-reward source of revenue.

The ABF says the rise in seizures is the result of intensified operations across international supply chains, with Australian officers embedded overseas now stopping tobacco shipments long before they reach Australian shores.

"We're seizing millions of illicit cigarettes and hundreds of kilos of illicit tobacco at the border every single week," said Commander Ken McKern, who leads the ABF's Illicit Tobacco and Vape Enforcement unit.

"These detections aren't based on luck or random finds, they're the result of precise, intelligence-led targeting and close collaboration with offshore partner agencies."

Commander McKern said the 2.5 billion cigarettes seized at the border represented a more than 320 per cent increase on the volume intercepted four years ago.

"These significant volumes aren't just numbers – they represent millions in lost profit for criminal syndicates and demonstrate ABF's important role in protecting Australia's border integrity," he said.

"Stopping illicit tobacco isn't just a domestic issue. Our officers deployed overseas are on the front line of this fight, using intelligence and international partnerships to stop illicit shipments long before they reach Australian shores.

"Our international footprint gives us a strategic advantage – we're not waiting for the problem to arrive on our doorstep, we're inside the supply chain, sharing intelligence, and actively preventing illicit tobacco from reaching our borders."

The ABF recorded 23,097 tobacco detections across the 2024–25 financial year – less than half the number from the previous year – but the volume of tobacco seized was significantly higher.

In total, officers seized 2,533 billion cigarette sticks and 435.46 tonnes of loose-leaf tobacco, compared to 1.86 billion sticks and 436.57 tonnes the year before.

The combined weight of this year's haul was 2091 tonnes, compared to 1700.5 tonnes in 2023-24.

Several of the largest seizures occurred in July. On July 4, officers intercepted 14.04 million cigarettes shipped in sea cargo from Asia. On July 13, a man travelling from the UAE with a woman and two minors was stopped with 166,200 cigarettes and six kilograms of chewing tobacco hidden in 11 suitcases. That same day, a separate passenger from the UAE was caught carrying 71,200 cigarettes. A week later, 10.18 million cigarettes were seized from another sea cargo consignment.

In one of the biggest operations of the year, a container carrying 15.5 million cigarettes was intercepted in mid-July after arriving in NSW from the UAE.

The ABF says criminal networks continue to change their shipping routes and concealment methods in response to enforcement activity. Most of the illicit product now enters through sea freight, often packed in containers disguised as commercial goods.

A single shipping container can hold tens of millions of cigarette sticks, making large-scale interceptions far more significant than dozens of smaller seizures through mail or at airports.

Authorities are now focusing heavily on upstream disruption, targeting shipments before they leave foreign ports and working closely with international customs agencies to share intelligence and dismantle supply chains.

The ABF's overseas network was established to identify high-risk consignments earlier and intercept larger volumes of product before they reach Australia.

Domestically, the ABF leads the Illicit Tobacco Taskforce, a joint agency initiative that includes the Australian Criminal Intelligence Commission, the ATO, AUSTRAC and the Commonwealth Director of Public Prosecutions. It works alongside state and territory police forces to pursue criminal prosecutions, disrupt local distribution networks and recover proceeds of crime.

While enforcement at the border remains the ABF's primary focus, the agency says its efforts complement broader health and compliance strategies aimed at reducing demand for illegal tobacco and educating consumers about the risks associated with black-market products.

The ABF expects illicit tobacco shipments to keep evolving as enforcement pressure increases, but says it is investing in more sophisticated targeting tools, expanding its global reach and building stronger relationships with international partners to stay ahead of the trade.

Recent research conducted by three of Australia's largest tobacco wholesalers shows illicit products could account for nearly half of all consumption this year.

The data, compiled by Philip Morris, British American Tobacco and Imperial Brands, estimates 39.4 per cent of all tobacco consumed in 2024 was illicit, with market forecasts predicting that number could rise to nearly 50 per cent in 2025.

The report found that "chop-chop" loose leaf tobacco – either grown illegally in Australia or imported without branding – accounts for up to 70 per cent of the illicit market. The ATO estimates about 20 per cent of this is cultivated in clandestine farms along the NSW–Victoria and NSW–Queensland borders.

South Australia is currently the only state jurisdiction that has a dedicated tobacco enforcement body, while other states rely on under-resourced compliance officers or police assistance to stamp out tobacconist stores that are selling illicit products.

Tobacco companies predict the illicit market will continue to grow, which undermines public health goals and guts small business revenues while emboldening criminal networks.

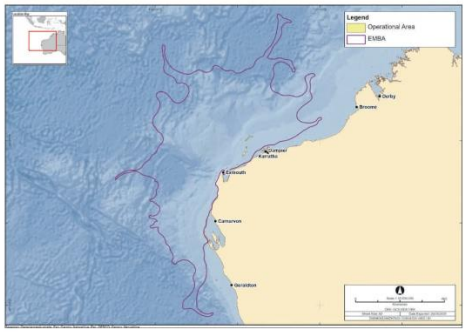
A spokesperson for Imperial Brands, the nation's third largest tobacco wholesaler, said while the scale of the ABF's latest seizures was encouraging, "clear and decisive" action was needed at the state and federal level.

"Whilst it is encouraging that the ABF data shows an increase in seizures, a record amount of unregulated illicit tobacco continues to enter the country," the spokesperson said.

"Recent research shows that in 2024 nearly 40 per cent of tobacco products were illegal, up from 28 per cent in 2023. Clear and decisive action is needed ... to address significant enforcement gaps, as well as address the underlying drivers that have caused this illegal market to flourish."

Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition.



Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP)

The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility. The GWF 4 Drilling and Subsea Installation EP comprises drilling offshore wells in nearfields and the Wilcox Field which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells. The EP will also cover installation and pre-commissioning of subsea infrastructure.

Environment that may be affected (EMBA)

The EMBA is the largest geographic area where unplanned events could potentially have an environmental consequence. The whole EMBA will not be affected.

We would like to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by the activities under this Environment Plan, we want to hear from you by **27 August 2025**.

On Darwin's trail, young crew put wind in life project's sails

LYDIA LYNCH

After two years skippering the Dutch tall ship Oosterschelde, retracing Charles Darwin's voyage aboard the HMS Beagle, Stewart McPherson is ready to relax with a cocktail in the Blue Mountains.

The British naturalist, who lives in Sydney, said while the two-year global conservation expedition had been gruelling, his pursuit to train and empower the next generation of environmental leaders had been an overwhelming success.

Branded the "world's most exciting classroom", the Oosterschelde departed from Plymouth Harbour in the southwest of England in August 2023 on a 43,000-nautical-mile odyssey around the world that included stops in Sydney and Hobart last year.

Now at the conclusion of its epic journey, the Oosterschelde has docked in London, the city where Darwin's On the Origin of Species was first published in 1859.

"We are basically at the end of the voyage now and looking back on it, it's been an incredibly intense two years," Mr McPherson told The Australian.

"I honestly think we've done everything we possibly could to try and drive forward that message that conservation isn't about what we've lost, it's about what we still have."

Recreating Darwin's expedition on the Beagle nearly 200 years ago, which inspired his theory of natural selection, more than 100 young people boarded the Oosterschelde to study the conservation of a particular endangered species and were charged with charting a way forward for its survival.

LYDIA LYNCH

Stewart McPherson aboard the Oosterschelde

"We've had 106 of them (young people) from 45 countries across the globe," Mr McPherson said. "Their objective wasn't to solve the problem, they're not going to do that in their one- to two-week placement with us, but what they did was learn how to think, get real experience on the ground, work with some of the most exciting conservationists and, most importantly, just get inspired to go home with that new knowledge."

The 84m ($8.2m) trip was funded through donations and corporate partnerships, and by selling about 700 tickets for the public to join various legs of the journey.

While in Australia last year, researchers engaged with six conservation projects, including the tracking of koala populations after bushfires and planting "several thousand trees" to support the gliding possum population, Mr McPherson said.

"People think conservation is this lofty idea by governments and NGOs, but it's not," he said.

"Every single one of us can make a positive change, and in many of these conservation projects we've worked with, it's often just one or two people that are stubborn, that won't let an animal or plant fall off the cliff of extinction."

Dame Jane Goodall, the world's leading expert on chimpanzees, gave various lessons via videoconference during the two-year voyage, and described Mr McPherson's journey as "truly inspiring".

"It's wonderful to see how many young people have benefited from the opportunities this project has created," she said.

Originally from the UK, Mr McPherson was married in Sydney and lives there with his Australian wife and children.

When he returns home, he plans to unwind "with a cocktail or two" in the Blue Mountains and visit the Glow Worm Tunnel before embarking on his next overseas adventure.

The Australian up for awards for excellence

The Australian's groundbreaking work in the world of sports and the war in the Middle East has earned its talented team of journalists a slew of nominations at this year's Kennedy Awards for Excellence in Journalism.

Europe correspondent Jacquelin Magnay has two nominations – for Scoop of the Year and Outstanding Sports Reporting – for her reporting alongside News Corp Australia's Peter Badel on the women's boxing gender war that eclipsed the Paris Olympics last year.

Also up for the Outstanding Sports Reporting award are chief sports writer Jessica Halloran and NSW editor Stephen Rice.

The pair are nominated for their series on Australia's most celebrated pole-vaulting coach being accused of grooming, sexually harassing and inappropriately touching multiple young female athletes in his care, in a case kept secret by the Western Australian Institute of Sport.

The Australian's top sports analyst, Andrew Webster, is also nominated for Outstanding Columnist for his extraordinary piece on controversial NRL titan Phil Gould.

Yoni Bashan and Liam Mendes have been nominated in the Outstanding Online News Breaking category for their work documenting Iranian missile attacks on Israel in text and video as they were happening live.

Media editor James Madden is up for Best Headlines for the likes of "Nine's big dogs gather at zoo to discuss elephants in the room".

And travel writer John Borthwick is nominated for Outstanding Travel Writing for his work in Travel+Luxury.

The Kennedy Awards will be held on August 15.

Storm front from west to bring rain across nation

BRENDAN KEARNS

Western Australia has been battered by a stormy cold front, but the weather system is only just beginning its march across the country.

The past few days have brought the most widespread rainfall of the year so far to Australia, with rain in every state and territory, and snow in alpine areas.

But a severe storm in WA has hit the state's southwest and will crawl eastwards, dumping more rain across the nation.

A warning was issued for WA as Perth was hit hard by lightning and hail, and there was also risk of flash flooding.

Wilyabrup in the Margaret River region recorded 72mm of rain in just six hours overnight on Saturday, while winds up to 98km/h were experienced in Cape Naturaliste.

Bureau of Meteorology meteorologist Angus Hines said the stormy cold front will cross the south of the country by Tuesday.

"We'll watch this band of rains start to sweep eastwards again into South Australia, once again back into NSW and southern parts of Queensland on Tuesday next week," he said.

"So this is going to be a follow-up spell of wet weather across the parts of the country which have just had a band of wet weather.

"And for most places, this will be another welcome spell of rain."

The country's east has already faced a weekend cold front as almost every capital city experienced downpours.

Dry parts of South Australia, Victoria and NSW welcomed wet weather; however, that still has not made up for the rainfall deficiencies this year.

The upcoming rain band is not set to be as heavy as the weekend weather, but some areas will receive a "top-up" of up to 15mm.

Monday will be dry in the north of Australia under a high pressure system.

WA will still experience some showers, storms and strong winds.

BRAVE AVA FIGHTING IN A TUTU

CLAIRE SADLER

Ava O'Kelly still feels like a ballerina even when enduring cancer treatments.

The four-year-old dancer was the first WA child to receive the ballerina-themed medical garment by Supertee and, thanks to Telethon, more than 1500 will be supplied to kids in WA hospitals over the next year.

The garment has side and top openings that enable her parents and hospital staff to easily change clothing and access medical lines.

"When she's going through lumbar punctures, bone marrow tests, an awful lot of theatre and general anaesthetics you think a T-shirt is the least on your mind but when you have it – it just completely changes everything," mum Lucy said. "This new design is amazing. There's nothing better than still feeling like a princess when you're in hospital."

Ava is taking oral chemotherapy every day and having a more intense form of the treatment once a week. However, after a year away from dance classes she has been able to return to ballet and tap.

"She pirouettes around the room and you can see her energy is coming back," Ms O'Kelly said.

Picture: Kelsey Reid

Fire trap blind spot

EXCLUSIVE JOHN FLINT

Apartment residents may be unknowingly living in buildings where life-saving fire systems are broken, outdated or never tested.

Despite mounting national concern over building safety, WA has no legal requirement for regular checks or reporting on fire systems.

WA building surveyors have sounded the alarm after recent audit inspections found systems were working properly in only 13 per cent of apartment buildings in Victoria and 32 per cent in NSW, where regulations stipulate annual maintenance.

The Australian Institute of Building Surveyors told a conference in Perth on Friday the situation in WA was likely worse because of weak regulations.

In Perth surveyors reported:

- A CBD office tower had an inadequate level of stair pressurisation, resulting in exit doors being inoperable in a fire.
- Several suburban shopping centres failed to undertake full function fire testing.

AIBS WA director Richard Attiwell said WA authorities, including local governments, don't have the resources to police this. "If combustible cladding was the canary in the coal mine, then failed fire and life safety systems are the elephant in the room and we're still pretending not to see it," he told The West.

The AIBS' Stephen Scimonello, who led the research in Victoria and NSW, said he was shocked to learn that there were no regulations in WA requiring property owners to report annual checks of their fire safety systems.

"This is a recipe for total disaster, and it would be quite likely in that the situation In Perth is much the same as it is in Melbourne. There is no other plausible conclusion that could be reached," Dr Scimonello.

"In WA, the real fire risk isn't the flames, it's the silence around system failures.

"We didn't know that the danger of combustible cladding until 72 lives were lost at Grenfell. What excuse will we have when fire safety systems fail in a real fire event in WA?"

A State Government spokesman said the Building and Energy departments were reviewing regulation of fire systems installers.

Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan

Woodside has led the development of the LNG industry in Australia and today aims to thrive through the global energy transition.

Woodside consults with relevant persons to gather feedback to inform its Commonwealth Environment Plans.

Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation Environment Plan (EP)

The Greater Western Flank Phase 4 (GWF-4) Project intends to partially fill ullage (unused production capacity) at the existing Goodwyn Alpha (GWA) facility. The GWF-4 Drilling and Subsea Installation EP comprises drilling offshore wells in nearfields and the Wilcox Field which will be tied back to existing GWF subsea infrastructure. Woodside plans to drill up to six wells. The EP will also cover installation and pre-commissioning of subsea infrastructure.

Environment that may be affected (EMBA)

The EMBA is the largest geographic area where unplanned events could potentially have an environmental consequence. The whole EMBA will not be affected.

Taxpayers will still pay for hub as BP pulls out

The Australian Renewable Energy Hub will be partly powered by wind turbines. Picture: Rabih Shasha

ADRIAN RAUSO & MATT MCKENZIE

Construction of a green hydrogen precinct in the Pilbara using $140 million of taxpayer cash is still moving forward despite BP exiting a key project the initiative could support.

A $55 billion Pilbara green hydrogen project was dealt a huge blow on Thursday after the venture's majority shareholder, BP, pulled out to focus on its core oil and gas business.

BP is relinquishing its 64 per cent stake in the Australian Renewable Energy Hub — slated to be the green hydrogen production centrepiece in WA's most resources-rich region.

But the State Government will move ahead with its Pilbara Hydrogen Hub common-user infrastructure proposal regardless.

Energy giants across the globe are curbing investment into green hydrogen projects as hype around the clean fuel's commercial viability wanes.

Singapore's InterContinental Energy has taken the reins from BP as the operator of AREH, which aims to produce 1.6 million tonnes of hydrogen annually using energy generated by a sea of solar panels and wind turbines.

The AREH setback comes 18 months after the State and Federal Governments agreed to each tip in $70m to build the Pilbara Hydrogen Hub nearby to support the industry.

PHH hopes to provide "common-user infrastructure, skills development, and future expansion works required to grow hydrogen opportunities in the Pilbara region", according to the WA Government's Pilbara Development Commission.

This includes construction of a hydrogen "and/or" ammonia pipeline, providing skills training related to clean energy, and upgrading infrastructure at Port Hedland to accommodate imports of renewable energy equipment like wind turbine blades.

A Cook Government spokesman on Friday said BP's AREH withdrawal would not prevent PHH from being in operation by mid-2028.

"The State Government remains committed to the Pilbara Hydrogen Hub which, when operational, will leverage WA's existing strengths and support the world's clean energy transition," the spokesman said.

"Hydrogen remains an emerging export opportunity for WA.

"By playing a role in de-carbonising WA's major trading partners through LNG exports now, then green hydrogen exports later, the State Government will continue to build on its strong record of creating jobs and supporting new business opportunities."

A spokeswoman for Federal Climate Change and Energy Minister Chris Bowen did not respond to a request for comment.

BP's AREH exit came during the same week as Fortescue and Woodside Energy pulled the pin on green hydrogen projects in Queensland, Arizona and Oklahoma.

But Woodside said it still planned to develop a $1b-plus liquid hydrogen production facility near Kwinana called H2Perth.

"We had previously proposed an ammonia and hydrogen facility, but have revised our concept to liquid hydrogen only, based on market feedback," a company spokeswoman said last Friday.

"H2Perth aims to make liquid hydrogen available initially for export, while creating employment and local content opportunities, as well as providing an opportunity to establish a new strategic export industry for Western Australia."

Construction on H2Perth had been due to start last year but the first sod is yet to be turned.

Criticism as Mid West left out of power plan

KATE CAMPBELL & OLIVER LANE

The State Government missed a golden opportunity to boost power transmission to Geraldton when it failed to include the city in a $342 million upgrade to the South West Interconnected System, according to a local MP.

Energy and Decarbonisation Minister Amber-Jade Sanderson announced on Wednesday $342m worth of contracts had been awarded to upgrade the northern section of the SWIS to Three Springs.

Geraldton MLA Kirrilee Warr said Geraldton was left out again and accused the State Government of failing to grasp a clear opportunity to unlock Geraldton's full potential.

"Instead, we're still waiting," she said.

"The expansion to Geraldton is a no-brainer thanks to the Mid West having some of the world's best renewable resources, and upgrades to the SWIS will be required to ensure these projects can be connected.

"The State Government hopes the Oakajee SIA will help innovate the renewable industry, but the infrastructure to get it up and running must come first, including power.

Amber-Jade Sanderson and Premier Roger Cook. Picture: 7NEWS

Kirrilee Warr Picture: David Boyes

"If Geraldton is to play its part in WA's energy transition, we need connection, consultation and real investment."

Ms Sanderson said contracts had been awarded to three companies to construct more than 26.5km of overhead transmission lines to better connect Perth to renewable projects.

UGL Engineering, GenusPlus and Acciona will all take part in projects on the lines, as well as construct terminals which will run from Western Power's Northern Terminal in Malaga to Three Springs. Work has already started on the projects.

In response to Ms Warr's criticism, Ms Sanderson said upgrading the SWIS was a "staged process".

"Clean Energy Link — North is the largest investment in electricity infrastructure in a decade, but it is just the start," she said.

"It is the first stage of our accelerated planning for future transmission corridors to unlock renewable energy across the State."

Ms Sanderson said further details of the government's SWIS plans would be released later this year.

"We're committed to delivering a credible transmission expansion for the benefit of all Western Australians," she said.

School and tennis club will benefit from grants

A pair of Mid West and Gascoyne schools and sporting clubs are among the first recipients of the State Government's Community Use of School Sporting Facilities grants program.

The Government announced the first round of recipients set to benefit from the $10 million grants scheme, which encourages partnerships between schools and community sporting groups to better use existing sporting facilities.

In total so far, $1.5m in grants have been awarded to 44 schools across eight different sporting codes, providing upgrades for local facilities, equipment and school resources.

In the Mid West, the only beneficiary in the first round is Yuna Primary School and Yuna Tennis Club, with upgrades to the hard-court surface.

Exmouth District High School and Exmouth Netball Association will receive funds for seating and water drinking stations.

The amount of money individual schools and clubs received was unspecified.

Sport and Recreation Minister Rita Saffioti said: "We're proud to be supporting schools and sports clubs in WA, and these upgrades will ensure our communities are set up for sporting success."

6.5.1.6 Koori Mail – 30 July 2025

Funding promised for roadmap

THE WA Government has promised funding to support action on the 2024 Yule River Call to Action and Solutions Roadmap.

WA Minister for Aboriginal Affairs Don Punch made the commitment at the 10th Annual on-Country Bush Meeting at Yule River, held over 23 and 24 July 2025.

Coordinated by Yamatji Marlpa Aboriginal Corporation (YMAC), more than 500 people attended the bush meeting to discuss local, community-led priorities to Close the Gap for First Nations people across the Pilbara.

Opening the meeting, YMAC Co-Chairperson Mrs Eaton said: "I stand here proudly to acknowledge the old people who met here at the Yule River Meeting Place decades ago to organise the 1946 Pilbara Strike. They fought for us. From Onslow to Marble Bar, from Roebourne, from the desert to Hedland – they stood as one. We're here to challenge the government. We're here as one voice."

In her speech, Mrs Eaton also acknowledged that past Yule River meetings have seen commitment from government with no action.

Day One saw First Nations attendees discuss and decide on several priority issues that they expect the government to address in the next 12 months. These priorities are aligned to the CTA and the National Agreement on Closing the Gap, and are across six key areas of concern: Systemic Reform, Education, Health, Housing, Wellbeing, and Community Safety, and decided on community presenters for Day Two.

Yule River Call to Action Working Group members with Minister Don Punch and other key government agency staff at the On-Country Bush Meeting at Yule River.

Day Two saw ministers, commissioners and heads of government agencies join the meeting, with community members Raylene Button and Henry Lockyer presenting the day-one priority items to government, before speeches from Minister Punch, Aboriginal and Torres Strait Islander Social Justice Commissioner Katie Kiss and a Q&A panel for community to ask questions of government directly.

Attendees at Yule River have been calling for many years for the government to act on the place-based solutions that have been developed by the community, and Minister Punch was clear that he will implement a place-based approach. Minister Punch also committed to attend a meeting with community members in the next six months to provide updates and reporting on what work is being undertaken to address and deliver on the CTA.

YMAC CEO Simon Hawkins acknowledges that the proposed funding from Minster Punch is a refreshing outcome to resource the CTA in partnership with the community – which has been a longstanding invitation to government at previous bush meetings.

The 2024 CTA is an open invitation to local, state and federal governments and industry to work together with First Nations peoples from across the Pilbara to achieve real and sustainable change.

It contains practical strategies and place-based solutions, identified by community members for: Systemic Reform, Education, Health, Housing, Wellbeing, and Community Safety.

Yamatji Marlpa Aboriginal Corporation (YMAC) coordinates the Yule River Bush Meeting under the direction of its Pilbara Regional Committee and in consultation with the Yule River Call to Action Working Group. In March this year, YMAC called on the state government to urgently address the concerns laid out in the Call to Action after the Productivity Commission released its data on Closing the Gap which highlighted ongoing failure to address the issues facing Aboriginal communities.

YMAC thanked the Town of Port Hedland and the Pilbara Development Commission for their sponsorship of this year's event.

6.5.1.7 National Indigenous Times – 29 July 2025

Elder takes her artwork to London

DAVID PRESTIPINO

Yinjibarndi artist and Elder Allery Sandy took her first overseas journey this month, at the age of 70, as artist-in-residence at a 20th anniversary exhibition of Pilbara art in London, held from July 14-18.

Before the trip, Ms Sandy told National Indigenous Times she was "looking forward to a wider audience to listen to my story, to see why Country that connects to the Aboriginal people is so important".

"For me to just stand up there and tell my story, and just meet everyone, is going to be an honour," she said before leaving for the UK, where the Rio Tinto-funded exhibition has been taken overseas for the first time, before another stint on the road back home in Busselton in August, and a final showing in Boorloo/Perth in September.

Ms Sandy shared the inspiration behind her signature piece After The Rain, part of a curated selection of works from six Pilbara artists at the special London showing.

"When the rain comes, it makes the country flourish again, and brings the beauty of the land that we live in . . . it provides all that we need," she said.

"When the heavy dew comes along, it's nature itself, it just waters the Mother Earth and slowly brings the beauty, the wildflowers and the fruits that we can get from the trees."

The Colours Of Our Country exhibition has become a vital support for artists in the Pilbara over its two decades and brought much attention to the region and Roebourne specifically, where many craft their works at Yinjaa-Barni Art Centre.

The selection for the London showing features nine artworks from six artists. Accompanying Ms Sandy to London was fellow artist Lynette Upton, a Pilbara Nyamal woman, and Rachael Sandover, the centre's executive manager.

Rachael Sandover and Allery Sandy at Yinjaa-Barni Art Centre ahead of the London exhibition.

"The exhibition is a real highlight for the artists they've been supporting for the 20 years it's been running, and allowed for a lot of attention . . . that they otherwise might not receive," Ms Sandover said.

She said Ms Sandy, the signature artist for the 2025 exhibition, was an amazing woman and passionate about her culture and inspiring others into the medium.

"To be in her presence, you can really feel that power. She really wants to preserve Yindjibarndi culture," Ms Sandover said.

"She also wants to encourage lots of other people to practise their art and consider it as a meaningful source of income."

Ms Sandy said she was proud painting was still important to many local artists throughout the years.

"Today we see what we have developed, and how we are proud of our work and what we can achieve in this, and seeing all that we have done . . . we've lost count of how many paintings and artwork we've done over the years."

Ms Sandy hopes sharing the connection Aboriginal people have to Country would enlighten the broader London audience, and inspire young people back home to share theirs. "I'd love to encourage my younger generations today to stand up for who they are and tell their story boldly, strong and just be who they are," the Elder said.

The exhibitions are open to the public in Busselton (August 25-29) and Perth (September 15-26).

Activity	FeNaCING Festival
Date	2-3 August, 2025
Description of the consultation	Woodside hosted a stand at the FeNaCING Festival 2025**.** Members of Woodside's Corporate Affairs, Environment and Operations teams actively engaged with the community to discuss proposed EP activities. Woodside displayed a QR code on the stand linked to the 'Consultation activities' page of the Woodside website. A pull-up banner was on display regarding engaging on Woodside's 'Let's Talk', with a QR code linking to the 'Consultation activities' page of the Woodside website. Woodside made available printed consultation information sheets on the GWF-4 Drilling and Subsea Installation
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, promote awareness of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in Pilbara News on Wednesday, 30 July 2025 edition. • Social media posts published on the Woodside North West Facebook page inviting the public to attend (see table below) • EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below).
Estimated number of individuals / organisations consulted	Over 5,000 community members attended the event. Woodside spoke to many community members, recording 50 conversations.
Summary of Feedback, Objection or Claim	
• General queries around employment opportunities, including apprenticeship and trainee opportunities. • Interest in local content and community contribution opportunities. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • Conversations on the North West Shelf Project Extension including support for local community, timelines, investing partners, political views and the future of gas in the energy transition. Many pro approval. • Interest in Woodside's supply of DOMGAS to WA. • Environment Plan community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Heritage BHP and Woodside merger, interest in the environmental approvals in the Bass Straight regarding decommissioning. • Murujuga World Heritage & MRAMP queries.	
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

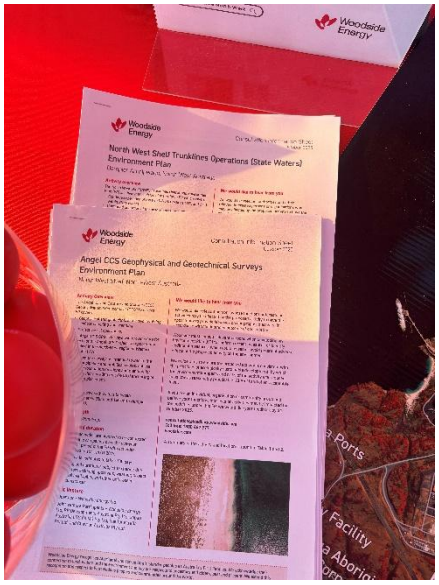
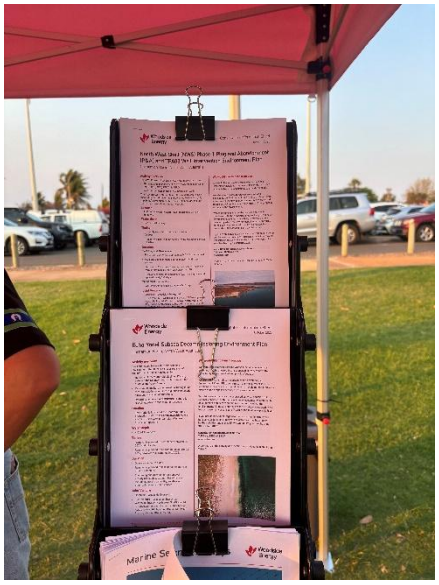
6.7.1.2 Dampier Beachside Markets − 18 October 2025

	Location: Dampier
Activity	Dampier Beachside Markets
Date	Saturday, 18 October 2025
Description of the consultation	Woodside hosted a stand at the Dampier Beachside Markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members of Woodside's Corporate Affairs team. Woodside displayed a QR code at the stand linking to the 'Consultation activities' page of the Woodside website. Woodside displayed and made available printed Consultation Information Sheets on the Greater Western Flank Phase 4 (GWF 4) Drilling and Subsea Installation.
Advertising and invitations	Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to allow individuals to provide feedback on proposed activities, through the following: • An advertisement published in the Pilbara News on 15 October 2025 (see below). • A social media post Dampier Community Association Facebook page advising that Woodside would be in attendance at the event (see below). • A social media post via Woodside North West Facebook account advising that Woodside would be in attendance at the event (see below). • An advertisement displayed on community noticeboards at Lo's Karratha, and IGA Good Grocer Karratha. • An EP consultation display with QR code (linked to the 'Consultation activities' page on Woodside's website) displayed at Woodside's stand. • EP consultation banner with QR code (linked to 'Consultation activities' page on Woodside website), displayed at Woodside's stand along with current EP consultation information sheets (see table below)
Estimated number of individuals / organisations consulted	Over 500 community members attended the event. Woodside spoke to many community members, recording 5 conversations.
Summary of Feedback, Objection or Claim	
• Queries around employment opportunities. • General interest in the Scarborough Energy Project progress and Pluto Train 2 and Train 1 modifications projects. • Conversation on the North West Shelf Project Extension; pro approval. • Patrons shared their views on future of gas in the energy transition and how this compares to alternative power options; solar and nuclear. • Interest in Woodside's supply of DOMGAS to WA. • Environment Plan community consultation and approval process discussed and why we want to talk to community. No concerns raised. • Discussions with children about what Woodside does and where gas comes from. • Pleasant interactions with Woodside, Woodside contractor company and near neighbour employees.	
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims.	





This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.7.2 Gascoyne Region

6.7.2.1 Exmouth Community Markets – 5 October 2025

	Location: Exmouth
Activity	Exmouth Community Markets
Date	5 October 2025
Description of consultation	Woodside hosted a stall at the Exmouth Community Markets to engage community members on our activities. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Information on Woodside's activities in the Exmouth region, details of Woodside's community grants program, and fact sheets about marine seismic surveys were available. Woodside also made available printed consultation information sheets on the Greater Western Flank Phase 4 Drilling and Subsea Installation EP.
Advertising and invitations	Woodside promoted the market stall on its North West Facebook page.
Estimated number of individuals / organisations consulted	Over 200 community members attended the event. Woodside spoke to many community members, recording approximately 20 conversations.
Summary of Feedback, Objection or Claim	
• Interest in Woodside's social contribution activities in Exmouth and potential support for health services infrastructure. • Conversations about Woodside's approach to cultural heritage management • Query about Woodside's tax contribution. • Conversation about Woodside's approach to the energy transition and investment in new energy products and lower carbon services. • Interest in industry's political influence. • General queries about Woodside's footprint in Exmouth and the two facilities visible from the coast (Pyrenees and Ngujima-Yin FPSOs). • General conversations about Woodside's activities in Western Australia, including the North West Shelf. • Questions relating to the current status of the Browse project and considerations for Scott Reef.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

• General interest in Woodside's health, safety and environmental management measures and mitigations, particularly in relation to seismic activities and potential impacts to fauna.
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

6.8.1 Let's Talk – Our Plans, Your Say

6.8.1.1 Edition 6, October 2025

Woodside Energy

Let's Talk

Our Plans, Your Say

Edition 6 | October 2025

Goodwyn A Platform approximately 140 km north-west of Karratha.

The rundown

Goodwyn Area Infill Development Offshore Project Proposal gets the green light

Following NOPSEMA's acceptance of the Goodwyn Area Infill Development Offshore Project Proposal (GWA OPP), Woodside is planning to develop new gas wells about 140 km north-west of Karratha.

The development will make better use of space at the Goodwyn A platform by bringing in extra gas and condensate from up to 8 new wells.

This is a phased development expected to deliver first gas in 2027-2028.

Environment Plans (EPs) supporting the development include:

- Goodwyn Alpha Geophysical and Geotechnical Surveys (Rev 2)
- Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation – consultation closed 27 August 2025.

We currently anticipate consulting on a revision for the GWA Operations EP that will include the proposed new wells in the first half of 2026.

Upcoming engagement opportunities

Woodside is consulting with local community members at events, making it easy to speak to us about our operations, decommissioning activities and proposed projects.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly teams at the locations below, follow the Woodside North West Facebook page or email us at consultation@feedback.woodside.com

Dampier

- Dampier Beachside Markets Saturday, 18 October and 8 November 5:30pm to 8:30pm Hampton Oval, Dampier, WA, 6713

Exmouth

- Exmouth Community Markets Sunday, 5 October 8:00 am to 12:00 noon Federation Park, Exmouth, WA, 6707

Community conversations

The way we engage is based on building trust and understanding to support long-term relationships.

We emphasise open and accessible communication and feedback on our activities. One way we do this is by inviting community to engage with Woodside at popular community events.

Woodside and our joint venture partners were pleased again to sponsor the City of Karratha's Red Earth Arts Festival (REAF) at The Quarter where we helped activate and transform the area into a hub of artistic and cultural activity.

This year's festival featured over 100 performances, workshops, and experiences. Over 9,200 people attended the four-day festival, with 90% of programming free to the community.

The main attraction was 'The Whale' installation, which invited viewers to operate the strings of a large whale puppet and its sea friends while listening to whale vocalisations – an immersive experience enjoyed by all ages.

Artists from Yinjaa-Barni Art Group painted and displayed art, welcoming the public to watch the creation of several pieces and engage in conversations.

A community concert featured roving entertainment, stage performances, music, food trucks and markets.

At our Woodside tent, we engaged with the Karratha community discussing Woodside's work in the North West, our EPs, current and proposed projects and we listened to community feedback.

Woodside, on behalf of the Scarborough Joint Venture, was also proud to support the new biennial Ningaloo Sky Festival in Exmouth recently. The three-day event showcased the region's vibrant culture, food and community.

A key event was a market day at Talanjee Oval featuring local artists and makers, roving entertainers, a kite show, animal petting farm and food trucks.

At our Woodside stand, we chatted with visitors about our EPs and Woodside's activities in the Exmouth region, and listened to people's feedback.

Ningaloo Sky Festival drone show.

A drone show highlighting stories of the region's Traditional Owners and a free community concert by iconic Aussie rock band Eskimo Joe capped off the day.

Other events included astronomy talks highlighting the star-filled Ningaloo night sky, unique dining experiences, sunrise yoga, cultural talks and a community movie night.

Woodsiders also met with the Exmouth Community Liaison Group to provide updates on relevant projects and activities.

Talking point

Pygmy blue whales: feeding discovery

In an Australian first, scientists have recorded where and when pygmy blue whales feed as they migrate along the WA coast, thanks to research co-funded by Woodside Energy.

Every year, many whale species and thousands of individual whales migrate through the offshore waters of WA's north-west.

Luke Smith, Woodside Head of Biodiversity and Science, says collaboration with researchers is helping us better understand these whale species and their annual migration.

"In recent years, we – together with our joint venture partners – have invested heavily in numerous whale research programs," Luke points out.

"We continue to deepen our understanding of these magnificent animals and their natural habitat."

One of our research programs focuses on pygmy blue whales, a species that belies its name and can measure up to 24 metres long and weigh 90 tonnes. They undertake an annual northern migration from south-east Australia up through offshore waters of WA to Indonesia before returning five to six months later.

Photo credit: Grace Russell, Centre for Whale Research.

The research led by the Australian Institute of Marine Science and the Centre for Whale Research, found the whales aren't just migrating but also feeding enroute to their Indonesian breeding grounds – something never previously recorded with telemetry in the north-west waters of WA.

Unlike humpback whales, commonly seen as they play and frolic near to shore on their annual migration along the WA coast, pygmy blues spend little time at the surface and migrate in deeper offshore waters. To understand this species we've turned to the latest technology.

Using satellite tags and dive loggers (think Fitbits for whales), scientists tracked nine pygmy blues as they searched for prey.

Previously, it was thought feeding only occurred at the Perth Canyon and Ningaloo but researchers documented them snacking on the go, too.

The whales were recorded performing deep dives with lunge feeding – a high-speed move where they engulf dense swarms of krill.

The findings are helping researchers deepen their understanding of the species' annual migration, while providing us with more knowledge to include in EPs, improving how we avoid or minimise potential impacts.

"As whale species continue to recover and whale numbers migrating through north-west Australia increase, we'll continue to develop technology and approaches to improve our management of whale interactions," reports Luke.

"It's crucial we further reduce potential impacts, support future project approvals and contribute to science along the way."

Luke believes we can continue to successfully co-exist in the marine environment while simultaneously contributing to the study of these complex, remarkable mammals.

Okha FPSO, approximately 115 kilometres north-west of Dampier.

Let's talk about... FPSOs

Woodside has been producing oil from its Australian assets through Floating Production Storage and Offloading (FPSO) facilities since 1995. Woodside currently has three FPSOs in operation in North West Western Australia.

An FPSO facility is a vessel used in offshore oil and gas production, processing hydrocarbons from subsea wells, storing the oil onboard, and offloading it to tankers for transport. During normal operations, an FPSO is operated by 50 to 100 personnel onboard at any given time. These roles include production operators, marine crew, engineers, safety officers, catering staff, and support personnel.

Moored approximately 115 kilometres north-west of Dampier, the Okha FPSO has been producing oil and gas from the Cossack, Wanaea, Lambert, and Hermes oil fields. Crude oil is offloaded to bulk tankers, and LPG-rich gas is exported to the North Rankin Complex before being processed at the Karratha Gas Plant.

Woodside operates two offshore assets off Exmouth: the Ngujima-Yin and Pyrenees FPSO facilities.

The Ngujima-Yin FPSO is located over the Vincent oil field, 50 kilometres north-west of Exmouth. Ngujima-Yin is a Thalanjyi word meaning "to dream". The Greater Enfield Project, completed in 2018, involved developing several oil accumulations through a subsea tie-back to Ngujima-Yin. This project included a major refit of the FPSO, installation of subsea infrastructure, and the drilling of 12 development wells.

The Pyrenees FPSO commenced operations in 2010 and consists of six conventional oil fields located 45 kilometres north-west of Exmouth.

The Ningaloo region is recognised for its high ecological importance, boasting unique environmental, social, and cultural values, extending across 280 kilometers of coastline between Exmouth and Carnarvon. It is a global biodiversity hotspot and was inscribed on the World Heritage List in 2011.

To better understand and manage the environmental features of the region, Woodside has supported a range of multi-year projects through its environmental partnerships program.

These projects focus on iconic species and habitats across different ecosystems along the Ningaloo Reef and Exmouth Gulf. Woodside's social investment and science-funded projects contribute to conservation efforts, biodiversity education, and community engagement at local and regional scales.

You can read more about this significant region by **clicking here**

Scarborough's subsea infrastructure now in place

The Scarborough Energy Project has reached another exciting milestone–this time beneath the waves. The team has successfully completed the penultimate subsea installation campaign, marking a significant step toward first LNG cargo in the second half of 2026.

Approximately 375 km off the Pilbara coast, over 400 pieces of subsea equipment have now been assembled and installed in the Scarborough field, including the impressive 305-tonne Riser Base Manifold. With all critical infrastructure in place and tested, the project is now more than 86% complete (excluding Pluto Train 1 modifications) and ready for the hook-up and commissioning of the floating production unit (FPU) upon its arrival.

The Scarborough Offshore Facility and Trunkline (Operations) Environment Plan (EP) is now approved, setting out how Woodside will manage environmental risks and impacts associated with offshore operations. The EP covers activities such as FPU installation, commissioning, and ongoing operations, as well as inspection, maintenance, and repair of subsea infrastructure.

Read more about the Scarborough Energy Project by **clicking here**

This is the 80m long, 32" diameter rigid pipe spool which weighs approximately 230 tonnes and was fabricated in Henderson, Western Australia.

6.8.2 Karratha Community Update

6.8.2.1 Edition Q2 – July 2025

Woodside Energy

Karratha Community Update

July 2025

Woodside and its joint venture partners were proud to support the Red Earth Arts Festival, as The Quarter Sponsor.

Stay up to date on our continued contribution to the local community Woodside North West

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Meet the people of the North West Shelf Project (L-R): Haylee, Aaron and Narelle

Woodside welcomes proposed North West Shelf Project extension

The North West Shelf (NWS) Project has supplied energy to Australian and international customers since the 1980s, investing hundreds of millions of dollars into the local economy and community. It has pioneered the LNG industry in Australia and is a nationally significant asset.

The NWS Project is a major employer in and around Karratha, supporting the development of a local workforce through training and employment pathways and contracting opportunities throughout Western Australia.

After decades of processing only the NWS resources, the Karratha Gas Plant (KGP) now also processes gas for other resource owners, who pay a toll to use the facility. A transformation that enables this landmark facility to continue to supply energy to Western Australia and international markets for decades to come.

State Government approval for North West Shelf Project Extension was received in December 2024 after six years of assessment and appeals.

The Federal Government provided its proposed environmental approval for the North West Shelf Project Extension in May 2025 with proposed conditions. Consultation is now occurring with Government on the proposed conditions.

As part of the State Government approval in December 2024, the North West Shelf committed to a range of environmental management measures, including a significant reduction in air emissions and measures to manage greenhouse gas emissions and to reduce them over time.

In addition, meaningful consultation with Traditional Owners is occurring as part of these conditions, including complying with all air quality objectives and standards arising from the Murujuga Rock Art Monitoring Program.

