Sea Urchin Fishery (Figure A-63)	White sea urchin (*Heliocidaris erythrogramma*), black, long-spined sea urchin (*Centrostephanus rodgersii*)	The Sea Urchin Fishery comprises of four individual management zones. The central zone covers Victorian waters from Hopkins River to Lakes Entrance. The eastern zone extends from Lakes Entrance to the New South Wales border. The target species are the white sea urchin (*Heliocidaris erythrogramma*) and the black, long-spined sea urchin (*Centrostephanus rodgersii*). The sea urchin is usually collected by hand by divers. Currently, sea urchin will only be harvested in eastern Victoria, primarily out of Mallacoota, and in Port Phillip Bay.	57.28%
Ocean (general) Fishery	A range of fish species including salmon, snapper, whiting, trevally, mackerel and gummy shark. As well as calamari and rays.	This fishery jurisdiction is the entire Victorian catch and effort grids, excluding bays and inlets. Haul seine gears, multi-filament mesh nets, non-shark monofilament mesh nets, hand lines, hand squid jigs, longlines, drop lines and troll lines are all used.	Approximately 48.87%
Trawl (inshore)	A range of fish species including flathead, whiting and mackerel as well as eastern king prawns, eastern school pawns, bug, sand crab and octopus.	This fishery jurisdiction is also the entire Victorian catch and effort grids, excluding bays and inlets. Trawling is the primary fishing method used.	Approximately 48.87%

A.1.6.4 Tasmanian fisheries

Tasmanian-managed commercial fisheries with jurisdiction to fish in the waters of the EMBA are described in Table A-11.

Table A-11 Tasmanian managed fisheries within the EMBA

Tasmanian fishery	Target species	Description	Percentage overlap with the EMBA
Abalone Fishery (Figure A-64)	Blacklip abalone (*Haliotis rubra*), and greenlip abalone (*H. laevigata*)	The Tasmanian Abalone Fishery is the largest wild abalone fishery in the world and the fishery area surrounds the entire island of Tasmania extending northwards into Bass Strait to include Bass Strait islands such as the Furneaux Group. The Tasmanian wild harvest Abalone Fishery for blacklip (*H. rubra*) and greenlip (*H. laevigata*) produces 25% of the total annual global production of wild caught abalone and is harvested by divers. Annual catch limits are set by the government, and the limits are spread across the fishing zones to manage resource sustainability. This system includes closures of some parts of the fishery as published by the Department of Natural Resources and Environment Tasmania on their website (Department of Natural Resources and Environment Tasmania, n.d.(a)).	7.44%
Scalefish Fishery (Figure A-65)	Wrasse banded morwong (*Cheilodactylus spectabilis*) southern calamari (*Sepioteuthis australis*)	The Tasmanian Scalefish Fishery is a multi-species and multi-gear fishery that is predominantly made up of small owner operated commercial businesses and a large and diverse recreational fishery. Some of the species commercially targeted include banded morwong, southern calamari, octopus, tiger flathead, school whiting, southern garfish, wrasse, Gould's squid, bastard trumpeter, blue warehou, silver warehou, flounder, silver trevally, striped trumpeter and small pelagic species. The main gear types include gillnet, hooks and seine nets, other fishing gears in use include traps, Danish-seine, dip nets and spears. For many commercial operators, scalefish represent an adjunct to other activities, for instance rock lobster fishing (Department of Natural Resources and Environment Tasmania, n.d.(b)).	13.09%
Rock Lobster Fishery (Figure A-66)	Southern rock lobster (*Jasus edwardsii*)	The Rock Lobster Fishery is a major Tasmanian industry providing significant benefits from exports from the commercial fishery. The southern rock lobster (*Jasus edwardsii*) commonly known as crayfish, lives in a variety of habitats ranging from shallow rocky inshore pools out to the continental shelf. Pots are used as the catch method and over 300 licences issued each year.	16.22%

Tasmanian fishery	Target species	Description	Percentage overlap with the EMBA
		The fishery is managed by quota management, supplemented by size limits, gear restrictions and seasonal closures (Fishing Tasmania, 2025).	
Giant Crab Fishery (Figure A-66)	Giant crabs (*Pseudocarcinus gigas*)	The Giant Crab Fishery is a comparatively small fishery with annual harvest quota for the 2024 - 2025 maintained at 20.7t, but is of relatively high value, with the landed valued estimated to be around AUD$2 million. The Tasmanian Giant Crab Fishery is managed by limited entry, setting a total annual commercial catch and by an individual transferable quota management system. This regime is supplemented by size limits, gear restrictions and seasonal closures. The permitted gear types are pot (or trap) for the commercial fishery (Ogier, et al., 2018).	16.22%
Scallop Fishery (Figure A-66)	Commercial scallop (*Pecten fumatus*)	The Scallop Fishery targets commercial scallop (*Pecten fumatus*) using a scallop harvester (dredge). Although commercial fishers can legally take the doughboy scallop and the queen scallop, these species have only minor commercial significance in Tasmania. Pre-season surveys are carried out to determine which areas meet predetermined criteria and can be opened for scallop fishing. The market for commercial harvested scallops is largely domestic. Scallop beds occur on the shelf in water deeper than 20m (Ogier, et al., 2018).	16.22%
Commercial Dive Fishery (Figure A-67)	Shortspined sea urchin (*Heliocidaris erythrogramma*), wavy periwinkles (*Lunella undulata*) and longspined sea urchin (*Centrostephanus rodgersii*)	The fishery targets three key species by hand from small vessels, including the shortspined sea urchin wavy periwinkles and the longspined sea urchin. It operates entirely in State waters in five separate management zones (central eastern, southeastern, northeastern, northern and eastern) (Department of Natural Resources and Environment Tasmania, n.d.(c)).	7.44%
Shellfish Fishery (Figure A-68)	Clams (*Veneruptis largillierti*), native oyster (*Ostrea angasi*), cockles (*Katelysia scalarina*) and wild	The commercial Shellfish Fishery includes clams and native oyster for which there are two licences each restricted to Georges Bay, and the wild Pacific oyster for which there is no cap in the number of licences that can be issued (Department of Natural Resources and Environment Tasmania, n.d.(d)).	8.05%

Tasmanian fishery	Target species	Description	Percentage overlap with the EMBA
	Pacific oyster (*Crassostrea gigas*)	Temperate climate bivalves generally have two spawning periods within a year following spring and autumnal peaks in phytoplankton production.	
Marine Plant Fishery	Wakame (*Undaria pinnatifida)* and bull kelp (*Durvillaea potatorum*)	The only marine plant that can be harvested directly from the water is wakame, a noxious pest species. The Marine Plant Fishery is managed under limited introduced marine plant fishing licences to mitigate the risk of spreading. Other marine plants that have been cast onshore, such as bull kelp, can be collected with a commercial beach-cast harvest licence.	N/A

A.1.6.5 New South Wales fisheries

New South Wales–managed commercial fisheries with jurisdiction to fish in the waters of the EMBA are described in Table A-12. Please note that the New South Wales fisheries does not have data publicly available, therefore mapping and percentage overlaps cannot be attained.

Table A-12 New South Wales managed fisheries within the EMBA

New South Wales fishery	Target species	Description	Percentage overlap with the EMBA
Abalone Fishery	Blacklip abalone (*Haliotis rubra*)	The blacklip abalone forms the basis of the Abalone Fishery in New South Wales. Abalone are commercially harvested from rocky reefs by divers typically using surface-supplied air or scuba. In practice, most commercial abalone fishing takes place on the south coast of New South Wales, primarily from Jervis Bay to the Victorian border, with most abalone found close to the shore.	N/A – data unavailable.
Estuary General Fishery	Sea mullet (*Mugil cephalus*), luderick (*Girella tricuspidata*), yellowfin bream (*Acanthopagrus australis*), school prawn (*Metapenaeus macleayi*), blue swimmer crab (*Portunus pelagicus*), dusky flathead (*Platycephalus fuscus*), sand whiting (*Sillago ciliata*), pipi (*Donax deltoides*), mud crab (*Scylla serrata*), silver diddy (*Gerres subfasciatus*)	The Estuary General Fishery is a diverse multi-species multi-method fishery that may operate in 76 of the New South Wales estuarine systems. This fishery is a significant contributor to regional and State economies providing high quality seafood and bait to the community. The fishery includes all forms of commercial estuarine fishing (other than estuary prawn trawling) in addition to the gathering of pipis and beachworms from ocean beaches. The most frequently used fishing methods are mesh and haul netting. Other methods used include trapping, hand-lining and hand-gathering. Sea mullet, luderick, yellowfin bream, school prawn, blue swimmer crab, dusky flathead, sand whiting, pipi, mud crab and silver biddy make up over 80% of the catch (Industry and Investment NSW, 2024).	N/A – data unavailable.
Lobster Fishery	Primary: eastern rock lobster (*Sagmaraisus verreauxi*). Other: southern rock lobster (*Jasus edwardsii*), tropical rock lobster (*Panulirus longipes* and *P. ornatus*).	The Lobster Fishery extends from the Queensland border to the Victorian border and includes all waters under jurisdiction of New South Wales to around 128km from the coast. It is characterised by inshore and offshore sectors. Inshore fishers use small beehive or square traps in waters up to 10m in depth, whilst offshore fishers use large rectangular traps.	N/A – data unavailable.

New South Wales fishery	Target species	Description	Percentage overlap with the EMBA
Ocean Hauling Fishery	Pilchards (*Sardinops sagax*), sea mullet (*Mugil cephalus*), Australian salmon (*Arripis trutta*), blue mackerel (*Scomber australasicus*), yellowtail scad (*Trachurus novaezelandiae*), yellowfin bream (*Acanthopagrus australis*)	The Ocean Hauling Fishery is broken up into seven regions along the New South Wales coast and targets approximately 20 finfish species using commercial hauling and purse seine nets from sea beaches and in ocean waters within 3nm of the coast.	N/A – data unavailable.
Ocean Trap and Line Fishery	Primary: snapper (*Pagrus auratus)*, yellowtail kingfish (*Seriola lalandi)*, leatherjackets (*Oligoplites saurus*), bonito (*Gymnosarda unicolor*), silver trevally (*Pseudocaranx georgianus*). Other: rubberlip (grey) morwong (*Nemadactylus douglasii*), blue-eye trevalla (*Hyperoglyphe antarctica*), sharks spp. various, bar cod (*Hyporthodus ergastularius*), yellowfin bream (*Acanthopagrus latus*), spanner crabs (*Ranina ranina*)	The Ocean Trap and Line Fishery is a multi-method, multi species fishery targeting demersal and pelagic fish along the entire New South Wales coast, in continental shelf and slope waters. The fishery is a share management fishery. This means that commercial fishers must hold sufficient shares to be eligible for an endorsement to operate in the fishery. An endorsement authorises the use of specific gear to take fish for sale from certain waters.	N/A – data unavailable.
Ocean Trawl Fishery	Primary: eastern king prawn (*Melicertus plebejus*), eastern school prawn (*Metapenaeus macleaya*), royal red prawn	There are two sectors to the ocean trawl fishery: the prawn trawl sector and the fish trawl sector. Both sectors use otter trawl nets. The fishery is a share management fishery; meaning commercial fishers must hold sufficient shares to be eligible for an endorsement to operate in the fishery. An endorsement authorises the use of specific gear to take fish for	N/A – data unavailable.

New South Wales fishery	Target species	Description	Percentage overlap with the EMBA
	(*Haliporoides sibogae*), balmain bug (*Ibacus spp.*), octopus spp. Various (*octopodidae*), cuttlefish (*Sepia spp*), southern calamari (*Sepioteuthis australis*), eastern school whiting (*Sillago flindersi*), stout whiting (*Sillago robusta*), tiger flathead (*Platycephalus richardsoni),* bluespotted flathead *(Platycephalus caeruleopunctatus*), silver trevally (*Pseudocaranx georgianus),* eastern shovelnose ray (*Aptychotrema rostrata*). Secondary: blue swimmer crab (*Portunus armatus*), squid spp. various (Class: *chephalopoda*) gurnard/latchet (*Pterygotrigla andertoni, Pterygotrigla polyommata, Chelidonichthys kumu*), John dory (*Zeus faber*) angel shark (*Squatina spp*), flounder spp various (*Pleuronectidae/Bothidae*), red mullet various (*Mullidae*), redfish (*Centroberyx affinis*), leatherjacket spp. various (*Monocanthidae*), ocean perch	sale from certain waters. Many of the fishers endorsed for fish trawling are also endorsed for prawn trawling.	

New South Wales fishery	Target species	Description	Percentage overlap with the EMBA
	(*Helicolenus barathri, Helicolenus percoides),* mirror dory (*Zenopsis nebulosus*), sole spp. various (*Soleidae*), grey morwong (*Nemadactylus douglasii),* pink tilefish *(Branchiostegus wardi),* giant boarfish (*Paristiopterus labiosus*), shark spp. various		
Sea Urchin and Turban Shell Restricted Fishery	Sea urchin (*Echinometridae*), turban shell (*Turbinidae*)	The New South Wales Sea Urchin and Turban Shell Restricted Fishery is relatively small with few divers participating. The main constraint on development is high processing costs and limited domestic markets. Fishing for sea urchins is generally constrained to that part of the year when the roe is well developed. Turban shells are harvested year-round for their fleshy foot (Industry and Investment NSW, 2024). A number of the fishing sub regions have been closed to commercial fishing since 1994.	N/A – data unavailable.

A.1.6.6 Commercial aquaculture

The Sydney rock oyster (*Saccostrea glomerata*) is the main species grown in New South Wales. Commercial production in the State occurs in 41 estuaries between Eden in the south to the Tweed River in the north. Wallis Lake and the Hawkesbury River are the main producing areas.

The Sydney rock oyster industry in New South Wales is largely dependent on natural spawning. The first spawning of a Sydney rock oyster is usually as a male and subsequent spawning's as a female. During spawning, adult females disperse up to 20 million eggs and males hundreds of millions of sperms into the water when the tide and current are optimal for the widest distribution. Fertilisation takes place in the water column and development continues for up to three to four weeks as the larval stages of the oyster grow, with the 'spat' ultimately being caught on 'sticks'. Oysters are knocked off these sticks at six months to three years of age for growing intertidally on trays until maturity in three to four years. Alternative growing systems such as baskets and tumblers are also being used, and some oysters are grown sub tidally on rafts or on floating culture.

No commercial oyster leases exist in Victorian waters, however, a trial to culture Sydney rock oysters in the Gippsland Lakes system is currently under way. The Victorian Fisheries Authority and the GLaWAC have partnered to develop a native oyster industry in Gippsland. A trial commenced in October 2022 with over 10,000 Sydney rock oysters placed in four sites near Flanagan Island and Hopetoun channel. Initial results from the trial have been successful with growth rates comparable with commercial Sydney rock oyster growing areas in New South Wales. As a result, GLaWAC and the Victorian Fisheries Authority have agreed to move the trial to a more commercial scale to test the commercial viability with greater number of oysters. The trial is expected to finish in December 2027. On completion of a successful trial, it is envisaged GLaWAC will commence a commercial aquaculture operation at the selected trial sites, which may be within an existing industry partner (VFA, 2025).

The Sydney rock oyster is also farmed south of Hervey Bay, Queensland, with most leases occurring in Moreton Bay. The seasonal occurrence of the disease QX in southeastern Queensland waters restricts the tidal areas where oysters can be viably produced and limits the growing season.

Blue mussels are grown in aquaculture fishery reserves in Port Phillip Bay and Western Port. A small number of permits have also been issued to trial native seaweed culture in aquaculture fishery reserves, but commercial licences are not yet available.

A.1.6.7 Recreational fishing

Recreational fishing in Australia is a multibillion-dollar industry. Most recreational fishing typically occurs in nearshore coastal waters (shore or inshore vessels), and within bays and estuaries. Offshore fishing (>5km from the coast) only accounts for approximately 4% of recreational fishing activity in Australia; privately owned fishing vessels are likely to account for the majority of this offshore fishing activity (Henry & J.M.Lyle, 2003)

The variation in recreational fishing intensity along the coast is illustrated in Figure A-69; there is moderate to high recreational use along most of the Victorian coast in the EMBA. Common recreational fish species include tiger flathead, bream, snapper, Australian salmon, and lobster. Offshore catches can include mackerel, tuna, groper, and shark.

Recreational fishing occurs mostly amongst the Nooramunga Islands (near Corner Inlet), on the Gippsland Lakes, along Ninety Mile Beach, at Cape Conran Coastal Park and Croajingolong National Park and off the coast of Mallacoota, comprising both boat-based fishing and beach-based surf fishing. All these are outside the OA. Boat-based fishing includes charter operations and private craft launched from boat ramps in the region. Boatyards and slipways are located at Bullock Island (Lakes Entrance), Port Welshpool and Mallacoota. Common recreational fish species include tiger flathead (*Neoplatycephalus richardsoni*), bream, snapper, Australian salmon (*Arripis trutta*), and lobster. Offshore catches can include mackerel, tuna, groper and shark.

The Corner Inlet fishery area is one of southern Gippsland's greatest tourist attractions and a popular fishing destination for Victoria's growing recreational fishing sector. Recreational fishing in Victoria contributes close to $3 billion annually to the economy and recreational fishing in and around the Corner Inlet Fishery makes a significant contribution to the Victorian economy at a local, regional and State level (VFA, 2022).

In 2020, the Victorian Fisheries Authority published the *Gippsland Lakes Recreational Fishery Plan 2020* (VFA, 2020), which highlights the recovery strategies for this fishery, which includes improving fish habitat and waterway health.

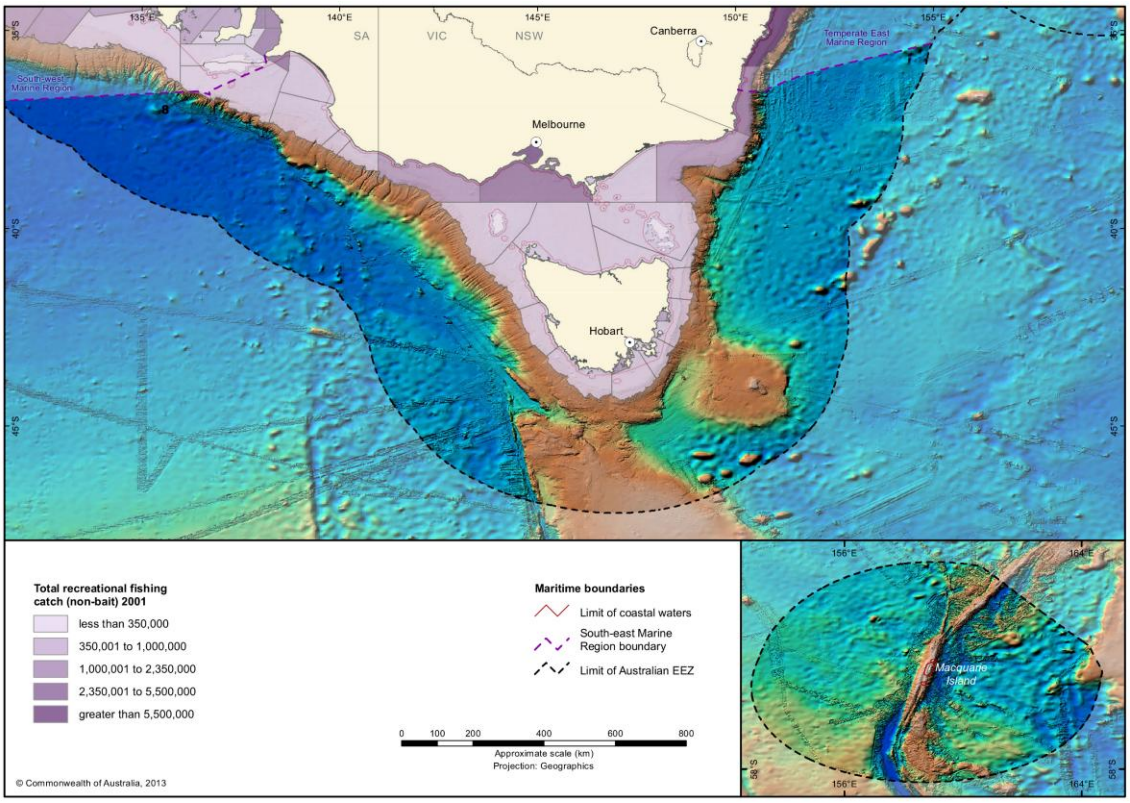

Figure A-69 Recreational fishing catch in temperate east (DoE, 2015a)

A.1.6.8 Tourism

The Australian coast and marine waters provide a diverse range of recreation and tourism opportunities, including scuba diving, charter boat cruises, cruise shipping, whale and wildlife watching, sailing, snorkelling, surfing, and kayaking.

For the financial year 2022 - 2023, the tourism industry contributed approximately $1.009 billion to the Gippsland economy, an increase of 7.3% compared to the 2018 - 2019 period, which represented a 5.7% contribution to the Victorian regional economy. Tourism also accounted for approximately 11,800 filled jobs in Gippsland for the 2022 - 2023 period, with a decrease of 1.7% from the 2018 - 2019 period, and represented a 8.9% contribution to the Victorian regional economy (DJSIR, 2024).In the year ending in September 2024, overnight visitors to the Gippsland area were predominantly Australian (99.1%), with low (0.9%) international visitors. The total number of visitors to the region reached 3,582,000 domestic daytrip visitors, 2,439,000 overnight domestic visitors, and 54,000 overnight international visitors (Tourism Victoria, 2024). In East Gippsland, primary tourist locations are the Gippsland Lakes (the largest inland waterway in Australia), Lakes Entrance, Marlo, Cape Conran and Mallacoota. The area is renowned for its nature-based tourism (e.g. Croajingolong National Park), recreational fishing and water sports (lake and beaches) (Travel Victoria, n.d.).

New South Wales is Australia's number one destination, with domestic and international visitors delivering almost $52.9 billion in expenditure to the State's visitor economy in the year ending September 2024 (Destination NSW, n.d.). The South Coast Region includes all the towns from Wollongong to the Victorian border. In the year ending in June 2024, the South Coast Region had a total of 11.3 million visitors with an expenditure of $4.3 billon (Destination NSW, 2024a). In the year ending in June 2024, the northern New South Wales regions, including Coffs Harbour, Ballina and North Coast had a total of 13.2 million visitors with an expenditure of $5.9 billon (Destination NSW, 2024b).

Tourism in Tasmania directly and indirectly contributes around $2.59 billion or about 6.7% to Tasmania's gross product in 2022 - 2023 (Toursim Tasmania, 2025). Tourism directly and indirectly supports around 37,300 jobs in Tasmania or about 12.1% of total Tasmanian employment – the highest share in the country. Visitors spent a total of $3.853 billion on accommodation, attractions, tours, transport and other goods and services during this period (Toursim Tasmania, 2025).

A.1.6.9 Future industries

In December 2022, an area off Gippsland was declared as suitable for offshore renewable energy development.

Following the declaration, a total of 37 applications from offshore wind developers were received. From the 37 applications, 12 projects were awarded licences in July 2024 for the Gippsland offshore wind declared area (DEECA, 2024). As of December 2025, Gippsland Dawn Project (Bluefloat), Kent Offshore Wind Project (RWE) and Gippsland Skies (AGL) feasibility licenses have been withdrawn, resulting in 9 feasibility licences remaining for offshore wind in Gippsland (see Figure A-70). Licence holders are:

- High Sea Wind Pty Ltd
- Blue Mackerel North Pty Ltd
- Kut-Wut Bratauallung Pty Ltd
- Ørsted Offshore Australia 1 Pty Ltd (Gippsland 01)
- Star of the South Wind Farm Pty Ltd (SOTS)
- Iberdrola Australia OW 2 Pty Ltd (Aurora Green)
- Navigator North Project Pty Ltd
- Ørsted Offshore Australia 1 Pty Ltd (Gippsland 02)
- Greater Eastern Offshore Wind Farm Project Co Pty Ltd.

Licence holders must develop management plans for approval by the offshore infrastructure regulator. Construction can only begin after the feasibility stage is completed and developers have gained all environmental and management plans approvals (DCCEEW, 2025c).

The EMBA overlaps with the 9 remaining offshore wind projects that were granted a feasibility licence (Figure A-70). Figure A-70 reflects the information available on the AMSIS website at the time this EP was prepared and therefore continues to show Gippsland Skies (FL-003).

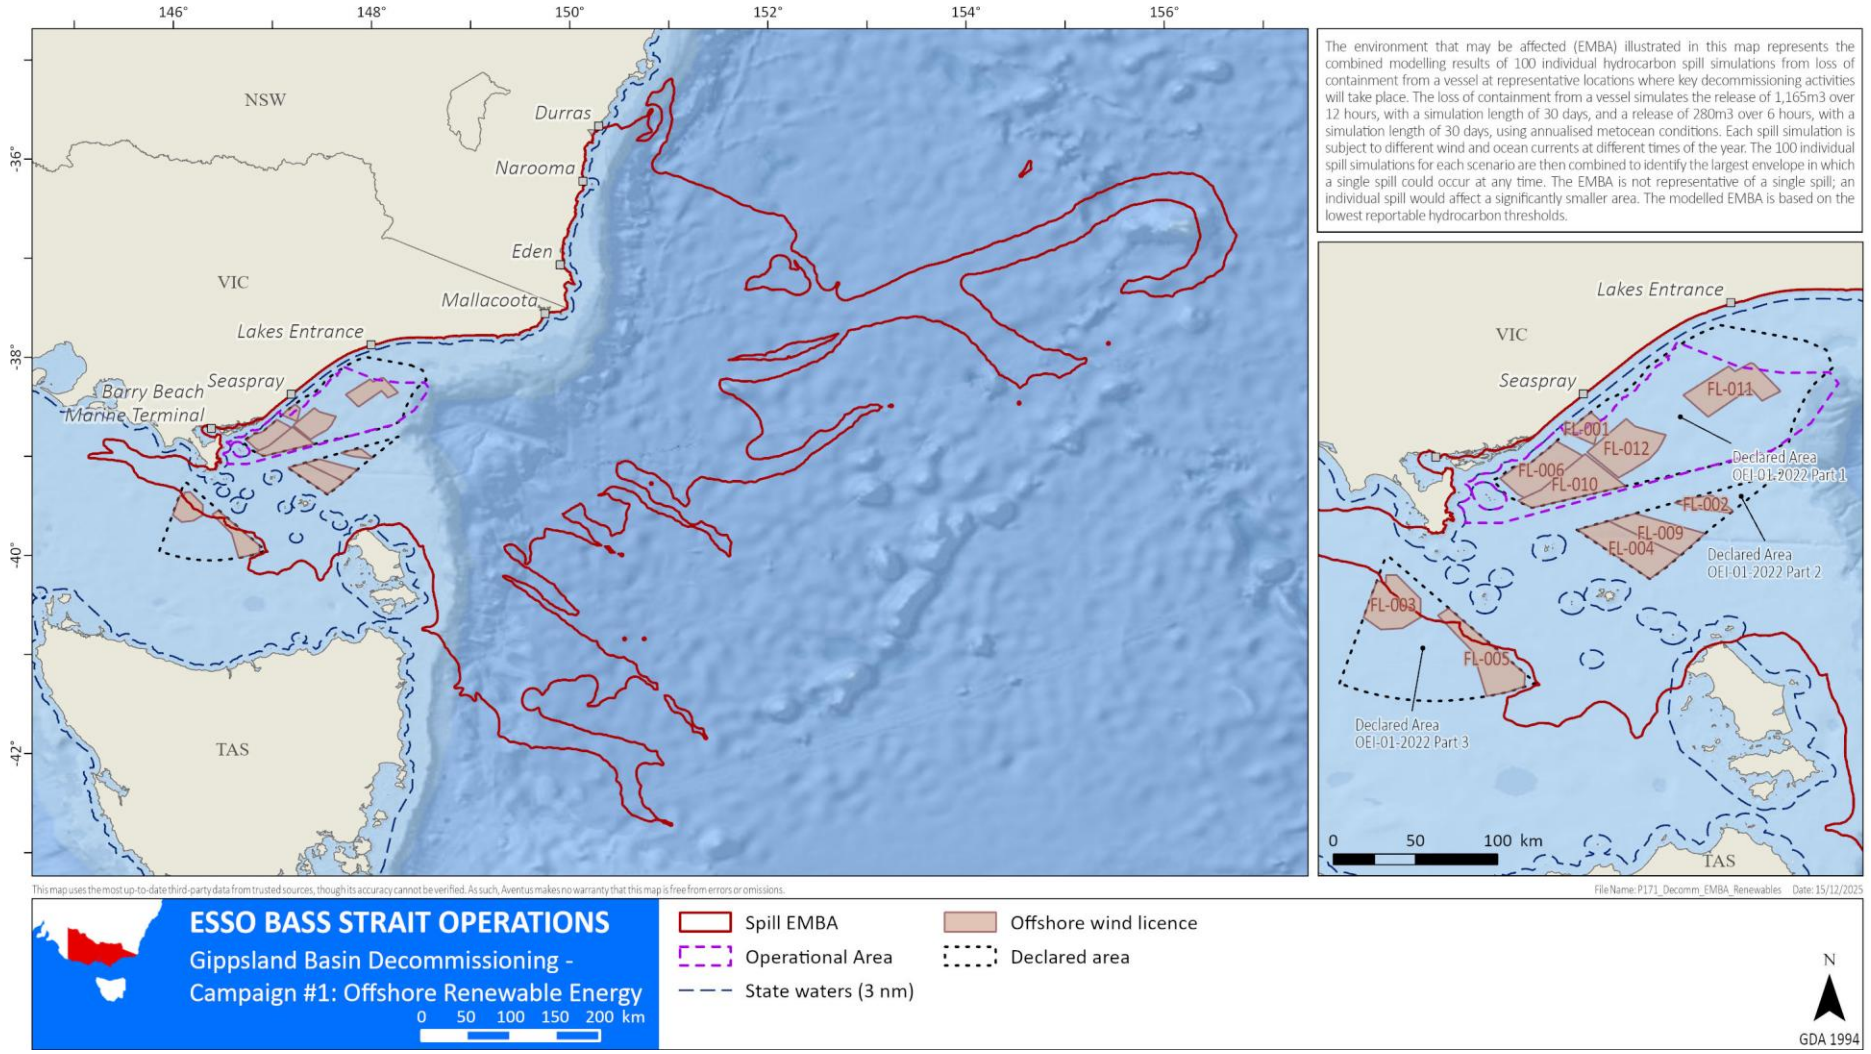

Figure A-70 Offshore renewable energy declared areas and licence areas within the EMBA

A.1.6.10 Oil and gas

Statistics from 2018 – 2019 showed that oil (nearly 39%) and gas (26%) remained Australia's largest energy sources (APPEA, 2021). The industry also contributed approximately $27.9 billion to the Australian economy during the 2019 – 2020 financial year (APPEA, 2021).

Victoria's petroleum (oil and gas) exploration and production is concentrated in the offshore Commonwealth waters of the Otway and Gippsland Basins; there are a number of current exploration and offshore production permit areas within both basins (Figure A-71). Information on the Production Licences, Exploration Permits and Retention Leases within Gippsland Basin at the time of writing are presented in Table A-13.

The Gippsland Basin in southeastern Australia is located about 200km east of the city of Melbourne, covering about 46,000km^2, of which two thirds are located offshore. The Gippsland Basin is recognised as one of Australia's primary hydrocarbon provinces, having continually produced oil and gas since the late 1960s.

In May 2022, remaining reserves were estimated at 1.64Tcf (1844.5PJ) of natural gas and ethane, and 94MMbbls (552.7PJ) of oil and natural gas liquids (Geoscience Australia, 2022). Several petroleum systems operate in the basin, with the largest oil and gas fields hosted by top-Latrobe Group (Eocene) shallow marine barrier sandstones, and additional discoveries made in intra-Latrobe Group (Upper Cretaceous–Paleocene) coastal plain and deltaic channel sandstones. Despite its mature status, parts of the basin remain underexplored and offer a variety of untested resources (Geoscience Australia, 2022).

A.1.6.11 Shipping

The southeast and eastern coasts are some of Australia's busiest in terms of shipping activity and volumes. This traffic includes international and coastal cargo trade, and passenger and ferry services. Major ports include Melbourne, Geelong, Western Port, Sydney and Brisbane, with other minor ports important to commercial and recreational fishing, yachts and other pleasure craft. Bass Strait is one of Australia's busiest shipping areas, with more than 3000 vessels passing through Bass Strait each year (NOO, 2002b).

A shipping exclusion zone (Area To Be Avoided (ATBA)) exists around the operating oil and gas platforms in the Gippsland Basin, whereby unauthorised vessels larger than 200 gross tonnes are excluded from entry (Figure A-72). Two traffic separation schemes have been implemented to enhance safety of navigation around the ATBA by separating shipping into one-direction lanes for vessels heading north-eastwards and those heading south-westwards. One separation area is located south of Wilsons Promontory, and the other south of the KFB platform.

Figure A-73 shows vessel traffic within the EMBA based on January to August 2024 Australian Maritime Safety Authority (AMSA) data.

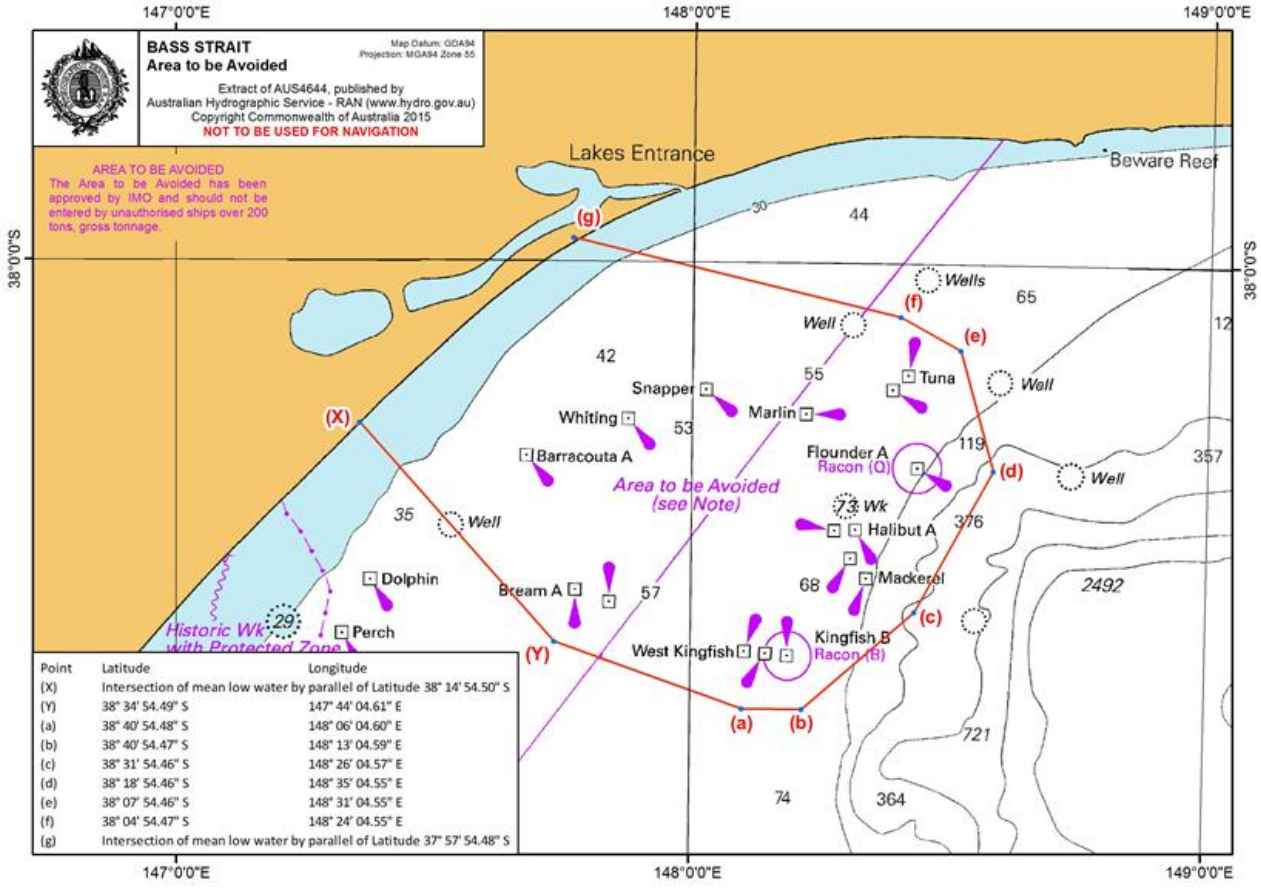

Figure A-72 Bass Strait ATBA (Australian Border Force, 2024)

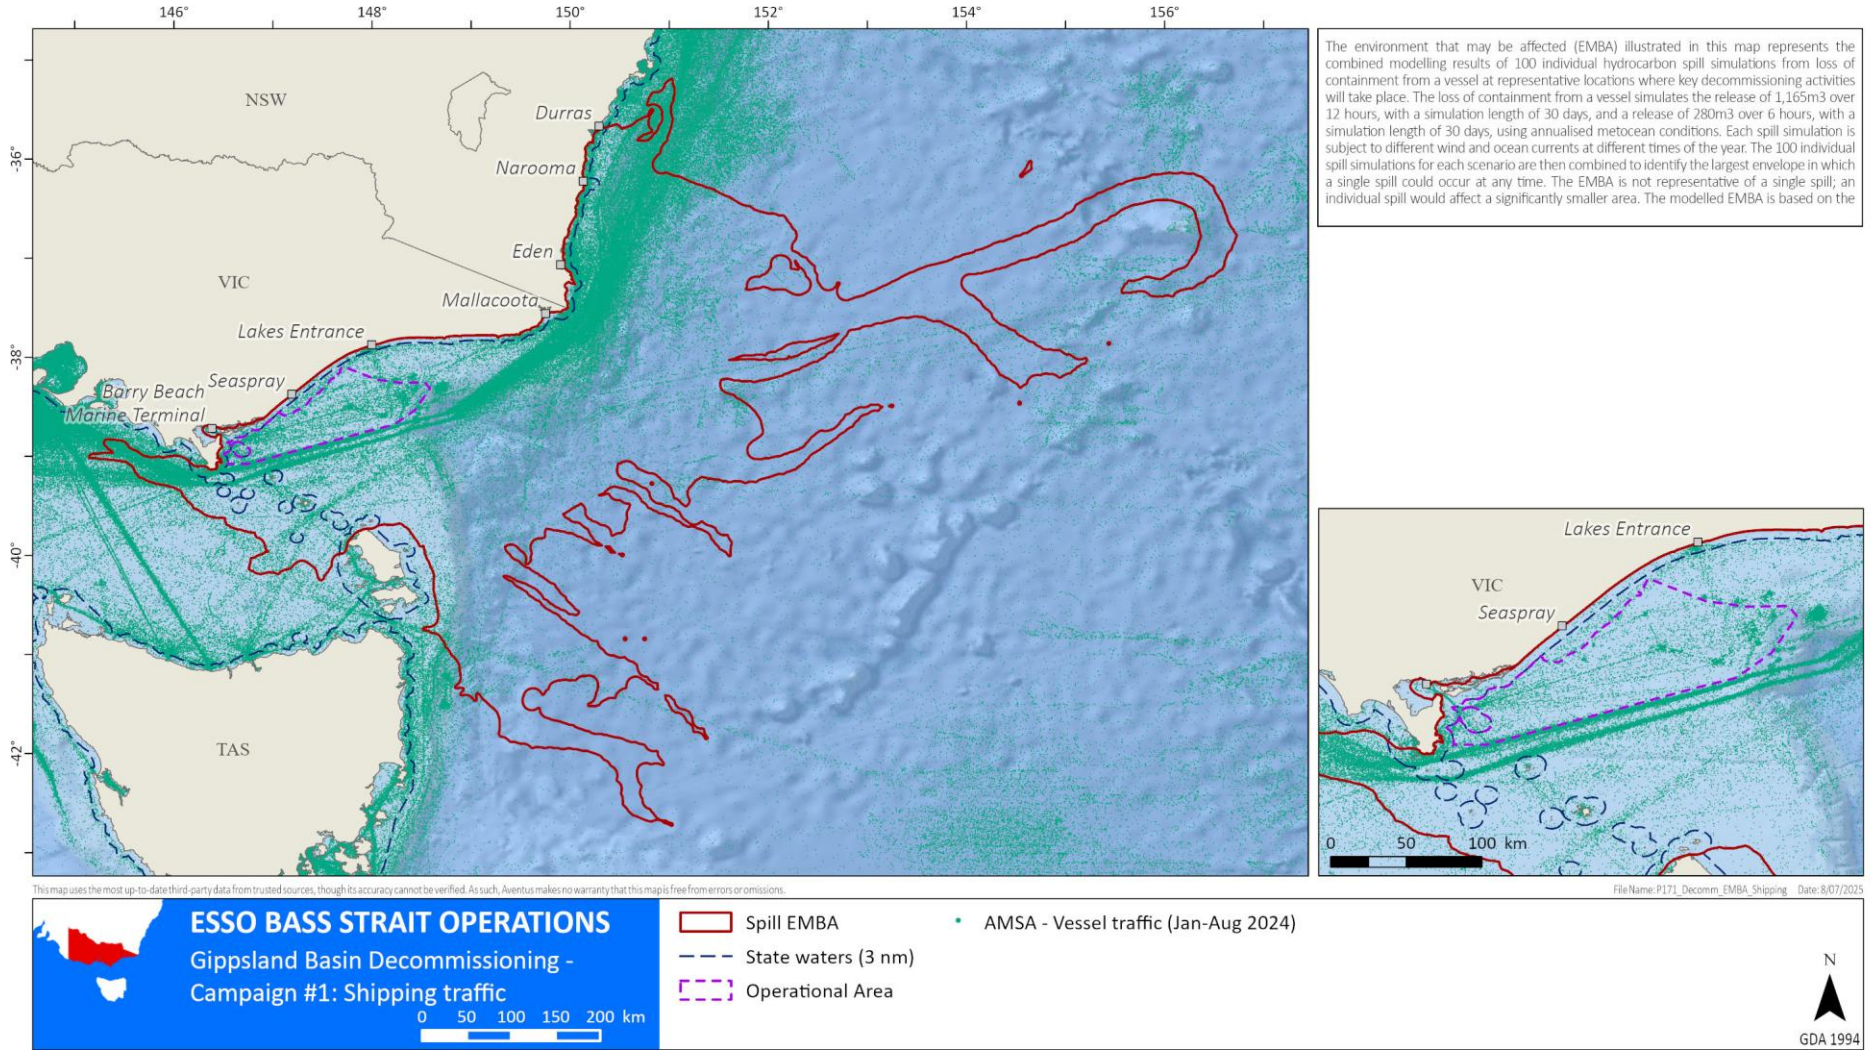

Figure A-73 Vessel traffic within the EMBA based on January – August 2024 AMSA data

A.1.6.12 Defence

The Australian Defence Force conducts a range of training, research activities, and preparatory operations in Australian waters (Figure A-74). These activities may include transit of naval vessels, training exercises, shipbuilding and repairs, hydrographic survey, surveillance and enforcement, demolition, use of explosives, use of radar, sonar, sonobuoys, flares, sensors and other equipment, and search and rescue.

The Port of Eden, located, within the EMBA at Twofold Bay, Eden (New South Wales) is a multi-purpose wharf that includes its use for naval operations). Primary training locations within the EMBA include the east Australia exercise area off the south coast of New South Wales.

Mine fields were laid in Australian waters during World War II. Post-war minefields were swept to remove mines and to make marine waters safe for maritime activities. There are three areas identified as dangerous due to unexploded ordnances, located south and east of Wilsons Promontory.

Appendix B: EPBC Act Listed Species in the OA and EMBA

Table B-1 EPBC Act listed fish (bony) species or species habitat that may occur within the OA and EMBA

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
Fish							
Acentronura tentaculata	Shortpouch pygmy pipehorse			✓			MO
Cosmocampus howensis	Lord Howe pipefish			✓			MO
Epinephelus daemelii	Black rockcod	V					LO
Galaxiella pusilla	Eastern dwarf galaxias	E					KO
Heraldia nocturna	Upside-down pipefish			✓			MO
Hippocampus abdominalis	Big-belly seahorse			✓			MO
Hippocampus breviceps	Short-head seahorse			✓			MO
Hippocampus minotaur	Bullneck seahorse			✓			MO
Hippocampus whitei	White's seahorse	E		✓			MO
Histiogamphelus briggsii	Crested pipefish			✓			MO
Histiogamphelus cristatus	Rhino pipefish			✓			MO
Hoplostethus atlanticus	Orange roughy	CD					LO
Hypselognathus rostratus	Knifesnout pipefish			✓			MO
Kaupus costatus	Deepbody pipefish, deep-bodied pipefish			✓			MO

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
Kimblaeus bassensis	Trawl pipefish, Bass Strait pipefish			✓			MO
Leptoichthys fistularius	Brushtail pipefish			✓			MO
Lissocampus caudalis	Australian smooth pipefish			✓			MO
Lissocampus runa	Javelin pipefish			✓			MO
Maroubra perserrata	Sawtooth pipefish			✓			MO
Mitotichthys mollisoni	Mollison's pipefish			✓			MO
Mitotichthys semistriatus	Halfbanded pipefish			✓			MO
Mitotichthys tuckeri	Tucker's pipefish			✓			MO
Mordacia praecox	Non-parasitic lamprey	E					LO
Notiocampus ruber	Red pipefish			✓			MO
Phycodurus eques	Leafy seadragon			✓			MO
Phyllopteryx taeniolatus	Common seadragon			✓			MO
Prototroctes maraena	Australian grayling	V					KO
Pugnaso curtirostris	Pugnose pipefish			✓			MO
Rexea solandri (eastern Australian population)	Eastern gemfish	CD					LO

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
Seriolella brama	Blue warehou	CD					KO
Solegnathus robustus	Robust pipehorse			✓			MO
Solegnathus spinosissimus	Spiny pipehorse			✓			MO
Solenostomus cyanopterus	Robust ghostpipefish			✓			MO
Stigmatopora argus	Spotted pipefish			✓			MO
Stigmatopora nigra	Widebody pipefish			✓			MO
Stipecampus cristatus	Ringback pipefish			✓			MO
Syngnathoides biaculeatus	Double-end pipehorse			✓			MO
Urocampus carinirostris	Hairy pipefish			✓			MO
Vanacampus margaritifer	Mother-of-pearl pipefish			✓			MO
Vanacampus phillipi	Port Phillip pipefish			✓			MO
Vanacampus poecilolaemus	Longsnout pipefish			✓			MO

Threatened Species:		Type of Presence:	
V	Vulnerable	MO	Species or species habitat may occur within the area
E	Endangered	LO	Species or species habitat likely to occur within the area
CD	Conservation Dependant	KO	Species or species habitat known to occur within the area

Note: Shaded species occur in both the OA and the EMBA. Non shaded species occur only in the EMBA.

Note: BIA spatial data has undergone revision, and some changes were not detected by the PMST. Where gaps were identified, data has been updated to align with information from the AMSIS.

Table B-2 EPBC Act listed fish (cartilaginous) species or species habitat that may occur within the OA and EMBA

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
Sharks and Rays							
Carcharias taurus	Grey nurse shark (east coast population)	CE	✓			f, r	KO
Carcharodon carcharias	Great white shark	V	✓		b, f	b, f	KO
Centrophorus harrissoni	Harrisson's dogfish	CD					LO
Carcharhinus longimanus	Oceanic whitetip shark		✓				MO
Centrophorus uyato	Little gulper shark	CD					LO
Galeorhinus galeus	School shark	CD					LO
Isurus oxyrinchus	Shortfin mako		✓				LO
Lamna nasus	Porbeagle		✓				LO
Mobula birostris	Giant manta ray		✓				KO
Rhincodon typus	Whale shark	V	✓				MO
Sphyrna lewini	Scalloped hammerhead	CD					MO

Threatened Species:
V Vulnerable
CE Critically Endangered

Type of Presence:
MO Species or species habitat may occur within the area
LO Species or species habitat likely to occur within the area

Biologically Important Areas:
b Breeding
f Foraging

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
CD Conservation Dependant	KO Species or species habitat known to occur within the area			m Migration r Reproduction			

Note: Shaded species occur in both the OA and the EMBA. Non shaded species occur only in the EMBA.

Note: BIA spatial data has undergone revision, and some changes were not detected by the PMST. Where gaps were identified, data has been updated to align with information from the AMSIS.