We remain committed to protecting the Murujuga Cultural Landscape and support its World Heritage nomination. We believe long-term co-existence between cultural heritage and industry is possible when guided by credible science, Traditional Custodian leadership, and genuine collaboration.

Discover the ways the North West Shelf Project holds a special place for our people, the businesses we work with and the Pilbara community by scanning the QR code.

New members join Karratha Community Liaison Group

Woodside is committed to building strong relationships with the community. One way we do this is through our quarterly Community Liaison Group (CLG) meetings.

This month we were excited to welcome new members to the meetings following a review of the group's membership and call for public nominations to fill new community member positions on the CLG.

Meeting quarterly, the CLG is an important platform for Woodside to share information about our operations, gather feedback on current and future activities, and facilitate discussions on issues of importance to the community.

Our meetings cover a range of topics, including operational and project updates, social impacts, local content, environment plans and social investment.

If you're interested in finding out more about the CLG, contact us by email: northwestcommunities@woodside.com or keep an eye on our social media channels for updates.

Woodside's CLG meet quarterly to share information, gather feedback and facilitate discussions.

Stay up to date on our continued contribution to the local community **Woodside North West**

Impact felt locally in Karratha

Impact Digi is a Pilbara-based Indigenous owned and operated marketing agency with close to a decade of experience working with Woodside Energy.

A full-service marketing agency, Impact Digi has built relationships with government, industry, Indigenous organisations and businesses of all sizes helping them to build brands and reach stakeholders.

"The past couple of years have been extra rewarding as our reputation has grown within Woodside and we're getting to work with team members from other areas of their business," said Impact Digi Managing Director, Tamara Bin Amat

Starting off by offering photography services when they first began, Impact Digi has transformed over time with a growing team, refined services and an expanded reach.

"Looking back, one of my favourite moments was when local Asset Manager for the Karratha Gas Plant, Breyden Lonnie presented our first ever award for Best Aboriginal Business at the 2015 Karratha and Districts Chamber of Commerce and Industry (KDCCI) Business Excellence Awards," said Tamara.

That recognition is continuing with Impact Digi recently winning the Best Small Business Award at the 2024 KDCCI Business Excellence Awards.

Tamara Bin Amat and Jason Miltrup with the Woodside team at EXA 2025 in Perth

Tamara and her team understand the importance of supporting local and contributing to their community.

"Working with Woodside has not only boosted our business but also our reputation, opening doors to new opportunities across the state," said Tamara.

Celebrating 20 Years of Corporate Volunteering at Woodside

This year marks another significant milestone for Woodside: 20 years of corporate volunteering.

We take pride in our long-standing commitment to investing in the communities where we operate, and where our employees live and work. In fact, 20 years ago, Woodside was one of the first companies in Australia to offer volunteering leave to our employees.

Woodside employees are entitled to 12 hours of volunteering leave each year, empowering them to make a meaningful difference in their communities and engage in a variety of activities. In Karratha this includes volunteering at local food banks, participating in beach clean-ups and mentoring young people in educational programs.

Introducing Danielle East. If you've been involved in Woodside volunteering in WA's Pilbara region, chances are you've met Dan.

Since joining Woodside in 2011, Dan has worked across many roles, but none showcase her passion better than coordinating volunteering opportunities for our teams in Karratha.

Dan's commitment to volunteering extends beyond coordination; she actively contributes her time and effort to help those in need. As a long-serving member of the Karratha State Emergency Service, Dan has been instrumental in responding to crises. Earlier this year, following the impact of Category 4 Tropical Cyclone Zelia, she was one of a team of volunteers that assisted a remote Aboriginal community by clearing fallen trees and addressing other emergency response requirements.

"Giving back to the community is in my DNA," Dan shares. "Being able to support my neighbours in need at a time of crisis is essential for me. And I'm grateful Woodside has volunteering programs in place, where I can put my hand up and jump in as and where I'm needed."

Last year alone, Woodside employees dedicated over 650 volunteer hours to community groups and not-for-profit organisations within the City of Karratha. As we celebrate two decades of corporate volunteering, we look forward to continuing our community engagement and making a positive impact, one volunteer hour at a time.

North West Shelf Project supports community housing needs

The North West Shelf Project recently gifted two houses to vital local not-for-profit organisations in the Pilbara region.

This initiative underscores the Project's commitment to fostering community wellbeing and providing essential support to those in need.

One of the houses has been donated to Reach Us Pilbara, an organisation dedicated to providing cancer support services.

This new facility will enable Reach Us Pilbara to expand their services, offering a comforting space for individuals and families navigating the challenges of a cancer diagnosis. The house will serve as a sanctuary where patients can access support, counselling, and respite.

The second house has been gifted to the Salvation Army Karratha Women's and Children's Centre. This centre plays a crucial role in offering refuge and support to women and children escaping domestic violence situations. The additional space will allow the centre to accommodate more families, providing them with a safe and nurturing environment as they rebuild their lives.

By supporting these organisations, the North West Shelf Project aims to help address immediate community needs while contributing to the long-term resilience and wellbeing of the Pilbara community.

One hull of a milestone for Scarborough's FPU

The Scarborough Energy Project has achieved a major engineering milestone with the joining together of the topsides and hull for the Floating Production Unit (FPU).

Constructed separately at two different fabrication yards in China, the joining of the two mega-structures is a significant step forward for the Scarborough Energy Project as it progresses towards first LNG cargo, targeted for the second half of 2026.

The floatover required precise planning and extensive collaboration by all stakeholders. Teams from Woodside, McDermott, QMW and COSCO worked closely on the fabrication of the structures and on safely and successfully bringing them together.

Woodside Executive Vice President & Chief Operating Officer Australia Liz Westcott highlighted what it meant for Woodside and the Scarborough Energy Project, which is now over 82% complete.

"The floatover of the FPU is an engineering marvel and builds on the safe and successful fabrication of the topsides and hull.

"Manoeuvring two structures that each weigh more than 30,000 tonnes at sea is an exceptionally complex operation.

"I am proud of the Woodside and McDermott teams for the safe delivery of the FPU to the integration yard and the completion of this chapter of work. The FPU is a critical piece of infrastructure for this world-class project which continues to be delivered to the highest standard."

The remaining integration work for the FPU will continue at the fabrication yard in Yantai before sailaway to Australia.

Once complete the FPU will be moored 375km off the coast of Karratha. The Scarborough Energy Project is set to produce up to 8 million tonnes of LNG per year and contribute up to 225 terajoules a day of domestic gas supply into the Western Australian market.

6.8.2.2 Edition Q3 – October 2025

Karratha Community Update

October 2025

Woodside welcomes approval of North West Shelf Project Extension

The Australian Government's final decision to grant environmental approval for the North West Shelf Project Extension is positive news for Woodside Energy and Karratha as our host community.

The decision provides certainty for the ongoing operation of the North West Shelf Project.

For Karratha and surrounds, this has meant sustained employment, meaningful social contributions, a legacy built on responsible energy development and a deep-rooted connection with the local community.

Over its lifetime, the North West Shelf Project has paid more than A$40 billion in royalties and excise, supported thousands of Australian jobs and contributed over A$300 million to social investment initiatives and infrastructure support in the City of Karratha.

Importantly, the approval follows an extensive environmental assessment and appeal process and includes rigorous conditions to manage the protection of cultural heritage.

This includes conditions that require additional monitoring and management of air emissions to protect the Dampier Archipelago (including Burrup Peninsula or Murujuga).

Woodside is committed to protecting the Murujuga Cultural Landscape and we were a proud supporter of the World Heritage nomination and assessment process, led by Ngarda Ngarli, the Traditional Custodians of Murujuga, on the World Heritage listing.

The internationally peer-reviewed, best-practice science conducted by the Murujuga Rock Art Monitoring Program, led by Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation, confirms that with the right controls and collaboration, co-existence of industry and cultural heritage is not only possible, but already happening.

"Over its lifetime, the North West Shelf Project has paid more than A$40 billion in royalties and excise, supported thousands of Australian jobs and contributed over A$300 million to social investment initiatives and infrastructure support in the City of Karratha."

As we shape the future of the North West Shelf alongside our Pluto LNG operations and the development of the Scarborough Energy Project, our commitment to collaboration and consultation remains strong.

We will continue to work closely with our colleagues, partners, and neighbours.

I'm looking forward to supporting Woodside's future in Karratha, reflecting the values and aspirations of the place we have proudly called home for over four decades.

Derek Paulgaard
Asset Manager North West Shelf Onshore

Inspiring futures through work experience

We recently had the pleasure of hosting Programmed work experience students from Karratha Senior High School, Roebourne District High School and St Luke's College Karratha at Pluto LNG and Karratha Gas Plant.

The students had the opportunity to shadow our teams, gaining insights into day-to-day operations and exploring the diverse career pathways available right here in the Pilbara.

Thank you all participating students, we hope the experience sparked some new ideas for your future pathways.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Community partnerships valued

On the evening of 13 August 2025, we had the privilege of celebrating the incredible contributions of our community partners at our annual Community Partner Sundowner, held at The Shelf, Red Earth Arts Precinct.

Our sundowner event was a heartfelt tribute to the people and organisations making a real difference across the Pilbara.

Hosted by Derek Paulgaard, Asset Manager – North West Shelf Onshore, the event featured inspiring reflections from Sophie Martin, One Tree Community Services Inc. sharing information about our award-winning Roebourne Pathways Program partnership and its impact on local youth and Stacey Giles, Reach Us Pilbara, highlighting vital cancer support services available to families in the region.

Thank you to everyone who joined us to recognise the incredible work happening across the City of Karratha.

The Woodside Community Grant Program opens in October, providing funding of up to $5,000 to community groups and not-for-profit organisations in the City of Karratha to support health, liveability, sustainability and environmental outcomes.

Building community connections: repurposing for a brighter future

Yurra and Woodside Energy made a collaborative contribution to the Roebourne Work Camp by donating 34 tonnes of scaffold boards.

During supplier visits, Local Content Manager, Julie Attwood, realised there was an opportunity to re-purpose redundant scaffold materials, no longer being used at Karratha Gas Plant.

The materials were welcomed by the men at the Department of Justice Roebourne Work Camp. They were used to make furniture for not-for-profit organisations and local community groups, helping participants develop employable skills, as well as providing benefits to Pilbara regional communities.

Some of the projects completed using these repurposed materials include; timber picnic benches for the Roebourne District Hospital, outdoor seating and cubby houses for local schools and daycares, and tables to display the work of local Aboriginal artists. These projects improve community spaces and connectivity, while providing a platform for artists to gain recognition and income.

Read more about the collaboration between Yurra, Woodside, and the Department of Justice and the positive impact on community by scanning the QR code.

Woodside is building for the future: 30 new homes in Karratha

Woodside Energy (Karratha Services) Pty Ltd, has awarded contracts for the construction of an additional 30 new homes in Karratha for Woodside's residential employees. Under the award, 20 new homes will be built by Thomas Building and 10 by Traditional Owner business, Yurra Building, both locally based contractors.

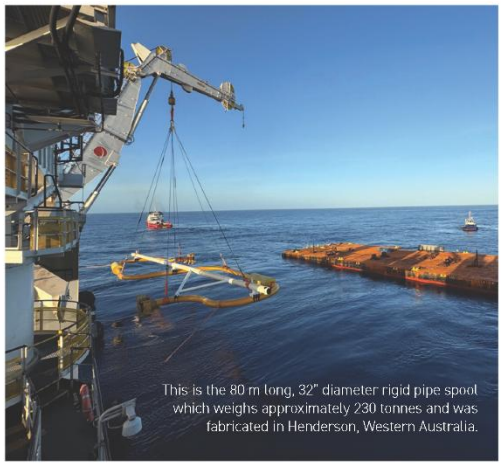
Expected to be completed from mid-2026, the new houses will be owned by Woodside and are additional to the recent construction of 20 new homes under a 15-year build-to-lease agreement with Karratha Housing, a subsidiary of Yurra Building.

Awarding the construction contracts to Thomas Building and Yurra Building is part of Woodside's ongoing commitment to delivering business opportunities that boost jobs and support the local economy. The contracts include provisions for the employment of local apprentices and trainees.

Woodside Pluto Asset Manager Kate Bardill said the new contracts were part of the company's Karratha housing approach, which aimed to providing quality housing options for employees while balancing the needs of the local housing market.

"Woodside's approach to housing includes investment in new builds, the sale of older housing stock on the open market and support for local housing affordability initiatives such as the City of Karratha's Service Worker Accommodation program," said Kate.

Under Woodside's predominantly residential frontline workforce policy, approximately 75% of the company's employees working at its Karratha operations live locally.



Scarborough's subsea infrastructure now in place

The Scarborough Energy Project has reached another exciting milestone–this time beneath the waves. The team has successfully completed the penultimate subsea installation campaign, marking a significant step toward first LNG cargo in the second half of 2026.

Approximately 375 km off the Pilbara coast, over 400 pieces of subsea equipment have now been assembled and installed in the Scarborough field, including the impressive 305-tonne Riser Base Manifold. With all critical infrastructure in place and tested, the project is now more than 86% complete (excluding Pluto Train 1 modifications) and ready for the hook-up and commissioning of the floating production unit (FPU) upon its arrival.

The Scarborough Offshore Facility and Trunkline (Operations) Environment Plan (EP) is now approved, setting out how Woodside will manage environmental risks and impacts associated with offshore operations. The EP covers activities such as FPU installation, commissioning, and ongoing operations, as well as inspection, maintenance, and repair of subsea infrastructure.

Scan the QR code to read more about the Scarborough Energy Project.

This is the 80 m long, 32" diameter rigid pipe spool which weighs approximately 230 tonnes and was fabricated in Henderson, Western Australia.

REAF reflections

This year saw the continuation of Woodside's support for the City of Karratha's Red Earth Arts Festival (REAF). We were proud to once again sponsor 'REAF at The Quarter,' offering a suite of free, family-friendly activities, activating and transforming the area into a hub of artistic and cultural activity.

The main attraction of REAF at The Quarter was 'The Whale' installation; inviting viewers to interact with a large whale puppet and its sea friends while listening to whale vocalisations – an immersive experience enjoyed by all ages.

REAF is moving towards becoming a destination festival for the region, and Woodside and its joint venture partners are proud to support the continued provision of important and much-loved community events, livability initiatives and significant local government projects.

Artists from Yinjaa-Barni Art Group painted and displayed art on site, welcoming the public to watch the creation of several pieces and engage in conversations.

A community concert featured roving entertainment, stage performances, music, food trucks and the Karratha District Chamber of Commerce and Industry markets.

Attendees were treated to Maori cultural displays, Brazilian samba and Chinese dance while enjoying face painting, elaborately costumed stilt artists, Dr Hubble's bubble display, jazz music from the Perth Symphony Orchestra and a calming space at The Inclusive Movement's sensory tent.

Woodsiders enjoyed engaging with the diverse Karratha community discussing Woodside's work in the North West and listening to community feedback on our activities.

The festival finale featured First Lights - Bunggaliyarra Munggu, presented by Fremantle Biennale in collaboration with Juluwarlu Art Group and supported by Woodside and its Pluto Train 2 Joint Venture partners. Woodside is proud to support events like REAF, bringing the community together, strengthening local connections, and fostering a sense of collective pride.

Karratha Volunteer Fire & Rescue Service were Woodside Community Grant recipients, 2024

Woodside Community Grants

Applications open Wednesday, 1 October 2025

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to $5,000 are available to support community initiatives in the City of Karratha and the Shire of Exmouth.

Applications close Friday, 31 October 2025 and can be completed online at woodside.com/social-contribution

For more information, please email northwestcommunities@woodside.com

6.8.2.3 Edition Q4 – December 2025

Karratha Community Update

December 2025

Scarborough Energy Project on track for start-up

Aerial view of Pluto Train 2 as at 25 October 2025.

As we approach start-up of the Scarborough Energy Project and commissioning of Pluto Train 2, Woodside and its joint venture partners continue to focus on managing impacts and delivering positive outcomes for the Karratha and Roebourne communities.

This approach has seen $215 million worth of contracts awarded to 170 Pilbara-based businesses, support for local employment and training initiatives and ongoing investment in programs, events and organisations that help build a thriving local community.

In 2026 we will continue to work to minimise the impact of our operations to the community as we commission Pluto Train 2 in preparation for the processing of Scarborough gas in the second half of the year.

Commissioning is a critical process in bringing new LNG processing facilities online. It involves initial testing and operation of equipment and systems to ensure correct installation and safe functioning. Our team takes a comprehensive approach to verifying all systems meet regulatory requirements while minimising environmental impacts wherever possible.

As we commission our Pluto Train 2 Project, you may notice an increase in flaring activity, including some periods of noise and visible dark smoke.

We are committed to proactively communicating planned activities as much as possible. As schedules are finalised, further updates will be communicated.

If you have questions on commissioning and flaring or would like more information, I invite you to view the Woodside Controlled Flaring animation here or contact Woodside's Community Line by calling 1800 634 988.

We look forward to continue to work with the Karratha and Roebounre communities during 2026.

Mike Price
Woodside Vice President Pluto Scarborough Asset

We extend this recognition and respect to First Nations peoples and communities around the world.

Tim Tam bird spotted at bird watching and cultural heritage event

Woodside were pleased to co-host the annual Bird Watching and Cultural Heritage Community Event at Hearson Cove and Ngajarli last month.

The event aims to raise awareness of Pilbara coast shorebirds and the rich cultural heritage of the area.

About 70 people got up early to attend the sunrise event. Broome Bird Observatory staff provided an information session followed by migratory shorebird watching and the Murujuga Aboriginal Corporation (MAC) Rangers hosted guided tours of the incredible petroglyphs and UNESCO World Heritage recognised landscape..

A highlight of this year's event was a sighting of the Red Necked Stint. The bird is affectionately known as the Tim Tam bird as it weighs 21 grams, just a tiny bit more than the much-loved Australian chocolate biscuit.

Western Australia's Pilbara shorebirds undertake a remarkable migration journey of over 10,000 kilometres to breed in the northern hemisphere, sustained by our region's marine cuisine. Attendees gained insights into the birds' behaviour and learned about some of the threats and conservation efforts to help protect them.

Broome Bird Observatory Warden Jamie Van Jones said it was fantastic to see some of the incredible migratory birds that fly all the way from Russia and Siberia to return and feed on the Pilbara shoreline.

Over 70 community members attended the free event.

He offers advice, "Keep an eye out for these small shorebirds over summer and give them space to feed, as they will take off on migration back 10,000 to 13,000 km to the far North in March and April."

MAC commenced the event inviting MAC Senior Ranger and Ngarluma woman, Sarah Hicks to share powerful Acknowledgement of Country. She said, "It's great to see the number of people rocking up to this event and the diversity of people interested in the rock art and the shorebirds."

"The benefit of this event is that it brings people together and it builds understanding."

Woodside Energy was pleased to work collaboratively with co-hosts Pilbara Ports, Rio Tinto, Yara Pilbara, Perdaman, and the DBCA Parks and Wildlife Service, Murujuga Aboriginal Corporation Rangers and BirdLife Australia to deliver the event.

New members join Karratha Community Liaison Group

New CLG members Rachel Rainey and James Florisson.

Woodside is committed to building strong relationships with the community. One way we do this is through our quarterly Karratha Community Liaison Group (CLG) meetings.

The CLG is a forum for community stakeholders to provide feedback on Woodside's current and planned activities, as well as for Woodside and CLG members to discuss issues of common interest or concern.

The group meets four times per year and cover a range of topics, including operational and project updates, social impact management and opportunities, local content, environment plans and social contribution.

In collaboration with existing CLG members, this year we updated our CLG terms of reference to broaden membership and enhance communication channels between Woodside and the community.

This resulted in the appointment of two new community representatives, Rachel Rainey and James Florisson following a call for public nominations.

The new representatives add diversity to the group by bringing their views on the environment, conservation and recreational fisheries.

The CLG is an important platform for Woodside to share information about our operations, gather feedback on current and future activities, and facilitate discussions on issues of importance to the community.

Stay up to date on our continued contribution to the local community **Woodside North West**

Congratulations to Dampier Surf Life Sporting Club, pictured accepting their award presented by Woodside Energy Asset Superintendent NWS Onshore Lis Hunt and event guest speaker Lord Ian Botham.

Yani Davis was awarded Woodside Energy Junior Sportsman of the Year.

Local athletes and associations recognised at Community Sports Awards

The City of Karratha Community Sports Awards in October brought together athletes, volunteers, and sporting associations to celebrate the achievements and community spirit that make local sport possible.

Woodside and its joint venture participants in the North West Shelf Project and Scarborough Energy Project were pleased to support the event through our City of Karratha Community Development Partnership. This year's event recognised outstanding contributions across nine categories, with more than 100 nominees reflecting the depth of talent and dedication in the region.

Among the evening's highlights, Yani Davis was named Woodside Energy Junior Sportsman of the Year, while the Dampier Surf Life Saving Club took home the Woodside Energy Sporting Club of the Year Award.

Woodside Project Manager Pluto Train 2, Rob MacKinnon said the awards night was a testament to the vital role sport plays in the City of Karratha, "Sport is integral to the Pilbara way of life, breaking down barriers, building friendships, and supporting both personal and community wellbeing."

"The awards are a great opportunity to celebrate the volunteers and clubs that are key to nurturing opportunities to be active, make friends, and excel."

For a full list of winners visit: Top sports stars recognised at Community Sports Awards | City of Karratha

Ngardimu reduce waste and build skills at Pluto Train 2

Woodside's Scarborough Energy Project is now over 91% complete (excluding Pluto Train 1 modifications) and is targeting first LNG in the second half of 2026. The project has the capacity to supply up to 225tjs a day of domestic gas to the WA domestic gas market.

But it isn't just critical energy that is being supplied by the Scarborough Energy Project.

Together with our contractors, we've invested over $215 million with more than 170 Pilbara-based businesses. Over $115 million in contracts have been awarded to 69 Australian Indigenous businesses since project inception across the Scarborough Energy Project's Pluto Train 2 and Pluto Train 1 modifications work scopes.

Bechtel, the engineering, procurement and construction contractor for Woodside's Pluto Train 2 Project, has partnered with Ngardimu, a joint venture led by Yindjibarndi-owned Yurra and Sims Metal.

Ngardimu has been engaged since July 2024 to deliver scrap metal collection and recycling services for the project.

To date, over 870 tonnes of recyclable materials from Pluto Train 2 have been redirected from landfill, while investment in local Indigenous communities has produced positive results by preparing individuals for employment in construction roles.

Since Bechtel commenced construction in Karratha, the Pluto Train 2 team has worked to ensure our project provides meaningful opportunities to support Pilbara Indigenous-led businesses and entrepreneurship.

Ngardimu has recently implemented a trainee program for employees gaining on-the-job metal recycling experience.

Ngardimu's business name comes from the Yindjibarndi language meaning "again and again".

"Through relationships with businesses like Ngardimu, Bechtel keeps finding new ways to support local communities while making our projects more sustainable" said Corey McGovern, Bechtel Senior Project Manager for Pluto Train 2.

The Scarborough Energy Project has generated thousands of jobs during the construction phase and around 600 direct jobs are expected to be created or sustained throughout operations. This includes about 70 residential positions in Karratha.

Paul Baker, Woodside Energy Pluto Expansion Project Manager says "We're pleased Bechtel are engaging Ngardimu. This work scope reflects Woodsides values: respect, environment and care for community."

"We strongly support local content, economic outcomes, positive social contributions and sustainable local supply chains which deliver direct benefits to our host communities."

Developing strong relationships with local suppliers and contractors is an important aspect of Woodside projects including the Scarborough Energy Project.

Stay up to date on our continued contribution to the local community Woodside North West

Woodside Anniversary Grant upgrades Karratha Volunteer Fire and Rescue Service facility

In 2024, 10 community groups in Karratha and Roebourne were awarded grants of up to $100,000 as part of the Woodside Anniversary Grant Program.

The grants formed part of Woodside's continued contribution to the Karratha and Roebourne communities as it marked 70 years as a proud Australian company and four decades of safe and reliable operations in Karratha.

Karratha Volunteer Fire and Rescue Service (VFRS) was among the grant recipients, using its grant to transform its training facilities.

This included renovating an underutilised shed at the Karratha VFRS station to create a new training centre and space for crew debriefs. Installing air-conditioning in the facility also improved equipment storage conditions, ensuring firefighting gear remains in optimal condition and extending service life.

The new facility also provides a venue for community engagement and volunteer events, fostering connection and resilience among the brigade.

Karratha VFRS Secretary/Treasurer, Kate Kelly said the upgraded facility had already made a significant difference. "This support means we can provide a safe, climate-controlled space for training and welfare, ensuring our volunteers are ready to respond year-round. It's more than an upgrade - it's an investment in community resilience and the wellbeing of those who serve," she said.

Woodside Executive Vice President and Chief Operating Officer Australia Liz Westcott said Woodside and its joint venture partners were proud to support these valuable initiatives.

"Karratha is where our Western Australia story began and we understand that being a part of the community is centred on developing strong relationships and making meaningful contributions. We have done this for 40 years and look forward to continue supporting projects and programs that provide local solutions to local challenges."

Karratha Volunteer Fire and Rescue Service were recipients of a Woodside Anniversary Grant.

Supported by Woodside and its joint venture participants in the North West Shelf Project and Scarborough Energy Project, the initiative reflects a shared commitment to creating enduring value for host communities.

Read more about Woodside Anniversary Grant recipients here.

Season's Greetings

We wish you and your loved ones a peaceful holiday season. 2025 has been a year of progress and resilience, and we're grateful for your role in our journey.

Let's continue to shape the future of energy together in 2026.

6.8.2.4 Edition Q1 – March 2026

Karratha Community Update

Woodside Energy

March 2026

The Scarborough FPU weighs approximately 70,000 tonnes and was towed over 4,000 nautical miles to the Scarborough field in the Carnarvon Basin.

Scarborough sails towards start up

This year marks a defining year for Woodside as the Scarborough Energy Project, including our Pluto Train 2 and Pluto Train 1 Modifications Projects in Karratha, move through final construction, commissioning and start up phases.

Across the Scarborough Energy Project, progress continues to track strongly toward first LNG cargo in the fourth quarter of 2026. The development is now more than 94% complete (excluding Pluto Train 1 modifications) and has already delivered economic benefits to the Karratha and Roebourne communities. Once operating, it is expected to support long-term energy supply for Western Australia and the wider Asia-Pacific region.

Offshore, a major milestone was achieved early this year with the safe arrival of the Floating Production Unit (FPU) at the Scarborough field, 375 km off the coast of Karratha. Hook-up and commissioning activities are underway in preparation for production.

Onshore, work at Pluto Train 2 remains focused on piping and electrical installation, system testing and commissioning, ahead of introduction of Scarborough gas to site later in the year.

Meanwhile, the Pluto Train 1 Modifications Project has ramped up. These modifications will enable the processing of additional Scarborough gas through our existing LNG train at Pluto LNG. New modules are expected to arrive through Dampier Port over the coming months.

Collectively, these projects represent the most significant investment in the region in more than a decade.

Together with our contractors, we've invested more than A$260 million with 200 Pilbara-based businesses. A$149 million of that figure has been invested with Pilbara-based businesses engaged on the Pluto Train 2 Project.

As we approach the finish line and a future with two trains operating at the Pluto LNG Park, we will continue to focus on managing impacts and delivering positive outcomes for the Karratha and Roebourne communities.

Mike Price
Woodside Vice President Pluto Scarborough Asset

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha.

We extend this recognition and respect to First Nations peoples and communities around the world.

Refreshed North West Shelf Visitor Centre

With the support of local Karratha contractors, last year the North West Shelf (NWS) Project Visitor Centre underwent a refresh to enhance the experience for visitors.

The Visitor Centre welcomes thousands of community members through its doors each year, from visitors to the region to school groups. It offers an opportunity to learn more about the NWS Project's history in Karratha, its operations and its ongoing role in supplying energy security in Western Australia and beyond.

Acting Asset Manager NWS Onshore, Perrine Lombart, said working closely with local contractors was a key focus in creating a modern visitor experience.

"We are proud to be part of the Karratha community, and the refreshed Visitor Centre allows us to share our story - from the history of Woodside and the NWS Project, to the important role we play in supporting the communities where we live and work."

The works brought together local contractors, including Birndirri, Impact Digi and C Signs, strengthening the NWS Project's contribution to the regional economy and prioritising local capability. Their involvement drew on longstanding experience of working in the Pilbara.

Jake Throssell, Construction Supervisor at Birndirri, said the project demonstrated the value of working closely with local contractors.

"Working with the Woodside team to deliver the Visitor Centre refresh was a positive experience and we are proud to have contributed to a space that visitors can enjoy for many years to come."

Jason Miltrup, Operations Manager at Impact Digi, said working with Woodside to redesign the Visitor Centre signage has been a great project for the team.

"We're proud to have played a role in transforming the space into a modern and engaging environment for visitors."

Cameron Inch, Director of C Signs, said the project was a valuable opportunity for local businesses.

Visitors are warmly welcome to experience the refreshed centre.

"Being part of the Visitor Centre refresh allowed us to bring the NWS Project's history and operations into focus and showcase the capabilities of our small business."

The Visitor Centre will be open from Tuesday, 7 April 2026, more details below:

Street Address:
Burrup Road, Burrup Peninsular, Dampier WA, 6713
Opening Times:
April - October
School term: 10am - 2pm, Tuesday and Wednesday
School holidays: 10am - 2pm, Tuesday - Friday

Follow the Woodside North West Facebook page for updates to opening hours here.

Woodside welcomes new apprentices and trainees

New starters at Woodside Training Academy.

Woodside are delighted to welcome the 2026 trainee and apprentice cohort across our North West operations.

This year, 23 Karratha-based recruits will be hosted at the Woodside Training Academy, 13 are local school leavers. Employed by Programmed Skilled Workforce, roles include service operator trainees, apprentices, pathway trainees and school-based trainees.

The new recruits now form part of a broader group of 63 apprentices and trainees developing their skills across Woodside's Karratha Gas Plant, Pluto LNG Park and Karratha Supply Facilities.

Reflecting our commitment to diversity, 47% of recruits this year are women and 52% are Indigenous, strengthening our future workforce and continuing our long-standing investment in local capability.

We can't wait to see where this journey takes our newest team-mates.

Pluto LNG and flare maintenance underway

In 2026, Woodside is undertaking a series of important works at Pluto LNG as we prepare to integrate the exiting facility with the Scarborough Energy Project. This includes improvement works to our flare system and a major planned maintenance campaign, known as a turnaround, commencing in May 2026.

Together with the upcoming commissioning and start-up of the new Pluto Train 2 facilities later this year, these staged works support the safe and reliable operations of Pluto LNG.

The turnaround includes a planned shutdown of parts of the facility so essential inspections, repairs, and upgrades can be carried out safely. This work can't be done while the plant is operating. To make the systems safe to execute the maintenance and project scopes, hydrocarbons need to be removed. This is the primary source of flaring during a turnaround.

Alongside preparation for the turnaround, Woodside is carrying out improvement activities on Pluto LNG's flare systems as part of our regular maintenance program. These works will help ensure the facility continues to operate safely and reliably, improve how gas is burned in the flare and reduce smoke where possible. It also ensures the flare system is ready to support future operations.

Flare improvement works are being completed in stages and are expected to continue in the first half of 2026. A testing stage is required to confirm systems are operating as intended before returning to normal operations.

Increased flaring is expected at Pluto LNG during these activities, particularly during system testing and restart works. This may include larger flames, increased noise, and occasional visible smoke, which is managed and reported in line with regulatory requirements.

Woodside adheres to regulatory requirements governing emissions, including those from flaring activities, and we implement robust monitoring to minimise environmental impacts.

To learn more about flaring, we invite you to view a short animation by scanning the QR code. You can also contact the Woodside Community Information Line on 1800 634 988.

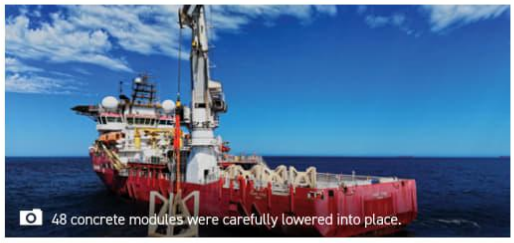
Locals land a solid catch with new artificial reef

Recreational fishers in Dampier and Karratha have something to get excited about, with Recfishwest and Woodside Energy successfully installing a new artificial reef near Rosemary Island. The project has been years in the making with aims to boost local marine life and create a high-quality fishing destination for Pilbara residents and visitors.

The reef is made up of 48 purpose-built concrete modules, transported and lowered into place in December 2025. Within days, the first marine species began moving in. Acting EVP and COO Australia, Breyden Lonnie said the project reflects Woodside's commitment to supporting the region.

"Woodside is excited to collaborate with Recfishwest and the local fishing community to bring this new reef to life," he said. "The reef is expected to provide a productive marine habitat for diverse species of algae and corals, supporting an abundance of fish life."



Situated in approximately 35 metres of water and roughly 30 kilometres from the Dampier boat ramp, the reef's modules have been engineered with complex internal spaces that encourage coral growth, protect juvenile fish and support larger species such as spanish mackerel, cobia, emperor, cod and even sailfish. For local fishers it is expected to become a new fishing hotspot.

It's not all about fishing action. The reef is also expected to support local tourism and economic activity. Similar artificial reefs like Exmouth's King Reef, have shown how previously barren seafloor can transform into thriving ecosystems supporting more than 150 species within a few years.

The Dampier Artificial Reef is a true community effort, delivered with support from the WA Government, the City of Karratha, Traditional Owners and local fishing clubs.

Dampier Artificial Reef coordinates.

Recfishwest will provide updates as the reef continues to establish. For now, Pilbara anglers can look forward to a fresh fishing hotspot right on Dampier's doorstep.

The installation of the reef was funded by Woodside and its Scarborough Joint Venture partners; JERA Australia and LNG Japan. Woodside also acknowledges its Enfield Joint Venture partner Mitsui E&P Australia, for contributing to the acquisition of the concrete modules for the reef.

Murujuga Ranger vessel Nyamina sets sail

Representatives from Murujuga Aboriginal Corporation (MAC) Rangers and Circle of Elders, State Government and Woodside Energy joined together recently to celebrate the launch of the new Murujuga Ranger vessel, the Nyamina.

Named after the dugongs that inhabit Murujuga Sea Country, the Nyamina is a custom-built 5.8 metres rigid-hulled inflatable boat, designed for inshore waters and safe landing and unloading on beaches.

The vessel was funded by the State Government via Lotterywest and Woodside Energy, which contributed support towards the vessel, additional camera equipment and two years of operating costs.

Guided by the Murujuga Circle of Elders, the vessel will support ongoing collaboration between Rangers, government agencies and researchers in the management of Sea Country. It also provides the opportunity for Rangers to gain diverse skills and qualifications, including coxswain certification.

MAC Chairperson Peter Hicks said "The launch of this vessel is a proud moment for Murujuga, our Rangers, and for the ongoing care of our World Heritage listed Murujuga Cultural Landscape, which extends across the Burrup Peninsula, the islands of the Dampier Archipelago, and Sea Country."

Matthew Turnbull, General Manager Scarborough Business shares Woodside's pride in co-funding the vessel, supporting Ranger-led management of Murujuga and long-term outcomes for cultural heritage and Country. He says "MAC Rangers play a critical role in protecting cultural heritage, monitoring Country and supporting research across the World Heritage Listed Murujuga Cultural landscape."

Photo credit: Murujuga Aboriginal Corporation.

"The launch of Nyamina gives the Rangers greater capability to manage Sea Country and to continue this important work safely and independently."

Watch the official launch on MAC's YouTube here.

KGP sets new record for lowest flaring

In 2025, Woodside achieved record low flaring performance at Karratha Gas Plant with flared quantities less than 10% of their peak in 2013.

This success reflects years of continuous improvement, which Matt Ladner, Senior Emissions and Production Optimisation Engineer, credits to a strong culture focused on emissions reduction, safety and reliability.

"It's a testament to the dedication of our engineering and operations teams who have embedded low-flaring practices into daily routines and decision making," says Matt.

"The record has been a result of a reliable plant and playing the long game in identifying and implementing flare reduction opportunities," explains Matt.

Flaring targets are set each year based on planned maintenance activities and expected plant reliability.

In 2025, Woodside implemented solutions to reduce our daily flaring by removing permanent gas supply to the flare, as well as optimised LNG plant maintenance and equipment restart improvements.

Woodside Community Grants

Applications now open

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to $5000 are available to support community initiatives in the City of Karratha, Shire of Exmouth and Town of Onslow.

Applications close Tuesday, 31 March 2026.

Find out more about Woodside Community Grants here.

EXECUTIVE SUMMARY

On behalf of the North West Shelf Joint Venture (NWSJV), Woodside Energy Limited (Woodside) has developed its oil spill preparedness and response position for the Greater Western Flank Phase 4 (GWF-4) Drilling and Subsea Installation, hereafter known as the Petroleum Activity.

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the Environment Plan (EP). This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenario	Credible Scenario-01 (CS-01): A surface/ subsea release of PYA-01 condensate from a loss of well integrity in the Wilcox Prospect at a water depth of 72 m 19˚ 59' 53.8" S 115˚ 29' 38.44" E [1] 707,729 m^3 over 70 days [2] of PYA-01 Condensate 3% residual component totalling 21,232 m^3	Section 2.2
	Credible Scenario-02 (CS-02): Unplanned loss of well containment from the Yodel Updip development well at a water depth of 132 m 19° 45' 4.365" S 115° 43' 44.79" E [1] 993,860 m^3 over 76 days of Yodel-3 Condensate. 2.50% residue totalling 24,847 m^3	
	Credible Scenario-03 (CS-03): Hydrocarbon release due to a vessel collision within Montebello Marine Park 20˚03'1.44"S, 115˚31'35.04"E Instantaneous release of 1,000 m^3 of Marine Diesel [3] 5 % residual component totalling 50 m^3	
	Credible Scenario-04 (CS-04): Hydrocarbon release due to a vessel collision close to GDA05 well 19˚45'10.681"S, 115˚52'42.898"E Instantaneous release of 1,000 m^3 of Marine Diesel [4] 5 % residual component totalling 50 m^3	

[1] Based on more recent engineering design, the primary top-hole locations of four of the five Petroleum Activity wells have been refined, noting locations remain within 200 metres of the locations used for modelling purposes.

[2] Modelling for a loss of well integrity in the Wilcox Prospect was originally undertaken in 2023 based on a preliminary estimated relief well duration of 77 days resulting in a release of circa 745,012 m^3. Contemporary studies estimate that a relief well could be executed within 70 days (including mobilisation of a MODU from South East Asia) releasing circa 707,729 m^3. Given the decreased duration and volume, the existing modelling is deemed conservative and therefore additional modelling was not required.

[3] Modelling for a release of 2,000 m^3 MDO was available within 6.6 km of the Wilcox Prospect area, and closer to shore than the Operational Area for this activity. It was originally undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. The largest tank of the vessel proposed for the activity is circa 1,000 m^3, 50% smaller than the modelled volume (2,000 m^3). Given that spill risk parameters and geographic location for this activity fall within the envelope of the existing modelling, it is an appropriate surrogate and therefore additional modelling was not required.

[4] Modelling for a release of 1,000 m^3 MDO was available within title WA-5-L (one of the northern Operational Areas for this activity). It was originally undertaken in 2020 using NOPSEMA's contemporary modelling thresholds. The largest tank of the vessel proposed for the activity is also 1,000 m^3. Given that spill risk parameters and geographic location for this activity align with the existing modelling, it is an appropriate surrogate and therefore additional modelling was not required.

<table>
<tr><td>Hydrocarbon Properties</td><td>PYA-01 Condensate

PYA-01 condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 48% of the oil mass should evaporate within the first 12 hours (BP < 180°C); up to a further 19% could evaporate within the first 24 hours (180°C < BP < 265°C); and a further 30% should evaporate over several days (265°C < BP < 380°C). Approximately 3% of the oil is shown to be persistent.

Yodel-3 Condensate

Yodel-3 Condensate (API 54.4) is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which would begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 63.1% of the oil mass should evaporate within the first 12 hours (BP < 180°C); a further 25.3% should evaporate within the first 24 hours (180°C < BP < 265°C); and a further 9.1% should evaporate over several days (265°C < BP < 380 °C). Approximately 2.5% of the oil is shown to be persistent

MDO

In general, about 6% of the MDO mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180°C < BP < 265°C); and a further 54% should evaporate over several days (265°C < BP < 380°C). Approximately 5% of the oil is shown to be persistent (50 m³).</td><td>Section 6 of the EP

Appendix A of the Oil Pollution First Strike Plan</td></tr>
<tr><td>Modelling Results</td><td>Stochastic modelling

A quantitative, stochastic assessment has been undertaken for credible spill scenarios to help assess the environmental risk of a hydrocarbon spill.

A total of 100 replicate simulations were completed for CS-01 and CS-02and 200 for CS-03 and CS-04, to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 -50 simulations per quarter).

Deterministic modelling

Deterministic modelling was then undertaken for scenario CS-01 as the worst-case credible scenarios (WCCS) to establish the following for response planning purposes:

• Minimum time to commencement of oil accumulation at any shoreline receptor (at a threshold of 100 g/m^2)
• Maximum cumulative oil volume accumulated at any individual shoreline receptor (at concentrations in excess of 100 g/m^2)
• Maximum cumulative oil volume accumulated across all shoreline receptors (at concentrations in excess of 100 g/m^2)

1 INTRODUCTION

1.1 Overview

On behalf of the North West Shelf Joint Venture (NWSJV), Woodside Energy Limited (Woodside) has developed its oil spill preparedness and response position for the GWF-4 Drilling and Subsea Installation, hereafter known as the Petroleum Activity. This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The GWF-4 Drilling and Subsea Installation Environment Plan (EP)
- Hydrocarbon Spill Australia Regulatory Framework[5]
- The GWF-4 Drilling and Subsea Installation Oil Pollution Emergency Plan (OPEP) including
  - Oil Pollution First Strike Plan (FSP)
  - Operational and Scientific Monitoring Bridging Implementation Plan (OSM BIP)[6]
  - Relevant Operations Plans
  - Relevant Tactical Response Plans (TRPs)
  - Relevant Supporting Plans
  - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to ALARP and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the Petroleum Activity described in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the Petroleum Activity is shown in Figure 3.2 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, outlining the selected response techniques for this Petroleum Activity. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the oil pollution FSP is underway. The IAP includes inputs from monitor and evaluate and operational monitoring activities and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 outlines the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the Petroleum Activity.