Table B-3 EPBC Act listed seabird and shorebird species or species habitat that may occur within the OA and EMBA

Scientific name	Common name	Threatened species	Migratory species	Listed marine species	BIA		Type of presence
					OA	EMBA	
Seabirds							
Albatross							
Diomedea antipodensis	Antipodean albatross	V	✓ (M)	✓	f	f	FKO

Appendix C: EPBC Act Protected Matters Report – OA

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 11-Dec-2024

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Acknowledgements

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	44
Listed Migratory Species:	45

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	66
Whales and Other Cetaceans:	29
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	56
Key Ecological Features (Marine):	1
Biologically Important Areas:	13
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Species or species habitat may occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
FISH		
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Prototroctes maraena		
Australian Grayling [26179]	Vulnerable	Species or species habitat may occur within area
Rexea solandri (eastern Australian population)		
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
MAMMAL		
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Eubalaena australis		
Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area
REPTILE		
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
SHARK		
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Centrophorus harrissoni		
Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area
Centrophorus uyato		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharias taurus Grey Nurse Shark [64469]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris melanotos		
Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat may occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area
Ardenna grisea as Puffinus griseus		
Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat may occur within area overfly marine area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
[Diomedea antipodensis](#) Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Diomedea antipodensis gibsoni as Diomedea gibsoni](#) Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Diomedea epomophora](#) Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Diomedea exulans](#) Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Diomedea sanfordi](#) Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
[Halobaena caerulea](#) Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
[Macronectes giganteus](#) Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
[Macronectes halli](#) Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Numenius madagascariensis](#) Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Pachyptila turtur Fairy Prion [1066]		Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma cervicalis White-necked Petrel [59642]		Species or species habitat may occur within area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna striata White-fronted Tern [799]		Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Species or species habitat may occur within area
Thalassarche bulleri platei as Thalassarche sp. nov. Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Fish		
Heraldia nocturna		
Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus abdominalis		
Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
Hippocampus breviceps		
Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Hippocampus minotaur		
Bullneck Seahorse [66705]		Species or species habitat may occur within area
Histiogamphelus briggsii		
Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
Histiogamphelus cristatus		
Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hypselognathus rostratus Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Vanacampus poecilolaemus](#) Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammal		
[Arctocephalus forsteri](#) Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area
[Arctocephalus pusillus](#) Australian Fur-seal, Australo-African Fur-seal [21]		Species or species habitat likely to occur within area
Reptile		
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
[Balaenoptera acutorostrata](#) Minke Whale [33]		Species or species habitat may occur within area
[Balaenoptera bonaerensis](#) Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Balaenoptera edeni](#) Bryde's Whale [35]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Lagenorhynchus obscurus](#) Dusky Dolphin [43]		Species or species habitat likely to occur within area
[Lissodelphis peronii](#) Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
[Megaptera novaeangliae](#) Humpback Whale [38]		Species or species habitat known to occur within area
[Mesoplodon bowdoini](#) Andrew's Beaked Whale [73]		Species or species habitat may occur within area
[Mesoplodon densirostris](#) Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
[Mesoplodon hectori](#) Hector's Beaked Whale [76]		Species or species habitat may occur within area
[Mesoplodon layardii](#) Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
[Mesoplodon mirus](#) True's Beaked Whale [54]		Species or species habitat may occur within area
[Orcinus orca](#) Killer Whale, Orca [46]		Species or species habitat likely to occur within area
[Physeter macrocephalus](#) Sperm Whale [59]		Species or species habitat may occur within area
[Pseudorca crassidens](#) False Killer Whale [48]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Upwelling East of Eden	South-east

Biologically Important Areas [Resource Information]

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Known to occur
Diomedea exulans antipodensis Antipodean Albatross [82269]	Foraging	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Sharks		
Carcharodon carcharias White Shark [64470]	Breeding (nursery area)	Known to occur
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

Appendix D: EPBC Act Protected Matters Report – EMBA

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 24-Jul-2024

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	19
Listed Threatened Species:	160
Listed Migratory Species:	89

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	28
Commonwealth Heritage Places:	3
Listed Marine Species:	135
Whales and Other Cetaceans:	36
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	7
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	128
Regional Forest Agreements:	5
Nationally Important Wetlands:	31
EPBC Act Referrals:	124
Key Ecological Features (Marine):	5
Biologically Important Areas:	41
Bioregional Assessments:	2
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands) [Resource Information]

Ramsar Site Name	Proximity	Buffer Status
Corner inlet	Within Ramsar site	In feature area
Gippsland lakes	Within Ramsar site	In feature area

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name	Buffer Status
Commonwealth Marine Areas (EPBC Act)	In feature area
Commonwealth Marine Areas (EPBC Act)	In feature area

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Araluen Scarp Grassy Forest	Endangered	Community may occur within area	In feature area
Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community	Endangered	Community likely to occur within area	In feature area
Brogo Vine Forest of the South East Corner Bioregion	Endangered	Community likely to occur within area	In feature area
Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community	Endangered	Community likely to occur within area	In feature area
Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland	Endangered	Community likely to occur within area	In feature area
Giant Kelp Marine Forests of South East Australia	Endangered	Community may occur within area	In feature area

Community Name	Threatened Category	Presence Text	Buffer Status
Gippsland Red Gum (Eucalyptus tereticornis subsp. mediana) Grassy Woodland and Associated Native Grassland	Critically Endangered	Community likely to occur within area	In feature area
Illawarra and south coast lowland forest and woodland ecological community	Critically Endangered	Community likely to occur within area	In feature area
Illawarra-Shoalhaven Subtropical Rainforest of the Sydney Basin Bioregion	Critically Endangered	Community likely to occur within area	In feature area
Littoral Rainforest and Coastal Vine Thickets of Eastern Australia	Critically Endangered	Community likely to occur within area	In feature area
Lowland Grassy Woodland in the South East Corner Bioregion	Critically Endangered	Community likely to occur within area	In feature area
Lowland Native Grasslands of Tasmania	Critically Endangered	Community likely to occur within area	In feature area
Natural Damp Grassland of the Victorian Coastal Plains	Critically Endangered	Community likely to occur within area	In feature area
Natural Temperate Grassland of the South Eastern Highlands	Critically Endangered	Community may occur within area	In buffer area only
River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria	Critically Endangered	Community likely to occur within area	In feature area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area	In feature area
Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)	Critically Endangered	Community likely to occur within area	In feature area
Tasmanian white gum (Eucalyptus viminalis) wet forest	Critically Endangered	Community likely to occur within area	In feature area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community may occur within area	In feature area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

BIRD			
Anthochaera phrygia			
Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Aphelocephala leucopsis](#) Southern Whiteface [529]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Aquila audax fleayi](#) Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area	In feature area
[Ardenna grisea](#) Sooty Shearwater [82651]	Vulnerable	Breeding known to occur within area	In feature area
[Arenaria interpres](#) Ruddy Turnstone [872]	Vulnerable	Roosting known to occur within area	In feature area
[Botaurus poiciloptilus](#) Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area	In feature area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]	Vulnerable	Roosting known to occur within area	In feature area
[Calidris canutus](#) Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
[Calidris tenuirostris](#) Great Knot [862]	Vulnerable	Roosting known to occur within area	In feature area
[Callocephalon fimbriatum](#) Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area	In feature area
[Calyptorhynchus lathami lathami](#) South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Charadrius leschenaultii](#) Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area	In feature area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat known to occur within area	In feature area
Dasyornis brachypterus Eastern Bristlebird [533]	Endangered	Species or species habitat known to occur within area	In feature area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat known to occur within area	In feature area
Grantiella picta Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area	In feature area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area	In feature area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Species or species habitat known to occur within area	In feature area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Endangered	Species or species habitat known to occur within area	In feature area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting known to occur within area	In feature area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Melanodryas cucullata cucullata South-eastern Hooded Robin, Hooded Robin (south-eastern) [67093]	Endangered	Species or species habitat likely to occur within area	In feature area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pardalotus quadragintus Forty-spotted Pardalote [418]	Endangered	Foraging, feeding or related behaviour may occur within area	In feature area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting known to occur within area	In feature area
Pterodroma heraldica Herald Petrel [66973]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Breeding known to occur within area	In feature area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area	In feature area
Pterodroma neglecta neglecta Kermadec Petrel (western) [64450]	Vulnerable	Foraging, feeding or related behaviour may occur within area	In feature area
Pycnoptilus floccosus Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area	In feature area
Stagonopleura guttata Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area	In feature area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In feature area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area	In feature area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area	In feature area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Thinornis cucullatus cucullatus Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area	In feature area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting known to occur within area	In feature area
CRUSTACEAN			
Engaeus martigener Furneaux Burrowing Crayfish [67220]	Endangered	Species or species habitat may occur within area	In feature area
Euastacus bidawalus Bidhawal Crayfish, Bidawal Crayfish, East Gippsland Spiny Crayfish [83136]	Endangered	Species or species habitat known to occur within area	In feature area
Euastacus diversus Orbost Spiny Crayfish [66782]	Endangered	Species or species habitat may occur within area	In feature area
FISH			
Epinephelus daemelii Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Galaxiella pusilla			
Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Endangered	Species or species habitat known to occur within area	In feature area
Hippocampus whitei			
White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat may occur within area	In feature area
Hoplostethus atlanticus			
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area	In feature area
Mordacia praecox			
Non-parasitic Lamprey, Precocious Lamprey [81530]	Endangered	Species or species habitat likely to occur within area	In feature area
Prototroctes maraena			
Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area	In feature area
Rexea solandri (eastern Australian population)			
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area	In feature area
Seriolella brama			
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area	In feature area
FROG			
Heleioporus australiacus			
Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area	In feature area
Litoria aurea			
Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area	In feature area
Litoria raniformis			
Southern Bell Frog,, Growling Grass Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area	In feature area
Litoria watsoni			
Southern Heath Frog, Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Mixophyes balbus			
Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat known to occur within area	In feature area
Uperoleia martini			
Martin's Toadlet [1873]	Endangered	Species or species habitat known to occur within area	In feature area
MAMMAL			
Antechinus minimus maritimus			
Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area	In feature area
Balaenoptera borealis			
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Balaenoptera musculus			
Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In feature area
Balaenoptera physalus			
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Chalinolobus dwyeri			
Large-eared Pied Bat, Large Pied Bat [183]	Endangered	Species or species habitat known to occur within area	In feature area
Dasyurus maculatus maculatus (SE mainland population)			
Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area	In feature area
Eubalaena australis			
Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area	In feature area
Isoodon obesulus obesulus			
Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area	In feature area
Mastacomys fuscus mordicus			
Broad-toothed Rat (mainland), Tooarrana [87617]	Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Petauroides volans			
Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area	In feature area
Petaurus australis australis			
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area	In feature area
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)			
Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area	In feature area
Potorous longipes			
Long-footed Potoroo [217]	Endangered	Species or species habitat known to occur within area	In feature area
Potorous tridactylus trisulcatus			
Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pseudomys fumeus			
Smoky Mouse, Konoom [88]	Endangered	Species or species habitat likely to occur within area	In feature area
Pseudomys novaehollandiae			
New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pteropus poliocephalus			
Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area	In feature area
PLANT			
Acacia caerulescens			
Limestone Blue Wattle, Buchan Blue, Buchan Blue Wattle [21883]	Vulnerable	Species or species habitat known to occur within area	In feature area
Acacia constablei			
Narrabarba Wattle [10798]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Acacia georgensis			
Bega Wattle [9848]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Acacia lanigera var. gracilipes [31652]	Endangered	Species or species habitat may occur within area	In feature area
Amphibromus fluitans River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area	In feature area
Astrotricha crassifolia Thick-leaf Star-hair [10352]	Vulnerable	Species or species habitat may occur within area	In feature area
Astrotricha sp. Wingan Inlet (J.A.Jeanes 2268) Wingan Star-hair [85675]	Endangered	Species or species habitat known to occur within area	In feature area
Caladenia caudata Tailed Spider-orchid [17067]	Vulnerable	Species or species habitat may occur within area	In feature area
Caladenia orientalis Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area	In feature area
Caladenia tessellata Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calochilus pulchellus Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat known to occur within area	In feature area
Commersonia prostrata Dwarf Kerrawang [87152]	Endangered	Species or species habitat known to occur within area	In feature area
Correa baeuerlenii Chef's Cap [17007]	Vulnerable	Species or species habitat known to occur within area	In feature area
Correa lawrenceana var. genoensis Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Corunastylis rhyolitica listed as Genoplesium rhyoliticum			
Pambula Midge-orchid, Rhyolite Midge Orchid [78697]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Corunastylis vernalis listed as Genoplesium vernale			
East Lynne Midge-orchid [78699]	Vulnerable	Species or species habitat known to occur within area	In feature area
Cryptostylis hunteriana			
Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area	In feature area
Deyeuxia ramosa			
Climbing Bent-grass [87970]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Dianella amoena			
Matted Flax-lily [64886]	Endangered	Species or species habitat known to occur within area	In feature area
Dodonaea procumbens			
Trailing Hop-bush [12149]	Vulnerable	Species or species habitat known to occur within area	In feature area
Eucalyptus stenostoma			
Jillaga Ash [3976]	Endangered	Species or species habitat may occur within area	In feature area
Eucalyptus strzeleckii			
Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area	In feature area
Genoplesium baueri			
Yellow Gnat-orchid, Bauer's Midge Orchid, Brittle Midge Orchid [7528]	Endangered	Species or species habitat may occur within area	In feature area
Glycine latrobeana			
Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area	In feature area
Haloragis exalata subsp. exalata			
Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Leionema ralstonii [64926]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Lepidium hyssopifolium Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat likely to occur within area	In feature area
Persicaria elatior Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pomaderris cotoneaster Cotoneaster Pomaderris [2043]	Endangered	Species or species habitat may occur within area	In feature area
Pomaderris parrisiae Parris' Pomaderris [22119]	Vulnerable	Species or species habitat known to occur within area	In feature area
Prasophyllum affine Jervis Bay Leek Orchid, Culburra Leek-orchid, Kinghorn Point Leek-orchid [2210]	Endangered	Species or species habitat may occur within area	In feature area
Prasophyllum frenchii Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area	In feature area
Prasophyllum spicatum Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area	In feature area
Prostanthera galbraithiae Wellington Mintbush [64959]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pterostylis chlorogramma Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area	In feature area
Pterostylis cucullata Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Pterostylis tenuissima Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area	In feature area
Rhizanthella slateri Eastern Underground Orchid [11768]	Endangered	Species or species habitat may occur within area	In feature area
Rhodamnia rubescens Scrub Turpentine, Brown Malletwood [15763]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Senecio psilocarpus Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Spyridium cinereum Tiny Spyridium [13564]	Endangered	Species or species habitat known to occur within area	In feature area
Syzygium paniculatum Magenta Lilly Pilly, Magenta Cherry, Daguba, Scrub Cherry, Creek Lilly Pilly, Brush Cherry [20307]	Vulnerable	Species or species habitat may occur within area	In feature area
Thelymitra epipactoides Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area	In feature area
Thelymitra matthewsii Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Thelymitra orientalis Hoary Sun-orchid [88011]	Critically Endangered	Species or species habitat may occur within area	In buffer area only
Thesium australe Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat known to occur within area	In feature area
Westringia davidii [19079]	Vulnerable	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Xerochrysum palustre Swamp Everlasting, Swamp Paper Daisy [76215]	Vulnerable	Species or species habitat known to occur within area	In feature area
Zieria tuberculata Warty Zieria [56736]	Vulnerable	Species or species habitat known to occur within area	In feature area
REPTILE			
Aprasia parapulchella Pink-tailed Worm-lizard, Pink-tailed Legless Lizard [1665]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Delma impar Striped Legless Lizard, Striped Snake-lizard [1649]	Vulnerable	Species or species habitat may occur within area	In feature area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Hoplocephalus bungaroides Broad-headed Snake [1182]	Endangered	Species or species habitat may occur within area	In feature area
Lissolepis coventryi Swamp Skink, Eastern Mourning Skink [84053]	Endangered	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Natator depressus			
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
SHARK			
Carcharias taurus (east coast population)			
Grey Nurse Shark (east coast population) [68751]	Critically Endangered	Congregation or aggregation known to occur within area	In feature area
Carcharodon carcharias			
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area	In feature area
Centrophorus harrissoni			
Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area	In feature area
Centrophorus uyato			
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area	In feature area
Galeorhinus galeus			
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area	In feature area
Rhincodon typus			
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In feature area
Sphyrna lewini			
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat may occur within area	In feature area

Listed Migratory Species			[Resource Information]
Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Anous stolidus			
Common Noddy [825]		Species or species habitat may occur within area	In feature area
Apus pacificus			
Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area	In feature area
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Breeding known to occur within area	In feature area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area	In feature area
Ardenna tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area	In feature area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area	In feature area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area	In feature area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area	In feature area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area	In feature area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area	In feature area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area	In feature area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Thalassarche impavida			
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche melanophris			
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche salvini			
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche steadi			
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Migratory Marine Species			
Balaenoptera bonaerensis			
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area	In feature area
Balaenoptera borealis			
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Balaenoptera edeni			
Bryde's Whale [35]		Species or species habitat likely to occur within area	In feature area
Balaenoptera musculus			
Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In feature area
Balaenoptera physalus			
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Caperea marginata			
Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area	In feature area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area	In feature area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area	In feature area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area	In feature area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area	In feature area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Megaptera novaeangliae](#) Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area	In feature area
[Mobula birostris as Manta birostris](#) Giant Manta Ray [90034]		Species or species habitat known to occur within area	In feature area
[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
[Orcinus orca](#) Killer Whale, Orca [46]		Species or species habitat likely to occur within area	In feature area
[Physeter macrocephalus](#) Sperm Whale [59]		Species or species habitat may occur within area	In feature area
[Rhincodon typus](#) Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In feature area
Migratory Terrestrial Species			
[Cuculus optatus](#) Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area	In feature area
[Hirundapus caudacutus](#) White-throated Needletail [682]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Monarcha melanopsis](#) Black-faced Monarch [609]		Species or species habitat known to occur within area	In feature area
[Motacilla flava](#) Yellow Wagtail [644]		Species or species habitat may occur within area	In feature area
[Myiagra cyanoleuca](#) Satin Flycatcher [612]		Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Rhipidura rufifrons](#) Rufous Fantail [592]		Species or species habitat known to occur within area	In feature area
[Symposiachrus trivirgatus as Monarcha trivirgatus](#) Spectacled Monarch [83946]		Species or species habitat known to occur within area	In feature area
Migratory Wetlands Species			
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
[Arenaria interpres](#) Ruddy Turnstone [872]	Vulnerable	Roosting known to occur within area	In feature area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]	Vulnerable	Roosting known to occur within area	In feature area
[Calidris alba](#) Sanderling [875]		Roosting known to occur within area	In feature area
[Calidris canutus](#) Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat known to occur within area	In feature area
[Calidris pugnax as Philomachus pugnax](#) Ruff [91256]		Roosting known to occur within area	In feature area
[Calidris ruficollis](#) Red-necked Stint [860]		Roosting known to occur within area	In feature area
[Calidris tenuirostris](#) Great Knot [862]	Vulnerable	Roosting known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area	In feature area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area	In feature area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat known to occur within area	In feature area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area	In feature area
Gallinago stenura Pin-tailed Snipe [841]		Species or species habitat known to occur within area	In feature area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area	In buffer area only
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area	In feature area
Limosa limosa Black-tailed Godwit [845]	Endangered	Roosting known to occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area	In feature area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area	In feature area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting known to occur within area	In feature area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area	In feature area
Tringa brevipes Grey-tailed Tattler [851]		Roosting known to occur within area	In feature area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area	In feature area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area	In feature area
Xenus cinereus Terek Sandpiper [59300]	Vulnerable	Roosting known to occur within area	In feature area

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status
Communications, Information Technology and the Arts - Australian Postal Corporation

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text	Buffer Status
Bird			
Actitis hypoleucos			
Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Anous stolidus			
Common Noddy [825]		Species or species habitat may occur within area	In feature area
Apus pacificus			
Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area	In feature area
Ardenna carneipes as Puffinus carneipes			
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area	In feature area
Ardenna grisea as Puffinus griseus			
Sooty Shearwater [82651]	Vulnerable	Breeding known to occur within area	In feature area
Ardenna pacifica as Puffinus pacificus			
Wedge-tailed Shearwater [84292]		Breeding known to occur within area	In feature area
Ardenna tenuirostris as Puffinus tenuirostris			
Short-tailed Shearwater [82652]		Breeding known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Arenaria interpres Ruddy Turnstone [872]	Vulnerable	Roosting known to occur within area	In feature area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Roosting known to occur within area	In feature area
Calidris alba Sanderling [875]		Roosting known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area overfly marine area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area	In feature area
Calidris pugnax as Philomachus pugnax Ruff [91256]		Roosting known to occur within area overfly marine area	In feature area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area	In feature area
Calidris tenuirostris Great Knot [862]	Vulnerable	Roosting known to occur within area overfly marine area	In feature area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area overfly marine area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area	In feature area
Charadrius ruficapillus Red-capped Plover [881]		Roosting known to occur within area overfly marine area	In feature area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area	In feature area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area	In feature area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea antipodensis gibsoni as Diomedea gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Diomedea sanfordi](#) Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
[Eudyptula minor](#) Little Penguin [1085]		Breeding known to occur within area	In feature area
[Fregata ariel](#) Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area	In feature area
[Fregata minor](#) Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area	In feature area

Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area	In feature area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area	In feature area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area	In feature area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area	In feature area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Pelecanoides urinatrix Common Diving-Petrel [1018]		Breeding known to occur within area	In feature area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area	In feature area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area	In feature area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area	In feature area
Pluvialis squatarola Grey Plover [865]	Vulnerable	Roosting known to occur within area overfly marine area	In feature area
Pterodroma cervicalis White-necked Petrel [59642]		Breeding likely to occur within area	In feature area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area	In feature area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area	In feature area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area	In feature area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Sterna striata White-fronted Tern [799]		Breeding known to occur within area	In feature area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Breeding known to occur within area	In feature area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area	In feature area
Symposiachrus trivirgatus as Monarcha trivirgatus Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area	In feature area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche bulleri platei as Thalassarche sp. nov. Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area	In feature area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area	In feature area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area	In feature area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area	In feature area
Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area	In feature area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting known to occur within area	In feature area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area overfly marine area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Xenus cinereus](#) Terek Sandpiper [59300]	Vulnerable	Roosting known to occur within area overfly marine area	In feature area
Fish			
[Acentronura tentaculata](#) Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area	In feature area
[Cosmocampus howensis](#) Lord Howe Pipefish [66208]		Species or species habitat may occur within area	In feature area
[Heraldia nocturna](#) Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area	In feature area
[Hippocampus abdominalis](#) Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area	In feature area
[Hippocampus breviceps](#) Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area	In feature area
[Hippocampus minotaur](#) Bullneck Seahorse [66705]		Species or species habitat may occur within area	In feature area
[Hippocampus whitei](#) White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat may occur within area	In feature area
[Histiogamphelus briggsii](#) Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area	In feature area
[Histiogamphelus cristatus](#) Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area	In feature area
[Hypselognathus rostratus](#) Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area	In feature area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area	In feature area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area	In feature area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area	In feature area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area	In feature area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area	In feature area
Mitotichthys mollisoni Mollison's Pipefish [66260]		Species or species habitat may occur within area	In feature area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area	In feature area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area	In feature area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area	In feature area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area	In feature area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area	In feature area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area	In feature area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area	In feature area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area	In feature area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area	In feature area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area	In feature area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area	In feature area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area	In feature area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area	In feature area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Vanacampus phillipi](#) Port Phillip Pipefish [66284]		Species or species habitat may occur within area	In feature area
[Vanacampus poecilolaemus](#) Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area	In feature area
Mammal			
[Arctocephalus forsteri](#) Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area	In feature area
[Arctocephalus pusillus](#) Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area	In feature area
Reptile			
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area	In feature area
[Eretmochelys imbricata](#) Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area

Whales and Other Cetaceans			[Resource Information]
Current Scientific Name	Status	Type of Presence	Buffer Status
Mammal			

Current Scientific Name	Status	Type of Presence	Buffer Status
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area	In feature area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area	In feature area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area	In feature area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In feature area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area	In feature area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area	In feature area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area	In feature area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat known to occur within area	In feature area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area	In buffer area only

Current Scientific Name	Status	Type of Presence	Buffer Status
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area	In feature area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area	In feature area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area	In feature area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area	In feature area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area	In feature area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area	In feature area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area	In feature area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area	In feature area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area	In feature area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area	In feature area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area	In feature area

Current Scientific Name	Status	Type of Presence	Buffer Status
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area	In feature area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area	In feature area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area	In feature area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area	In feature area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area	In feature area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area	In feature area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area	In buffer area only
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area	In feature area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area	In feature area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area	In buffer area only
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area	In feature area

Current Scientific Name	Status	Type of Presence	Buffer Status
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area	In feature area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area	In feature area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area	In feature area

Gippsland	Gippsland Basin	BA website	In feature area

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

Appendix E-1: Relevant persons consultation levels

Relevant persons consultation levels for Regulation 25(1)(a) relevant persons

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
420	Aboriginal Heritage Tasmania (Part of the Department Premier and Cabinet)	EMBA	Function as department or agency of Tasmania that aims to protect and promote Tasmania's unique Aboriginal heritage and facilitate the return of land to Tasmania's Aboriginal people. Aboriginal Heritage Tasmania administers the Aboriginal Heritage Act 1975, which establishes the Aboriginal Heritage Council of Tasmania, the Aboriginal Lands Act 1995, which establishes the Aboriginal Land Council of Tasmania, and the Native Title (Tasmania) Act 1994.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
4	Australian Fisheries Management Authority	OA	Function as a Commonwealth government agency responsible for management of Commonwealth commercial fisheries from 3-200nm. The OAs overlap with local fisheries.	L1	Esso has applied its methodology and assessed AFMA as a Level 1 consultation as their function is in the OA of the planned activity.
125	Australian Hydrographic Office	OA	Function as a Commonwealth government agency responsible for publication of nautical charts and other information for safety of ships navigating in Australian waters (including Notices to Mariners).	L1	Esso has applied its methodology and assessed AHO as a Level 1 consultation as they provide Notice to Mariners and therefore have a function in the OA of the planned activity.
2	Australian Maritime Safety Authority	OA	Function as a Commonwealth government statutory authority responsible for maritime safety, protection of the marine environment including marine pollution and maritime aviation search and rescue.	L1	Esso has applied its methodology and assessed AMSA as a Level 1 consultation as their function is in the OA of the planned activity.

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
407	Bass Coast Shire Council	EMBA	Function as a Victorian local government for Bass Coast Shire. Provides a range of services to community and is interested in maintaining sustainable communities and business.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
100	CarbonNet	ATBA	Function as Victoria government agency to establish a commercial scale Carbon Capture and Storage network in Gippsland, Victoria.	L2	Esso has applied its methodology and assessed CarbonNet as a Level 2 consultation as their function is in the ATBA of the planned activity.
340	Department of Agriculture, Fisheries and Forestry	OA	Function as a Commonwealth government department that manages biosecurity risks to Australia for agriculture, fisheries and forestry, industry growth and resilience and sustainability.	L1	Esso has applied its methodology and assessed DAFF as a Level 1 consultation as their function is in the OA of the planned activity.
339	Department of Climate Change, Energy, the Environment and Water	OA	Function as a Commonwealth government department whose role is to help Australia respond to climate change, manage water and energy resources, environment, parks and heritage. They have responsibility for considering sea dumping applications.	L1	Esso has applied its methodology and assessed DCCEEW as a Level 1 consultation as their function is in the OA of the planned activity.
103	Department of Climate Change, Energy, the Environment and Water - Director of National Parks	OA	Function as a Commonwealth entity responsible for the management of Commonwealth terrestrial and marine protected areas.	L1	Esso has applied its methodology and assessed person or organisation as a Level 1 consultation as their function is in the OA of the planned activity.
950	Department of Climate Change, Energy, the Environment and	OA	Function as a Commonwealth government department whose role is to administer the Underwater Cultural Heritage Act 2018 (UCH	L1	Esso has applied its methodology and assessed DCCEEW as a Level 1 consultation as

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
	Water - Underwater Cultural Heritage		Act) and regulate activities in relation to protected underwater cultural heritage (UCH) within Australian waters including the Commonwealth marine area.		their function is in the OA of the planned activity.
104	Department of Defence	OA	Function as Commonwealth department for national defence. The East Sale Airbase is located in Gippsland and has activities over Bass Strait.	L1	Esso has applied its methodology and assessed DoD as a Level 1 consultation as their function is in the OA of the planned activity.
612	Department of Employment and Workforce Relations - Gippsland	EMBA	Function as a government agency that bring together businesses, employment and skills services and community organisations to connect people to training, jobs and support services.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
576	Department of Energy, Environment and Climate Action - Agriculture Victoria	ATBA	Function as department of the Victorian Government working with industry and the community to grow and protect profitable, sustainable farms in thriving regional and rural communities across Victoria.	L2	Esso has applied its methodology and assessed DEECA as a Level 2 consultation as their function is in the ATBA of the planned activity.
529	Department of Energy, Environment and Climate Action (DEECA) - cetacean/marine wildlife	ATBA	Function as department of the Victorian Government working with industry and the community to develop Victoria's secure and sustainable energy future. Responsible for earth resources exploration, licensing, approval of applications, and enforcement on land and state waters. Responsible for protection of biodiversity and biosecurity on land and in State waters. Has responsibility to approve sea dumping applications in State waters.	L2	Esso has applied its methodology and assessed DEECA as a Level 2 consultation as their function is in the ATBA of the planned activity.

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
334	Department of Industry, Science, Energy and Resources	OA	Function as department or agency of the Commonwealth responsible for consolidating the Government's efforts to drive economic growth, productivity and competitiveness by bringing together industry, energy, resources and science.	L2	Esso has applied its methodology and assessed DISER as a Level 2 consultation as their function is in the ATBA of the planned activity.
44	Department of Jobs, Skills, Industry and Regions	ATBA	Function as a Victorian State government department for economic recovery and business and industry engagement.	L2	Esso has applied its methodology and assessed DJSIR as a Level 2 consultation as their function is in the ATBA of the planned activity.
382	Department of Transport and Planning	EMBA	Function as Victorian State government department with primary responsibility for maritime sourced pollution oil spills in Victorian waters. Function as the oil spill response control agency for Victorian state waters.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
10	East Gippsland Catchment Management Authority	EMBA	Function as a Victoria government statutory authority for the integrated management of land, biodiversity and water resources in the region. The Authority also has responsibility for the planning and delivery of river health works, and several statutory activities.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
11	East Gippsland Shire Council	EMBA	Function as Victorian government local council delivering services to community and issuing planning permits for land use and development throughout East Gippsland. Has an interest in maintaining sustainable communities and business.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
392	East Gippsland Water	EMBA	Function as Victorian government statutory corporation responsible for delivery of water supply and waste water management in East Gippsland,.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
191	Energy Safe Victoria	N/A	Function as independent government agency responsible for the safe generation, supply and use of electricity, gas and pipelines.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their interest may be relevant in the event of an unplanned activity.
13	Environment Protection Authority Victoria	EMBA	Function as the Victoria's State environmental regulator and performs oil spill response support functions and conducts incident investigations.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
63	Environmental Protection Agency (Tas) (used to be DPIPWE)	EMBA	Function as Tasmanian regulator responsible for the environmental protection and management, including ensuring that activities do not cause unacceptable pollution. They also have a function of oil spill response control agency in Tasmanian State waters.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
536	Fire Rescue Victoria	EMBA	Function as fire and rescue service for the state of Victoria. Responsible for marine response associated with fires, chemical spills on ships and in ports, and other marine related emergencies.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.
15	Gippsland Ports	ATBA	Function as Victorian statutory authority responsible for five Gippsland Ports, including	L2	Esso has applied its methodology and assessed person or organisation as a Level 2 consultation as their

ID	Person/organisation	Geo. area	Function, interest or activity	Consultation Level	Classification justification
			Lakes Entrance, Port of Corner Inlet and Port Albert.		function may occur in the ATBA of the planned activity.
409	Gippsland Water	EMBA	Function as Victorian government statutory corporation to deliver fresh, clean drinking water, and manage and treat waste water.	L3	Esso has applied its methodology and assessed department or agency as a Level 3 consultation as their function is in the EMBA and no impact from planned activity.

Appendix E-2: Consultation report (Summary)

Regulation 25(2) sufficient information:

Unless otherwise noted in the tables below - Esso considers it has discharged its obligations for consultation under Regulation 25(2). Sufficient information has been provided as summarised below: Esso sent Campaign #1 specific emails during 2024 in March, July, September and December providing an information bulletin including activity description, location, timing, potential impacts and EMBA map. Email included links to the Esso Consultation Hub on the public website, the Esso Consultation Questionnaire to better understand relevant person consultation wishes and NOPSEMA's "Consultation on offshore petroleum environment plans brochure". Esso held 31 community information sessions between February 2024 and May 2025 in various locations around Gippsland to discuss activity description, location and potential impacts. Additional emails were sent throughout February 2024 and May 2025 with updates on current activities including Campaign #1 - links to proposed activity information available via Consultation hub e.g. Information bulletins and webpages, including EMBA information and consultation submission dates.

Regulation 25(3) sufficient time:

Unless otherwise noted in the tables below - Esso considers it has discharged its obligations for consultation under Regulation 25(3). Esso considers that for the nature and scale of the activity as described in this EP, a minimum 60 business days would provide a reasonable period for relevant persons to make an informed assessment of the possible consequences of the activity on their functions, interests or activities. Since the start of consultation, as noted in the 'Date' column, which continued until August 2025 sufficient time has been provided, giving the relevant person the opportunity to provide feedback over a period greater than 60 business days. Esso engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Esso will apply its OIMS System 7-1 Management of Change (see Section 8.12).

Community Information Sessions:

Esso held a total of 31 community information sessions between February 2024 and May 2025, across multiple locations in South Gippsland and East Gippsland. Feedback, objections or claims received during these sessions were collated for each session. Due to the nature of community information sessions, feedback, objections or claims were not assigned to individual relevant persons.

Key topics, relevant to the activity of this EP, raised during sessions held between February 2024 and May 2025 are summarised in the table below and relevant section references of the EP. Information relevant to State or onshore activities are not assessed within this EP. Feedback, objections or claims for State or onshore activities were addressed in the community information session and will be included as part of the relevant approvals for those activities.

Key Topics (relevant to this EP)	Relevant Section of the EP
Regulatory & Compliance	
Jurisdiction clarity (State vs. commonwealth; onshore vs. offshore).	Section 1.6.

Key Topics (relevant to this EP)	Relevant Section of the EP
Required approvals and status of regulatory processes.	Section 6.16 provides an overview of required approvals (outside of the Commonwealth area) EP does not provide status of approvals (outside scope).
Native Title Act considerations.	Appendix A, Section A.1.5.1.4.
Timeline alignment with offshore wind construction.	Section 6.13.3.8.
Oversight mechanisms (audits, inspections).	Section 8.11.3 - Internal audits and inspections.
Environmental Impacts & Management	
Marine ecosystem biodiversity and impacts of infrastructure removal.	Section6 - Impact Assessment.
Marine growth and biota management during removal.	Section 6.12.
PFAS and other contaminants: historical presence, containment, and community communication.	PFAS (in relation to the C1 activities) is addressed in Section 1.6.1.
RAMSAR wetlands: vessel impacts, debris, hazardous materials, water runoff.	Not within the scope of this EP (outside the OA). Impacts assessed as indirect impacts through Section 6 and 7 where applicable.
Vessel emissions (noise, light) and impacts on marine/bird life.	Sections 6.13, 6.14 and 7.2.
Marine mammals: migration and mitigation plans.	Section 6.13, Appendix A.
Jackets: cutting depth, corrosion timeline, habitat impacts.	Sections 2.7.5, 2.18, habitat impacts considered throughout section6 and 7.
Removal Operations	
Timeline and phases: preparation, cutting, lifting, transport, dismantling.	Section 2.

Key Topics (relevant to this EP)	Relevant Section of the EP
Jackets and topsides: cutting methods, depth, remaining portions.	Section 2.
Protective coatings, concrete-filled pilings, and radiation/mercury handling.	Section 6.16.
Vessel Operations	
Pioneering Spirit: capabilities, draught, suitability, weather considerations.	Section 2.6.1.
Vessel types: CSVs, barges, heavy lift vessels.	Section 2.6.1.
Transfer process: offshore to barge to land.	Section 2.8.2.
Duration at platform and number of trips.	Section 2.8.2.
Exclusion zones and trawl zone overlaps.	Trawl fishing areas - Appendix A, Section A1.6. Exclusion zones around vessels may occur anywhere in the OA. Platform exclusion locations are know.
Ballast water and invasive species management.	Section 7.4.
Impact on seals and marine life resting on platforms.	Section 7.2.
Notifications to mariners via Gippsland Ports.	Section 6.2, 7.1.
Social & Community Impacts	
Commercial fishing: exclusion zones, resumption possibilities.	Section 6.2, 7.2.
Whale watching season disruptions.	Section 6.2

Stakeholder Forums:

Esso held a total of 31 community information sessions between February 2024 and May 2025, across multiple locations in South Gippsland and East Gippsland. Feedback, objections or claims received during these sessions were collated for each session. Due to the nature of community information sessions, feedback, objections or claims were not assigned to individual relevant persons.

Key topics, relevant to the activity of this EP, raised during sessions held between February 2024 and May 2025 are summarised in the table below and relevant section references of the EP. Information relevant to State or onshore activities are not assessed within this EP. Feedback, objections or claims for State or onshore activities were addressed in the community information session and will be included as part of the relevant approvals for those activities.

Key Topics (relevant to this EP)	Relevant Section of the EP
Opportunities to increase transferable skills and job capacity in the area	Not relevant to scope of EP.
Clarification of removal campaign activity details, such as load in operations at Barry Beach and vessel exclusion zones	Vessel exclusion zones -Section 6.2 and 7.1. Load in operations at BBMT - not relevant to scope of EP
Feedback on potential impacts and risks of removal campaign activities	Displacement of seals and seabirds - Section 7.2. Disturbance to established ecosystems on jackets - Sections 6.1 and 6.12. Residual debris presenting a snag risk - Section 7.1.
Feedback on potential controls associated with these impacts and risks – provision of navigational aids, regular notifications	Section 7.1.
Potential impacts (positive and negative) on tourism and local businesses	Section 6.2.
Benefits of leaving infrastructure in situ - retain established marine ecosystems and provide recreational fishing opportunities	Not relevant to scope of EP.
Opportunities to share research associated with infrastructure removal and/or leaving in situ.	Not relevant to scope of EP (research associated with infrastructure removal/leave in situ is published on ExxonMobil decommissioning website)
Corner Inlet seagrass monitoring opportunities.	Not relevant to scope of EP.

Consultation report (Summary) for Regulation 25 (1)(a) relevant persons

Aboriginal Heritage Tasmania (Part of the Department Premier and Cabinet) [420]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*					
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			**Summary of feedback, objection or claim**		**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
Not applicable as no responses were received.			No feedback, objection or claims on this activity.		Not applicable as no feedback, objections or claims were made.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
AFMA registered for the Decommissioning – Removals Stakeholder Forum on 5 June 2024, but did not attend. AFMA requested to continue to be consulted on Decommissioning activities. Esso confirmed AFMA will continue to receive consultation material and offered a meeting to discuss and feedback or questions. AFMA has not requested a meeting.			AFMA replied to Esso Australia on 9th October 2024 requesting to be consulted on decommissioning Campaign #1. Esso provided an update to Decommissioning Campaign #1 Onshore Reception Centre in December 2024, AFMA responded requesting to be further consulted via email.	Esso continues to provide AFMA with consultation material relating to the activities of this EP. Esso offered a meeting to AFMA to discuss decommissioning activities.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Summary of responses received and Esso's consideration and response	**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
Esso invited AHO to attend the Stakeholder Forums, AHO declined the invitation. AHO requested to be consulted on this activity. Esso confirmed AHO will continue to receive consultation material. AHO provided feedback they have no concerns with any of the activities proposed for Campaign #1 and Onshore Reception Centre.	Esso invited AHO to attend the Stakeholder Forums for Campaign #1 on 20th May 2024, AHO responded declining the invitation. Esso provided AHO with consultation material on Campaign #1 throughout the consultation period, AHO responded on 11th September 2024 confirming AHO does not	Esso will keep AHO informed of activities once the activity is underway.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

			have any further comment that will currently value add to the activity. AHO requested from a charting perspective, once the activity is underway anything that will impact maritime safety, freedom of manoeuvre for vessels, or anything that will impact maritime traffic to be reported to the AHO. On completion, the final position of any permeant features are sent to the AHO for charting action.

Australian Maritime Safety Authority [2]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso requested a meeting with AMSA to provide an update on Decommissioning Campaign #1 in January 2024. Esso held a meeting with AMSA on 6th February 2024 and provided an update on decommissioning. AMSA requested to continue participating in the consultation process for the duration of the decommissioning Campaign #1. Esso held a meeting with AMSA on 8 July 2025 and discussed (among other items) the proposed navigational aids to be installed on the BMB concrete substructure following removal of the topsides. Further discussions on the configuration and type of these navigational aids were held via email.	AMSA requested to continue participating in the consultation process for the duration of the decommissioning Campaign. AMSA raised queries on infrastructure end states, including environmental outcomes. AMSA provided feedback pertaining to the configuration and type of navigational aid/s to be installed on the BMB substructure following the removal of the topsides to ensure the safety of other users of the sea.	Feedback provided by AMSA pertaining to the configuration and type of navigational aid/s to be installed on the BMB substructure following the removal of the topsides to ensure the safety of other users of the sea has been incorporated into Section 2.18.2 and Section 7.1 the EP. Esso answered queries on infrastructure end states. End states are not relevant to this EP and will be addressed in relevant regulatory submissions. Esso continues to engage with AMSA and provide updates on Campaign #1 activities.	Table 7-6 of the EP outlines the control incorporated based on discussions regarding the BMB substructure navigational aid discussions with AMSA.

Department of Agriculture, Fisheries and Forestry [340]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*					
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			Summary of feedback, objection or claim		Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response Reg 34(g) (ii): EP controls
Esso met with DAFF to present an overview of the decommissioning plans. DAFF requested to continue to be consulted on decommissioning activities in Commonwealth waters that may pose biosecurity risk. Esso has continued to provide DAFF with consultation material.			DAFF provided feedback that Esso (and Esso subcontractors) must comply with all relevant ballast water and biofouling requirements to minimise the biosecurity risk associated with decommissioning activities. DAFF recommended as part of future IMS surveillance, Esso should consider deploying settlement arrays at multiple depths and undertaking both visual identification and eDNA analysis of settlement plates.		Esso has taken DAFF's feedback into account, and it is reflected in Section 7.3 and 7.4 of the EP. Esso has considered DAFF's recommendation of deploying settlement arrays at multiple depths and undertaking both visual identification and eDNA analysis of settlement plates, this is detailed in Section 7.4 of the EP. Esso will provide updates of the activity as necessary. No additional measures or controls are required.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls

DCCEEW requested a meeting with Esso to gain update on decommissioning activities, Nature Positive Regulation Division confirmed no comment on decommissioning Campaign #1. Esso met with DCCEEW on 19th December 2023 to discuss requirements under EPBC Act, OPGGS Act shared assessments between DCCEEW, NOPTA and NOPSEMA. Meeting held 10th July 2024 Esso provided updates to DCCEEW on Campaign #1. Meeting held 16th July 2025 with Sea Dumping department to provide an update on decommissioning activities. DCCEEW provided information relating to the applicability of the Sea Dumping Act to Campaign #1 activities. Esso requested meeting with DCCEEW (Wetlands branch) on 12th November, providing Campaign #1 information bulletin on 18th November and again followed up on 24th November. Esso held a meeting with DCCEEW (Wetlands branch) on 9th Jan 2026.	Provided guidance as to the applicability of the Sea Dumping Act to the cleaning of marine growth from the HLV, summarised as: Proposed activity (as carried out in the manner described to the sea dumping team) constitutes normal vessel operations to remove large jackets and other items containing heavy marine growth. Where possible efforts should be made for the marine growth to be left at the site where the jacket was removed from. Esso held a meeting with DCCEEW (Wetlands branch) on 9th Jan 2026 providing briefing on Campaign #1 activities and potential indirect impacts to Corner Inlet. DCCEEW were happy with Esso's plans and requested a meeting once the removal activities are complete to discuss implementation of the plans and lessons learned.	Esso will continue to engage with DCCEEW under EPBC Act as required. Feedback on the discharge of marine growth has been incorporated into Section 6.12 of the EP (Planned Discharge - Marine Growth). Esso will set a meeting with DCCEEW (Wetlands Branch) in 2028 once removal activities for Campaign #1 are complete.	Feedback has informed the EPO, EPS and measurement criteria included in Section 6.12(Planned Discharge – Marine Growth).

To	17/04/2025	250527161226	-	Meeting - In Person	Meeting held to discuss Decommissioning Campaign #1 regulatory jurisdiction, Stage 1 ORC and timing of submission.
To	17/04/2025	250521164703	-	Email	Esso thanking the Stakeholder for their time and if they have any questions, or require any clarification on staging or impacts, we welcome a discussion with them and their team.
To	17/04/2025	250522121358	-	Email	Esso informing the Stakeholder that they have met with their team to discuss the Stage 1 ORC early works referral for the Decommissioning Campaign 1.
From	17/04/2025	250521163543	-	Email	Stakeholder thanking Esso for confirming their availability, attendees and provided the agenda for the meeting.
To	01/05/2025	250523175406	-	Email	Esso thanking the Stakeholder for the notification and communication of decision timelines and look forward to working with them as the assessment progresses.
From	01/05/2025	250523150949	-	Email	Stakeholder informing Esso that their referral for the Decommissioning Campaign #1 - Onshore Reception Centre early works (EPBC 2025/10178) has been published and it is now available on the EPBC Act Public Portal. .
To	06/05/2025	250528124755	250506_E_01	Email	Notification of details for Esso Australia: Community Information Sessions May 2025.
To	07/05/2025	250528132135	250507_E_01	Email	Esso Australia: Consultation on the Bass Strait Environment Plan - five-year revision, including link to Campaign #1 consultation material.
To	19/05/2025	250718141733	-	Email	Esso thanked the Stakeholder for the referral update, confirmed the public consultation period has closed, and requested guidance on the next steps for Stage 2 and the likely outcome for Stage 1.

From	20/05/2025	250718142528	-	Email	Stakeholder confirmed the public consultation period has closed and advised Esso that further information is required to support the decision process, with the referral decision timeline paused until it is received and assessed.
From	21/05/2025	250721124043	-	Email	Stakeholder advised Esso that further information is needed to assess the referral, including details on cost recovery, with relevant documents attached.
To	18/06/2025	250721163427	-	Email	Esso provided the requested additional information for the referral, confirmed payment of the cost recovery fee, and invited the Stakeholder to advise if further details are needed.
From	19/06/2025	250721163915	-	Email	Stakeholder acknowledged the previous email Esso's further information response and confirmed their team will review it and follow up if needed.
From	19/06/2025	250721164314	-	Email	Stakeholder confirmed satisfactory information was received from Esso, the referral decision process has restarted, and a decision is expected by 30th June unless further information is needed.
To	25/06/2025	250703134120	-	Email	Esso thanking the Stakeholder for the email and look forward to hearing from them in due course.
From	25/06/2025	250702180132	-	Email	Stakeholder updating Esso on the fact there has not been a decision on this project has yet been made.
To	27/06/2025	250703135859	-	Email	Esso thanking the Stakeholder for the updates towards the progress of the referral decision and Esso is aligned with the proposed suspension of the timeframe.
To	27/06/2025	250703154357	-	Email	Esso is aligned with the proposed suspension of the timeframe.
From	27/06/2025	250703134609	-	Email	Stakeholder asking for a quick discussion about the referral for the Onshore Reception Centre early works.

From	27/06/2025	250703134822	-	Email	Stakeholder is finalising the decision package for the Decommissioning Campaign and is seeking agreement to extend the referral decision.
From	30/06/2025	250703154826	-	Email	Stakeholder sending through the Suspension of referral timeframe letter.
From	08/07/2025	250723154623	-	Email	Stakeholder provided Esso with a letter and decision notice regarding the proposed decommissioning early works and invited any questions or contact as needed.
To	11/07/2025	250717165138	-	Email	Esso informed the Stakeholder of a change in project contact.
From	11/07/2025	250717165539	-	Email	Stakeholder thanked Esso for the update, wished the departing contact well in their new role, and said they look forward to working with the new project contact.
To	16/07/2025	250721170910	-	Email	Follow up email after meeting providing presentation pack.
To	16/07/2025	250722140111	-	Meeting - Online	Meeting with Sea Dumping team - decommissioning update.
To	24/07/2025	250728144703	-	Email	Follow up email from meeting held on 16 July with the Sea Dumping team.
To	24/07/2025	250728145206	-	Email	Esso confirmation of email received.
From	24/07/2025	250728144945	-	Email	Stakeholder response to meeting minutes. .
From	28/07/2025	250805141350	-	Email	Automatic reply.
To	30/07/2025	250731221412	-	Email	Stakeholder followed up with Esso seeking guidance whether marine growth removal from vessels required consideration under Sea Dumping regulations, requesting clarification to inform upcoming input into project plans.
From	31/07/2025	250731222422	-	Email	Stakeholder thanking Esso for the follow up and will not need any additional information at this time.

To	12/11/2025	251219095902	-	Email	Esso requested meeting with DCCEEW (Wetlands branch) to discuss Campaign #1 activities.
To	18/11/2025	251219100918	-	Phone call	Follow up phone call to DCCEEW (Wetlands branch) regarding meeting request.
To	18/11/2025	251219101144	-	Email	Follow up email to meeting request with DCCEEW (Wetlands branch) providing Campaign #1 Information Bulletin.
From	18/11/2025	251219102124	-	Email	Automatic reply. Out of office notification received.
To	24/11/2025	251219102319	-	Email	Follow up email to alternative contact at DCCEEW (Wetlands branch) regarding meeting request.
From	12/12/2025	251219102903		Email	Response from DCCEEW providing appropriate contact within Wetlands Branch to discuss Campaign #1 activities.
To	12/12/2025	251219103325	-	Email	Meeting request with DCCEEW (Wetlands branch) providing Campaign #1 Information Bulletin.
From	15/12/2025	251219104054	-	Email	DCCEEW (Wetlands branch) agreeing to online meeting.
To	15/12/2025	251219104353	-	Email	Esso confirming preferred meeting timeframe.
From	18/12/2025	251219105013	-	Email	Meeting invitation sent.
To	08/01/2026	260109084807	-	Meeting - Online	Meeting held with DCCEEW Wetlands Branch to provide Campaign #1 briefing including key potential impacts and risks.
To	09/01/2026	260109092657	-	Email	Thank you email to DCCEEW (Wetlands Branch) following meeting and confirmation meeting to be set in 2028.
From	09/01/2026	260109104809	-	Email	DCCEEW (Wetlands Branch) response to thank you email.

Department of Climate Change, Energy, the Environment and Water - Director of National Parks [103]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*					
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
The Director of National Parks (Marine Parks Authorisations) confirmed the planned activities do not overlap any Australian Marine Parks, therefore there are no authorisation requirements from the DNP.			DNP provided the response on 6th December 2024 based on the information provided, they note that the planned activities do not overlap any Australian Marine Parks. Therefore, there are no authorisation requirements from the DNP. DNP confirmed they do not require further notification of progress made in relation to this activity unless details regarding the activity change and result in an overlap with or new impact to a marine park, or for emergency responses.	DNP are included within the Oil Pollution Emergency Plan (OPEP) to be consulted during an unplanned event.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Department of Climate Change, Energy, the Environment and Water - Underwater Cultural Heritage [950]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*			
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls

Esso provided DCCEEW – Underwater Cultural Heritage with information on shipwrecks within Campaign 1 operational area requesting feedback. Esso received an automatic reply on 30 June 2025 advising when preparing an Environment Plan under the Offshore Petroleum Greenhouse Gas Storage (Environment) Regulations 2023 (the Environment Regulations), please have regard to the Guidelines to assessing and managing impacts to Underwater Cultural Heritage in Australian waters.			Automatic response received from the Underwater Cultural Heritage Team on 30 June 2025 advising when preparing an Environment Plan under the Offshore Petroleum Greenhouse Gas Storage (Environment) Regulations 2023 (the Environment Regulations), please have regard to the Guidelines to assessing and managing impacts to Underwater Cultural Heritage in Australian waters.		Esso referred to the Guidelines to assessing and managing impacts to Underwater Cultural Heritage in Australian waters and updated the EP with the following information: • Section 1.6 Legislative Requirements and industry guidance to reflect the applicability of the Guidelines to activities within the scope of the EP; • The impact assessment for Sediment Disturbance (Section 6.1) has been updated to include an assessment of impacts to underwater cultural heritage and controls as required. • The requirement to notify DCCEEW of the identification of any potential UCH during the EP activity has been added to the Incident notification and reporting table. The EP has been updated to include consideration of the UCH Act and associated guidelines in the following Sections - 1.6.7, 2.8.4, 6.1.3.7, 6.1.2, 6.1.4, 6.1.5, 7.5.3.3, 7.5.5, 7.5.6, 8.15.2 and Appendix E-2.	Esso will provide updates of the activity as necessary. An additional control has been added to Section 6.1.6 to ensure compliance with the UCH Act in the event there is an unexpected discovery of potential during the removal activities.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time*.						
Summary of responses received and Esso's consideration and response			**Summary of feedback, objection or claim**		**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
RDV expressed an interest in the impact of decommissioning on socio economic aspects of the region and potential partnership opportunities. Esso continues to consult with RDV.			RDV has an interest in the impact of decommissioning on socio economic aspects of the region e.g. employment numbers declining over time, opportunities for skills transfer, indirect and direct effects on business, and how they can help to support attracting new business to the area through partnering arrangements, particularly in the low carbon area.		Esso continues to consult with RDV as required relevant to onshore activities and low carbon solutions.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
DTP – marine pollution unit Stakeholder requested to be consulted on oil spill response plans related to the activity. Esso met with DTP and provided details on Decommissioning Campaign #1 activities and had advised that will be sending Quick Reference Guide (QRG) for review. Esso provided Stakeholder QRG for review in December 2024. No feedback on QRG received. Esso updated the QRG and provided to DTP for review on 8th July 2025. No feedback was received. DTP registered and attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable. Esso continues to engage with DTP in relation to Onshore Reception Centre activities and relevant State regulatory approvals.	DTP – marine pollution unit provided no feedback on the QRG. Community information session feedback is summarised in *Community Information Sessions.*	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.*	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*			
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
EPA attended the Decommissioning – Removals Stakeholder Forum Sale session and Community Information Sessions. Feedback from forums has been incorporated into the EP, where applicable. Esso met with Stakeholder to discuss Decommissioning activities; Stakeholder expressed interest in emergency response. Esso provided Quick Reference Guide to Stakeholder for review. No feedback on Quick Reference Guide has been received.	Community information session feedback is summarised in *Community Information Sessions.* Feedback from Stakeholder forums is summarised in *Stakeholder Forums.*	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.*	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Esso continues to engage with EPA Victoria in relation to Onshore Reception Centre activities and relevant State regulatory approvals.

Gippsland Ports [15]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso and AllSeas met with Gippsland Ports to provide updates on Campaign #1 activities. GP expressed interest in conditions needed for load in and load in location and oversight within Port jurisdiction within Corner Inlet. AllSeas discussed transport plans regarding Heavy Transport Vessels or barges. Esso will continue to engage with Gippsland Ports as the project progresses. Gippsland Ports completed Esso Consultation Questionnaire, Esso informed Gippsland Ports they would be kept updated on decommissioning activities. GP registered for the Decommissioning – Removals Stakeholder Forum Online session on 5th June 2024 but did not attend.	Gippsland Ports was supportive of HTVs as views this as an improvement from safety / operability perspective and reiterated the need for experienced local pilots to be engaged.	The vessels proposed to be used as part of Campaign #1 are outlined in Section 2.6 of the EP. Esso will continue to engage with Gippsland Ports as the project progresses.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Gippsland Water [409]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
GW attended the Decommissioning – Removals Stakeholder Forum Online session and Community Information Session. Feedback from forums and information sessions has been incorporated into the EP, where applicable. GW asked questions on the Decommissioning annual report regarding waste material.	Feedback from Stakeholder forums is summarised in *Stakeholder Forums.* Community information session feedback is summarised in *Community Information Sessions.* Queries raised by GW on desktop studies and field sampling in relation to waste data. GW was happy with Esso's clarification.	Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.* Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso provided GW clarification on the Decommissioning Annual Report reference to field sampling and the inventory of waste refers to the structures (via an inventory of the topsides and jackets) which will be removed and transported to Barry Beach Marine Terminal (BBMT) as part of Campaign #1.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Summary of responses received and Esso's consideration and response	**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
Esso undertakes 6 monthly meetings with NOPTA to provide project updates. Esso provided an email update on Campaign #1 decommissioning 8th August 2024, NOPTA responded suggesting an update in the next scheduled meeting for September 2024. Esso held a meeting with NOPTA on 15th October 2024 providing an update on decommissioning, next meeting scheduled for March 2025. Meeting in March 2025 was rescheduled, Esso met with NOPTA on 2nd July 2025 to discuss the status of the pipeline licence variations. These variations relate to the topside and subsea cuts in order to enable topside removal.	The specifics of the C1 EP was not discussed in the July meeting. NOPTA acknowledges this is not their jurisdiction/expertise.	Esso continues to engage with NOPTA on a 6 monthly basis and provide updates as required.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso met with Parks Victoria to discuss Campaign #1 activities. Parks Victoria provided feedback on mitigation measures for invasive marine species (IMS) and vessel lighting. Esso has incorporated this feedback into the relevant section of the EP.	Parks Victoria provided feedback during meeting held 12 September 2024 on the occurrence of and potential mitigation measures for invasive marine species and vessel lighting. Potential mitigation measures for IMS included visual inspections and minimising marine growth falling from vessel during transit and transfer activities. Parks Victoria requested further information on sediment	Esso has incorporated the feedback provided into Sections 7.4 and 6.14 of the EP.	Esso will provide updates of the activity as necessary. Controls have been assessed and adopted where applicable in Sections 6.12, 6.14, 7.3 and 7.4. .

			and noise modelling. Esso has followed up with Parks Victoria multiple times to offer to provide updates, no response has been received.

South Gippsland Shire Council [38]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*			
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls

Esso met with SGSC multiple times throughout 2024 to discuss Campaign #1 activities. SGSC attended the Decommissioning – Removals Stakeholder Forum Online session. Feedback from forums has been incorporated into the EP, where applicable. SGSC has attended multiple Community Information Sessions. Esso continues to engage with SGSC in relation to Onshore Reception Centre activities and relevant State regulatory approvals.	SGSC expressed support for Esso's Campaign #1 project and requested to be kept updated on project activities. Community information session feedback is summarised in *Community Information Sessions.* Feedback from Stakeholder forums is summarised in *Stakeholder Forums.*	Esso continues to engage with SGSC to provide updates on Decommissioning activities. Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.*	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso met with BLCAC on 26th August 2024 to discuss decommissioning activities. BLCAC are interested in the Sea Country area but recognize this is in Gunaikurnai country. However, whilst BLCAC would not comment on it from a RAP perspective, they acknowledge there may be people within community that may wish to put forward their own view on Esso's proposed activities. Esso requested a meeting with BLCAC on 29th May 2025, no response has been received. Esso continues to provide BLCAC with consultation material.	BLCAC are interested in the Sea Country area but recognize this is in Gunaikurnai country. BLCAC would not comment on it from a RAP perspective	Esso acknowledges BLCAC are interested in Sea Country, but recognise the Campaign #1 activities are within Gunaikurnai country. Esso continues to provide BLCAC with consultation material.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Community Over Mining [335]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Stakeholder attended the Decommissioning – Removals Stakeholder Forum and Community Information Sessions. Feedback from forums and community information sessions has been incorporated into the EP, where applicable. Stakeholder requested meeting with Esso to discuss decommissioning and environmentalists concerns.	Feedback from Stakeholder forums is summarised in *Stakeholder Forums.* Community information session feedback is summarised in *Community Information Sessions.* Stakeholder requested meeting with Esso. Meeting held 8th April 2025. ,stakeholder asked questions regarding ORC/BBMT activities as part of Campaign #1, primarily around SPJ dismantling and management and disposal of hazardous waste.	Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.* Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso answered Stakeholder's queries regarding ORC/BMMT activities during meeting held 8th April 2025. Esso continues to provide updates to Stakeholder relating to Campaign #1 activities. Onshore activities are not relevant to the scope of this EP and addressed in other regulatory submissions.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
FoE requested to be considered relevant person for all Esso activities. Completed Esso Consultation Questionnaire nominating to be consulted for decommissioning. Esso	Community information session feedback is summarised in *Community Information Sessions.*	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.*	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

continues to provide FoE with consultation material. Stakeholder attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable. FoE registered to attend Decommissioning – Removals Stakeholder Forum but did not attend. FoE called Esso on 6th March 2024 to discuss and raise queries on sea dumping permit, leave in situ, onshore activities – transport, BBMT, NORM. Esso held a meeting with FoE on 13th February 2025 providing update on Campaign #1 activities, FoE raised queries on onshore activities relating to BBMT.	FoE raised queries on sea dumping permit, leave in situ, onshore activities – transport, BBMT, NORM during phone call on 6th March 2024 and meeting held 13th February 2025.	Queries raised on sea dumping, leave in situ and onshore activities were answered during phone call, these items are not relevant to the scope of this EP and addressed in other regulatory submissions.

To/ from	Date	Consultation ID	Bulk load ID	Method	Reg 24(b)(i): Summary of each response
From	05/12/2023	240729215826	-	Questionnaire	Stakeholder responded to questionnaire.
To	08/12/2023	240118160056	-	Email	Thanking the recipient for doing the Esso Consultation Questionnaire, will keep updated on CCS, Decommissioning Pipelines, Decommissioning SPJ, Turrum Drilling, Kipper Drilling, LIP and Longford Gas Plants.

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso held regular meetings with GLaWAC throughout the consultation period on a monthly basis and provided detailed consultation on all offshore activities including this activity including activity description, location, timing and potential impacts and risks. GLaWAC raised queries on Campaign #1 Execution EP submission and approval, concerns on invasive marine species. Stakeholder attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable.	GLaWAC raised queries on Campaign #1 Execution EP submission and approval, concerns on invasive marine species, marine mammal interactions, cultural heritage. GLaWAC raised queries on sea dumping, leave in situ, BBMT, shore crossing, onshore waste management. Community information session feedback is summarised in *Community Information Sessions.* *Esso has not received objections from GLaWAC to the activities proposed in this EP.*	Esso answered GLaWAC's queries and concerns during meetings. Invasive marine species is addressed in Section 7.4 of the EP. Marine mammal interactions is addressed in Section 6.13 of the EP. Cultural heritage is addressed in Appendix A 1.5 Feedback/queries relating to sea dumping, leave in situ, shore crossings and onshore activities are not relevant to this EP and will be addressed in the relevant regulatory submissions. Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.*	Esso will provide updates of the activity as necessary. Control RSK4-CM8 'Photographs of any potential IMS will be taken and provided to an IMS expert for review' has been added to Section 7.4 as a result of feedback

To/ from	Date	Consultation ID	Bulk load ID	Method	Reg 24(b)(i): Summary of each response
From	15/12/2023	240119150525	-	Email	Organising a meeting in the new year.
From	15/12/2023	240523181004	-	Email	Stakeholder is busy and wants to meet up after January.
To	17/12/2023	240119151039	-	Email	Agreeing to a time for a meeting in February.
To	05/02/2024	240523192211	-	Email	Esso wanted to touch base with some questions regarding protocol and logistics for the meeting scheduled in February.
To	06/02/2024	240207101701	-	Phone call	Phone call to clarify meeting logistics.

Kurnai Aboriginal Corporation [742]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*			
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Stakeholder attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable. Esso met with Kurnai Aboriginal Corporation on 17th December 2024 to provide further updates on Campaign #1 activities. Kurnai Aboriginal Corporation submitted a letter to Esso on 13th August 2025 (outside the consultation period) outlining legal obligations arising from decommissioning and Native Title impacts, including decommissioning in a safe, environmentally responsible, and culturally respectful manner, and making various requests of Esso. In response to requests from Esso to arrange a meeting to discuss its letter, Kurnai Aboriginal Corporation emailed Esso on 3 November 2025 and advised that it would be open to scheduling a meeting once Esso complies with certain requirements.	Community information session feedback is summarised in *Community Information Sessions.* In the meeting held 17th December 2024, Kurnai Aboriginal Corporation discussed Native Title Act 1993, preference to retain marine life around infrastructure, and concept of healing of country. Kurnai Aboriginal Corporation advised they would contact Esso in the new year (2025). Kurnai Aboriginal Corporation submitted a letter to Esso on 13th August 2025 outlining legal obligations arising from decommissioning and Native Title impacts, including decommissioning in a safe, environmentally responsible, and culturally respectful manner, and making various requests of Esso. These requests include that Esso enters into formal negotiations	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso has detailed the Native Title Act within Section 1.6.5 of the EP and identified under values and sensitives in Section 3.3. Esso noted feedback on retaining marine life around infrastructure, marine ecosystem impacts are assessed in Section 6 of the EP. Esso continues to provide updates on Campaign #1. Esso does not consider that the matters raised in the letter received on 13 August 2025 raises any objection or claims in relation to the activity the subject of this EP. In relation to references in the letter to Sea Country generally, Esso has considered the values and sensitivities related to Sea Country within the OA in Table 3-2 and within the EMBA in section A.1.5.1.3 of Appendix A for the purposes of this EP. Esso responded to Kurnai Aboriginal Corporation on 13th August 2025 acknowledging receipt of letter submitted on 13th August, Esso further followed up on 29th August to provide an update that a response was being drafted. Esso contacted Kurnai Aboriginal Corporation on the 22nd and 29th of October 2025 to arrange a meeting to discuss the letter. Kurnai Aboriginal Corporation emailed Esso on 3 November 2025 and advised that it would be open to scheduling a meeting once Esso acknowledges various conditions, including that Esso contributes to the cost of legal representation for Kurnai Aboriginal Corporation and confirms its	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

					to resolve legacy impacts, that cultural heritage assessments be conducted with Kurnai representatives and independent experts, that a native title compensation framework is developed and that Kurnai People are recognised as custodians for Sea Country. Further correspondence was received from the Kurnai Aboriginal Corporation on 11 December 2025, agreeing to quarterly consultation meetings and providing response to Esso letter dated 5 December 2025, disputing Esso's assertion sufficient consultation under of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) has been discharged.	willingness to explore compensation pathways and legacy resolution mechanisms. Esso provided a response to Kurnai Aboriginal Corporation 12 January 2026 confirming Esso considers it has discharged its obligations for consultation under Regulation 25 having provided a reasonable period, sufficient information and opportunity for relevant persons to provide feedback, objections and/or claims.

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso held quarterly meetings with LEFL throughout the consultation period and provided detailed consultation on all offshore activities including this activity including activity description, location, timing and potential impacts and risks. LEFL provided a letter on 4th December 2023 to Esso regarding LEFL's position on decommissioning of Esso Assets in Bass Strait. LEFL continued to hold this position throughout the consultation period for the EP.	Feedback from Stakeholder forums is summarised in *Stakeholder Forums.* Community information session feedback is summarised in *Community Information Sessions.* LEFL provided their position for full removal of assets as per the	Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.* Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso acknowledges LEFL's position on full removal of assets and notes this is not relevant to the activities in this EP and will be addressed in a future Campaign as noted in	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

LEFL raised queries on PSZ removal, marine ecosystem impacts, commercial fishing safety concerns, clean-up of infrastructure. LEFL submitted a letter to NOPSEMA on 7th August 2025 (outside the consultation period), cc'ing Esso, outlining position on full removal and seabed capping of offshore infrastructure to protect marine safety, environment, and fishing industry. Esso responded to the letter on 4th September 2025. Stakeholder attended the Decommissioning – Removals Stakeholder Forum Online session. Feedback from forums has been incorporated into the EP, where applicable. Stakeholder attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable.	OPGGS Act 2006 and Offshore petroleum decommissioning guideline, DISER 2022. LEFL raised queries on PSZ removal, marine ecosystem impacts, commercial fishing safety concerns, clean-up of infrastructure. LEFL submitted a letter to NOPSEMA on 7th August 2025, cc'ing Esso, outlining position on full removal and seabed capping of offshore infrastructure to protect marine safety, environment, and fishing industry.	Section 1.2.1.4 of the EP. Esso acknowledged LEFL's concerns raised, commercial fishing interactions relating to the activities of the EP are detailed in Section 6.2.3.2. Esso responded to the letter on 4th September 2025 acknowledging LEFL's current position in favour of complete remove and confirming decommissioning activities will be completed responsibly in full compliance with environmental regulations and in a timely manner. Esso offered to continue quarterly meetings with LEFL. Esso continue to engage with LEFL and provide updates on Campaign #1 activities.

Maritime Union of Australia [348]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*					
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso held regular meetings with MUA throughout the consultation period and provided detailed consultation on all offshore activities including this activity including activity description, location, timing and potential impacts and risks. MUA raised concern relating to timing of removal campaign, queries on responsible regulator for sea dumping, worker's safety, support vessels. Stakeholder attended the Decommissioning – Removals Stakeholder Forum. Feedback from forums has been incorporated into the EP, where applicable.			MUA raised concern on timing of activity and questioned if it could be done quicker. Queries on sea dumping, worker's safety, support vessels. Feedback from Stakeholder forums is summarised in *Stakeholder Forums.*	Esso confirmed details on timing of project activities, including arrival of Pioneering Spirit, onshore capabilities. Pioneering Spirit and support vessels are detailed in Section 2 of the EP. Key legislations relevant to Campaign #1 activities including safety are detailed in Section 1.6 of the EP. Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.*	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Navigator North Project Pty Ltd [585]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*					
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*					
Summary of responses received and Esso's consideration and response			Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Completed Esso Consultation Questionnaire nominating to be consulted for decommissioning. Esso continues to provide Stakeholder with consultation material. Esso met with Navigator North Project on 18th July 2024 and 24th March 2025 providing information on decommissioning including Campaign #1 activities. NNPPL provided feedback on Campaign #1 activities on 20th December 2024. Esso continues to engage and provide NNPPL updates on Campaign #1 activities.			NNPPL provided feedback on the proximity of Campaign #1 activities and their project will require ongoing dialogue as part of Esso's decommissioning activities under OPPGSA, and NNPPL site investigations, installation activities and subsequent offshore wind operations under OEI Act. NNPPL believe that any synergies and simultaneous operations are manageable through ongoing cooperation and dialogue.	Esso has considered cumulative impacts associated with offshore wind in Section 6 of the EP. Esso acknowledges NNPPL feedback that synergies and simultaneous operations are manageable through ongoing cooperation and dialogue. Esso continues to engage with NNPPL and provide project updates as required.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Esso held quarterly meetings with SETFIA throughout the consultation period and provided detailed consultation on all offshore activities including this activity including activity	Feedback from Stakeholder forums is summarised in *Stakeholder Forums.*	Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.*	Section 6.2 outlines the control based on SETFIA's communication system.

description, location, timing and potential impacts and risks for Campaign #1. Stakeholder attended the Decommissioning – Removals Stakeholder Forum. Feedback from forums has been incorporated into the EP, where applicable. Stakeholder registered and attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable.	Community information session feedback is summarised in *Community Information Sessions.* Concerns raised on safety issues regarding snag risk of fishing gear and queries on PSZs, SETFIA developed an improved system to replace SMS communication in Gippsland: a rolling map of all activities that changes and is re-issued when a proponent plans new activities that might impact fishing and require attention from the fishing industry.	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso acknowledged SETFIA's concerns raised, commercial fishing interactions relating to the activities of the EP are detailed in Section 6.2.3.2. Esso has adopted SETFIA's communication system of a rolling map and incorporated into Section 6.2 of the EP. Esso continue to engage with SETFIA and provide updates on Campaign #1 activities.

The Wilderness Society [345]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*

Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
TWS attended the Decommissioning – Removals Stakeholder Forum Sale session. Feedback from forums has been incorporated into the EP, where applicable. Esso met with TWS in a one on one in person meeting on 19th February 2025 providing a tailored presentation on Campaign #1 to address TWS queries on decommissioning. TWS provided a letter in response to Campaign #1 Execution EP on 1st August 2025, Esso provided a response to the letter on 7th August 2025.	Esso met in a one on one in person with TWS 19th February 2025 providing update on decommissioning including Campaign #1 and pipelines. TWS were interested in leave in-situ/end states and requested to continue to be consulted. Expressed preference for full removal of infrastructure. No concerns raised about Barry Beach. TWS letter sent on 1st August 2025 (outside the consultation period) provided feedback on consultation, concerns on timing of planned SPJ removal inconsistent with OPPGS Act (not relevant to this EP), concerns on	Esso provided an update on Campaign #1 in a one on one in person meeting held with TWS 19th February 2025. Feedback raised on pipelines, end states and Barry Beach are not considered relevant to this EP. Esso responded to TWS letter on 7th August confirming feedback received from relevant persons has been considered during the preparation of the EP, details on staged decommissioning, Campaign #1 activities. Esso has considered contaminates as part of the EP impacts and risks. NORM is discussed in Section 6.1.6.1.5. Results from sediment sampling at platform location is summarised in Section 6.1.3.5. Other items raised by TWS are not relevant to this EP. TWS has not responded to Esso's letter dated 7 August 2025. Esso collated the feedback received during the Stakeholder forums. This feedback, where applicable has been incorporated as per *Stakeholder Forums.* Esso considers that it has discharged its obligations under section 25 of the Environment	Esso will provide updates of the activity as necessary. Sediment sampling is summarised in Section 6.1.3.5. NORM is discussed in Section 6.1.6.1.5, This poses no risk to marine life as it is contained within topsides systems and will be taken onshore for appropriate disposal.

			SPJ end state (not relevant to this EP), concerns of contaminates associated with offshore oil and gas infrastructure including NORM, heavy metals and trace elements due to delay of removal of infrastructure (not relevant to this EP). Feedback from Stakeholder forums is summarised in *Stakeholder Forums.*	Regulations and that consultation with TWS in the course of preparing the Campaign #1 EP is complete. Esso will continue to consult with TWS on decommissioning activities.

Tuna Australia Ltd [120]

An assessment has been made for this Relevant Person on the provision of sufficient information, refer to explanation *Regulation 25(2) sufficient information.*			
An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	**Summary of feedback, objection or claim**	**Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response**	**Reg 34(g) (ii): EP controls**
Tuna Australia registered for Decommissioning – Removals Stakeholder Forum but did not attend. Although outside the consultation period, correspondence received from Tuna Australia between August 2025 – January 2026 relating to consultation with Tuna Australia as a relevant person has been included.	No feedback, objection or claims on this activity. On 1st August 2025 Tuna Australia requested details on Esso's environment plans and consultation with Tuna Australia. Tuna Australia provided further details on 16th October 2025 including difficulty of Tuna fishers	Not applicable as no feedback, objections or claims were made. 3rd October 2025 Esso provided details on Community Information Session and engagement commercial fishers active within Esso's ATBA. Esso provided further details to Tuna Australia on 4th December 2025 outlining current fishing data used to assess Tuna Australia as a relevant person for Esso's activities. Esso responded to Tuna Australia on 9 January 2026 confirming Esso considers it has discharged its obligations for consultation under Regulation 25 having provided a reasonable period, sufficient information and opportunity for relevant persons to provide feedback, objections and/or claims.	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

			to attend Esso's workshops. Tuna Australia responded on 4th December 2025 outlining their industry position statement, details on tuna fishing grounds significantly shifted over the past decade compared to historical datasets and suggestion of establishing a service agreement for consultation. Tuna Australia responded on 11 January 2026 to Esso's letter dated 9 January 2026 providing details on consultation obligations. Tuna Australia agreed to meet with Esso.		Esso requested a meeting with Tuna Australia to discuss ongoing consultation for Esso's other activities. Esso will continue to consult with Tuna Australia on decommissioning activities.

An assessment has been made for this Relevant Person on the provision of sufficient time, refer to explanation *Regulation 25(3) sufficient time.*			
Summary of responses received and Esso's consideration and response	Summary of feedback, objection or claim	Reg 24(b)(ii) & (iii): Esso's assessment of merits of feedback, objection or claim and its response	Reg 34(g) (ii): EP controls
Stakeholder attended Community Information Session. Feedback from community information sessions has been incorporated into the EP, where applicable. Stakeholder raised queries on decommissioning, concerns on level of consultation in Corner Inlet, environmental impacts to Corner Inlet and onshore activities.	Community information session feedback is summarised in *Community Information Sessions.* Stakeholder raised concerns on community consultation in Corner Inlet. Concerns raised on project impacts to RAMSAR wetland in Corner Inlet and onshore activities.	Feedback received from community information sessions has been incorporated into the EP where applicable, refer to *Community Information Sessions.* Esso acknowledged Stakeholder's suggestion on consultation in Corner Inlet, Esso held monthly community information sessions from Aug 2024 – Nov 2024 in South Gippsland and continued quarterly sessions in 2025. Esso noted Stakeholder's concerns on RAMSAR wetlands and onshore activities. Impacts are assessed as indirect impacts	Esso will provide updates of the activity as necessary. No additional measures or controls are required.

					through Sections 6 and 7 where applicable, e.g. RAMSAR wetlands. Activities relating to Corner Inlet and BBMT are not relevant to the scope of this EP and addressed in other regulatory submissions.

INFORMATION BULLETIN
March 2024

CONSULTATION

Gippsland Basin Decommissioning

Decommissioning Campaign #1 Project Update

Esso is committed to engaging with the communities where we operate and helping our stakeholders to understand our business. This information bulletin has been developed as part of Esso's commitment to keep relevant persons and other stakeholders informed of planned activities in Bass Strait and to provide them with sufficient information about the nature and scale of the activity as well as its potential risks and impacts, so that they can make an informed decision as to whether their functions, interests or activities are affected.

Overview

Esso Australia Resources Pty Ltd (Esso) is a wholly owned subsidiary of ExxonMobil Australia Pty Ltd. Esso is the operator of the assets in Bass Strait that are part of the Gippsland Basin Joint Venture between Esso and Woodside Energy (Bass Strait) Pty Ltd (Woodside Energy) and the Kipper Unit Joint Venture (Esso, Woodside Energy, and MEPAU A Pty Ltd). These assets comprise 19 platforms with approximately 400 wells, six subsea facilities and more than 800 kilometres of subsea pipelines.

After delivering energy to Australia for over 50 years, many of the Bass Strait fields are now reaching the end of their productive life. As a result, Esso is planning to undertake the first Bass Strait decommissioning campaign. Activities proposed as part of the Decommissioning Campaign #1 Project include the removal of the topsides of up to 13 facilities, the removal of two monotowers and the removal of the upper jacket sections of up to 10 steel piled jacket (SPJ) facilities.

Following an extensive heavy lift vessel (HLV) contracting exercise, Esso has awarded an execution contract to Allseas Marine Contractors Australia. The Allseas HLV *Pioneering Spirit*, along with support vessels, will be used to remove and transport the topsides and steel substructures to Barry Beach Marine Terminal for dismantling, recycling and disposal.

This bulletin provides information on the activities planned to be conducted as part of the Decommissioning Campaign #1 Project, so that relevant persons and interested stakeholders can make an informed decision as to whether their functions, interests or activities are affected.

Activity location

Esso's operations are located in Bass Strait, off Victoria's Gippsland coast in Australia. The area lies entirely within the South-west Marine Region. The facilities to be removed as part of Campaign #1 activities are located in water depths ranging from 38 metres (Dolphin) to 94 metres (Mackerel). Their distance from the coast ranges from 21 kilometres (Dolphin) to 77 kilometres (Kingfish B).

The potential location (or locations) at which the HLV or construction support vessels (CSVs) will transfer the removed topsides and jacket sections to a barge for transport on to Barry Beach Marine Terminal is to be confirmed and further information will be communicated in future information bulletins. It is expected this location will be in sheltered waters closer to Barry Beach.

Activity timing

Estimated commencement of activities: Preparation activities using a CSV are expected to commence in the fourth quarter of 2026. The HLV *Pioneering Spirit* is expected to arrive in the field in the third quarter of 2027.

Estimated duration of offshore activities: The removal campaign timing window is expected to extend from the fourth quarter of 2026 until early 2028. Activities will not be continuous and the timing and order of activities will be contingent on regulatory approvals, joint venture approvals, suitable weather conditions and vessel schedules.

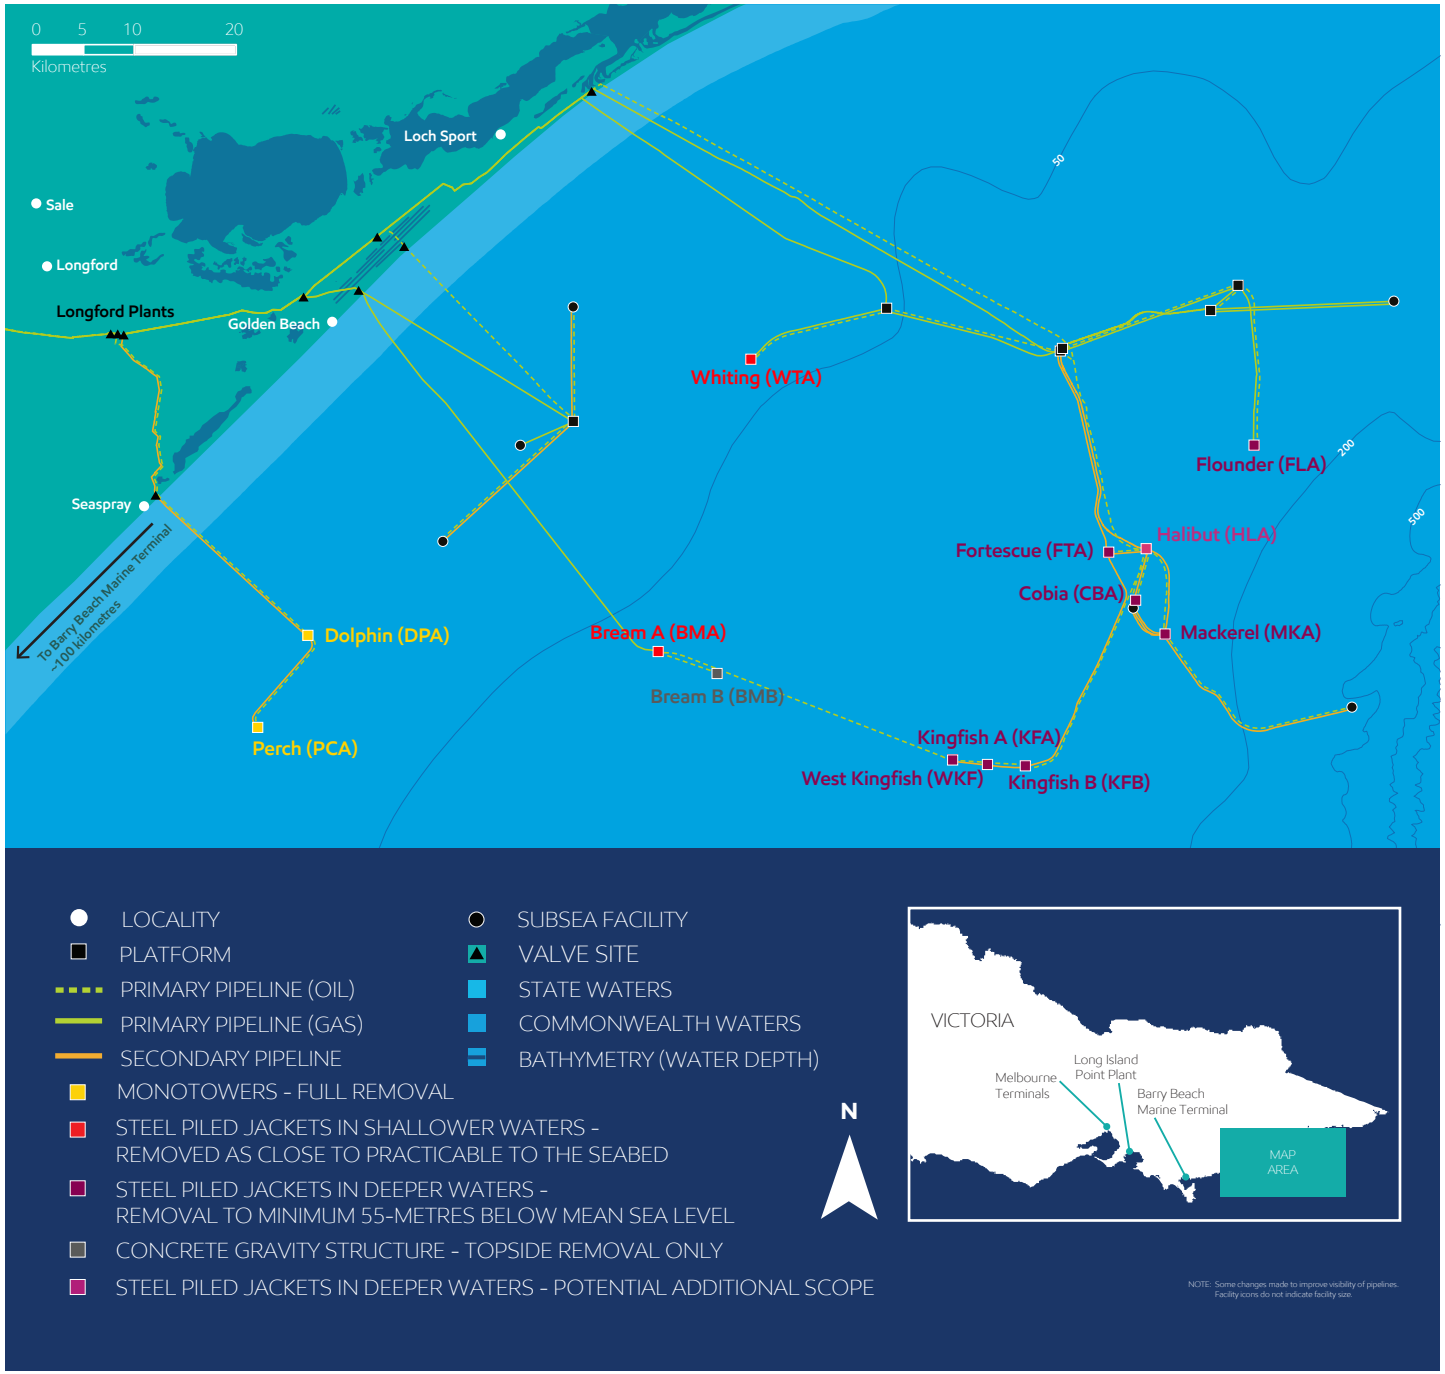
The HLV *Pioneering Spirit* is expected to be in the field for approximately four months. Offshore activities will be conducted on a 24 hours per day basis.

↑ Cover: Fortescue platform

→ The Allseas HLV *Pioneering Spirit* utilising its topside lift system

Consultation and notifications will be conducted with relevant persons prior to commencement of and throughout the activities.

Activity description

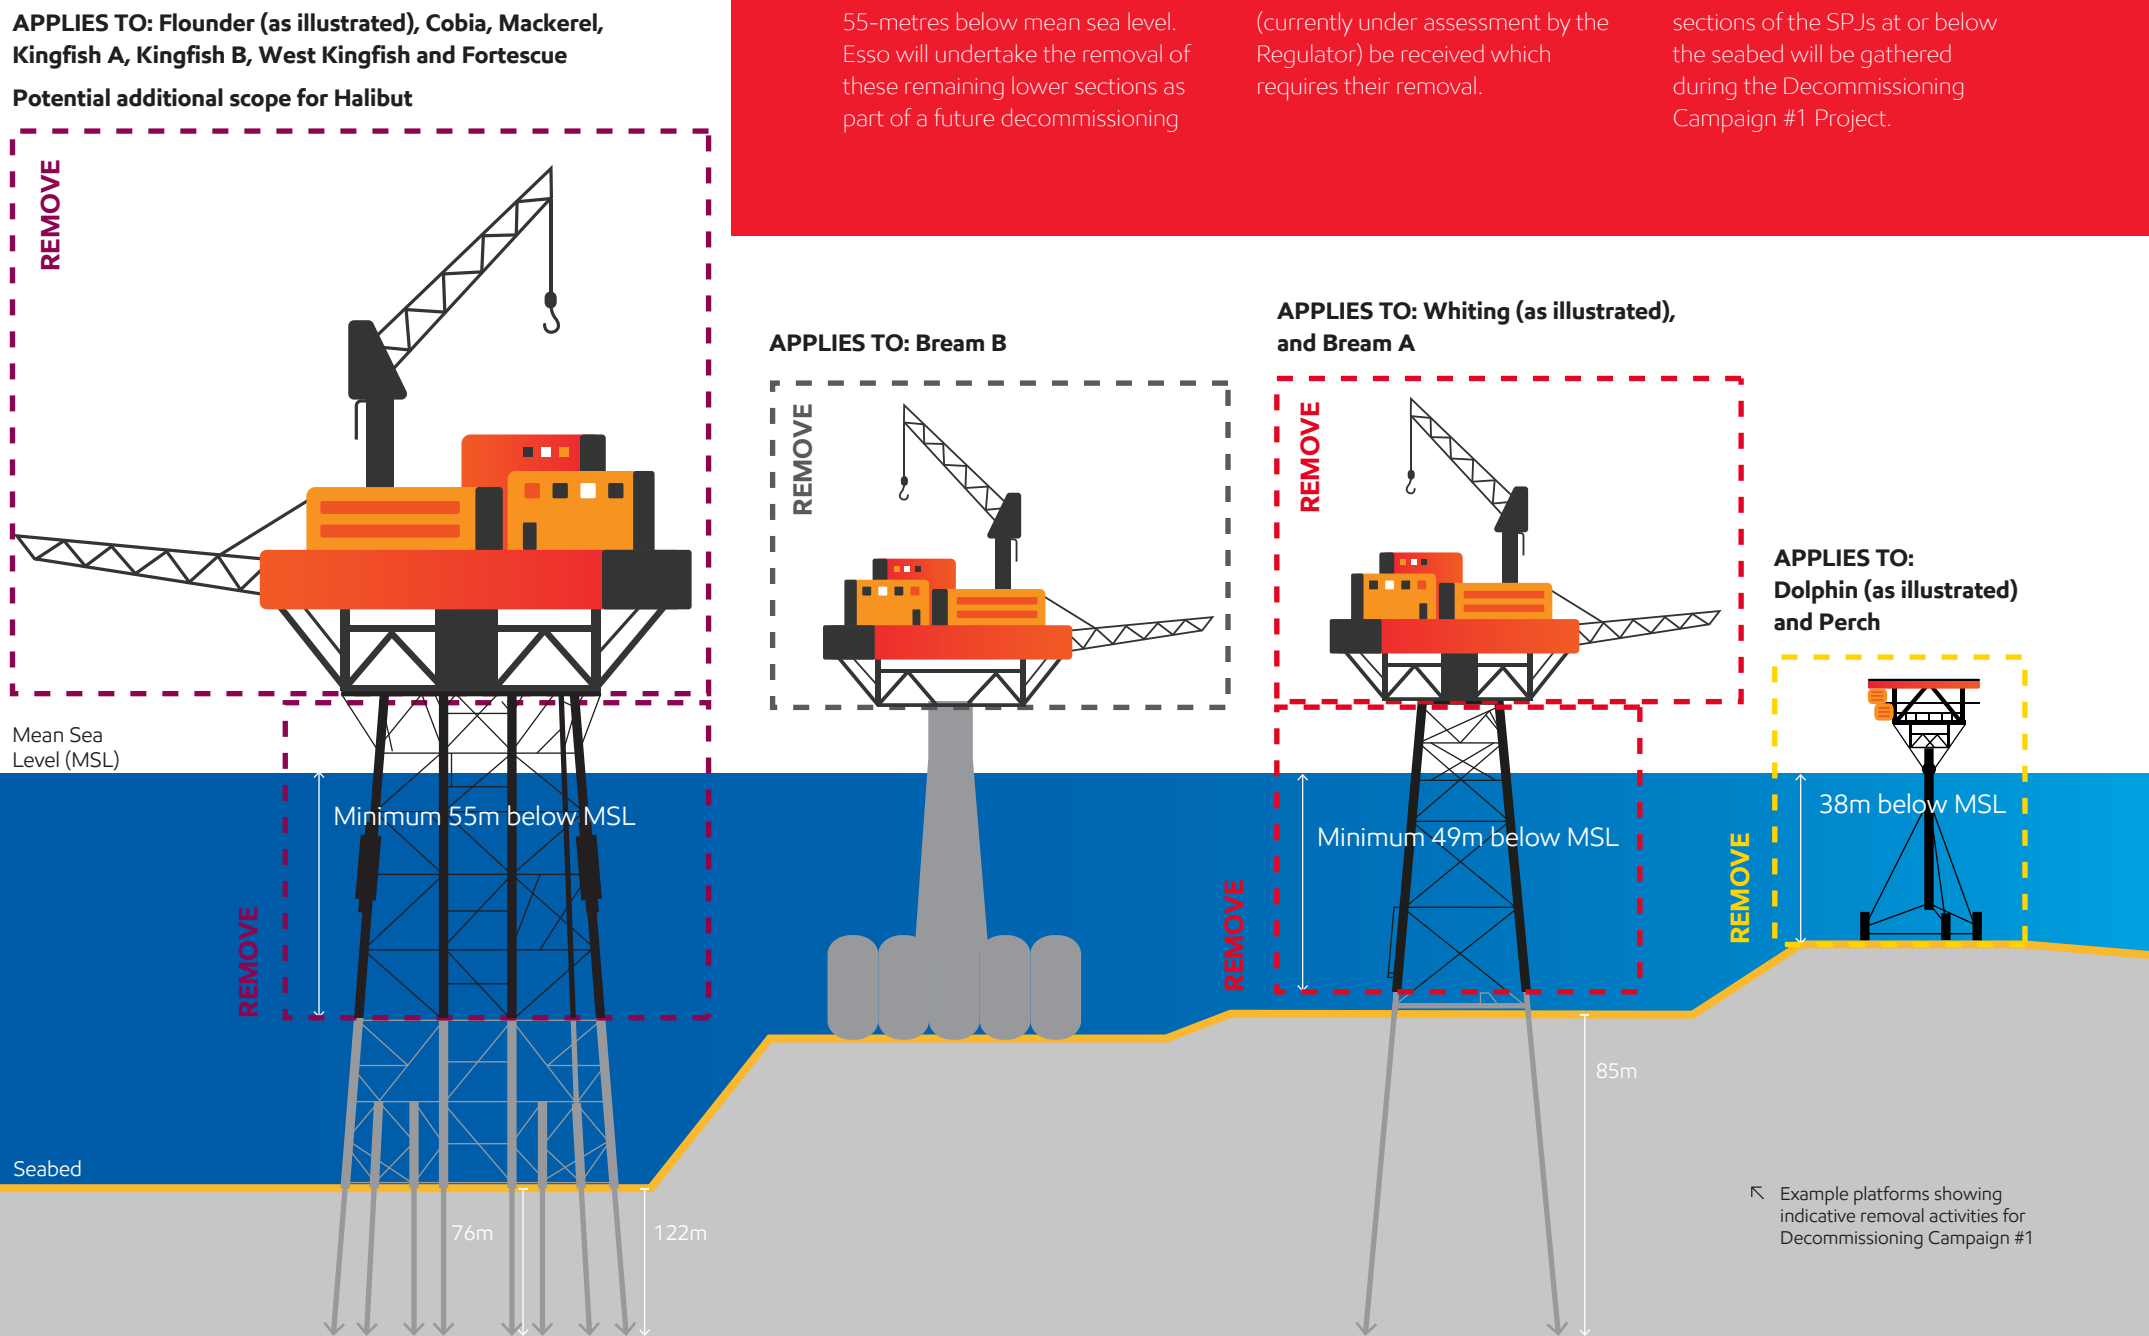


Scope of Decommissioning Campaign #1

The scope and facilities included in Decommissioning Campaign #1 Project are:

- Full removal of two monotowers (Perch, Dolphin)
- Removal of the topsides from the Bream B platform that sits on a concrete gravity structure (CGS)
- Removal of the topsides and upper jacket sections (and potentially well conductors) on seven SPJs in deeper water (Kingfish A, Kingfish B, West Kingfish, Cobia, Mackerel, Fortescue and Flounder) to a depth of at least 55-metres below mean sea level
- Removal of the topsides and upper jacket sections of one SPJ in shallower water (Whiting) to as close as practicable to the seabed. This may be below, or just above the seabed.
- One of two removal options for the Bream A facility, dependant on the requirement for reuse of this facility as part of the South-east Australia Carbon Capture and Storage project (SEA CCS);
  - Removal of the flare boom and radio tower only; or
  - Removal of the topsides and the jacket to as close as practicable to the seabed.

Contingent on vessel availability schedules and the timing of the completion of facility preparation activities (including well plug and abandonment), additional activities may include the removal of the topsides and upper jacket sections (to at least 55-metres below mean sea level) of one further facility (Halibut).



The Bream B CGS base will remain in place, with appropriate navigational aids installed, until a decision is made on the final end state for this facility.

→ Map of activity location for Decommissioning Campaign #1

The lower sections of the SPJs in deeper water will remain in place on the seabed, with the clearance above these sections at least 55-metres below mean sea level. Esso will undertake the removal of these remaining lower sections as part of a future decommissioning campaign, should a decision on the *Gippsland Basin Decommissioning Campaign #1 Steel Piled Jackets End State Environment Plan* (currently under assessment by the Regulator) be received which requires their removal.

Information required to inform detailed engineering of the appropriate methodology to execute the removal of the lower sections of the SPJs at or below the seabed will be gathered during the Decommissioning Campaign #1 Project.

↖ Example platforms showing indicative removal activities for Decommissioning Campaign #1

Removal activities

Activities to be undertaken offshore during the Decommissioning Campaign #1 Project include:

- Preparation of the facilities for removal by the HLV - either by a CSV or personnel on the facility while it is still operating. Cuts will be made either by diamond wire saw or hydraulic shears in strategic locations on the structure to allow for the removal of the topsides and jackets.
- The Dolphin and Perch topsides will be lifted by a CSV.
- The HLV *Pioneering Spirit* will use a motion compensated topside lift system to lift the other facility topsides in one piece and a jacket lift system to lift the jacket substructures and monotower bases in large pieces.
- All removed components will be transferred from a CSV or the HLV onto a barge in a sheltered water location.
- Tugs will then transport the barge from the transfer location to Barry Beach Marine Terminal, where the removed structures will be offloaded, segregated and dismantled for recycling and disposal.

The HLV *Pioneering Spirit* is the largest offshore construction vessel in the world and has undertaken installation and decommissioning projects throughout the Northern Hemisphere. Further information on the *Pioneering Spirit*, including photos and videos can be found here.

Additional vessels such as supply vessels, barges and tugs will be used to support the decommissioning campaign offshore activities from removal through to loading of the structures at Barry Beach Marine Terminal.

← *Pioneering Spirit* using its jacket lift system to remove a SPJ in the North Sea

The main components of the removed topsides and the jacket and monotower substructures are steel and concrete.

Esso will ensure the maximum practicable amount of material from the removed structures is recycled and that the environmental impacts and risks associated with onshore waste handling, transportation and disposal are managed to As Low As Reasonably Practicable (ALARP) and in accordance with relevant legislation governing waste management onshore.

Following the completion of the Decommissioning Campaign #1 Project activities, surveys will be undertaken to confirm activities have been completed in accordance with relevant permissioning documents.

The existing 500-metre Petroleum Safety Zones (PSZ) around the facilities will be reassessed to determine the appropriate status after decommissioning activities have been completed. This risk-based assessment will identify if the PSZ for those facilities can be removed or reduced, as they will no longer be operational.

Remaining structures will continue to be marked on nautical charts to ensure other users of the sea are aware of their presence.

POTENTIAL IMPACTS, CONSEQUENCES AND CONTROL MEASURES

Esso's aim is to minimise environmental and social impacts associated with the Decommissioning Campaign #1 Project activities. As such, Esso will undertake an impact and risk assessment to identify potential impacts and consequences to the environment resulting from the proposed activities, considering timing, duration, location, values and sensitivities.

For impacts and risks identified, Esso will develop control measures, as applicable, to reduce them to ALARP and acceptable levels.

Consultation with relevant persons will take place throughout preparation of the execution Environment Plan, and Esso will analyse feedback received to inform the impact and risk assessment, including control measures, for Campaign #1 activities.

ENVIRONMENT PLAN

Under the *Offshore Petroleum and Greenhouse Gas Storage Act 2006*, before any petroleum-related activities in Commonwealth waters can commence, an Environment Plan must be accepted by the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

An Environment Plan is being developed for the Decommissioning Campaign #1 Project activities. This is a comprehensive document that describes the existing environment, including relevant persons, and how Esso will undertake Campaign #1 Project activities to avoid, minimise or manage potential environmental impacts to ALARP and acceptable levels.

Demonstrating ALARP requires a titleholder to implement all available control measures where the cost is not grossly disproportionate to the environmental benefit gained from implementing the control measure.

In the course of preparing an Environment Plan, Esso must consult with relevant authorities, persons and organisations whose functions, interests or activities may be affected by the proposed activities (i.e. a relevant person) and provide the opportunity for any feedback.

Submission to NOPSEMA of the Environment Plan for the Decommissioning Campaign #1 Project activities is expected in the first quarter of 2025.

Regular inspection, maintenance and repairs continue to be conducted at the Fortescue platform →

Environmental studies

Esso is undertaking a set of environmental studies to inform preparation of the Environment Plan for Decommissioning Campaign #1 activities.

The results of these studies will be used to inform the impacts and risks assessment, including controls to ensure identified environmental impacts and risks are reduced to ALARP and acceptable levels.

The outcomes of these studies will be communicated to relevant persons as part of future consultation activities in 2024 as well as being detailed in the Environment Plan.

Studies currently being planned or undertaken include:

- Spill dispersion modelling to understand the 'Environment that May be Affected' in the event of an unplanned spill event during execution activities
- Underwater noise assessment, including modelling to understand any impacts on sensitive marine fauna as a result of noise from vessel and execution activities
- Sediment dispersion modelling to understand any impacts to the marine environment as a result of disturbance of seabed sediments during activities to remove facilities to at or below the seabed.
- A light emissions assessment to understand any impacts on light sensitive marine fauna as a result of the use of lights on vessels during execution activities
- Greenhouse gas and air emission calculations for execution activities.
- An invasive marine species (IMS) risk assessment to assess the risk of the introduction or spread of IMS as a result of the decommissioning activities and ensure these risks are reduced to ALARP and acceptable levels.

Consultation

Esso is committed to ongoing engagement with the communities where we operate. Your functions, interests and activities may mean you, your business or your organisation are a relevant person for these activities. Your participation will help Esso to better understand the impacts and risks that may arise from the activities.

As such, we're seeking your feedback on the activities outlined in this bulletin. Consultation for this Environment Plan will close in the fourth quarter of 2024. Your feedback and our response will be included in our Environment Plan for the proposed activities, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*.

Please let us know if your feedback is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan, in order for this information to remain confidential to NOPSEMA.

Further consultation regarding Decommissioning Campaign #1 Project activities and potential environmental impacts and risks associated with the activities will be provided in a further information bulletin in the second or third quarter of 2024. A series of stakeholder forums are also being planned for the second quarter of 2024. If you would like to participate in these forums, comment on the proposed activities or would like any additional information, please contact us.

Acknowledgement of traditional owners

Esso Australia acknowledges the Traditional Custodians of Country, the Gunaikurnai Peoples, and the land and sea upon which our operations are located.

We recognise the Gunaikurnai Peoples' continuing connection to land, sea, culture and community, and pay our respects to Elders past and present.

ExxonMobil

CONSULTATION

Gippsland Basin Decommissioning

Decomissioning Campaign #1 - Environmental impacts and risks

INFORMATION BULLETIN
June 2024

Esso is committed to engaging with the communities where we operate and helping our stakeholders to understand our business. In the course of preparing an Environment Plan, a titleholder must consult with relevant persons in accordance with Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth), Division 3, and demonstrate that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate.

This information bulletin has been developed as part of Esso's commitment to keep relevant persons and other stakeholders informed of planned activities in Bass Strait and to provide them with sufficient information about the nature and scale of the activity as well as its potential risks and impacts, so that they can make an informed decision as to whether their functions, interests or activities are affected.

Overview

Esso Australia Resources Pty Ltd (Esso) is a wholly owned subsidiary of ExxonMobil Australia Pty Ltd. Esso is the operator of the assets in Bass Strait that are part of the Gippsland Basin Joint Venture between Esso and Woodside Energy (Bass Strait) Pty Ltd (Woodside Energy) and the Kipper Unit Joint Venture (Esso, Woodside Energy, and MEPAU A Pty Ltd). These assets comprise 19 platforms with approximately 400 wells, six subsea facilities and more than 800 kilometres of subsea pipelines.