The GWF-4 Drilling and Subsea Installation Oil Pollution First Strike Plan (FSP) then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

Section 1. INTRODUCTION

Section 2. RESPONSE PLANNING PROCESS

- identification of worst-case credible scenario(s) (WCCS)
- spill modelling for WCCS.

Section 3. IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

- areas predicted to be contacted at concentration >100 g/m^2.

Section 4. NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

- pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
- selected response techniques prioritised and carried forward for ALARP assessment.

Section 5. HYDROCARBON SPILL ALARP PROCESS

- determines the response need based on predicted consequence parameters.
- details the environmental performance of the selected response options based on need.
- sets the environmental performance outcomes, environmental performance standards and measurement criteria.

Section 6. ALARP EVALUATION

- evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP.
- provides a detailed ALARP assessment of selected control measure options against:
  - predicted cost associated with implementing the option
  - predicted change to environmental benefit
  - predicted effectiveness / feasibility of the control measure.

Section 7. ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

- evaluation of impacts and risks from implementing selected response options.

Section 8. ALARP CONCLUSION

Section 9. ACCEPTABILITY CONCLUSION

2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

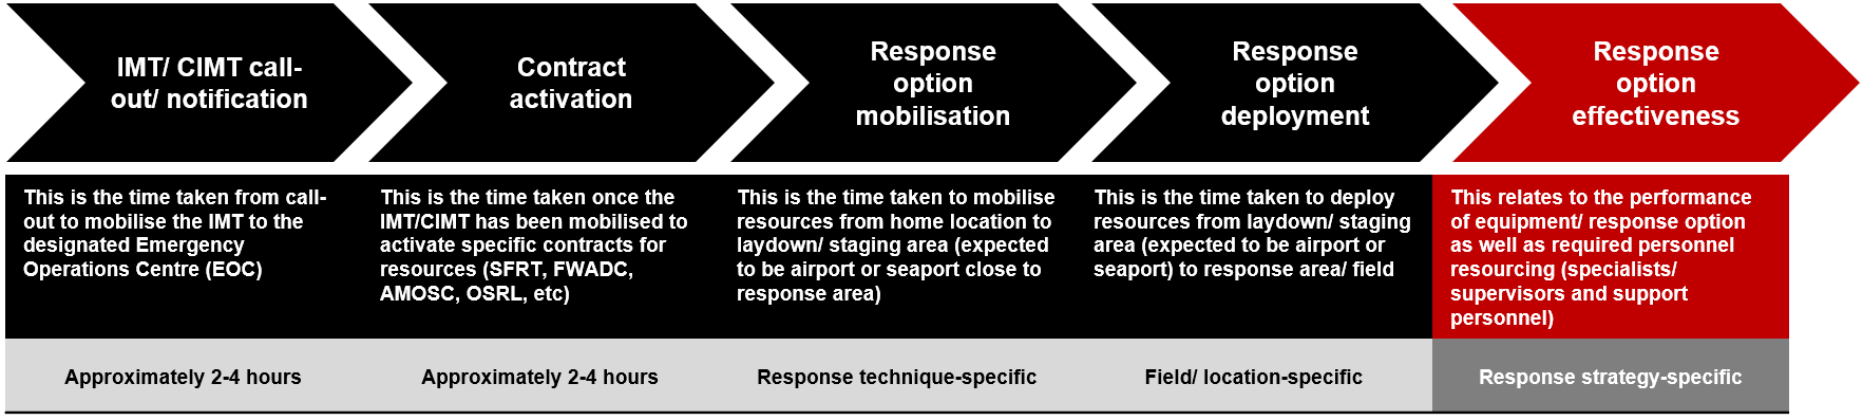

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the Petroleum Activity have been identified during the risk assessment process (Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Three unplanned events or credible spill scenarios for the Petroleum Activity have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the Petroleum Activity. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

The loss of well containment scenarios (CS-01 and CS-02) have been modelled and are considered to determine the WCCS for response planning purposes. Modelling of the CS-01 has confirmed that the WCCS will result in shoreline accumulation and floating hydrocarbons at feasible response thresholds.

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6 of the EP.

PYA-01 Condensate

PYA-01 condensate is a mixture of volatile and persistent hydrocarbons with high proportions of volatile and semi-volatile components. In favourable evaporation conditions, about 48% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); up to a further 19% could evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 30% should evaporate over several days (265 °C < BP < 380 °C). Approximately 3% of the oil is shown to be persistent.

Yodel-3 Condensate

Yodel-3 Condensate (API 54.4) is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which would begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 63.1% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 25.3% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 9.1% should evaporate over several days (265 °C < BP < 380 °C). Approximately 2.5% of the oil is shown to be persistent

Marine Diesel Oil (MDO)

Marine diesel is a mixture of volatile and persistent hydrocarbons with low proportions of highly residual components. In general, about 6% of the MDO mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent (50 m^3).

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

A total of 100 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and inform operational and scientific monitoring

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
Condensate	10	10	1,000	100
Diesel	10	10	1,000	100
Operational and scientific monitoring assessment (see ANNEX C)				
All hydrocarbon types	1	10	10	10

2.3.2 Deterministic modelling

Woodside uses deterministic modelling results to evaluate risks and impacts and response capability requirements. These results are provided in both shapefile and data table format with each row of the data table representing a 1 km^2 cell. This cell size has been used as it represents the approximate area a single containment and recovery operation or surface dispersant operation (single sortie or vessel spraying) can effectively treat in one ten (10) hour day. Smaller cell sizes have been considered but would not change the response need as the potential distance between cells would not allow multiple cells to be treated per day by response operations. Additionally, a 1 km^2 cell is expected to allow averaging of threshold concentrations and mass across the spatial extent to represent a conservative approach (patches of oil and windrows) to response planning that simulates monitor and evaluate feedback in a real event.

Deterministic modelling was carried out on CS-01 as the WCCS and used for response planning purposes. A sample of the deterministic results is provided below as an indication of the data format and content.

- Column A and B provide the latitude and longitude of the cell
- Column C is the elapsed time since the release occurred
- Column D represents the average concentration across the cell in g/m2
- Column E represents the viscosity of the hydrocarbon in centistokes (cSt) at sea surface temperature
- Column F and G represents the mass of hydrocarbon across the entire cell in kg and tons respectively.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Table 2-3: Example Deterministic modelling data

Latitude	Longitude	Time_hour	Conc_gm^2	Visc_cSt	Mass_kg	Mass_tons
A	B	C	D	E	F	G
-20.000258	115.470380	6	2.945560	28.259384	2947.502851	2.945560
-19.991226	115.470380	6	6.128163	25.917292	6132.562399	6.128163
-20.000258	115.479935	6	49.300703	17.704011	49333.163023	49.300703
-20.000258	115.489490	6	206.066086	1.938434	206201.503754	206.066086
-20.009291	115.403493	12	2.283731	44.490824	2285.124302	2.283731
-20.000258	115.403493	12	6.393756	48.859937	6398.029566	6.393756
-20.009291	115.413048	12	4.601684	44.030422	4604.486465	4.601684

The deterministic modelling data provides an indication of the response need by displaying the potential surface area and volume treated or recovered by response operations. Existing capability is reviewed to approximate the surface area and volumes that can be treated or removed and a range of alternate, improved and additional options to reduce risks and impacts to ALARP are considered.

Woodside recognises no single response technique will treat all available subsea or surface oil and a combination of response techniques will be required for the identified scenario. Even with the significant resources available to Woodside through existing capability and third-party resources, the primary offshore response techniques of surface dispersant application and containment and recovery will only treat or recover a minor proportion (<30%) of the available surface hydrocarbons based on previous response experience.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA and inform operational and scientific monitoring (OSM) are used to predict and assess environmental impacts, however they do not appropriately represent the thresholds at which an effective response can be implemented. Additional response thresholds are used for response planning and to determine areas where response techniques would be most effective. The deterministic modelling is then used to assess the nature and scale of a response.

In the event of an actual response, existing deterministic modelling would be reviewed for suitability and additional modelling would be conducted using real-time data and field information to inform IMT decisions.

The deterministic spill modelling outputs are presented at response planning thresholds for surface hydrocarbons for the WCCS. Surface spill concentrations are expressed as grams per square metre (g/m^2) (Section 2.2). The thresholds used are derived from oil spill response planning literature and industry guidance and are summarised below.

This document is protected by copyright. 2.3.3.1 Surface hydrocarbon concentrations

Table 2-4: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum threshold for commencing monitor and evaluate[7]	Code 3 – Dull metallic colours	5 to 50
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application [8]	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so overall the average thickness is 0.1 mm (or approx. 100 g/m^2 ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (Ipieca, 2015a).

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten (10) fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code [BAOAC] 3, approx. 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from NOAA in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013).* This guide outlines advice

[7] Monitor and evaluate will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport and Major Infrastructure (WA DTMI) or AMSA.

[8] At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-4 below from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996, EMSA, 2012, Spence, 2018) the surface threshold of 50 g/m^2 was chosen as an average/equilibrium thickness for offshore response operations (50 g/m^2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or wind-rows).

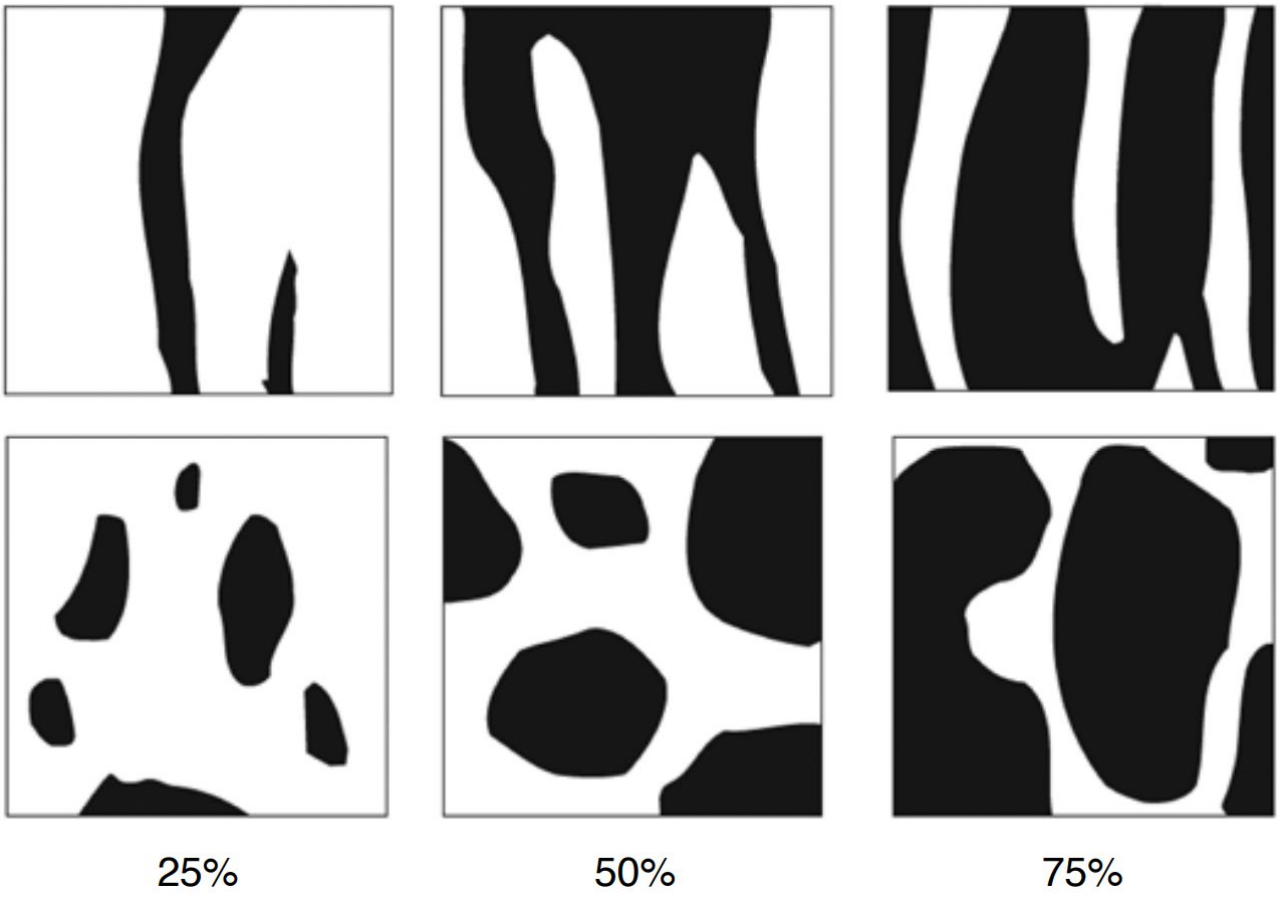

Figure 2-4: Proportion of total area coverage (AMSA, 2014)

Figure 2-5 illustrates the general relationships between on-water response techniques and slick thickness. Wind-rows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

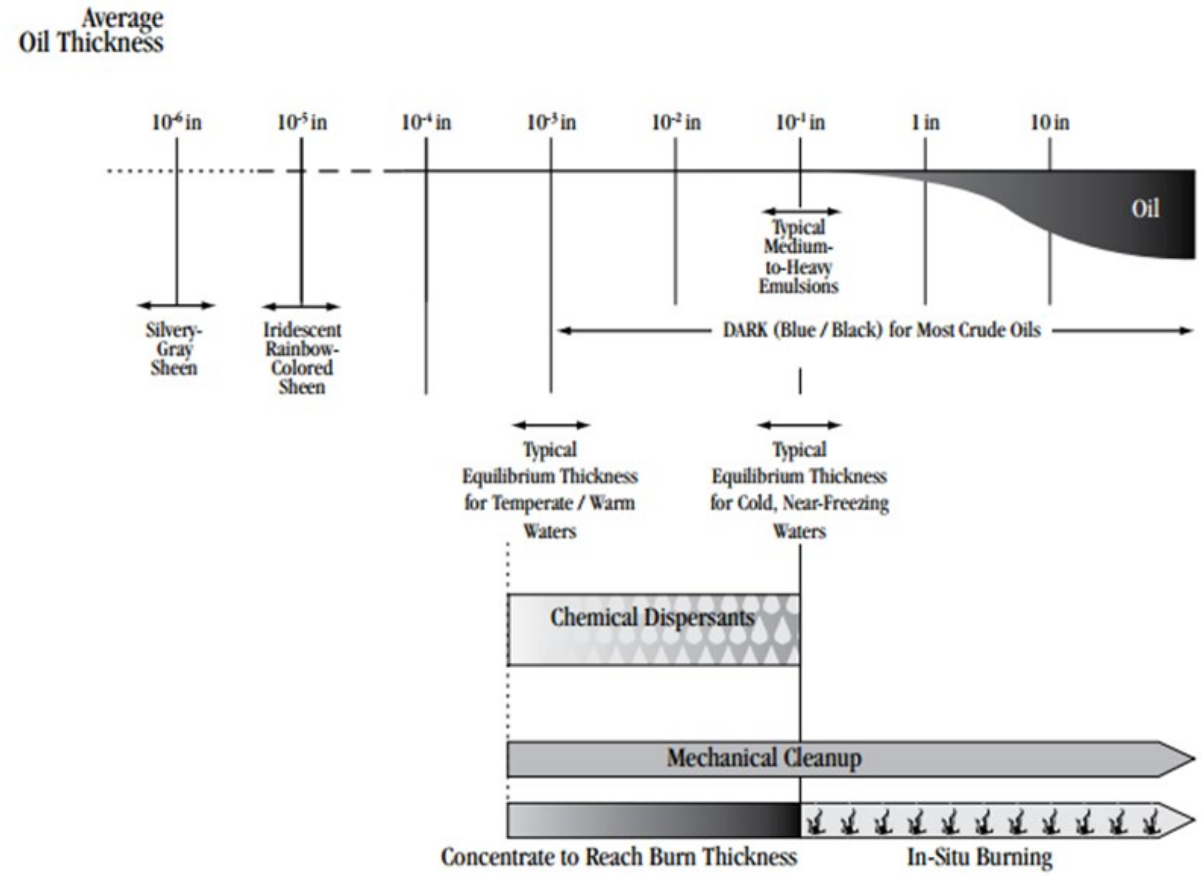

Figure 2-5: Oil thickness versus potential response options (from Allen & Dale 1996)

Wind and wave influence on the feasibility of response operations are also considered below (adapted from NOAA 2013):

- Mechanical Clean-up: Effectiveness drops significantly because of entrainment and/or splash-over as short period waves develop beyond 2–3 ft. (0.6–0.9m) in height. The ability to contain and recover oil decreases rapidly as the slick thickness becomes less than a thousandth of an inch (0.025 mm) (i.e., very low oil encounter rates). Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.
- Dispersants: Effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness; and, there is a point (~25-kt winds, 10-ft waves) where natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approx. 50 g/m^2) to hundredths of an inch (approx. 250 g/m^2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) have been utilised by Woodside in deterministic modelling to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-5: Surface hydrocarbon viscosity thresholds

Surface viscosity threshold (cSt)	Description	European Maritime Safety Authority (EMSA)	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5,000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1,000 or 2,000 mPa (1,000 – 2,000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2,000 or 5,000 mPa (2,000 – 5,000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5,000 mPa (5,000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5,000 cSt at sea temperature are generally possible to disperse, while 5,000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

The thresholds described above are compared with the modelling results for the WCCS (Table 2-6).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs are included along with deterministic results in Table 2-6.

The selected deterministic runs used to represent the WCCS are:

- Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a threshold of 10 g/m^2).
- Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors (at a threshold of 100 g/m^2).
- Minimum time to entrained hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 10 ppb).

From the above modelling results in Table 2-6, deterministic run Q3_012 for CS-01 is deemed to be the worst case and has been used as the basis for response planning for this Petroleum Activity.

The map below displays the predicted surface concentration of oil at 0-50 g/m^2 (BAOAC Code 1-3 sheen - light grey), 50–200 g/m^2 (BAOAC Code 4 – discontinuous true oil colour - brown) and 200 g/m^2 and above (BAOAC Code 5 – continuous true oil colour - black) over the initial 6 days of the WCCS (CS-01). Beyond day 6the subsea release continues with daily surface oil presenting in similar locations, concentrations and viscosity.

CS-03 and CS-04 are MDO scenarios for which the use of containment and recovery and surface dispersant application are not appropriate and therefore no maps are included for these scenarios.

As shown in the figure below, and from analysis of the deterministic results, modelling predicts the following:

- The subsea release is predicted to result in sufficient surface concentrations for effective surface dispersant (>50 g/m^2 and <10,000 cSt) and containment and recovery operations (>50 g/m^2) from day 1 of the modelled scenario. Floating hydrocarbons are not predicted to exceed the maximum feasible viscosity of 10,000 cSt for feasible surface dispersant application for the duration of the spill event.
- Surface dispersant application would only be applied where the application criteria is met i.e. within the pre-defined Zone of Application as illustrated in Figure 2-6.
- Response operations cannot be implemented if the safety of response personnel cannot be guaranteed. Safety circumstances that limit the execution of this control measure include volatile concentrations of hydrocarbons in the atmosphere, high winds (>20 knots), waves and/or sea states (>1.5m waves) and high ambient temperatures.

3 IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

In a response, monitor and evaluate – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

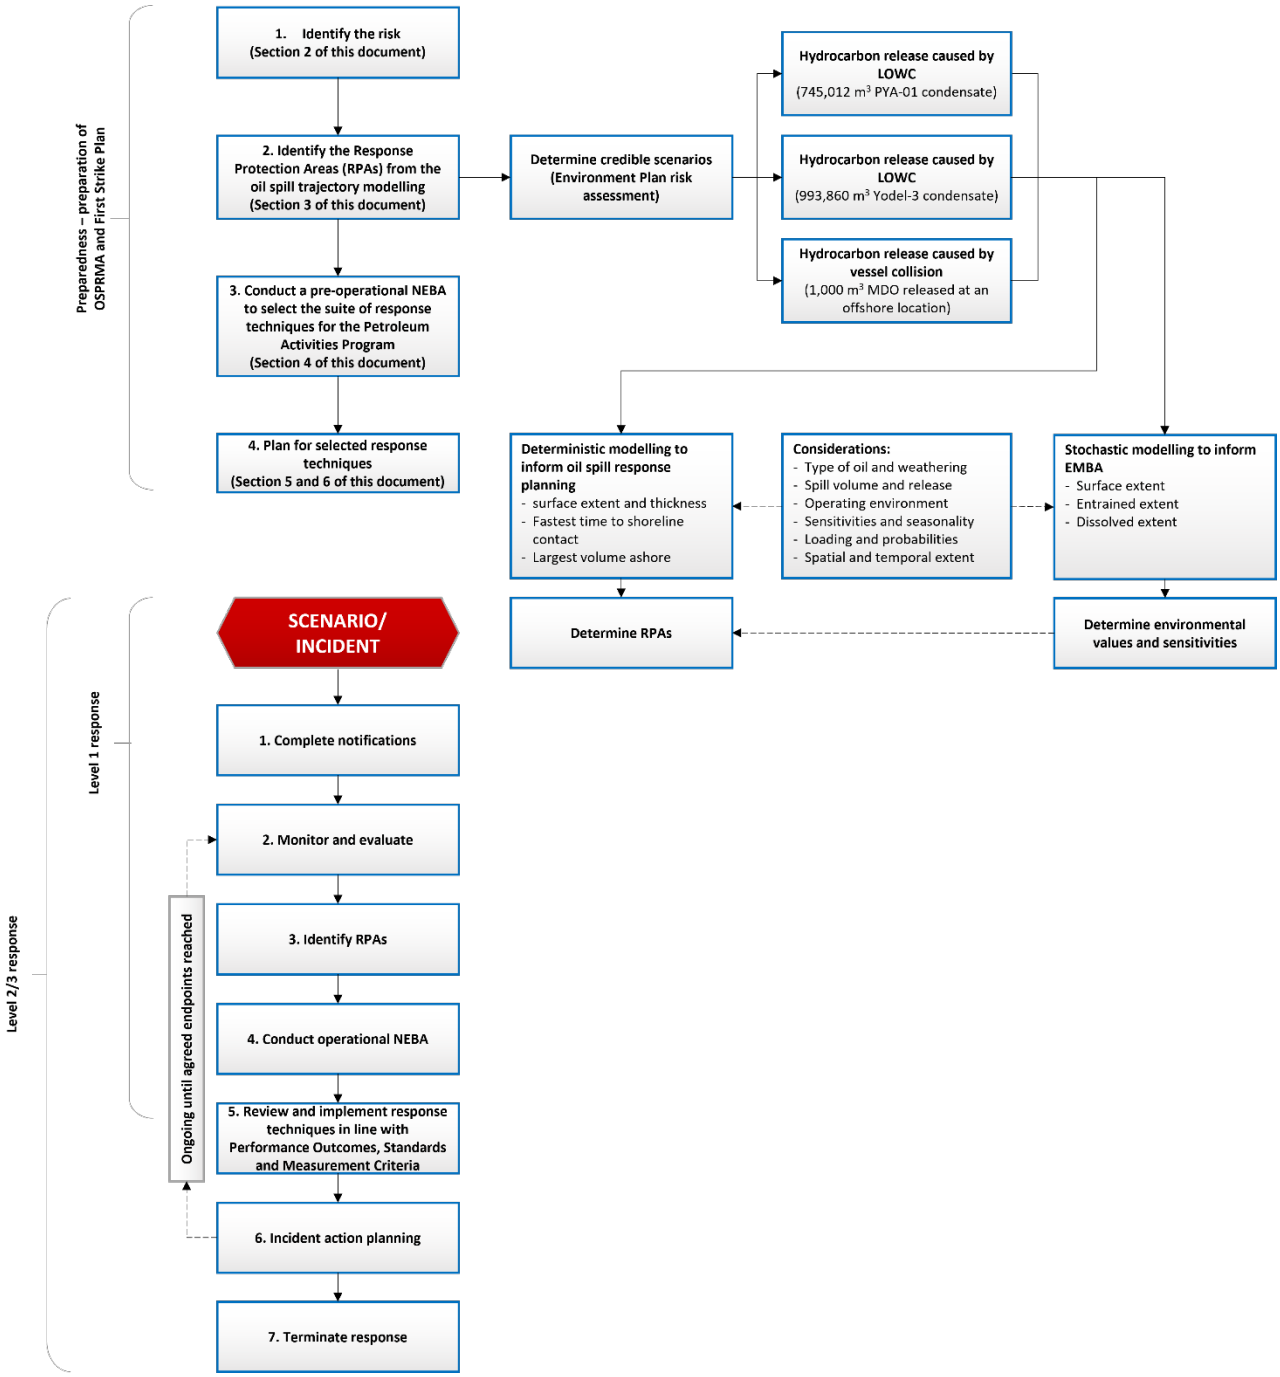

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

- receptors within the EMBA which meet the following:
  - a number of priority protection criteria/categories
  - International Union of Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas (RPAs)

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (Section 2.3.3). It is important to note that the figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m^2 for shoreline assessment and/or contact with surface slicks >10 g/m^2 for monitor and evaluate) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of Priority Protection Areas (PPAs) potentially contacted from stochastic modelling (as per EMBA definition) (see Section 6 of the EP). Other PPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) considers the results from the stochastic modelling to allow consideration of all feasible response techniques are considered in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed in the planning/preparedness process and would also be followed in a response.

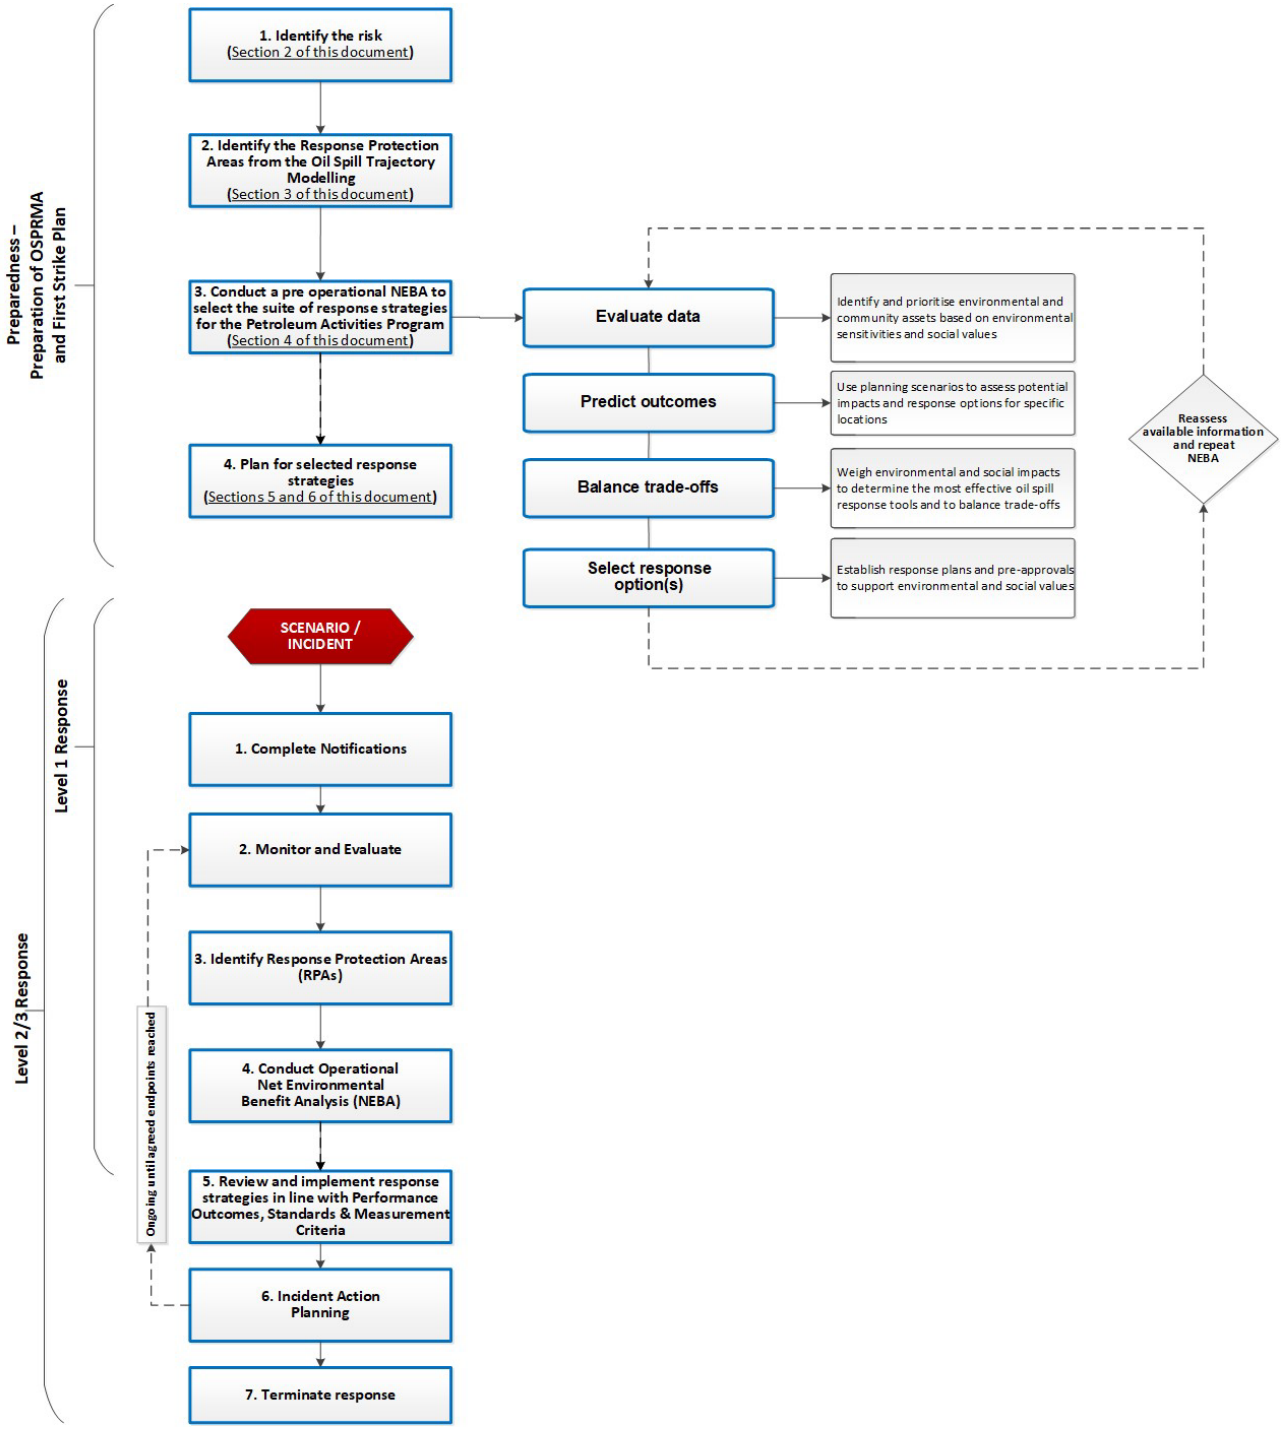

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds (Section 2.3.1.1) and the surface concentrations (Section 2.3.3.1) from the deterministic modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this Petroleum Activity are contained in **ANNEX A**: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed through the use of trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the Petroleum Activity.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in **Table 2-6** and **Table 3-1**.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response effectiveness/ feasibility to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the effectiveness/ feasibility of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in **ANNEX A: Net Environmental Benefit Analysis detailed outcomes**.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released and the sensitivities of the receptors (both ecological and socio-economic) may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Monitor and evaluate

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

- Source control
  - Remotely operated vehicle (ROV) intervention
  - debris clearance and/or removal
  - capping stack
  - relief well drilling
- Source control via vessel SOPEP
- Subsea dispersant injection
- Surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
  - protection
  - deflection
- Shoreline clean-up:
  - Phase 1 – mechanical clean-up
  - Phase 2 – manual clean-up
  - Phase 3 – final polishing
- Oiled wildlife response (including hazing)

Support functions may include:

- Waste management
- Operational and scientific monitoring

Table 4-1 and Table 4-2 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 4-1: Response technique evaluation – Loss of Well Containment (LOWC) (CS-01 and CS-02)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: PYA-01 Condensate and Yodel-03 Condensate				
Operational Monitoring	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once operational monitoring informs likely RPAs at risk.	Monitoring of a condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport and Major Infrastructure (WA DTMI).	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via blowout preventer (bop) intervention using ROV and hotstab	Controlling a loss of well containment at source via BOP intervention would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	In the event of the worst-case scenario with a loss of well containment during drilling operations, ROV operations to locally operate the BOP would be attempted.	Yes	The use of source control intervention via ROV may be feasible (depending on local concentration of atmospheric volatiles) and would reduce quantity of hydrocarbons entering the marine environment.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Woodside will have a source control emergency response plan (SCERP) which will cover the GWF-4 drilling and subsea installation activity. Though all capping stack deployment technologies are unproven, in the event of a loss of well containment, and where deployment is feasible, the use of a proven subsea deployment method such as a heavy lift vessel, would be attempted as this is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack would be attempted with a heavy lift vessel. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The location of suitable vessels for capping stack deployment is monitored monthly. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames. A site-specific landing force analysis, through computational fluid dynamic (CFD) modelling, will be undertaken prior to commencement of the activity to confirm the ability to land the capping stack on either a Xmas tree or BOP.	Potentially	Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew. Circumstances that limit the safe execution of this control measure include shallow water depths, lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states and high ambient temperatures.
Source control via relief well drilling	A release of condensate will be over approximately 70 days [2] (CS-01) or 76 days (CS-02). Relief well drilling is one of the primary options to stop the release.	For a spill from the Petroleum Activity wells, relief well drilling will be a feasible means of stopping a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling will be the main technique employed to control a loss of well containment event.
Subsea dispersant injection	Application of subsea dispersant may reduce the scale and extent of hydrocarbons reaching the surface and thus may reduce spill volumes contacting predicted RPAs. SSDI can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals and fish, which may be otherwise unaffected. Entrained oil plume likely to be increased resulting in greater spatial extent of entrained oil.	SSDI may potentially provide a net environmental benefit where its use would reduce hydrocarbons reaching surface waters in order to lessen exposure of surface-dwelling organisms, reduce shoreline contact and, under certain circumstances, facilitate access to the wellhead for execution of other source control techniques. At certain times SSDI may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018) or where water depths are <100 m. SSDI would only be permitted and/or appropriate where favourable metocean conditions are present, in appropriate water depths, a net environmental benefit can be demonstrated e.g. minimising surface expression or shoreline accumulations, and where the plume would be predicted to remain within the pre-defined Zone of Application (ZoA) illustrated in Figure 2 6. The ZoA is based on the following criteria: • 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones') • 10 km from State Marine Parks • 10 km from Heritage List areas • >20 m water depth • 4 km from State Waters	Potentially	SSDI may be appropriate where its use is required to facilitate access to the wellhead for execution of other source control techniques and in suitable water depths. SSDI would only be permitted and/or appropriate where favourable metocean conditions are present, a net environmental benefit can be demonstrated, and where the plume would be predicted to arise in, and remain within, the pre-defined ZoA. Safety risks associated with responding in close proximity to a release of volatile hydrocarbons from the wellhead must also be considered.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: PYA-01 Condensate and Yodel-03 Condensate				
		• Within the Mainland Australian EEZ • Avoiding sensitive reefs and shoals Despite the considerable amount of research and experimental work completed since the Deepwater Horizon spill in 2010, efficacy of SSDI remains uncertain however (Quigg et al. 2021). The use of SSDI would therefore need to be assessed for appropriateness based on the release conditions in the event of a loss of well containment.		
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce VOCs in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Surface dispersant application may potentially provide a net environmental benefit where its use would reduce the volume of shoreline oiling in sensitive regions. At certain times it may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018). Modelling predicts that the spatial and temporal extent of floating oil reaching the required threshold (>50 g/m^2) for surface dispersant to be effective is present from day 1. Figure 2-6 illustrates surface concentrations present from days 1-6. Thereafter, the subsea release continues with daily surface oil presenting in similar locations, concentrations and viscosities. Use of surface dispersant would only be appropriate where favourable metocean conditions are present, a net environmental benefit can be demonstrated e.g. minimising shoreline accumulations, and where application is undertaken within the pre-defined ZoA as illustrated in Figure 2-6. The ZoA is based on the following criteria: • 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones') • 10 km from State Marine Parks • 10 km from Heritage List areas • >20 m water depth • 4 km from State Waters • Within the Mainland Australian EEZ • Avoiding sensitive reefs and shoals	Potentially	Should surface oil reach the minimum required threshold (>50 g/m^2) during a spill event, dispersant application may be considered appropriate and acceptable where the pre-defined ZoA criteria is met, as illustrated in Figure 2-6, and only where a net environmental benefit can be demonstrated at the time of the incident. Modelling predicts that floating oil reaching the required minimum threshold (>50 g/m^2) for feasible dispersant application may be present during an ongoing loss of well containment event. Safety risks associated with responding in close proximity to a release of volatile hydrocarbons must also be considered.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved and where calm metocean conditions can be confirmed. Use of this technique would also cause an increase the release of atmospheric pollutants.	There is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which would be difficult to achieve. Furthermore, this technique may be prevented from being undertaken due to personnel safety issues arising from predicted high local concentrations of atmospheric volatiles.	No	The safety concerns and the predicted low effectiveness associated with implementing an in-situ burning response outweigh the potential environmental benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Modelling predicts that the spatial and temporal extent of floating oil reaching the required threshold (>50 g/m^2) for feasible containment and recovery operations to be feasible is present from day 1. Figure 2-6 illustrates surface concentrations present from days 1-6. Thereafter, the subsea release continues present daily floating hydrocarbons in similar locations, concentrations and viscosities. Corralling volatile hydrocarbons such as condensates is not generally recommended as it may lead to unsafe conditions for response personnel, however, in the event that metocean and volatile levels are appropriate and safe operations can be guaranteed, this response may be considered.	Potentially	Where safe metocean and volatile conditions can be guaranteed, containment and recovery may be an effective response technique where hydrocarbon thickness of BAOAC 4-5 with a 50-100% coverage of 100-200 g/m^2 is present. Modelling predicts that floating oil reaching the required minimum threshold (>50 g/m^2) for containment and recovery to be feasible may be present during an ongoing loss of well containment event. Safety risks associated with corralling volatile hydrocarbons must also be considered.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: PYA-01 Condensate and Yodel-03 Condensate				
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	If real-time monitor and evaluate activities indicate surface hydrocarbons are moving toward shorelines, pre-emptive assessments of sensitive receptors at risk and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). For CS-01, deterministic modelling predicts first shoreline accumulation from floating surface hydrocarbon will occur on Day 15.0 (15 $m^{3)}$ at Montebello Islands including Montebello Islands MP and Hermite Island allowing adequate time to deploy this technique. Protection strategies can be used for targeted protection of sensitive resources. Access to sensitive areas may cause more negative impact than benefit.	Yes	RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are deemed to be at risk, based on real-time modelling during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing net environmental benefit.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	If real-time monitor and evaluate activities indicate hydrocarbons will contact shorelines, pre-emptive assessments of sensitive receptors at risk, shoreline assessments and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DTMI (for Level 2/3 spills). For CS-01, deterministic modelling predicts first shoreline accumulation from floating surface hydrocarbon will occur on Day 15.0 (15 m^{3}) Montebello Islands including Montebello Islands MP and Hermite Island allowing adequate time to deploy this technique. Confirm, through shoreline assessment, that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.	Yes	Response Protection Areas predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are at risk, based on real-time modelling during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites. Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature. This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife is at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a Pluto Condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	Yes	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Table 4-2: Response technique evaluation – vessel collision (CS-03 and CS-04)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MDO				
Operational Monitoring	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • Pre-emptive assessment of sensitive receptors at risk – triggered once operational monitoring informs likely RPAs at risk.	Monitoring of a marine diesel spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DTMI. Practicable techniques that could be used for this scenario include predictive modelling, surveillance and reconnaissance and monitoring of hydrocarbon presence in water. Modelling does not predict impact of any shoreline receptors at threshold, however, pre-emptive assessment of sensitive receptors at risk and monitoring of contaminated resources would be utilised if any sensitive shoreline receptors are deemed to be at risk of impact.	Yes	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information..
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce VOCs in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Whilst modelling predicts that floating oil will reach the minimum feasible threshold at which to commence surface dispersant application (>50 g/m^2) within Montebello MP, this technique is not suitable for MDO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as marine diesel as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	No	The application of dispersant to marine diesel is unnecessary as the diesel will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	Use of in-situ burning as a response technique for marine diesel is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.	No	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100 g/m^2 to 200 g/m^2.	Whilst modelling predicts that floating oil will reach the minimum feasible threshold at which to commence containment and recovery (50 g/m^2) within Montebello MP this technique is not suitable for MDO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations.	No	Containment and recovery would be an inappropriate response technique for a spill of marine diesel. Corralling a volatile hydrocarbon such as MDO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		The volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.		prior to the commencement of containment and recovery operations.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	A marine diesel spill would be prone to rapid spreading and evaporation and modelling predicts that no shoreline receptors will be contacted at threshold. Furthermore, the volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	In addition to safety issues and the rapid spreading and evaporation of the diesel, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at any of the assessed thresholds.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m2.	A marine diesel spill would be prone to rapid spreading and evaporation and the modelling predicts that no shoreline receptors will be contacted at threshold – any minor contact is significantly below any threshold concentration that would allow a response to be feasible. Furthermore, the volatile nature of marine diesel is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	No	In addition to safety issues, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at a recoverable threshold and a spill of marine diesel is unlikely to accumulate at concentrations appropriate for shoreline clean-up techniques.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	Yes	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488 A382148* (2024) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/SIMA, Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- considers the Response Planning Need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability
- considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
    - predicted cost associated with adopting the control measure
    - predicted change/environmental benefit
    - predicted effectiveness/feasibility of the control measure.
- evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- a structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique
- the analysis of alternate, additional, and improved control measures meets one of the following criteria:
    - all identified, reasonably practicable control measures have been adopted; or
    - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
    - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned
- higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or clearly unreasonable control measure
- cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the purpose of the ALARP assessment, the following terms and definitions have been used:

- response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably
- cost is defined as the time, effort and/or trouble taken in financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance terms to adopt a control measure
- where the predicted change to environmental impact is compared against standard environmental values and sensitivities impacts using positive or negative criteria from the NEBA Impact Ranking Classification Guidance in Annex A

5.1 Monitor and evaluate

Monitor and evaluate includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

Techniques may include:

- Predictive modelling of hydrocarbons to assess resources at risk
- Surveillance and reconnaissance to detect hydrocarbons and resources at risk
- Pre-emptive assessment of sensitive receptors at risk

Woodside maintains an Operational Monitoring Operational Plan. If shoreline contact is predicted, Response Protection Areas (RPAs) will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey (SCAT) will be completed to guide effective shoreline clean-up operations per arrangements detailed in Woodside's Operational and Scientific Monitoring Bridging Implementation Plan[4] (OSM-BIP) (see Section 5.11). This plan includes the process for the CIMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier/ Karratha to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier/ Karratha. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Dampier/ Karratha.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective monitoring and evaluate (>10 gm^2) is predicted at Montebello MP within 1 hour (CS-03).
- The shortest timeframe that shoreline contact from floating oil is predicted is 15.0 days (CS-01).
- The time to contact for oil at concentrations of entrained hydrocarbons greater than 100 ppb at shoreline receptors is 1 hour at Montebello MP (CS-01 and CS-03).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).