After delivering energy to Australia for over 50 years, many of the Bass Strait fields are now reaching the end of their productive life. As a result, Esso is planning to undertake the first Bass Strait decommissioning campaign. Activities proposed as part of the Decommissioning Campaign #1 Project include removal of the: topsides of up to 13 facilities; two monotowers; and upper jacket sections of up to 10 steel piled jacket (SPJ) facilities.

Following an extensive heavy lift vessel (HLV) contracting exercise, Esso has awarded an execution contract to Allseas Marine Contractors Australia. The Allseas HLV *Pioneering Spirit*, along with support vessels, will be used to remove and transport topsides and steel substructures via barges to Barry Beach Marine Terminal for dismantling. Once dismantled, materials will be transported from Barry Beach Marine Terminal to appropriate facilities for recycling and disposal.

This bulletin provides preliminary information on the potential environmental impacts and risks associated with the activities planned to be conducted as part of Decommissioning Campaign #1, so that relevant persons and interested stakeholders can make an informed decision as to whether their functions, interests or activities are affected. Further details on potential impacts and risks will be obtained through analysis of the results of environmental studies, relevant persons consultation and impact and risk workshops scheduled for mid-2024. These further details will be provided in a future information bulletin.

Activity location

Esso's operations are located in Bass Strait, off Victoria's Gippsland coast in Australia. The area lies entirely within the South-west Marine Region. The facilities to be removed as part of Campaign #1 activities are located in water depths ranging from 38 metres (Dolphin) to 94 metres (Mackerel). Their distance from the coast ranges from 21 kilometres (Dolphin) to 77 kilometres (Kingfish B).

The indicative area of operation of the HLV or Construction Support Vessels (CSVs) is shown on the map provided. The HLV or CSV will transport the removed topsides and jacket sections to a sheltered location closer to the Corner Inlet shipping channel (the 'transfer area'). At the transfer area the removed topsides and jacket sections will be transferred onto barges for transport to the Onshore Reception Centre at the Barry Beach Marine Terminal. Due to the HLV size and draft requirements, this vessel will not enter Corner Inlet. The exact location of each transfer within this indicative area will depend on the prevailing weather and sea conditions at the time.

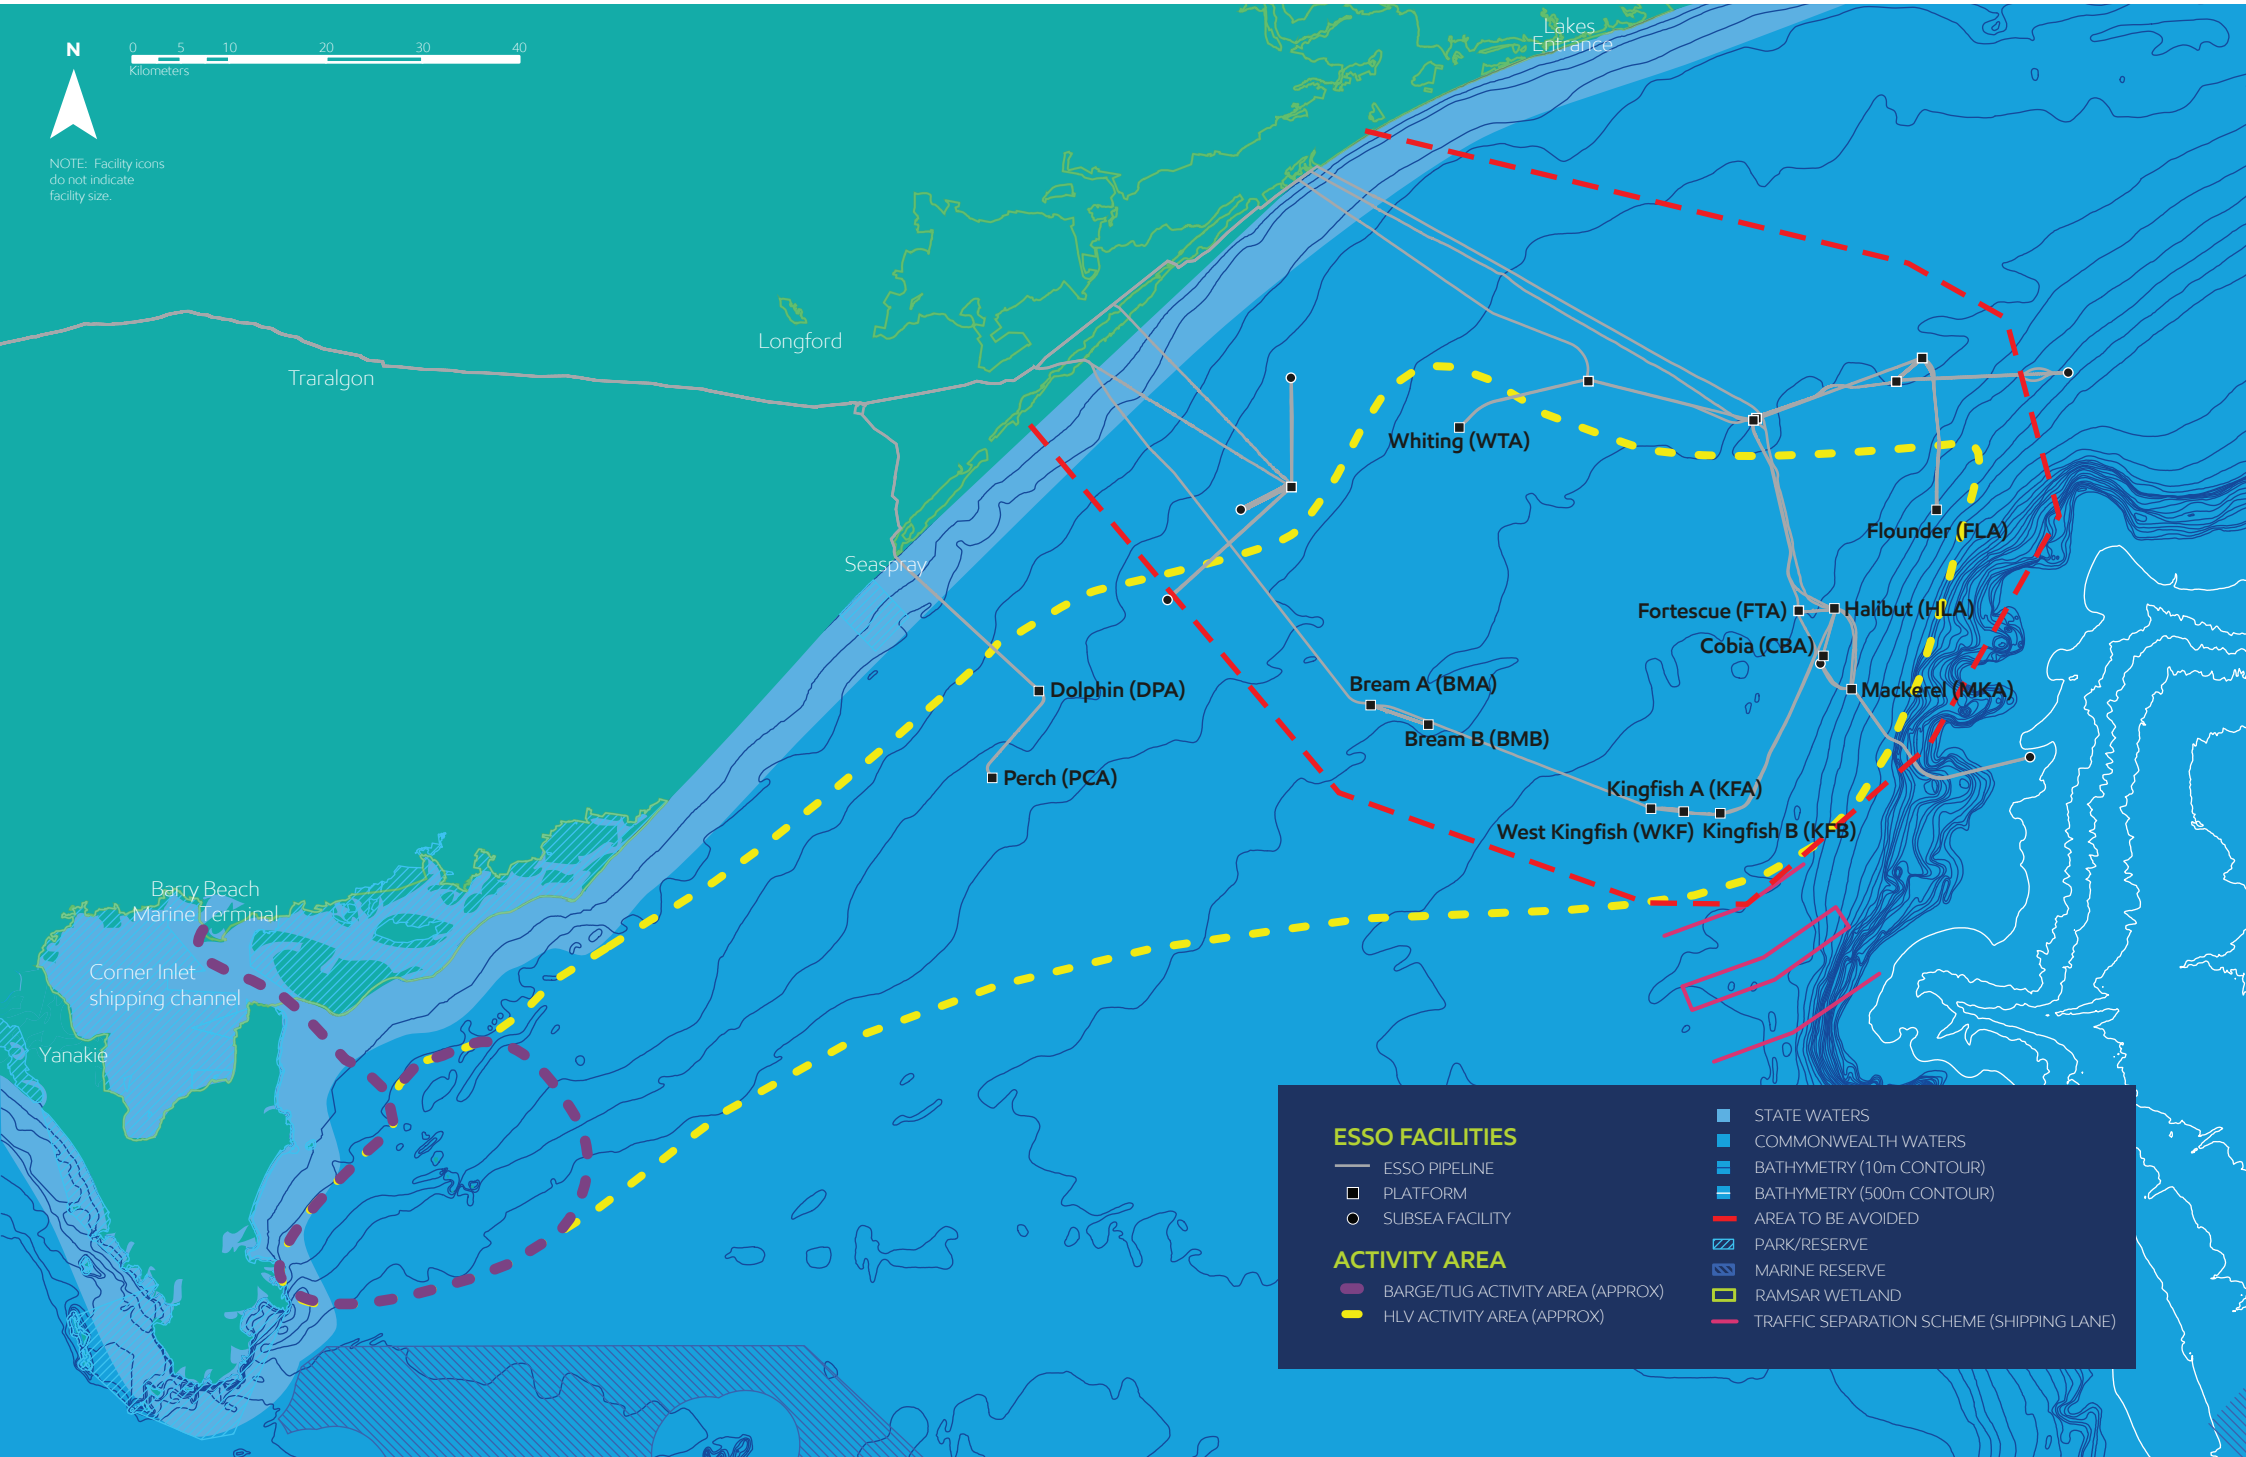
Following the transfer of removed topsides and jacket sections onto barges, the barges will be towed by tugs individually from the transfer location, through the Corner Inlet shipping channel, before being moored at Barry Beach Marine Terminal for offloading. It is anticipated there will be approximately 20 barge movements (accompanied by tugs) in and out of Corner Inlet over the approximate four-month period the HLV is undertaking removal activities.

Activity timing

The timing and order of activities will be contingent on regulatory approvals, joint venture approvals, suitable weather conditions and vessel schedules.

- Preparation activities using a CSV expected to commence Q4, 2026
- HLV expected to arrive in field 3Q 2027
- Expected removal campaign timing window 4Q 2026 - 1Q 2028
- HLV in the field for approximately 4 months
- Marine activities conducted on a 24 hour per day basis

Activity description



Information on the proposed activities was provided in the previous project update issued in March 2024, which can be accessed at this link.

The scope of Decommissioning Campaign #1, including updates that have occurred since March 2024, is as follows:

- full removal of two monotowers (Perch, Dolphin)
- removal of the topsides and module support frame from the Bream B platform that sits on a concrete gravity structure (CGS). The Bream B CGS base will remain in place, with appropriate navigational aids installed, until a decision is made on the final end state for this base
- removal of the topsides and upper jacket sections (and potentially well conductors) on six SPJs in deeper water (Kingfish A, Kingfish B, West Kingfish, Cobia, Mackerel and Flounder) to a depth of at least 55 metres below mean sea level
- removal of the topsides and the jacket of one SPJ in shallower water (Whiting) to as close as practicable to the seabed. This may be below, or just above the seabed

- one of two removal options for Fortescue, depending on the outcome of detailed removal engineering:
  - removal of the topsides and the jacket to as close as practicable to the seabed. This may be below, or just above the seabed, or
  - removal of the topsides and the jacket to a depth of at least 55 metres below mean sea level
- one of two removal options for the Bream A facility, dependent on the requirement for reuse of this facility as part of the South-East Australia Carbon Capture and Storage (SEA CCS) Project:
  - removal of the topsides and the jacket to as close as practicable to the seabed, or
  - removal of the flare boom and radio tower only.

Contingent on the requirement for ongoing gas production the scope may include the removal of the topsides and upper jacket sections (to at least 55 metres below mean sea level) of one further facility (Halibut).

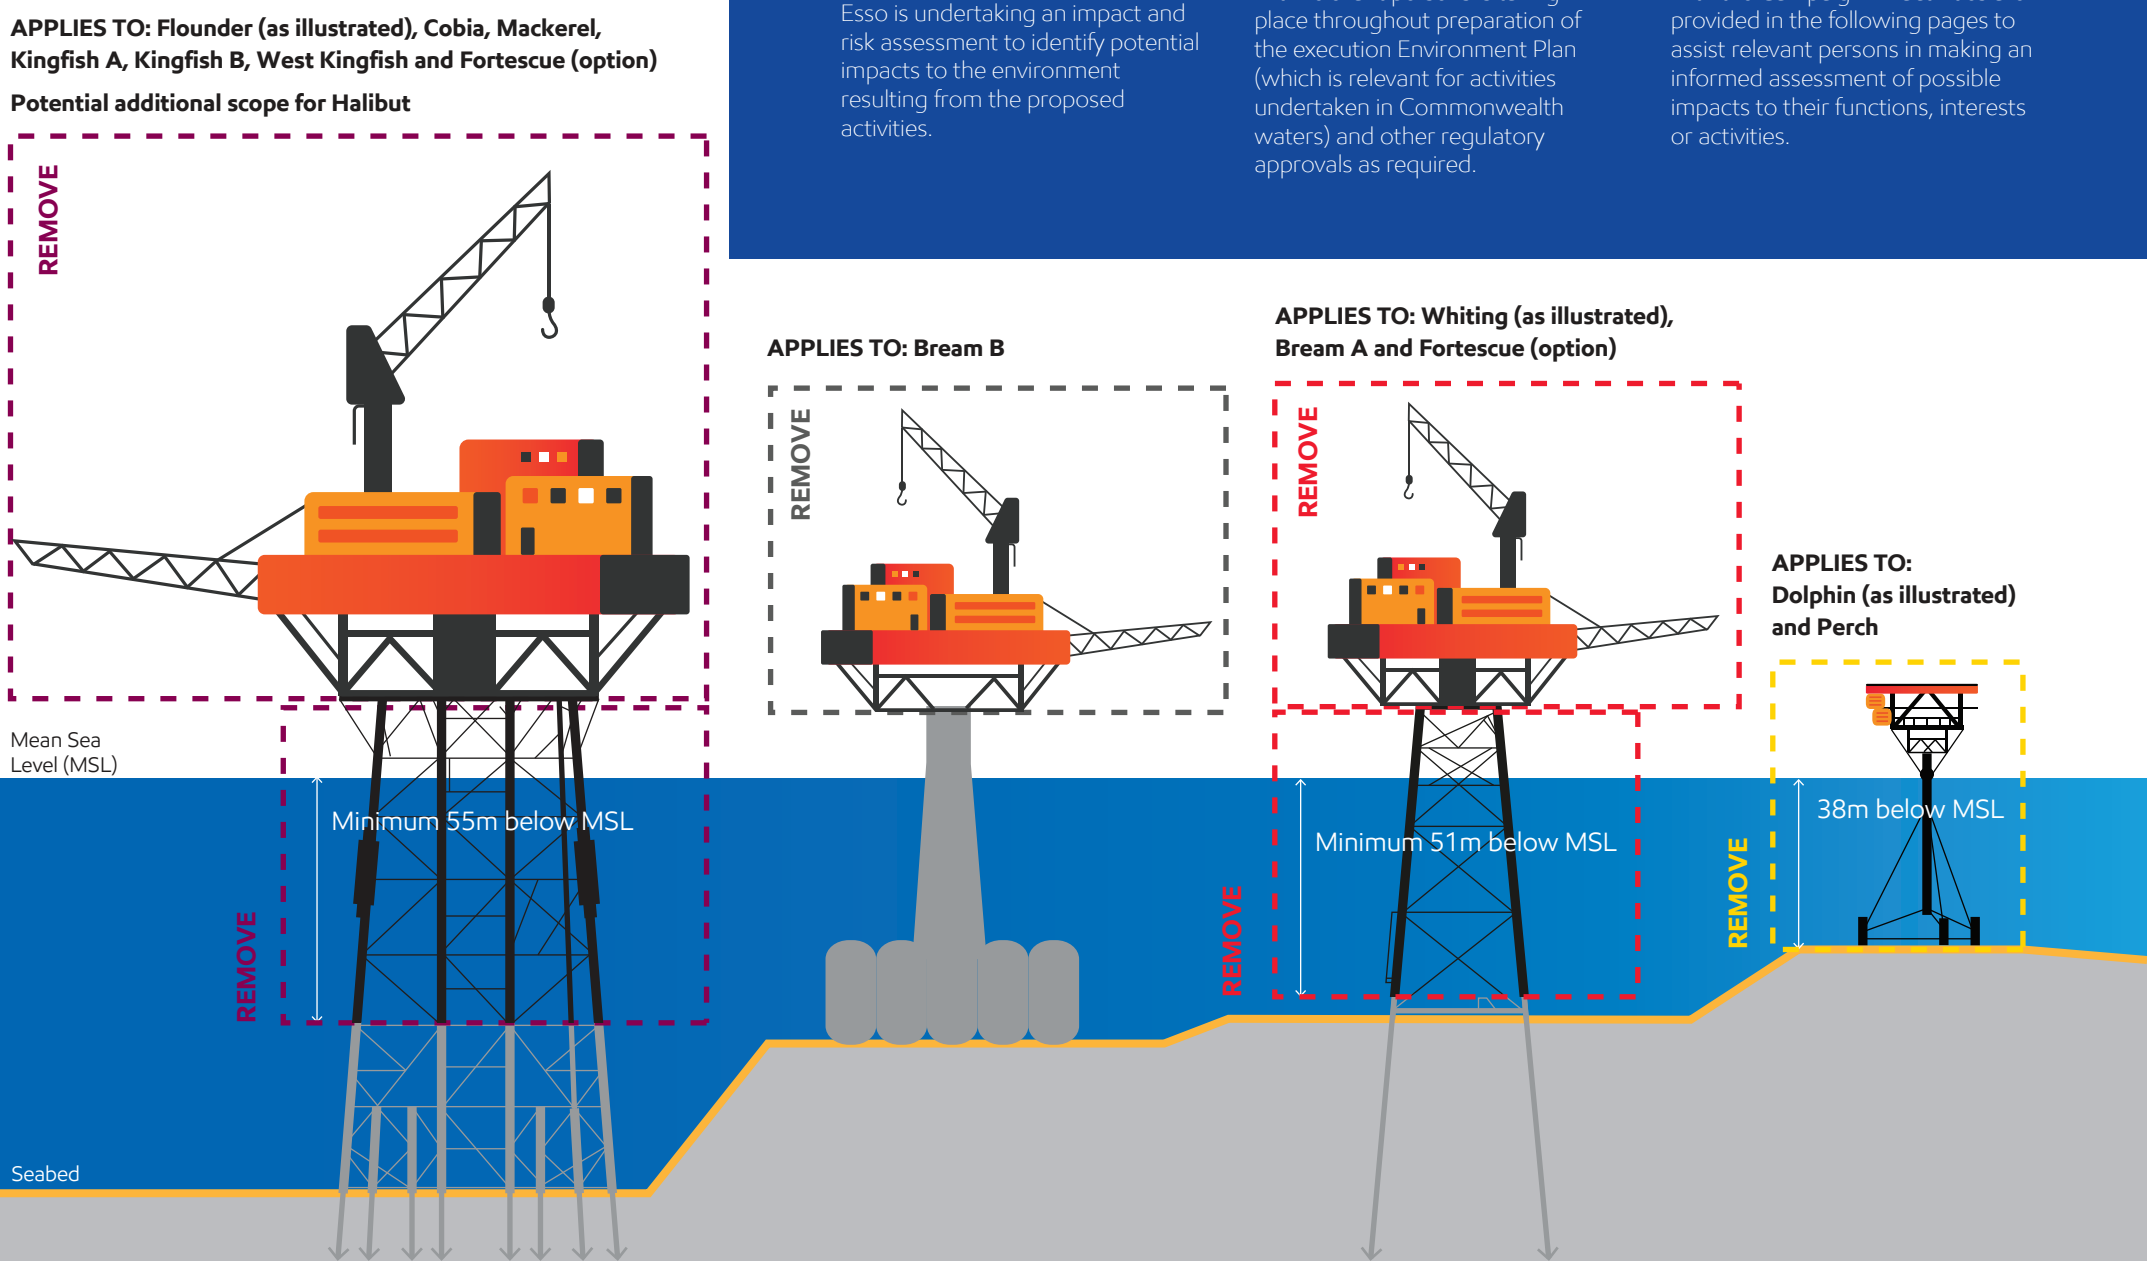
The lower sections of the SPJs in deeper water below -55 metres will remain in place on the seabed. Esso will undertake the removal of these remaining lower sections as part of a future decommissioning campaign, should a decision on the *Gippsland Basin Decommissioning Campaign #1 Steel Piled Jackets End State Environment Plan* (currently under assessment by the Regulator) be received which requires their removal. Information required to inform detailed engineering of the appropriate methodology to execute the removal of the lower sections of the SPJs at or below the seabed will be gathered during Decommissioning Campaign #1.

- Campaign #1 includes removal of approximately 60,000 tonnes of offshore facilities (topsides and jackets).
- The facilities are predominantly comprised of steel (>80%) with the remainder primarily construction materials such as concrete, stainless steel, copper, wood and plastic.
- A very small amount of hazardous waste will come onshore with the facilities and will be efficiently recycled or disposed of safely in accordance with legislative requirements. These materials include light bulbs, fire extinguishers, batteries and Naturally Occurring Radioactive Material.
- Over 95% of the materials brought to shore are planned to be recycled.

ONSHORE RECEPTION CENTRE

The removed topsides and upper jacket sections will be transferred from the HLV or CSV to barges and towed through the Corner Inlet shipping channel to Barry Beach Marine Terminal. These structures will be offloaded at the Onshore Reception Centre at Barry Beach Marine Terminal, where they will be dismantled over 2-3 years and then sent for recycling or disposal. Barry Beach Marine Terminal is an existing port facility, which has been part of South Gippsland's industrial precinct for over six decades. It is where most of the Esso offshore facilities were constructed since the 1960s and has been continuously operating as the supply depot for Bass Strait oil and gas operations since this time.

The activities at Barry Beach Marine Terminal will be managed under relevant Commonwealth and State legislation and contractor environmental management processes and plans. All waste will be handled, transported and disposed of in accordance with applicable legislative requirements.



↗ Barry Beach Marine Terminal with proposed Onshore Reception Centre zones
→ One of the Kingfish jackets being prepared for transport from Barry Beach Marine Terminal in 1969

Potential impacts, risks and control measures

Esso's aim is to minimise environmental and social impacts associated with Decommissioning Campaign #1 activities. As such, Esso is undertaking an impact and risk assessment to identify potential impacts to the environment resulting from the proposed activities.

For impacts and risks identified, Esso will develop control measures, as applicable, to reduce them to As Low As Reasonably Practicable (ALARP) and acceptable levels. Consultation with relevant persons is taking place throughout preparation of the execution Environment Plan (which is relevant for activities undertaken in Commonwealth waters) and other regulatory approvals as required.

Esso is analysing feedback received to inform the impact and risk assessment for the Campaign #1 activities. A preliminary outline of the key potential impacts and risks and control measures associated with the Campaign #1 activities are provided in the following pages to assist relevant persons in making an informed assessment of possible impacts to their functions, interests or activities.

POTENTIAL IMPACTS	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Physical presence – interaction with other marine users	• Changes to the function, interests or activities of other users through disruption to activities.	• Removal activities such as cutting and lifting will take place within existing Petroleum Safety Zones (PSZs). • Relevant persons whose activities are within activity locations outside of PSZs will be informed in advance of the commencement of activities. • Structures remaining on the seabed at the end of the removal campaign will continue to be marked on nautical charts to ensure other users of the sea are aware of their presence. • The removal methodology (single lift) minimises the number of vessel movements required, as infrastructure can be removed in large sections.
Physical presence – seabed disturbance	• Smothering/alteration of benthic habitats; localised and temporary increase in turbidity near the seabed.	• Seabed disturbance will be localised and minimised as far as reasonably practicable. • Platforms in shallower water will be removed to below seabed where cuts can be executed inside jacket piles. If not feasible, cuts will be made as close to seabed as possible, hence limiting seabed disturbance.
Planned vessel discharges to the marine environment i.e. sewage and food waste. Bilge water, deck drainage and brine and cooling water may also be discharged	• Temporary and localised impacts to water quality.	• Routine discharges from vessels will be managed in accordance with legislative requirements, consistent with all vessels in Commonwealth Waters.
Noise emissions	• Temporary impacts to noise sensitive fauna.	• Noise modelling is being undertaken to inform on potential controls relating to noise emissions.
Light emissions	• Short term attraction of light sensitive species. • Short term change in fauna behaviour.	• Lighting will be kept to a minimum while still meeting navigational and workplace safety requirements. • Light modelling is being undertaken to inform on potential controls relating to light emissions.
Air emissions	• Temporary and localised impacts to air quality • Contribution to the global greenhouse gas effect.	• Marine engines are routinely maintained and air emissions will be reduced to ALARP.

↑ Potential key impacts, risks and control measures – Decommissioning Campaign #1 activities

→ Next page: Potential key impacts, risks and control measures – Decommissioning Campaign #1 activities continued

POTENTIAL IMPACTS	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Waste management	• Contribution to onshore landfill. • Air, water and land pollution if waste is not managed appropriately.	• A waste and resource recovery strategy will be developed in conjunction with disposal contractors which incorporates consideration of the waste hierarchy, ensures waste is handled in accordance with applicable legislation, monitors and tracks waste and sets targets for the recycling/reuse of recovered infrastructure. • Over 95% of the material removed will be recycled. • Environmental and waste management plans will be developed and implemented at the Onshore Reception Centre.
Unplanned interaction with marine fauna (vessel strike)	• Impacts to marine fauna.	Vessels will comply with Environment Protection and Biodiversity Conservation Regulations 2000 (Cth) Part 8 Division 8.1 interacting with cetaceans.
Unplanned introduction of invasive marine species	• Displacement of native species and habitat domination.	• The HLV and support vessels will have a Ballast Water Management Plan and comply with the associated Australian requirements. • A biofouling risk assessment process will be completed to determine controls. • Study is being undertaken to assess the risk of the translocation of invasive marine species via the movement of previously submerged equipment through the activity area.
Unplanned release of hydrocarbons (marine diesel oil) due to vessel collision	• Impacts to water quality and marine ecosystems.	• Compliance with legislative requirements for the prevention of vessel collisions and safety and emergency arrangements. • Consultation with other marine users prior to activities to reduce the likelihood of a collision. • Emergency response preparedness including: Oil Pollution Emergency Plan, Operational and Scientific Monitoring Plan and Shipboard Oil Pollution Emergency Plan.
Accidental release of materials/waste	• Temporary and localised: - increase in turbidity - burial of benthic habitat in immediate seabed area - potential toxicity impacts.	• Topside systems will be isolated and made safe for removal. • Waste handling, storage and disposal on vessels will meet Australian requirements. • Lifting equipment certified and routinely maintained.

Consultation

Esso is committed to ongoing engagement with the communities where we operate.

Your functions, interests and activities may mean you, your business or your organisation are a relevant person for these activities. Your participation will help Esso to better understand the impacts and risks that may arise from the activities. As such, we are seeking your feedback on the activities outlined in this bulletin.

Your feedback and our response will be included in our Environment Plan for the proposed activities, which will be submitted to NOPSEMA for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) in first quarter 2025.

Please let us know if your feedback is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan, in order for this information to remain confidential to NOPSEMA.

Further consultation regarding Decommissioning Campaign #1 activities and more detail on the potential environmental impacts and risks associated with the activities will be provided in a further information bulletin in the third quarter of 2024. If you would like to comment on the proposed activities or would like any additional information, please contact us.

Esso Australia acknowledges the Traditional Custodians of Country, and the land and sea upon which our operations are located.

We recognise the Traditional Custodians continuing connection to land, sea, culture and community, and pay our respects to Elders past and present.

Appendix F-3: Information Bulletin #3 (September 2024)

CONSULTATION

Gippsland Basin Decommissioning

Decomissioning Campaign #1 - Impacts and risks update

INFORMATION BULLETIN
September 2024

Esso is committed to engaging with the communities where we operate and helping our stakeholders understand our business. In the course of preparing an Environment Plan, a titleholder must consult with relevant persons in accordance with Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth), Division 3, and demonstrate that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate.

Information bulletins have been issued in March and June 2024 as part of Esso's commitment to keep relevant persons and other stakeholders informed of planned activities in Bass Strait and to provide them with sufficient information about the nature and scale of the activity as well as its potential risks and impacts, so that they can make an informed decision as to whether their functions, interests or activities are affected.

This information bulletin provides further information on the potential environmental impacts and risks associated with the activities planned to be conducted as part of Decommissioning Campaign #1, including those to be undertaken offshore in Bass Strait and onshore at the Onshore Reception Centre.

Overview

Esso Australia Resources Pty Ltd (Esso) is a wholly owned subsidiary of ExxonMobil Australia Pty Ltd. Esso is the operator of the assets in Bass Strait that are part of the Gippsland Basin Joint Venture between Esso and Woodside Energy (Bass Strait) Pty Ltd (Woodside Energy) and the Kipper Unit Joint Venture (Esso, Woodside Energy, and MEPAU A Pty Ltd). These assets comprise 19 platforms with approximately 400 wells, six subsea facilities and more than 800 kilometres of subsea pipelines.

After delivering energy to Australia for over 50 years, many of the Bass Strait fields are now reaching the end of their productive life. As a result, Esso is undertaking the first Bass Strait decommissioning campaign. Activities proposed as part of the Decommissioning Campaign #1 Project include the removal of the topsides of up to 13 facilities, the removal of two monotowers and the removal of the upper jacket sections of up to 10 steel piled jacket (SPJ) facilities.

↑ Cover: Allseas *Fortitude* (example of CSV)

→ Next page: Map of activity location

Esso has awarded an execution contract to Allseas Marine Contractors Australia. The Allseas Heavy Lift Vessel (HLV) *Pioneering Spirit*, along with support vessels, will be used to remove and transport the topsides and steel substructures via barges or heavy transport vessels to an Onshore Reception Centre within the existing Barry Beach Marine Terminal for dismantling. Once dismantled, materials will be transported from the Onshore Reception Centre to appropriate licenced facilities for recycling or disposal.

Activity location

Esso's operations are located in Bass Strait, off Victoria's Gippsland coast in Australia. The area lies entirely within the South-west Marine Region. The facilities to be removed as part of Campaign #1 activities are located in water depths ranging from 38 metres (Dolphin) to 94 metres (Mackerel). Their distance from the coast ranges from 21 kilometres (Dolphin) to 77 kilometres (Kingfish B).

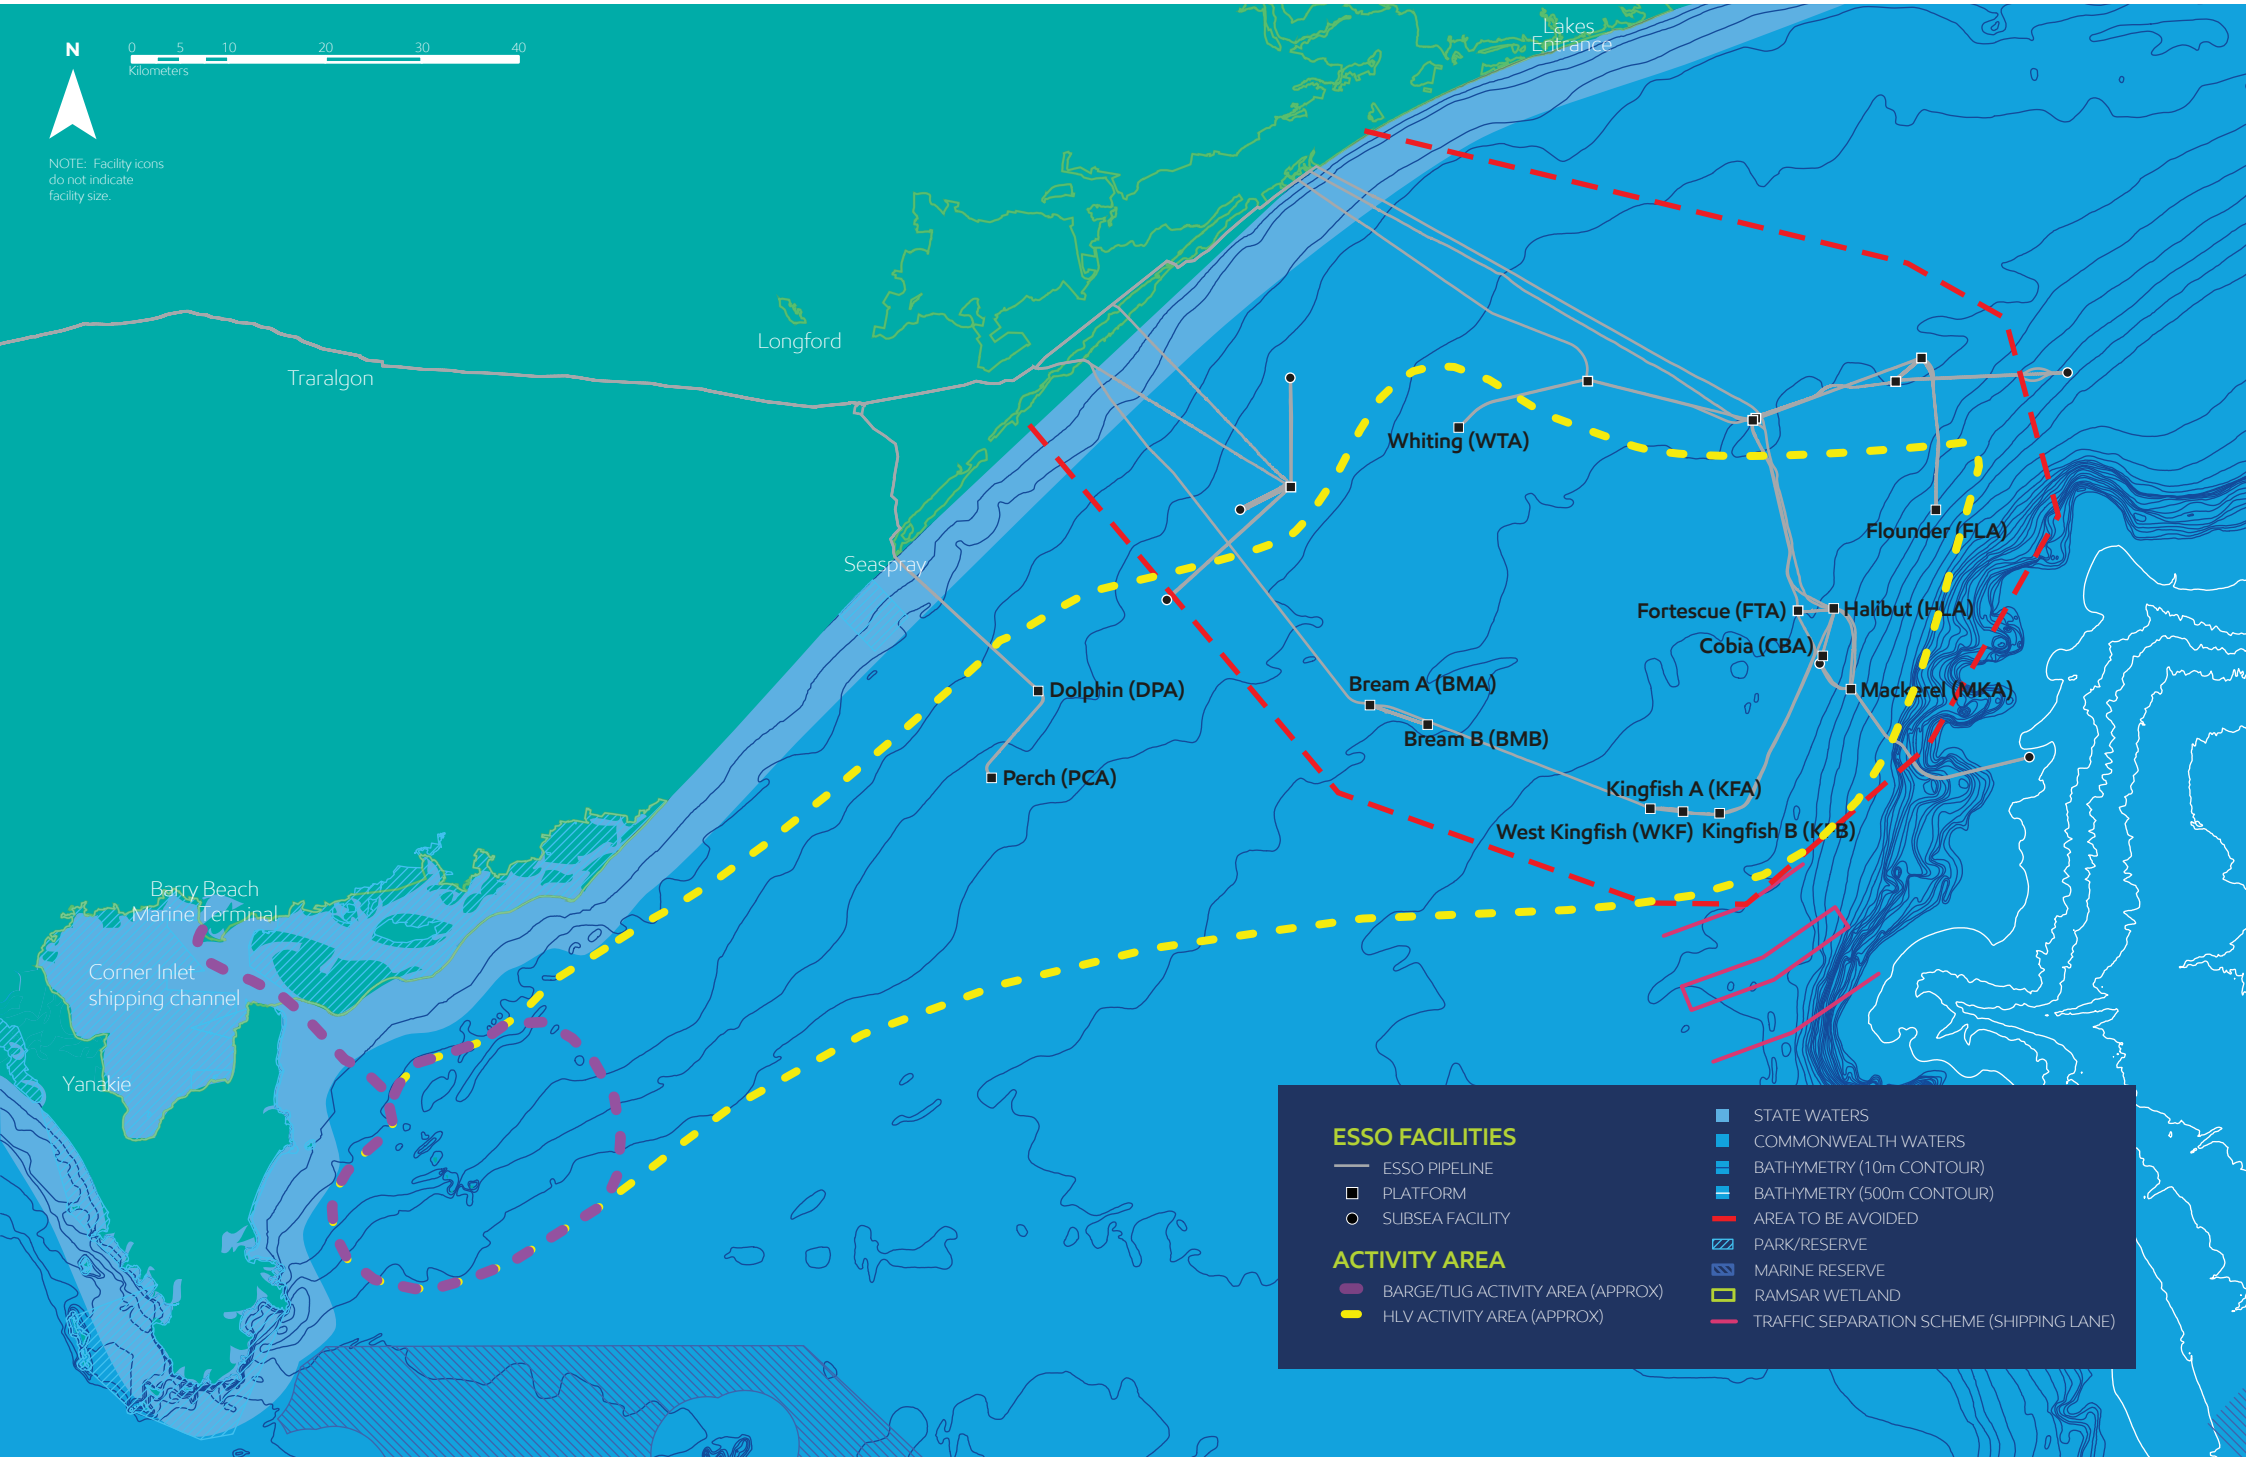
The indicative area of operation of the HLV or Construction Support Vessels (CSVs) is shown on the map provided. The HLV or CSV will transport the removed topsides and jacket sections to a sheltered location closer to the Corner Inlet shipping channel (the 'transfer area'). At the transfer area the removed topsides and jacket sections will be transferred onto barges or heavy transport vessels for transport to the Onshore Reception Centre at the Barry Beach Marine Terminal. Due to the HLV's size and draft requirements, this vessel will not enter Corner Inlet. CSVs may enter Corner Inlet. The exact location of each transfer within this indicative area will depend on the prevailing weather and sea conditions at the time.

If the transfer of removed topsides and jacket sections is made onto barges, the barges will be towed by tugs individually from the transfer location, through the Corner Inlet shipping channel, before being moored at Barry Beach Marine Terminal for offloading. Heavy transport vessels will follow the same route – but will not require towing. It is anticipated there will be approximately twenty barge (accompanied by tugs) or heavy transport vessel movements in and out of Corner Inlet over the approximate four-month period the HLV (and CSVs) are undertaking removal activities.

While conducting removal and transport activities, the HLV, CSVs, barges/ tugs and heavy transport vessels will potentially be visible from the shore at some locations.

Activity timing

Estimated commencement and duration of activities is outlined below but will be contingent on regulatory approvals, suitable weather conditions and vessel schedules:



- Removal preparation activities using a CSV expected to commence 4Q 2026.
- HLV *Pioneering Spirit* is expected to arrive in the field in the 3Q 2027 and is estimated to be in the field for approximately four months, until early 2028.
- Marine activities will be conducted on a 24 hour per day basis.
- Load-in and dismantling activities at the Onshore Reception Centre are expected to take place over 3-4 years, commencing 3Q 2027.
- Site readiness activities will be completed in the 2-3 years prior.

Activity description

Information on the proposed activities was provided in the previous bulletins issued in March and June 2024, which can be accessed at this link.

Decommissioning Campaign #1 is the first of the decommissioning campaigns for the Bass Strait oil and gas facilities and involves facilities that are either at or near the end of their production life.

Esso is also planning for the eventual decommissioning of all producing facilities and associated infrastructure (such as pipelines) in Bass Strait, while continuing to safely operate producing offshore platforms and subsea facilities.

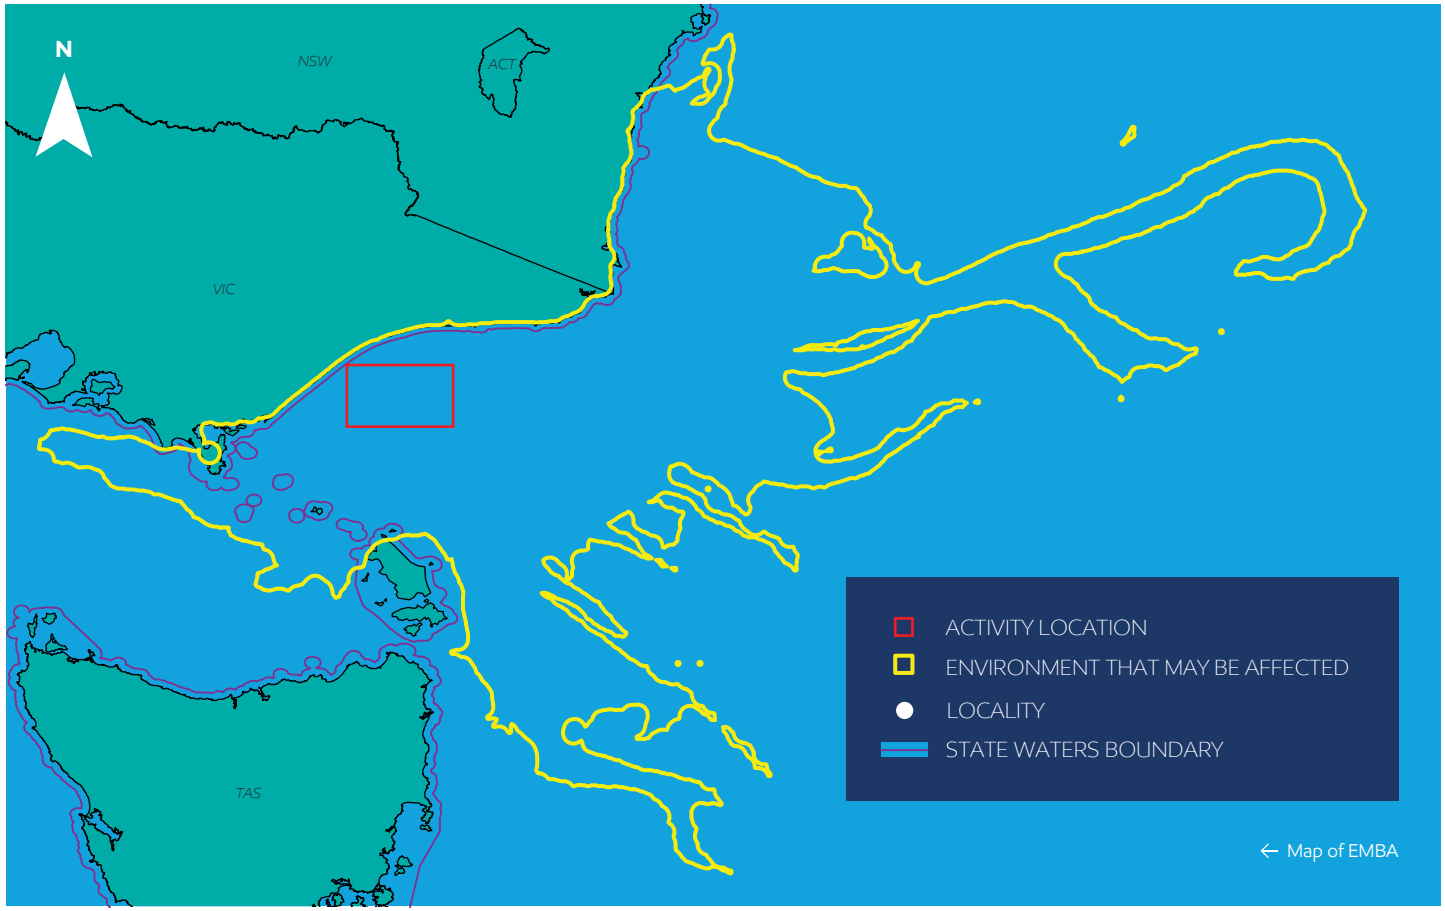
A summary of the scope of Decommissioning Campaign #1, is as follows:

- full removal of two monotowers (Perch, Dolphin)
- removal of the topsides and module support frame from the Bream B platform that sits on a concrete gravity structure (CGS). The Bream B CGS base will remain in place, with appropriate navigational aids installed, until a decision is made on the final end state for this base
- removal of the topsides and upper jacket sections (and potentially well conductors) on six SPJs in deeper water (Kingfish A, Kingfish B, West Kingfish, Cobia, Mackerel and Flounder) to a depth of at least 55-metres below mean sea level
- removal of the topsides and the jacket of one SPJ in shallower water (Whiting) to as close as practicable to the seabed. This may be below, or just above the seabed
- one of two removal options for Fortescue, depending on the outcome of detailed removal engineering:
  - removal of the topsides and the jacket to as close as practicable to the seabed. This may be below, or just above the seabed, or
  - removal of the topsides and the jacket to a depth of at least 55-metres below mean sea level
- one of two removal options for Bream A, dependent on the requirement for reuse of this facility as part of the South-East Australia Carbon Capture and Storage (SEA CCS) Project:
  - removal of the topsides and the jacket to as close as practicable to the seabed; or
  - removal of the flare boom and radio tower only.

Contingent on the requirement for ongoing gas production the scope may include the removal of the topsides and upper jacket sections (to at least 55 metres below mean sea level) of one further facility (Halibut).

The lower sections of the SPJs in deeper water below -55 meters will remain in place on the seabed. Esso will undertake the removal of these remaining lower sections as part of a future decommissioning campaign, unless an alternative end state is proposed and accepted by the Regulator.

The removed topsides and upper jacket sections will be transferred from the HLV or CSV to barges or heavy transport vessels and transported through the Corner Inlet shipping channel to Barry Beach Marine Terminal. The structures will be offloaded at the Onshore Reception Centre at Barry Beach Marine Terminal, where they will be dismantled and the resulting material then sent offsite for recycling or disposal.



Example platforms showing indicative removal activities for Decommissioning Campaign #1

Barry Beach Marine Terminal is an existing port facility, which has been part of South Gippsland's industrial precinct for over six decades. It is where most of the Esso offshore facilities were constructed since the 1960s and has been continuously operating as the supply depot for Bass Strait oil and gas operations since this time.

The activities at the Onshore Reception Centre will be managed under relevant Commonwealth and State legislation and contractor and site environmental management processes and plans. Site readiness works will be completed at the Onshore Reception Centre prior to any structures being loaded-in. There is no plan to modify the depth or width of the shipping channels in Corner Inlet via dredging to allow transport or load-in of the structures.

Separate regulatory applications and permits will be attained for the Onshore Reception Centre activities.

- Campaign #1 includes removal of approximately 60,000 tonnes of offshore facilities (topsides and jackets).
- The facilities are predominantly comprised of steel (>80%) with the remainder primarily construction materials such as concrete, stainless steel, copper, wood and plastic.
- Over 95% of the materials brought to shore are planned to be recycled.
- All waste will be handled, transported and tracked through to disposal in accordance with applicable legislative requirements.

← Map of EMBA

Environment that may be affected

The environment that may be affected (EMBA) is the largest spatial extent where the activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities and for this activity, is determined by the worst case potential spill scenario of a release of marine gas oil to the environment in the highly unlikely event of a vessel collision. The EMBA is defined for every project carried out offshore.

The EMBA represents the total area that could be exposed to hydrocarbon, including trace concentrations of oil in the water column, as a result of any spill from this activity.

This area takes into account the merged areas of many possible paths which a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event a hydrocarbon release does occur, the entire EMBA will not be affected. The specific part of the EMBA that is affected can only be known at the time of the release.

For this activity, Esso has defined the EMBA by combining the potential spatial extent of surface and in-water (dissolved and entrained) hydrocarbons, resulting from a worst-case credible spill from a vessel collision at the Dolphin, Whiting, Fortescue, Kingfish A, Flounder facilities and barge/heavy vessel transfer locations.

Petroleum Safety Zones and Exclusion Zones

The facilities to be removed are within existing designated 500-metre Petroleum Safety Zones (PSZs), hence it is a legal requirement that the area is avoided during decommissioning activities, as has been the case throughout the facilities life cycle.

A temporary 500-metre exclusion zone is also intended to be in place around the HLV and CSVs when these vessels are undertaking removal and transfer operations. This exclusion zone will be communicated via a Notice to Mariners issued by the Australian Hydrographic Service and AUSCOAST warnings issued by the Australian Maritime Safety Authority.

Temporary restrictions on vessel movements within the Corner Inlet shipping channel may be required during transport of the removed structures from the transfer location to Barry Beach Marine Terminal and during load-in operations to the Onshore Reception Centre. These restrictions will be implemented in conjunction with the relevant port authority, short in duration and communicated to relevant persons prior to activities commencing.

Oil pollution response arrangements

Under Commonwealth environment legislation, Esso must demonstrate and document oil spill response arrangements. An Oil Pollution Emergency Plan (OPEP) forms part of an Environment Plan submission and demonstrates Esso's capability to respond in the unlikely event of a hydrocarbon spill. Esso has an existing OPEP which covers production operations in Bass Strait. This OPEP is reviewed and revised if required for all offshore activities (i.e. drilling, decommissioning, new developments). Project vessels will also have a Shipboard Oil Pollution Emergency Plan (SOPEP) which outlines actions to be taken in the event of a hydrocarbon spill.

As the wells associated with the facilities to be removed will be plugged and abandoned prior to the commencement of removal activities, the worst-case potential spill scenario associated with Decommissioning Campaign #1 activities is a loss of marine gas oil from a vessel due to a very unlikely event such as a collision.

Esso is a member of the Australian Marine Oil Spill Centre, a co-operative national oil spill response organisation, which provides access to additional oil spill response resources if required. Esso's OPEP interfaces with national, state and industry response plans prepared and implemented by the Australian Government via the Australian Maritime Safety Authority (NATPLAN), the Victorian Government (Maritime Emergencies (non-search and rescue) Plan), the Tasmanian Government (TASPLAN), the NSW Government (NSW Marine Oil and Chemical Spill Contingency Plan) and the Australian Oil industry's Australian Marine Oil Spill Plan (AMOSPLAN) administered by the Australian Marine Oil Spill Centre. The OPEP and the vessel SOPEP defines spill response options which may be applied to a spill event. The selected spill response option(s) would depend upon the size and type of spill; environmental sensitivities within the spill path; prevailing weather conditions; access restrictions and available resources. In all instances, a Net Environmental Benefits Assessment is undertaken, in consultation with relevant government agencies, to determine the most appropriate spill response option.

→ Perch platform

Potential impacts, risks and control measures

Esso's aim is to minimise environmental and social impacts associated with Decommissioning Campaign #1 activities. As such, Esso is undertaking an impact and risk assessment to identify potential impacts and consequences to the environment resulting from the proposed activities.

For impacts and risks identified, control measures are proposed, as summarised in Table 1 and Table 2, to reduce them to As Low As Reasonably Practicable (ALARP) and acceptable levels. Further details on the impacts and risks associated with the offshore removal activities, as well as relevant control measures, will be provided in the Environment Plan proposed to be submitted to NOPSEMA in 1Q 2025.

Esso is separately undertaking studies and assessments to support additional State and Commonwealth assessments and approvals required for site readiness, materials transit and operational activities associated with the Onshore Reception Centre.

Table 1: Potential key environmental impacts and control measures – Decommissioning Campaign #1 activities

An impact relates to a planned event and is defined by the environmental consequence of the event.

POTENTIAL IMPACTS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Physical presence of vessels – interaction with other marine users Activities will be undertaken using a range of project vessels (HLV, CSVs, barges/tugs, heavy transport vessels and supply vessels) Temporary exclusion zones and shipping lane restrictions will be in place to minimise the chance of interactions with other marine users.	• Changes to the function, interests or activities of other users through disruption to activities: - commercial fishing - recreational fishing - other marine users.	• Removal activities such as cutting and lifting will take place within existing PSZs. • Relevant persons whose activities are within activity locations outside of PSZs will be informed in advance of the commencement of activities. • The removal methodology (single lift) minimises the number of vessel movements required, as infrastructure can be removed in large sections. • Removed structures will be transported from the transfer location to the Onshore Reception Centre at Barry Beach Marine Terminal utilising existing shipping lanes. Any required restrictions on vessel movements in the shipping lanes during transit operations will be short in duration and communicated to relevant persons in advance (in collaboration with the port authority). • Structures remaining on the seabed at the end of the removal campaign will continue to be marked on nautical charts to ensure other users of the sea are aware of their presence.
Physical presence – seabed disturbance Resulting from: • creating/clearing access for cutting tools around structures • post decommissioning sediment sampling and visual surveys (remotely operated vehicle (ROV) operating near the seabed).	• Smothering/alteration of benthic habitats. • Localised and temporary increase in turbidity near the seabed.	• Seabed disturbance will be localised and minimised as far as reasonably practicable via cutting methods and locations. • Platforms in shallower water will be removed to below seabed - where cuts can be executed inside jacket piles. If not feasible, cuts will be made as close to the seabed as possible, hence limiting seabed disturbance. • Barges and heavy transport vessels will be selected to enable transport operations to take place in Corner Inlet without the need to modify the depth or width of the shipping channels beyond current conditions. Maintenance activities may be required.

POTENTIAL IMPACTS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Planned discharges to the marine environment Vessels including treated sewage and food waste, treated bilge and deck wash, cooling water and brine.	• Temporary and localised impacts to water quality. • Temporary change to predator/prey dynamics.	• Routine discharges and vessel waste treatment systems are maintained to meet the requirements of the International Convention for the Prevention of Pollution from Ships, 1973 as modified by the Protocol of 1978, (MARPOL 73/78).
Planned discharges to the marine environment During lifting of jackets and cutting of pipelines and umbilicals: • Some residual fluid in pipelines, skimmer piles and umbilicals will be released during cutting to allow removal of jackets. Fluid is seawater, with minor volumes of residual hydrocarbons, biocide, corrosion inhibitor and water based hydraulic fluid • Small quantities of metal particles and, titanium-iron oxide mineral sand (used during historical modifications of the Kingfish A and Kingfish B jackets) will also be released during cutting and lifting of the jackets.	• Temporary and localised impacts to water quality. • Smothering/alteration of benthic habitats.	• Hydrocarbon will be flushed and drained from all facilities and pipelines as part of the facility preparation scope prior to cutting and lifting. • Residual hydrocarbons within fluids that may be discharged will meet specified discharge limits (achieved during decommissioning preparation activities). • Residual chemicals will undergo an environmental assessment to confirm suitability for discharge.
Noise emissions Vessels and cutting activities will generate underwater noise as a result of the use of vessel thrusters and cutting tools. Onshore Reception Centre site readiness and operational activities will also generate noise.	• Temporary impacts to noise sensitive fauna and amenity.	• Vessels will comply with Environment Protection and Biodiversity Conservation Regulations 2000 (Cth) Part 8 Division 8.1 interacting with cetaceans. • Fauna observations will be undertaken by trained personnel. • Activities will be undertaken to ensure consistency with relevant Conservation Management Plans for species that may be present in the area. • Underwater noise modelling has been undertaken to inform impact assessments and management plans. • Studies are being undertaken to inform the development of the Onshore Reception Centre environmental management plan.

POTENTIAL IMPACTS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Light emissions Artificial light is required 24 hours a day on vessels during the activity to maintain operational and navigational safety.	• Short term attraction of light sensitive species.	• Lighting installed at the Onshore Reception Centre will be in accordance with the *National Light Pollution Guidelines for Wildlife*. • Lighting will be kept to a minimum while still meeting navigational and workplace safety requirements. • Light modelling for offshore marine operations is being undertaken to provide further guidance on potential impacts and controls.
Air emissions Emissions to the air will occur as a result of fuel combustion on vessels.	• Temporary and localised impacts to air quality. • Contribution to the global greenhouse gas effect.	• Compliance with legislative and regulatory requirements for marine air pollution. • Vessels have been selected to ensure offshore activities are completed in the most efficient and expedient manner, so as to minimise air emissions. • Marine engines are routinely maintained.
Dust emissions Generated during dismantling of the removed infrastructure at the Onshore Reception Centre.	• Temporary and localised impacts to local air quality and amenity.	• Dust suppression measures will be implemented to minimise potential impacts.
Odour Generated as a result of the decay of marine growth presence on removed infrastructure at the Onshore Reception Centre.	• Temporary impacts to amenity.	• Odour impacts are expected to be intermittent and short term and in accordance with relevant site environmental licences. • An odour study is underway using marine growth samples from a steel piled jacket to confirm the nature and extent of any odour that may be generated. • Odour generating materials will be appropriately disposed of offsite.
Traffic movements During dismantling of removed infrastructure at the Onshore Reception Centre.	• Temporary impacts to amenity.	• Traffic assessment will inform the development of the Onshore Reception Centre environmental management plan.
Waste management	• Contribution to onshore landfill. • Air, water and land pollution if waste is not managed appropriately.	• Waste management procedures will be developed in conjunction with dismantling contractors which will incorporate consideration of the waste hierarchy and ensure waste is handled, monitored and tracked in accordance with applicable legislation and applicable transportation and Environment Protection Agency licencing requirements. • Over 95% of the material removed will be recycled. • Environmental and waste management plans will be developed and implemented at the Onshore Reception Centre, in accordance with site environmental licences.

Table 2: Potential key environmental risks and control measures – Decommissioning Campaign #1 activities

A risk relates to an 'unplanned event' and is defined by a combination of the probability of the event occurring and the environmental consequence if the event does occur.

POTENTIAL RISKS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Unplanned interaction with marine fauna (vessel strike)	• Impacts to marine fauna.	• Vessels will comply with Environment Protection and Biodiversity Conservation Regulations 2000 (Cth) Part 8 Division 8.1 interacting with cetaceans. • Any injury/mortality of *Environment Protection and Biodiversity Conservation Act 1999*-listed fauna will be reported to appropriate regulatory departments.
Unplanned introduction of invasive marine species	• Displacement of native species and habitat domination.	• All vessels will be assessed and managed appropriately to prevent the introduction of invasive marine species. • All vessels will comply with Australian biosecurity and ballast water requirements and guidance. • Invasive marine species have not been identified on the submerged areas of the jackets during visual surveys undertaken during decommissioning planning.
Unplanned release of hydrocarbons (marine gas oil) due to vessel collision	• Impacts to water quality and marine ecosystems. • Temporary closure of areas (fishing grounds, beaches). • Visual amenity. • Physical harm to marine fauna resulting from ingestion, inhalation or skin contact with hydrocarbons.	• Compliance with legislative requirements for the prevention of vessel collisions and safety and emergency arrangements. • Marine users will be informed (including Notices to Mariners and in conjunction with the relevant port authority) prior to commencement of the activities so they will be able to plan their activities and avoid unexpected interference. • Emergency response preparedness including: OPEP, SOPEP and Operational and Scientific Monitoring Plan.
Unplanned release of hydrocarbons (marine gas oil) during refuelling operations	• Impacts to water quality and marine ecosystems. • Temporary closure of areas (fishing grounds, beaches). • Visual amenity. • Physical harm to marine fauna resulting from ingestion, inhalation or skin contact with hydrocarbons.	• Continuous visual monitoring of hoses, connections and tank levels during operations. • Checklists and communication protocols followed. • Refuelling will take place in a safe location and commencement will be contingent on suitable weather and sea state conditions.

POTENTIAL RISKS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Accidental release of materials/waste	• Temporary and localised: - increase in turbidity - burial of benthic habitat in immediate seabed area - potential toxicity impacts.	• Vessels will comply with MARPOL Annex V which includes measures to prevent loss of waste to the marine environment. • Topside systems will be isolated and made safe (sea fastened) for removal and transportation. • Lifting equipment routinely maintained and inspected. • Detailed engineering of cutting and removal activities and testing of lift points.

Consultation

Esso is committed to ongoing engagement with the communities where we operate.

Your functions, interests and activities may mean you, your business or your organisation are a relevant person for these activities. Your participation will help Esso to better understand the impacts and risks that may arise from the activities. As such, we are seeking your feedback on the activities outlined in this bulletin.

Your feedback and our response will be included in our Environment Plan for the proposed activities, which will be submitted to NOPSEMA for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) in 1Q 2025.

Please let us know if your feedback is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan, in order for this information to remain confidential to NOPSEMA.

If you would like to comment on the proposed activities or require any additional information, please contact us.

ExxonMobil

CONSULTATION

Gippsland Basin Decommissioning

Onshore Reception Centre

INFORMATION BULLETIN
December 2024

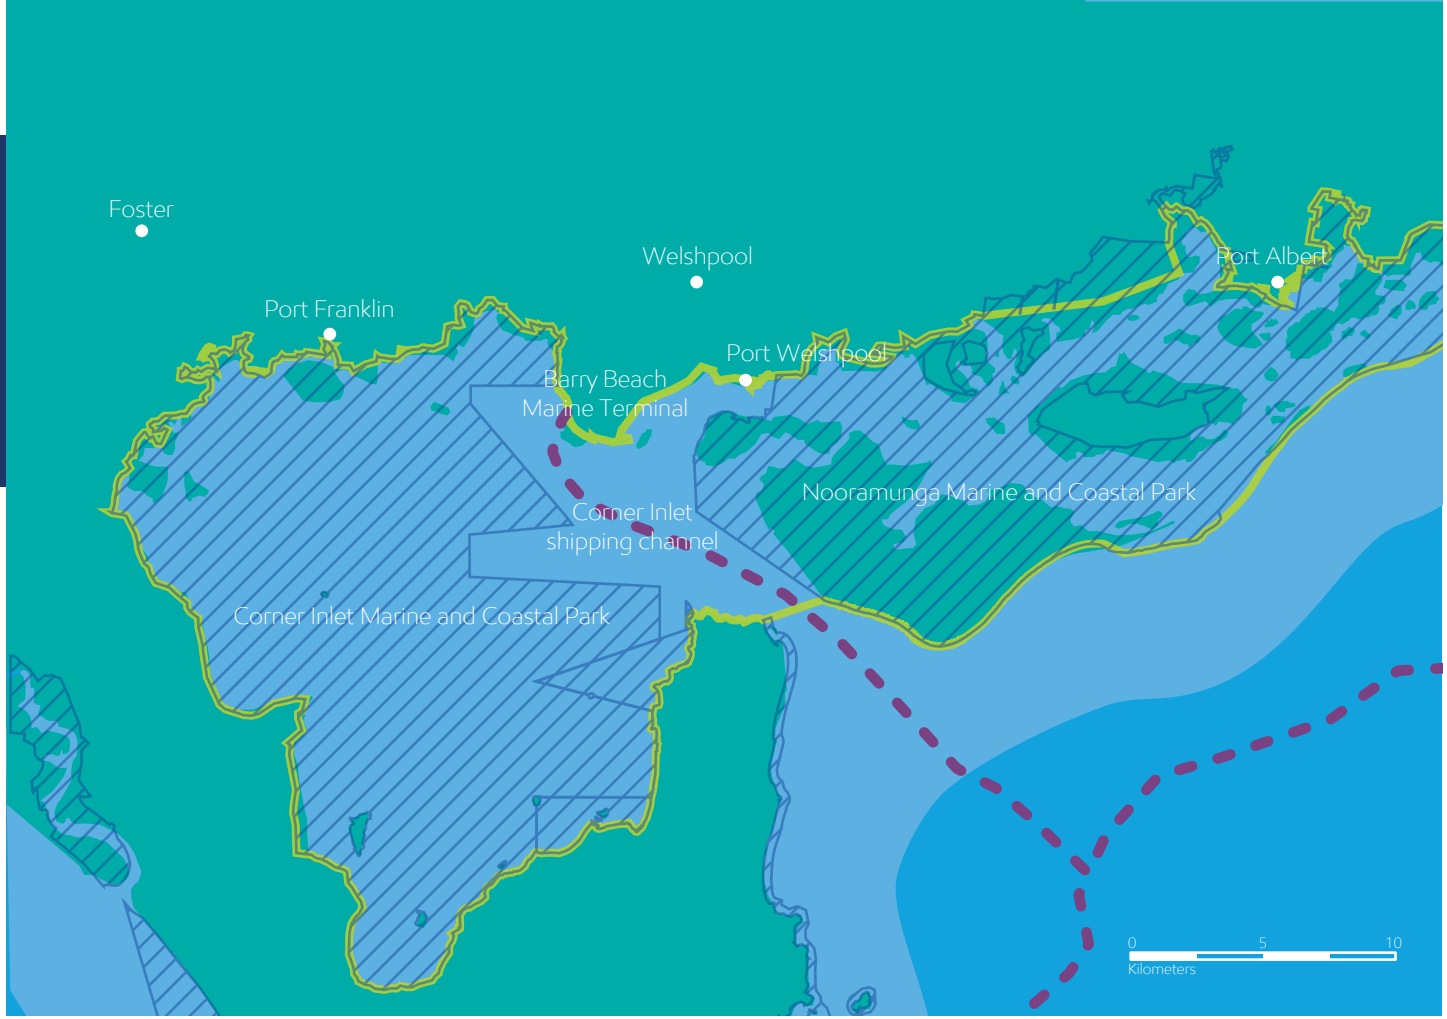
What is Decommissioning Campaign #1?

After delivering energy to Australia for over 50 years, many of the Bass Strait fields are now reaching the end of their productive life. Esso's planning and preparation to remove non-producing platforms during the first Bass Strait Decommissioning Campaign #1, is well underway. This includes activities to start removing assets that have ended their productive life in accordance with the National Offshore Petroleum Safety and Environmental Management Authority General Direction 817 as soon as reasonably practicable and no later than 30 September 2027. Activities proposed as part of Decommissioning Campaign #1 include the removal of the topsides of up to 13 facilities, the removal of two monotowers and the removal of jacket sections of up to 10 steel piled jacket facilities.

Removal of the facilities will be completed by a heavy lift vessel (HLV), supported by one or more construction support vessels (CSV). The HLV or CSV will transport the removed topsides and jacket sections to a sheltered location closer to shore within Commonwealth waters (referred to as the transfer area) where the removed topsides and jacket sections will be transferred onto barges or heavy transport vessels. The topsides and removed sections of the steel piled jackets will be transported from the transfer area through existing Corner Inlet shipping channels and be offloaded to an Onshore Reception Centre (ORC) within the established Barry Beach Marine Terminal.

Removal, transit and offloading is expected to take around four months.

Once the removed structures are set down at the ORC laydown areas, a dismantling and recycling contractor will carefully dismantle the structures. Materials will be segregated and sent offsite for recycling and/or disposal. Dismantling is expected to take between two to three years to complete.



Decommissioning the Campaign #1 offshore facilities is a complex project. The extent of detailed planning, technical and environmental studies required to safely conduct decommissioning of this nature and scale is significant.

To do this, Esso has staged the decommissioning activities to eliminate or reduce the highest impacts and risks early in the process. This includes design decisions such as the removal of platform topsides in a single lift and the use of barges or heavy transport vessels to avoid the need for increasing the depth or width of the shipping channels in Corner Inlet via dredging. This forms part of Esso's commitment to work safely and minimise environmental impacts.

Following on from previous information distributed for Campaign #1, this bulletin provides information on the detailed planning activities and environmental studies that are currently underway to assess the potential environmental impacts and risks associated with the activities planned to be conducted at the ORC at Barry Beach Marine Terminal.

↑ Cover: Barry Beach Marine Terminal
→ Fortescue platform

Esso at Barry Beach Marine Terminal - Our history

Barry Beach Marine Terminal is an existing port facility owned by Esso and has been part of South Gippsland's industrial precinct for over six decades. It is where most of the Esso offshore infrastructure was constructed from the 1960s and has been continuously operating as the supply depot for Bass Strait oil and gas operations since that time.

The facility consists of a marine operations terminal, which includes boat servicing, quays, storage and construction facilities, warehouse and office buildings, the offloading, storage and dismantling of offshore equipment, infrastructure and goods for offshore use. Barry Beach Marine Terminal has a long history of being continuously used as the main operations, maintenance and supply base for Esso's Bass Strait oil and gas operations, including decommissioning activities. It is well placed to support this next phase of Esso's decommissioning program.

Why an Onshore Reception Centre at Barry Beach Marine Terminal?

Esso Australia identified Barry Beach Marine Terminal as the preferred ORC to dismantle the facilities given its suitability and existing similar use, as well as its close proximity to the Bass Strait fields to minimise potential higher risks associated with transporting removed structures in open water over long distances.

Barry Beach Marine Terminal is where most of Esso's offshore facilities have been fabricated, offloaded onto barges and transported offshore for installation over the past 50 years. The terminal has the capacity and space to accommodate all Decommissiioning Campaign #1 facilities, which will be delivered over a short period of approximately four months. This process is effectively a reversal of the process used to deliver the platforms to their offshore locations.

Activity description

Esso is undertaking detailed planning, studies and engineering designs for Decommissioning Campaign #1 to ensure regulatory submissions comply with regulatory requirements. To support this work, regulatory submissions will be staged based on the following activities:

1. ORC Early Works (site readiness)
2. Transportation, offloading and set-down operations including transit of the removed structures (via HLV or CSVs) in State waters and offloading of the structures at the ORC
3. Onshore dismantling operations at the ORC.

Detailed studies and engineering works are underway to mitigate potential impacts of Early Works activities.

These activities have the highest level of design maturity and have entered the detailed design phase. Studies to inform planning for the transport, offloading and dismantling activities have also commenced. This bulletin is focused on the ORC Early Works activities, which involves the following:

- modification and strengthening of two land areas associated with the existing wharf
- building an impervious dismantling pad
- building a washbay for decontaminating any potentially contaminated equipment and items
- potential modifications to the existing stormwater system.

In addition, the following supporting activities will occur:

- refurbishing (ground maintenance) existing hardstand areas
- building concrete set-down pads
- constructing a gatehouse and parking area
- establishing temporary site offices and amenities
- establishing service connections to temporary site offices and an additional gatehouse (including fire services, power and telecommunications).

Early Works will be completed prior to Campaign #1 decommissioned structures being offloaded at Barry Beach Marine Terminal. There will be no requirement to increase the depth or width of the shipping channels in Corner Inlet via dredging to allow transport or offloading of structures during Campaign #1.

Activity timing

The staged approach for regulatory submissions has been discussed with relevant regulators. Sequencing submissions in this manner ensures sufficient planning is undertaken to avoid and minimise environmental impacts, and allows for increased certainty around activity scope and methodology.

↗ Aerial depiction and description of areas to be used to house facilities during dismantling phase at Barry Beach Marine Terminal

It is anticipated that regulatory submissions for ORC Early Works will be provided to the relevant regulators in Q1 2025. Submissions will be published on regulators websites for public comment.

Pending regulatory decisions, the ORC Early Works are anticipated to commence in 2H 2025.

Minimising environmental impacts

Decommissioning planning and engineering design is being undertaken to minimise potential impacts to the environment.

Esso has extensively consulted with stakeholders for Campaign #1, including discussing the ORC, and the feedback from this consultation has enabled Esso to align its plans to address stakeholder feedback. Examples of measures being implemented in response to stakeholder feedback are:

- removal of the topsides and jacket sections via a single lift methodology using the HLV rather than removal in multiple smaller sections. This minimises potential safety and environmental risks associated with removal of the structures. This single lift removal methodology significantly reduces vessel trips involved in removal and offloading activities
- transport of topsides and jacket sections via barge and tug avoids the need to increase the depth or width of the shipping channels in Corner Inlet via dredging
- leveraging existing hardstand and laydown areas avoids clearing native vegetation and expansion beyond the existing footprint and site boundary
- rationalised offloading design and modification work to the wharf avoids needing to replace the existing wharf and removes the need to extend the quay wall out into the Ramsar wetlands. This change also significantly reduces the number of piles required, which in turn reduces noise, vibration and other environmental impacts
- retaining and working around existing buildings in the ORC area avoids the need to move or rebuild these buildings and the associated environmental impacts
- utilisation of self-propelled modular transporters to offload the jacket substructures avoids constructing a new skidway.

Early Works (site readiness) activities – Potential key impacts and risks

Esso is firmly committed to designing solutions to avoid or minimise impacts to the environment.

Corner Inlet is an internationally recognised Ramsar wetland that supports a range of sensitive marine habitats and ecosystems including seagrass, intertidal mud flats, mangroves and saltmarshes. These habitats are important for migratory, wader and shorebird species.

Regulatory processes

Early Works at the ORC will be managed under relevant Commonwealth and State legislation, as well as contractor and site environmental management processes and plans. For site readiness activities, applications will be made to the relevant Authorities under the following Acts:

- South Gippsland Shire Council under the *Planning and Environment Act 1987* (Vic)
- Department of Transport and Planning under the *Environment Effects Act 1978* (Vic)
- Department of Climate Change, Energy, the Environment and Water under the *Environment Protection and Biodiversity Conservation Act 1999* (Cth)
- Department of Energy, Environment and Climate Action under the *Marine and Coastal Act 2018* (Vic).

→ One of the Kingfish jackets being prepared for transport from Barry Beach Marine Terminal in 1969

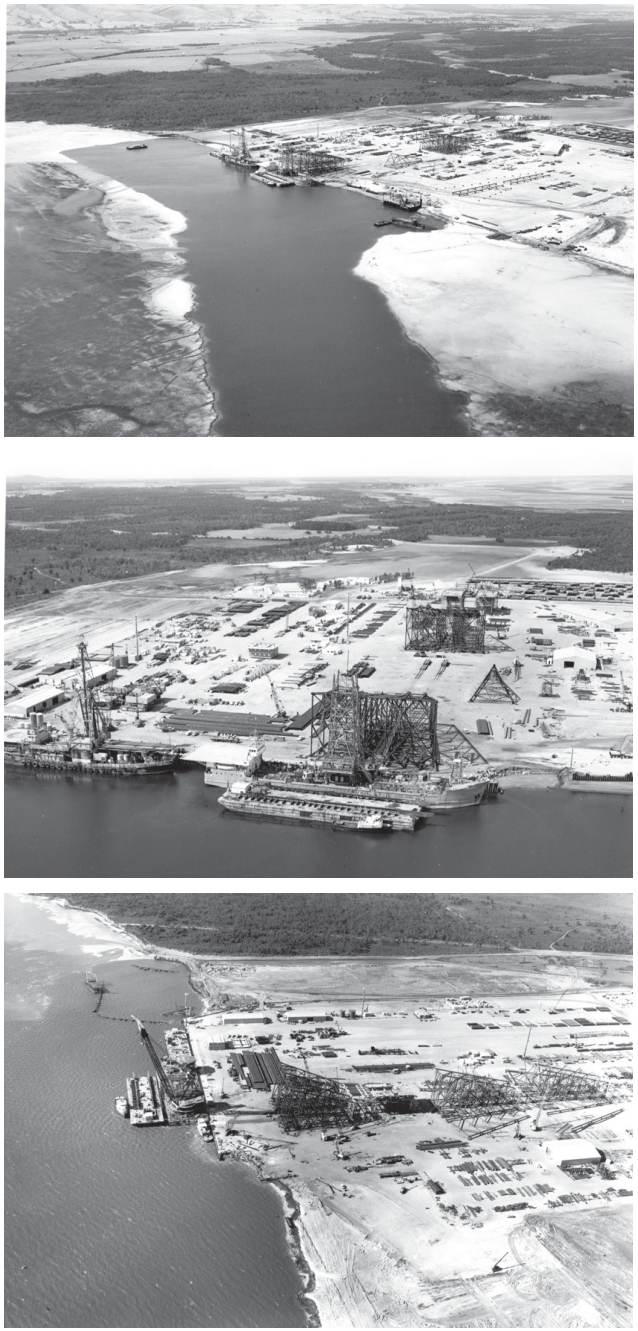
Corner Inlet is highly valued for its commercial and recreational fisheries, boating and tourism.

The wetland is also highly valued by the local community and visitors for its recreational value, including for bird watching from the Toora Bird Hide.

The ORC's proximity to Corner Inlet means it is important to understand and manage potential impacts that could affect the surrounding area. Early Works at the ORC are being designed to protect Corner Inlet and its ecology.

Esso has commissioned technical and environmental studies to assess potential impacts of the Early Works on Corner Inlet Ramsar wetland values.

Studies currently underway include:



- infrastructure condition
- detailed site investigation
- road traffic
- terrestrial ecology
- cultural heritage assessment
- marine water quality monitoring
- terrestrial noise and vibration
- shorebirds and waders
- benthic habitat and marine ecology
- bushfire assessment
- flood assessment.

Results from these studies will inform Esso's evaluation of potential impacts or risks associated with the proposed Early Works along with appropriate control measures to avoid and minimise impacts wherever possible.

Findings from the environmental studies will also be included in regulatory submissions.

POTENTIAL IMPACTS AND SOURCE	POTENTIAL CONSEQUENCES	POTENTIAL CONTROL MEASURES
Noise emissions	• Temporary impacts to fauna (for example shorebirds) and amenity.	• Shrouds will be used during piling to minimise noise impacts. • Noise study being undertaken to inform the development of the ORC environmental management plan and other mitigating measures to minimise potential impacts. • Timing will be restricted to outside of the shorebird breeding season.
Light emissions	• Short term attraction of light sensitive species.	• Lighting installed at the ORC will be in accordance with the *National Light Pollution Guidelines for Wildlife*. • Lighting will be kept to a minimum as Early Works will be conducted during daytime hours only.
Dust emissions	• Temporary and localised impacts to local air quality and amenity.	• Proven dust suppression measures (for example keeping surfaces wetted down) will be implemented.
Traffic movements	• Temporary impacts to amenity.	• Traffic assessment study will inform the development of the site environmental management plan and relevant control measures.
Waste	• Contribution to onshore landfill. • Air, water and land pollution if waste is not managed appropriately.	• Waste management procedures will be developed in conjunction with the construction contractor, which will incorporate consideration of the waste hierarchy and ensure waste is handled, monitored and tracked in accordance with applicable legislation and licencing requirements.

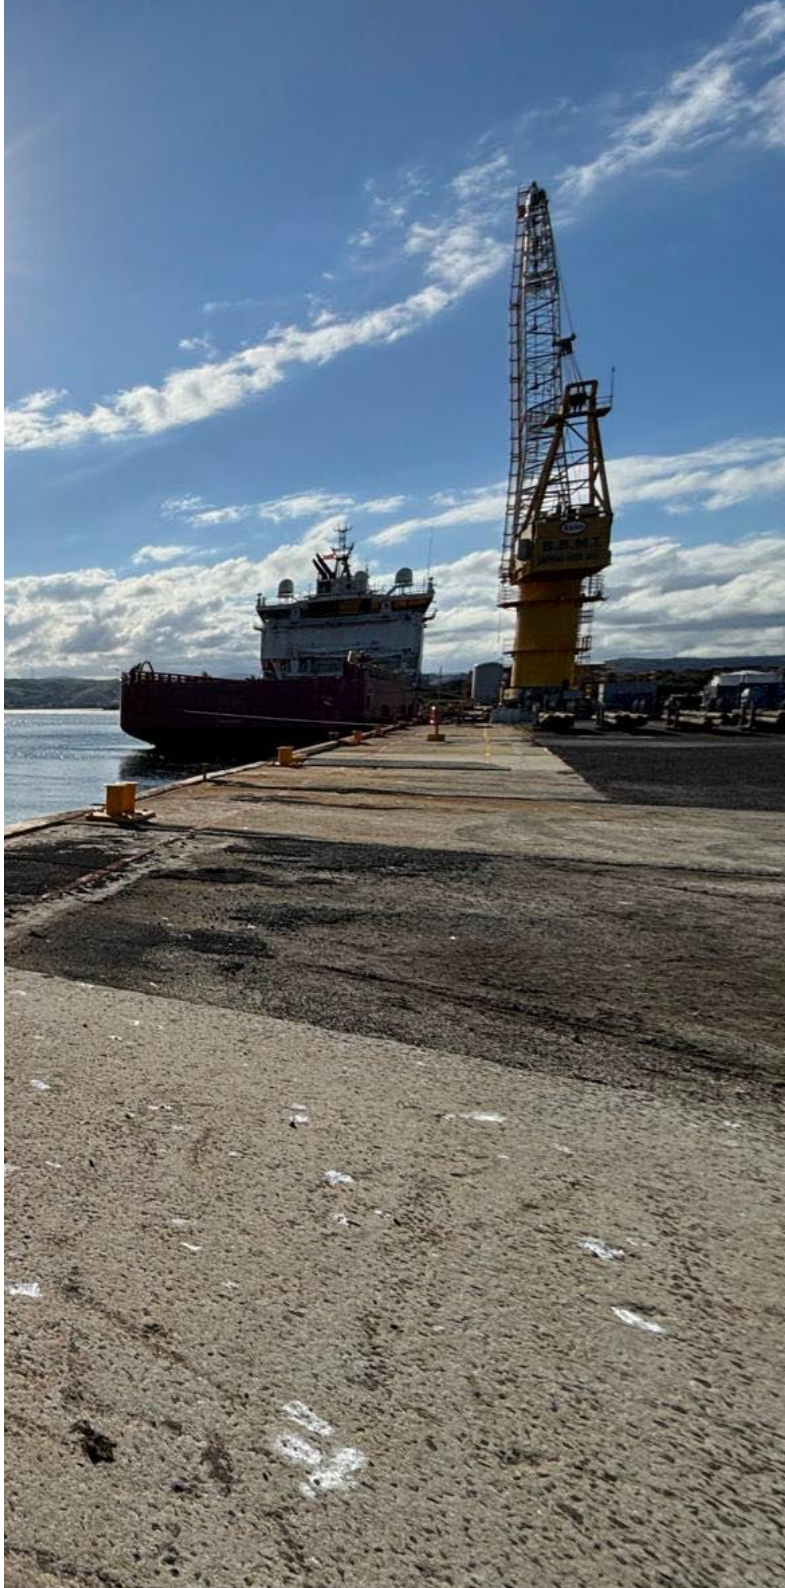
↑ ORC early works potential key environmental impacts and control measures

↑ Historical images of Barry Beach Marine Terminal

Additional engineering design planning and studies are underway to support future regulatory submissions for the transport, offloading and dismantling stages.

Esso will provide progress updates on these later activity stages once further detailed design has progressed.

Consultation



Esso is committed to ongoing engagement with the communities where the Company operates.

Functions, interests and activities of stakeholders may mean that an individual, their business or organisation are considered to be a relevant person for decommissioning activities. Stakeholder participation will help Esso better understand the impacts and risks that may arise from decommissioning activities. As such, Esso is seeking stakeholder feedback on the activities outlined in this bulletin.

Your feedback and Esso's response will be included in plans for the proposed decommissioning activities, which will be submitted to regulators for acceptance in accordance with applicable regulatory requirements.

Please let us know if your feedback is sensitive and we will make this known to regulators upon submission of Esso's plans so this information remains confidential to the applicable regulator.

If you would like to comment on the proposed activities or would like any additional information, please contact us.

Acknowledgement of traditional owners

Esso Australia acknowledges the Traditional Custodians of Country, and the land and sea upon which our operations are located.

We recognise the Traditional Custodians continuing connection to land, sea, culture and community, and pay our respects to Elders past and present.

Appendix F-5: Stakeholder forum info sheet (June – August 2024)

ExxonMobil

Decommissioning - Removals

June - August 2024

Stakeholder
Forums

Introduction

Thank you for attending one of Esso Australia Pty Ltd's (Esso's) recent stakeholder forums about Campaign #1 platform removal as part of decommissioning in Bass Strait.

At the forums held at Lakes Entrance, Sale, Port Welshpool and online between June and August, 64 people from across a range of different backgrounds took the opportunity to learn more about what was being considered to decommission the Esso platforms and to hear from each other about the potential risks and impacts of options being considered and how these could be managed.

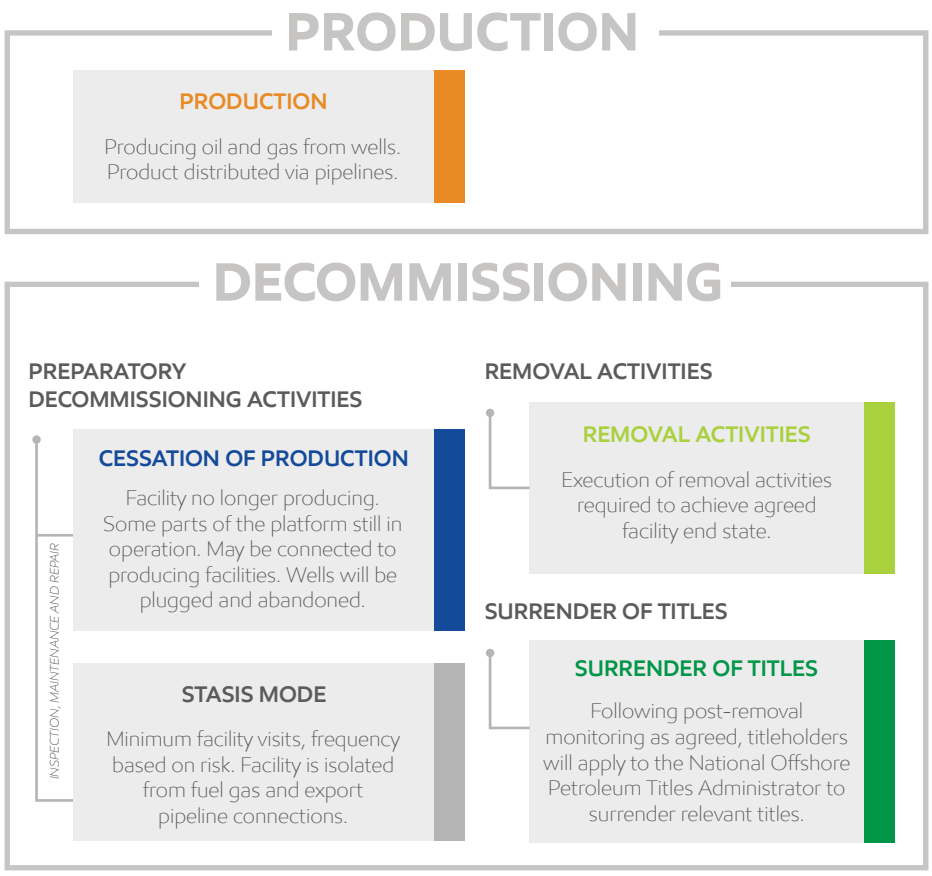
Background

Esso is the operator of the assets in Bass Strait that are part of the Gippsland Basin Joint Venture between Esso and Woodside Energy (Bass Strait) Pty Ltd (Woodside Energy) and the Kipper Unit Joint Venture (Esso, Woodside Energy, and MEPAU A Pty Ltd). Esso's assets consist of 19 platforms with 421 wells, six subsea facilities and more than 800 kilometres of subsea pipelines that extract, process and store oil and gas, then transport it onshore for further processing and distribution to customers.

After delivering energy to Australia for over 50 years, many of the Bass Strait oil fields are now reaching the end of their productive life. As planning for decommissioning progresses, Esso is focused on safely shutting-down non-producing facilities and ensuring they stay safe throughout the entire decommissioning process. Esso is committed to identifying and actively engaging with communities to find solutions that balance environmental impacts and benefits with the needs of the community, all within regulatory requirements.

The purpose of consultation is to help relevant persons make an informed assessment of the possible consequences of decommissioning activities on their functions, interests and activities and to advise Esso of any potential impacts or risks that may affect them and help to inform the identification of the impacts and risks and consider mitigations that may be required to address these risks.

During planning for Campaign #1, relevant persons and other interested stakeholders were invited to learn more about the decommissioning activities being considered and to discuss the potential impacts and risks of these activities as part of Esso's consultation-related regulatory obligations.



↑ Flounder platform

The forums provided an opportunity for engagement with relevant persons and interested stakeholders to help build an understanding about how these activities might affect their functions, interests, and activities. They are also key to meeting Esso's consultation-related regulatory obligations.

A range of stakeholders attended the forums and shared their knowledge including:

- commercial and recreational fishing groups
- government representatives (State (Victoria) and local councils)
- unions
- environmental non-government organisations
- research institutes
- community groups and local businesses
- energy sector organisations.

↑ Facility lifecycle

The forums aimed to:

- provide an opportunity for stakeholders to gain an understanding of Esso's operations, specifically Campaign #1 removals activities
- learn from participants what they consider important in the process
- enhance existing stakeholder relationships and establish relationships with new stakeholders.

What the forums covered

The forums were facilitated by Richard Perry, Esso's Australia Major Projects Decommissioning Project Manager and supported by Esso's Consultation team and Environment and Regulatory team.

The forums included a presentation that covered:

- an overview of Esso's operations
- the facility lifecycle
- Esso's approach to decommissioning
- details of vessels involved in Campaign #1
- information on transfer locations
- recycling and disposal plans
- an outline of impacts and risks associated with Campaign #1
- overview of the regulatory process.

Highlights of the information presented during the forums is provided in the following sections.

Approach to decommissioning

In accordance with the facility lifecycle, Esso's approach to decommissioning involves:

1. Preparatory Decommissioning Activities

Preparatory Decommissioning Activities are activities required to cease production, ensure the integrity of the facility is maintained and prepare the facility for removal. This includes activities that fall within the Cessation of Production and Stasis Mode stages. *Preparatory Decommissioning Activities* are conducted in accordance with relevant Safety Cases and managed through the Bass Strait Environment Plan and other Environment Plans as appropriate.

Specific *Preparatory Decommissioning Activities* include:

- topsides purge, and draining/isolation of liquids
- pipeline flushing and cleaning
- powering down platforms and shutting down systems including living quarters
- air gapping (cutting) of piping and topside structures
- making safe for removal and transport.

2. Removal Activities

Removal Activities encompass the removal of facilities to progress towards the approved facility end state.

Removal Activities are managed in accordance with approved Execution Environment Plans and will be undertaken by aggregating facilities and removal activities into 'campaigns' that involve the use of specialist vessels.

Campaign #1 involves:
- full removal of the Perch and Dolphin monotower platforms
- removal of topsides and jackets to seabed, which applies to Whiting and Bream A platforms in shallower water
- removal of topsides and upper jacket sections to at least 55 metres below mean sea level, which applies to the Cobia, Flounder, Fortescue, Kingfish A, Kingfish B, Mackerel, West Kingfish and Halibut platforms in deeper water
- removal of topside only for the Bream B concrete gravity structure.

Specific *Removal Activities* required for Campaign #1 include:
- topside removal:
  - cuts made by diamond wire saw or hydraulic shears on the structure to allow for the removal of the topside from the jacket
  - the *Pioneering Spirit* Heavy Lift Vessel (HLV) will use a motion compensated topside lift system to lift topsides in one piece
  - Dolphin and Perch topsides will be lifted by a Construction Support Vessel (CSV)
- jacket removal:
  - the *Pioneering Spirit* HLV will use a jacket lift system to lift the jacket substructures (in large pieces) or a crane as needed for the monotower bases
  - lift and removal is expected to take approximately 6 -12 hours per facility
- removed topsides, jackets and monotower bases will be sea fastened and transported to a sheltered location
- at this location they will be transferred to barges for onward transport to the Onshore Reception Centre.

Vessels

Vessels assisting in *Preparatory Decommissioning Activities* include DOF *Skandi Darwin* and Allseas *Fortitude*.

Vessels undertaking *Removal Activities* include Allseas *Pioneering Spirit*, Allseas *Fortitude* and support vessels such as: a second CSV, around six transport barges and towing tugs.

ALLSEAS *PIONEERING SPIRIT*

Esso has contracted Allseas to undertake removal activities using the *Pioneering Spirit* HLV.

The *Pioneering Spirit* is expected to arrive in Bass Strait in late 2027 and will undertake work scopes including:
- final topside separation
- final jacket separation
- topside and jacket removal.

The *Pioneering Spirit* will remain in Bass Strait for approximately 4 months.

Attendees were shown a video indicating how topsides and jackets will be removed using the Allseas *Pioneering Spirit*. The video can be visited at:

www.allseas.com/equipment/pioneering-spirit-offshore-construction-vessel/

Transfer locations and Onshore Reception Centre

All removed components will be transferred from a CSV or the HLV onto a barge in a sheltered water location close to Corner Inlet. Tugs will transport the barge from the transfer location through Corner Inlet to the Onshore Reception Centre where removed structures will be offloaded, segregated and dismantled onsite then transported for recycling or disposal.

Barry Beach Marine Terminal has been identified as the Onshore Reception Centre for transfer of removed infrastructure. Qube Holdings will undertake the development and management of the Onshore Reception Centre.

Recycling and disposal

Topsides will be delivered to the Onshore Reception Centre. The deconstruction process includes:

- make safe, survey, assess and remove hazardous materials and equipment
- mechanical demolition of the sections.

The jackets will go through a deconstruction process, with sections processed into smaller pieces to enable recycling. The deconstruction process includes:

- removal of marine growth
- lowering of jacket sections to ground level
- mechanical demolition of jacket sections into pieces for further processing.