5.1.2 Environmental performance based on need

Table 5-1: Environmental Performance – Monitor and evaluate

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside common operating picture (COP) daily to improve the accuracy of other Monitoring & evaluate techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Monitoring & evaluate techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	Two trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	One aircraft available for two sorties per day, available for the duration of the response from day 1	1, 3C, 4
		4.3	Observer to compile report during flight as per FSP. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support Shoreline Contamination Assessment Technique (SCAT), containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Pre-emptive assessment of sensitive receptors	5.1	10 days prior to any predicted impact/ Within [X] days/hours], in agreement with WA DoT (for Level 2/3 incidents), deployment of 2 specialists from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
		5.2	Daily reports provided to IMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4

The control measures and capability of Woodside and its third-party service providers are shown to support monitor and evaluate activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.2 Source control and well intervention

The worst-case credible scenario for a loss of well containment is considered to be loss of well control during drilling operations. This scenario would result in an uncontrolled flow from the well as outlined in the EP. In the event of a loss of well containment, the primary response would be source control and well intervention.

.

Woodside is a signatory to a MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well, if a LOWC incident were to occur. The MoU commits the signatories to share rigs, equipment, personnel and services to assist another operator in need.

5.2.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Prior to any source control activities, Woodside will implement protocols to confirm that the site is safe including subsea ROV surveys and surface air monitoring.
- Hydrocarbons will flow from the well until one of the following interventions can be made:
  - Direct intervention by ROV to close BOP
  - Closure of the Tubing Retrievable Safety Valve (TRSV)
  - Capping stack (where deployment is feasible)
  - A relief well is drilled and first attempt at well kill within 70 days[2] (CS-01) or 76 days (CS-02)
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01)..

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-2: Response Planning Assumptions – Source Control

Response planning assumptions	
Safety considerations	Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	Woodside's primary source control option would be ROV intervention followed by relief well drilling for the Petroleum Activity wells. The following approaches outline Woodside's hierarchy for relief well drilling; • Primary – Review internal drilling programs and MODU availability to source an appropriate rig operating within Australia with an approved Safety Case; • Alternate – Source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case; • Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case

5.2.2 Environmental performance based on need

Table 5-3: Environmental Performance – Source Control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
6	Subsea First Response Toolkit (SFRT)	6.1	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		6.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		6.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		6.4	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
7	Well intervention	7.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		7.2	Source control vessel will have the following minimum specifications: • active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. • at least 90 m in length • deck has water/electricity supply deck capacity to hold at least 110 T of capping stack.	1, 3B, 3C
		7.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		7.4	ROV available on MODU ready for deployment within 48 hours to attempt initial BOP well intervention.	1, 3B, 3C
		7.5	Hot Stab and/or well intervention attempt made using ROV and SFRT within 48 hours.	1, 3B, 3C
		7.6	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.	1, 3C
		7.7	Contract in place for access to equipment and staff to assist with the mobilisation, deployment, and operation of well intervention equipment.	1, 3B, 3C
		7.8	MODU mobilised to site for relief well drilling within 21 days for a locally available rig and up to 36 days for a rig from outside of the region.	1, 3C
		7.9	First well kill attempt completed within 70 days[2] (CS-01) or 76 days (CS-02).	1, 3B, 3C
		7.10	Open communication line(s) to be maintained between IMT and infield operations to confirm awareness of progress against plan(s).	1, 3A, 3B
		7.11	Relief Well Peer review undertaken during well design which includes screening and identification of suitable MODU(s) with in-force Australian safety cases for relief well drilling.	1, 3C
		7.12	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history, to meet specifications for relief well drilling. Titleholders of suitable MODUs notified.	3C
8	Support vessels	8.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C
		8.2	Frame agreements for installation support vessels (ISVs) require vessels to maintain in-force safety case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		8.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

9	Safety Case	9.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing safety case	1, 3C
		9.2	Woodside Planning, Logistics, and Safety Officers (on roster/Call 24/7) to assist in expediting the safety case assessment process as far as practicable.	1, 3C
		6.1	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to relief well drilling operations to stop the well flowing.

- The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this Petroleum Activity.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.2.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.3 Source Control via vessel Shipboard Oil Pollution Emergency Plan (SOPEP)

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the Petroleum Activity vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by IMO Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer marine diesel and thus minimise the release.

5.3.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the Petroleum Activity which are detailed in Section 6.8 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.3.

Performance standards for each contracted Petroleum Activity vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.4 Subsea Dispersant Injection

Subsea dispersant injection involves the deployment of a subsea dispersant manifold with associated equipment to inject chemical dispersant directly into the oil plume in the event of a loss of well containment. As it may take some time to mobilise subsea dispersant equipment, surface dispersants may be used in the interim to treat oil that makes it to the surface.

The use of subsea dispersants has similar benefits to surface dispersant application including a potential reduction in the volume of hydrocarbons that reach the shoreline thereby reducing impacts to sensitive receptors. In addition to these benefits, subsea dispersant application may facilitate access to the wellhead in order to undertake other source control techniques and reduce volatile organic compound (VOC) levels during surface response operations, reducing risks and hazards to responders. At certain times it may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018).

SSDI would only be permitted and/or appropriate where favourable metocean conditions are present and where the plume would be predicted to arise and remain within the pre-defined ZoA illustrated in Figure 2-6 and Section 4 of the Greater Western Flank Phase 4 Drilling and Subsea Installation Oil Pollution First Strike Plan. The ZoA is based on the following criteria:

- 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones')
- 10 km from State Marine Parks
- 10 km from Heritage List areas
- >20 m water depth
- 4 km from State Waters
- Within the Mainland Australian EEZ
- Avoiding sensitive reefs and shoals

Where SSDI is deemed appropriate, Woodside will monitor the effectiveness of the ongoing operation via water column monitoring in accordance with the Woodside OSM-BIP, Joint Industry OSM Framework (AEP, 2021) and OMP: Subsea dispersant injection effectiveness assessment (AEP, 2021).

The *Subsea Dispersants Operational Plan* details the mobilisation and resource requirements for dispersant operations including the logistics, support and facility arrangements to manage the movement of personnel and resources.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- The maximum volume of subsea hydrocarbons released is predicted to be approximately 13,865 m^3 (CS-01) and 14,310 m^3 (CS-02) on day 1 decreasing to 7,200 m^3 per day (CS-01) and 11,829 m^3 per day (CS-02) during weeks 10-11 when the wells are predicted to be killed.
- Ability to treat a large proportion of the daily hydrocarbon release volumes.
- A subsea dispersant injection system with sufficient coiled tubing for water depth.
- Arrangements for support organisations who provide specialist services, including subsea plume monitoring, or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).

In addition, a number of assumptions are required to estimate the response need for Subsea Dispersant Injection. These assumptions have been described in the table below.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Table 5-4: Response Planning Assumptions – Subsea Dispersant Injection

Response Planning Assumptions	
Safety considerations	Subsea dispersant operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Technique	**Application parameters[11]**
Subsea Dispersant Injection	The predicted performance range for SSDI is based on: • total rate of subsea released oil available for SSDI • subsea inspection (ROV) observing oil release and technique safe for deployment • dispersant to oil application at 1:60-1:100 (used to determine the volume of dispersant required) • predicted dispersant effectiveness of 80% of contacted subsea oil (based upon industry research).
SSDI operation	1 SSDI operation includes: 1 suitable vessel (specifications as per SFRT and Subsea Dispersant Injection Operational Plan) • subsea dispersant delivery system • work class ROV with ancillaries and hydraulic power unit (HPU) • dispersant pump • down hole line/ coiled tubing • trained ROV operator(s) • trained subsea specialists • water column monitoring sensors.
Dispersant delivery (per operation)	Lower – 60 m^3 per 24 hours Upper – 75 m^3 per 24 hours
Dispersant Effectiveness	Dispersant testing is available for NWS Condensate (Leeder Analytical [formerly SGS Leeder Consulting], 2012) which has a residue of 3% and similar characteristics to PYA-01 Condensate and Yodel-3 Condensate (which have residues of 3% and 2.5% respectively). This testing indicates that average dispersant efficiency (%) for oil age will be: • 51% (0 hrs) • 72% (0.25 hrs) • 59% (2 hrs) • 37% (4 hrs) • 35% (8 hrs) • 37% (24 hrs) This data is based on a range of weathering results and four National Plan OSCA approved dispersants that will be the most likely dispersant used by Woodside.

[11] Performance ranges outlined are indicative for response planning purposes. Where actual figures and concentrations exist based on deterministic modelling or laboratory results, these will be used for response and capability planning.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.4.2 Environmental performance based on need

Table 5-5: Environmental Performance – Subsea Dispersant Injection

Environmental Performance Outcome		To reduce consequences to surface and shoreline receptors and increase the bioavailability of hydrocarbons for microbial breakdown.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
10	Subsea spraying	10.1	Contract in place to provide Subsea Dispersant equipment resources (via SFRT)	1, 3B, 3C, 4
		10.2	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	
		10.3	Subsea Dispersant vessel will have the following minimum specifications: • Compensated seabed crane up to 36 mt • Mobilised to site for deployment within 12 days.	1, 3A, 3C, 4
		10.4	Per day dispersant log completed to record quantity of dispersants applied	1, 3A, 3B
		10.5	Contract in place to provide SSDI and debris clearance equipment and trained personnel	1, 3B, 3C, 4
		10.6	Contract in place to provide water column monitoring equipment and trained personnel.	1, 3B, 3C, 4
11	Support vessels	11.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for subsea dispersant injection.	3C, 4
		11.2	Vessel frame agreements require suitable vessels to maintain in-force Safety Case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
12	Dispersant	12.1	Year-round access to 5,000 m^3 of dispersant located globally which is ready to be mobilised within 48 hours under activation of GDS membership.	1, 3A, 3B, 3C, 4
		12.2	Year-round access to additional dispersant stockpiles via memberships with OSRL and AMOSC.	
13	Management of environmental risks	13.1	OSCA approved dispersants will be prioritised for use	1
		13.2	Subsea dispersant injection efficacy monitoring will be conducted in accordance with the Woodside OSM-BIP and OM4: Dispersant Effectiveness and Fate Assessment (AEP, 2021)	1, 3A, 3B, 3C

The resulting subsea dispersant injection capability has been assessed against the WCCS. The maximum volume of subsea hydrocarbon released is estimated to be approximately 12,912 m^3 per day during week 1 decreasing to 6,984 m^3 per day during weeks 11 and 12 when the well is predicted to be killed (CS-01) and, for CS-02, a constant release rate of 13,872 m^3 per day for the duration of the incident.

Dispersant efficacy testing on NWS Condensate, which has similar characteristics and a similar residual component (3%) to PYA-01 Condensate and Yodel-3 Condensate, predicts it will be amenable to dispersant with an approximate range of effectiveness from 35-72% (Leeder Analytical [formerly SGS Leeder Consulting], 2012).

As described in Section 4.5.1 and Section 5.4, use of SSDI will only be appropriate under certain conditions. If deemed appropriate during a real loss of well containment event, the SSDI capability currently available provides the capacity to treat 3,000 m^3 to 7,500 m^3 of subsea hydrocarbons per day with the application of 60-75 m^3/day of dispersant by Day 12. The release rates for some of the Petroleum Activity wells may initially exceed the indicated capacity but will decrease during the modelled release period. SSDI is considered a potential response technique for the subsea loss of well control scenarios where appropriate plume and release conditions are met, in appropriate water depths, the plume arises within the ZoA and a net environmental benefit can be demonstrated.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Under optimal conditions, during the subsea release period, the subsea dispersant capability has the following expected performance(s):

- entrained hydrocarbon concentrations in the water column are predicted to increase at most subsurface receptor locations, with dispersant application from the trapping of treated entrained hydrocarbons at a lower depth (from subsea dispersant application) due to the greatly reduced droplet size and therefore reduced buoyancy.
- the scope of the Frame Agreement Vessel Safety Case includes a range of subsea activities that would cover the requirement for SSDI operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids), operating as a stable platform for activities including ROV operations, and accommodation support alongside or within the 500 m safety zone of an existing facility which may be in production.
- an SSDI vessel can be activated and mobilised within 12 days. Detailed breakdown of this timing is included in Section 6.4. Whilst Woodside will make every endeavour to accelerate the activities to reduce this timeframe, Woodside believes that the timeframe outlined is appropriate and realistic to ensure these activities can be completed reliably.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.5 Surface Dispersant Application

Surface dispersant application may reduce surface hydrocarbons and therefore prevent, or reduce the scale of, shoreline contact. Priority would be placed on treating high volume surface hydrocarbons closest to the release location as this is where high surface concentrations are predicted, and dispersant application is expected to achieve the greatest environmental benefit (refer to Annex A).

At certain times its use may not provide an environmental benefit, for example, during coral spawning seasons due to coral larvae being highly sensitivity to dispersants (Negri et al, 2018).

Surface dispersant application would only be permitted and/or appropriate where favourable metocean conditions are present and where the plume would be predicted to remain within the pre-defined Zone of Application (ZoA) illustrated in Figure 2-6 and Section 4 of the GWF-4 Drilling and Subsea Installation Oil Pollution First Strike Plan. The ZoA is based on the following criteria:

- 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones')
- 10 km from State Marine Parks
- 10 km from Heritage List areas
- >20 m water depth
- 4 km from State Waters
- Within the Mainland Australian EEZ
- Avoiding sensitive reefs and shoals

Weathering of the hydrocarbons would reduce dispersant efficacy. During a protracted response, surface hydrocarbons may become heavily weathered, viscosity may increase above feasible treatment levels (10,000 cSt) or, alternatively, may spread below effective response thresholds. Surface dispersant application is weather and sea–state dependent. Periods of downtime can be expected.

Where surface dispersant application is deemed appropriate, Woodside will conduct dispersant effectiveness monitoring in accordance with the Woodside OSM-BIP, Joint Industry OSM Framework (AEP, 2021) and OMP: Surface chemical dispersant fate and effectiveness assessment (AEP, 2021). This assessment is conducted after the initial shake jar test or aerial test spray and is based on the SMART protocol (NOAA, 2006).

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which response need is based for each scenario:

- Within week 1, surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) and maximum viscosity parameters (<10,000 cSt) for feasible surface dispersant application are predicted to peak on day 3 at 19 km^2 (2,737 m^3) (deterministic model: Q3_12). This may reduce to ~82 m^3 post weathering.
- Within week 2, surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) and maximum viscosity parameters (<10,000 cSt) for feasible surface dispersant application are predicted to peak on day 14 at 31 km^2 (5,296 m^3) (deterministic model: Q3_12). This may reduce to ~159 m^3 post weathering.
- The subsea release continues with daily surface oil presenting in similar locations, concentrations and viscosity with an overall peak on day 15 of 45 km^2 and 6,995 m^3. This may reduce to ~210 m^3 post weathering.
- Surface dispersant application is not appropriate for spills of MDO (CS-03 and CS-04).
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).
- Arrangements for support organisations who provide specialist services (dispersant spray aircraft, logistics services for mobilizing dispersant and Air Attack Supervisors) or resources (dispersants and transfer pumping systems) and should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

- Defined Zone of Application (ZoA) to reduce environmental consequences on subsea receptors – see Figure 2 6. The broader ZoA is also included in Section 4 of the GWF-4 Drilling and Subsea Installation Oil Pollution First Strike Plan.

In addition, a number of assumptions are required to estimate the response need for Surface Dispersant Application. These assumptions have been described in the table below.

Table 5-6: Response Planning Assumptions – Surface Dispersant Application

Response Planning Assumptions	
Safety considerations	Surface dispersant operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Technique	**Application parameters [12]**
Surface Dispersant Application (combined vessel and aircraft)	The predicted performance range for surface dispersant application is based on; • remaining surface oil available for surface dispersant application following weathering, • monitor and evaluate activities observing surface oil at minimum BAOAC 4 (discontinuous true oil colour) or BAOAC 5 (continuous true oil colour), • safe for deployment, within range of vessels and aircraft, • dispersant to oil application at 1:20-1:25 (based on uniform surface oil 100 g/m^2 and 50 litres/hectare application rate) allows for 3-4 km^2 per aircraft per day, • predicted dispersant effectiveness of 35-72% for contacted surface oil, and • spraying encounter rate of approximately 50-75% (50-25% of dispersant sprayed does not contact surface oil)
Physical properties	Surface threshold: • Lower – 50 g/m^2 (equates to 100 g/m^2 with approximately 50% coverage and/or 200 g/m^2 with approximately 25% coverage) • BAOAC 4 – Discontinuous true oil colour – lower threshold 50 g/m^2 • Optimum – 100 g/m^2 (equates to >100 g/m^2 with approximately 100% coverage and/or 200 g/m^2 with approximately 50% coverage) • BAOAC 5 – Continuous true oil colour – lower threshold 200 g/m^2 Viscosity: • Optimum – <5,000 cSt at sea surface temperature • Upper – 10,000 cSt at sea surface temperature
Dispersant Effectiveness	Dispersant testing is available for NWS Condensate (Leeder Analytical [formerly SGS Leeder Consulting], 2012) which has a residue of 3% and similar characteristics to PYA-01 Condensate and Yodel-3 Condensate (which have residues of 3% and 2.5% respectively). This testing indicates that average dispersant efficiency (%) for oil age will be: • 51% (0 hrs) • 72% (0.25 hrs) • 59% (2 hrs) • 37% (4 hrs) • 35% (8 hrs) • 37% (24 hrs) This data is based on a range of weathering results and four National Plan OSCA approved dispersants that will be the most likely dispersant used by Woodside.

[12] Performance ranges outlined are indicative for response planning purposes. Where actual figures and concentrations exist based on deterministic modelling or laboratory results, these will be used for response and capability planning.

5.5.2 Environmental performance based on need

Table 5-7: Environmental Performance - Surface Dispersant Application

Environmental Performance Outcome		To reduce consequences to surface and shoreline receptors and increase the bioavailability of hydrocarbons for microbial breakdown.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
14	Aerial spraying	14.1	1 aircraft with minimum payload of 1,850 litre payload mobilised to site within 4 hours of activation. 1 additional aircraft mobilised to site within another 20 hours of activation. 2 additional aircraft mobilised to site within 48 hours of activation.	1, 3B, 3C, 4
		14.2	1 high-capacity aircraft with minimum payload of 10 m^3 available to spray within 48 hours.	
		14.3	FWADC to complete a minimum of 3 sorties per day and high-capacity aircraft to complete a minimum of 2 sorties per day	1
		14.4	Per sortie spray log completed to record where dispersants were applied	1, 3A, 3B
15	Vessel spraying	15.1	2 offtake support vessels from integrated fleet will undertake dispersant trials within 24 hours of the release as per first strike plan.	1, 3A, 3B, 3C, 4
		15.2	Two offtake support vessels will be available for deployment to spray dispersant for the duration of the response.	3A, 3C, 4
		15.3	Up to 2 vessels spraying per day within 48 hours. An additional 2 vessels spraying within 72 hours.	1, 3C
		15.4	Per day spray log completed to record where dispersants were applied	1, 3A, 3B
16	Dispersant	16.1	Year-round access to 5,000 m^3 of dispersant located globally which is ready to be mobilised on activation of GDS membership within 24-48 hours.	1, 3A, 3B, 3C, 4
		16.2	Year-round access to additional dispersant stockpiles via memberships with OSRL and AMOSC.	
		16.3	OSCA approved dispersants prioritised for surface and subsea use	1, 3A, 3B, 3C, 4
		16.4	Only apply surface dispersants within the Zone of Application and on BAOAC 4 and 5	
17	Management of Environmental Risks	17.1	Surface dispersants will only be applied in the Zone of Application and on BAOAC 4 and 5 oil.	1
		17.2	OSCA approved dispersants will be prioritised for use	
		17.3	Surface dispersant efficacy monitoring will be conducted in accordance with the Woodside OSM-BIP and OM4: Dispersant Effectiveness and Fate Assessment (AEP, 2021)	1, 3A, 3B, 3C

The resulting surface dispersant response capability following ALARP evaluation has been assessed against the WCCS and surface release scenario.

- Surface concentration, viscosity and mass vary for each time step based on spreading and weathering algorithms within the model. Woodside has reviewed the deterministic modelling data for the applicable scenario (CS-01) to determine the response need and required capability for surface dispersant application as a response technique (see Figure 2-6).
  - Deterministic modelling (Q3_12) predicts that surface hydrocarbons within threshold concentration (>50 g/m^2) and viscosity parameters (<10,000 cSt) available for surface dispersant

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

application are predicted to peak within week 1 (day 3) at 19 km^2 (2,737 m^3) (~82 m^3 post weathering) and, within week 2 (day 14) at 31 km^2 (5,296 m^3) (~159 m^3 post weathering).

  - The subsea release continues with daily surface oil presenting in similar locations, concentrations and viscosity with an overall peak on day 15 of 45 km^2 and 6,995 m^3 (~210 m^3 post weathering).

- Within 24 hours, Woodside has available 1-2 FWADC aircraft capable of dispersing 28 m^3 to 112 m^3 surface oil and covering an area of 3 km^2 to 8 km^2, plus 1 surface dispersant application vessel capable of dispersing 36 m^3 to 72 m^3 oil covering an area of ~1 km^2.
- Within 48 hours, Woodside has access to 2-4 FWADC and 1 high-capacity aircraft per day for the duration of the spill with a capability of dispersing 67 m^3 to 1,414 m^3 surface oil and covering an area of 6 km^2 to 20 km^2 per day.
- Further to this, surface dispersant vessel availability increases to 2 by day 2, 4 by day 3 and 6 by day 6. Each vessel is capable of dispersing 36 m^3 to 72 m^3 oil covering an area of ~1 km^2 per day. For the capability available, this is therefore estimated to be 142 m^3 to 840 m^3 covering 4 km^2 to 6 km^2 by day 6.
- As described in surface dispersant application will only be appropriate within the ZoA. If dispersant operations are required and feasible, details of capability from week 2 to month 3 are included in Section 6.5.
- Surface dispersant application would target the thickest parts (BAOAC 4-5) at the leading edge of the surface slick and as close to the spill source as is feasible. This approach aims to mitigate the spread of the oil and maximise dispersant effectiveness thus reducing shoreline accumulations.
- At times, the capability will be limited by safety or logistics including number of airframes permitted in the airspace simultaneously.

More detail regarding capability need is included at Section 6.5 together with consideration of potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are also included in Section 6.5.

5.6 Containment and Recovery

Containment and recover is used to reduce damage to sensitive resources by the physical containment and mechanical removal of hydrocarbons from the marine environment. It has a lower capacity for removing surface oil than the application of dispersant but avoids potential additional impacts created by the resulting increase in entrained hydrocarbons in the water column.

Weathering and spreading of hydrocarbons will significantly reduce containment and recovery effectiveness. In the event of an ongoing loss of well control, modelling predicts fresh hydrocarbons reaching the surface may be heavily weathered and present in small discrete patches. Containment and recovery is also weather and sea–state dependent. Periods of downtime can be expected.

Wind direction in the vicinity of the Petroleum Activity is predominantly easterly between May and June and south-westerly in the October to February period. Average wind speeds at the modelled release location are predicted to be 5.1-7.1 m/s (Beaufort ~3-4) with year-round maximum speeds of 25.5 m/s (Beaufort ~9.8) (RPS modelling input data, 2023). Industry guidance indicates that maximum wind speeds for safe and effective containment and recovery operations are ~10 m/s (20 knots, Beaufort ~5) (Ipieca, 2015b) therefore, at times, it is expected that open water containment and recovery operations would not be a feasible response technique. However, Containment and recovery may be available for deployment nearshore and priority would be given to being prepared to deploy units if the conditions are met.

The *Containment and Recovery Operational Plan* details the mobilisation and resource requirements for response operations including the logistics, support and facility arrangements to manage the movement of personnel and resources.

5.6.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which response need is based:

- Within week 1, surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) for feasible containment and recovery operations are predicted to peak on day 3 at 19 km^2 (2,737 m^3) (deterministic model: Q3_12). This may reduce to ~82 m^3 post weathering.
- Within week 2, surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) for feasible containment and recovery operations are predicted to peak on day 14 at 31 km^2 (5,296 m^3) (deterministic model: Q3_12). This may reduce to ~159 m^3 post weathering.
- The subsea release continues with daily surface oil presenting in similar locations and concentrations with an overall peak on day 15 of 45 km^2 and 6,995 m^3. This may reduce to ~210 m^3 post weathering.
- Containment and recovery is not appropriate for spills of MDO (CS-03 and CS-04).
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).
- Arrangements for support organisations who provide specialist services (logistics services for mobilising equipment, trained Offshore Supervisors and waste disposal) and/or resources (vessels, containment and recovery equipment, transfer pumping systems) should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for Containment and Recovery. These assumptions have been described in the table below.

Table 5-8: Response Planning Assumptions – Containment and Recovery

Response Planning Assumptions	
Safety considerations	Containment and recovery operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Technique	**Predicted performance range**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

	(% of surface oil volume available predicted to be recovered by response technique)	
Containment and recovery	Lower	5%
	Upper	10%
	The predicted performance range for containment and recovery is based on; • remaining surface oil available for containment and recovery following weathering • monitor and evaluate activities observing surface oil at minimum BAOAC 4 (discontinuous true oil colour) or BAOAC 5 (continuous true oil colour) • safe for deployment, within range of vessels and aircraft • encounter rate of approximately 50-75% (50-25% of surface coverage is not surface oil)	
Response Capability details		
Containment and recovery operation	One containment and recovery operation includes; • 2 x suitable vessels (vessel specifications as per Marine Operations Plan) • 1 x boom system (min 800 mm overall height and approximately 200 m length) with all required ancillaries) or • 1 x suitable vessel (vessel specifications as per Marine Operations Plan) • 1 x single ship system (min 800 mm overall height and approximately 200 m length) with all required ancillaries) and • 1 x skimmer (min 20 m^3/hr) with all required ancillaries • Temporary storage (min 100 m^3) • 1-2 x trained supervisor per operation • 8-10 x support personnel per operation	
Physical properties	Surface Threshold • Lower – 50 g/m^2 (equates to 100 g/m^2 with approximately 50% coverage and/or 200 g/m^2 with approximately 25% coverage) – BAOAC 4 – discontinuous true oil colour – lower threshold 50 g/m^2 • Optimum – 100 g/m^2 (equates to >100 g/m^2 with approximately 100% coverage and/or 200 g/m^2 with approximately 50% coverage) – BAOAC 5 – Continuous true oil colour – lower threshold 200 g/m^2	
Expected effectiveness	• One containment and recovery operation is expected to be able to contain and recover approximately 11.25 – 67.5 m^3 per day. This figure is based on a 5 hr (lower) to 10 hr (upper) operational day which allows for transit to the Petroleum Activity location, change out of temporary waste storage equipment/ decanting (if required) and transit time between discreet oil patches.) • Based on the following assumptions: – boom system with 70 m opening = 0.07 km – vessel moving at 0.7 kn = 1.3 km/h – area covered per hour = 0.07 km x 1.3 km = 0.09 km^2 – area covered per day (lower) = 0.09 km^2 x 5 hours = 0.45 km^2 / day – area covered per day (upper) = 0.09 km^2 x 10 hours = 0.9 km^2 / day – recovery per day (lower) = 0.45 km^2 x 50 g/m^2 x 50% coverage = 11.25 m^3/ 5-hour day – recovery per day (upper) = 0.9 km^2 x 100 g/m^2 x 75% = 67.5 m^3/ 10-hour day Increased surface oil concentration may result in increased recovery capacity providing other conditions and oil properties remain suitable for containment and recovery. For planning purposes, conservative concentrations outlined above have been used.

5.6.2 Environmental performance based on need

Table 5-9: Environmental Performance – Containment and Recovery

Environmental Performance Outcome		To reduce consequences to surface and shoreline receptors.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
18	Vessel-based recovery systems	18.1	Woodside maintains an integrated fleet of vessels, including vessels with at least 10 t bollard pull. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3B, 3C, 4
		18.2	2 containment and recovery operations would be deployed within 48 hours.	
		18.3	2 additional containment and recovery operations using 3rd party provider resources would be deployed by day 4.	
		18.4	Each operation will have internal or added 100 m^3 of liquid waste storage onboard.	
19	Response teams	19.1	Deployment of 2 containment and recovery teams would be available by day 2, and 6 containment and recovery teams available by day 5.	1, 2, 3A, 3B, 3C, 4
		19.2	Deployment team will be comprised of: • 1-2 trained specialists per operation • 8-10 personnel for support • Personnel sourced through resource pool	1, 2, 3B, 4
		19.3	Teams will segregate liquid and solid wastes at the earliest opportunity.	
		19.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
20	Response systems	20.1	Rapid sweep systems and active boom systems to be prioritised for mobilisation in the event of a response.	1, 3C
21	Management of Environmental Impact of the response risks	21.1	The boom will be monitored and maintained to ensure trapped fauna are released as early as possible, with Containment and Recovery activities occurring in daylight hours only.	1
		21.2	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	
		21.3	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

The resulting containment and recovery capability following ALARP evaluation has been assessed against the WCCSs:

- Surface concentration and mass vary for each time step based on spreading and weathering algorithms within the model. Woodside has reviewed the deterministic modelling data for the applicable scenarios (CS-01) to determine the response need and required capability for containment and recovery operations as a response technique (see Figure 2-6).
  - Deterministic modelling (Q3_12) predicts that surface hydrocarbons meeting minimum threshold concentration (>50 g/m^2) for feasible containment and recovery operations are predicted to peak within week 1 (day 3) at 19 km^2 (2,737 m^3) (~82 m^3 post weathering) and, within week 2 (day 14) at 31 km^2 (5,296 m^3) (~159 m^3 post weathering).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

  - The subsea release continues with daily surface oil presenting in similar locations and concentrations with an overall peak on day 15 of 45 km^2 and 6,995 m^3 (~210 m^3 post weathering).

- Within 24 hours, Woodside has available 1 containment and recovery operation capable of recovering up to 68 m^3 surface oil covering an area of 1 km^2. Availability of containment and recovery operations increases to 2 by day 2, 3 by day 3, 4 by day 4, and 6 by day 5. Thus, by day 5, the recovery capacity is estimated to be up to 405 m^3 covering an area of 6 km^2.
- Containment and recovery operations would target the thickest parts (BAOAC 4-5) at the leading edge of the surface slick and as close to the spill source as is feasible. This approach aims to mitigate the spread of the oil and maximise encounter rate in order to reduce potential shoreline accumulations.
- The efficiency of this response technique will decrease significantly as the slick moves, breaks into wind-rows and weathers resulting in less surface concentrations available for effective offshore recovery.
- At times, the capability will be limited by safety or logistics including number of available vessels and/or maintenance of feasible safe simultaneous operations (SIMOPS).
- More detail regarding capability need is included at Section 6.6 together with consideration of potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are also included in Section 6.6.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.7 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable.

Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.7.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil above threshold is predicted to be 15.0 days (CS-01) at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3).
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact at 100 g/m^2, which occurs on day 15.0 (CS-01) at Montebello Islands including Montebello Islands MP and Hermite Island.
- The duration of the spill may extend up to 76 days with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).
- .
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for Shoreline Protection and Deflection. These assumptions have been described in the table below.

Table 5-10: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	One Shoreline Protection and Deflection operation may include; • Quantity of shoreline sealing boom (as outlined in TRP) • Quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire Specific details of each operation would be tailored to the Tactical Response Plan implemented (where available).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.7.2 Environmental performance based on need

Table 5-11: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
22	Response teams	22.1	In liaison with WA DTMI (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike plan for activation 5 days prior to a predicted impact.	1, 3A, 3C, 4
		22.2	In liaison with WA DTMI (for Level 2/3 incidents), mobilise teams to RPAs 5 days prior to a predicted impact. Teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool.	1, 2, 3B, 3C, 4
		22.3	In liaison with WA DTMI (for Level 2/3 incidents), 1 operation mobilised 5 days prior to a predicted impact at each identified RPA. Expected to be 2 RPAs within 18 days. (operation as detailed above)	1, 3A, 3B, 4
		22.4	12 trained personnel available within 24 hours sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		22.5	Open communication line to be maintained between IMT and infield operations to confirm awareness of progress against plan(s)	1, 3A, 3B
		22.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
23	Response equipment	23.1	Equipment mobilised from closest stockpile 5 days prior to a predicted impact.	1, 3A, 3C, 4
		23.2	Supplementary equipment mobilised from AMOSC and State stockpiles 5 days prior to a predicted impact.	1, 3C, 4
		23.3	Supplementary equipment mobilised from OSRL 5 days prior to a predicted impact.	
		23.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3C, 4
24	Management of Environmental Impact of the response risks	24.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		24.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

Under optimal conditions, during the subsea and surface releases the capability available exceeds the need identified. It indicates that, the shoreline protection and deflection capability have the following expected performance:

- Deterministic modelling predicts first shoreline impact at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3) on day 15.0 (CS-01).
- Existing capability allows for mobilisation and deployment of shoreline protection operations within 24 hours (if required). Given shoreline contact at RPAs is not predicted until Day 15.0 at Montebello Islands including Montebello Islands MP and Hermite Island, the existing capability is considered sufficient to mobilise and deploy protection at RPAs prior to hydrocarbon contact, guided by the ongoing monitor and evaluate activities.

This document is protected by copyright. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.7.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.8 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches, and
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (NP-GUI-025) (AMSA 2015).

5.8.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil above threshold is predicted to be 15.0 days (CS-01) at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3). Shoreline accumulation peaks at approximately 42 m^3 in Week 4
- Pre-emptive assessment and shoreline assessments will be mobilised prior to shoreline contact at 100 g/m^2, which occurs on day 15.0 (CS-01) at Montebello Islands including Montebello Islands MP and Hermite Island.
- The duration of the spill may extend up to 76 days (CS-02) with response operations extending to 2-3 months based on the predicted time to complete shoreline clean-up operations (CS-01).
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport and Major Infrastructure and Major Infrastructure, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- Tactical Response Plans (TRPs) for Response Protection Areas (RPAs) along with other relevant plans, procedures and support documents need to be in place for Operational and Support Sections. These should be reviewed and updated regularly.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

In addition, a number of assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

Table 5-12: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 x trained supervisor • 8–10 x personnel/ labour hire • Supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface Threshold • Lower – 100 g/m^2–100% coverage of 'stain' – cannot be scratched off easily on coarse sediments or bedrock – Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of 'coat' – can be scratched off with a fingernail on coarse sediments – Expected trigger to commence clean-up operations
Efficiency **(m^3 oil recovered per person per day)**	Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m^3 oil recovered per person per 10-hour day is based on moderate to high coverage of oil (100 g/m^2–1000 g/m^2) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Table 5-13: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.

All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.8.2 Environmental performance based on need

Table 5-14: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
25	Shoreline responders	25.1	In liaison with WA DTMI (for Level 2/3 incidents), deployment of shoreline clean-up teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool within 24 hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		25.2	Relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation 5 days prior to a predicted impact.	1, 3A, 3C, 4
		25.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		25.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		25.5	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy up to 1 shoreline clean-up operations to each contaminated RPA 24 hours prior to a predicted impact.	1, 2, 3A, 3C, 4
		25.6	In liaison with WA DTMI (for Level 2/3 incidents), mobilise and deploy up to 1 shoreline clean-up operations by day 15 and 1 additional operation by day 18.	
		25.7	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
		25.8	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
26	Shoreline clean up equipment	26.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		26.2	Equipment mobilised from closest stockpile (detail in activity specific ALARP) 5 days prior to predicted impact.	
		26.3	Supplementary equipment mobilised from AMOSC and State stockpiles 5 days prior to predicted impact.	1, 3C, 4
		26.4	Supplementary equipment mobilised from OSRL 5 days prior to predicted impact.	
27	Management of Environmental Impact of the response risks	27.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		27.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
		27.3	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves.	
		27.4	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations.	
		27.5	Removal of vegetation will be limited to moderately or heavily oiled vegetation.	
		27.6	Oversight by trained personnel who are aware of the risks.	
		27.7	Trained unit leaders brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity.

The shoreline clean-up capability has the following expected performance (if required during a response):

- Deterministic modelling predicts first shoreline impact at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3) on day 15.0 (CS-01).
- Existing capability allows for mobilisation and deployment of 1 shoreline clean-up operation within 24 hours (if required). Within 48 hours, Woodside can mobilise up to 15 response operations comprising its team of trained response personnel from Karratha (the 'Burrup Response Team'), Woodside's personnel/ labour hire contract, and appropriate shoreline response equipment. This capability increases to 20 operations by day 4 and would also include team leads from Woodside, AMOSC, AMOSC Core Group and/or OSRL together with existing personnel/ labour hire contracts. As detailed in Table 5-12, teams would comprise 1 supervisor with 8 personnel/ labour hire up to 2 supervisors with 10 personnel/ labour hire. Each individual within a team is predicted to be able to remove 0.25 m^3 to 1 m^3 oil/ oiled waste per day dependent upon the nature of the shoreline oiling.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability and the response would be completed by end month 2-3.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Dampier and management of response generated waste. From previous assessment of accommodation in Exmouth and Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.

More detail regarding capability need is included at Section 6.8 together with consideration of potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.8.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.9 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DTMI *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DTMI. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DTMI. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (BC Act)* which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.9.1 Response need based on predicted consequence parameters

Wildlife response priority areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- Presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- Greatest probability of shoreline accumulation
- Shortest timeframe to contact

Table 5-15 outlines the wildlife response areas for this activity. At the time of a spill, identification and allocation of wildlife RPA's should also take into consideration any key biological activities. Additional detail regarding species and their key biological activities within the vicinity of the Petroleum Activity are described in Section 4 of the [Environment Plan name].

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

For WA, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife), 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-15: Key at-risk species potentially in Response Protection Areas and open ocean

Species	Montebello MP	Montebello Islands and Hermite Island	Southern Pilbara Islands at Thevenard Island including NR	Muiron Islands and Muiron MMA	Exmouth including Ningaloo State MP and Ningaloo Coast WH	Montebello Shoals	Tryal Rock
Marine turtles	✓	✓	✓	✓	✓	✓	
Whale sharks	✓	✓		✓		✓	
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓	✓	
Cetaceans – migratory whales	✓	✓		✓	✓	✓	✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓	✓	✓
Dugongs		✓	✓	✓	✓	✓	✓
Sharks and rays	✓	✓	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- Floating oil at >10 g/m^2 is predicted at Montebello MP within 13 hours (CS-01).
- The shortest timeframe for shoreline accumulation at response thresholds (>100 g/m^2) is predicted to be 15.0 days at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3).
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and operational and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between medium and high, as defined in the WAOWRP (DBCA, 2022a) (Table 5-16).

Table 5-16: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with operational and scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response is likely, requiring preventative actions and/or wildlife rescue, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, along with capture, intake and treatment require a higher degree of planning, approval (licenses) and skills and will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in **Section 4** of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.9.2 Environmental performance based on need

Table 5-17: Environmental Performance – Oiled Wildlife Response (OWR)

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016*.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
28	Wildlife response arrangements	28.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		28.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by OMP: Marine Fauna Assessment and in liaison with DBCA.	1
29	Wildlife response equipment	29.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 4
		29.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 4
30	Wildlife responders	30.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an OWR Management course.	1, 2, 3B
		30.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists	1, 3B, 3C
		30.3	Maintain contract with OSRL to access additional trained OWR specialists	1, 3B, 3C
		30.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
31	Management of environmental impacts of response risks	31.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance:

- undertake OWR first strike response:
  - mobilisation of monitor and evaluate and/or OMP: Marine Fauna Assessment to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons.
- availability and mobilisation of trained OWR personnel to supervise OWR activities.
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.10 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- Liquids (hydrocarbons and contaminated liquids) collected during containment and recovery, shoreline clean-up and wildlife response, and/or
- Solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during containment and recovery, shoreline clean-up and wildlife response.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.
- processes will be in place for transfers of bulk liquid wastes and include:
  - inspection of transfer hose undertaken prior to transfer
  - watchman equipped with radio visually monitors loading hose during transfer
  - tank gauges monitored throughout operation to prevent overflow

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.10.1 Response need based on predicted consequence parameters

Table 5-18: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Containment and Recovery – approximately 10x multiplier for oily waste generated by containment and recovery operations
	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.10.2 Environmental performance based on need

Table 5-19: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
32	Waste Management	32.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		32.2	Access to at least 675 m^3 of solid and liquid waste storage available within 4 days upon activation of 3rd party contract.	
		32.3	Access to up to 2,400 m^3 by end of Day 7	
		32.4	Decanting in accordance with National Plan guidelines to occur in daylight hours into the apex of the boom once hydrocarbon/water has settled in storage container.	
		32.5	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		32.6	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		32.7	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		32.8	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B, 3C, 4
		32.9	Waste management services available and employed during response	
33	Management of environmental impacts of response risks	33.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

Given the largest shoreline volumes ashore are predicted during Week 4 at a maximum volume of 42 m^3, and 76 m^3 of waste is expected across all shoreline clean-up operations, the capability available exceeds the need identified.