↓ DOF *SKANDI DARWIN*

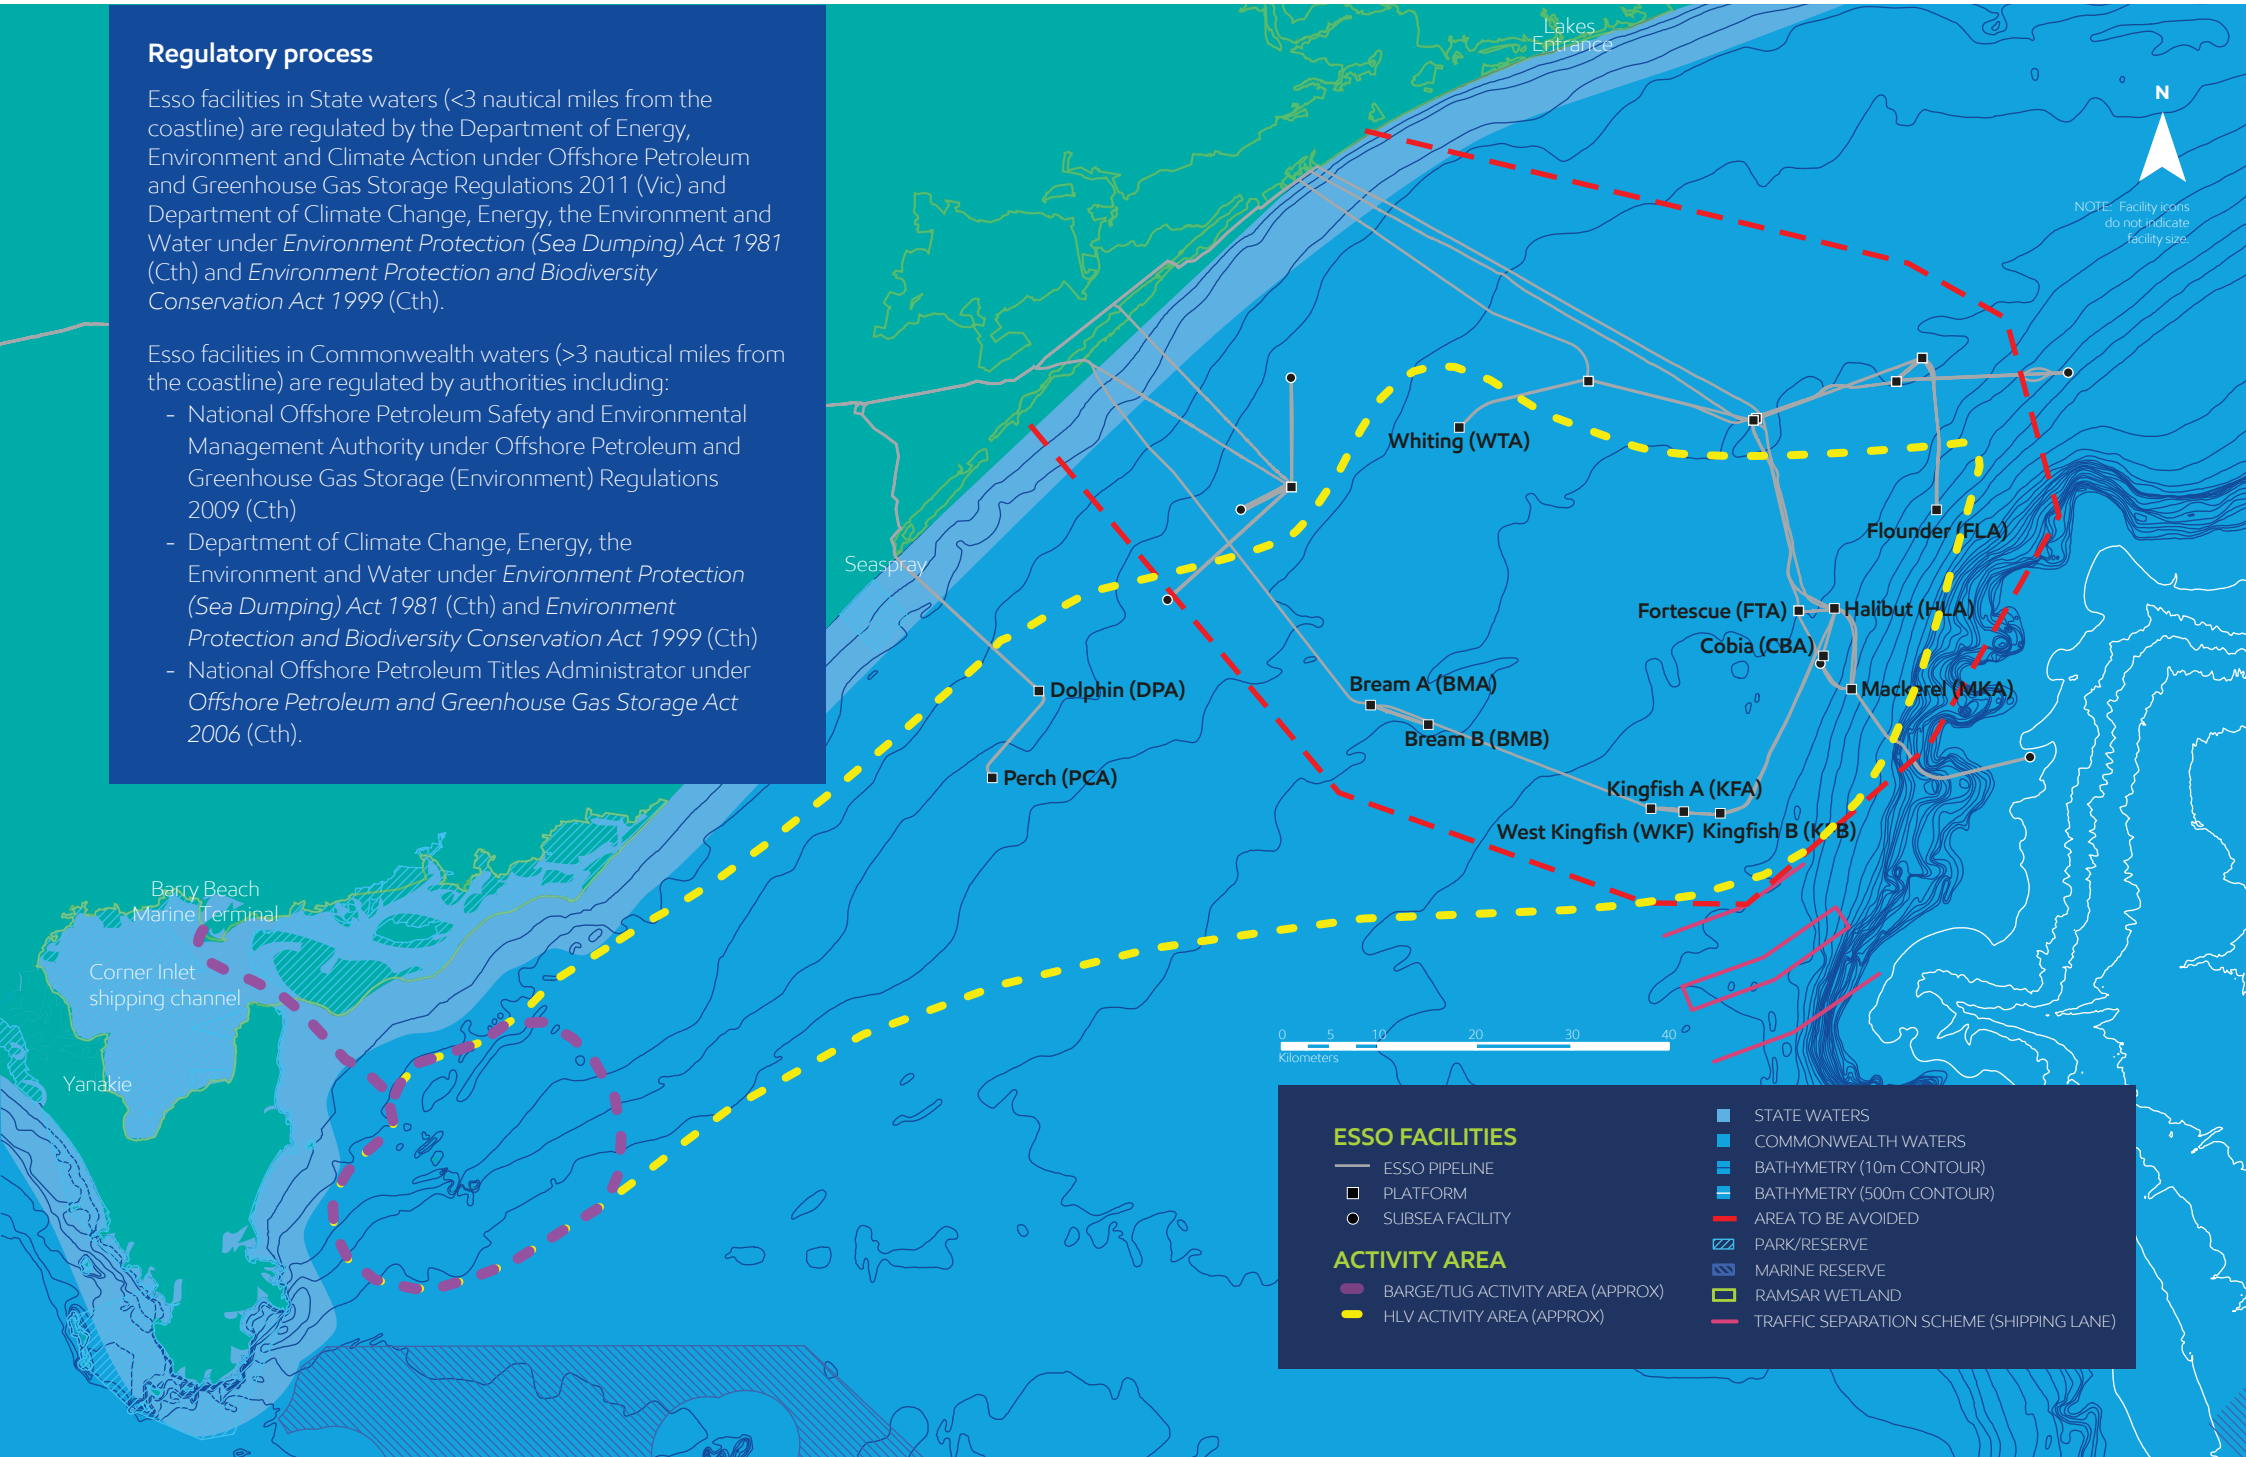
In February 2022, Esso entered into a multi-year agreement with DOF Subsea Australia Pty Ltd to charter the *Skandi Darwin* as the Multi-Purpose Support Vessel (MPSV).

The MPSV *Skandi Darwin* arrived in Bass Strait in August 2022 and is key to executing multiple work scopes.

← ALLSEAS *FORTITUDE*

The CSV *Fortitude* is expected to arrive in Bass Strait in 4Q, 2026 and will undertake work to prepare the facilities for removal such as:

- installation of lift points
- cutting of jackets and pipelines.



The *Fortitude* will likely remove the Dolphin and Perch topsides.

Regulatory process

Esso facilities in State waters (<3 nautical miles from the coastline) are regulated by the Department of Energy, Environment and Climate Action under Offshore Petroleum and Greenhouse Gas Storage Regulations 2011 (Vic) and Department of Climate Change, Energy, the Environment and Water under *Environment Protection (Sea Dumping) Act 1981* (Cth) and *Environment Protection and Biodiversity Conservation Act 1999* (Cth).

Esso facilities in Commonwealth waters (>3 nautical miles from the coastline) are regulated by authorities including:

- National Offshore Petroleum Safety and Environmental Management Authority under Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)
- Department of Climate Change, Energy, the Environment and Water under *Environment Protection (Sea Dumping) Act 1981* (Cth) and *Environment Protection and Biodiversity Conservation Act 1999* (Cth)
- National Offshore Petroleum Titles Administrator under *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (Cth).

↑ Kingfish A platform

Impacts and risks

Esso aims to minimise environmental and social impacts of Campaign #1 activities. *Potential* impacts, risks and control measures have been identified and are provided in the Decommissioning Campaign #1 Project Update information bulletin, which is available for download from:

https://corporate.exxonmobil.com/locations/australia/our-operations/bass-strait/decommissioning-in-the-bass-strait

Impacts and risk assessment will identify possible impacts and consequences from activities (duration, location, values and sensitivities taken into consideration).

Consultation and feedback will help inform impacts and risk assessment and potential control measures, which will be developed to reduce impacts and risks to As Low As Reasonably Practicable and acceptable levels.

Forum feedback

Opportunities were provided during the stakeholder forums for questions to be raised and responded to. Discussion topics on Campaign #1 raised by participants are as follows.

- Opportunities to increase transferable skills and job capacity in the area
- Clarification of removal campaign activity details, such as load in operations at Barry Beach and vessel exclusion zones
- Feedback on potential impacts and risks of removal campaign activities – disturbance to established ecosystems on jackets, residual debris presenting a snag risk, displacement of seals and seabirds
- Feedback on potential controls associated with these impacts and risks – provision of navigational aids, regular notifications
- Benefits of leaving infrastructure in situ - retain established marine ecosystems and provide recreational fishing opportunities
- Potential impacts (positive and negative) on tourism and local businesses
- Opportunities to share research associated with infrastructure removal and/or leaving in situ.
- Corner Inlet seagrass monitoring opportunities.

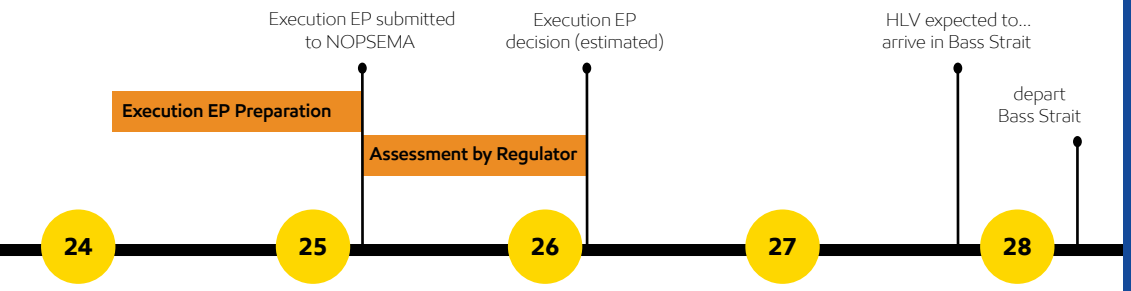
What we've done with the information

Information gathered at the forums, where applicable, is informing the environmental impacts and risks assessment which is being undertaken as part of preparing the Environment Plan and will also identify appropriate measures and controls to manage impacts and risks to As Low As Reasonably Practicable and acceptable levels.

An update on the outcomes of the impacts and risks assessment will be provided to stakeholders for feedback prior to submitting the Environment Plan to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

↑ Fabrication of the first offshore platforms at Barry Beach Marine Terminal in the late 1960s

Next steps



As new information becomes available from environmental and technical studies, we will provide further communication to assist you in understanding whether decommissioning platforms will affect your functions, interests or activities.

We appreciate your interest and contribution to our planning process and look forward to continuing to engage with you about decommissioning platforms for Esso's Bass Strait oil and gas fields.

Legislative and regulatory requirements

In the course of preparing an Environment Plan, a titleholder must consult with relevant persons in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) Division 3, and demonstrate that the measures (if any) that the titleholder has adopted, or proposes to adopt, because of the consultations are appropriate.

The Bairnsdale Regional Health Service's dental team - Sharon Favaloro, Susan Dare and Mika Tuimaseve.

Free dental services for kids

Get the dental care your children need without putting the bite on the family budget through Bairnsdale Regional Health Service's (BRHS) dental clinic.

Children under the age of 13 are eligible for free dental treatment through BRHS.

Treatment is also free for children from their 13th birthday on if their parent or carer has a concession card, are eligible for Services Australia's Child Dental Benefits Schedule (CDBS) through Medicare or are Aboriginal or a Torres Strait Islander.

If you and your children don't qualify, there is a low one-off fee of $37 for care at BRHS' dental service.

BRHS executive community wellbeing and aged care, Sonia Reisenhofer, said the initiative is another way that BRHS supports East Gippsland families.

"Dental health is crucial to everyone's overall health," Ms Reisenhofer said.

"Getting dental health right means a brighter and healthier future for children, so we're happy to open our doors to any children that need dental care.

"Our dental staff are friendly and very well qualified. With free or very low-cost appointments available, there's no reason for children to miss out on good dental care."

To book an appointment, or if you are unsure if your child aged 13 or over qualifies for free dental care, please phone BRHS' dental service.

Engaging and innovative - Claire brings a brilliant backstory

EmpowHer East Gippsland is hosting its biggest ever event in Bairnsdale at 7.30pm on Friday, March 8, at The Forge Theatre and Arts Hub.

The EmpowHer EG committee is excited to announce that the keynote speaker is well-known Australian comedian, Claire Hooper.

Claire Hooper started on the stage, crafting engaging, innovative live shows that blended stand-up, theatre and some hammer dancing. Her 2006 show, *Oh*, earned her both critical acclaim and a nomination for the Melbourne Comedy Festival's best newcomer award. A born storyteller with a sharp wit, Claire has gone on to regularly perform at festivals and comedy rooms all over the country.

For four years Claire shared a set with Paul McDermott and Mikey Robbins on the iconic comedy show *Good News Week* as a team captain.

Over the past decade Claire has been captivating audiences touring solo shows across the country, hosting popular television and streaming shows and is a regular on screen, often co-hosting Channel Ten's *The Project* as well as regular appearances on ABC's *Question Everything*, *Spicks & Specks*, SBS' *Celebrity Letters & Numbers* and Channel Ten's *Would I Lie to You?*

Last but not least, in what is possibly Claire's proudest achievement to date, her debut children's book *Princess Benjamin Has A Very Cheeky Bum* was released in 2021. Claire has loved sharing the joy of this book with kids all around the country.

"Part of EmpowHer's mission is to bring speakers to East Gippsland," EmpowHer president and Bairnsdale lawyer, Katherine Argentino, said.

"We decided that our community deserved a big event with a high-profile speaker for International Women's Day 2024. The committee has worked incredibly hard to make this happen, and I cannot wait to see it all come together."

International Women's Day is a global day with origins dating back to the beginning of the 20th century. It is a day of celebration, recognising the social, economic, cultural, and political achievements of women. The 2024 theme is 'Count Her In: Invest in Women. Accelerate Progress'.

"We have organised a panel of local women in leadership, financial counselling and business who will share their stories and provide practical tips on matters such as employment pathways, financial services, and financial literacy. It's an opportunity to come together to celebrate local women's achievements and advocate for women's economic inclusion."

Women leave EmpowHer EG events feeling positive, with new connections, information, inspiration, and tools to succeed.

Katherine said this event will be no exception.

"We want women to have equal access to participating in the economy," Katherine said.

"Women need opportunities to build their capabilities locally. EmpowHer events provide opportunity for education and connection. For me personally, the benefits of simply surrounding yourself with a group of supportive and inspiring women are immeasurable.

"At this event, we aim to empower women in East Gippsland to learn, earn and lead."

An exciting highlight of the evening will be the release and performance of a new song dedicated to International Women's Day. The artist will be announced soon, promising an uplifting addition to the celebration.

This is a jam-packed night of entertainment that is not to be missed.

Well-known Australian comedian, Claire Hooper, will be the special guest speaker at EmpowHer East Gippsland's biggest ever event at Forge Theatre and Arts Hub on Friday, March 8. (PS)

Offer available in store for all prescriptions and online for +/-6. Available when choosing two pairs from the $149 range or above. Price includes single-vision lenses. Other lens types and options available at extra cost. Both pairs for same person. Use with other offers restricted. Offer valid 1 February – 28 February 2024.

Expanding coverage

Telstra will be upgrading its mobile base station at Bairnsdale by adding additional infrastructure to bring better 4G and 5G services, as well as expanding coverage to more parts of the region.

The works will however require some temporary outages or reduction in mobile coverage.

These improvements will temporarily impact Telstra mobile coverage at various times until March 8.

Telstra mobile customers have been sent text messages advising of the upcoming work.

Landline services, NBN internet services and mobile coverage from other providers will not be impacted. Any calls to Triple Zero from a Telstra mobile when the site is off air will automatically be diverted to any working mobile network for connection to emergency services.

Telstra regional general manager, Jenny Gray, said while crews need to work during daylight for safety, we'll only be switching off the site when we need to and will have it back on as quickly as possible.

"The works will be delivering new and improved mobile coverage to Bairnsdale and the surrounding area, providing faster speeds and higher capacity to more parts of the region," Ms Gray said.

"Customers may notice slower data speeds during the works. We have other mobile sites in the area that will deliver some overlapping coverage in the area.

"There's never a good time to undertake this sort of work but recent events have highlighted the importance of connectivity in rural and regional communities. and this will mean better mobile services for local residents.

"As a company, we heavily invest in improving regional connectivity. Over the past seven years to the end of FY23, Telstra invested $11 billion in our mobile network nationally, with $4 billion of this invested in our regional mobile network."

For mobile coverage in the interim, if residents have access to a Wi-Fi signal at home or at work, Telstra encourages residents to activate Wi-Fi calling. This is a free setting on most popular mobile phones and allows your mobile to use a Wi-Fi network to make and receive mobile calls. To find out more they can google Telstra WIFI calling or search in your settings icon on your phone.

NOTICE OF PROPOSED GRANT OF AN EXTRACTIVE MINERAL LEASE

NATIVE TITLE ACT 1993 (CTH) SECTION 29

The Honourable Mark Monaghan MLA, the Northern Territory Minister for Mining, C/- Department of Industry, Tourism and Trade, GPO Box 4550 DARWIN NT 0801, hereby gives notice in accordance with section 29 of the *Native Title Act 1993* (Commonwealth) of her intent to do an act(s) namely to grant the following extractive mineral lease application.

The application to which this notice applies:

Extractive Mineral Lease 33587 sought by OSTOJIC GROUP PTY LTD, ACN 009 629 805 over an area of 16 Hectares depicted below for a term of 10 years, within the MARY RIVER locality.

Nature of act(s): The grant of an extractive mineral lease under the *Mineral Titles Act 2010* authorises the holder to extract or remove (whether by quarrying or other means) from, on or below the natural surface of the land, extractive mineral(s) for a term not exceeding 10 years and to seek renewal(s). The term for which it is intended to grant the extractive mineral lease/s referred to in this notice commences from the date of grant. Further information about the act may be obtained from the Department of Industry, Tourism and Trade, GPO Box 4550, Darwin NT 0801 or Centrepoint Building 48-50 Smith Street Darwin NT 0800, telephone (08) 8999 5213.

Native Title Parties: Any person who is, or becomes a "native title party" within the meaning of the *Native Title Act 1993* is entitled to the negotiation and/or procedural rights provided in Part 2, Division 3, Subdivision P of the *Native Title Act 1993*. Under section 30 of the *Native Title Act 1993*, persons have until 3 months after the notification day to take certain steps to become native title parties in relation to this notice. Enquiries concerning becoming a native title party should be directed to the National Native Title Tribunal, GPO Box 9973, Brisbane QLD 4001, or telephone (07) 3307 5000.

Notification Day: 28 February 2024

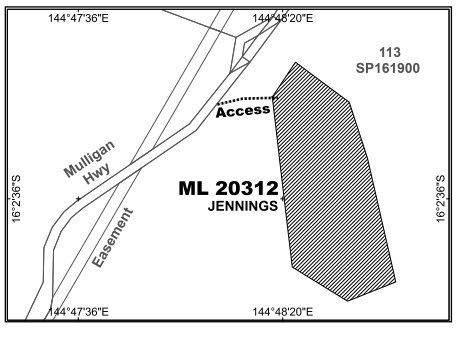
NOTICE OF PROPOSED RENEWAL AND GRANT OF MINING LEASES

***NATIVE TITLE ACT 1993* (CTH) SECTION 29**

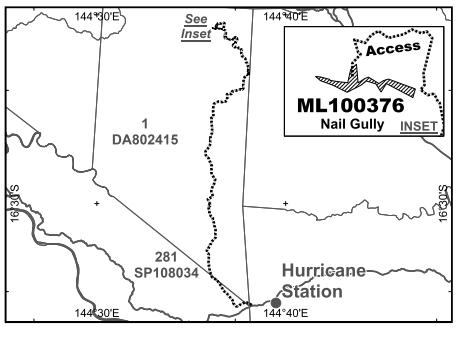
The Queensland Minister for Resources and Critical Minerals, PO Box 15216, City East, Queensland, 4002, hereby gives notice in accordance with section 29 of the *Native Title Act 1993* (Cth) of the proposed renewal of Mining Lease (ML) 20312, and the grant of ML 100376 subject to the provisions of the *Mineral Resources Act 1989* (Qld).

Nature of Act(s): The renewal of Mining Lease 20312 under the *Mineral Resources Act 1989* (Qld) authorises the holder to mine and carry out associated activities subject to the *Mineral Resources Act 1989* (Qld) for a term not exceeding twenty (20) years with the possibility of renewals for terms not exceeding twenty (20) years. The grant of Mining Lease 100376 under the *Mineral Resources Act 1989* (Qld) authorises the holder to mine and carry out associated activities subject to the *Mineral Resources Act 1989* (Qld) for a term not exceeding ten (10) years with the possibility of renewals for terms not exceeding ten (10) years.



Name and Address of person doing Act(s): It is proposed that the Mining Leases be renewed and granted subject to the provisions of the *Mineral Resources Act 1989* (Qld) by the Queensland Minister for Resources and Critical Minerals, PO Box 15216, City East, Queensland, 4002.

Native Title Parties: Under the *Native Title Act 1993* (Cth) any person who is a "native title party" is entitled to certain rights in relation to the proposed renewal and grant of the Mining Leases. Under section 30 of the *Native Title Act 1993* (Cth), persons have until three (3) months after the Notification Day to take certain steps to become native title parties in relation to this notice. Enquiries in relation to filing a native title determination application may be directed to the Federal Court, Brisbane Registry, Level 6, Harry Gibbs Commonwealth Law Courts Building, 119 North Quay, Brisbane, Queensland, 4000. Telephone: 1300 720 980 or Email: nativetitleQLD@fedcourt.gov.au. Enquiries in relation to the registration of a native title determination application may be directed to the National Native Title Tribunal, Brisbane Registry, Level 5, Harry Gibbs Commonwealth Law Courts Building, 119 North Quay, Brisbane, Queensland, 4000. Telephone: (07) 3052 4040.



Further Information: May be obtained from the Department of Resources, Mineral Assessment Hub, Level 9, Verde Tower, 445 Flinders Street, Townsville, Qld, 4810.Telephone: (07) 4447 9230 or Email: MineralHub@resources.qld.gov.au.

Notification Day: 13 March 2024

ML 20312 renewal applied for by Edmund Henry Jennings, over an area of 78.5549 ha centred approximately 8 kms northeast of the Palmer River Roadhouse, in the locality of the Cook Shire Council.

ML 100376 grant applied for by Dennis Ronald Fitzgerald, over an area of 7.3960 ha centred approximately 60 kms northwest of Mount Carbine, in the locality of the Mareeba Shire Council.

Gippsland Lakes Complete Health's 2024 trainees Hilary, Lucia, Nikita and Ilona as they explored GLCH's facilities on their first day on the job. (PS)

New trainees arrive at GLCH

The 2024 intake of trainees has arrived at Gippsland Lakes Complete Health (GLCH).

Now in its third year, GLCH's traineeship program brings together talented young school-leavers and adults seeking a career change to continue to add skills and depth to the local health sector workforce.

Each of the trainees will be undertaking a nationally recognised tertiary qualification and completing on-the-job learning. They will receive paid study time, mentoring and regular group education sessions to set them up for a rewarding and inspiring career in community health.

GLCH's general manager people and culture, Paul Hopkins, said the trainees showed a tremendous amount of promise and their time with GLCH would be full of learning opportunities and development.

"They will complete their traineeship with a nationally recognised qualification, and we hope they stay on at GLCH, where we can further support them with career development in the health field of their choice," Mr Hopkins said.

"We are really pleased with this team and wish Ilona, Lucia, Nikita and Hilary every success in their studies and stay with us during the next 12 months."

The four trainees will work across GLCH's home and community support services and support, therapy, education and prevention units and work towards qualifications in allied health assistance, business, health promotion, and leisure and health over the course of this year.

If you, or someone you know, is keen to pursue a career in health, visit the careers page on the GLCH website or contact the recruitment team to learn more.

THUMBS UP / THUMBS DOWN

THUMBS DOWN: To the customers who think it is ok to abuse the customer greeters at Kmart. We are real people with real feelings. If you have an issue with Kmart operations, contact Head Office and voice your opinion there.

THUMBS UP: A big shout out to all the essential service personnel who worked tirelessly during the storm on Tuesday night and continued on with their work on the Wednesday. The speed at which electricity was restored and streets cleared was much appreciated.

THUMBS DOWN: To the two individuals who stood and watched a young woman in West Bairnsdale during the recent storm who was trying to retrieve large fence panels that had blown off. It proves two things, one being you're not real men and two you obviously have no Christian values. God judges us all from our actions or lack of. But **THUMBS UP:** To the 88-year-old and his sidekick who came to her aid.

THUMBS DOWN: To drivers reversing out of centre parking into oncoming traffic. The law for this offence needs to be enforced before a serious accident occurs.

THUMBS UP: To the lovely man in Coles car park last Thursday morning who took time to assist me with a car problem, which he corrected and explained to me how it happened. Thank you so much for your kindness.

If submitting a Thumbs Up/Down

All items submitted for consideration for publication in Thumbs Up, Thumbs Down, must be signed and include the address and telephone number of the writer. (This information is not for publication but is required under the Newspaper Act.) Items should be limited to 30 words, and writers should note that due to the numbers received, only a selection can be published. No specific business names will be mentioned in Thumbs Up/Thumbs Down. **Write to 'Tom', c/- 'The News'**

Submit your thumbs up or thumbs down thumbs@eastvicmedia.com.au or online at www.bairnsdaleadvertiser.com.au

Your feedback and our response will be included in the relevant Environment Plan and submitted to the regulator, the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA), for acceptance.

Australian National University

Apply for the 2025 Master of Philosophy in Applied Epidemiology (MAE) Program

Applications Open: 3 June 2024
Applications Close: 21 July 2024

Information Evening: Thursday 16 May - Join us for a virtual info session https://nceph.anu.edu.au/news-events/events/information-session-are-you-applying-master-applied-epidemiology-2025. to learn more about becoming a MAE with an opportunity to ask questions.

Do you want to be on the frontline addressing public health priorities? Do you want to develop sound skills in field epidemiology and to be able to use these to make a difference? If so, the MAE is for you.

The Master of Philosophy in Applied Epidemiology (MAE) Program is Australia's long standing and globally recognised Field Epidemiology Training Program. This is a two-year research degree that emphasises learning by doing. You will spend the majority of your time in a field placement (typically a government health department or other appropriate health organisation) conducting useful and important projects under the supervision of a field and academic supervisor while supported via a tax-free scholarship of $64,273 in 2025 with an increase in 2026 to $66,908 per annum.

The MAE has been run by the National Centre for Epidemiology and Population Health at the Australian National University since 1991. The scholars before you have investigated over 500 outbreaks, including important roles in the COVID-19 pandemic, established, evaluated, and strengthened multiple surveillance systems, conducted important projects into communicable and non-communicable disease. Many have gone on to hold senior positions in health in Australia or work with international organisations including the World Health Organisation. The MAE is committed to supporting First Nations Scholars. Fifteen per cent of graduates are Aboriginal or Torres Strait Islander persons. Hear from some of the First Nations graduates (https://health.anu.edu.au/study/research/master-philosophy-applied-epidemiology-mae).

First Nations MAE Scholars can apply for top up scholarships.

For more information see the Leonard Broom HDR Scholarship (https://www.anu.edu.au/study/scholarships/find-a-scholarship/leonard-broom-hdr-research-award).

If you are interested in the MAE, please see the MAE website and How to Apply Master of Philosophy in Applied Epidemiology (MAE) (Australia's Field Epidemiology Training Program) I ANU College of Health & Medicine

If you require additional information please contact: mae.nceph@anu.edu.au.

The application portal at https://health.anu.edu.au/study/research/master-philosophy-applied-epidemiology-mae will open on 16 May. The portal will provide the application requirements/application guidelines.

An artwork titled *Australia in Colour, 2021* by artist Vincent Namatjira, which includes a portrait of Gina Rinehart, is seen at the National Gallery of Australia, Canberra,

Vain attempt to remove artwork

AUS

MINING billionaire Gina Rinehart has demanded the National Gallery of Australia remove her portrait from an exhibition by award-winning Aboriginal artist Vincent Namatjira.

The image is one of 21 portraits that make up an artwork titled *Australia in Colour, 2021*, which the gallery acquired as part of its 40th anniversary celebrations in 2022.

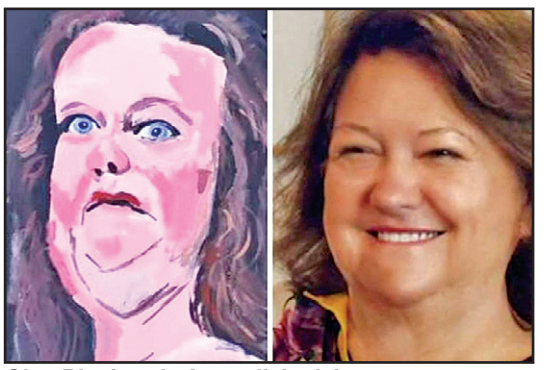
The artwork is on show as part of the Archibald prize-winning artist's first major survey exhibition which opened in Canberra in March.

The National Gallery has rebuffed efforts to have the picture taken down and said in a statement that it welcomed public dialogue on its collection and displays.

"Since 1973, when the National Gallery acquired Jackson Pollock's *Blue Poles*, there has been a dynamic discussion on the artistic merits of works in the national collection, and/or on display at the gallery," it said.

"We present works of art to the Australian public to inspire people to explore, experience and learn about art."

The portrait of Mrs Rinehart sits alongside images of Queen Elizabeth II and football player Adam Goodes and is set to be on display until July 21.



Before going on show in Canberra, the painting was on public display in Adelaide for months during the exhibition's initial run at the Art Gallery of South Australia from October 2023 until January 2024.

The SA gallery has confirmed it did not field any requests for the removal of the painting.

A reproduction of the image is also part of a prestigious Thames & Hudson monograph about Vincent Namatjira's work, published to accompany the survey show.

Mrs Rinehart is listed as a friend of the National Gallery after donating between $4999 and $9999 to the institution.

In 2023, Mrs Rinehart withdrew a $15 million sponsorship of Netball Australia after Indigenous netballer Donnell Wallam asked for her uniform not to carry the Hancock Prospecting logo.

Gina Rinehart is Australia's richest person.

Mrs Rinehart later set up a $3 million fund to reward athletes who won gold medals or set world records in swimming, artistic swimming, rowing and volleyball.

In 2020 Namatjira became the first Aboriginal artist to win the Archibald Prize with his portrait of former AFL player Adam Goodes, with his paintings an attempt to change people's perspectives by using satirical humour as a commentary on power.

For example, in one of his recent works included in the show, King Charles III stands in his regalia in the central desert, looking decidedly uncomfortable and out of place, as an artistic way of depriving the royal family of their power and entitlement.

Namatjira was born in Alice Springs and raised in foster care in Perth from the age of six, which meant losing his connection to family, Country and culture.

He grew up not knowing of his link to famed watercolourist Albert Namatjira – Vincent is his great-grandson – until he was an adult, and was astonished to discover his artistic legacy and the significance of his family name. ***–AAP***

Gippslanders 'worse off' under Albanese

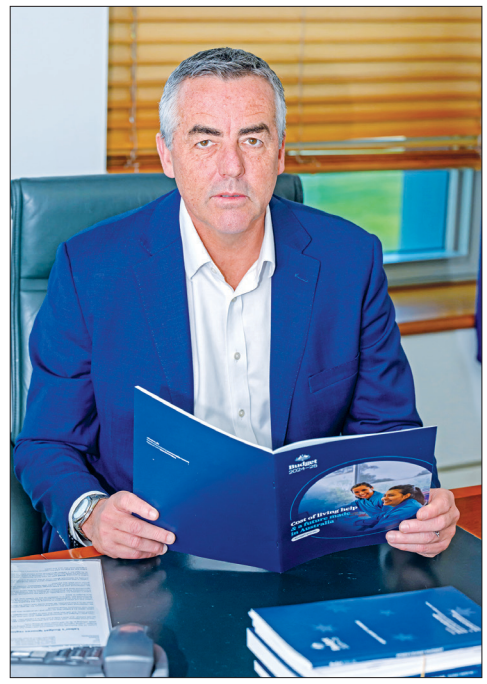
Gippslanders will be worse off under the Albanese Government's third Budget as prices continue to rise and place pressure on local families, according to local MP Darren Chester.

The Federal Member for Gippsland said he was disappointed that regional Australia had been largely ignored in the Budget, with the government failing to invest in critical road, rail, telecommunications, and much-needed community infrastructure.

"Regional Australia is simply not on the radar for this city-focused Prime Minister, and there's no funding for new infrastructure projects that would improve safety and productivity on our transport system and telecommunication connectivity, which are all vital for regional growth," Mr Chester said.

"There's no new funding for local councils to deliver community infrastructure, and the decision to launch an inquiry into the financial sustainability of local government is another broken promise and just a cynical attempt to stall action to deliver more support for six councils across Gippsland.

"Before the 2022 Federal election, the Labor Party promised 'fair increases' to local government funding but has actually delivered cuts to regional programs which local councils relied on.



"Instead of keeping its promise, we have yet another review from a government that has failed to deliver a single project under its regional grants program after almost two years in office.

"In the middle of a cost of living crisis, the burden will fall on family budgets as Gippsland ratepayers will be forced to fund the widening gaps in demand for new infrastructure, maintenance and critical services."

Mr Chester said families were struggling with higher mortgages, energy, fuel and food bills while the Federal Government was adding to inflationary pressures in the economy.

"This is a government with the wrong priorities. It wasted two years and more than $400 million on the failed Voice referendum, and despite increased revenue, the Budget will be in deficit for years to come because of more wasteful spending," he said.

"Since coming to government, the Labor Party has added 36,000 bureaucrats in Canberra but cut regional programs that would deliver safer roads and improved community facilities. At the same time, the Albanese Government has increased cost pressures on farmers and small business owners."

Federal Member for Gippsland Darren Chester says the Federal Budget has failed Gippslanders and all regional Australians.

Native timber support available now

Native timber harvesting has ended in Victoria but support is still available.

Native timber businesses, workers and communities can continue to access a range of support including:

- **The Victorian Forestry Worker Support Program** –including payments and training, 1:1 case management, employment services, health and wellbeing support.
- **Business support** – including exit packages and funding to help diversify.
- **Community support** – health and wellbeing services and community development planning and funding.

Esso ExxonMobil

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Bass Strait offshore facilities safely and effectively.
In planning for these activities, Esso is required under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 to prepare an Environment Plan about the risks and impacts these activities may have on the environment.

Additionally, Esso is required to identify and consult with relevant persons whose functions, interests, or activities may be affected by one or more of Esso's proposed offshore activities.

Community Drop-in

If you'd like to know more about Environment Plans for the following:

- Pipeline Network Decommissioning
- Steel Pile Jacket Decommissioning
- Jack Up Rig Plug and Abandonment
- Kipper Sub-Sea Drilling
- Turrum Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage Project

The Esso Consultation Team will be hosting a community drop in between 5.00 pm and 6.00 pm on:

- Thursday, 30 May 2024 at Bellevue on the Lakes, Lakes Entrance

Please email us at consultation@exxonmobil.com

THUMBS UP / THUMBS DOWN

THUMBS UP: To the cleaning team for the improved cleanliness of the Orbost public toilets as well as the kind and thoughtful individual who is placing a jar of fresh flowers in the female toilets. Thanks for brightening the space.

THUMBS DOWN: To all those disrespectful and downright lazy owners who will not pick up after their dogs. Our parks and trails are a disgrace and a potential health hazard to other users.

THUMBS DOWN: In reply to a thumbs down last week - Mallacoota public toilets. To set the record straight, they are cleaned around 9am Monday and Friday restocked with soap and paper. After this, it is out of control of the cleaners.

THUMBS UP: Thank you to the kind and honest person who found my daughters wallet, containing cash and other items, in a trolley at Woolies and handed it in a few weeks ago. Very much appreciated. Good karma coming your way.

THUMBS UP: To Maharajas Palace in Bairnsdale. We took Mum there for Mother's Day and it was a real hit! Beautiful food and great service.

THUMBS UP: To the wonderful people who helped me when I had a fall outside the library on Monday morning. Great help, I would not have got up otherwise.

THUMBS UP: To the helpers after our car accident on the Stratford side of the Billabong after we hit the centre barriers. You are wonderful people.

If submitting a Thumbs Up/Down

All items submitted for consideration for publication in Thumbs Up, Thumbs Down, must be signed and include the address and telephone number of the writer. (This information is not for publication but is required under the Newspaper Act.) Items should be limited to 30 words, and writers should note that due to the numbers received, only a selection can be published. No specific business names will be mentioned in Thumbs Up/Thumbs Down. **Write to 'Tom', c/- 'The News'**

Submit your thumbs up or thumbs down thumbs@eastvicmedia.com.au or online at www.bairnsdaleadvertiser.com.au

Making fishing better

VRFish, the peak body for recreational fishing in Victoria, is calling on Victorian recreational fishers to have their say on how we can make fishing better via the annual VRFish advocacy priorities survey.

"Our latest survey gives every Victorian recreational fisher the opportunity to shape what VRFish advocates for on their behalf. We encourage all recreational fishers to provide their valuable input by completing the survey," VRFish chair Rob Loats said.

The survey aims to gather the views of Victorian recreational fishers and understand the issues that are deeply important to the recreational fishing community.

Recreational fisher input and feedback collected from the survey will be used in advocacy planning to ensure VRFish is representing recreational fishers on the issues that matter most to them.

"Our last advocacy survey received almost 5000 responses. We're eager to hear from even more recreational fishers for this survey, as the more support VRFish has, the stronger our voice when advocating for better recreational fishing," Mr Loats said.

Recreational fisher involvement in previous surveys activated successful campaigns to restore fish habitat in our waterways, access brand new fisheries, provide more support for fishing clubs, fix our boat ramps and secure a new native fish hatchery, to name a few.

"Have your say in our survey and let's make fishing even better in Victoria," Mr Loats said.

The survey is open until June 17.

Recreational fishers can complete the survey on the Survey Monkey website.

One of the first fish caught during the Hooked On Lakes free kids fishing clinics, run by Fishcare Victoria earlier this year. VRFish is seeking recreational fishers to have their say on how they can make fishing better via an online survey.

Public Notices

PUBLIC NOTICE
Proposed Long Term Lease
Crinigan Road South Reserve, Morwell

In accordance with *Section 115, of the Local Government Act 2020* (the Act), Council proposes to enter into a long term lease with Optus Mobile Pty Ltd (the tenant) for a telecommunications tower located on part of Lot 1 on Title Plan 876353.

Written submissions regarding this proposal will be considered by Council, in accordance with Section 223 of the Act, if received within the prescribed time.

A submission must:
- be in writing to the Latrobe City Council, PO Box 264, Morwell, 3840 or via email latrobe latrobe.vic.gov.au
- be received by Friday 6 June 2024.
- state clearly whether you (or a representative on your behalf) wish to be heard in support of your written submission.

Submissions received, including the name of the submitter, may be published on Council's website and may form part of the public record of the relevant Council and Committee meetings. Personal contact details and any offensive, defamatory, or third-party personal information will not be published.

Any submissions received will be considered at a future unscheduled Council Meeting. All persons submitting a written submission will be advised of the Council Meeting date and invited to attend.

In the event that no submissions are received objecting to the lease, Council will enter into the lease agreements.

Further information and a locality plan can be obtained from the Latrobe City Council website: https://www.latrobe.vic.gov.au/sites/default/files/OC_06052024_MIN.pdf or contact Mr Josh Graham, telephone 1300 367 700.

Scam warning

Recently, an elderly Marlo resident who wishes to remain anonymous was the latest to be targeted by scammers.

The resident received a phone call from a perpetrator pretending to be a NBN representative who managed to keep her on the line for approximately two hours before convincing the Marlo resident to hand over her credit card details.

Later that evening, in a series of transactions, $6000 was taken from her account and her financial institution had contacted her and blocked any further transactions.

This serves as a timely reminder that financial details should not be given over the phone and if in doubt, contact the proposed company to check its legitimacy.

If you happen to be scammer then report the matter to the local police and Australian Cyber Security Centre (ACSC).

If you have provided remote access to your computer or mobile device or given personal or financial information to a scammer, contact IDCARE.

Try to record as much information as possible including phone numbers, names, or any remote access ID.

Remote access companies such as TeamViewer also accept direct reports of scams via their website to investigate and block fraudulent accounts.

To protect others, report scams to the Australian Competition and Consumer Commission (ACCC) via Scamwatch.

Scamwatch data is provided to many companies and is invaluable in helping our efforts to educate the community about scams.

The National Water Week Poster competition is back this year, and East Gippsland Water is encouraging all kinder, early learning, prep and primary school students to enter the competition. PICTURED: Prep/foundation – State and regional winner for 2023, Maizie – Swan Reach Primary School.

Poster competition open for entries

East Gippsland Water is calling on all kinder, early learning, prep and primary school students and teachers to enter this year's National Water Week Poster competition.

This annual competition is a great way for students to learn and develop a deep understanding of the importance of water and using it efficiently, in an enjoyable way.

Students are encouraged to get creative and design a poster on the theme "Water for all, inspiring action" exploring the importance of water and how everyone has a part to play in saving water and being more water efficient now and into the future.

Last year, East Gippsland received 287 fantastic entries from 14 schools with three out of the five regional winners also claiming wins in the State-wide competition.

"Each year that we host this competition, I am overwhelmed by the interest, support and talent of our young people across East Gippsland," East Gippsland Water executive manager customers, community and communications, David Radford, said.

"I am anticipating that we will receive some fantastic entries from the students this year. So, I'd like to encourage them to get out their coloured pencils, textas, paints, paper or digital technology ready and get creative producing their A3 poster.

"This is a fun, creative activity for the home or the classroom for schools and children from across our region to get involved in."

National Water Week runs from October 21 to 25, 2024, and the winners of the competition will be announced during that week.

There are a number of categories available and some great prizes up for grabs for individuals and schools.

Closing date for entries is 5pm Friday, August 30, 2024.

For further information and to enter visit the National Water Week website.

First prize winners from each category will automatically be entered into the state level competition.

Meeting the demand for social workers

FEDERATION University Australia and Anglicare Victoria are teaming up to create a pipeline of skilled family violence social workers to meet a growing demand.

Brooke Pym has been working at Anglicare Victoria in Gippsland for 11 years, working as an Integrated Family Services Team Leader, and has recently enrolled in the Bachelor of Social Work at Federation to enhance her skillset.

"I am enjoying learning the theory around the work I have been doing for many years now, gaining a deeper understanding into the work that I do and why we work in the manner that we do," Ms Pym said.

Ms Pym feels lucky to be working in her chosen profession while completing a Bachelor's degree, and says there is a massive demand for skilled and experienced social workers in the region.

"There is such high demand for front line workers in child protection, family violence and family services that we need as many new graduates as we can get," she said.

Anglicare Victoria Gippsland Regional Director, Vicki Levey says that more social workers are needed to fit the current demand in the region.

"The demand for skilled social workers in the Gippsland region is very high, specifically in the family violence space," she said.

"As part of the recommendations from the 2015 Royal Commission in Family Violence, we need more social workers who are qualified or becoming qualified in family violence roles by July 2026, particularly as part of The Orange Door network."

According to the Victorian Skills Authority, the demand for social workers continues to increase in Gippsland and throughout the state, with an additional 2349 workers required Victoria-wide by 2026.

"We need to train workers locally as we are more likely to maintain the workforce if they don't have to travel long distances, and they will gain familiarity with the region and its specific needs," Ms Levey said.

"The community can only benefit by the support of skilled and qualified workers, and our partnership with Federation University is imperative to ensure we continue to have those staff numbers in Gippsland.

"It's important we're responding locally to meet the demand."

Federation University Discipline Lead, Social Work, Community and Human Services, Jennifer Martin, said the degree had been thoroughly considered.

"Federation has had strong engagement from the Gippsland community to co-design a degree to meet local workforce demands with local people," she said.

"The Social Work curriculum has been designed with local Gippsland human services providers to ensure teaching and learning content, delivery and assessment is tailored to the needs of the local Gippsland social work workforce."

Drink driving not worth the risk

ONE in five drink drivers fined in Victoria are caught during daylight hours.

New Victoria Police analysis also reveals half of detections were on a weekday.

The force is warning police are out anywhere, any time, to make sure motorists aren't over the limit.

It comes amid a danger month on Victoria's roads with 29 people killed in May last year with alcohol a contributor in multiple deaths. So far this May, 12 people have died.

Figures show about 1200 of the near 4900 drivers caught drink driving in the last financial year were nabbed between 6am and 6pm.

More than 400 were caught between 6am and noon alone.

Victoria Police has been scheduling special daytime and early-morning operations to keep drink drivers on their toes, and remind all drivers police are out testing for alcohol anywhere, any time.

The night, 6pm to midnight, remains the most prolific time for drink drivers on the road, with 1900 detected, followed by midnight to 6am when almost 1800 were caught last financial year.

Saturday accounts as the most detections of any day, with 1200, ahead of Sunday, Friday and Thursday. About 400 drink drivers were caught on a Monday and 350 on a Tuesday.

Most drink drivers fined - more than 40 per cent - recorded a blood alcohol content between 0.07 and 0.10.

About a third blew between 0.05 and 0.07.

Anyone caught drink driving faces heavy fines and a loss of licence, and those with higher readings must go to court where a magistrate imposes a fine and driving disqualification period.

About a quarter of all fatal crashes involve a driver or rider over the legal blood alcohol limit of 0.05.

Assistant Commissioner Glenn Weir, Road Policing Command, said the consequences of being involved in a crash are even more serious and last a lifetime.

"People might think drink driving is something that only occurs after dark but this data shows there's a lot of offending in the day," he said.

"That's why police are out breath testing motorists around-the-clock."

Police Beat
with Stefan Bradley

45km/h over the limit

IN the early hours of Sunday, May 19, Sale Police say they detected a vehicle travelling south bound on Rosedale-Maffra Road at a speed greater than 45km/h over the posted speed limit.

As a result, the vehicle was intercepted and impounded for a period of 30 days at a cost of $1333 to the driver.

He will be summonsed to attend court at a later date.

Drugs and imitation firearm seized

POLICE have arrested four people and seized an imitation firearm, methylamphetamine, GHB and cannabis as part of an operation targeting alleged drug trafficking in Orbost.

East Gippsland Crime Investigation Unit detectives, Dog Squad, and local police from Orbost, Bairnsdale and Cann River executed five search warrants at properties across Orbost on Thursday, May 16.

Police seized an imitation firearm, traffickable amounts of dried cannabis, methylamphetamine, GHB, three cannabis plants, and a laser pointer.

Those arrested by police include:

- A 49-year-old Orbost man, expected to be charged with cultivating cannabis, possessing cannabis, possessing GHB, using cannabis and possessing prohibited weapon. He is expected to appear in court at a later date;
- A 21-year-old Orbost man, charged with eight offences including burglary, trespassing, criminal damage, possessing imitation firearm, possessing drug of dependence, and refusing to comply with 465AAA direction. He was bailed to appear at Orbost Magistrates Court in August;
- A 22-year-old Orbost man, charged with possessing cannabis and was bailed to appear at Orbost Magistrates Court in August, and;
- A 24-year-old Orbost woman, charged with possessing drug of dependence following a search warrant at a residence in Orbost. She was released pending summons.

Anyone with information about illicit firearm or drug activity is urged to contact Crime Stoppers on 1800 333 000 or submit a confidential crime report to crimestoppersvic.com.au

Sale Police detected a vehicle travelling south bound on the Rosedale-Maffra Road well over the speed limit last Sunday.

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Bass Strait offshore facilities safely and effectively.

In planning for these activities, Esso is required under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* to prepare an Environment Plan about the risks and impacts these activities may have on the environment.

Additionally, Esso is required to identify and consult with relevant persons whose functions, interests, or activities may be affected by one or more of Esso's proposed offshore activities.

Community Drop-in

If you'd like to know more about Environment Plans for the following:

- Pipeline Network Decommissioning
- Steel Pile Jacket Decommissioning
- Jack Up Rig Plug and Abandonment
- Kipper Sub-Sea Drilling
- Turrum Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage Project

the Esso Consultation Team will be hosting a community drop in between 5.00 pm and 6.00 pm on:

- **Wednesday, 29 May 2024** at The Criterion Hotel, Sale

Please email us at consultation@exxonmobil.com to register your attendance.

Miners flex their $74bn revenue muscles

EXCLUSIVE

GEOFF CHAMBERS
CHIEF POLITICAL CORRESPONDENT

Miners have poured a record $74bn into the coffers of federal, state and territory governments, with the Albanese government pocketing $42.5bn in company tax revenue, and Queensland and NSW cashing in on booming coal royalties.

After Jim Chalmers announced a second budget surplus anchored by strong mining exports and commodity prices, an EY royalty and company tax payments report, released on Monday, reveals miners have paid governments almost $360bn in taxes and royalties over a decade.

With Peter Dutton promising a Coalition government will adopt a "pro-mining mindset" and the Greens demanding an end to coal and gas, Anthony Albanese is under pressure to balance Labor's emissions reduction ambitions with support for traditional mining.

Commissioned by the Minerals Council of Australia, whose members include BHP, Rio Tinto, Lynas Rare Earths, Glencore and Peabody, the annual report shows a $9.3bn increase in payments to governments. The $74bn payday for governments in 2022-23 included a decade-high $31.5bn in royalties. As well as traditional mining revenue associated with iron ore and coal, The Australian this month revealed oil and gas companies are on track to pay a record $17.1bn in taxes and royalties across 2023-24.

With the mining industry paying the highest average wages, contributing the most company taxes and delivering the bulk of export revenue, MCA chief executive Tania Constable warned against holding back miners with "draconian 1970s industrial relations agendas, high energy, environmental, planning and taxation costs". The MCA will launch a national advertising blitz on Monday.

"The recent federal budget revealed that government spending is on the rise and it is our country's mining sector that foots the bill, paying more than half of the company tax paid by large corporations and international businesses," Ms Constable told The Australian.