The waste management capability has the following expected performance:

- Offshore operations may generate up to an additional 1,238-5,670 m^3 during week 1 of offshore operations for CS-01.
- Shoreline and nearshore operations may generate up to 76 m^3 over 2-3 months of operations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.10.
- Woodside's waste contractor has access to approximately 120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.11 Operational and Scientific monitoring

Operational and scientific monitoring (OSM) is a key component of the environmental management document framework for offshore petroleum activities, which includes activity EPs and OPEPs. The key elements and differences between operational monitoring and scientific monitoring include:

- **Operational Monitoring (OM)** – undertaken during the course of the spill and includes any physical. chemical and biological assessments that may guide operational decisions such as selecting the appropriate response and mitigation methods and/or to determine a response activity. This monitoring is additional to the activities (aerial/vessel surveillance, tracking buoys, oil spill trajectory modelling and satellite tracking) performed as part of the Monitor and Evaluate Strategy (Section 5.1). Information needs to be collected and processed rapidly to suit response needs, with a lower level of sampling and accuracy needed than for scientific purposes. For the OMP initiation and termination criteria during a Level 2-3 spill event refer to Table 9-1 of the Joint Industry OSM Framework.
- **Scientific Monitoring (SM)** - the principal tool for determining the extent, severity and persistence of possible environmental impacts from a hydrocarbon spill and for informing resultant remediation activities. Consequently, such studies are required to account for natural or sampling variation, and study designs must be robust and produce defensible data. Scientific monitoring is typically conducted over a wider study area, extending beyond the spill footprint, and a longer time period, extending beyond the spill response. For the SMP initiation and termination criteria during a Level 2-3 spill event refer to Table 9-2 of the Joint Industry OSM Framework.

Woodside has developed a Woodside OSM Bridging Implementation Plan[4] (OSM-BIP), which describes a program of monitoring oil pollution that will be adopted in the event of a hydrocarbon spill incident (Level 2–3) to marine waters. It aligns with the Joint Industry OSM Framework (AEP, 2021) and describes how this Framework applies to Woodside activities and spill risks.

A series of Operational Monitoring Plans (OMPs) and Scientific Monitoring Plans (SMPs) form part of the Joint Industry OSM Framework and provide detail on monitoring design, standard operating procedures, data management, quality assurance and quality control and reporting.

Table 5-20 lists the Joint Industry OMPs and SMPs that are relevant to the Petroleum Activity. The aims/objectives of each OMP and SMP are listed in Tables 5-1 and 6-1 of the Joint Industry OSM Framework respectively. Woodside confirms it has reviewed these aims/objectives and determined they are all appropriate to address the potential impacts, risks and response activities of this Petroleum Activity, noting that dispersant application is not a suitable response strategy for this activity.

The OSM-BIP is structured so that it can provide a flexible framework that can be adapted to individual spill incidents. The Combined OSM Planning Area (refer to section 2.1 of the OSM-BIP), derived from all Woodside worst-case scenarios, represents the geographical extent of the Woodside OSM-BIP.

The OSM requirements for Petroleum Activity credible spill scenarios, including monitoring priorities, implementation timeframes and capability is provided in ANNEX C: GWF-4 Drilling and Subsea Installation OSM Activity Specific Assessment.

Woodside will review the initiation criteria for OMPs and SMPs (provided in Table 9-1 [OMPs] and Table 9-2 [SMPs] of the Joint Industry Operational and Scientific Monitoring Framework (AEP, 2021)) during the preparation of the initial IAPs, and subsequent IAPs. If any initiation criteria are met, then that relevant OMP and/or SMP will be activated via the OSM Services Provider.

5.11.1 Response need for Shoreline Clean-Up Assessment (SCAT) based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- SCAT will be mobilised to RPAs contacted at 100 g/m^2.
- The shortest timeframe for shoreline accumulation at 100 g/m^2 predicted by modelling is 15.0 days at Montebello Islands including Montebello Islands MP and Hermite Island, 18.1 days at Southern Pilbara Islands at Thevenard Island including NR, 27.5 days at Muiron Islands and Muiron MMA, 29.8 days at Exmouth including Ningaloo State MP and Ningaloo Coast WH.

In addition, a number of assumptions are required to estimate the response need for SCAT. These assumptions have been described in Table 5-21. Consequently, for planning purposes and based on the modelling results for shortest time to contact at 100 g/m^2 there are four RPAs (Montebello Islands including Montebello Islands MP and Hermite Island, Southern Pilbara Islands at Thevenard Island including NR, Muiron Islands and Muiron MMA, and Exmouth including Ningaloo State MP and Ningaloo Coast WH) requiring 4-8 SCAT specialists. These resourcing requirements can be met via the resourcing arrangements outlined in Table 8-3 of the OSM-BIP.

Table 5-21: Response Planning Assumptions – SCAT

Response planning assumptions: SCAT	
Safety considerations	Shoreline assessment operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
SCAT	• Deployment of 1-2 x specialists in SCAT from resource pool for each of the RPAs with predicted impacts

5.11.2 Summary – Operational and Scientific monitoring

A detailed OSM preparedness assessment is provided in ANNEX C: GWF-4 Drilling and Subsea Installation OSM Activity Specific Assessment.

The ALARP assessment for operational and scientific monitoring (Section 6.11) considers alternate, additional, and/or improved control measures on each selected response technique.

Known, reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The OSM program's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 5.11.3 Environmental performance based on need

Table 5-22: Operational and scientific monitoring

Environmental Performance Outcome		Implement OSM programs to assess and report on the impact, extent, severity, persistence and recovery of sensitive receptors contacted by a spill or affected by spill response.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
34	OSM arrangements	34.1	Maintain access to OSM expertise qualified to fulfill OSM Implementation Lead role during a Level 2/3 spill event per Joint Industry OSM Framework requirements.	3A, 3B, 3C, 4
		34.2	OSM Implementation Lead responsible for overseeing implementation of OMP and SMP components in accordance with the Woodside OSM Bridging Implementation Plan[4].	
35	Access to adequate OSM capability to provide both first strike and ongoing monitoring	35.1	Maintain contract with third-party provider to provide access to suitably qualified and competent personnel and equipment to assist in the implementation of monitoring in accordance with the capability and resourcing requirements described in Sections 8–10 of the OSM-BIP and the activity-specific capability assessment in Table C - 8 and Table C - 9	3A, 3B, 3C, 4
		35.2	Obtain monthly cap ability reports from OSM Service Provider to demonstrate the capability described in Section 10 of the OSM-BIP is available are available throughout any activity	
		35.3	Annual testing of OSM Service Provider standby arrangements and activation process	
36	Baseline studies assurance	36.1	Annual review of environmental baseline data for all locations where spill modelling has predicted contact within 7 days	3C
37	OSM response	37.1	OMPs and SMPs will be activated in accordance with the initiation criteria provided in the Joint Industry OSM Framework (AEP, 2021)	1
		37.2	Initiation criteria of OMPs and SMPs will be reviewed during the preparation of the initial Incident Action Plan (IAPs) and subsequent IAPs; and if any criteria are met, relevant OMPs and SMPs will be activated	
		37.3	If the OSM Implementation Lead identifies that additional monitoring capability is required beyond that described in Section 10 of the OSM-BIP, the need for these resources will be identified as soon as practicable and mobilised through the OSM Services Provider Contract, which includes provisions for scaling up personnel to meet monitoring program requirements	
		37.4	Decisions regarding co-mobilisation of monitoring teams will be determined following a spill event, as part of the Incident Action Planning process. These decisions will be made by the CIMT in consultation with the OSM Services Provider and relevant stakeholders, with due consideration given to safety, access to sensitive receptors, timing, and data quality requirements	
		37.5	OSM to be conducted in accordance with the Woodside OSM-BIP and, where relevant to the activity, the assessment detailed in ANNEX C: GWF-4 Drilling and Subsea Installation OSM Activity Specific Assessment	
		37.6	Monitoring prioritisation will be undertaken in accordance with the process and checklist provided in Table 13-1 of the OSM-BIP, informed by the guidance in Section C.2	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

		37.7	Mobilisation and implementation of OMPs and SMPs will be undertaken in accordance with the indicative timeframes and sequencing described in Section C.3 of the OSPRMA and Part B of the OSM-BIP	
		37.8	Implementation of OSM will comply with the minimum standards listed in Appendix A of the Joint Industry OSM Framework	
		37.9	Once OSM data reports are drafted they will be peer reviewed by an expert panel for data integrity	
		37.10	OMPs and SMPs will be terminated in accordance with the termination criteria provided in the Joint Industry OSM Framework (AEP, 2021)	
38	OSM-BIP maintenance	38.1	Annual review will be conducted according to the criteria in Section 11 of the OSM-BIP	3A, 3B, 3C, 4
39	Shoreline Clean-up Assessment Technique (SCAT)	39.1	Mobilisation within 24 hours, in agreement with WA DTMI (for Level 2/3 incidents), deployment of 2 specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts	1, 2, 3B, 3C, 4
		39.2	Reports from OMP: Shoreline Clean-up Assessment will be provided to the IMT daily, detailing the assessed areas to maximise effective utilisation of resources	1, 3B, 4
40	Management of Environmental Impact of the response risks	40.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		40.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		40.3	Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations	
		40.4	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves	
		40.5	Oversight by trained personnel who are aware of the risks	
		40.6	Trained unit leaders brief personnel of the risks prior to operations	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.12 Incident Management System (IMS)

The Incident Management System (IMS) is both a control measure and a measurement criteria. As a control measure the IMS function is to prompt, facilitate and record the completion of three key response planning processes detailed below. As a measurement criteria the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used of the Petroleum Activity.

As the IMS does not directly remove hydrocarbons spilt into the marine environment there is no direct relationship to the response planning need.

5.12.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based IC may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident either the CIMT DM or IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.12.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of Environment Plan/ Oil Pollution Emergency Plan (EP/ OPEP) acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response, An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Joint Industry OSM Framework (AEP, 2021). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.12.3 Consultation engagement process

Woodside will consult relevant persons/ organisations are engaged during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.12.4 Environmental performance based on need

Table 5-23: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.13)**
41	Operational SIMA	41.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		41.2	Record the evidence and justification for any deviation from the planned response activities.	
		41.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
42	Stakeholder engagement	42.1	Prompt and record all notifications (including government notifications) for persons/ organisations in the region are made	
		42.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		42.3	Undertake communications in accordance with: • Functional Support Team Guideline – Reputation • External Communication and Continuous Disclosure Procedure	
43	Personnel required to support any response	43.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident are appropriate to the situation at the time.	1, 3B
		43.2	A duty roster of trained and competent people will be maintained to maintain minimum manning requirements are met all year round.	3C
		43.3	Immediately activate the CIMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		43.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		43.5	Security and Emergency Management advisors will be integrated into CIMT to monitor performance of all functional roles.	
		43.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.	
		43.7	Follow the Hydrocarbon Spill Australia Regulatory Framework[5], Operational Plans, FSPs, support plans and the IAPs developed.	1, 2, 3A, 4
		43.8	Contribute to Woodside's response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3B, 3C, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

5.13 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The aforementioned performance tables identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Crisis and Emergency and Crisis Management Procedure Standard. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Crisis and Emergency and Crisis Management Procedure Standard defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down. The IAP process formally documents and communicates the:

- Incident objectives
- Status of assets
- Operational period objectives
- Response techniques (defined during response planning)
- The effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, development and the execution of the IAP.

2. The CEM Competency Dashboard

The CEM competency dashboard records the number of trained and competent responders that are available across Woodside to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-1 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Figure 5-1: Example screenshot of the CEM dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability to meet the requirements of the environmental performance standards that relate to filling certain response roles.

Figure 5-2 shows an example of the SCAT role and the training modules required to show competence.

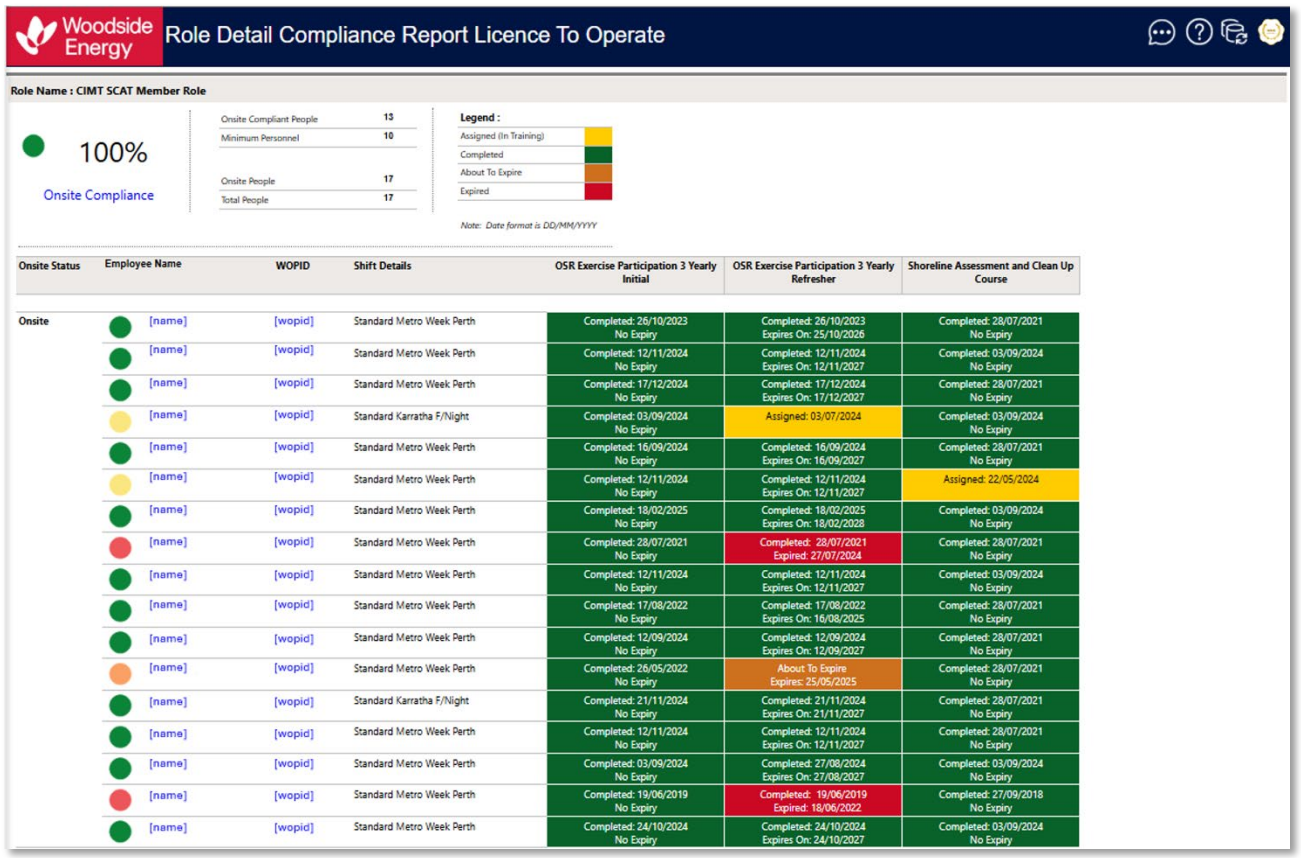

Figure 5-2: Example screenshot for the SCAT role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Woodside also maintains a pool of trained responders which is composed of but not limited to personnel from the following organisations:

- Australian Marine Oil Spill Centre (AMOSC) core group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- Woodside contracted workforce

3. The Hydrocarbon Spill Preparedness Assurance Process

The Hydrocarbon Spill Response Team uses Woodside's assurance process to track compliance over four key control areas:

a) **Plans** – confirms all plans (including: Hydrocarbon Spill Australia Regulatory Framework[5], first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b) **Competency (personnel and testing)** – confirms the competency dashboard is up to date and there are the minimum numbers across CIMT, CMT and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (TOA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to ensure compliance.

c) **Capability (equipment and contracts)** – tracks and monitors capability that could be required in a hydrocarbon incident, including but not limited to: integrated fleet[13] vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

The assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported on a monthly basis through the CEM Function.

4. The Hydrocarbon Spill Planning Standard, Hydrocarbon Spill Planning Work Instruction (Australia), Hydrocarbon Spill Capability and Competency Standard and Hydrocarbon Spill Response Standard

The Hydrocarbon Spill Planning Standard sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment. (Note, this standard does not apply to scenarios relating to gas releases in the marine environment). This standard details the requirement for an Oil Pollution Emergency Plan (OPEP) to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable).

The Hydrocarbon Spill Planning Work Instruction (Australia) details planning for hydrocarbon spill response preparedness including:

- Developing OPEPs.
- Defining how spill scenarios are developed on an activity specific basis
- Priority response receptor determination.
- ALARP determination.

The Hydrocarbon Spill Capability and Competency Standard details:

- Developing spill training requirements and ongoing maintenance of training and competency for personnel
- Developing requirements for spill exercising / testing of spill response arrangements
- Maintaining access to identified equipment, personnel and contracts.
- Ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

[13] The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response.

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

The Hydrocarbon Spill Response Standard details requirements for appropriate hydrocarbon spill response standards including:

- safeguarding the safety and health of people (responders and communities)
- stopping the source of the spill as quickly as possible
- minimising the environmental and community impact

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Monitor and evaluate – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.1 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Monitor and evaluate – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**

6.1.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to Monitor and evaluate data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A$25,000.	This option is not adopted as the current capability meets the need.	**No**
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	**No**
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A$2000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.1.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24hr access plus an initial A$5000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**
Nighttime aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	**No**

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.2 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case credible scenarios (as described in Section 2.2). This includes the following selection of primary source control and well intervention techniques which would be conducted concurrently:

- direct ROV intervention on BOP
- debris clearance and/or removal
- capping stack (where deployment is feasible)
- relief well drilling.

6.2.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead. The ROV available on the MODU can be deployed for this purpose within 48 hours. Work class ROVs for well intervention are also available through the existing frame agreements (timing per Table 6-1).

As Woodside holds frame agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days of an emergency event.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimated ROV mobilisation timing for GWF-4 Drilling and Subsea Installation (days)
Source and mobilise vessel with work class ROV	2 days
Liaise with Regulator regarding risks and impacts*	4 days
Undertake ROV Inspection	1 day
TOTAL	**7 days***

** Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.*

6.2.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario from those presented in Figure 6-4 and Figure 6-5for implementing this response would be “no safety case revision required”. Timeframes for well intervention are detailed in Figure 6-2 and Figure 6-3 and would be implemented concurrently to the actions required by the “no Safety Case” revision scenario detailed in Figure 6-4 and Figure 6-5 Figure 6-4, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would take place in parallel with mobilisation of the capping stack to ensure initial ROV surveys and debris clearance have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.2.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an "associated offshore place" but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force safety case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in Figure 6-4 and Figure 6-5 for implementing this response would be "no safety case revision required". Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and Figure 6-3 and would be implemented concurrently to the actions required by the "No Safety Case" revision scenario detailed in Figure 6-4 and Figure 6-5 , therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.3 Capping stack

The GWF-4 Drilling and Subsea Installation activities will be covered by a Source Control Emergency Response Plan (SCERP) detailing the mobilisation and resource requirements for implementing this strategy. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the SCERP. This plan has pre-identified vessel specifications for the capping stack deployment and Woodside monitors the availability and location of these vessels on a monthly basis. Woodside maintain several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.

A capping stack will be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.2.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA safety case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting capping stack are not classified as an "associated offshore place" but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- existing frame agreement vessel, located outside the region with approved Australian Safety Case
- a safety case revision and scope of validation is required
- vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Planning Guideline
- vessel has an active heave compensated crane, rated to at least 150 T for shallow waters or 250 T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 and Figure 6-3 would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in Figure 6-4 and Table 6-3.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Woodside will execute the capping stack response in the fastest possible timeframe, provided the required safety and metocean conditions allow. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.2.5.

6.2.4 Relief Well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and ensure necessary regulatory approvals are in place to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following and the process used for GWF-4 Drilling and Subsea Installation is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case.
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case.
- Contingency – Source and contract a MODU outside Australia with an approved Australian Safety Case.

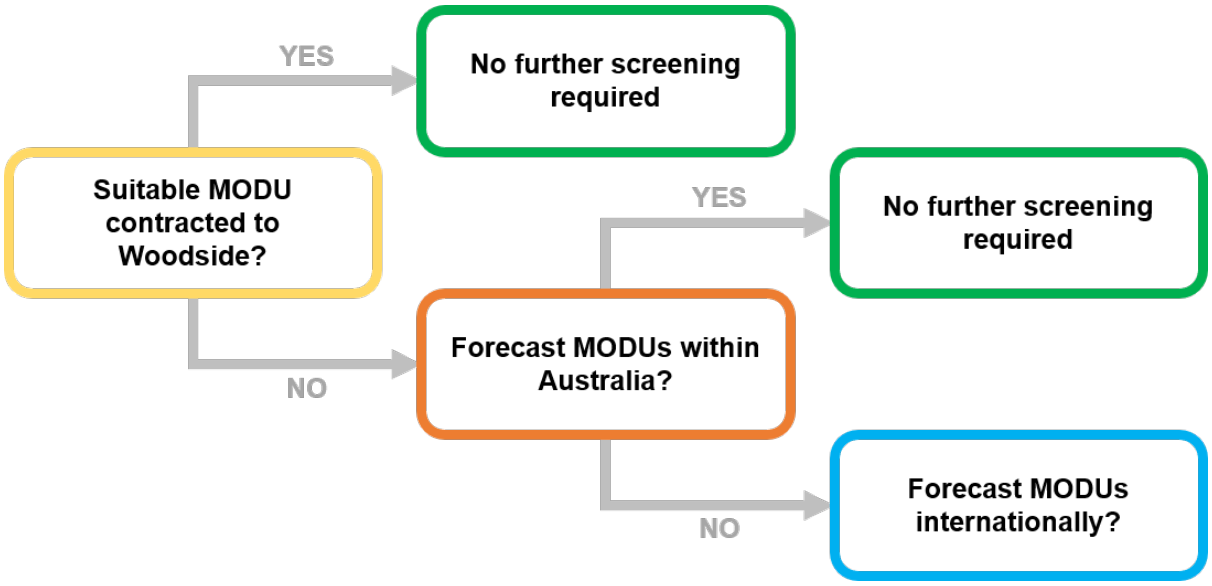

Figure 6-1: GWF-4 Drilling and Subsea Installation process for sourcing relief well MODU

In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters including those outside of the North West Shelf region. Screening of a relief well MODU from international waters is undertaken where there is low confidence in local (Australian) availability. For these circumstances, Woodside will screen for suitable MODUs in closest proximity to the North West Shelf region e.g. South East Asia, and relevant additional controls will be implemented as detailed in Section 6.2.6 and/or Section 6.2.7.

If a suitable international MODU is not identified, an internal review will be undertaken, NOPSEMA notified, and the issue tabled at the Australian Energy Producers' Drilling Industry Safety Committee (AEP DISC). A review of the significance of the change in risk will be undertaken in accordance with Woodside's environment management of change requirements and relevant regulatory triggers. Based on the detail provided, mobilisation of a suitable and available MODU in North West Shelf region is expected to be achieved within 21 days and from South East Asia within 36 days. If a MODU was available in South East Australia, mobilisation is estimated to be 47 days. Woodside will seek to execute relief well drilling in the fastest possible timeframe.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and an acceptable level through the control measures and performance standards outlined in Section 5.2.

6.2.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) for the Petroleum Activity is assessed as 70 days[2] (CS-01) or up to 76 days (CS-02). Relief wells for other wells within the field are expected to be similar duration.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Details on the steps and time required to drill a relief well is shown in Table 6-2. Moored MODUs are suitable for the GWF-4 Drilling and Subsea Installation Petroleum Activity and have, therefore, been used as the basis for the time estimate below.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the 21-day mobilisation period forms part of Woodside's three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator's activities, contracting the MODU, vessel safety case revision and transit to location.

Table 6-2: Relief well drilling timings

Estimated Relief Well Duration	Moored Days (CS-01)		Moored Days (CS-02)	
Rig mobilisation				
Secure and suspend well. Complete Relief well design. Secure relief well materials.	8.0	36 days	8.0	36 days
Transit to location	17.0		17.0	
Backload and loadout bulks and equipment, complete internal assurance of relief well design.	2.0		2.0	
Contingency for unforeseen event	9.0		9.0	
Mooring activities and relief well construction operations	**20**		**26**	
Drill out shoe, conduct formation integrity test and drill towards intersection point	1.5	14 days	1.5	14 days
Execute well-specific ranging plan to accurately intersect wellbore in minimum timeframe	9.5		9.5	
Pump kill weight drilling fluid per the relief well plan. Confirm well is static with no further flow	0.5		0.5	
Contingency for unforeseen technical issues	2.5		2.5	
Total discharge duration	**70**[2]		**76**	

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.2.6 and/or Section 6.2.7.

Intersect and kill duration is estimated at 14 days. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well.

6.2.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. In the event that a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to ensure timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/ vessel to commence drilling a relief well. Performance standards associated with these measures have been included in Section 5.2. Section 6.2.6.3 details ALARP controls to improve activation and mobilisation arrangements including maintenance of an 'Emergency Response Tactical Response Plan' to assist in accelerating Safety Case revision(s).

These include;

- Access to Safety and Risk discipline personnel with specialist knowledge.
- Monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements on a monthly basis, with a two-year lookahead.
- Prioritisation of MODUs/vessels with current or historical contracting arrangements. Woodside maintains records of previous contracting arrangements and companies. All current contracts for vessels and MODUs are required to support Woodside in the event of an emergency.
- Leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support.
- Woodside Planning and Logistics, and Safety Officers (on-Roster/Call 24/7) which can articulate need for, and deliver Woodside support, in key delivery tasks including sitting with potential outside operators.
- Ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three safety case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in Figure 6-4 and Figure 6-5. The assumptions for each of the cases are detailed in subsequent Table 6-3.

A relief well Safety Case Revision would leverage the previously accepted Safety Case Revision for the Petroleum Activity, including the associated site-specific well hazards. As such, there is less new detail for the regulator to review and should present a short review timeframe with no impact expected to the commencement of relief well drilling activities.

Table 6-3: Safety case revision conditions and assumptions

Case	No safety case revision required	Safety case revision and submission	Safety case revision and scope of validation
Description	Vessel/MODU has a safety case in place appropriate for activities.	Vessel/MODU has an existing safety case, however, a revision is required.	Vessel/MODU has an existing safety case, however, a revision is required plus scope of validation.
Conditions/ assumptions	Assumes that existing vessel/MODU safety case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety case timing assumes vessel/MODU selected and crew and available for workshops and safety case studies.	Safety case timing assumes vessel/ MODU selected and crew and available for workshops and safety case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing safety case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU safety case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the safety case submission is not dependent on the validation statement, however the safety case acceptance is.
		Assumes safety case preparation is undertaken 24/7.	Assumes safety case preparation is undertaken 24/7.

6.2.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.2.1, 6.2.2, 6.2.3 and 6.2.4 outline the primary and alternate approach respectively that Woodside would implement for relief well drilling**.**

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option

Alternative, Additional and Improved options have been identified and assessed against the base capability described in Section 5 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical.

- Alternative options, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control.
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures.
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.2.6 Activation/Mobilisation – Control Measure Options Analysis

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.2 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.2.6.1 Alternative Control Measures

Alternative Control Measures considered

Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Contract and run a rig on standby or warm stack on the north-west shelf, shared for all Woodside activities.	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it will maintain or may reduce the 21-day sourcing, contracting and mobilisation time. This could reduce the volume and duration of the release through shorter time to kill the well and thus may reduce impacts on receptors and sensitivities.	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Estimate for 12 months of operations: US$ 500k/day (0.66FX) plus A$ 30M startup would total A$307M. This is considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation time. Further, there are additional health, safety and environmental impacts associated with running a rig on standby.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the Petroleum Activities Program are disproportionate to the environmental benefit gained.	**No**
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MOU is likely to provide a minor environmental benefit as it will maintain or may reduce the 21-day sourcing, contracting and mobilisation time. This could reduce the volume and duration of the release through shorter time to kill the well and thus may reduce impacts on receptors and sensitivities. Running a MODU on standby together with the required support vessels/ aircraft, however, will result in increased atmospheric emissions from burning fuel. The MODU may also increase seabed damage. Deployment of such resources will also increase SIMOPs complexity and elevate health and safety risks to personnel.	This option is not considered feasible for a number of Titleholders due to the remote distances and regions in which Titleholders operate within Australia, as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across the range of Titleholders.	Costs are dependent upon the number of AEP MOU Titleholders involved. Additional costs and complexity involved given commercial arrangements that would need to be addressed.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the Petroleum Activities Program, together with increased environmental, SIMOPs and health and safety risks, are disproportionate to the environmental benefit gained. .	**No**
Mobilise Equinox MODU from Victoria with associated additional time impact and water depth limitations	Longer mobilisation duration than 36 days (estimated 47 days), leading to increased relief well drilling timeframe.	This option is considered feasible however it would result in longer MODU mobilisation time.	Potential for higher cost of mobilisation compared with relief well rigs from South East Asia.	Considered not to be the primary option given increased mobilisation timeframes compared with mobilising a rig from South East Asia. Possible that this option could be activated in parallel with the South East Asia mobilisation, or in the event South East Asia rig mobilisation is unsuccessful.	**Evaluate**
Mobilise relief well MODU from further afield e.g. Africa, GOM with associated additional mobilisation time impact	Longer mobilisation duration, leading to increased relief well drilling timeframe.	This option is considered feasible, however it would result in longer mobilisation timeframes.	Potential for higher cost of mobilisation compared with relief well rigs from local/ regional vicinity.	Considered not to be the primary option given increased mobilisation timeframes compared with mobilising a rig from local/ regional vicinity.. Possible avenue in the event that attempts to mobilise a rig from local/ regional vicinity are not successful.	**Evaluate**

6.2.6.2 Additional Control Measures

Additional Control Measures considered

Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.2.6.3 Improved Control Measures

Improved Control Measures considered

Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the Petroleum Activity, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors MODU availability through market intelligence services. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Related control measures and performance standards are included in Section 5.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and, therefore, the volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations. Commercial and operational provisions do not allow Woodside to discuss current and potential drilling programs in detail with other titleholders.	Associated cost of implementation is moderate to the environmental benefit gained.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). Woodside can monitor monthly the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing Safety Case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbons released to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Create an 'Emergency Response Tactical Response Plan' focused explicitly on meeting the requirements of rig permissioning under accelerated timeframe requirements of a relief well scenario.	NOPSEMA require Safety Case(s) in the event of a relief well scenario. Preparing an Emergency Response Tactical Response Plan with sample Scope of Validations for a variety of rig types and additional required equipment to support relief well drilling (i.e. critical services) may streamline the process for obtaining a Safety Case in the event of a loss of well control scenario.	This option is considered feasible.	Minor administrative cost associated with the development of an Emergency Response Tactical Response Plan and maintaining its currency overtime.	This option provides benefit in terms of streamlining the process for obtaining a Safety Case in the event of relief well rig mobilisation from South East Asia. The ER Tactical Response Plan will contain sample Scope of Validations for a variety of rig types and would include any additional equipment to support relief well drilling (e.g critical services) as well as dynamic kill such as pumps. The framework will not be populated with rig specifics; these would be updated at the time of source control event.	**Yes**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.2.7 Deployment Options Analysis

6.2.7.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.2.7.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, the mobilisation lead times for both a capping system and required vessels/ support equipment, would minimise any environmental benefit gained over conventional capping.	The base case considerations for offset installation equipment (OIE) requires a coordinated response by four to seven vessels working simultaneously outside of the 500m exclusion zone, introducing complex SIMOPS issues. Due to the OIE's scale, fabrication of equipment (e.g. mooring anchors) outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames. Screening indicates that mobilising some components of the OIE (which are based in Italy) can only be done by sea and is likely to erode any time savings realised through killing the well via a relief well. The March 2019 OSRL exercise in Europe tested deployment of the OIE. It highlighted that a >600 T crane vessel would be required for deployment to allow for a useable hook-height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel Safety Case are not locally or readily available.	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage. Implementation of OIE has been assessed as a complex and unfeasible SIMOPs operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the GWF-4 location. Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks. As such, the primary source control response and ALARP position remains drilling a relief well.	**No**
Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the feasibility issues surrounding a dual vessel capping deployment in the water depths at the GWF-4 Drilling and Subsea Installation well (72-132 m), together with mobilisation lead times for both a cap and required vessels and support equipment, would minimise any environmental benefit.	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120 m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Further, the longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would actually be lowered on the AHV work wire so a crane would not be required on the barge.	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	**No**
Subsea Containment System alternative to capping stack deployment	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the release duration is 70 days (CS-01) or 76 days (CS-02) before drilling of a relief well under the adopted control measure.	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be longer (>90 days), than the expected 70 day (CS-01) or 76 day (CS-02) relief well drilling operations based on the location, size and scale of the equipment required, including seabed piles that can only be transported by vessel.	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by Woodside for this Petroleum Activities Program is not considered reasonably practical and are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Pre-drill and suspend relief well overburden section, for each well.	Whilst this option may potentially decrease relief well drilling timing, it represents additional environmental impacts associated with discharge of additional drill cuttings and fluids along with benthic habitat disturbance.	This option is not considered feasible due to the uncertainties related to the location and trajectory of the intervention well, which may vary according to the actual conditions at the time the loss of containment event occurs. Top-hole may have to be relocated, due to location being unsafe or unsuitable and further works will be required each year to maintain the top holes.	Not practicable: Cost estimated at ~ $40M per well. Further, the control would not be effective as no relief well rig would be available while drilling pre-drill wells. Significant HSE impact due to increase in drilling and completions operations associated with pre-drilling relief wells.	This option would not provide an environmental benefit due to the additional environmental impacts coupled with a lack of significantly improved relief well timings.	**No**
Purchase and maintain mooring system	In theory, may provide some environmental benefit as it may reduce equipment sourcing time. However, due to the continued need for specialists to install the equipment plus the need to source a vessel suitable for installing the mooring system, the timeframe reduction would be minimal. Furthermore, this process would typically take place in parallel with relief well rig mobilisation.	Woodside is not a specialist in installing and maintaining moorings so would require specialists to come in to install the moorings and would also require specialist vessels to be sourced to undertake the work.	The cost of purchasing, storing and maintaining pre-lay mooring systems with anchors, chains, buoys and ancillary equipment is considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit as timeframe reductions would be minimal given vessels suitable for the installation of the mooring system would still be required, and this would take place in parallel with rig mobilisation..	**No**
Purchase or rent a Kinetic Blowout Stopper (K-BOS) system	The use of a K-BOS system could reduce the quantity of hydrocarbon entering the marine environment.	The K-BOS is marketed in two configurations, either integrated (i.e. retrofitted) into the existing rig BOP through modifications to replace a traditional Blind Shear Ram (BSR)/ Casing Shear Ram (CSR) or non-integrated (i.e. standalone) device deployed as a dedicated 'spool' with appropriate connector below and wellhead hub enabling installation between the wellhead/ Xmas tree and BOP stack. **a) Integrated (i.e. retrofit)** • Removal or retrofit of either one of the existing rams bonnets of the Woodside proposed MODUs existing BOP 'double' ram bodies to accommodate the retrofit installation of the device (which would only be used in an unlikely LOWC scenario) is viewed by Woodside as an unnecessary control measure given the existing BOP system redundancy which has been validated and accepted as part of the MODU's Base Vessel Safety Case to meet ALARP for management of formation hydrocarbons entering the well. • Lead time for procuring an integrated K-BOS has been estimated at 10 months and time to install, integrate and commission system within rig contractors existing BOP stack is assumed at ~1-2 months • As install of an integrated K-BOS device would require modification of Safety Critical Equipment (i.e. BOP), rig contractor would be required to resubmit and gain regulator approval for MODU Base Vessel Safety Case, estimated to require ~6 months. Campaign specific MODU Vessel Safety Case Revision can only be submitted for regulator approval post MODU Base Vessel Safety Case approval. Accordingly, a further ~6 months had been assumed to attain MODU Vessel Safety Case Revision approval. • Based on the aforementioned, Woodside estimates an integrated/retrofit option would ultimately require ~18-24 months total when accounting for device procurement, install, commissioning and required regulator approvals. **b) Non-integrated (i.e. standalone)** • Adding a K-BOS device as a dedicated 'spool' between the wellhead/ Xmas tree and MODU BOP would result in significantly extending the height and increasing the weight of equipment attached to the wellhead and conductor system. This resulting increase in the centre of gravity would exacerbate wellhead bending and fatigue loads, adding	**a) Integrated (i.e. retrofit)** • Woodside estimates an integrated/ retrofit K-BOS option could ultimately require up to ~24 months and lead to a cost increase of ~USD 95M when accounting for device procurement, install, commissioning and rental costs, expected MODU contract termination/deferral costs, associated engineering works and regulatory approval and permitting costs. **b) Non-integrated (i.e. standalone)** • The execution of the drilling campaign using the non-integrated/standalone configuration would require running and recovery of the K-BOS spool independent of the rig BOP and on critical path operations. Each well would require 2x running events and 2x recovery events (1 each on the wellhead and 1 each on the Xmas tree). Additionally, this would preclude hopping the BOP with BOP hop tool. It is assessed this would add ~20 rig days (~4 days per well x 5 wells) to the campaign leading to an increase in campaign costs of ~USD 20M. • In addition to the ~USD 20M operational implications of utilising a non-integrated/standalone K-BOS device, the rental charge of such a device is estimated at ~USD 7M for a total of USD 27M.	It is Woodsides assessment that the application of existing controls and barriers captured in the MODU Base Vessel Safety Case, Woodside's Well Management System including: Wells Risk Management Standard; Manage Campaign Operations Standard; and Well Control Standard provide a resulting low LOWC risk level that meets ALARP without the deployment of this additional control measure. At present, and historically, it has been industry experience that rig BOP equipment and control systems in compliance with API Standard 53 Revision 5 have been widely accepted worldwide by regulatory bodies to address any given well control situation encountered and to be considered ALARP. Woodside assesses the cost/ schedule implications and additional wellhead bending/fatigue risk of this additional control measure as disproportionate to the potential environmental benefit. Accordingly, the control has not been adopted.	**No**

		increased risk to the structural integrity of the wellbore pressure containing envelope. • Assessment of the bending and fatigue life of the already procured wellhead, conductor and surface casing does not consider the additional loads (bending and fatigue) that would be applied as a result of installation of the device between the wellhead/ Xmas tree and BOP stack. Further analysis would be required and additional engineering controls may be required to accommodate the device, such as additional tethering of the BOP or equipment replacement. Fatigue management is a focus at the GWF-4 location due to the shallow water depth. • Lead time for procuring a non-integrated /standalone KBOS has been estimated at 10 months and time to incorporate with rig contractor's existing BOP stack is assumed at ~1 month. • Use of non-integrated/standalone configuration spool to potentially shear and seal in an actual LOWC event may further complicate planning/executing a well kill and subsequent plug and abandonment operations.			
Contract in place with Wild Well Control and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will ensure that competent personnel are available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**

6.2.7.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21-36 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately $600K with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**

6.2.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - relief well rig mobilised from South East Asia region
  - mobilise Equinox MODU from Victoria with associated additional time impact and water depth limitations (EVALUATE)
  - mobilise relief well rig from further afield than South East Asia: Africa, GOM with associated additional mobilisation time impact (EVALUATE)
- additional
  - contract in place with Wild Well Control and Oceaneering to supply trained, competent personnel
- improved
  - monitor internal drilling programs for MODU availability
  - monitor external activity for MODU availability
  - monitor status of registered operators / approved Safety cases for MODUs
  - create an 'Emergency Response Tactical Response Plan' focused explicitly on meeting the requirements of rig permissioning under accelerated timeframe requirements of a relief well scenario.

6.3 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.3 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.3.1.1 Alternative Control Measures

Alternative Control Measures considered
Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.1.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.3.1.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.3.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.4 Subsea Dispersant Injection – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.4. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Subsea Dispersant Injection timing

The scope of existing safety cases for Frame Agreement vessels includes all relevant activities for SSDI operations. Depending on the location and availability of vessels, Woodside expects the SSDI capability can be mobilised to site for deployment within 12 days. This may be able to be achieved faster if vessels are closer to appropriate staging areas and not already involved in other operations. The following steps are included within the indicative timeframe and many of these are expected to be concurrent activities, as shown in Figure 6-2 and Figure 6-3.

1. Identifying and locating frame agreement vessels (1-2 days)
2. Identifying and locating support vessels (1-2 days)
3. Tasking and mobilising identified vessels to port (staging area) including ceasing previous operations (2-4 days)
4. Activate and mobilise SSDI equipment from service provider to port (Staging Area) (2-3 days)
5. Activate and mobilise initial dispersant stock to port (Staging Area) (1-2 days)
6. Assemble and test SSDI equipment at staging area prior to load-out (2-3 days)
7. Re-supply, provision and fuel vessels (1-2 days)
8. Load-out and secure SSDI equipment onboard vessel (1-2 days)
9. Load-out and secure dispersant on support vessel (1-2 days)
10. Contingency for unforeseen events (1 day).

6.4.2 Response Planning: Loss of well containment (CS-01)

Following a loss of well control it may take 2-5 days to complete a risk assessment, discuss and agree appropriate control measures with NOPSEMA (Safety, Environment and Well Integrity divisions), and monitor the operating environment within the Petroleum Safety Zone around a well or facilities. Subsea dispersant injection is unlikely to be deployed until approximately day 12, subject to subsea ROV survey of the site and agreement of risk assessment and recommended control measures for personnel safety.

Dispersant efficacy testing on NWS Condensate, which has a residue of 3% and similar characteristics to PYA-01 Condensate and Yodel-3 Condensate (residues of 3% and 2.5% respectively), predicts it will be amenable to dispersant with an approximate range of effectiveness from 35-72% (see Table 5-4). These results were determined in ideal laboratory conditions and represent the expected treatment of hydrocarbons that are contacted. Based on response planning assumptions outlined in Section 5.3, the subsea dispersant injection system (as part of the SFRT package) is able to deliver approximately 60-75 m^3 per day on a continuous 24 hours per day, 7-day basis.

For the purpose of capability demonstration below, Woodside has shown that once the SSDI system arrives and is able to be deployed safely, a capability exists to commence and continue SSDI until the well is killed (approximately day 70 (CS-01) or day 76 (CS-02)).