"Despite underwriting our nation's prosperity, living standards and security, the path forward for the mining industry remains uncertain. Our tax system is increasingly uncompetitive, and our regulatory environment is becoming more cumbersome.

"Approvals are taking too long, tied up in endless red tape, well-funded lawfare and multi-layered government bureaucracy, wasting taxpayers' money and holding back Australia's economy from realising its full potential."

Queensland's share of national royalty payments increased from 32.5 to 47.2 per cent off the back of higher coal royalty rates, with NSW claiming a $4.7bn royalties windfall. In the battleground election state of Western Australia, iron ore remained the biggest earner despite lower revenue and prices in 2022-23.

"Total mineral sector royalties reached approximately $31.5bn in 2022-23, increasing by $7.6bn from the previous year. The yearly growth in royalties was primarily due to an increase of $7.1bn in royalty taxes paid in Queensland due to the introduction of progressive coal royalty rates," the EY report said.

"Western Australia's royalty income is largely attributed to iron ore. In 2022-23, iron ore production volumes were similar to 2021-22, so changes in WA's royalties were largely driven by changes in iron ore prices.

"Iron ore prices declined in the second quarter of 2022-23 and remained lower in early 2023 due to production restrictions in China."

With mining companies and associated supply chains supporting 1.1 million jobs, Ms Constable said the sector was helping keep "Australia solvent".

"A robust mining sector is critical if we want to sustain public spending, advance Australia's broader economic agenda, and keep the budget in the black," she said. "This is revenue that supports families, builds communities, and funds essential services like the NDIS, childcare subsidies and aged care."

The mining industry has warned the Prime Minister that at a time of "decaying productivity and looming long-term structural fiscal deficits, the government is imposing regressive policies on the sector that dampen the investment growth critical to achieving economic potential".

Less than a year out from the election, Mr Albanese and Mr Dutton will ramp up campaigning in the resources-rich jurisdictions of WA and Queensland and the Northern Territory.

While Mr Albanese has used his Future Made in Australia policy to support critical minerals, Mr Dutton promised in his budget reply to cut red tape and rollback Labor's sweeping IR reforms.

Migration cuts will harm economy: business

RHIANNON DOWN

The peak body representing hotels has told the Coalition its pledge to slash net migration to 160,000 would have a "knock on effect" on the economy, amid mounting concerns from key sectors the move will exacerbate existing skill shortages.

Australian Hotels Association chief executive Stephen Ferguson will lobby the opposition to reconsider its proposal to cut overseas arrivals by 25 per cent when parliament sits this week, urging that any major decline in temporary migrants would cripple the hospitality industry.

Mr Ferguson said he was seeking clarity from Peter Dutton on which visa category his proposed measures would target, raising concerns about the Opposition Leader's promise to prioritise skilled visas in the construction sector, which could place hospitality workers back of the queue.

Ferguson

He said the industry was grappling with a protracted shortage of chefs to staff kitchens and was locked in a contest to recruit trained cooks from around the world, with employers sponsoring 2841 overseas chefs to come to Australia in 2022-23.

"There's a knock on effect, first in terms of employment; not only does the key position of the chef not get filled, but neither do people like waiters, barman and baristas and all the other people associated with the restaurant or the bistro," Mr Ferguson told The Australian.

"Once the restaurant and bistro closes, there's a knock on across the whole business.

"So it's a massive decrease in our productivity if these numbers come to fruition."

Aged Care Industry Association chief executive Peter Hoppo said about 30 per cent of the sector's 370,000 workers were migrants, and any reduction in migration would be "catastrophic" for the industry.

"While we acknowledge the housing and other cost-of-living challenges faced by Australians, a significant reduction in immigration would be catastrophic for the aged-care sector if not managed carefully," Mr Hoppo said.

Aged & Community Care Providers Association general manager policy and advocacy Roald Versteeg said the sector needed to recruit 110,000 direct care workers by 2030, with migration forming a key pillar of how this could be achieved, adding that migration was an "important part of the workforce supply".

Business Council of Australia chief executive Bran Black said slashing migration could "compound our existing skill shortages and make it harder to do business ... I'm concerned about any proposal to further reduce temporary skilled migration, through a cut in Net Overseas Migration, due to the negative impact it may have on the economy," he said.

Opposition Treasury spokesman Angus Taylor refused to reveal the Coalition's plan for net migration beyond the 2025-26 financial year, saying the "right balance" needed to be struck to ease the housing crisis after international student numbers soared.

Mr Taylor said the "absolute collapse" of productivity under Labor was to blame for the skills shortage, declaring the government had "lost control" on migration.

Greens leader Adam Bandt accused both Labor and the Coalition of engaging in a "migrant-bashing race to the bottom" while refusing to clarify his party's stance on migration.

He told Sky News it wasn't migrants who were to blame but investors with a "big fat cheque in their pocket from Anthony Albanese".

NCA NEWSWIRE / GARY RAMAGE

Clkockwise from main: Hollie Hughes; Alex Hawke; Jess Collins; and Andrew Bragg

Hawke's time is 'over' as Libs clean up state slate

ALEXI DEMETRIADI
NSW POLITICAL REPORTER

Liberal centre-right powerbroker Alex Hawke's influence is not waning "but terminal", a party insider has claimed as the conservative-aligned Jess Collins dumped senator Hollie Hughes from a winnable spot on the party's Senate ticket.

The result, which saw moderate senator Andrew Bragg take top spot and the conservative-backed Ms Collins claim the second, dealt a blow to Scott Morrison ally Mr Hawke and his centre-right faction.

The party's once division-riddled right faction was "over the moon", said one source, and appeared to have got its house in order. "Hawke's influence isn't waning, mate – it's gone," one senior Liberal source from the right said. "It's terminal."

Ms Collins, a research fellow at the Lowy Institute, is aligned with the state party's conservative wing and had previously run unsuccessfully to fill the casual vacancy created by the retirement of Marise Payne, which went to Dave Sharma, and in the North Sydney preselection, which went to Gisele Kapterian.

Senior centre-right sources, however, said while they were "disappointed" with the result, they didn't accept any doomsaying about the influence and strength of the faction. "You lose one preselection and people start saying (the faction is finished)," one senior insider said. "You win some, you lose some."

A senior moderate, however, called it a "terrible result" for former immigration minister Mr Hawke and the centre right: "It has shown the decline of the faction in a post-Morrison world."

That source, speaking on the condition of anonymity, said Senator Hughes had "defied expectations" to grab the No. 1 spot at the previous preselection when the faction was at its peak during Mr Morrison's leadership.

"It's a different dynamic now; the right have got their act together and unified," they said.

"They coalesced behind Collins ... the few that went to Lincoln Parker (the fourth candidate standing) also almost entirely flowed through to her."

Senator Hughes was recently appointed as the Coalition's assistant National Disability Insurance Scheme spokeswoman.

Multiple sources, from different factions, said the vote was not just on Senator Hughes but on her faction's powerbroker. "It was a bit about sending a message to Hawke," one party source said.

"Holly is seen as a factional foot soldier."

The Australian revealed last week how former prime minister John Howard urged leaders to take a lead in stamping out factionalism from within the party, calling it an "absolute curse".

"A lot (of us) echo Howard's concerns about the factions," one source said. "(The vote) was a message to stop playing games."

Another, from the centre-right, admitted it wasn't entirely unexpected. "I think we've seen the collapse of the soft right with Mr Morrison's downfall," they said. "A few members I talked to wanted to punish Holly for the sins of the faction. They voted in that way to send a message."

Other senior centre-right sources said its defeat "wasn't a smashing" and if some members had turned up as promised, "it's a different story".

"It wasn't like a 50-vote smashing, it was a pretty fine result," they said. "We're not saying 'the end is nigh', we're a large faction in a three-faction system."

Senator Bragg won 196 votes in the first round of voting in the party's preferential system, followed by Ms Collins on 146, Senator Hughes on 145, and Mr Parker on 51. Ms Collins won the third round of voting against Senator Hughes, 191 to 167.

Labor's green tax breaks on hold

GREG BROWN

Labor will delay introducing legislation to provide tax breaks for hydrogen and critical minerals producers until the second half of the year, as senior government figures negotiate with industry and the crossbench over the final outcome of the $13.7bn package.

A government source said the Future Made in Australia Act – providing a framework for commonwealth investment – would be introduced to parliament ahead of the July winter break.

But this would not include tax production credits for hydrogen producers and critical minerals processing, with a parliamentary debate on the issue later this year.

Despite Anthony Albanese talking up Future Made in Australia as a central plank of his policy agenda, there will be no legislation introduced on the issue in parliament this week.

With the Coalition opposed to the production tax credits – the centrepiece of the Made in Australia program – Labor needs the support of the Greens and the crossbench for the legislation to pass the Senate.

Greens leader Adam Bandt said he would push for an end to new coal and gas development as part of his negotiations. He also flagged a push for a domestic hydrogen reservation scheme and a requirement for some public ownership in the sectors.

"Government and public ownership of these critical industries in the future is going to be very important to avoid making the same mistakes that Labor has made with gas where they allow the big corporations to do whatever they like and all of a sudden, it creates a series of problems," Mr Bandt said.

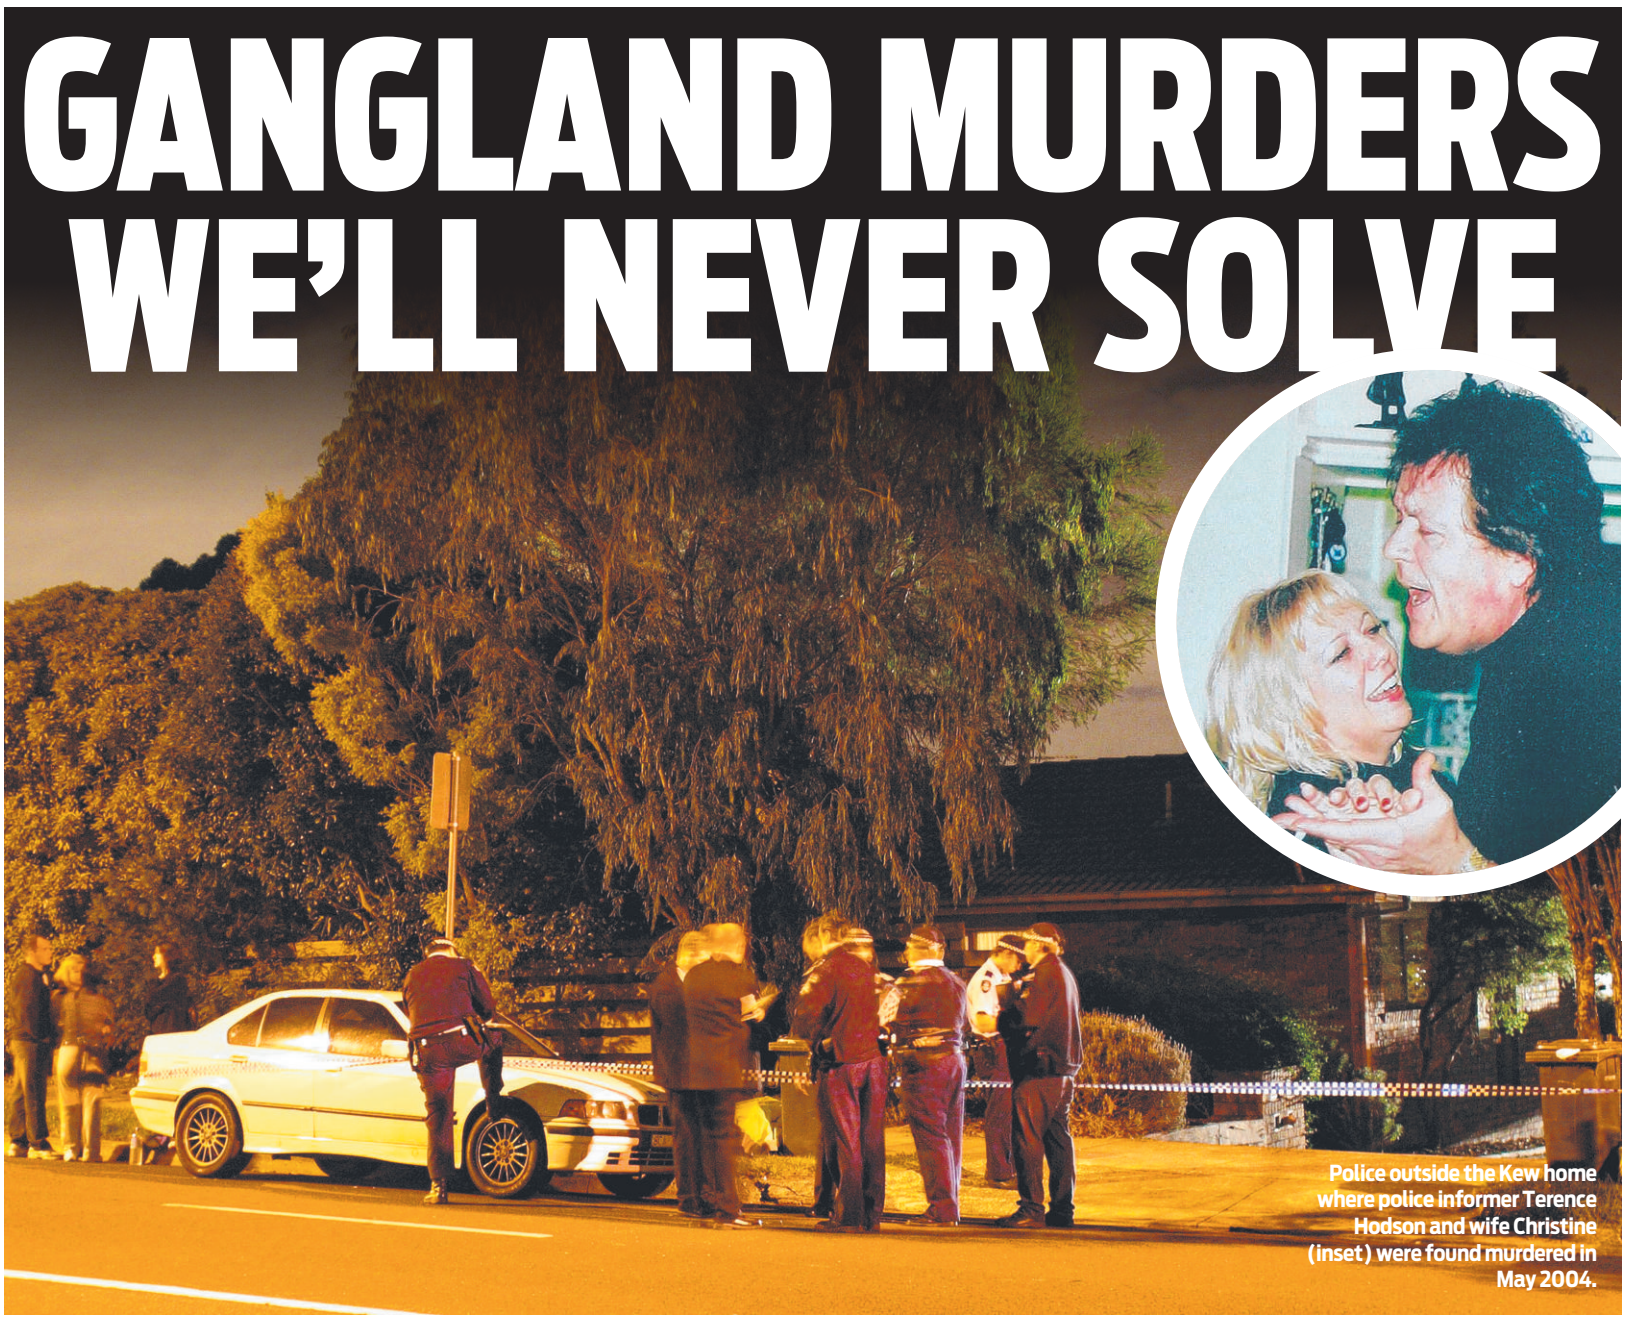
"The second issue is this: it's becoming apparent that Labor's Future Made in Australia is a future for coal and gas past 2050. Now, you can't have your foot on the accelerator and the brake at the same time."

Opposition Treasury spokesman Angus Taylor said wealthy business people such as Andrew Forrest should not receive tax credits for producing hydrogen.

"It is the equivalent of going to every cafe owner in Australia and saying the government is going to give you a buck every time you produce a coffee," he told Sky News.

In the first sitting week since the May 14 budget, Jim Chalmers and the Prime Minister will focus on cost-of-living relief through the budget that has provided tax cuts to workers and electricity rebates to households.

The Coalition, meanwhile, will try to keep the focus on Labor's immigration bungles and Mr Albanese's failure to unequivocally back Israel.



While the House of Representatives will spend the next fortnight debating in the chamber, upper house MPs will probe bureaucrats in Senate estimates.

During hearings this week, Home Affairs secretary Stephanie Foster will face a grilling over the handling of the NZYQ case and its implications.

Over the fortnight of estimates, bureaucrats are expected to be grilled on the inflationary impact of the budget, anti-Semitism in universities, Australia's position on the Gaza conflict and the handling of the China relationship.

The Coalition is also expected to probe the $450m investment in US-based company PsiQuantum.

GANGLAND MURDERS WE'LL NEVER SOLVE

Police outside the Kew home where police informer Terence Hodson and wife Christine (inset) were found murdered in May 2004.

Hodson case to forever 'sit in a box'

EXCLUSIVE
Mark Buttler

The lead detective in the murders of police informer Terry Hodson and his wife Christine says there is no chance of the killing ever being solved.

It is 20 years this month since the Hodsons were shot execution-style at their Harp Rd, Kew, home in a crime that still reverberates today.

Former homicide squad senior sergeant Charlie Bezzina said any prospect of justice being done for the events of May 16, 2004, was long gone.

Mr Bezzina said high-level police meddling, the secrecy of his superiors, the silence of those in the know and the deaths of key suspects meant there could never be a result.

The inquiry was difficult and complex from the start.

Hodson was facing charges over the 2003 burglary of a drug house at Oakleigh East he carried out with drug squad detective Dave Miechel.

He had agreed to testify that Miechel's colleague Paul Dale was involved.

Hodson's previous co-operation with police had become common knowledge in the underworld after the leaking of sensitive intelligence reports outlining his assistance.

"It was scattered around like confetti," Mr Bezzina told the Herald Sun.

The former senior sergeant recalled interviewing high-profile figures in the aftermath of the murders, among them drug kingpin Tony Mokbel who, Mr Bezzina said, was linked to a fax machine used to distribute reports that exposed Hodson's informing.

Mr Bezzina said Mokbel gave the appearance of being "nonplussed" when the evidence was put to him.

Mokbel has always declined to talk about what he knows of the events at Kew. Police suspect he ran the Oakleigh East drug house where $8.5m in ecstasy was found.

Miechel was ultimately jailed and Hodson murdered before he could be prosecuted.

Mr Dale was charged over the drug house burglary but the case was withdrawn after Hodson's death. He was later charged with murdering the Hodsons but the case was abandoned when drug boss Carl Williams – the star witness – was bludgeoned to death inside Barwon Prison in 2010.

Mr Bezzina also interviewed lawyer Nicola Gobbo, who had been co-operating with police. He said she was "s--ting herself", concerned about her work with law enforcement being exposed, though this crucial detail had been kept from Mr Bezzina at the time.

Charlie Bezzina

"There was no hope of us solving it," he said.

Ms Gobbo was of interest to investigators to the point that the Petra task force, which examined the Hodson killings, put together a profile on her.

"It is believed that Gobbo may have knowledge of intimate details of the planning of the murders of Terence and Christine Hodson," was its stated reason for her being under scrutiny.

The leaking of the information reports on Hodson after he agreed to testify over the Oakleigh burglary was a challenging element of an already difficult gangland probe.

"That's why our suspect pool was so large," Mr Bezzina said.

He said two men he was certain were principal players in the crime were dead. He said there was no doubt feared gunman Rodney Charles Collins was the triggerman and that Williams had arranged the hit.

Collins died in jail from natural causes in 2018 and Williams was bludgeoned to death by prison heavy Matthew Johnson in 2010.

The Hodsons' daughter Mandy said the case was once solvable but now it would always sit in a box.

Ms Hodson said her father would have turned 77 on Saturday. She said on each anniversary of her parents' deaths, she would play them songs and have a cry.

"Sometimes it seems like an eternity ago and sometimes it seems like yesterday," she said.

Musk to run major AI project

WASHINGTON: Billionaire tech mogul Elon Musk has told investors that he plans to build a supercomputer dubbed "giga-factory of compute" to support the development of his artificial intelligence start-up xAI, reports say.

Mr Musk wants the supercomputer – which will string together 100,000 Nvidia chips – operational by mid-late 2025, and "will hold himself personally responsible for delivering it on time", industry news outlet The Information said on Saturday.

Elon Musk

The planned supercomputer would be "at least four times the size of the biggest GPU clusters that exist today", such as those used by Meta to train its AI models, Mr Musk was quoted as saying.

Since OpenAI's generative AI tool ChatGPT exploded on the scene in 2022, the technology has been an area of fierce competition between tech giants Microsoft and Google, as well as Meta and start-ups such as Anthropic and Stability AI.

xAI is developing a chatbot named Grok, which can access social media platform X, also owned by Mr Musk, in real time.

Half Light are Rennie Pearson and Bob McNeill, coming to Valencia Creek Hall in a couple of weeks. Photo: Contributed

Half Light visits Valencia

VIRTUOSO wooden flute and Irish tin whistle player Rennie Pearson, and multi-award winning guitarist and songwriter Bob McNeill, are touring Victoria and New South Wales this winter as Half Light.

Their music is a journey from toe tapping jigs and reels to mysterious, mystical slow airs and finely crafted songs.

Half Light are coming to Valencia Creek Hall to perform a concert on Thursday, June 13, at 7.30pm.

Both Rennie and Bob are luminaries in the folk music scene of New Zealand and Australia, boasting extensive touring experience as solo artists and group members. They are revered experts in their craft, having shared their knowledge and talents at NZ's Irish music school 'Ceol Aneas' and numerous festivals and workshops.

Bob's intricate and evocative songwriting and Rennie's mastery of wooden flutes, Irish tin whistles, and other instruments promise an evening of intricately crafted and diverse folk music that will resonate with audiences of all ages.

Half Light's magic lies in their ability to take these folk melodies and songs, both old and new, and weave them into fresh and exciting arrangements. Drawing inspiration from a rich tapestry of musical styles, they transport listeners to faraway lands with one melody and have them tapping their toes and clapping their hands with the next.

Tickets are $25.

Make a booking by calling 0439 454 428 or on Rennie Pearson's website: renniepearsonmusic.com

Wedge Roaring Twenties

Garage Girls perform at The Wedge this Friday. Photo: Contributed

IMAGINE... 1920s Melbourne-the advent of the motorcar! Society reels from the aftermath of war and a second wave of Spanish flu wreaks havoc on the streets. Theatres buzz with vaudeville hacks and men with an eye for enterprise seize every opportunity to weasel wealth.

Meanwhile, one small woman defies convention and makes her mark. Inspired by actual events and with a healthy dose of magic realism, breathtaking sound design and many colourful characters, played by five actors - *Garage Girls* is a rollicking ride celebrating a Victorian icon.

Check out Garage Girls at The Wedge this Friday (May 31), from 12pm and 8pm.

Visit The Wedge website for more.

Dr Todd returns home for book tour

The Todd family of Wayne, Jeremy, Claudia, Anthea, Harrison, Morgan and Angela during Dr Anthea's book tour. Photo: Contributed

IN a heartfelt homecoming, Sale local, best selling author and women's health advocate, Dr Anthea Todd returned home recently for a special book tour.

Her debut book, *What's My Body Telling Me*?, has been making waves for its empowering message that encourages women to see their bodies not as problems, but as solutions.

Dr Todd's visit included a stop at her alma mater, Gippsland Grammar, where she was warmly received by patients and faculty alike.

The highlight of her visit was a reunion with her past patients, being back at her old school with all of her siblings and parents and her reunion with Julie Ripon, her Year 12 Chemistry teacher.

Dr Todd fondly recalls how Mrs Ripon's unique teaching style profoundly impacted her, not just in understanding chemistry but in learning how to think critically and independently.

"Mrs Ripon didn't just teach us the subject matter; she taught us how to think, how to question, and how to explore," Dr Todd reminisced.

"Her influence has been a cornerstone in my career and my approach to healthcare and writing."

The book tour was more than just a nostalgic trip down memory lane; it was a celebration of community and connection.

Dr Todd's visit to Sale was a heartfelt reunion with past patients, friends, and familiar faces. The warmth and support from the community was palpable, as many gathered to hear her speak about the book that has resonated with so many women across the country.

What's My Body Telling Me? delves into the intricate ways women's bodies communicate their needs and stresses. Dr Todd's holistic approach encourages readers to listen to their bodies and understand that symptoms are often signals of deeper issues. Her message is clear: our bodies are not the problem; they are the solution.

One of the standout moments of the tour was a book signing event at Collins Booksellers in Sale, where Dr Todd was featured alongside Natasha from the Sale bookstore.

"Seeing my book on the shelves of a store that I used to spend so much time wandering the isles of was surreal,," Dr Todd said.

Natasha from Collins Booksellers expressed her excitement about hosting Dr Todd.

"Having Dr. Todd here is a tremendous honor. Her book is not just informative but transformative for many women. We are thrilled to see such a positive response from our local community," she said.

Dr Todd said it was a great buzz to be back home where it all started.

"It's wonderful to be back in Sale, to see so many familiar faces, and to share this journey with the people who have been such a big part of my life," she said.

"I hope my book continues to inspire women to listen to their bodies and embrace the solutions within."

For those who missed the event, What's My Body Telling Me? is available at Collins Booksellers in Sale, and Dr Todd's insights can be followed on her social media platforms.

The ADRA Food Relief program operates from 8-12pm each Monday, with our ADRA Furniture shop and Gems & Jams Opportunity shop operating from Mondays to Fridays. Join us on Monday mornings for a free snack and cuppa at the Smile Awhile Cafe.

Our community worship services are held each Saturday (Sabbath) morning, starting at 10-11am with Bible study for all age groups. Our main family worship service starts at 11.15am. Mid week prayer and Bible study groups are available.

For more information contact Pastor Rian van Deventer (0436 105 124), https://bairnsdale.adventist.org.au/

Anglican Parish of Lakes Entrance and Metung

We seek to be a loving, caring, listening Christian community joyfully serving Jesus Christ in the world and making Him known.

Warm welcome to all to come and worship with us.

Lakes Entrance every Sunday at 10.30am Holy Communion at St Nicholas' Church at 11 Church Street, Lakes Entrance (opposite Woolworths). Cuppa and fellowship after the service.

Metung at historic St John's Church, Stirling Road, Metung worship every Sunday at 8.45am Holy Communion. Cuppa and fellowship after the service. Please join us for breakfast on fourth Sundays.

St Brendan's Catholic Parish Lakes Entrance

Weekend Mass Times:

Saturday: 9:30am on 1st, 2nd, 4th and 5th week.

Sunday: 9:00am.

Weekday Mass Times:

Tuesday and Friday: 9:30am

St Joseph's Swan Reach

Saturday Vigil: 5:00pm on the 1st, 3rd and 5th week.

Nursing Homes

Opal 11am on the first Thursday of the month.

Calvary Kalimna 11am on the first Friday of the month.

Baptist Church

At Lakes Entrance Baptist Church, we're committed to building lasting community.

We are a family who follow Jesus, serve our neighbours, seek to be a voice of hope and known by love.

You're very welcome at 10am Sunday mornings - there's something for all the family at 141 Princes Highway.

Net-Work Bible Study Groups on various days, Prayer Fellowship, Messy Church.

Blokes On Bikes/Women Walking - 9.15am Wednesdays.

Tiny Turtles Playgroup – 10 - 11.30am Thursdays/Fridays.

For information 0427 731 331.

Lakes Entrance Uniting Church

We extend a warm welcome to our service of worship which will be held each Sunday at 10a.m. at the Uniting Church, 181 Esplanade, Lakes Entrance. Worship is a blend of contemporary and traditional style.

Morning tea and a time of fellowship follow the service.

We seek to connect with God and our community through practical and meaningful ways.

One of these is the on-site Op Shop open 10am -2pm weekdays and 10am-1pm Saturday.

Lakes Community Church

Come and experience the love and grace of God. We are a contemporary worshipping church and love to celebrate the goodness of God and to share the good news of Jesus Christ, who remains relevant for every generation.

Jesus said: "I came so you might have and enjoy life and have it in abundance - to the full - til it over- flows" (John 10:10b).

Sunday meetings: 10.30am on Palmers Road (up past the Aquadome). Enquiries - 5155 3277.

Open Mic at the Slipway was held recently in Lakes Entrance with a supportive group of musicians and audience members enjoying and encouraging the performers. Musician Olivia Lay (third from left) organised the event and was pleased with the turn out. "We will hold our next Open Mic in the shed at Slipway on Friday, June 14, all welcome as either a performer or to enjoy the talent on show," she said.

Christine Waterson from Metung opened the evening with some original songs and covers.

Nick Evangelou and Ashley Carmody were enjoying the evening.

Sandy and Tony performed on the evening.

ExxonMobil

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Bass Strait offshore facilities safely and effectively.
In planning for these activities, Esso is required under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 to prepare an Environment Plan about the risks and impacts these activities may have on the environment.

Additionally, Esso is required to identify and consult with relevant persons whose functions, interests, or activities may be affected by one or more of Esso's proposed offshore activities.

Community Drop-in

If you'd like to know more about Environment Plans for the following:

- Pipeline Network Decommissioning
- Steel Pile Jacket Decommissioning
- Jack Up Rig Plug and Abandonment
- Kipper Sub-Sea Drilling
- Turrum Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage Project

The Esso Consultation Team will be hosting a community drop in between 5.00 pm and 6.00 pm on:

- Thursday, 30 May 2024 at Bellevue on the Lakes, Lakes Entrance

Please email us at consultation@exxonmobil.com

Please connect us with other interested people

If there is anyone you know who may be interested in our activities, we encourage you to share this information with them.

Awardees Liz Hansen and John Hanson, chief executive officer Ernie Metcalf, and awardees Grace Jobling, Christopher Dean and Kaye Thurbon.

Honouring local disability work

Distinctive Options recently reviewed and considered the best ways to acknowledge extraordinary work and/or contributions to the organisation, now and moving forward.

Unlike Noweyung Ltd, which had the scope and facility within its constitution to award life memberships in recognition of outstanding service, this is not within Distinctive Options' constitution.

The board of Distinctive Options, following its review, approved a new criteria to be able to honour outstanding service and/or contributions via a new lifetime fellowship awards.

The first recipients for this award due to their outstanding contributions were made to the six living life members of Noweyung.

The lifetime fellowship award ensures an important, ongoing link, between Noweyung and Distinctive Options post the recent merger/acquisition.

At an award ceremony on May 21 in Bairnsdale, Distinctive Options' chief executive officer, Ernie Metcalf, met with five of the proud lifetime fellowship awardees who all live in East Gippsland.

Lifetime fellowship awardees all commented how humble and delighted they are to be recognised by Distinctive Options for their long and ongoing contributions to the disability sector.

The CEO advised the sixth recipient, Tony Graham who lives in Port Melbourne, will be presented separately with his award.

Echo Bend gearing up for winter festival

Don't want to travel too far for a few days away? Head out to Echo Bend Camping Park for the King's Birthday break.

Coinciding with the East Gippsland Winter Festival, Julie will be once again allowing people to join in some fun on Saturday, June 8, and make some lovely lanterns to decorate your camp site or the grounds ready for winter.

This unique caravan/camping park is a hidden gem.

There are powered and unpowered sites for tents, roof tops, camper vans and caravans.

There are also clean amenities with hot showers.

You can find a secluded spot, observe the wildlife or bring a group and enjoy telling stories around a camp fire while cooking marshmallows, a nice way to relax for a few days away from the house, business or farm.

You may even be lucky to spot some friendly wallabies in the nearby bush.

To get a bit of exercise you can venture on a small trail from the camp ground to the National Park, visit the Den of Nargun.

The camping park adjoins the Mitchell River National Park, just 45 minutes from Bairnsdale on the Linde-now-Dargo Road.

Echo Bend Camping Park will once again be holding lantern making workshops over the King's Birthday break, coinciding with the East Gippsland Winter Festival. (PS)

LATROBE VALLEY Express
We've got news for you

Gavin Joiner speaking to Orbost History Walk participants outside the Butter Factory. Twenty-one people took part in the walk held on Monday, May 20, which was organised by the Orbost and District Historical Society.

Stepping through time on history walk

Looking at Orbost History while taking a gentle stroll on a cold day seems like a good way to spend an hour.

Add a good cuppa at the end and a chat with friends at a local café and that's even better.

Twenty-one people, a combination of newer residents and people who have lived in the region for many years, joined in the Orbost and District Historical Society's Orbost History Walk on Monday, May 20.

Organiser, Lynn Craig, herself a newbie to Orbost, said how much she enjoyed being involved.

"I've learned a lot about Orbost as a result," she said.

"I was thrilled to meet people who enjoy living here and want to know a bit more about Orbost's history.

"For instance, we stood outside the disused Mechanics Hall in Browning Street which has witnessed many of the major events in Orbost over the past 100+ years and I thought 'If only these walls could speak'. Imagine the din and excitement of roller-skating, of concerts and balls, parties, political meetings, flower shows, and silent and talking pictures. In fact, roller-skating was so popular here that it wore out the floor!

"I also realised that guest houses most definitely have a lot of stories to tell. Before the days of motels, hotels and guest houses provided accommodation for anyone coming to Orbost. We saw two of these on our History Walk - Orbost House in McLeod Street, and Orotava House in Clarke Street.

"As well, we walked past nurse Caroline Jensen's home in Clarke Street. Ms Jensen was a 'ladies nurse' and used her home as a place where babies were born and where anyone in need of medical and nursing care could stay. This was in the days before Orbost Hospital existed.

"Another building with a long and interesting history is the old butter factory in Forest Road. After the butter and cheese making era finished, it was used by local farmers as a bean-sorting shed.

"Special thanks go to Gavin Joiner who told us about the dried culinary bean industry in the Orbost district.

"One of the last sites that we passed in McLeod Street was where Orbost Motor Works used to be. This was right next door to the Club Hotel's stables. During World War II, Orbost Motor Works was a hive of activity (and probably 24 hour-a-day noise as well), because this was where sprockets for Brengun carriers were tooled with a lathe.

"And lastly, a thank you to all who came on our Orbost History Walk and I hope you enjoyed it as much as I did," Lynn said.

INVITATION

Gippsland Basin Decommissioning

Platform Decommissioning Workshop

Esso Australia is the operator of offshore facilities in Bass Strait which extract, process and store oil and gas, then transported onshore for further processing and distribution to customers. Esso's assets consist of 421 wells, 19 platforms, five subsea facilities and more than 800 kilometres of subsea pipeline.

After delivering energy to Australia for over 50 years, some of Esso's Bass Strait facilities are no longer producing oil and gas. As **planning for decommissioning** progresses, we are focused on safely shutting-down non-producing facilities and ensuring they stay safe throughout the entire decommissioning process. We are committed to identifying and actively engaging with communities to find solutions that balance environmental impacts and benefits with the needs of the community and within the regulatory requirements.

Esso Australia would like to invite you to attend a stakeholder forum to discuss platform removal as part of our decommissioning activities in Bass Strait.

Forum attendees will hear more about decommissioning activities for the platforms and can discuss how these activities may impact their functions, interests, and activities.

Date: Wednesday 19 June 2024

Time: 2pm – 5pm

Venue: Welshpool Golf Club
95 Port Welshpool Road, Port Welshpool

Please register your interest at consultation@exxonmobil.com.

During our planning for platform removal as part of our decommissioning in Bass Strait, it has been identified you may be **a relevant person based on your functions, interests and activities** and may wish to be consulted about these platform removal decommissioning activities.

The purpose of consultation is to help you make an informed assessment of the possible consequences of decommissioning activities on your functions, interests and activities and to advise us of any potential impacts or risks that may affect you. Your involvement will help to inform the identification of the impacts and risks and to consider what mitigations may be required to address these risks. You can find more information on our Decommissioning activities on **our website**. We're continuing consultation on our Decommissioning activities in the Bass Strait, you can view the latest **Information Bulletin here**.

If you'd like to know more, please use the link to **Esso's Consultation Hub** or use the QR Code below to easily access information about our activities.

To help us better understand what activities you're interested in, how you want to be consulted, and any questions or feedback you may have, please complete our '**Esso Consultation Questionnaire**'.

If you'd like to discuss further, please contact the Consultation Team at **consultation@exxonmobil.com** or via phone on 03 9261 0000.

A summary of forum discussions will be provided to participants. Outputs from the forums will be used by Esso to inform the environment plan submitted to the regulator for consideration as part of the regulatory approval process.

Slow down, pay attention on roads

Police in East Gippsland and Wellington shires are encouraging drivers to slow down and pay attention, after recent collision data showed a 66 per cent increase compared to the same time last year.

Superintendent Mark Edwards said speeding and the use of mobile phones while driving were two significant factors playing a role in the collision jump.

"We're seeing some concerning behaviours around driver behaviour, particularly around some of the rural back roads, speeding," Supt. Edwards said.

"We're certainly keeping an eye on speed, because speed is factoring into a lot of our collision data, particularly on these rural back roads.

"The age demographic of people that are being killed (on the roads) generally sits in the male drivers under 25 but at the moment with the fatal collision data, it's older drivers that are featuring more in our data, so the 50s to 70s.

"Drivers around East Gippsland and Wellington will notice there have been speed reductions in certain areas where we believe that the speed zones are set too high for the type of roads that they are.

"We've done a bit of work in reducing those speed zones, but we've also doing a fair bit of work in policing those speed zones as well because we know from our collision data people are still driving too fast on regional back roads."

Supt. Edwards said the majority of those being caught using their phone are younger drivers.

"We've got issues around people who are on their devices, we've already had one fatal collision this year where a person on a mobile phone has struck and killed a cyclist," he said.

"Your license can disappear pretty quick if you choose to be on your phone, and our data tells us that people who are on their devices and being distracted are featuring in the collision data, in our serious injury data and the fatal collisions data.

"It's not just about the money and the demerit points, it's actually about your life, so stay off it."

Superintendent Mark Edwards has urged road users to take care, after recent collision data showed a 66 per cent increase compared to the same time last year in East Gippsland and Wellington shires.

It's not only driver inattention and speeding contributing to collisions, but the condition of the road itself.

"If you have a look around the region, roads in some areas have deteriorated with weather and traffic, so we're seeing some more broken up roads and potholes," Supt. Edwards said.

"Everybody has to be more vigilant, and a little bit more careful and reduce your speeds accordingly with the wet and icy conditions."

Esso
ExxonMobil

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

In planning for these activities and in accordance with the regulations, Esso will prepare application documentation e.g. Environment Plans about the risks and impacts these activities may have.

All artists

By JILLIAN MUNDY

TAS

FIRST Nations arts leader Tina Baum encourages more Aboriginal and Torres Strait Islander artists to enter Australia's richest landscape competition – the Hadley Art Prize.

It is awarded each August with a top prize of $100,000 and the winner's work going into the Hadley's Orient Hotel's permanent art collection in Nipaluna/Hobart.

Baum, a Gulumirrgin/Wardaman/Karajarri woman, and curator of Aboriginal and Torres Strait Islander Art at Australia's National Gallery was one of this year's judges.

"I would love to see more of our communities enter and really show what their connections to their Country means to them," she told the *Koori Mail*.

"We've got a lot of stories to tell whether it's about cultural connections or climate change, Sky Country, land, Country, water Country – it's all connected and we have a rich, rich connection.

"These notions of country are not devoid of the plants, the animals that are in there and the cultural layers that are in that landscape that are really important to many of the Aboriginal and Torres Strait Islander artists."

Continued next page

Tina Baum in the Hadley Art Award Exhibition beside the honourably mentioned work of Pitjantjatjara artist Iluwanti Ken. Tina encourages more First Nations artists to paint about their country and enter the lucrative annual Hadley Art Award.

NSW Aboriginal Woman of the Year 2025

Do you know the next NSW Aboriginal Woman of the Year?

A dedicated pillar of her community, the NSW Aboriginal Woman of the Year is a role model who promotes economic, cultural or social opportunities for Aboriginal people in NSW. If you have someone in mind, make sure you nominate her today.

Nominations now open

Open to all Aboriginal and Torres Strait Islander women.
Nominate now at **nsw.gov.au/wotya25** or scan the QR code.
Nominations close Sunday 15 September 2024.

NSW GOVERNMENT

LP2467

THUMBS UP / THUMBS DOWN

THUMBS UP: To the shire for considering the proposal of a footpath in Punt Road this will make it a lot safer for residents and rowers alike as all walk in the road at the moment.

THUMBS DOWN: To the able people who go to the pool and use the disability change rooms. There are only two, they make people with disabilities wait wet and cold, how rude. Also the people that use disability car parks without a disability permit, shame.

THUMBS DOWN: To the drunk people in the Nicholson Street Mall - kindness is free, why target innocent people? I hope you're seeking help for your problems.

THUMBS UP: To the staff at the Picnic Point Apple Farm who generously donate their product to the Salvation Army. God bless you all.

If submitting a Thumbs Up/Down

All items submitted for consideration for publication in Thumbs Up, Thumbs Down, must be signed and include the address and telephone number of the writer. (This information is not for publication but is required under the Newspaper Act.) Items should be limited to 30 words, and writers should note that due to the numbers received, only a selection can be published. No specific business names will be mentioned in Thumbs Up/Thumbs Down. **Write to 'Tom', c/- 'The News'**

Submit your thumbs up or thumbs down thumbs@eastvicmedia.com.au or online at www.bairnsdaleadvertiser.com.au

Grade five Toorloo Arm Primary School student Max Friend speaking to one of the many visitors. (PS)

Ollie Anderson answering questions from Andrea Kleehammer. (PS)

Be your hero

Grade five and six students at Toorloo Arm Primary School recently stepped into the shoes of a significant Australian and presented themselves to the wider school community.

They researched a person of interest, wrote a biography about them and then were able to get into character by dressing up as their significant Australian in an evening presentation. Students also had a diorama on display that depicted a significant event in Australia's history.

Principal at Toorloo Arm Primary Kerry said many parents, grandparents, carers and family members were impressed with the students' capacity to speak about the history and recall facts about the Australian Greats.

Emily Jackson as Edward Hargreaves, Arlia Beveridge as Steve Irwin and Gracie Lunny as Ash Barty. (PS)

The winner will be contacted by phone and published in the Papers on the 28th August 2024. All entries published in our Fathers Day feature for 2024

A number of old Orbost Municipal Band uniforms have been found while renovation works at the Orbost Customer Service Centre/Library were taking place.

Flags were also found with the uniforms - it's believed the items date back to the late 1970s, when it's understood the band wound up.

Band items discovered

While doing some renovations at the Orbost Customer Service Centre/Library, East Gippsland Shire Council staff have found some boxes of old Orbost Municipal Band uniforms and flags which date back to the late 1970s (when it's understood the band wound up).

The Orbost Historical Society has taken a uniform for its collection, however there a quite a few other uniforms (of varying quality) remaining.

The council service centre team is offering the remaining uniforms to anyone who may have had a connection with the band or has an interest in local history.

If you would like a keepsake, see the friendly team at the Orbost Service Centre - first in best dressed.

The uniforms are of varying quality as they have been in storage a long time, but would be a great memory for the right person.

Any items remaining by the end of August will be recycled through council's textile recycling facility.

Coalition MPs press for zonal tax expansion

JACK QUAIL

Liberal and National MPs are pressing Peter Dutton to expand tax breaks for regional and rural Australians in a bid to help ease the cost-of-living squeeze.

The intervention comes after Nationals leader David Littleproud hinted on Sunday that the Coalition was considering changes to existing zonal tax deductions, echoing comments made by the federal Opposition Leader, who said he was "happy to have a look" at tax settings in regional areas.

"We are working through a suite of measures. There is already a zonal tax rebate that is in place," Mr Littleproud told the ABC.

"The cost of living in regional areas is significantly greater because of the cost of transport fuel. So we want to make sure that we get that policy setting right."

First legislated in 1945, the Zone Tax Offset (ZTO) provides taxpayers residing in designated regional and remote areas a deduction of between $57 and $1173 in recognition of the limited services provided by government.

Despite substantial demographic shifts since their inception, the zone boundaries remain largely unchanged, and are currently based on data from the 1980s, meaning taxpayers in major regional centres that are home to considerable public services – including Darwin, Townsville and Cairns – receive deductions.

At the same time, taxpayers in many similarly sized regional cities do not receive any offset.

Nationals frontbencher Barnaby Joyce said the measure should be expanded to assist the "most needy" and cover additional areas. "There's some areas where it's just an absurdity that they pay tax at the same rate as some in the city," he said.

"They pay tax for public services and they don't get any."

Despite Mr Joyce's regional electorate of New England taking in the regional cities of Armidale and Tamworth, taxpayers there are not eligible for the ZTO.

> 'It's the sort of thing they talk about before elections; it's also the sort of thing that doesn't happen after an election'
>
> ANNE TWOMEY
> SYDNEY LAW SCHOOL

Liberal MP and house economics committee deputy chair Garth Hamilton, whose regional electorate of Groom includes Toowoomba and is similarly ineligible for the ZTO, welcomed discussion around expanding tax offsets in the regions.

"There's got to be an incentive for business to come out, for young families to come out to areas like mine," he said.

A review of tax concessions and payments in remote areas undertaken in 2020 by the Productivity Commission was scathing of the ZTO, stating the measure was "outdated", "poorly targeted" and found nearly half of all claimants lived in large coastal regional cities.

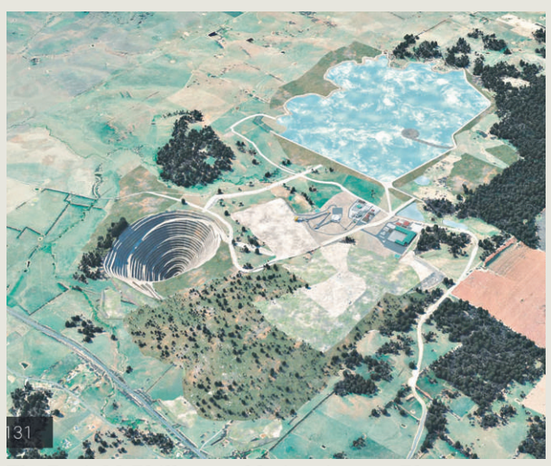
"There is no compelling justification for a zone tax offset in contemporary Australia," the report read. "Higher living costs or other aspects of life in remote areas do not warrant compensation through the tax system."

Finding no evidence to suggest the ZTO encouraged people to live and work in designated areas, the Productivity Commission suggested it be abolished.

Despite support within some segments of the Coalition, the constitutionality of the ZTO remains a potential impediment to its expansion. While never challenged in its near-80 year history, legal scholars argue the ZTO's validity remains uncertain as it could potentially breach the Constitution, which states the federal government cannot "discriminate between states or part of states" with respect to taxation.

"Because it's an offset rather than a tax rate ... there's some doubt about it," constitutional law expert and Sydney Law School professor emerita Anne Twomey said. She was doubtful the Coalition would press ahead with reforms to zonal taxation.

"Tony Abbott raised the same thing back in 2013 ... it's the sort of thing they talk about before elections; it's also the sort of thing that doesn't happen after an election."



Shafted in culture of anti-mine activism

THE ENVIRONMENT MINISTER

Tanya Plibersek in her ruling on the Regis goldmine near Blayney on Friday

"I have decided to make a partial declaration under section 10 of the ATSIHP Act to protect a significant Aboriginal heritage site ... from being destroyed to build a tailings dam for a goldmine"

The Regis McPhillamy goldmine site near Blayney in central NSW

What the Orange Local Aboriginal Land Council told the NSW Independent Planning Commission in a letter last year

It is a matter of concern to OLALC that a range of claims have been made on this issue, by people and organisations lacking the experience, expertise and authority to hold themselves out as authorities on Aboriginal Cultural Heritage. We question the motives of people and organisations who participate in promoting unsubstantiated claims and seek to hijack Aboriginal Cultural Heritage in order to push their agendas.

The Cultural Heritage Committee formed the view that a number of the key concerns raised and claims made in the EIS submission could not be substantiated.
It is on this basis that OLALC submits that the proposed development would not impact any known sites or artefacts of high significance.

THE MINING CHIEF

Association of Mining and Exploration Companies chief executive Warren Pearce in response to Ms Plibersek's decision

"It's scarcely believable, that the federal minister could uphold this objection, when a comprehensive state inquiry found that there were no unacceptable impacts on cultural heritage"

Continued from Page 1

"If any project, no matter how thoroughly consulted, negotiated, supported and assessed, can be knocked over by the objections of only a few people right at the end of the process, then how can any company or investor have confidence to invest in Australia.

"Section 10s (objections) have an exceptionally low bar to make an objection, and often cause significant delay."

Mr Pearce said the Regis McPhillamy decision would likely encourage more activists seeking to weaponise the act against project developers. "It's scarcely believable, that the federal minister could uphold this objection, when a comprehensive state inquiry found that there were no unacceptable impacts on cultural heritage," he said.

The Regis gold mine had passed all the necessary development approvals under federal and NSW law including the Environment Protection and Biodiversity Act. The company claims it has already invested $340m in the project.

For the NSW government – which approved the tailings dam for the mine, the key issue in dispute – the federal decision represents the potential loss of $200m in royalties.

Ms Plibersek said on Friday her decision to make a declaration under the ATSIHP Act did not kill the project as the company had claimed it had alternative sites.

"I have decided to make a partial declaration under section 10 of the ATSIHP Act to protect a significant Aboriginal heritage site near Blayney, in central west NSW, from being destroyed to build a tailings dam for a gold mine," Ms Plibersek stated in her decision.

"The Wiradjuri/Wiradyuri people, who traditionally lived around the Bathurst area, have significant spiritual and cultural connections to the headwaters of the Belubula River.

"The headwaters are of particular significance to Wiradjuri/Wiradyuri people and are linked to ongoing cultural practices of the area. They have featured in many traditions practised for generations including by Aboriginal people transitioning from youth to young adulthood.

"Some of these traditions have been disclosed to me privately and must remain confidential due to their cultural sensitivity. If this site were to be desecrated, it would be an threat to the continuance of Wiradjuri/Wiradyuri culture.

"Because I accept that the headwaters of the Belubula River are of particular significance to the Wiradjuri/Wiradyuri people in accordance with their tradition, I have decided to protect them.

"Crucially, my decision is not to stop the mine."

This is disputed by the company which in June warned Ms Plibersek via the Environment Department that a section 10s application would prevent development of the mine.

> 'Unclear, duplicative, and uncertain processes not only hut the mining sector but also create barriers to much-needed investment'
>
> TANIA CONSTABLE MINERALS COUNCIL OF AUSTRALIA

In a submission to the NSW Independent Planning Commission last year, the Orange Local Aboriginal Land Council disputed the application by other groups and claimed it didn't object to the mine. The OLALC said it had been misrepresented in the section 10s application and that it had never opposed the mine.

"As stated previously, we are not against approval for the mine, but we're not for it either. I suppose you'd say we are neutral," the group said.

OLALC in its submission said that the development would not impact "any known sites or artefacts of high significance".