Table 6-4: Response Planning – Subsea Dispersant Injection (based on CS-02)

Subsea Dispersant Injection (SSDI)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
Oil Release													
R1	Oil Release Rate - m^3	14,310	14,199	14,131	14,078	14,035	13,985	13,950	96,739	95,434	94,339	365,164	243,497
A	**Capability available - m^3**												
A1	Predicted oil volume treated by SSDI (lower)	0	0	0	0	0	0	0	3,600	12,600	12,600	50,400	50,400
A2	Predicted oil volume treated by SSDI (upper)	0	0	0	0	0	0	0	31,500	31,500	31,500	126,000	126,000
A3	Dispersant application volume (lower)	0	0	0	0	0	0	0	120	420	420	1,680	1,680
A4	Dispersant application volume (upper)	0	0	0	0	0	0	0	525	525	525	2,100	2,100
B	**Subsea release oil remaining - m^3**												
B1	Predicted oil volume not treated (lower)	14,310	14,199	14,131	14,078	14,035	13,985	13,950	93,139	82,834	81,739	314,764	193,097
B2	Predicted oil volume not treated (upper)	14,310	14,199	14,131	14,078	14,035	13,985	13,950	65,239	63,934	62,839	239,164	117,497

A1 and A2 – the upper and lower volumes in m^3 that subsea dispersant injection may be able to treat (based on response planning assumptions in Section 5.3 and volumes in A3 and A4). These are based on a 1:50 ratio for A1 and a 1:100 ratio for A2
A3 and A4 – the upper and lower volumes in m^3 of the associated dispersant injection volumes for A1 and A2,
B1 and B2 – the upper and lower volumes in m^3 of the subsea oil that is not treated on each day, following predicted treatment outlined in A1 and A2 (oil released minus predicted oil volume treated (R1-A1)).

The dispersant injection operation will be monitored subsea to ensure ongoing efficacy and also for any change in conditions that has the potential to cause the dispersed plume to migrate outside of the Zone of Application (ZoA) (see Figure 2-6). The ZoA is based on the following criteria:

- 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones')
- 10 km from State Marine Parks
- 10 km from Heritage List areas
- >20 m water depth
- 4 km from State Waters
- Within the Mainland Australian EEZ
- Avoiding sensitive reefs and shoals

If SSDI is deemed appropriate, Woodside has contracted access to both SSDI application equipment and the OSRL Global Dispersant Stockpile to enable ongoing subsea dispersant injection operations. The SSDI equipment and dispersant can be deployed by day 12 to commence treatment of the released oil.

Woodside acknowledges that no single response strategy or even combination of offshore response strategies will treat or remove 100% of hydrocarbons. Woodside would require the inclusion of other response techniques to be initiated concurrently. Woodside is committed to a realistic, scalable response capability that is commensurate to the level of risk and able to be practically implemented and sustained within the logistical constraints of remote areas.

6.4.3 Subsea Dispersant Injection – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated, contracted vessel for SSDI mobilisation and deployment (based in Australia)	Reducing the mobilisation and deployment time of the SSDI through vessel standby/pre-positioning is unlikely to result in a significant change in environmental benefit. Under current arrangements the SSDI system can be on location from approximately day 12 depending on vessel availability where a dedicated, contracted vessel may enable the SSDI system on location from day 10. Once deployed the SSDI will be utilised to increase entrainment of released oil and to ensure safe operations for surface deployment of SFRT and other surface response techniques.	A modified Construction vessel or vessels with suitable remote operated underwater vehicles (ROVs) is required to load, transport and deploy the SSDI system. The critical element in deployment of the SSDI is the availability of an appropriate vessel. Achieving a shorter mobilisation would require the vessel's work schedule to be permanently restricted so as to permit a quicker return to Exmouth, reducing the utilisation of the vessel, or the permanent retention of a dedicated vessel. Neither option is considered reasonably practicable. Acceleration is limited by availability of the SSDI system mobilisation and this control measure is not expected to reduce the estimated extent and magnitude of impact from a well release on receptor locations compared with the proposed mobilisation plan using pre-identified or vessels available through frame agreements.	A dedicated vessel on standby in Exmouth, ready to load is estimated to cost A$20 m per annum. This is considered cost-prohibitive for the Petroleum Activity.	This response strategy is not considered as a primary response and this control measure is not adopted as the cost, complexity and feasibility is considered disproportionate to the minor environmental benefit that might be gained	**No**
Shared, contracted vessel for SSDI mobilisation and deployment (shared between Titleholders)	Reducing the mobilisation and deployment time of the SSDI through vessel standby/pre-positioning is unlikely to result in a significant change in environmental benefit. Under current arrangements the SSDI system can be on location from approximately day 12 depending on vessel availability where a dedicated, contracted vessel may enable the SSDI system on location from day 10. Once deployed the SSDI will be utilised to increase entrainment of released oil and to ensure safe operations for surface deployment of SFRT and other surface response techniques.	A modified Construction vessel or vessels with suitable remote operated underwater vehicles (ROVs) is required to load, transport and deploy the SSDI system. The critical element in deployment of the SSDI is the availability of an appropriate vessel. Achieving a shorter mobilisation would require the vessel's work schedule to be permanently restricted so as to permit a quicker return to Exmouth, reducing the utilisation of the vessel, or the permanent retention of a dedicated vessel. Neither option is considered reasonably practicable. This option is not considered feasible for a number of Titleholders due to the remote distances in Australia as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across a range of Titleholders. Additionally, acceleration is limited by availability of the SSDI system mobilisation and this control measure is not expected to reduce the estimated extent and magnitude of impact from a well release on receptor locations compared with the proposed mobilisation plan using pre-identified or vessels available through frame agreements.	A dedicated vessel on standby in Exmouth, ready to load is estimated to cost A$20 m per annum. As a shared cost across a range of titleholders, this may be approximately A$2 m each. This is considered cost-prohibitive for the Petroleum Activity.	This response strategy is not considered as a primary response and this control measure is not adopted as the cost, complexity and feasibility is considered disproportionate to the minor environmental benefit that might be gained by 1-2 days of additional subsea dispersant injection.	**No**

6.4.3.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-identifying/ contracting vessels through Frame Agreements for SSDI loading and operations	Ensuring the mobilisation and deployment time of the SSDI through vessel availability/ contracting strategy is likely to result in a moderate environmental benefit as using these arrangements, the SSDI will be on location from approximately day 12.	Achieving a shorter mobilisation would require the vessel being on standby with limited duties to permit a faster return to Exmouth and this is not considered reasonably practical. Woodside has established frame agreements with vessel providers and will track availability of similar vessels. These options are both considered reasonably practicable.	Associated cost of implementation is minimal to the environmental benefit gained.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**

6.4.3.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - pre-identifying/ contracting vessels through Frame Agreements for SSDI loading and operations
- improved
  - none selected.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.5 Surface Dispersant Application – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base capability described in Section 5.4 with those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing capability – Surface Dispersant Application

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours per day, 7 days per week. The capability presented below is displayed as ranges from lower to upper to incorporate operational factors such as weather, daylight, crew/vessel/aircraft location and duties prior to deployment, survey or classification society inspection requirements for vessels, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisioning, and other similar logistics and operational limitations that are beyond Woodside's direct control.

Table 6-5: Existing Capability – Surface Dispersant Application

E	Existing Capability													
E1	Existing level of surface dispersant application capability available – Aerial Dispersant Application (m^3)													
Existing capability – Surface Dispersant Application		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	By Volume – m^3												
E1.1	Predicted oil contacted by surface dispersant application (lower) – m^3	40	80	310	310	310	310	310	2170	2170	2170	8680	8680
E1.2	Predicted oil dispersed by surface dispersant application (lower) – m^3	28	57	220	220	220	220	220	1541	1541	1541	6163	6163
E1.3	Predicted oil contacted by surface dispersant application (upper) – m^3	100	1263	1263	1263	1263	1263	1263	10,838	11,700	12,563	40,950	40,950
E1.4	Predicted oil dispersed by surface dispersant application (upper) – m^3	112	1414	1414	1414	1414	1414	1414	12,141	13,108	14,074	45,876	45,876
E1.5	Dispersant delivery available (lower) – m^3	4	8	31	31	31	31	31	217	217	217	868	868
E1.6	Dispersant delivery available (upper) – m^3	8	101	101	101	101	101	101	867	936	1005	3276	3276
	By Surface Area– km^2												
E1.7	Predicted surface area treated by surface dispersant application (lower) – km^2	3	6	9	9	9	9	9	63	63	63	252	252
E1.8	Predicted surface area treated by surface dispersant application (upper) – km^2	8	20	20	20	20	20	20	220	224	228	784	784
E2	Existing level of surface dispersant application capability available – Vessel Dispersant Application (m^3)												
	By Volume – m^3												
E2.1	Predicted oil contacted by surface dispersant application (lower) – m^3	0	50	100	100	200	200	200	1500	2100	2100	8400	8400
E2.2	Predicted oil dispersed by surface dispersant application (lower) – m^3	0	36	71	71	142	142	142	1065	1491	1491	5964	5964
E2.3	Predicted oil contacted by surface dispersant application (upper) – m^3	0	376	752	752	752	1128	1128	7895	7895	7895	31,579	31,579
E2.4	Predicted oil dispersed by surface dispersant application (upper) – m^3	0	280	560	560	560	840	840	5882	5882	5882	23,526	23,526
E2.5	Dispersant delivery available (lower) – m^3	0	5	10	10	20	20	20	150	210	210	840	840
E2.6	Dispersant delivery available (upper) – m^3	0	20	40	40	40	60	60	420	420	420	1680	1680
	By Surface Area – km^2												
E2.7	Predicted surface area treated by surface dispersant application (lower) – km^2	0	1	2	2	4	4	4	30	42	42	168	168
E2.8	Predicted surface area treated by surface dispersant application (upper) – km^2	1	2	4	4	4	6	6	42	42	42	168	168

The figures above for E1 - Aerial Dispersant Application and E2 – Vessel Dispersant Application show the predicted surface oil contacted by dispersant spraying (E1.1 (lower), E1.3 (upper) and E2.1 (lower) and E2.3 (upper)) which are intended to show the volume of dispersant sprayed from available platforms contacting the floating oil. Woodside has assumed a 50-75% encounter rate of sprayed dispersant to oil.

The figures also show the predicted oil dispersed (E1.2 (lower), E1.4 (upper) and E2.2 (lower) and E2.4 (upper)) which is intended to show the effectiveness of dispersant (based on laboratory results where available) on contacted oil, along with the predicted encounter rate of dispersant sprayed to oil contacted.

Predicted surface area contacted (E1.7, E1.8, E2.7 and E2.8) is based upon a coverage for available aircraft of 3 km^2 per day (lower) to 4 km^2 per day (upper) and, for vessels, 1 km^2 per vessel per day.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.5.2 Response Planning: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)

Modelling results at defined response thresholds (>50 g/m^2 and <10,000 cSt), where surface dispersants are likely to be effective, indicate that surface hydrocarbons arising from the subsurface release from PYA-01 well (CS-01) are expected to be available for surface dispersant operations throughout the event. Surface dispersant application would only be permitted within the Zone of Application (ZoA) (see Figure 2-6). The ZoA is based on the following criteria:

- 10 km from Commonwealth Marine Parks (excluding 'Multiple Use Zones')
- 10 km from State Marine Parks
- 10 km from Heritage List areas
- >20 m water depth
- 4 km from State Waters
- Within the Mainland Australian EEZ
- Avoiding sensitive reefs and shoals

To remove the surface hydrocarbons would require treatment of the floating hydrocarbons within in the ZoA (see Figure 2-6) that meet the minimum threshold of 50 g/m^2 i.e. 1 km^2 (249 m^3) on day 1 with a weekly peak of 19 km^2 (2,737 m^3) on day 3. This would require 0-2 FWADC able to fly 3-4 sorties per day and 0-1 surface dispersant application vessels on day 1. Woodside's capability meets the need on day 1. For day 3, this would require 2-21 FWADC, 0-4 high-capacity aircraft plus up to 0-4 surface dispersant application vessels. The required aircraft capability is not available within Australia and would not be permitted or feasible under safe simultaneous operations (SIMOPS) procedures. By day 3, Woodside has 2-4 FWADC aircraft, 1 high capacity aircraft and 2-4 surface dispersant application vessels available which would target the thickest parts (BAOAC 4-5) at the leading edge of the surface slick and as close to the spill source as is feasible. This approach aims to mitigate the spread of the oil and maximise dispersant effectiveness thus reducing shoreline accumulations. Within 48 hours, if the oil remains within the ZoA and amenable to dispersant, Woodside has access to 2-4 FWADC and 1 high-capacity aircraft per day for the duration of the spill. Further to this, surface dispersant vessel availability increases to 2 by day 2, 4 by day 3 and 6 by day 6.

Table 6-6: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Release volumes

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	Oil on sea surface												
A	**Total volume of oil released (surface) – m^3**	**13,865**	**13,653**	**13,448**	**13,250**	**13,059**	**12,912**	**12,912**	**82,369**	**75,852**	**70,434**	**241,647**	**152,005**
B	**Total volume of surface oil remaining after weathering (per day) – m^3**	**416**	**410**	**403**	**398**	**392**	**387**	**387**	**2,471**	**2,276**	**2,113**	**7,249**	**4,560**

A – This volume represents the total volume of hydrocarbons released from the identified Worst-Case Credible discharge (CS-01). The total volume for this spill is released over approximately 77 days[2] at a rate of 291-538 m^3 / hr.
B – The PYA-01 Condensate contains a relatively low proportion (~3% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds will persist in the marine environment. The unweathered mixture has a dynamic viscosity of 1.390 *cP. The pour point of the whole oil ensures that it will remain in a liquid state over the annual temperature range observed on the North West Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 48% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); up to a further 19% could evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 30% should evaporate over several days (265 °C < BP < 380 °C).*

Table 6-7: GWF-4 Drilling and Subsea Installation (CS-01) – Treatable hydrocarbons

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
C	**Treatable hydrocarbons following weathering**												
C1	**Total volume of surface oil >50 g/m^2 – m^3**	**249**	**2,223**	**2,737**	**148**	**113**	**0**	**0**	**14,755**	**6,995**	**3,112**	**11,573**	**2,236**
C2	**Total surface area >50 g/m^2– km^2**	**1**	**10**	**19**	**1**	**1**	**0**	**0**	**95**	**45**	**20**	**91**	**16**
	Dispersible hydrocarbons												
C3	**Surface oil volume >50 g/m^2 and viscosity <10,000 cSt – m^3**	**249**	**2,223**	**2,737**	**148**	**113**	**0**	**0**	**14,755**	**6,995**	**3,112**	**11,573**	**2,236**

C1 – indicates the total remaining volume of hydrocarbons in cubic metres (m^3) on the sea surface above 50 g/m^2. Based on the information outlined in Section 2.3.3 regarding surface concentration thresholds, this is the total volume of oil that can be treated by containment and recovery and surface dispersant spraying operations.
C2 – indicates the total surface area in square kilometres (km^2) of hydrocarbons above 50 g/m^2. This is the total surface area of BAOAC 4 and above that can be treated by surface dispersant spraying operations.
C3 – indicates the total remaining volume of hydrocarbons in cubic metres (m^3) on the sea surface above 50 g/m^2 and below 10,000 cSt. This is the total volume of oil that can potentially be treated by surface dispersant spraying operations.
C4 – indicates the total surface area in square kilometres (km^2) of hydrocarbons above 50 g/m^2 and below 10,000 cSt. This is the total surface area of BAOAC 4 and above that can potentially be treated by surface dispersant spraying operations.

D3	Bonn Agreement Oil Appearance Code (BAOAC) 3, 2 and 1 – Sheen												
	Volume of surface oil BAOAC 3, 2 and 1 (<50 g/m^2) – m^3	141	2,619	2,918	178	6	70	116	20,008	8,087	3,876	22,701	0

Surface dispersant operations, guided by monitor and evaluate activities, using vessels and aircraft would target the identified heavy (BAOAC 4 and 5) patches of oil to treat larger volumes and surface areas than containment and recovery. It is subject to a temporal window of opportunity prior to spreading below 50 g/m^2 and/or viscosity increasing above 10,000 cSt. Dispersant application would only be undertaken whilst the oil remains in the ZoA as illustrated in Figure 2-6.

The surface area of thickest oil (BAOAC 4 and 5, and <10,000 cSt) available for surface dispersant application for CS-01 reaches a weekly peak of 19 km^2 on day 3 where surface concentration and viscosity thresholds are met. As noted in Section 6.5.2 above, within 24 hours, Woodside has available 1-2 FWADC aircraft capable of dispersing 28 m^3 to 112 m^3 surface oil and covering an area of 3 km^2 to 8 km^2, plus up to 1 surface dispersant application vessel capable of dispersing 36 m^3 to 72 m^3 oil covering an area of ~1 km^2. Within 48 hours, Woodside has access to 2-4 FWADC and 1 high-capacity aircraft per day for the duration of the spill with a capability of dispersing 57 m^3 to 1,414 m^3 surface oil and covering an area of 6 km^2 to 20 km^2 per day. Further to this, surface dispersant vessel availability increases to 2 by day 2, 4 by day 3 and 6 by day 6. Each vessel is capable of dispersing 36 m^3 to 72 m^3 oil covering an area of ~1 km^2 per day. For the capability available, this is therefore estimated to be 142 m^3 to 840 m^3 covering an area of 4 km^2 to 6 km^2 by day 6. If ongoing dispersant operations were required and feasible, details of capability from week 2 to month 3 are included in Table 6 6.

Surface dispersant application may limit the feasible spatial area and effectiveness of containment and recovery as these operations cannot be conducted under or near the surface dispersant spraying operations for personnel safety reasons. Furthermore, floating hydrocarbons that have been treated with dispersant cannot then be recovered via containment and recovery techniques. In evaluating the response need for offshore operations, surface dispersant application is prioritised for BAOAC 5.

Woodside acknowledges that the current surface dispersant application capability may not treat the entirety of the oil released alone as no single response strategy or even combination of offshore response strategies will treat or remove 100% of the surface hydrocarbons in either surface area or volume. Woodside would require the inclusion of other response techniques to be initiated concurrently and recognises that multiple passes from aircraft and vessels may be required to meet the required dispersant to oil ratio. Woodside is committed to a realistic, scalable response capability that is commensurate to the level of risk and able to be practically implemented and sustained within the logistical constraints of remote areas.

6.5.3 Surface Dispersant Application – Control measure options analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered
Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Dedicated Response Vessel in region (exclusive to Woodside)	The environmental benefits associated with surface dispersant application are described above. The additional environmental benefit obtained from immediate access to this equipment, permitting deployment once conditions become favourable, would result in 50-188 m^3 of oil contacted resulting in approximately 36-140 m^3 of oil treated based on one operation. This is considered to be of minor environmental benefit.	Chartering and equipping additional vessels on standby has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated availability of vessel and FWADC resources which have a similar dispersant delivery capacity and are available from Day 2 to treat the spill. The effectiveness of this control (weather dependency, availability and survivability) is rated as very low.	The cost A($15 m per annum for the Petroleum Activity) and organisational complexity of employing a dedicated response vessel is considered disproportionate to the minor environmental benefit to be realised by implementing this control.	This option is not adopted as it has low effectiveness and cost is disproportionate to the minimal potential environmental benefit.	**No**
Dedicated Response Vessel in region (shared resource)	The environmental benefit would be similar to that described above for Woodside integrated fleet vessels.	Additional resources and capability can be contracted should the need arise, and dispersant build-up is capable of satisfying additional demand.	The cost and complexity of implementing and maintain this alternative control measure is considered high given the predicted effectiveness. Even with consideration of shared costs, the minor benefit of this control measure does not justify the cost.	This option is not adopted as the complexity and cost are disproportionate to the minimal potential environmental benefit.	**No**

6.5.3.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Lease/purchase additional spray systems and/or dispersant stocks (based at Exmouth/ Dampier)	Purchase of additional system(s) and/or dispersant stocks would not provide a significant environmental benefit compared to the current capability in place.	Time to set up and mobilise a marine charter vessel is ~10 days, at which point existing surface dispersant application systems are available for loading onto vessels. Adding additional spray systems would allow for extra surface dispersant application capacity but is unlikely to reduce deployment times for this strategy.	For the WCCS, additional surface dispersant (vessel) spray systems and large quantities of dispersant are already available through AMOSC and OSRL and agreements with AMSA therefore the cost is considered disproportionate to the minor benefit gained.	This option is not adopted as the current capability meets the need.	**No**
Train additional Woodside personnel in Exmouth to coordinate vessel dispersant application	Limited environmental benefit to be gained by training additional personnel.	Current capability meets need. Woodside has a pool of trained, competent offshore responders / team leaders at strategic locations to ensure timely and sustainable response. Additional personnel are available through current contracts with AMOSC and OSRL and agreements with AMSA. Marine standards & guidelines ensure vessel masters are competent for their roles. Regular audits of oil spill response organisations ensure training and competency is maintained.	Minor additional cost regarding training and maintenance of competency.	This option is not adopted as the current capability meets the need.	**No**

6.5.3.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Locate vessel spraying equipment on additional in-field support vessel(s)	This option may achieve minor incremental improvements in surface oil and residual oil volumes similar to those described for integrated fleet vessels. However, given the likely vessel re-supply times involved to/from the offshore spill location, this	Woodside currently has dispersant spray systems pre-located on vessels used in-field during cargo transfer activities. Consideration of equipping additional vessels with similar equipment was made but is not being carried through to implementation.	The option is reasonably practicable and the cost (charter and operational/maintenance costs) is expected to be moderate, particularly when compared with the ability to rapidly commence spraying operations, subject to safety considerations	This option is not adopted as the current capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 	option is unlikely to realise material environmental benefits additional the capability selected.		but Woodside considers the existing control measures to be sufficient for the need.		

6.5.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.6 Containment and Recovery – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.6. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Containment and Recovery

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours/7 days. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

Table 6-9: Existing Capability – Containment and Recovery

E	Existing Capability													
E3	Existing level of containment and recovery capability available (m^3 recovered per day)													
Existing capability – Containment and Recovery		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7		Week 2	Week 3	Week 4		Month 2	Month 3
	By Volume – m^3														
E3.1	Predicted oil recovered by containment and recovery (lower) – m^3	0	23	23	34	45	56	68		473	630	630		2520	2520
E3.2	Predicted oil recovered by containment and recovery (upper) – m^3	68	135	203	270	405	405	405		3915	4725	4725		18,900	18,900
	By Surface Area– km^2														
E3.3	Predicted surface area treated by containment and recovery (lower) – km^2	0	2	2	3	4	5	6		42	56	56		224	224
E3.4	Predicted surface area treated by containment and recovery (upper) – km^2	1	2	3	4	6	6	6		58	70	70		280	280

For E3 – Containment and Recovery, the range of figures shows the predicted recovery rates of surface oil at 50 g/m^2 for the lower figures and 200 g/m^2 for the upper figures using conventional booming systems in a J or U configuration with an encounter rate of 25-50% surface oil meaning 75%-50% of the area within the booming system has surface oil that is not within threshold concentrations <50 g/m^2).

6.6.2 Response Planning: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)

The deterministic modelling run showing the minimum time to commencement of oil accumulation at any shoreline receptor (at threshold of 100 g/m^2) indicates that first shoreline impact is predicted to occur at Montebello Islands including Montebello Islands MP and Hermite Island on day 15 (15 m^3). The deterministic run for the cumulative oil volume accumulated across all shoreline receptors (at concentrations in excess of 100 g/m^2) predicts shoreline contact of 42 m^3 at Muiron Islands and Muiron MMA on day 27.5.

Modelling results at defined response thresholds (>50 g/m^2), where containment and recovery is likely to be effective, indicate that the surface area available for feasible response operations will reach a weekly peak of 19 km^2 on day 3. Viscosity alone is unlikely to prevent containment and recovery operations, but very high viscosity combined with low surface concentrations (<50 gm^2) are unlikely to continue to provide a net environmental benefit. As this spreading and weathering occur, there will be limitations on available surface area that can be treated as shown in Section 5.6

Table 6-10: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Release volumes

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Containment and Recovery		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7		Week 2	Week 3	Week 4		Month 2	Month 3
	Oil on sea surface														
A	Total volume of oil released (surface) – m^3	13,865	13,653	13,448	13,250	13,059	12,912	12,912		82,369	75,852	70,434		241,647	152,005
B	Total volume of surface oil remaining after weathering (per day) – m^3	416	410	403	398	392	387	387		2,471	2,276	2,113		7,249	4,560

A – This volume represents the total volume of hydrocarbons released from the identified Worst-Case Credible discharge (CS-01). The total volume for this spill is released over approximately 77 days[2] at a rate of 291-538 m^3 / hr
B – The PYA-01 Condensate contains a relatively low proportion (~3% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds will persist in the marine environment. The unweathered mixture has a dynamic viscosity of 1.390 *cP. The pour point of the whole oil ensures that it will remain in a liquid state over the annual temperature range observed on the North West Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 48% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); up to a further 19% could evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 30% should evaporate over several days (265 °C < BP < 380 °C).*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 6-11: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Treatable hydrocarbons

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
C	Treatable hydrocarbons following weathering												
C1	Total volume of surface oil >50 g/m^2 – m^3	249	2,223	2,737	148	113	0	0	14,755	6,995	3,112	11,573	2,236
C2	Total surface area >50 g/m^2– km^2	1	10	19	1	1	0	0	95	45	20	91	16

C1 – indicates the total remaining volume of hydrocarbons in cubic metres (m^3) on the sea surface above 50 g/m^2. Based on the information outlined in Section 2.3.3 regarding surface concentration thresholds, this is the total volume of oil that can be treated by containment and recovery and surface dispersant spraying operations.
C2 – indicates the total surface area in square kilometres (km^2) of hydrocarbons above 50 g/m^2. This is the total surface area of BAOAC 4 and above that can be treated by containment and recovery and surface dispersant spraying operations.

6.6.2.1 Response Planning Need: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Summary

Table 6-12: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Response Planning Need

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
D	Response Planning Need												
D1	Bonn Agreement Oil Appearance Code (BAOAC) 5 – Continuous True oil colour												
	Surface area of BAOAC 5 (>200 g/m^2) – km^2	1	0	0	0	0	0	0	0	0	0	0	0
	Volume of surface oil BAOAC 5 (>200 g/m^2) – m^3	249	0	0	0	0	0	0	0	0	0	0	0
D2	Bonn Agreement Oil Appearance Code (BAOAC) 4 – Discontinuous True oil colour												
	Surface area of BAOAC 4 (50-200 g/m^2) – km^2	0	10	19	1	1	0	0	95	45	20	91	16
	Volume of surface oil BAOAC 4 (50-200 g/m^2) – m^3	0	2,223	2,737	148	113	0	0	14,755	6,995	3,112	11,573	2,236
D3	Bonn Agreement Oil Appearance Code (BAOAC) 3, 2 and 1 – Sheen												
	Volume of surface oil BAOAC 3, 2 and 1 (<50 g/m^2) – m^3	141	2,619	2,918	178	6	70	116	20,008	8,087	3,876	22,701	0

Offshore response operations will always be guided by monitor and evaluate and operational monitoring activities to target the thickest part of the slick, typically BAOAC 5 – continuous true oil colour with a surface oil concentration >200 g/m^2 and BAOAC 4 – discontinuous true oil colour with a surface oil concentration between 50 and 200 g/m^2. For a surface release, the thickest oil is typically in the leading edge of the slick, driven by wind and currents. As the spill continues to weather and spread over a number of days and weeks, the surface concentration and surface area of continuous oil colour spreads and reduces to discontinuous true oil colour and finally sheen as shown above.

The response need is calculated from the surface area and volume of treatable hydrocarbons following weathering as outlined in Table 6-11. While surface dispersant operations target the leading edge of the slick where surface concentration and viscosity thresholds are met, containment and recovery operations would be deployed behind the surface dispersant application area to target discrete patches of thick oil at BAOAC 4 and 5 and remaining oil that is not dispersed.

The surface area of thickest oil (BAOAC 4 and 5) available for containment and recovery reaches a weekly peak of approximately 19 km^2 on day 3 only where surface concentration thresholds are met. Within 24 hours, Woodside has available 1 containment and recovery operation capable of recovering up to 68 m^3 surface oil and covering an area of 1 km^2. Availability of containment and recovery operations increases to 2 by day 2, 3 by day 3, 4 by day 4, and 6 by day 5. Thus, by day 5, the recovery capacity is estimated to be up to 405 m^3 covering an area of 6 km^2. If ongoing containment and recovery operations were required and feasible, details of capability from week 2 to month 3 are included in Table 6-9.

Woodside acknowledges that the current containment and recovery capability may not treat the entirety of the oil released alone as no single response strategy or even combination of offshore response strategies will treat or remove 100% of the surface hydrocarbons in either surface area or volume. Woodside would require the inclusion of other response techniques to be initiated concurrently and recognises that multiple passes from vessels may be required to recover a greater proportion of the oil. Woodside is committed to a realistic, scalable response capability that is commensurate to the level of risk and able to be practically implemented and sustained within the logistical constraints of remote areas.

6.6.3 Containment and Recovery – Control Measure Options Analysis

6.6.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Dedicated Response Vessel in region (exclusive to Woodside)	The environmental benefits associated with containment and recovery are described above. The additional environmental benefit obtained from immediate access to this equipment, permitting deployment as soon as conditions became favourable, would result in a negligible environmental benefit – 11.25-67.5 m^3 of oil recovered per operating unit per day.	Chartering and equipping additional vessels on standby has been considered. The option is reasonably practicable but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated effectiveness of dispersant operations to treat the spill which are available from Day 2. The effectiveness of this control (encounter rate, weather dependency, availability) is rated as very low.	The cost (A$15 m per annum for the Petroleum Activity) and organisational complexity of employing a dedicated response vessel is considered disproportionate to the insignificant environmental benefit to be realised by implementing this control.	This option is not adopted as it has low effectiveness and cost is disproportionate to the minimal potential environmental benefit.	**No**
Dedicated Response Vessel in region (shared resource)	The environmental benefit would be similar to that described above for Woodside integrated fleet vessels.	Additional containment and recovery resources and capability can be contracted should the need arise.	The cost and complexity of implementing and maintain this alternative control measure is considered high given the predicted effectiveness. Even with consideration of shared costs, the minor benefit of this control measure does not justify the cost.	This option is not adopted as it has low effectiveness and cost is disproportionate to the minimal potential environmental benefit.	**No**
Regional oil spill response contractor	This option may achieve minor incremental improvements in surface oil and residual oil volumes similar to those described for integrated fleet vessels. However, given the likely vessel transit times involved to/from the offshore spill location, this option is unlikely to realise material environmental benefits additional the capability selected.	No current private response contracting capability exists that would significantly improve response timing or effectiveness in the Dampier or Exmouth regions.	N/A – not currently feasible	This option is not adopted as it is not currently feasible.	**No**

6.6.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Train additional Woodside personnel in Exmouth to coordinate containment and recovery operations	Limited environmental benefit to be gained by training additional personnel as the number of operations will be governed by the availability of response vessels.	Current capability meets need. Woodside has a pool of trained, competent offshore responders / team leaders at strategic locations to ensure timely and sustainable response. Additional personnel are available through current contracts with AMOSC and OSRL and agreements with AMSA. Marine standards & guidelines ensure vessel masters are competent for their roles. Regular audits of oil spill response organisations ensure training and competency is maintained.	Minor additional cost regarding training and maintenance of competency.	This option is not adopted as the current capability meets the need.	**No**

6.6.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Prioritise rapid sweep systems (NOFI Buster series, Desmi Speed Sweep, etc.) for mobilisation	Although each rapid sweep containment and recovery operation could remove an additional 10-45 m^3 per operation per day, the environmental benefit of containment and recovery as a response technique is minor. This response technique is not considered to be as effective as surface dispersant	Rapid sweep systems allow containment and recovery operations to be undertaken at speeds of up to 3 knots. This allows for greater encounter rates and surface coverage. AMOSC has recently purchased a Speed Sweep system and a number of	Additional costs for prioritising rapid sweep systems are negligible	Although containment and recovery remains a low-efficiency response technique, this control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**

from service providers	application to prevent hydrocarbons reaching the shore.	NOFI systems are available through Mutual Aid arrangements.			
Prioritise active booming systems (Ro-skim, etc.) for mobilisation from service providers	Although each active booming system could remove an additional 10-45 m^3 per operation per day, the environmental benefit of containment and recovery as a response technique is minor. This response technique is not considered to be as effective as surface dispersant application to prevent hydrocarbons reaching the shore.	Active booming systems allow containment and recovery operations without the need for an additional skimming system. This allows for greater effectiveness and continued skimming operations. Active booming systems are available through OSRL and Mutual Aid arrangements and would be prioritised for mobilisation.	Additional costs for prioritising active booming systems are negligible	Although containment and recovery remains a low-efficiency response technique, this control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**
Pre-position additional containment and recovery equipment (Exmouth)	It is unlikely that faster mobilisation and deployment from Exmouth would significantly increase response effectiveness or removal of oil to create an increased environmental benefit	Facilities at Exmouth are currently limited by tides and draft for the loading and unloading of vessels with heavy plant and equipment. Access to the Navy Pier to provide an additional loading location is subject to Defence Force approval and cannot be relied upon for rapid approval in the event of an oil spill.	Limited additional cost considerations.	This option is not adopted as the complexity is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	**No**
Re-locate containment and recovery equipment on in-field vessels	The additional environmental benefit obtained from faster mobilisation and deployment would be limited by safety considerations during the initial period following the release. Once operations were considered safe, the vessels would increase recovery capacity by 11.25-67.5 m^3 per day per operation. The limited oil treatment of containment and recovery and expected effectiveness of dispersant application from vessels indicates the preference would be for greater surface dispersant application capability.	Operations close to the release location are unlikely to be feasible during the initial period due to the uncertainty of the situation and potential safety impacts on personnel. Vessels may require time to return to port and load equipment, fuel etc. to allow response duration to be the maximum possible once deployed. Shortening the timeframes for vessel availability would require equipment to be pre-positioned on-board vessels.	The cost and organisational complexity of employing two dedicated response vessels (approximately A$15 m per year per vessel) is considered disproportionate to the limited environmental benefit to be realised by adopting this control	This option is not adopted as the cost is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	**No**
Purchase or pre-position larger skimmers	The environmental benefit of containment and recovery for the loss of well control scenario is minor. This response strategy is not considered to be as effective as surface dispersant application to prevent hydrocarbons reaching the shore.	Larger systems such as the Desmi Octopus or Transrec with >200 m^3 per hour capacity, could improve recovery rates, however are not readily available in Australia and not easily compatible with booming, waste and hydraulic power systems. If required and deemed to be of benefit, these systems are available through Service Providers such as OSRL.	Cost of purchasing Octopus system is A$600,000 plus additional transport, training and commissioning costs and ongoing maintenance costs. Cost for pre-positioning in Australia for the life of the asset/activity is greater than the purchase costs.	This option is not adopted as the cost is disproportionate to the minimal potential environmental benefit due to the low efficiency of containment and recovery as a response technique.	**No**

6.6.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - prioritise rapid sweep systems (NOFI Buster series, Desmi Speed Sweep, etc.) for mobilisation from service providers
  - prioritise active booming systems (Ro-skim, etc.) for mobilisation from service providers
- improved
  - none selected

6.7 Shoreline Protection and Deflection – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.7. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Shoreline Protection and Deflection

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.7.2 Response Planning: GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01) – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of RPAs from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until monitor and evaluate and operational monitoring activities confirm that the locations are no longer at risk. Woodside has identified the RPAs from deterministic modelling results provided from specific scenarios.

The control measures selected provide capability to commence mobilisation of shoreline protection equipment within 24 hours (if required). For CS-01, the deterministic modelling run demonstrating the minimum time to shoreline contact at a threshold of >100 g/m^2 and the run with the greatest number of locations with accumulations at >100 g/m^2 (both Q3, Run 12) has been selected for response planning and are combined in Table 6-13 below. Initial contact is predicted within 15 days at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3). No shoreline contact is predicted for CS-03 or CS-04 and thus the capability assessment is based upon CS-01 only..

Tactical response plans exist for many of the RPAs identified. The plans identify values and sensitivities that would be protected at location. Modelling does not predict that all priority protection shorelines will be at risk of contact at the same time. Therefore, to allow for the best use of available shoreline protection and deflection resources, monitor and evaluate and operational monitoring activities will inform the response, targeting RPAs where contact is predicted above response threshold levels.

below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed).

Table 6-13: Response Planning – Shoreline Protection and Deflection (CS-01)

GWF-4 Drilling and Subsea Installation loss of well containment scenario (CS-01)		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	Oil on shoreline (from deterministic modelling) m^3	0	0	0	0	0	0	0	0	17	42	17	0
A	Capability Required												
A1	Number of RPAs contacted (> 100 g/m^2) - GWF-4 Drilling and Subsea Installation LOWC	0	0	0	0	0	0	0	0	2	1	1	0
B	Capability Available (operations per day)												
B1	SPD operations available – per day (lower)	0	15	15	20	20	20	20	105	105	105	560	560
B2	SPD operations available – per day (upper)	0	15	15	20	20	20	20	140	140	140	560	560
C	Capability Gap (operations per day)												
C1	SPD operations gap – per day (lower)	0	0	0	0	0	0	0	0	0	0	0	0
C2	SPD operations gap – per day (upper)	0	0	0	0	0	0	0	0	0	0	0	0

A1 – the number of Response Protection Areas contacted by surface hydrocarbons above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline protection and deflection operations available (based on response planning assumptions in Section 5.7),
C1 and C2 – the gap between the upper and lower number of shoreline protection and deflection operations required in A1 compared to the operations available in B1 and B2

Table 6-14: Indicative Tactical response plan, aims and methods for identified RPAs

Tactical Response Plan	Response aims and methods
Pilbara Islands – Southern Island Group	**First Response objective:** Undertake Monitor and Evaluate strategy – Shoreline assessment techniques to be undertaken. **Second Response objective:** Pre-clean of the beach area using rakes and shovels, move any debris on the beach to above the high tide area, above the reach of any floating oil. **Third Response objective:** Shoreline Protection - prevent oil from moving into key sensitive areas within the gulf area by deployment of booms. Deflection & containment methods would be undertaken. **Fourth Response objective:** Recovery of collected oil where possible through the use of skimming systems. Although boom formations will deflect most of the spilt hydrocarbon away from sensitive areas, it may be necessary to collect and remove floating oil from additional boom formations to prevent the spread of oil down the coastline into the Gulf. **Fifth Response objective:** Clean-up of oiled shoreline using manual clean up techniques, predominantly rakes and shovels, with flushing and vacuum skimming if appropriate and required.
Muiron Islands	**First response aim:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident **Second response aim**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately **Third response aim**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate **Fourth response aim**: Collection and specialist cleaning/rehabilitation of oiled wildlife
Montebello Island Champagne Bay and Chippendale channel TRP	**First response aim**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response aim**: Protection of Champagne Bay. Prevent hydrocarbon passing into the inner reaches of Champagne Bay through use of shoreline booms at Chippendale Channel and the south-western sides of Champagne Bay. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions. **Third response aim**: Collection and specialist cleaning/rehabilitation of oiled wildlife.
Montebello Island - Claret Bay TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective**: Protection of mangrove within Claret Bay through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions. **Third response objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate.

Tactical Response Plan	Response aims and methods
Montebello Island - Hermite/Delta Island Channel TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective:** Protection of Mansion Bay. Prevent hydrocarbon passing through the channel into Mansion Bay with the use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.
Montebello Island - Hock Bay TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective**: Prevent hydrocarbon passing into the inner reaches of Stephenson Channel through use of shoreline booms at Hock Bay. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.
Montebello Island - North and Kelvin Channel TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective**: Prevent hydrocarbon passing through North Channel and Kelvin Channel into the inner areas of the Montebello Islands through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions. **Third response objective**: Recovery of floating oil where possible through the use of skimming systems and other appropriate recovery devices. It is necessary to collect and remove floating oil at sea to reduce shoreline impact.
Montebello Island - Sherry Lagoon Entrance TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective**: Prevent hydrocarbon passing into Sherry Lagoon through use of shoreline booms at the entrance. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.
Montebello Island – Stephenson Channel Nth TRP	**First response objective**: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas **Second response objective**: Prevent hydrocarbon passing into the inner reaches of Stephenson Channel through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions. **Third response objective**: Recovery of floating oil where possible through the use of skimming systems and other appropriate recovery devices. It is necessary to collect and remove floating oil at sea to reduce shoreline impact.

Tactical Response Plan	Response aims and methods
Jurabi to Lighthouse Beaches Exmouth	**First response objective:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas **Second response objective**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately **Third response objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate
Mangrove Bay	**First response objective:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas **Second response objective**: Protection of Mangrove Bay Lagoon. Prevent hydrocarbons ingress to lagoons through use of shore sealing booms. Complete northern lagoon first, then southern if required – depending on beach topography and tidal cycle. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions **Third response objective**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately **Fourth response objective**: Recovery of floating oil where possible through the use of skimming systems and other appropriate recovery devices. Although boom formations will deflect most of the spilt hydrocarbon away from sensitive areas, it may be necessary to collect and remove floating oil from additional boom formations to prevent the spreading of oil down a coastline **Fifth response objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate
Turquoise Bay	**First response objective:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas **Second response objective**: Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line and then segregate appropriately **Third response objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate
Yardie Creek	**First response aim:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas **Second response aim**: Protection of Yardie Creek entrance through the deployment of protection booming formations. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions **Third response aim:** Pre-clean of potential impact areas (if time allows) using rakes and shovels to move any debris above the high tide line along the beach and then segregate appropriately

Tactical Response Plan	Response aims and methods
	Fourth response aim: Recovery of floating oil at Yardie Creek entrance where possible through the use of skimming systems and other appropriate recovery devices **Fifth response aim:** Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate **Sixth response aim**: Collection and specialist cleaning/rehabilitation of oiled wildlife

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

6.7.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.7.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Pre-position equipment at Response Protection Areas (RPAs)	Additional environmental benefit of having equipment prepositioned is considered minor. Equipment is currently available to protect RPAs and additional shorelines, within estimated minimum times until shoreline contact at RPAs, enabling mobilisation of the selected delivery options.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost to preposition protection/ deflection packages at each site of potential impact would be approx. A$6,100 per package per day.	This option is not adopted as the existing capability meets the need.	**No**

6.7.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Supplemented stockpiles of equipment in Exmouth to protect additional shorelines	Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary. A reduction in environmental consequence from a 'B' rating (serious long-term impacts) is unlikely to be realised as a result of having more equipment available locally.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment in Exmouth.	Total cost for purchase supplemental protection and deflection equipment would be approximately. A$455,000 per package.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSRO's (OSRL/AMOSC) to manage other responders.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

		Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.			

6.7.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 15 (CS-01), Woodside considers that there is sufficient time for deployment of protection and deflection operations prior to impact.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days. Hydrocarbons are not predicted to accumulate at threshold until day 15 at Montebello Islands including Montebello Islands MP and Hermite Island (CS-01) therefore allowing enough time to re-locate existing equipment, personnel and other resources to the most appropriate areas.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	**No**

6.7.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.8 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.8. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Shoreline Clean-up

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.8.2 Response planning: GWF-4 Drilling and Subsea Installation – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the Petroleum Activity. The control measures selected provide capability to commence mobilisation of shoreline protection equipment within 24 hours (if required).

For CS-01, the deterministic modelling run demonstrating the minimum time to shoreline contact at a threshold of >100 g/m^2 and the run with the greatest number of locations with accumulations at >100 g/m^2 (both Q3_12) has been selected for response planning and the results are detailed in Table 6-15 below. Initial contact is predicted within 15 days at Montebello Islands including Montebello Islands MP and Hermite Island (15 m^3) with ongoing accumulation over the following days, Woodside is satisfied that the current capability is managing risks and impacts to ALARP. The full list of RPAs predicted to be contacted by oil is detailed in Table 3-1 and relevant Tactical Response Plans available for identified RPAs are included in Table 6-14.

The scale of the shoreline clean-up will depend on the success of other techniques deployed offshore and nearshore that endeavour to prevent shoreline oiling. Further, the potential remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in Exmouth to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in Exmouth, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Table 6-15 below outlines the capability required (volume of oil on the shoreline) against the capability available (number of shoreline clean-up operations that can be mobilised and deployed). This capability is based upon Woodside's access to local response personnel and equipment. In the event of a protracted or worst-case event, Woodside has access to national and international response personnel and equipment which would be scaled to meet the response need. These volumes assume that no offshore mitigations have been applied.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.8.3.

Table 6-15: Response Planning – Shoreline Clean-up

	Shoreline Clean-up (Phase 2)	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
	Oil on shoreline (from deterministic modelling) m^3													
	Shoreline accumulation (above 100 g/m^2) - m^3	0	0	0	0	0	0	0	0	17	42	17	0	0
	Oil remaining following response operations - m^3	0	0	0	0	0	0	0	0	0	0	0	0	0
A	**Capability Required (number of operations)**													
A1	SCU operations required (lower)	0	0	0	0	0	0	0	0	2	4	2	0	0
A2	SCU operations required (upper)	0	0	0	0	0	0	0	0	2	6	9	0	0
B	**Capability Available (number of operations)**													
B1	SCU operations available - Stage 2 - Manual (lower)	0	15	15	20	20	20	20	105	105	105	560	560	0
B2	SCU operations available - Stage 2 - Manual (upper)	0	15	15	20	20	20	20	140	140	140	560	560	0
C	**Capability Gap**													
C1	SCU operations gap (lower)	0	0	0	0	0	0	0	0	0	0	0	0	0
C2	SCU operations gap (upper)	0	0	0	0	0	0	0	0	0	0	0	0	0

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.8),
C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.8.3 Shoreline Clean-up – Control measure options analysis

6.8.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.8.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional trained personnel available	The level of training and competency of the response personnel ensures the shoreline clean-up operation is delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety brief prior to commencing operations.	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will ensure there is no increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 x Trained Supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including On-Scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to ensure an efficient shoreline clean-up. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors	Additional Specialist Personnel would cost A$2,000 per person per day.	This option is not adopted as the existing capability meets the need.	**No**

6.8.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster response/ mobilisation time	Given modelling does not predict floating or shoreline impacts at threshold until day 15 (CS-01), Woodside considers that there is sufficient time for	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial shoreline clean-up	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 	deployment of protection and deflection operations prior to impact.	response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days. Hydrocarbons are not predicted to accumulate at threshold until day 15 at Montebello Islands including Montebello Islands MP and Hermite Island (CS-01) therefore allowing enough time to re-locate existing equipment, personnel and other resources to the most appropriate areas.			

6.8.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.9 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.9. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.9.1 Existing Capability – Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.9.2 Oiled Wildlife Response - Control Measure Options Analysis

6.9.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	**No**

6.9.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements ensure that these resources can be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel by Day 3. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response threshold concentrations (>10 g/m^2) with offshore waters is expected from day one (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Additionally, the remote offshore location of the release site, with an earliest impact on day 12, provides sufficient opportunity for the ongoing monitoring and surveillance operations to inform the scale of the response. Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by monitor and evaluate. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1,700 per operational site per day.	This option is not adopted as the existing capability meets the need.	**No**
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas.	Current numbers meet the needs required and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending	Additional wildlife response personnel cost A$2,000 per person per day	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

	The potential environmental benefit of training additional personnel is expected to be low.	on the scale of the event and the impact to wildlife and maybe sourced via existing contracts with OSROs. Materials for holding facilities, portable pools, enclosures and rehabilitation areas would be sourced as required.			

6.9.2.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster mobilisation time for wildlife response	Response time is limited by specialist personnel mobilisation time. Current timing is sufficient for expected first shoreline contact. This control measure provides increased effectiveness through faster mobilisation of specialists. However, no significant net environmental benefit is expected due to shoreline stranding times.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, given the effectiveness of an oiled wildlife response is expected to be low, an earlier response would provide a marginal increase in environmental benefit.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need.	**No**

6.9.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

6.10 Waste Management – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5.10. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.10.1 Existing Capability – Waste Management

Woodside's exiting level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.10.2 Waste Management - Control Measure Options Analysis

6.10.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.10.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Veolia's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with OSRL. Existing arrangements meet identified need for the Petroleum Activity.	Cost for increased waste disposal capability would be approx. A$1,300 per m^3. Cost for increased onshore temporary waste storage capability would be approx. A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	**No**

6.10.2.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted as the existing capability meets the need.	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

	and transport will allow continuous response operations to occur. This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.				

6.10.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.11 Operational and Scientific Monitoring – ALARP Assessment

Alternative, additional and improved options have been identified and assessed against the base OSM capability described in Section 5.11 and the Woodside OSM-BIP with those that have been selected for implementation which are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.11.1 Existing Capability – Operational and Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitations that are beyond Woodside's direct control.

6.11.2 Operational and Scientific Monitoring – Control Measure Options Analysis

6.11.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Analytical laboratory facilities closer to the likely spill affected area	The environmental consideration of having access to suitable laboratory facilities in Karratha to carry out the hydrocarbon analysis would provide faster turnaround in reporting of results only by a matter of days (as per the time to transport samples to laboratories).	SM01 water quality monitoring requires water samples to be transported to NATA-rated laboratories in Perth or over to the East coast. Consider the benefit of laboratory access and transportation times to deliver water samples and complete lab analysis. There is a time lag from collection of water samples to being in receipt of results and confirming hydrocarbon contact to sensitive receptors.	Laboratory facilities and staff available at locations closer to the spill affected area can reduce reporting times only to a moderate degree (days) with associated high costs of maintaining capability do not improve the environmental benefit.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	**No**
Dedicated contracted SMP vessel (exclusive to Woodside)	Would provide faster mobilisation time of scientific monitoring resources, however, the environmental benefit associated with faster mobilisation time would be minor compared to selected options.	Chartering and equipping additional vessels on standby for scientific monitoring has been considered. The option is reasonably practicable, but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated availability of vessels and resources within in the required timeframes. The selected delivery provides capability to meet the scientific monitoring objectives, including collection of pre-emptive data where baseline knowledge gaps are identified for receptor locations where spill predictions of time to contact are >10 days.	The cost and organisational complexity of employing a dedicated response vessel is considered disproportionate to the potential environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	**No**

6.11.2.2 Additional control measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position a team of trained scientific monitoring personnel on standby in Dampier	Pre-positioning a team of trained scientific monitoring personnel closer to the spill location would result in quicker mobilisation times for one or two priority OMPs or SMPs to be implemented.	A trained team of scientific monitoring personnel positioned in Dampier could result in a more rapid deployment of first strike monitoring. However, this option is reliant on suitable vessels being readily available in Dampier and not requiring relocation from nearby ports or adjacent offshore locations.	The costs of having a small team of trained scientific monitoring personnel available on standby in Dampier would be in excess of $3-4M / annum and would be an associated cost to the activity whether there was a spill or not.	The cost of maintaining a team of trained scientific monitoring personnel on standby in Dampier is considered disproportionate, as multiple teams of trained personnel are required to implement multiple OMPs and SMPs. It is considered more cost effective and feasible to pre-position first strike sampling kits on support vessels (see below).	**No**
Contract additional OSM Service Providers to increase availability of monitoring personnel in the first 2 weeks of the spill	The availability of additional monitoring personnel could theoretically increase the number of receptors and locations able to be monitored, however, the ability to deploy personnel would be subject to a range of feasibility considerations	This option has been considered and evaluated; however, it has been discounted on the basis that deploying a significantly larger number of monitoring teams concurrently with response operations would introduce additional safety, environmental, and operational risks. The current resource assessment within ANNEX C: GWF-4 Drilling and Subsea Installation OSM Activity Specific Assessmentindicates that up to 27 monitoring teams	Cost to contract an additional OSM Service Provider.	The option to contract an additional OSM Service Provider to increase the number of contracted monitoring teams during the initial stages of the spill response has been assessed and found not to be reasonably practicable due to the elevated safety and environmental risks associated with SIMOPs, including vessel collisions, anchoring impacts, and waste discharges. These risks outweigh the marginal benefit of increased early-stage monitoring	**No**

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
		may be required during the initial two weeks of the response. Expanding this effort further by engaging additional contracted monitoring teams would likely result in increased simultaneous operations (SIMOPs), elevating the potential for vessel interactions, collision risks, anchoring impacts, and waste discharges, thereby increasing the overall risk profile. To ensure risk remains ALARP, a staged and scalable approach to resourcing has been adopted. Should additional monitoring capacity be required from week 3 onwards, this will be identified early through ongoing review of monitor and evaluate activities and existing monitoring efforts. Woodside will activate additional resourcing via its existing contract with the OSM Services Provider, thereby ensuring a streamlined and controlled expansion of effort. By this stage of the response, operational response activities are expected to have stabilised, reducing the likelihood and severity of SIMOPs-related risks. In addition, efficiencies may be gained by reallocating existing monitoring teams to other priority receptors where monitoring is still required, particularly in cases where termination criteria have been met at initial locations. This dynamic resourcing approach ensures that additional personnel are only deployed when necessary, thereby supporting both environmental and safety performance outcomes and maintaining ALARP principles throughout the monitoring program.		coverage, particularly given the scale of the existing response and monitoring deployment already planned.	
Purchase water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection	The availability of first strike water quality / hydrocarbon sampling kits on nearby support vessels (and an accompanying technical procedure for sample collection) will provide an opportunity for more rapid initial measurements of hydrocarbon properties and concentrations. This information will provide important initial situational awareness information that will aid decision making in both monitoring and response efforts.	This control measure will improve the availability and timeframe for first strike water quality sampling.	Implementing this additional control measure will involve time and effort to source and supply first strike sampling kits to the selected supply vessels. There will also be employee time involved in developing and conducting training to vessel crews on the technical procedure for sample collection.	Adoption of this control measure will provide an additional and quicker opportunity for first strike water quality sampling, resulting in improved situational awareness for decision making in monitoring and response teams.	**Yes**
Modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)	Initial aerial surveillance provides important information for decision making in response operations, but can also provide important initial environmental monitoring data. Amending the Woodside Aerial Surveillance Observer Log to include the ability to report on location, presence and type of fauna could assist in a more rapid, effective deployment of specialised OMP teams for Marine Fauna Assessment and Oiled Wildlife Response.	This control measure is considered reasonably practicable to implement.	Cost to modify the Aerial Surveillance Observer Log is minimal and is associated with time and effort of existing employees.	Adoption of this control measure is considered to be beneficial as it could assist in more effective and efficient deployment of fauna monitoring and response efforts.	**Yes**
Conduct periodical review of existing baseline data sources across receptors predicted to be contacted within 7 days at the low thresholds and a probability ≥10%	This ensures that receptors with deficient baseline data are identified. This a consideration for initial monitoring prioritisation and the finalisation of each SMP design	This control measure is considered reasonably practicable to implement.	Cost of contract with Service Provider.	Understanding the presence or absence, suitability and quality of baseline data for receptors predicted to be contacted within 7 days, at a probability ≥ 10%, is an important preparatory measure. Understanding which receptors have insufficient baseline data will help quickly guide monitoring prioritisation and the finalisation of each SMP design and whether there is a need to include alternative designs.	**Yes**

This document is protected by copyright. 6.11.2.3 Improved Control Measures considered

Improved Control Measures considered *Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision	A Joint Industry capability provision has considerable benefits, including an improvement to industry OSM standards; improved reliability in accessing specialist personnel; efficiencies and capability growth associated with shared testing and exercising; and greater depth in Monitoring Service Provider (MSP) capability, with a centralised contract coordinating multiple consultancies and MSPs.	This control measure has already been developed by Industry and is considered reasonably practicable to implement.	Cost of annual subscription to OSRL OSM Supplementary Service Agreement	Adopting this control measure involves additional costs, but the benefits of a Joint Industry OSM capability provision outweighs the costs and therefore this additional measure has been accepted.	**Yes**
Determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas	Understanding vessel specification requirements for OSM at priority locations will result in quicker mobilisation times, and more effective monitoring, as correctly equipped vessels will be made available at the commencement the monitoring effort.	This control measure is considered reasonably practicable to implement.	Cost to determine vessel specifications is minimal and is associated with time and effort of existing employees.	This control measure would result in the correct vessels being mobilised for monitoring personnel and result in quicker implementation of monitoring.	**Yes**

6.11.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the Petroleum Activity:

- alternative
  - none selected
- additional
  - purchase first strike water quality / hydrocarbon sampling kits for pre-positioning on nearby support vessels and develop technical procedure for sample collection
  - modify Woodside Aerial Surveillance Observer Log to enable observers to record marine fauna sightings (presence and type of fauna)
  - conduct periodical review of existing baseline data sources for receptors predicted to be contacted within 7 days, at the low thresholds and a probability ≥ 10%.
- improved
  - adoption of the OSRL OSM Supplementary Service Agreement for OSM capability provision
  - determine the required specifications for suitable monitoring vessels, including specialised equipment for OMPs and SMPs (i.e. hiab) and the requirement of shallow draft vessels to access offshore islands and priority monitoring areas.

7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment to ensure these impacts and risks have been considered and specific measures are put in place to continually review and manage these further impacts and risks to ALARP and Acceptable levels. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Refer to the EP for details regarding how these risks are being managed. They are not discussed further in this document.

- Atmospheric emissions
- Routine and non-routine discharges
- Physical presence, proximity to other vessels (shipping and fisheries)
- Routine acoustic emissions vessels
- Lighting for night work/navigational safety
- Invasive marine species
- Collision with marine fauna
- Disturbance to Seabed

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- Drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- Vessel operations and anchoring
- Presence of personnel on the shoreline
- Increase in entrained hydrocarbons
- Toxicity of dispersant
- Human presence (manual cleaning)
- Vegetation cutting
- Additional stress or injury caused to wildlife
- Secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

A number of direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- Temporary increase in total suspended solids (TSS) in the water column;
- Attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation;
- Sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota; and
- Potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated Total Suspended Solids (TSS), changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (i.e. within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

proximity to the well locations with potential for localised spread downstream (depending on the speed of currents throughout the water column and seabed) (IOGP 2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m; 250 m and 1 km distances from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM and non-water based muds (NWBMs, no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the loss of well containment (LOC) event a relief well drilling activity would be responding too).

Vessel operations and anchoring

Typical booms used in containment and recovery operations are designed to float, meaning that fauna capable of diving, such as cetaceans, marine turtles and sea snakes can readily avoid contact with the boom. Impacts to species that inhabit the water column such as sharks, rays and fish are not expected. Additionally, some fauna, such as cetaceans, are likely to detect and avoid the spill area, and are not expected to be present in the proximity of containment and recovery operations.

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Distribution of entrained hydrocarbons

Surface dispersant application in intended to treat floating hydrocarbons, thereby reducing the risk of air breathing marine fauna (e.g. cetaceans, dugongs, marine turtles, seabirds and shorebirds) from becoming oiled. It also has the potential to reduce/eliminate contamination of sensitive intertidal habitats such as mangroves, coral reefs, salt marshes and sandy shores (recreational and tourist areas) through the reduction in shoreline loadings.

Chemical dispersants act to break up hydrocarbons by reducing surface tension between the oil and the surrounding water. Dispersants, whether applied on the surface or subsea, result in the breakup of hydrocarbons into micron-sized droplets, which are easier to disperse throughout the water column. These small, dispersed hydrocarbons droplets are degraded by bacteria due to the increased surface area presented by the small droplets. The application of dispersants can enhance biodegradation and dissolution, reducing the volume of hydrocarbons that have the potential to impact shorelines.

Surface application of dispersants results in the micron-sized droplets being mixed into the upper layer of the water column, usually the first 10 to 20 m, through wave and wind energy. These elevated concentrations of dispersed hydrocarbons within the upper layer of the water column are rapidly diluted through vertical and horizontal mixing. The application of surface dispersants may result in a greater risk that water column and subtidal habitats could be exposed to elevated concentrations of dispersed hydrocarbons.

Toxicity of dispersants

The evaluation of the potential impacts to the receiving environment needs to consider not only the redistribution of hydrocarbons into the water column, but also the potential toxic nature of the dispersant applied and the toxicity effects of dispersed hydrocarbons.

The potential toxicity to the marine environment can be from the chemical/dispersant itself but also chemical dispersion of hydrocarbon can increase the concentration of toxic hydrocarbon compounds in the water column (Anderson et al 2014). Subtidal habitats and communities such as coral reefs, seagrass meadows, plankton,

fish, known spawning grounds and periods of increased reproductive outputs (early life stages of fish and invertebrates i.e. meroplankton) are susceptible to toxic effects of chemically dispersed hydrocarbons.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- Damage to vegetation/habitat to gain access to areas of shoreline oiling;
- Damage or disturbance to wildlife during shoreline surveys;
- Removal of surface layers of intertidal sediments (potential habitat depletion); and
- Excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- Liquids (recovered oil/water mixture), recovered from containment and recovery and shoreline clean-up operations
- Semi-solids/solids (oily solids), collected during containment and recovery and shoreline clean-up operations
- Debris (e.g. seaweed, sand, woods, plastics), collected during containment and recovery and shoreline clean-up operations and oiled wildlife response.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination similar to that described above, impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- Capturing wildlife
- Transporting wildlife
- Stabilisation of wildlife
- Cleaning and rinsing of oiled wildlife
- Rehabilitation (e.g. diet, cage size, housing density)
- Release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to ensure that further injury and the removal of water proofing feathers are managed and mitigated. Finally, during the release phase it's important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- The boom will be monitored and maintained to ensure trapped fauna are released as early as possible, with Containment and Recovery activities occurring in daylight hours only (Performance Standard (PS) 21.1)
- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (PS 21.2, PS 24.1, PS 27.1, PS 40.1)
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 21.3, PS 24.2, PS 27.2, PS 40.2)

Distribution of entrained hydrocarbons

- Surface dispersants will only be applied in the Zone of Application and on BAOAC 4 and 5 oil (PS 17.1)
- Surface dispersant efficacy monitoring will be conducted in accordance with the Woodside OSM-BIP and OM4: Dispersant Effectiveness and Fate Assessment (AEP, 2021) (PS 13.3)
- Subsea dispersant injection efficacy monitoring will be conducted in accordance with the Woodside OSM-BIP and OM4: Dispersant Effectiveness and Fate Assessment (AEP, 2021) (PS 13.2)

Toxicity of dispersants

- OSCA approved dispersants will be prioritised for use (PS 13.1, PS 17.2)

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 27.6, PS 40.5)
- Trained unit leaders brief personnel of the risks prior to operations (PS 27.7, PS 40.6)

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 27.4, PS 40.3)
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 27.3, PS 40.4)

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates (PS 25.4)
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 27.5)
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 33.1).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 31.1).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be clearly disproportionate to the environmental benefit gained from its adoption it has been rejected. Where this is not considered to be the case the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
    - Known, reasonably practicable control measures have been adopted.
    - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
    - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure .
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting all of the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/ impact are deemed acceptable by relevant persons/ organisations are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
    - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans.
    - National Water Quality Management Strategy and supporting guidelines for marine water quality.
    - Conditions of approval set under other legislation.
    - National and international requirements for managing pollution from ships.
    - National biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/ legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

11 GLOSSARY AND ABBREVIATIONS

11.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that it is capable of performing its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform their required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with Petroleum Activity.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the Petroleum Activity.
Dependency	The degree of reliance on other systems in order for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed to ensure they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure has to achieve in order to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident in order to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (WHA, Commonwealth or State marine reserve or park) containing one or more receptor type.
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.

Term	Description / Definition
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥1 g/m^2, dissolved – ≥10 ppb and entrained hydrocarbon concentrations – ≥10 ppb.
Zone of Application	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the Petroleum Activity for CS-01, CS-02, CS-03 and CS-04. The complete list of potential receptor locations within the EMBA within the Petroleum Activity is included in Section 4 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the Petroleum Activity identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>10 g/m^2)
- Surface contact (>50 g/m^2)
- Shoreline accumulation (>100 g/m^2) at any time

The NEBA assessment outcomes are shown below. The GWF-4 Drilling and Subsea Installation preoperational NEBAs contains the full assessments.

Table A-1: NEBA assessment technique recommendations for a loss of well containment (CS-01 and CS-02)

Receptor	Monitor and Evaluate	Source Control	Dispersant application: sub-sea	Dispersant application: >20 m water depth and >10 km from shore/ reefs	In situ burning	Mechanical dispersion	Containment and Recovery	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled Wildlife Response

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact[14]	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	**3P**	**Major**	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	**Moderate**	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A

	1P	**Minor**	Likely to prevent impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors such as:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Decrease in duration of impact by several seasons (< 1 year)	N/A

	0	**Non-mitigated spill impact**	**No detectable difference to unmitigated spill scenario.**		
Negative	**1N**	**Minor**	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	**Moderate**	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))

	3N	**Major**	Likely to result in impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors resulting in either:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

[14] NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: MONITOR AND EVALUATE ACTIVATION AND TERMINATION CRITERIA

Table B-1: Monitor and evaluate objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Predictive Modelling of Hydrocarbons to Assess Resources at Risk	Predictive modelling focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. Predictive modelling utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of predictive modelling are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP	Predictive modelling will be triggered immediately following a level 2/3 hydrocarbon spill.	The criteria for the termination of predictive modelling are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by surveillance observations) predicts no additional natural resources will be impacted

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Greater Western Flank Phase 4 Drilling and Subsea Installation Environment Plan.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Surveillance and reconnaissance to detect hydrocarbons and resources at risk	Surveillance and reconnaissance aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of surveillance and reconnaissance are: • Verify spill modelling results and recalibrate spill trajectory models. • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options in order to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	Surveillance and reconnaissance will be triggered immediately following a level 2/3 hydrocarbon spill.	The termination triggers for the Surveillance and reconnaissance are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results do not predict surface exposures at visible levels.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Pre-emptive assessment of sensitive receptors at risk	Pre-emptive shorelines assessment aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. The primary objective of pre-emptive shorelines assessment is to confirm understanding of the status and characteristics of environmental resources, predicted by predictive modelling and surveillance, to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. Indirectly, qualitative/semi-quantitative pre-contact information collected by pre-emptive shorelines assessment on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. Pre-emptive shorelines assessment would be undertaken in liaison with WA DTMI as the control agency once the oil is in State Waters (if a Level 2/3 incident).	Triggers for commencing pre-emptive shorelines assessment include: • Contact of a sensitive habitat or shoreline is predicted by predictive modelling and surveillance. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed via SCAT.	The criteria for the termination of pre-emptive shorelines assessment at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).

ANNEX C: GWF-4 DRILLING AND SUBSEA INSTALLATION OSM ACTIVITY SPECIFIC ASSESSMENT

The Woodside OSM-BIP [6] comprehensively presents important information for OSM assessment and implementation, including the process for assessing OSM requirements for each activity. This Annex provides the activity-specific information required for the GWF-4 Drilling and Subsea Installation OSM Assessment, including:

- OSM Planning Area;
- Monitoring priorities;
- Mobilisation and implementation timeframes; and
- Resourcing requirements and capability assessment.

C.1 Determine if the activity OSM Planning Area fits within the Combined OSM Planning Area

The OSM Planning Area for the GWF-4 Drilling and Subsea Installation activity (hereafter referred to as the Petroleum Activity) credible spill scenarios (as shown in Figure C - 1) fit within the Combined OSM Planning Area (Figure 2-1 in the OSM-BIP).

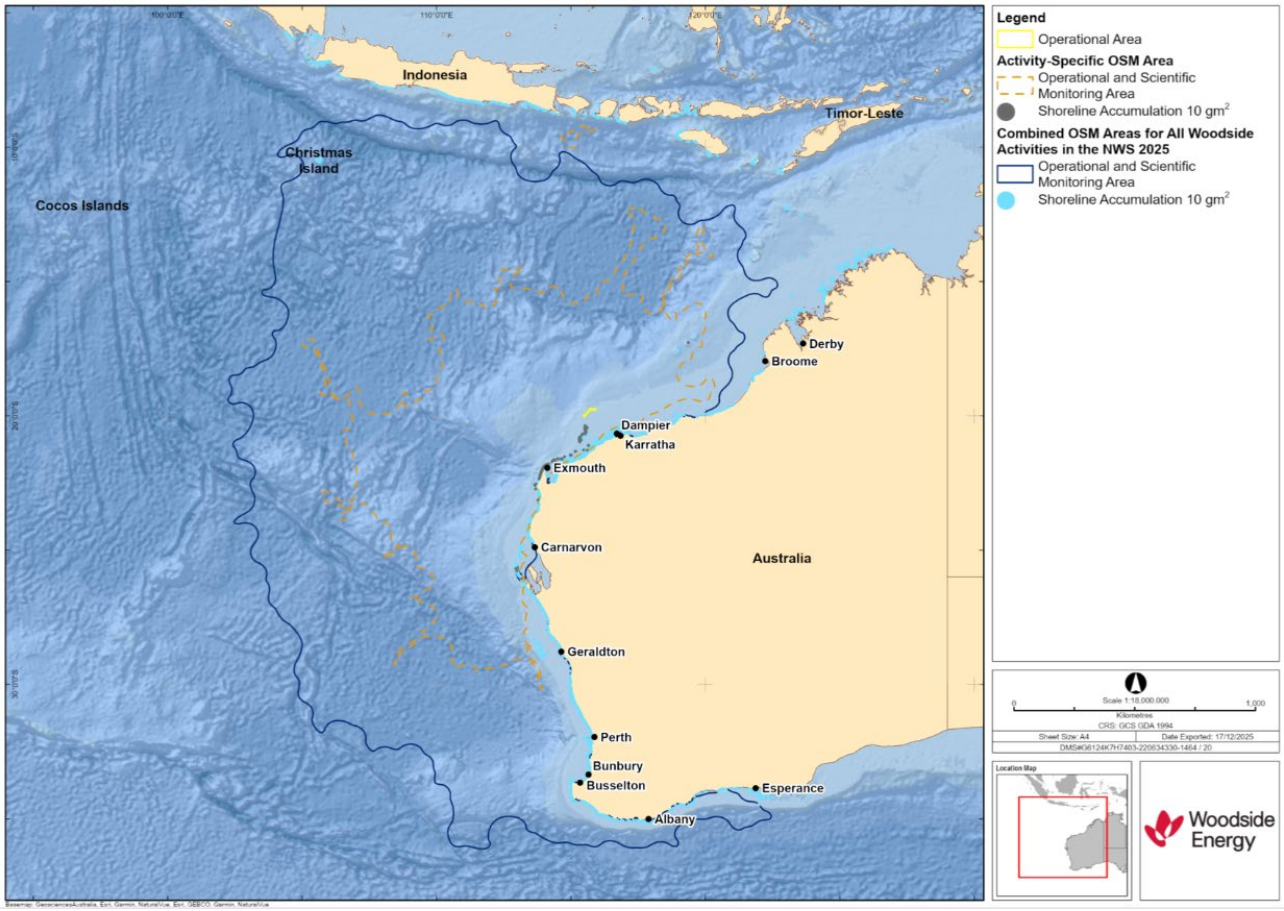

Figure C - 1: OSM Planning Area based on the area potentially contacted by the low (below ecological impact) hydrocarbon thresholds in the event of the worst-case credible spill scenario (CS-01, CS-02, CS-03 an CS-04)

C.2 Determine activity-specific monitoring priorities

Assess spill exposure risk using trajectory modelling

Woodside has reviewed the stochastic oil spill modelling results for the worst-case credible spill scenarios listed in Table 2-1 and as outlined in Section 2.2 of the OSM-BIP[6], identified receptors contacted at a higher probability of rapid contact. Table C - 1 presents the receptors contacted within 14 days at a probability >10%

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. at the low threshold for dissolved (≥10 ppb), entrained (≥10 ppb), floating (≥1 g/m^2), and shoreline contact (≥10 g/m^2).

Evaluate availability of adequate baseline data

The availability of baseline data may influence monitoring priorities. Section 4 of the OSM-BIP outlines Woodside's baseline review and evaluation process. Using the Marine Environment Baseline Database, Woodside has reviewed baseline data for all of the receptors predicted of being rapidly contacted at a higher probability from the Petroleum Activity (Table C - 1) to help determine which receptors and key features have insufficient or no baseline data available and should be given a higher monitoring priority.

It is anticipated that some receptors and locations may be impacted before monitoring teams can begin the assessments. Given this constraint, and the limited baseline data at many priority monitoring locations and receptors, scientific monitoring will likely need to use a combination of approaches including gradient analysis, impact versus control comparisons, and lines of evidence methodologies. During a spill, it may be necessary to identify additional unaffected control sites for comparative monitoring where possible. As such, control sites have been factored into capability planning in Section C.4.

Consideration of Key Ecological Features, Biologically Important Areas and transient receptors

A number of broadscale ecological features are located within the OSM Planning Area and have been considered in monitoring prioritisation and OSM capability planning for the Petroleum Activity. The following Key Ecological Features (KEFs) (and their distances to the Operational Area) are noted in Table 4-17 of the EP:

- Ancient coastline at 125 m depth contour (overlaps Operational Area)
- Continental Slope demersal fish communities (5 km north)
- Glomar Shoals (70 km east)
- Exmouth Plateau (120 km west)
- Canyons linking the Cuvier Abyssal Plain and the ape Range Peninsula (180 km south west)
- Commonwealth waters adjacent to Ningaloo Reef (225 km south west
- Mermaid Reef and commonwealth waters surrounding Rowley Shoals (375 km north east)
- Wallaby Saddle (720 km south west)
- Canyons linking the Argo Abyssal plain with the Scott Plateau (690 km north east)
- Western Demersal slope and associated fish communities (690 km south west)
- Western Rock lobster (870 km south west)
- Ancient coastline at 90 – 120 m depth (875 km south west)
- Commonwealth marine environment surrounding the Houtman Abrolhos Island (910 km south west)
- Perth Canyon and adjacent shelf break, and other west coast canyons (910 km south west)

The Ancient Coastline at 125 m depth contour KEF overlaps the Petroleum Activity Operational Area, so is at a higher risk of contact with hydrocarbons. All KEFs within the OSM Planning Area are described in detail in Section 4.7 and Appendix C of the EP. These KEFs include subsea receptors (benthic and pelagic habitats; demersal fish communities; marine fauna aggregations) that may be at risk from subsea releases, such as the loss of containment scenario associated with the Petroleum Activity (refer to Table 2-1). Therefore, OSM planning and resourcing for this activity includes relevant monitoring requirements, such as water quality, sediment quality, benthic habitats and fish for these features (refer to Table C - 3 and Table C - 9).

The OSM Area also overlaps a number of Biologically Important Areas (BIAs) with protected species potentially occurring in the area, as described in Section 4.6 of the EP and listed in Table C - 3. A number of the BIAs and protected species are located within the geographical extents of other receptors, such as marine turtles within the Montebello AMP, so these BIAs and protected species would automatically be included in the relevant SMPs for that receptor (refer to Table C - 6). Where BIAs, protected species and KEFs are situated away from the monitoring priorities, they will be captured in the Offshore Environs monitoring unit described in Table C - 6.

Initial Monitoring Priorities

Monitoring prioritisation during the initial stages of a spill should focus on sensitive receptors with the highest risk of adverse consequences and where oil spill modelling predicts high probability of rapid contact. During

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. the initial monitoring response, emphasis will be placed on receptors contacted by floating, shoreline, and dissolved hydrocarbon phases. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response.

To further guide monitoring prioritisation in the event of a spill, Woodside has also compared the availability of baseline data against the WA State-based protection prioritisation evaluation rankings. The WA DTMI protection priority rankings were established through the Western Australian Marine Oil Pollution Risk Assessment process. These rankings evaluate each receptor's vulnerability to marine oil spills, considering impacts from both floating and dissolved oil, as shown in Table C - 4. This information is then used to determine the resultant initial monitoring priorities for the activity.

Key	
	Comprehensive baseline data or ongoing monitoring collected within the last 5 years. Data align with Joint Industry SMP parameters and methods, cover required species/communities and span the necessary spatial extent.
	Historical data (>5 years old) that remain of value, or some current but not extensive baseline data. Caveat: Additional relevant data may exist but be unknown and therefore not included in the assessment.
	No baseline data available, or existing data are inadequate in quality, scope, or relevance. Caveat: Additional relevant data may exist but be unknown and therefore not included in the assessment.
*	Submerged receptor
NA	Not applicable as the receptor is submerged.

[15] For sea turtles, nesting-beach monitoring remains the primary basis for assessing population trends, whereas adult males and non-nesting life-stages (hatchlings at sea, juveniles/sub-adults on foraging grounds) are monitored far less systematically.

Table C - 4: Initial monitoring priorities

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
Ningaloo Coastline and WHA (also includes most of the Carnarvon sector)	**World Heritage Area**	N/A	N/A	5	5	High
	Mangroves	N/A	High	3	3	Medium
	Turtles Loggerhead (*Caretta caretta*) (vulnerable) site, green turtle (*Chelonia mydas*) (endangered), hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) nesting	Main nesting: Hawksbill July-Mar Green Sept-Mar Flatback Sept-Mar Loggerhead Sept-Mar	Low	4	3	Medium
	Marine mammals Pygmy blue whales (*Balaenoptera musculus brevicauda*) (endangered) foraging area. Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Australian humpback dolphin (*Sousa sahulensis*) (vulnerable), Indo-Pacific bottlenose dolphin (*Tursiops aduncus*) (unknown) and orca (*Orcinus orca*) (data deficient). Dugongs (*Dugong dugon*) (vulnerable) breeding and foraging.	Pygmy blue whale migration: Apr to Aug (north bound) and Oct to Dec (south bound) Humpback whale migration: Jun to Oct	High	3	2	Medium
	Sharks and rays Seasonal aggregations of whale sharks (*Rhincodon typus*) (endangered) and manta rays	Whale sharks – Mar to Jul	High, with the exception of whale shark	3	4	High
	Birds Internationally important shorebird area. Biologically important breeding habitat for seabirds: fairy tern (*Sternula nereis*) (vulnerable); wedge-tailed shearwater (*Ardenna pacifica*) (least concern); roseate tern (*Sterna dougallii*) (least concern)	Shorebirds: Aug to Apr Seabirds: species specific	High	5	4	High
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	Low	3	4	Medium
	Socio-economic and heritage Tourism – significant fishing/charter boat tourism, camping and use of nearshore sanctuary zones (fishing, snorkelling)	Year-round	High	2	2	Medium
Southern Pilbara – Islands and Shoreline	**Mangroves**	N/A	Low	3	3	Low
	Turtles Critical nesting habitat for green turtle (*Chelonia mydas*) (endangered), flatback turtle (*Natator depressus*) (data deficient), hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) and loggerhead (*Caretta caretta*) (vulnerable).	Oct to Apr	Low	4	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Australian humpback dolphin (*Sousa sahulensis*) (vulnerable), Indo-Pacific bottlenose dolphin (unknown) and dugong (*Dugong dugon*) (vulnerable) utilise the shallow intertidal waters around islands.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Staging point/feeding area for migratory shore birds. Seabird nesting, resting and foraging on and around islands.	Migratory shorebirds: Aug to Apr Seabirds: Species dependant	Low	3	2	Low
	Fish Green sawfish (*Pristis zijsron*) (critically endangered).	Unknown	Low	4	5	High
	Coral and other subsea benthic habitats	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Recreational fishing/ charter boats, tourism related to water-based activities and nature. Camping beaches.	Year-round	High	4	4	High
Montebello Islands	**Mangroves** Montebello Islands' mangrove communities are regarded as globally unique.	N/A	High	3	3	Medium
	Turtles Nesting area for green (*Chelonia mydas*) (endangered), flatback (*Natator depressus*) (data deficient), and hawksbill (*Eretmochelys imbricata*) (critically endangered) turtles. The islands are recognised as critical habitat for flatback turtles and for hawksbill turtles, with key sites for the latter including Ah Chong Island, South East Island, and Trimouille Island.	Turtle nesting Nov to Mar	High	4	3	High
	Marine mammals Pygmy blue whale (vulnerable) and humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Resident populations of Indo-Pacific bottlenose dolphin (*Tursiops aduncus*) (unknown and Australian humpback dolphins (*Sousa sahulensis*) (vulnerable). Dugong (*Dugong dugon*) (vulnerable) foraging.	Pygmy blue whale migration: Apr to Aug Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Significant seabird nesting and foraging areas. Staging point/feeding area for migratory shore birds.	Seabird: Species dependant Migratory shorebirds: Aug to Apr	High, with the exception of wedge-tailed shearwater on Ah Chong Island (low)	3	2	Medium

This document is protected by copyright. Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Pearling (inactive/pearling zones). Very significant for recreational fishing and charter boat tourism (Marine Management Area). Social amenities and other tourism. Nominated place (National Heritage).	Year-round	High	3	2	Medium
Barrow Island	**Mangroves**	N/A	High	3	3	Medium
	Turtles Regionally and nationally significant green turtle (*Chelonia mydas*) (endangered) (western side) and flatback turtle (*Natator depressus*) (data deficient) (eastern side) nesting. Small numbers of hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) nesting.	Year round, peaking Oct to Jan	High, with the exception of nesting flatback turtles (low)	4	3	High
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Resident populations of bottlenose dolphins and Australian humpback dolphin (*Sousa sahulensis*) (vulnerable). Dugong (*Dugong dugon*) (vulnerable) foraging.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Birds Nationally significant site for migratory shorebirds, serving both as a key staging area during migration and as a non-breeding destination. Double Island has important bird nesting sites (shearwaters and sea eagles).	Migratory shorebirds: Aug to Apr	Low	2	1	Low
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	High	3	4	High
	Socio-economic Significant for recreational fishing and charter boat tourism, Nominated place (National heritage), Industry – Reverse Osmosis Plant and port operations. Petroleum Activities such as Barrow Island petroleum production.	Year-round	High	5	5	High
Lowendal Islands	**Mangroves**	N/A	High, with the exception of Varanus & Bridled Islands (low)	3	3	Medium
	Coral and other subsea benthic primary producers	Coral spawning: Mar and Oct	High	3	4	High
	Turtles Flatback turtle (*Natator depressus*) (data deficient) , hawksbill turtle (*Eretmochelys imbricata*) (critically endangered), and green turtle (*Chelonia mydas*) (endangered) nesting.	Nesting all year, Hawksbill nesting peak Oct to Jan Flatback turtles nesting peaks Dec to Jan	High, with the exception of turtles at Varanus Island (low)	4	3	High
	Birds Significant seabird nesting and foraging areas.	Year-round	High for shorebirds Low for seabirds at Varanus, Abutilon, Beacon, Bridled, & Parakeelya Islands	2	1	Low
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Dugong (*Dugong dugon*) (vulnerable) foraging.	N/A	High	3	2	Medium
	Socio-economic and heritage Social amenities and other tourism, very significant for recreational fishing and charter boat tourism.	N/A	High	2	2	Low
Muiron Islands	**Turtles** Turtle nesting – major loggerhead (*Caretta caretta*) (vulnerable) site, significant green turtle (*Chelonia mydas*) (endangered) nesting site, low density hawksbill turtle (*Eretmochelys imbricata*) (critically endangered) nesting, occasional flatback (*Natator depressus*) (data deficient) presence	Loggerhead peak nesting: Nov to Jan Green peak nesting Dec to Jan	High	4	3	High
	Coral and other subsea benthic primary producers	Coral spawning: Mar & Oct	Low	3	4	Medium
	Birds Seabird nesting and foraging. Internationally important shorebird area	Seabird nesting: approximately Sep–Feb Migratory shorebirds: Aug to Apr	High	2	1	Low
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area.	Humpback whale migration: Jun to Oct	High	3	2	Medium
	Fish Shallow macroalgal habitats identified as important juvenile habitat for blue-spotted emperor (*Lethrinus punctulatus*) (least concern).	Year-round	Low	1	1	Low
	Socio-economic and heritage Exmouth gulf prawn fishery (Muiron is western boundary); significant for recreational fishing and charter boat tourism	Prawn fishery – April to November	High	1	2	Low
Montebello AMP	**Coral and other subsea benthic primary producers** A prominent seafloor feature in the Marine Park is Tryal Rocks consisting of two close coral reefs. The reefs are emergent at low tide.	Coral spawning: Mar & Oct	High	3	4	High
	Turtles Biologically important internesting, foraging, mating, and nesting habitat for turtles.	Nesting green and flatback turtles: Oct to Mar (hawksbill can nest all year)	High	3	3	Medium
	Birds Biologically important breeding habitat for seabirds.	Species dependant	High	3	2	Medium
	Whale shark		High	3	4	High

Receptor	Key sensitivities / values	Relevant key periods	Baseline Priority	DTMI Ranking (Floating oil)	DTMI Ranking (Dissolved oil)	Initial Monitoring Priority
	Biologically important habitat for whale shark (*Rhincodon typus*) (endangered)					
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area.	Jun to Oct	High	3	2	Medium
	Socio-economic Pearling (inactive/pearling zones). Very significant for recreational fishing and charter boat tourism (Marine Management Area). Shipwreck (Tryal).	Year-round	High	3	2	Medium
Gascoyne AMP	**Birds** Biologically important breeding habitat for seabirds: wedge-tailed shearwater (*Ardenna pacifica*) (least concern); roseate tern (*Sterna dougallii*) (least concern)	Species specific	High	3	2	Medium
	Turtle Biologically important internesting habitat for turtles	Main nesting: Hawksbill July-Mar Loggerhead Sept-Mar	High	3	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Pygmy blue whales (*Balaenoptera musculus brevicauda*) (endangered) foraging and migration area.	Pygmy blue whale migration: Apr to Aug (north bound) and Oct to Dec (south bound) Humpback whale migration: Jun to Oct	High	3	2	Medium
Ningaloo AMP	**Coral and other subsea benthic primary producers** Commonwealth waters adjacent to Ningaloo Reef (valued for high productivity and aggregations of marine life).	Coral spawning: Mar & Oct	Low	3	4	Medium
	Fish Continental slope demersal fish communities (valued for high levels of endemism and diversity).	-	Low	1	1	Medium
	Shark Foraging habitat for whale sharks (*Rhincodon typus*) (endangered)	Whale sharks – Mar to Jul	Low	3	4	High
	Birds Biologically important breeding habitat for seabirds: fairy tern (*Sternula nereis*) (vulnerable); wedge-tailed shearwater (*Ardenna pacifica*) (least concern); roseate tern (*Sterna dougallii*) (least concern)	Species specific	High	3	2	Medium
	Turtle Biologically important internesting habitat for turtles	Main nesting: Hawksbill July-Mar Green Sept-Mar Flatback Sept-Mar Loggerhead Sept-Mar	Low	4	3	Medium
	Marine mammals Humpback whale (*Megaptera novaeangliae*) (least concern) migration area. Pygmy blue whales (*Balaenoptera musculus brevicauda*) (endangered) foraging and migration area. Dugong (*Dugong dugon*) (vulnerable) breeding, calving, foraging and nursing habitat.	Pygmy blue whale migration: Apr to Aug (north bound) and Oct to Dec (south bound) Humpback whale migration: Jun to Oct	High	3	2	Medium
Argo-Rowley Terrace AMP	**Benthic habitat** The marine park contains ecosystems typical of two provincial settings: the Northwest Transition, with shelf break, continental slope, and much of the Argo Abyssal Plain, where Mermaid, Clerke, and Imperieuse Reefs form a biodiversity hotspot; and the Timor Province, dominated by warm, nutrient-poor waters in which submarine canyons are key drivers of productivity and marine life aggregations (Parks Australia n.d.).	-	High	3	4	High
	Birds Biologically important resting and breeding habitat for seabirds.	Species specific	High	3	2	Medium
	Marine mammals Migratory pathway for pygmy blue whales (*Balaenoptera musculus brevicauda*). The marine park contains submarine canyons that link the deep Argo Abyssal Plain with the shallower Rowley Terrace and Scott Plateau. These canyons transport sediments downslope and modify currents, creating periodic upwelling that increases surface-water productivity and provides important habitat for the pygmy blue whale.	April to December	High	3	2	Medium
Glomar Shoals	**Benthic habitat** Rocky hard substrates support diverse sessile benthic communities, including hard and foliose corals, sponges, octocorals, coralline algae and macroalgae. These coral, algal and filter-feeder assemblages provide essential habitat structure and food resources for demersal fish and sea snake populations.	-	Medium	3	4	High
	Fish Important habitat for several commercially and recreationally targeted fish species, including Rankin cod (*Epinephelus multinotatus*), brown-striped snapper (*Lutjanus vitta*), red emperor (*Lutjanus sebae*), crimson snapper (*Lutjanus erythropterus*), bream (*Lethrinus spp.*) and yellow-spotted triggerfish (*Pseudobalistes fuscus*).	-	Medium	1	2	Low
	Turtle Turtle foraging area, green turtles (*Chelonia mydas*) primarily feed on macroalgae, while flatback turtles (*Natator depressus*) feed on benthic filter feeders.	-	High	3	2	Medum
Rankin Bank	**Benthic habitat** Benthic communities dominated by hard corals, macroalgae and filter feeders, particularly sponges and octocorals, with assemblage patterns strongly influenced by depth and seabed rugosity.	-	Medium	3	4	High
	Fish	-	Medium	1	2	Low

C.3 Mobilisation and timing of OMP and SMP implementation

Table C - 5 provides a list of OMPs and SMPs relevant to the Petroleum Activity, as well as indicative timeframes for mobilisation of each OMP and SMP for key receptors. In addition, monitor and evaluate activities will capture initial observations of fauna, habitat, and other sensitive receptors. Water samples will be collected during vessel surveillance for OM1: Hydrocarbon Characterisation, when safe to do so. SCAT teams will begin mobilisation within 48–72 hours of notification and will also document fauna observations. This information will be provided to the IMT to aid early decision making per the process outlined in Section 18.1 of the OSM-BIP.

Table C - 5: Indicative OMP and SMP implementation schedule for OSM activities if initiation criteria are met

Proximity to spill source	Monitoring type	0–48 hours from OSM activation	Within 72 hours of OSM activation	~5–7 days from OSM activation	Weeks 1–2 from OSM activation	Ongoing
Spill site and surrounding waters	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation, where resources are available (e.g. Supply Vessel with onboard sampling equipment). • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM4a: Surface Chemical Dispersant Effectiveness (commencing with Tier 1 SMART Protocol) • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per ongoing arrangements)	Continued (as per ongoing arrangements) • OM4b: Subsea dispersant injection effectiveness monitoring	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (e.g. Situation Unit) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill.
	SM	• Commence activation and mobilisation process. • Activation of SMP Team Leads.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM6: Benthic Habitat Assessment • SM7: Marine fish and elasmobranch assemblages assessment	Continued	Continue SMP monitoring until termination criteria are met
Sensitive receptors predicted to be contacted within 7 days	OM	• Activation of OMP Team Leads. • Finalise OMPs. • Aerial surveillance – which will also document fauna observations. • Commence activation and mobilisation of OM personnel.	• OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • Continue to finalise OMPs. • Continue to activate and mobilise OM personnel.	Continued (as per on-going arrangements)	Continued (as per on-going arrangements)	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Lead) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill until termination criteria are met
	SM	• Activation of SMP Team Leads and finalisation of SMPs.	• Continue to activate and mobilise personnel. • Work on finalising SMPs.	• SM1: Water Quality Impact Assessment • SM2: Sediment Quality Impact Assessment • SM4: Seabirds and Shorebirds • SM5: Marine Mega-fauna Assessment – Reptiles • SM5: Marine Mega-fauna Assessment – Cetaceans, Whale Sharks, Dugong • SM6: Benthic Habitat Assessment • SM7: Marine Fish and Elasmobranch Assemblages assessment • SM8: Fisheries impact assessment • SM9: Heritage Features Assessment • SM10: Social Impact Assessment	Continued	Continue SMP implementation until termination criteria are met.
Sensitive receptors (including shorelines, reefs, banks and shoals) predicted to be contacted week 1–2	OM	–	–	• Additional Activation of OMP Team Leads. • Commence activation and mobilisation of additional OM personnel.	• Continue to finalise OMPs. • Continue to activate and mobilise OM personnel. • OM1: Hydrocarbon Characterisation • OM2: Hydrocarbons in Water Assessment • OM3: Hydrocarbons in Sediment Assessment • OM5: Rapid Marine Fauna Surveillance • OM6: Shoreline Clean-up Assessment	As results from implemented OMPs are available, data are provided to relevant personnel in IMT (Situation Unit Leader) and used in the Incident Action Planning process for the next operational period. OMP is redesigned or reallocated according to the specifics of the actual spill until termination criteria are met

C.4 Determine the OSM resourcing requirements and assess capability for the activity

To guide the resourcing requirements assessment for the Petroleum Activity, the spill scenario (see Table 2-1) most likely to require the greatest initial capability was selected for further assessment. Selection was based on stochastic modelling results, focussing on the scenario predicted to contact the greatest number of receptors at the low hydrocarbon thresholds for floating, shoreline or dissolved contact within 14 days and at the highest contact probabilities. If a receptor is only contacted by low concentrations of entrained hydrocarbons and not by any other hydrocarbon phase, it will be considered a lower priority during the initial monitoring response as outlined in Section 2.2 of the OSM-BIP. The loss of well containment from the Yodel Updip development well releasing 993,860 m^3 Yodel-3 Condensate (CS-02) was identified as the worst-case scenario, affecting the most locations within 14 days and determined to require the greatest OSM capability.

The first 14 days of the response has been selected as the focus area for the OSM resourcing assessment as it is the period during which resources are likely to be overwhelmed, before additional resources (including appropriately qualified personnel, suitable vessels and additional monitoring equipment) can be scaled in locally and from interstate and international resources. Other factors influencing the selection of the scenario with the highest capability requirements were location of the spill, proximity to receptors, and hydrocarbon properties. The OSM Services Provider Contract includes provision of scale-up resources, which would be considered and mobilised as soon as practicable following the spill.

Monitoring Units

Using the stochastic modelling results, Woodside has grouped the monitoring priorities for the Petroleum Activity into monitoring 'units' (Table C - 6). These units incorporate all of the possible receptors that may be contacted by the Petroleum Activity scenarios shown in Table C - 1 at a probability >10%. Receptors only contacted by entrained hydrocarbons and no other phase of hydrocarbon were not included. These unit groupings are based on consultation with experienced monitoring personnel and planners, who often group these receptors together for time-bound monitoring projects. The grouping of units is based on factors such as access and distance to ports, SIMOPS of multiple vessels and teams working in a close area, travel time between individual locations/receptors and time taken to collect samples for each SMP.

The monitoring units presented in Table C - 6 also include KEFs, BIAs and transient species. Additional information on the seasonality of the receptors can be found in Appendix B of the OSM-BIP and Section 4.6 of the EP. Each monitoring unit will require 1-2 teams during the initial response (first 14 days). The number of teams allocated to each unit will depend on the extent of the spill, the outcome of the monitoring prioritisation finalised at the time of the spill (Section 13 of the OSM-BIP), the ALARP assessment, and SIMOPs.

It should be noted that not all monitoring units will be contacted by a single spill and that the list below has been generated from stochastic modelling results. To help define OSM resourcing requirements, deterministic modelling has been used (Table C - 7), where applicable to the nature and scale of the activity and spill scenarios.

Deterministic modelling

To better understand worst-case capability OSM requirements for this activity, deterministic modelling was undertaken for the loss of well containment from the Yodel Updip development well releasing 993,860 m^3 Yodel-3 Condensate (CS-02). The deterministic run with the most receptors contacted by dissolved hydrocarbons at ≥10 ppb within 14 days (Run Q3, 09) was selected for further analysis. Deterministic modelling enables oil spill planners to assess the results of a single run from the stochastic oil spill modelling results, helping to assess the possible worst-case capability requirements. The results of this deterministic assessment are presented in Table C - 7.

To help understand which Monitoring Units will be contacted by the worst-case single spill, Figure C - 2 shows the Monitoring Units predicted to be contacted by the floating, shoreline and dissolved hydrocarbon phases.

The resources required to commence operational and scientific monitoring components during weeks 1–2 are presented in Table C - 8 and Table C - 9 respectively, which are based on the locations requiring a baseline review in Table C - 2, the implementation schedule outlined in Table C - 5, and the worst-case deterministic trajectory outlined in Table C - 6, including the resources required for monitoring unaffected control sites.

Woodside's OSM capability arrangements are detailed in Sections 9 and 10 of the OSM-BIP. These sections demonstrate that Woodside has established arrangements to mobilise up to 5-6 teams for most OMPs and SMPs, confirming that the OSM capability requirements for the Petroleum Activity (Table C - 8 and Table C - 9) are satisfied by the existing capability arrangements in the OSM-BIP.

SPILLS IN STATE/PORT WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Energy Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport and Major Infrastructure (DTMI).

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DTMI IMT (APPENDIX F – Woodside Liaison Officer Resources to DTMI). DTMI role as the Controlling Agency in State waters/ within port limits does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters/ within port limits or to commence the initial response actions to a spill prior to DTMI establishing incident control in line with DTMI *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DTMI can be seen at APPENDIX E – Woodside Incident Management Structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both commonwealth and state waters/ shorelines.

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Corporate Incident Management Team Incident Commander (CIMT IC)	[1]	Verbally notify WCC of event and estimated volume and hydrocarbon type. If further support required, implement this Oil Pollution First Strike Plan per relevant actions detailed in Table 1-1 and Table 2-1.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), CIMT IC or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[2]	Verbally notify NOPSEMA for spills >80 litres[2]. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DMPE).	Link	
Within 3 days	WSR, CIMT IC or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DMPE) NOPSEMA [2] NOPTA [3] DMPE [4]	[2]	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from EP	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	WA Department of Transport and Major Infrastructure (DTMI)	DTMI Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[5]	Verbally notify DTMI MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DTMI to be notified if spill is likely to extend into WA State waters. Request DTMI to provide Liaison to Woodside IMT.	[5]	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	Department of Primary Industries and Regional Development (DPIRD)			Notification to DPIRD via email within 24 hours of Woodside reporting the incident to the appropriate authority: [6]	Email	
Within 24 hours of Woodside reporting the incident to the appropriate authority	CIMT IC or Delegate	WA Fishing Industry Council (WAFIC)	Industry Liaison Officer	[7]	Notification to WAFIC via email within 24 hours of Woodside reporting the incident to the appropriate authority: [7]	Email	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[8]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: • titleholder details • time and location of the incident • proposed response arrangements and locations as per the OPEP • contact details for the response coordinator • confirmation of access to relevant monitoring and evaluation reports when available.	Verbal	

[1] Notification to NOPSEMA must be from a Woodside Representative.

[2] An uncontrolled release of petroleum liquids exceeding 80 litres is required to be reported as a dangerous occurrence related to safety at a facility, under clause 82 of Schedule 3 of the OPGGS Act and Part 4 of the Safety Regulations.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA Department of Biodiversity, Conservation and Attractions	CIMT IC or Delegate	WA Department of Biodiversity, Conservation and Attractions (DBCA)	Duty Officer	[9]	Phone call notification	Verbal	
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Greater Western Flank Phase 4 Drilling and Subsea Installation. Relevant persons/ organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Greater Western Flank Phase 4 Drilling and Subsea Installation Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Rescue Coordination Centre (RCC)	[10]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with a written Harmful Substances Report (POLREP) as soon as practicable following verbal notification.	[10]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT IC or Delegate	AMOSC	AMOSC Duty Manager	[11]	Notify AMOSC that a spill has occurred and follow-up with an email from the **CIMT IC/ CIMT Deputy IC/ CMT Leader** to formally activate AMOSC. Determine what resources are required consistent with the AMOSPlan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[11]	
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[12]	Notification for all services: Contact OSRL duty manager and request assistance from technical advisor. Send the completed notification form to OSRL as soon as practicable.	[12]	
					Mobilisation of response personnel/ equipment: For mobilisation of response personnel/ resources, send the Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[12]	
					Mobilisation of Operational and Scientific Monitoring service: For mobilisation of Operational and Scientific Monitoring (OSM) service, send the OSM Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside i.e. **CIMT IC/ CIMT Deputy IC/ CMT Leader**. OSRL can advise the names on the call out authority list, if required.	[12]	
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[13]	Activate the contract with MSRC (in full) for the provision of up to 14 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Cond.					
Monitor and evaluate – tracking buoy	**Yes**	**Yes**	**ALL**	Deploy the oil spill tracking buoy within 2 hours in the event of release of hydrocarbons to the marine environment. If no oil spill tracking buoy is available, mobilise unit from the King Bay Supply Facility (KBSF) stockpile.	Operations	**WITHIN 24 HOURS:** Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Monitor and evaluate – predictive modelling	**Yes**	**Yes**	**ALL**	Undertake initial modelling using OceansMap and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A.	Environment	**WITHIN 24 HOURS:** Initial modelling within 6 hours using the OceansMap tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
	Yes	**Yes**	**ALL**	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([14]). Outputs will be uploaded to OceansMap by RPS.	Environment	**WITHIN 24 HOURS:** Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Monitor and evaluate – aerial surveillance	**Yes**	**Yes**	**ALL**	Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**WITHIN 24 HOURS:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk in Operational Monitoring Operational Plan. *Planning Section to download immediately and follow steps*
Monitor and evaluate – satellite tracking	**Yes**	**Yes**	**ALL**	Environment Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [11] • OSRL Duty Manager: [12] • KSAT: [15] • Others identified by CIMT	Environment	**WITHIN 24 HOURS:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Revalidate pre-operational NEBA	**Yes**	**Yes**	**ALL**	Environment Unit Leader to revalidate pre-operational NEBA against current situational awareness from monitor and evaluate techniques.	Environment	**WITHIN 24 HOURS**: Revalidate pre-operational NEBA and incorporate into IAP	Pre-operational NEBAs
Monitor and evaluate – pre-emptive assessment of receptors at risk	**Yes**	**Yes**	**ALL**	Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk.	Planning or Environment	In agreement with WA DTMI, deployment of 2 specialists for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors in Operational Monitoring Operational Plan.
Operational monitoring – shoreline assessment	**Yes**	**Yes**	**ALL**	Consider the need to mobilise resources to undertake shoreline assessment surveys.	Planning or Environment	In agreement with WA DTMI, deployment of 2 specialists trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Mobilise OSM service via OSRL: [12] Refer to OSM Bridging Implementation Plan – Part B for additional implementation information: Link Refer to Joint Industry Operational And Scientific Monitoring Plan Framework for activation criteria and additional supporting information.
Operational and Scientific Monitoring	**Yes**	**Yes**	**ALL**	Consider the need to mobilise OSM resources via third party service provider.	Environment	**WITHIN 4 HOURS**: Contact OSM Services Provider and verbally notify their Duty Manager of the incident, requesting provision of OSM Implementation Lead to the IMT. **OSM:** OMPs and SMPs will be activated in accordance with the initiation criteria provided in Tables 9-1 and 9-2 of the Joint Industry OSM Framework (AEP, 2021)	
Surface dispersant	**No**	**Potentially**	**L2/3**	Use of surface dispersant would also only be permitted and/or only appropriate where favourable metocean conditions are present, a net environmental benefit can be demonstrated e.g. minimising shoreline accumulations, and where application is undertaken only within the pre-defined ZoA as illustrated in Section 4 of this plan. If surface dispersant is deemed appropriate, dispersant mobilised from Woodside and AMOSC (Dampier and Exmouth) stockpiles. Consideration of mobilisation of interstate/ international dispersant stockpiles.	Logistics, Marine and Planning	**WITHIN 24 HOURS**: One FWADC aircraft with minimum payload of 1850 litres mobilised to site within four hours of activation. One additional FWADC mobilised to site within another 20 hours of activation. Access to dispersant stockpiles within 24-48 hours. 2 offtake support vessels from integrated fleet will undertake dispersant trials within 24 hours of the release	Surface Dispersant Operational Plan *Logistics Section to download and follow steps*
Containment and recovery	**No**	**Potentially**	**L2/3**	Whilst modelling predicts floating hydrocarbons at suitable thresholds for containment and recovery (>50 g/m^2), the highly	Logistics and Planning	**WITHIN 48 HOURS:**	Containment and Recovery Operational Plan

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Cond.					
				volatile nature of condensate and/or metocean conditions may preclude safe response operations If containment and recovery is considered feasible and safe, mobilise equipment from Woodside, AMOSC and DTMI stockpiles with relevant personnel. Consider mobilisation of interstate/ international containment and recovery equipment and relevant personnel (i.e. OSRL).		Two vessel-based containment and recovery operations deployed.	*Logistics Section to download and follow steps*
Mechanical dispersion	**No**	**No**	**N/A**	This response strategy is not recommended.			
In-situ burning	**No**	**No**	**N/A**	This response strategy is not recommended.			
Shoreline protection and deflection	**No**	**Yes**	**L2/3**	Equipment from Woodside, AMOSC and State stockpiles mobilised. Consideration of mobilisation of interstate/ international shoreline protection equipment (i.e. OSRL).	Operations and Planning	**5 DAYS PRIOR TO CONTACT:** In agreement with WA DTMI, activate relevant Tactical Response Plans (TRPs). In agreement with WA DTMI, mobilise teams to RPAs 5 days prior to operational monitoring predicting impacts. In agreement with WA DoT (for Level 2/3 incidents), equipment mobilised from closest stockpile 5 days prior to operational monitoring predicting impacts. Supplementary equipment mobilised from AMOSC and State stockpiles (if required). Supplementary equipment mobilised from OSRL (if required).	Protection and Deflection Operational Plan *Logistics Section to download immediately and follow steps*
Shoreline clean-up	**No**	**Yes**	**L2/3**	Equipment from Woodside, AMOSC and State stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/ international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	**5 DAYS PRIOR TO CONTACT:** In agreement with WA DTMI, activate relevant Tactical Response Plans (TRPs). In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy shoreline clean-up operations to RPAs 24 hours prior to predicted impact. In agreement with WA DoT (for Level 2/3 incidents), equipment mobilised from closest stockpile 24 hours prior to predicted impact. Access to ~2,400 m^3 of solid and liquid waste storage available within 7 days upon activation of 3rd party contract. Supplementary equipment mobilised from AMOSC and State stockpiles (if required). Supplementary equipment mobilised from OSRL (if required).	Shoreline Clean-up Operational Plan *Logistics Section to download immediately and follow steps*
Oiled wildlife response	**Yes**	**Yes**	**ALL**	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC Oiled Wildlife Containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning		Oiled Wildlife Response Operational Plan
SOURCE CONTROL TECNIQUES							
Subsea First Response Toolkit	**No**	**Yes**	**L2/3**	As per Source Control Emergency Response Planning Guideline.	Source Control	**WITHIN 48 HOURS:** Remotely Operated Vehicle (ROV) on Mobile Offshore Drilling Unit (MODU) ready for deployment within 48 hours.	Source Control Emergency Response Planning Guideline Link Subsea Dispersant Application Operational Plan Link
Subsea Dispersant	**No**	**Potentially**	**L2/3**	Use of subsea dispersant injection would only be permitted and/or appropriate where favourable metocean conditions are present, in appropriate water depths, a net environmental benefit can be demonstrated e.g. minimising surface expression or shoreline accumulations, to facilitate access to the wellhead for execution of	Source Control	**WITHIN 24 HOURS:** Mobilisation of SSDI toolkit and subsea dispersant (500 m^3 available from AMOSC stockpiles) to site. **DAY 5:**	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Cond.					
				other source control techniques, and where the plume would be predicted to remain within the pre-defined Zone of Application (ZoA) illustrated in Section 4 of this plan. If subsea dispersant is deemed appropriate, mobilise subsea dispersant stockpile (Fremantle) from AMOSC and SFRT equipment (Jandakot) from AMOSC/ Oceaneering. Mobilise deep sea water quality monitoring equipment via IMR global contract. Suitable vessel required. This response strategy is not recommended.		SSDI equipment and dispersant mobilised to site. Support vessels available to begin application on within 24-48 hours. **DAY12:** Subsea dispersant application able to be conducted at an application volume of 75m^3 per day. Response established within 12 days of release.	
Capping Stack	**No**	**Potentially**	**L2/3**	Capping stack deployment is not considered feasible where water depths are <100 m. For the wells located in >100 m water depth, conventional/ vertical capping stack deployment with a heavy lift vessel will be attempted if plume and environmental conditions permit (wind speed, wave height and current) and will be assessed on a case-by-case basis and at the discretion of the vessel master.	Source Control	**DAY 16:** Capping stack deployed by a chartered construction vessel.	
Relief Well	**No**	**Yes**	**L2/3**	As per Source Control Emergency Response Planning Guideline.	Source Control	**WITHIN 24 HOURS:** Identify source control vessel availability within 24 hours.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, no sensitive receptors are identified as priority protection areas, as they do not have the potential to be contacted by hydrocarbon at or above impact threshold levels within 48 hours of a spill.

Hydrocarbon spill modelling results indicate the sensitive receptors listed below have the potential to be contacted by hydrocarbons beyond 48 hours of a spill:

- Montebello Islands including Montebello MP and Hermite Island
- Southern Pilbara Islands at Thevenard Island including NR
- Muiron Islands and Muiron MMA
- Exmouth including Ningaloo State MP and Ningaloo Coast WH

Tactical Response plans for these locations can be accessed via the link here and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Greater Western Flank 4 Drilling and Subsea Installation Operational Area and identifies priority protection areas.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-2** indicates the assets within the vicinity of the Greater Western Flank 4 Drilling and Subsea Installation Operational Area.

Table 3-1: Assets in the vicinity of the Greater Western Flank 4 Drilling and Subsea Installation Operational Area

Asset	Distance and direction from Wilcox Prospect	Distance and direction from Yodel Updip	Operator
Pluto Platform	13.2 km, west	46.5 km south-west	Woodside
Wheatstone Platform	13.8 km, north-west	41.3 km south-west	Chevron
Goodwyn Platform	59.8 km, north-east	23.7 km, north-east	Woodside
John Brookes Platform	63.5 km, south-west	100.0 km, south-west	Santos
Reindeer Platform	85.7 km, east	68.0 km, east-south-east	Santos
Stag Platform	88.0 km, south-east	82.7 km, south-east	Jadestone
North Rankin Complex	81.5 km, north-east	46.6 km, north-east	Woodside
Okha FPSO	110.2 km, north-east	77.4 km, east-north-east	Woodside
Angel Platform	128.4 km, north-east	95.4 km, east-north-east	Woodside

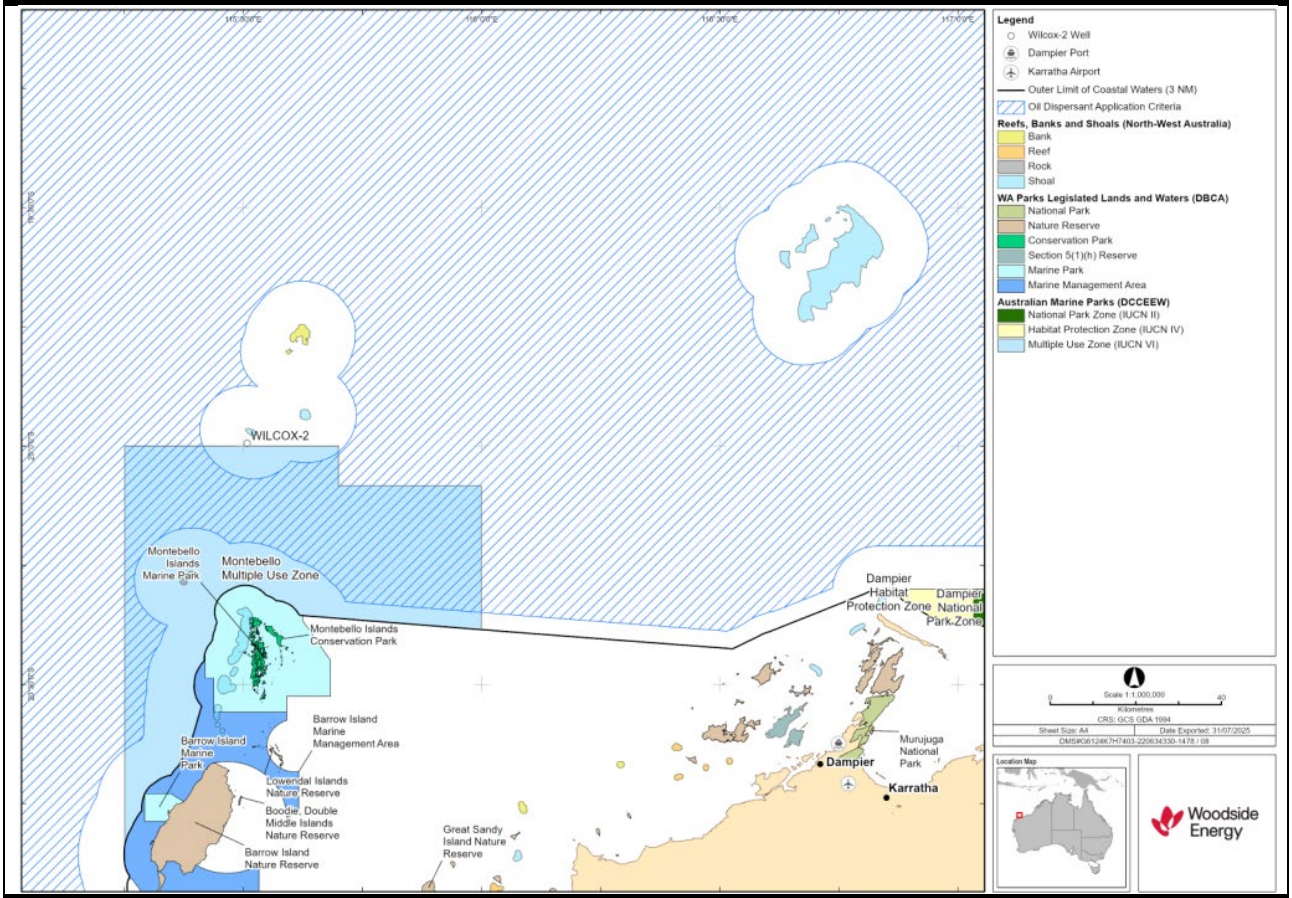
4. DISPERSANT APPLICATION

Woodside has included surface dispersant spraying as a potential response technique in the instance that operational monitoring observes sufficient oil concentrations for it to be deployed.

INSTRUCTIONS



DISPERSANTS ARE PRE-APPROVED UNDER THE ENVIRONMENT PLAN FOR USE IN THE BLUE STRIPED ZONE ONLY. OSCA APPROVED OR TRANSISTIONAL DISPERSANTS ARE PRE-APPROVED FOR USE.

The shape file for the approved dispersant zone of application (ZoA) is saved in Woodside's Geospatial Corporate Geodatabase and adheres to the following criteria:

- 10km from Commonwealth Marine Parks (excluding 'Multiple Use Zones')
- 10km from State Marine Parks
- 10km from Heritage List areas
- >20m water depth
- 4km from State Waters
- Within the Mainland Australian EEZ
- Avoiding sensitive reefs and shoals

The Surface Dispersants Operational Plan should be used to mobilise dispersant operations immediately

PRE-APPROVED DISPERSANT ZONE

DISPERSANT VOLUMES

Current dispersant volumes available should be checked in the following document:
Oil Spill Preparedness - Dispersant Stockpiles Database

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[3]
CS-01 (WCCS) Hydrocarbon release caused by a well loss of containment over 70[4] days	PYA-01 Condensate	707,729 m^3	3% (21,232 m^3)	12 hours (BP < 180 °C)	48%	*NWS Condensate*
				24 hours (180 °C < BP < 265 °C)	19%	
				Several days (265 °C < BP < 380 °C)	30%	
CS-02 Hydrocarbon release caused by a well loss of containment over 76 days	Yodel-3 Condensate	993,860 m^3	2.5% (24,847 m^3)	12 hours (BP < 180 °C)	63.1%	*NWS Condensate*
				24 hours (180 °C < BP < 265 °C)	25.3%	
				Several days (265 °C < BP < 380 °C)	9.1%	
CS-03 Instantaneous hydrocarbon release due to a vessel collision[5]	MDO	1,000 m^3	5% (50 m^3)	12 hours (BP < 180 °C)	6%	*Diesel Fuel Oil – Southern USA 1 (API 37.2°)*
				24 hours (180 °C < BP < 265 °C)	34.6%	
				Several days (265 °C < BP < 380 °C)	54.4%	
CS-04 Instantaneous hydrocarbon release due to a vessel collision [6]	MDO	1,000 m^3	5% (50 m^3)	12 hours (BP < 180 °C)	6%	*Diesel Fuel Oil – Southern USA 1 (API 37.2°)*
				24 hours (180 °C < BP < 265 °C)	34.6%	
				Several days (265 °C < BP < 380 °C)	54.4%	

[3] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

[4] Modelling for a loss of well integrity in the Wilcox Prospect was originally undertaken in 2023 based on a preliminary estimated relief well duration of 77 days resulting in a release of circa 745,012 m^3. Contemporary studies estimate that a relief well could be executed within 70 days (including mobilisation of a MODU from South East Asia) releasing circa 707,729 m^3. Given the decreased duration and volume, the existing modelling is deemed conservative and therefore additional modelling was not required.

[5] Modelling for a release of 2,000 m^3 MDO was available within 6.6 km of the Wilcox Prospect area, and closer to shore than the Operational Area for this activity. It was originally undertaken in 2021 using NOPSEMA's contemporary modelling thresholds. The largest tank of the vessel proposed for the activity is circa 1,000 m^3, 50% smaller than the modelled volume (2,000 m^3). Given that spill risk parameters and geographic location for this activity fall within the envelope of the existing modelling, it is an appropriate surrogate and therefore additional modelling was not required.

[6] Modelling for a release of 1,000 m^3 MDO was available within title WA-5-L (one of the northern Operational Areas for this activity). It was originally undertaken in 2020 using NOPSEMA's contemporary modelling thresholds. The largest tank of the vessel proposed for the activity is also 1,000 m^3. Given that spill risk parameters and geographic location for this activity align with the existing modelling, it is an appropriate surrogate and therefore additional modelling was not required.

FORM 1 – RECORD OF INITIAL VERBAL NOTIFICATION TO NOPSEMA

Woodside Energy

NOPSEMA phone: [2]		
Date of call		
Time of call		
Call made by		
Call made to		
Information to be provided to NOPSEMA:		
Date and time of incident/ time caller became aware of incident		
Details of incident	**1. Location**	
	2. Title	
	3. Source	**□ Platform**
		□ Pipeline
		□ FPSO
		□ Exploration drilling
		□ Well
		□ Other (please specify)
	4. Hydrocarbon type	
	5. Estimated volume	
	6. Has the discharge ceased?	
	7. Fire, explosion or collision?	
	8. Environment Plan(s)	
	9. Other Details	
Actions taken to avoid or mitigate environmental impacts		
Corrective actions taken or proposed to stop, control or remedy the incident		
After the initial call is made to NOPSEMA, please send this record as soon as practicable to:		
NOPSEMA	**[2]**	
NOPTA	**[3]**	
DMPE	**[4]**

APPENDIX C – SPILL ASSESSMENT QUESTIONS

What has happened?		
Date/time		
Spill source		
Spill cause		
Safety situation		
What is it?		
Oil type and name		
Oil properties	Specific gravity	
	Viscosity	
	Pour point	
	Asphaltenes	
	Wax content	
	Boiling point	
Where is it?		
Latitude and longitude		
Distance and bearing		
Affected area	☐ Offshore	
	☐ Subsea	
	☐ Shoreline	
	☐ Estuary	
	☐ Port	
	☐ Harbour	
	☐ Inland	
	☐ River	
	☐ Other (please detail):	
Water depth		
How big is it?		
Area		
Release type	☐ Instantaneous	Estimated volume:
	☐ Continuous release	Estimated release rate:
Where is it going?		
Metocean conditions		
Currents and tides		
What is in the way?		
Resources at risk		
Time until resource contact		
What's happening to it?		
Weathering processes		
Response actions underway

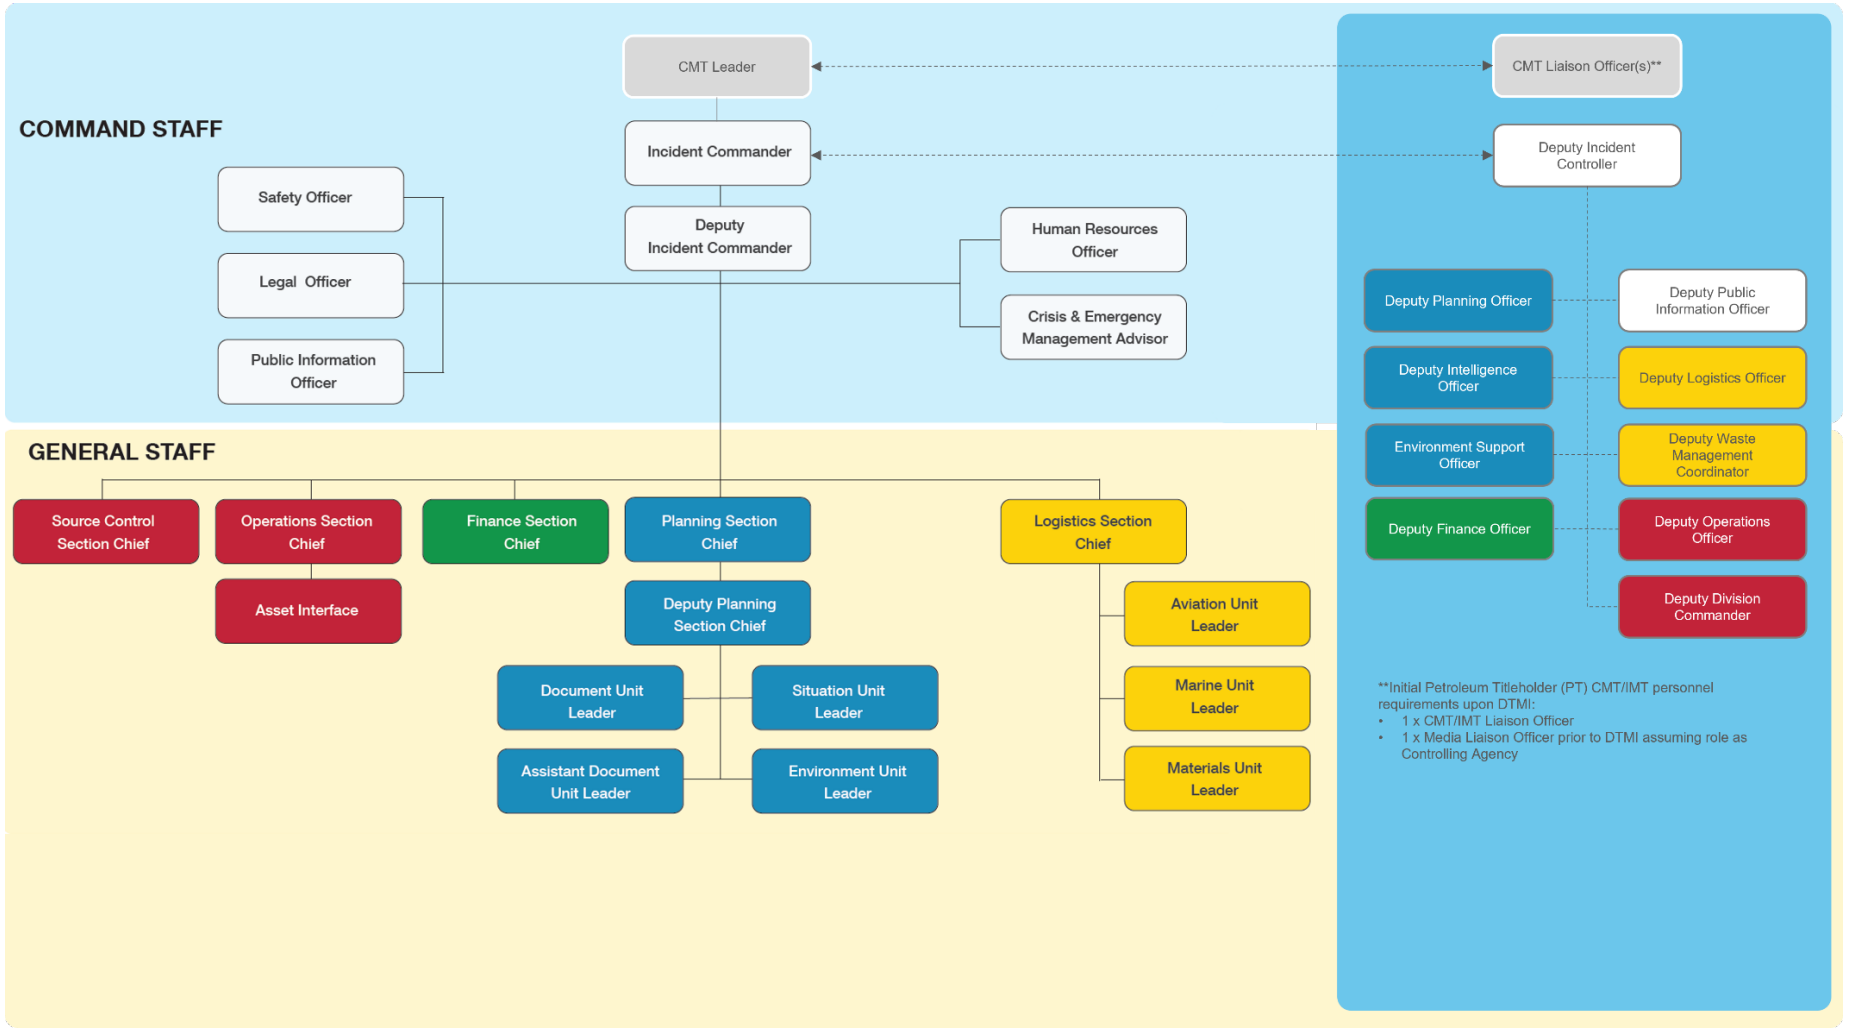
APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES[7]

The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).



The Control Agency/ Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DTMI. DTMI will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

[7] Adapted from DTMI Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside Incident Management Structure for Hydrocarbon Spill (including Woodside Liaison Officers Command Structure within DTMI IMT if required) is shown below. Woodside's CIMT would operate from the Emergency Operations Centre (EOC) at the Woodside headquarters in Perth.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DTMI

In the event that DTMI is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DTMI IMT.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DTMI Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8 am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DTMI's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside personnel[8]	Key Duties	#
DTMI Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and SMPC. • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DTMI IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DTMI IMT. • Facilitate effective communications and coordination between the PT IC and the DTMI IC. • Offer advice to the DTMI IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DTMI IMT.	1
DTMI IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DTMI IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT. • Facilitate the provision of relevant mapping originating from the DTMI IMT to the PT IMT.	1
DTMI IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans.	1

[8] *These positions would be mobilised, in consultation with DTMI, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [11]*