It said of the currently identified items of Aboriginal Cultural Heritage that would be impacted, they could be properly managed and protected as long as conditions were placed on the project.

Minerals Council chief executive Tania Constable said the organisation had long warned about the "unclear, duplicative, and uncertain processes not only hurt the mining sector but also create barriers to much needed investment".

"For Australia to remain an attractive investment destination, our regulatory processes must be transparent and based on clear, consistent evidence," Ms Constable said.

"When transparency is compromised through shifting requirements, it not only undermines trust but also slows down vital projects integral to creating investment certainty, supporting regional jobs, businesses and the communities that benefit from minerals development."

Ms Plibersek said both Liberal and Labor governments had previously made decisions under section 10s and rejected the warning of sovereign risk.

"Building a waste dump on that particular site would have destroyed the headwaters of the Belubula River – a place of particular significance for local Aboriginal people going back thousands of years," said a spokesman for Ms Plibersek.

"The company is free to find another site for their waste dump. It's understood there were more than four sites investigated with 30 options in the mix."

Deputy Liberal leader Sussan Ley, when she served as environment minister, issued a section 10 decision involving the same traditional owner group (Wiradyuri traditional owners Central West Aboriginal Corporation) close to the Blayney gold mine site Ms Ley protected the site under section 10 for cultural significance to the Wiradjuri/Wiradyuri people, including "local Aboriginal narratives, songlines, ceremonies and cultural heritage".

Opposition resources spokesman Susan McDonald said Ms Plibersek's decision was a "blow to investor confidence by stealth".

"It makes it impossible for investor boards to make decisions in to invest in Australia," Senator McDonald said.

"The uncertainty is crippling for decision makers."

ExxonMobil

Esso™

An ExxonMobil Brand

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

In planning for these activities and in accordance with the regulations, Esso will prepare application documentation e.g. Environment Plans about the risks and impacts these activities may have.

Community Drop-in

If you'd like to know more about activity plans for the following:

- Steel Pile Jacket Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage (SEA CCS) Project
- Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)
- Pipeline Network Decommissioning

The Esso Consultation Team will be hosting community drop-ins between 5:00pm and 6:00pm on:

Wednesday, 21 August 2024 at The Criterion Hotel, Sale, 90 MacAlister Street

Thursday, 22 August 2024 at Off The Wharf café, Bullock Island, Lakes Entrance

Tuesday, 27 August 2024 at the Welshpool Memorial Hall, 49 Main Street, Welshpool

Wednesday, 28 August 2024 at Manna Gum Community House, 33 Station Street, Foster

To register your attendance, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (Slido) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure *Consultation on offshore petroleum environment plans* (link) to understand more about consultation on offshore petroleum environment plans assessed under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023*.

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

Please connect us with other interested people

If there is anyone you know who may be interested in our activities, we encourage you to share this information with them.

China iron ore rout risks budget billions

Continued from Page 1

was "not immune" from volatility in global markets. "This is exactly why we take such a cautious and conservative approach to Treasury's forecasts for resource prices and revenue," Dr Chalmers said. "We're following these developments very closely because of their potential impact on our economy and our budget."

While Treasury is preparing for a worst-case scenario, veteran budget watcher Chris Richardson said he doubted iron ore would hit $US60 a tonne next year.

"Treasury always assumes armageddon and armageddon hasn't happened till now," he said.

"If anything, I continue to think that we will beat the budget trajectory from here."

Mr Richardson estimated that every $US10 reduction in the iron ore price would result in a $10bn reduction in national income, with the federal budget similarly set to lose out on as much as $3bn due to the lower corporate tax take on mining industry profits.

MARTIN OLLMAN/NEWSWIRE
Treasurer Jim Chalmers

The iron ore sell-off has also raised alarm at the Reserve Bank, with governor Michele Bullock on Friday warning that a further downturn in the Chinese economy could drive a further reduction in Australia's GDP growth and the iron ore price.

"Developments in China can have quite a big impact on the way our trade develops, and therefore on our growth," Ms Bullock told the House of Representatives economics committee.

While noting China's GDP was still expected to expand in line with Beijing's 5 per cent target, she cautioned that its debt-ridden property sector was acting as a "very big drag" on overall growth. "China is really important for us ... It's our biggest trading partner, and it's very important in particular for the prices of the commodities that we export, in particular iron ore."

Ms Bullock also pointed the finger at state governments for causing a "large chunk" of the additional public spending that was putting upward pressure on inflation, and declared the infrastructure pipeline was exacerbating the chronic housing shortage.

Facing an election in October, Queensland Premier Steven Miles, who has unleashed a wave of additional spending including $1000 power bill rebates, 50c public transport fares and a 20 per cent vehicle registration discount, rejected Ms Bullock's claims.

"I didn't read that into those comments," he said on Sunday.

"What we are doing here in Queensland is supporting Queenslanders and building the infrastructure our state needs."

Senator Gallagher said she hadn't instructed state Labor governments to limit spending in light of Ms Bullock's comments.

"The Treasurer and I don't really tell other administrations, other governments, how to do their jobs," she said. "But our focus is really on making sure that our budget wasn't inflationary, but that it helped people with cost of living at the same time."

ADDITIONAL REPORTING: LYDIA LYNCH

Free dental care for more than 100,000 victorian kids

The Allan Labor Government's Smile Squad program has now delivered free dental care to more than 100,000 students – helping thousands of parents save time and money and keeping Victorian kids happy and healthy.

Minister for Health Mary-Anne Thomas and Minister for Children and Acting Minister for Education Lizzie Blandthorn visited Amsleigh Park Primary School to celebrate the successful program which is making sure thousands of children get the oral care they need – free of charge.

Delivered by mobile teams of dedicated oral health clinicians who travel across the state in bright orange vans, Smile Squad provides free check-ups, x-rays, teeth cleaning, application of fluoride and dental sealants, fillings, and root canals to school students.

Since the program launched in 2019 Smile Squad has delivered 200,000 free initial and follow up appointments to kids at government schools and provided more than 600,000 dental health packs which include a toothbrush and toothpaste.

A survey of students attending Smile Squad found that 36 per cent of them don't brush their teeth twice a day, and 16 per cent of them had never had their teeth checked by a dental professional before Smile Squad visited their school.

Across Australia, at least a quarter of children have experienced tooth decay and in Victoria dental conditions are the highest cause of preventable hospitalisations for children under 10.

Importantly, this transformational program has benefits that reach beyond Victorian kids. By delivering free dental care to Victorian kids, we are freeing up treatment places for more adults to be seen by our public dental services.

The Smile Squad program was first funded in 2019 with an initial $321.9 million investment by the Labor Government– the most significant investment in public dental health in the state since 2004.

The program received a $16.9 million boost in the Victorian Budget 2023/24 which will support Smile Squad to expand into low-fee non-government schools from 2026.

Victorian parents are encouraged to keep an eye out for information about Smile Squad and sign their kids up when the service next visits their school.

Minister for Health Mary-Anne Thomas said:
"Smile Squad is saving families time and money - ensuring that all Victorian government school students can get the high quality dental care they need, at school."

Reducing fire risk along rural roads in time for summer

The Allan Labor Government is supporting rural and regional councils to reduce roadside weeds and prepare for the upcoming fire season.

This year, 45 councils across Victoria will receive up to $85,000 each through the Labor Government's Roadside Weeds and Pests.

Rural roadsides can provide a breeding ground for harmful weeds and pests and this funding allows councils to implement control measures that prevent their spread.

The funding will assist councils with a range of activities along their rural roadsides, including treating and preventing blackberry, boxthorn and serrated tussock weeds, as well as managing rabbit populations.

Local Government Victoria and Agriculture Victoria work closely with local councils to ensure plans to tackle weeds and pests are tailored to their local area.

Weeds and pests cost the Victorian economy over $900 million each year. Invasive plant and animal species threaten native biodiversity, can have a serious negative impact on agricultural production, and contribute to the spread of fires.

Since 2017, the Labor Government has invested more than $22 million to help councils manage municipal rural roadsides, protecting Victoria's native biodiversity and reducing fire risk.

More information on the Roadside Weeds and Pests Program can be found at localgovernment.vic.gov.au/funding-programs.

Minister for Local Government Melissa Horne said:
"Reducing roadside weeds and pests is vital for protecting lives and properties in the lead up to the fire season, which is why we're helping councils to manage invasive plant and animal species."

Giving sexual harassment victim-survivors a voice

Non-disclosure agreements (NDAs) were meant to protect trade secrets. These days, too often, they're being used to silence victims of sexual harassment.

These victims – overwhelmingly women – are being asked to sign these agreements, as part of their settlement.

What is actually being bought is their silence – legally compelling victims to stay silent, even with their family and friends. Sometimes, even their doctor or psychologist.

By silencing victim-survivors, NDAs are also being misused to hide serial offending, protect perpetrators and employers' reputations.

It's why the Allan Labor Government will begin consultation on nation-leading laws to restrict the use of NDAs in workplace sexual harassment cases.

The engagement process will seek feedback on a number of potential protections, including:

Prohibiting NDAs unless requested by the complainant

Ensuring no attempts have been made to unduly pressure or influence a complainant to enter an NDA

Ensuring an NDA does not adversely affect others

The ability for the complainant to decide to waive their own confidentiality in the future

Review and 'cooling off' periods

Permitted disclosures (including to legal professionals, medical and mental health professionals, prospective employers, union representatives and support people)

Consultation on the legislation begins today and submissions are encouraged from victim-survivors – so we get this right. Victim-survivors can also provide their feedback anonymously via a short and confidential survey.

The community, businesses, unions, workers, and legal groups are also invited to participate with consultation open until 8 September.

At present, there is only one nation where laws of this kind currently exist – the province of Prince Edward Island, in Canada. The proposed legislation will be the first of its kind in Australia, and amongst the first in the world.

Legislating to restrict the use of NDAs in workplace sexual harassment cases was a key recommendation of the Victorian Ministerial Taskforce on Workplace Sexual Harassment.

For more information about the reforms – or to make a submission or complete a survey – visit engage.vic.gov.au/restricting-non-disclosure-agreements.

Premier Jacinta Allan said:
"Non-disclosure agreements are being used to protect perpetrators and silence victims. That's flat-out wrong."
"We've listened directly to victim-survivors who have been silenced, and this nation-leading reform will make sure they are heard."

Bec Judd helped Bianca Roccisano (left) celebrate her 39th birthday at Cecconi's. Picture: Instagram

Judd shines at big bash

WAG supremo Bec Judd has elevated a birthday party to an A-list event.

Judd – the model, designer and businesswoman on every event planner's wishlist – blessed the 39th birthday of Booby Tape founder Bianca Roccisano with her attendance.

The Italian-themed party was held at Melbourne hotspot Cecconi's on the weekend.

Ms Roccisano marked the event with a barrage of slickly stylised pictures of herself on Instagram.

Models, designers and stylists joined a long thread of congratulations. One fashion figure who couldn't attend the party admitted to feelings of FOMO (fear of missing out).

But Judd's presence got the party started. She added instant glamour, posing on a staircase alongside the birthday girl.

Ms Roccisano also posted a video of her luxe birthday outing, including a shopping trip to Chadstone.

Ms Roccisano co-founded the Booby Tape business with her sister Bridgett, and turned it into a multimillion-dollar enterprise.

Last year, the sisters from Mildura hosted a Halloween party in Hollywood to promote the brand.

The event was attended by LA superstars Justin and Hailey Bieber, Paris Hilton, Megan Fox and Machine Gun Kelly, and Paris Jackson.

Docs want justice

NEW DELHI: Crowds of Indian doctors dressed in white coats came as if ready for work on Saturday but instead stood outside hospitals demanding justice after the rape and murder of a colleague.

"We just want to be safe while we are doing our duty," said Sapna Rani, a 27-year-old woman doctor in the capital New Delhi who took part in a 24-hour nationwide strike by medics.

"The hospital is the last place where we should have to worry about our safety."

The killing of the 31-year-old doctor, whose bloodied body was discovered on August 9 at a state-run hospital in the eastern city of Kolkata, has focused rage at the chronic issue in a country where sexual violence is endemic.

An average of nearly 90 rapes a day were reported in 2022 in India.

Earth moves for Russians

MOSCOW: A magnitude 7.0 earthquake struck off the coast of Russia's far-eastern Kamchatka Peninsula early Sunday local time.

The local emergencies ministry said tremors were felt along the coast including in the region's capital Petropavlovsk-Kamchatsky.

The earthquake struck at a depth of nearly 50km just after 7am local time.

Deals, abuse, theft in west

Footscray in 'sad state', say students

EXCLUSIVE
Rebecca Borg
Suzan Delibasic

Terrified university students are wearing personal alarms and business owners are locking their doors during daylight hours amid escalating crime and anti-social behaviour in Melbourne's west.

Victoria University faces pressure to move its Psychology Clinic in Paisley St, Footscray after students reported confronting incidents including drug-fuelled violence and thefts, despite the presence of security guards in the area.

Traders also say crime has worsened, with some claiming it forced them to shut for good.

When the Herald Sun visited the once-thriving street, a woman, who appeared to be drug-affected, was punching the back of a car and shouting at passers-by including a mother and young child. A man was openly injecting metres from the psychology clinic, while a drug deal took place soon after.

One Victoria University student who does a placement at the clinic said she and her peers wore personal alarms for "protection" when in Paisley St.

"When I get off at Footscray Station I have to be hypervigilant," she said. "I'm not even on my phone.

Another student said she had seen people having drug-induced episodes on the street.

The students were asked to ensure they locked the door behind them when they entered the clinic.

Meanwhile, dramatic footage obtained by the Herald Sun shows a confrontation between an undercover security guard and a man who allegedly stole from a nearby supermarket.

The video shows a struggle between the alleged thief and the security worker as shocked bystanders watch. Police arrested the man within 10 minutes of the report being made.

+MORE ONLINE
WATCH THE VIDEO
heraldsun.com.au

Helen, who has owned a clothing store in Paisley St for almost 20 years, said she was assaulted after she confronted a thief who stole a shirt.

"I was very scared ... there has been ongoing drug use," she said. "My shop windows have been smashed twice; crime is very bad in this street."

A fast food outlet owner said his shop was hit twice in the past month, including brazen thieves stealing cash from the register in front of workers.

Victoria University said it was aware of student concerns and had implemented extra security measures.

Victoria Police said it would welcome the opportunity to meet with students and clinic management. "Everybody has the right to feel safe and to this end we conduct regular proactive patrols of the Footscray area as well as operations targeting serious and violent crime," a spokesperson said.

V2 - MHSE01Z01MA

FLGOFF Bryce Zerbes claimed the AIRCDRE Allan Pappin, CVO, AM Leadership Award. WGCDR Couper said leaders stand out from day one and given the 12-week period to excel; students need to prove themselves day in and day out.

The Leadership Award has a significant connection to Gippsland because AIRCDRE Pappin was a Commanding Officer of OTS in the 1970s. He is the current President of the Bairnsdale RSL and often returns to OTS as a guest speaker at dining-in nights.

WGCDR Couper said that on every graduation day, AIRCDRE Pappin sends her well wishes via text.

This level of "enduring community engagement", as WGCDR Couper put it, began in 1943 when flying training was conducted at RAAF Base East Sale. Flying training continued after the end of World War 2.

RAAF Base Sale is associated with a rich training history. The first Initial Officer Course at OTS in East Sale took place in 2008, but before that, training was conducted in the 50s out of the now-closed RAAF Station Rathmines, a WW2 flying boat base in Lake Macquarie, NSW. In 1961, the school relocated to RAAF Base Point Cook before coming to East Sale.

From Initial Military Training graduates just beginning their journeys in the Australian Defence Force to a man who was honoured for 40 years of service, festivities last week exemplified a full circle moment. It's serendipitous because Sergent (SGT) Simon Reddish, who received the Federation Star signifying long service last Thursday, said that as a graduate of four months, he didn't know how long he'd last in the ADF. Four decades later, he's integral to OTS.

"How fortunate are we here at OTS that we have Sergeant Reddish as part of our team with all his experience showing the way forward for our junior leaders," WGCDR Couper said.

"And that's the other significant thing here at OTS: the relationship between (who) we call a senior non-commissioned officer and a junior officer."

WGCDR Couper said people like SGT Reddish help shape and guide junior officers towards success. She noted that SGT Reddish is "incredibly good at being a military skills instructor". His team is responsible for training graduates in Drill and Ceremonial, which they performed at last week's graduation ceremony in impeccable navy and sky-blue uniforms.

Chief of Air Force (AIRMSHL) Chappell, in his address as the Reviewing Officer, discussed the Air Force uniform as an emblem of legacy and honour.

Asked to expand on his meaning, WGCDR Couper gave an example.

"For Anzac Day this year, it was the first time our trainees had actually been in their blue uniform. And I asked them, 'Who's participated in Anzac Day activities previously?' and there were a few. But I said, 'This was the first one in uniform. What did that mean to you?' And there's (an) immense amount of pride in the uniform. You think about those that have gone before you and the challenges that they've incurred, the sacrifices they've made, the achievements that have been made… and you do, you feel part of that family… it's an absolute privilege to wear it," she explained.

As important as the extended family students create throughout their training is the suite of emotions passed between relatives after the ceremonial proceedings was tremendous, as people ran to embrace each other and shed tears of pride.

For Flying Officer (FLGOFF) Casey-Lee Rebellato, who grew up on a cattle station outside of Newcastle, Defence is in her blood.

"My mother was a serving member in the Navy, she was a pianist, a musician. My partner was a marine technician in the Royal Australian Navy," she said.

"It's definitely challenging being away from your family for 12 weeks and being put through initial basic military skills. However, it's been very rewarding at the same time."

Asked what her ambitions are, FLGOFF Rebellato replied: "I'd like to have some form of influence over people and culture at the higher levels, but just getting a taste of it at this rank (FLGOFF) will be really exciting."

"I'll be posting to RAAF Base Pierce in Perth as the personal capability officer of No. 2 Flying Training School."

She said her role as a Personnel Capability Officer will involve similar responsibilities as a human resources manager.

Like the rest of the graduating group, FLGOFF Rebellato is about to embark on another exciting journey.

"I have spent a lot of time speaking with the graduates today… and they actually look back and reflect on what they've achieved, and this is the first step… Now the real excitement begins," WGCDR Couper said.

"For anyone that's considering joining, I would encourage them to go to the ADF Career centre and should they be successful and come through the doors, through the gates to commence training, you have a wealth of support behind you," she added.

"We will challenge you, and you will grow, and you will form some of the best friendships and relationships that you ever have."

FLGOFF Abbey Thomas receiving the Military Skills Award.

PLTOFF Bryce Zerbes was the parade's Colour Bearer, pictured carrying the Governor General's Banner for Officers' Training School. PLTOFF Zerbes was awarded the AIRCDRE Allan Pappin CVO AM Leadership Award signifying excellence in leadership, Defence values and academics.

PLTOFF Ashlee Hooper receiving the Air and Space Power Award.

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

In planning for these activities and in accordance with the regulations, Esso will prepare application documentation e.g. Environment Plans about the risks and impacts these activities may have.

Community Drop-in

If you'd like to know more about activity plans for the following:

- Steel Pile Jacket Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage (SEA CCS) Project
- Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)
- Pipeline Network Decommissioning

The Esso Consultation Team will be hosting community drop-ins between 5:00pm and 6:00pm on:

Wednesday, 21 August 2024 at The Criterion Hotel, Sale, 90 MacAlister Street

Thursday, 22 August 2024 at Off The Wharf café, Bullock Island, Lakes Entrance

Tuesday, 27 August 2024 at the Welshpool Memorial Hall, 49 Main Street, Welshpool

Wednesday, 28 August 2024 at Manna Gum Community House, 33 Station Street, Foster

To register your attendance, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (Slido) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure Consultation on offshore petroleum environment plans (link) to understand more about consultation on offshore petroleum environment plans assessed under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023.

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

Please connect us with other interested people

GP1673124

Members of opening party for the Great Southern Rail Trail extension on Friday, August 16 included (L-R) Wellington Shire Councillors Carmel Ripper and Marcus McKenzie, Rail Trails Australia representative Damien McCrohan, South Gippsland Shire Councillor John Schelling, Wellington Shire Councillor Garry Stephens, Gippsland South MP Danny O'Brien and Judy Kennedy a member of the original Tarra Trail committee.

Toot, toot trail to Yarram open again

THE 21-kilometre extension of the Great Southern Rail Trail, from Welshpool and Alberton near Yarram, is now officially open.

The extension, opened last Friday by officials from the Wellington and South Gippsland shires, increases the total length of the trail, from Nyora to Yarram, to an impressive 129 kilometres.

It also clears the way to connecting South Gippsland and Bass Coast to the 1100-kilometre Gippsland Odyssey Trail, one of the longest trail networks in Australia, after the completion of "the missing link" from Woolamai to Nyora, presently in the planning stage.

Among those in attendance were Wellington Shire Councillors Carmel Ripper, Marcus McKenzie, and Gary Stephens, Rail Trails Australia representative Damien McCrohan, South Gippsland Shire Councillor John Schelling, the Member for Gippsland South Danny O'Brien and Judy Kennedy of the original Tarra Trail committee.

There was also a strong crowd of rail trail supporters, many of whom had ridden out from the Goods Shed at the Yarram Tarra Trail Reserve, ahead of the 2pm opening, to Gellion Street, Alberton for the chance to win a Jamis bike.

Integrated Transport Strategy, have your say

BASS Coast Shire residents are encouraged to have their say on the Integrated Transport Strategy (ITS). A strategy that is aimed to meet people's needs and align with Council's strategic ambition, help better manage car use and provide a more user-focused set of alternatives, such as walking, cycling and public transport. In addition, the ITS is also an opportunity to enhance streetscapes and the vibrancy of townships in Bass Coast.

The Bass Coast Shire is known for its stunning coastline, charming townships, and vibrant community. However, as the population continues to grow and the demand for transport services increases, it is important to develop an ITS that will make the region more accessible and sustainable in the future.

One of the key goals of this strategy is to enhance the townships in Bass Coast by improving connectivity between them. This could involve the development of new cycling paths and walking trails, as well as better public transport connections. By providing residents and visitors with more options for getting around, the shire can help to create a more vibrant and connected community.

In addition to improving connectivity, the integrated transport strategy will also aim to better manage car use in the region. By encouraging people to use their cars less and opt for more sustainable modes of transport, the shire can help to reduce traffic congestion and create a more sustainable environment for future generations.

The background report released in July 2024 looked at transport patterns, population data, car parking, the existing transport network, emerging transport technologies and implications for Bass Coast.

This survey is a chance for the community to have their say on what they believe will make Bass Coast a better place. The survey remains open until August 31. Visit engage.basscoast.vic.gov.au/its.

national science week 2024

BASS COAST SCIENCE FAIR

Sustainable Science in our Everyday

What do a hovercraft, a volcano, paper daisies and magnets have in common? You can find them all at the Bass Coast Science Fair being held in the Wonthaggi Town Hall Mon-Wed this week.

We have some wonderful entries in the fair – from kids, teenagers and adults. And if you come along on Wednesday at lunchtime you can even see a couple of demonstrations!

Times:

Monday 19th August – 11am to 1pm set up; 1pm – 3pm is judging. Closes at 4pm

Tuesday 20th August – 11am – 4pm Open.

Wednesday 21st August – 11am to 1pm open; 1pm prize giving and afternoon tea; Take down of entries and closing at 3pm.

Entry $5 for adults which includes 3 raffle tickets.

Uncertain future for Bush Nursing Centres

Gippsland East Nationals' MP, Tim Bull, has called on the State Government to provide important financial support to rural Bush Nursing Centres (BNCs), which face an uncertain future.

Speaking in Parliament, he said the BNCs in Cann Valley, Gelantipy district, Dargo, Swifts Creek, Ensay and Buchan all play a critical role in their local communities, but most faced significant financial challenges.

"On top of their budgets being reduced by 10 per cent, I am being told by some local BNC representatives, that even more alarming is the government expects them to cover the nursing staff wage increases recently agreed to by government of 28.4 per cent between now and 2027. They simply cannot do this," Mr Bull said.

"There is no question the nurses deserve a pay rise, but it cannot be implemented without financial support provided to the BNCs to meet these increased costs.

"Nurses do an amazing job, and our bush nurses have an extensively dynamic skill set to adapt to the range of care needed in rural settings.

"However, it is completely unfair that our remote care centres have not only had a funding cut, but the Minister remains silent on government support for these wage increases.

"The Allan Labor Government is playing a dangerous game with rural and regional critical health services, and we want to see no change in employment, outreach capacity or service provision.

"The great fear is that without the capacity to pay, nurse hours will be reduced and that is not an outcome that is acceptable.

"It is appalling that I need to stand in Parliament and request that the Allan Labor Government provide some clarity on this.

"The reality is these situations, along with our health system cuts more generally, the state of our county roads and a litany of other issues, is all a result of the catastrophic mismanagement of the state's finances.

"Even Labor's own budget papers say we are headed for a debt of $186 billion by 2027 and interest repayments will hit $26 million per day. They can't manage money and we pay the price," he said.

Buchan (inset) and Cann Valley Bush Nursing Centres are two of the six BNCs in the Gippsland East electorate that face an uncertain time.

THUMBS UP / THUMBS DOWN

THUMBS UP: To the shire for cleaning and clearing the Wuk Wuk and Calulu Bridge entry and exit verges. Also for mulching the Wy Yung Calulu Road verges, it's now much safer and appreciated by all road users.

THUMBS UP: To the Wy Yung Bakery on Monday, August 12, who chose to prioritise their customer base over profits with free bakery items on what was a difficult day for production. Best of luck moving forward.

THUMBS UP: To all the football and netball club volunteers in East Gippsland, with the season drawing to a close some well earned rest is now in sight. Thank you all for your valuable community contribution.

THUMBS DOWN: To the neighbour of Eastwood Early Learning Centre. Your wood smoke is pouring into their yard each morning. How much asthma and illness has your choice of heating caused?

THUMBS UP: To the local council for maintaining the East Bairnsdale playground regularly - it's looking great.

THUMBS DOWN: To the person who set a fish trap on Progress Jetty. At 10am on August 15 I found a swan with rope wrapped around its neck. I released it and handed the trap to a shire officer.

THUMBS DOWN: The toilets in Bairnsdale Main Street are disgusting, filthy, smelly and poorly cleaned. These would have to be the worst toilets I have seen, these need to be brought to attention.

If submitting a Thumbs Up/Down

All items submitted for consideration for publication in Thumbs Up, Thumbs Down, must be signed and include the address and telephone number of the writer. (This information is not for publication but is required under the Newspaper Act.) Items should be limited to 30 words, and writers should note that due to the numbers received, only a selection can be published. No specific business names will be mentioned in Thumbs Up/Thumbs Down. **Write to 'Tom', c/- 'The News'**

Submit your thumbs up or thumbs down thumbs@eastvicmedia.com.au or online at www.bairnsdaleadvertiser.com.au

School maintenance boost

The State Government is ensuring students across East Gippsland will continue to have access to world-class facilities after maintenance works are carried out at local schools.

Member for Eastern Victoria Tom McIntosh last week announced four schools in East Gippsland are included in the Planned Maintenance Program (PMP), with funding for high priority maintenance across Victoria's government school network.

Lakes Entrance Primary School will receive $686,343 in funds for clean down works as well as various repairs.

Bruthen Primary School has been allocated $531,882 for work on its Shelter-in-Place building, with roof works, structural works, and switchboard works set to take place.

Bairnsdale Secondary College will receive $1.6m for ceiling repairs and roof works, repainting works, revarnishing, switchboard works, and repair of walls.

Works on Nicholson Primary's Shelter-in-Place building will also take place, with $210,006 allocated to the school.

This will allow them to undergo fascia replacement, repainting, and structural and roof works.

"Local students deserve the best facilities close to home. By upgrading and maintaining local schools, we are giving young people in East Gippsland the best chance of a quality education," Member for Eastern Victoria Tom McIntosh said.

The PMP provides funding to address high-priority maintenance across Victoria's government school network.

Works are determined by a rolling facilities evaluation process, which provides up-to-date information on the condition of schools to create a faster and more targeted allocation of funding.

The government is building and upgrading the Education State so every student can access a great local school and a quality education no matter where they live.

Member for Eastern Victoria Tom McIntosh (right) with Lakes Entrance Primary School principal Simon Prior, one of the schools funded for clean down works as well as various repairs.

"This program is about ensuring that every Victorian school is kept up-to-date, so that every child can access a high-quality education in a high-quality environment," Minister for Education Ben Carroll said.

"We are constantly evaluating our schools and making sure every single classroom is safe, engaging, and will complement the top-class education we are committed to providing."

Keeping safe

East Gippsland Climate Action Network recently hosted an afternoon discussion centred around the impacts of climate change. (PS)

Representatives from local agencies and community members came together recently for an afternoon exploring the questions around keeping safe in East Gippsland as impacts of a changing climate are felt.

Hosted by volunteers from East Gippsland Climate Action Network (EGCAN), those present considered exposures, sensitivities and assets in the local setting. Participants shared ideas, experiences and knowledge focussing on those three areas as well as the capacity for adaptation to a heating climate.

The workshop at the Eagle Point Foreshore Hub, was facilitated by Vicki and Alee from Friends of the Earth, and proved to be successful in bringing together concerns and positives from a number of sectors.

"We acknowledge that East Gippsland covers a very large area, but small groups and neighbourhoods having more conversations will increase people's understanding of local risks around climate impacts.

"Ultimately we hope people will become more prepared and connected," Nola Kelly, one of the organisers from EGCAN, said.

Further stages in EGCAN's Climate Ready Communities project are planned, but organisers were heartened by the willingness of attendees to work together on this important topic.

Faster 40 years ago

Nationals Member for Eastern Victoria Region, Melina Bath, has moved a take note motion in state parliament condemning the State Government for its mismanagement of Gippsland rail upgrades.

Ms Bath's motion cited the fact that Gippsland train travel times to Melbourne have worsened under Labor.

"Forty years ago, in 1984, a train trip to Melbourne departing Traralgon was 40 minutes faster than it is today," Ms Bath said.

"The trip to Flinders Street when John Cain was the Victorian Premier took one hour and 40 minutes, however under Premier Allan the duration is now two hours and 33 minutes.

"Passengers have suffered 10 years of service disruptions with no time efficiency gains and despite a multitude of false claims, Gippsland train travel is neither more reliable nor faster under Labor.

"Labor has shunted Gippsland commuters to the end of the queue while city-based infrastructure projects take precedence."

Member for Morwell, Martin Cameron, said V/Line had failed to meet any rail punctuality targets between August 2015 and June 2024 – except in January 2023 when the train service did not operate.

"The poor performance on the Gippsland line and a constantly changing timetable is beyond frustrating for commuters who deserve a reliable service," he said.

"We know Gippsland's never ending train chaos will continue while Labor keeps preferencing its city centric big build, but despite all its the spin it cannot hide the poor performance figures."

Ms Bath said it appears 21st Century technology cannot overcome Labor's ineptitude and mismanagement.

"Labor cannot manage projects, it cannot manage rail upgrades and Gippsland commuters are paying the price."

The Nationals' Melina Bath has taken Labor to task for its mismanagement of the Gippsland rail service, after old timetables show the trip to Melbourne from Traralgon is now 40 minutes longer than it was 40 years ago. PICTURED: Leader of The Nationals Peter Walsh, Nationals Member for Eastern Victoria Region, Melina Bath, and Member for Morwell Martin Cameron. (PS)

Punch-drunk Labor faces rebuild

LIAM MENDES
PAIGE TAYLOR

A shell-shocked Northern Territory Labor Party was on Sunday beginning to consider the reality of a two-term rebuild after losing 10 of its 14 seats at Saturday's election.

One Labor source said CLP senator Jacinta Nampijinpa Price was correct on Saturday when she predicted that Chansey Paech, who had been the deputy chief minister, would want the job of leading the opposition.

However, there was some doubt within Labor about whether he was the right person to take over from chief minister Eva Lawler – who sensationally lost her seat of Drysdale – given he was in a leadership role in the lead up to the party's wipe-out.

"He wasn't in charge, but he was there and sometimes it is the optics," one Labor source said.

"People are still in shock I think."

Other insiders were saying Selena Uibo could be a solid choice because she is "a perfect opposite to Lia" (Finocchiaro). Like the new chief minister, Ms Uibo was born and bred in the Territory.

Ms Finocchiarom, the incoming chief minister and Country Liberal Party leader, is a former lawyer while Ms Uibo is a former schoolteacher.

Ms Finocchiaro's father built a career as a senior public servant. Ms Uibo's mother is Nunggubuyu from Numbulwar and Wanindilyakwa from Groote Eylandt, and her father is a second-generation Australian of Estonian and South African origin, born in Sydney.

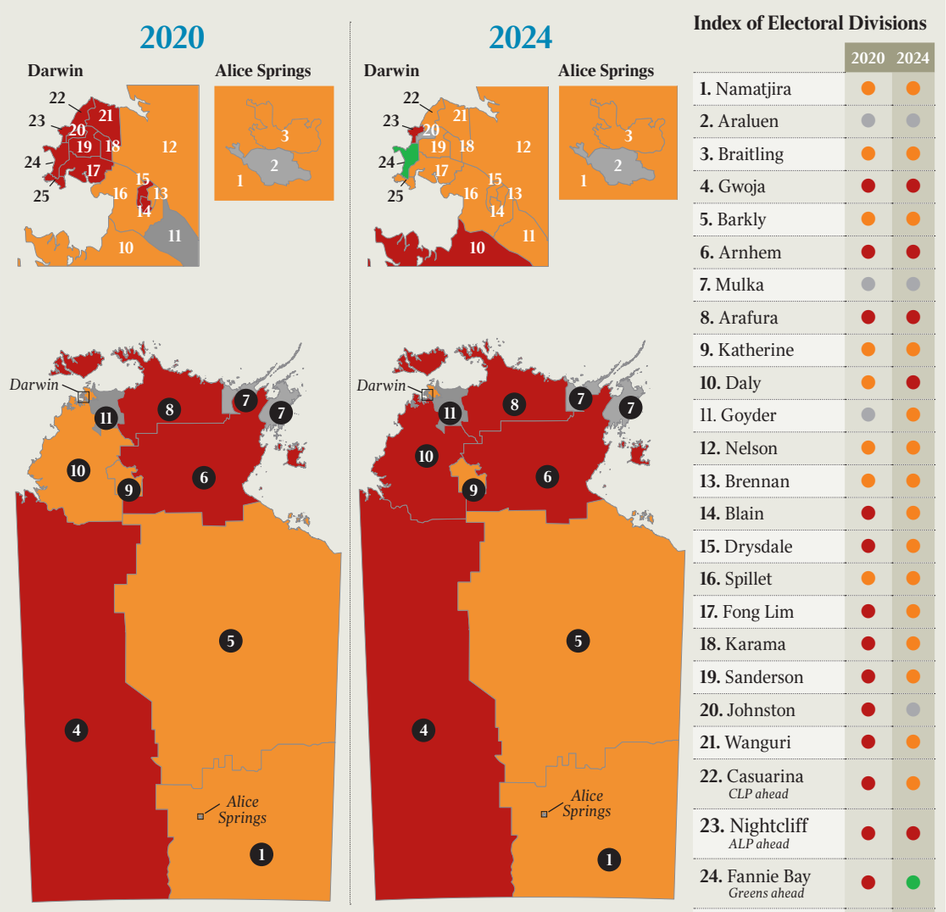
Territory Labor crisis meetings are expected to kick off early this week as the party comes to terms with what has happened and as they wait to find out whether they hold any urban seats.

At the close of counting on Saturday, Labor had just four seats, all in the NT bush – Mr Paech in Gwoja, Ms Uibo in Arnhem, Dheran Young in Daly and Manuel Brown in Arafura and .

Nightcliff, previously the safest seat in the Territory and held by former chief minister Natasha Fyles, was on Sunday too close to call.

Other key predicted Labor losses included mining minister Mark Monaghan, former police minister Brent Potter and environment minister Kate Worden.

In the week before election day, Labor noticed CLP had "gone up a gear". Ms Finocchiaro was clear and engaging at her Sky News Australia debate on Wednesday against a much more experienced Ms Lawler. Labor insiders have told The Australian they initially felt the CLP may have been overconfident. This was in part because some commentators were predicting a very close result and even a hung parliament.



However, towards the end of the week, there was a clear difference in the attitude and demeanour of the leaders. Ms Lawler was not communicating as crisply as usual, while observers said Ms Finocchiaro had significantly more confidence.

Labor sources who spoke to The Australian on Sunday felt the instability in the party was one factor that hurt them. The exit of Ms Fyles from the leader's job over undeclared shares felt like a turning point in hindsight. "The Natasha era was shocking, the Gunner era was pretty bad, we really underestimated how pissed off people are," one said. "Our performance is reflective on the opposition that has been elected. Fyles is the one who has held her seat and she caused a lot of this."

Mountain of debt a huge pile to climb

PAIGE TAYLOR
ANALYSIS

Lia Finocchiaro inherits a wicked problem: the Northern Territory government's most high-profile challenge is crime but behind the scenes the deeper crisis is debt.

Her ability to address the crime and social dysfunction in Alice Springs and beyond is severely impaired by the fact the Territory of 233,000 people is a financial basket case. It has gone beyond anything a federal bailout can fix, though it has been a long-establish practice for the federal government to reward failure with more money in the NT.

The Territory has a net debt of $10.82bn. In Tasmania, there is sheer panic over a $3.5bn debt on an island of 541,000 people. Keep in mind, Tasmania does not have the social problems of the NT.

And the work of the Territory government is unique because 30.8 per cent of residents are Indigenous.

Health editor Natasha Robinson showed us in an eye-opening reports this year that central Australia is a global diabetes capital.

NT hospitals are overwhelmed with the grim work of amputations on younger and younger Indigenous people. In Arnhem Land, men die on average aged 54. All manner of chronic and preventable illnesses hit the top end's Indigenous residents at shocking rates.

In responding to violence, alcohol-fuelled chaos and family dysfunction in Alice Springs earlier this year, Anthony Albanese called these "complex problems".

These are also expensive problems.

The evidence is in that what helps keep children on the right path is not a custodial sentence when they are 16.

It starts with pre-natal programs that support pregnant young women to make good choices, it requires early childhood programs, early interventions when families are struggling and it all costs a lot. It does not, however, cost as much as dealing with the results.

As opposition Indigenous affairs minister Jacinta Nampijinpa Price told the Sky News Australia's election panel on Saturday: "We can decrease incarceration by dealing with the problem when they're children."

The Territory has not managed its federal grants well for many years and this is going to be a difficult problem for Finocchiaro.

The Yothu Yindi Foundation claims NT governments are beholden to "an administrative class" of bureaucrats who mostly live in Darwin in the seats that both sides of politics need to get elected.

Five years ago, economist John Langoulant told the Territory government that it was overpaying its 300 highest-ranking bureaucrats by about $80,000 a year each.

They were earning between $217,533 and $233,565 a year each but he found they weren't doing the work to justify those wages. The former West Australian under-treasurer recommended they all get pay cuts. Of course, this did not happen.

At the same time, the NT government spent $300m on a bar and dining precinct on the Darwin waterfront. And while the NT population rose 21 per cent, the size of the Territory's public service increased 41 per cent.

Chief minister Finocchiaro lays down law

Continued from Page 1

she said. "We have just got to stop ignoring that people are doing it tough.

"Yes, the government has done a number of things but we need to have a look at trying to help people to get through this because otherwise we will be punished in the same way."

The CLP is yet to name a candidate to take on Ms Scrymgour in Lingiari, but Coalition sources say the seat is a must-win if the Opposition Leader is to win the election.

The CLP secured a 4.51 per cent two-party-preferred swing to it from the last election, despite large swings away from the Coalition more broadly. It is one of the most marginal electorates in the nation, held by 0.9 per cent.

"It gives us brand presence back in that market," a Coalition source said.

"To win government, Lingiari is one of the first that has to come our way."

NT Labor presided over a debt blowout that is now almost $11bn and a flatlining economy. Treasury recently predicted the NT would begin making surpluses within 18 months as royalties from emerging industries began to flow.

However, it was crime – particularly in Alice Springs – that was a frequent topic of discussion in the campaign. So was family dysfunction and the plight of children living in violent homes or with irresponsible adults.

Curfews brought temporary relief. Federal opposition spokeswoman on Indigenous affairs Jacinta Nampijinpa Price, a Warlpiri-Celtic woman who lives in Alice Springs, said there was not enough early intervention in the lives of Aboriginal children at risk, arguing this was fuelling the youth crime crisis.

The chaos in Alice Springs on Sunday followed a football game where spectators from the communities of Papunya and Hermannsberg turned on each other, yelling and brandishing weapons.

One witness said they were "terrified" when they saw the two groups wielding hatchets, a bright blue baseball bat, massive sticks and a garden maddock. The witness said the there were only unarmed Aboriginal Community Police Officers present.

NT Labor was hit hard from the right and the left on election day. Labor had 14 seats before the election and is now likely to hold just four, with the CLP on track to win 16 seats. The Greens were poised on Sunday to claim their first NT seat, the Darwin suburb of Fannie Bay, the first time Labor will not hold the seat in 30 years.

So just who is the Territory's new leader?

PAIGE TAYLOR

Lia Finocchiaro was 28 and only a year into her parliamentary career when she became collateral damage in a Country Liberal Party coup against its leader Terry Mills. It was 2013 and one of new leader Adam Giles's first acts was to fire Ms Finocchiaro – Mr Mills's ally – from his cabinet. The youngest star of the CLP had been a minister for just seven days.

Mr Mills had known Ms Finocchiaro and her family for many years by then because his son went to school with her at Darwin's Kormilda College.

As Mr Mills and Ms Finocchiaro got into a lift together outside the Speakers' office, he gave some advice.

"I said 'We are going through all sorts of challenges here but please, Lia, play the long game'," Mr Mills said.

"And God bless her, she has played the long game. I am really proud of her."

In Darwin, the Finocchiaros have become a large and important family. Last October, Ms Finocchiaro told how all four of her grandparents migrated from Italy to Australia in the 1950s "in search of opportunity and a better life". The parents of Ms Finocchiaro's father chose Darwin.

"I am so thankful that they made the Territory home," she wrote on Facebook in a post that coincided with Grandparents Day.

"My father was born here, I was born here and my children were born here."

She posted a photo of her paternal grandmother Rita standing with her and her sister when they were little girls.

"(She) gave us amazing love and support, and we are blessed to have my Nonna Rita in our lives at age 97," Ms Finocchiaro wrote.

Among the Finocchiaros of Darwin are successful property developers Ross and Terry, her uncles.

Ms Finocchiaro's father built his career as a public servant in the Northern Territory's planning department.

After high school, Ms Finocchiaro studied law and international studies at the University of Adelaide.

She returned to Darwin and worked as a lawyer at Clayton Utz. In 2012, she was a finalist for Young Australian of the Year because of her charity work for children, the prevention of SIDS and advocacy for fairer pay and representation for women.

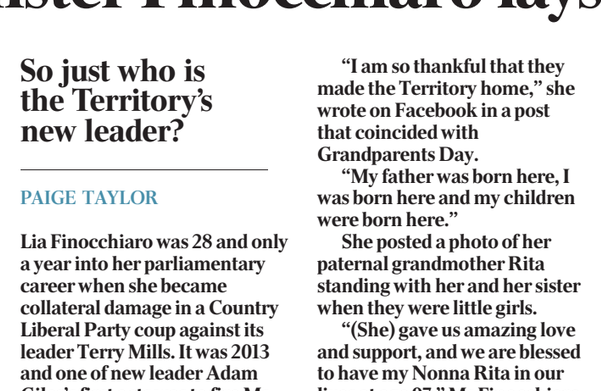
Those close to Ms Finocchiaro say she is considered far less conservative than some others in her party but she is also pragmatic and willing to compromise.

They say she supported the Indigenous voice to parliament for some time before announcing she would vote no at the referendum last October, citing the proposal's lack of detail.

Now 39, Ms Finocchiaro is married to Sam Burke and they have two children. Mr Burke's father, Denis Burke, is a former CLP leader and was NT chief minister from 1999 to 2021.

Mr Giles, the former NT chief minister who now runs Hancock Agriculture and S. Kidman & Co, told The Australian Ms Finocchiaro had "Territory tenacity".

"I think she will make an outstanding leader," he said.



"From as far back as 2014-15 I said she would be the next Country Liberals chief minister.

'The opportunities to grow the NT and northern Australia are vast and Lia is the best person to provide the direction to do this, but first crime has to be addressed so people want to live, stay and play in the NT and do it safely," Mr Giles said.

On Sunday, Mr Mills – who has since left politics and returned to Western Australia where he is running his own business – said he hoped the CLP would be disciplined in victory.

He said even though Ms Finocchiaro had led the party to an emphatic victory, there could always be plotters in the background. "I won the popular vote but I couldn't survive the party," Mr Mills.

"I would urge the party to focus on the long game, too."

LIAM MENDES

Lia Finocchiaro with Police Commissioner Michael Murphy and Ken Davies, CEO of the Department of Chief Minister

While NT Labor performed particularly poorly in Darwin on Saturday, the overlapping federal seat of Solomon is held on a margin of 9.4 per cent and is considered difficult for the Coalition to win. Labor strategists played down the crossover of federal issues in the result, arguing that youth crime did not translate to federal elections.

Nationals leader David Littleproud said Anthony Albanese was at the "front and centre" of cost-of-living issues facing the Northern Territory.

"There are federal issues at play up in the Northern Territory, and there will be in Queensland, in my home state here," Mr Littleproud said.

"Obviously, we're not taking anything for granted, but we just simply say to Australians, do they feel safe and do they feel better off after 2½ years of Anthony Albanese?

Deputy Prime Minister Richard Marles said federal Labor would examine lessons from the NT result.

"The issues that were at hand in this election were Territory-based issues, law and order being front and centre," Mr Marles told Sky News.

"That's clearly what people are seeing as being the driving issues in respect of this result."

Inside NT Labor on Sunday, party faithful reflected on the tumult of three leaders in four years.

"The Natasha (Fyles) era was shocking, the (Michael) Gunner era was pretty bad, we really underestimated how pissed off people are," one Labor source said.

ExxonMobil

Esso™

An ExxonMobil Brand

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

In planning for these activities and in accordance with the regulations, Esso will prepare application documentation e.g. Environment Plans about the risks and impacts these activities may have.

Community Drop-in

If you'd like to know more about activity plans for the following:

- Steel Pile Jacket Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage (SEA CCS) Project
- Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)
- Pipeline Network Decommissioning

The Esso Consultation Team will be hosting community drop-ins between 5:00pm and 6:00pm on:

Wednesday, 21 August 2024 at The Criterion Hotel, Sale, 90 MacAlister Street

Thursday, 22 August 2024 at Off The Wharf café, Bullock Island, Lakes Entrance

Tuesday, 27 August 2024 at the Welshpool Memorial Hall, 49 Main Street, Welshpool

Wednesday, 28 August 2024 at Manna Gum Community House, 33 Station Street, Foster

To register your attendance, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (Slido) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure *Consultation on offshore petroleum environment plans* (link) to understand more about consultation on offshore petroleum environment plans assessed under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023.*

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

Please connect us with other interested people

If there is anyone you know who may be interested in our activities, we encourage you to share this information with them.

Mary Has Spuds!... and a big heart too!
Mirboo North icon

Thanks to Mary's family, Mary and Jeanice, for raising funds through the sale of t-shirts and merchandise and donating the $1,000 to the Community Recovery Fund at the Community Foundation.

Donations to this fund support grants to community-led recovery projects and programs that support individuals in their recovery.

If your community organisation has an idea for a recovery project or an event that will bring people together, you can apply for a recovery grant to support the costs of bringing that to life.

The process is easy and turnaround is quick. Email us on info@mirboodistrictfoundation.org.au or give Ruth a call on 0418 301 092.

Korumburra Community invited to South Gippsland Garlic Festival Annual General Meeting

The South Gippsland Garlic Festival invites members of the Korumburra community to attend its Annual General Meeting (AGM) on Monday, 2nd September 2024. The meeting will be held at the Korumburra Community Hub, with registrations opening at 6:00 PM and the meeting commencing at 6:30 PM.

This is an important opportunity for local residents and community organisations to engage with the festival's ongoing development and future direction. We are seeking passionate individuals and community organisations with the relevant skills and experience to join our committee. Those interested in contributing to the management and delivery of this popular
event are encouraged to participate.

The South Gippsland Garlic Festival has grown into a cherished community event, celebrating local produce and bringing together people from across the region. This year's AGM will focus on reviewing the past year's achievements, discussing future plans, and recruiting dedicated committee members to support the festival's continued success.

The meeting will commence on Monday September 2nd 2024 at 6.30pm

Time: Registrations from 6:00 PM, Meeting to commence at 6:30 PM

Location: Korumburra Community Hub, 2 Stanley Street, Korumburra

We invite all interested parties to attend and become involved in shaping the future of the South Gippsland Garlic Festival.

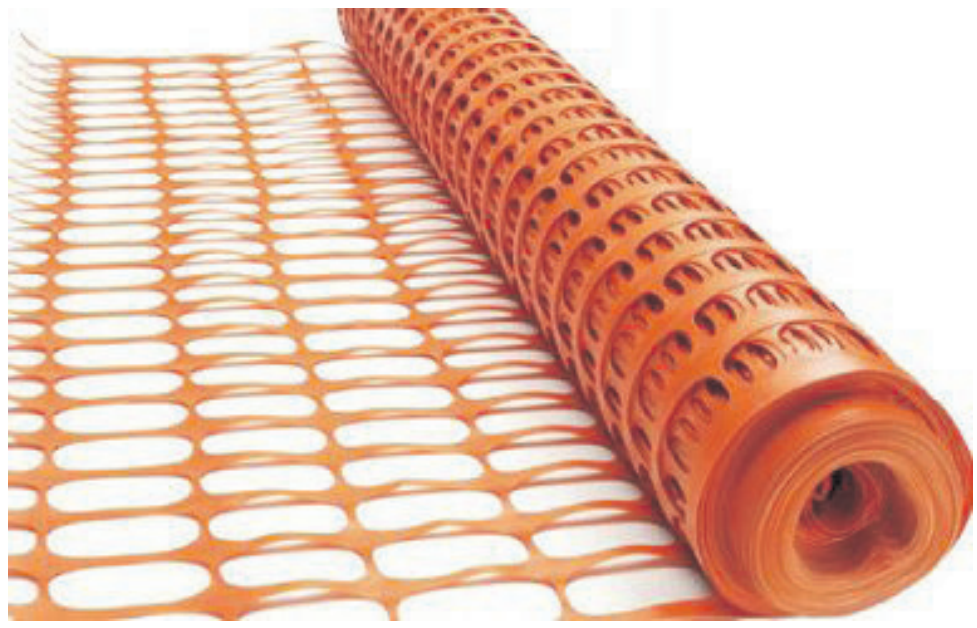
Your expertise, enthusiasm, and commitment are vital to ensuring the event remains a highlight of the community calendar.

For more information, please contact:
Joel White - President
South Gippsland Garlic Festival
White100@ozemail.com.au
0402029658

We look forward to welcoming you to the AGM and working together to make the next festival even more successful!

About the South Gippsland Garlic Festival: The South Gippsland Garlic Festival celebrates the rich agricultural heritage of the region, focusing on the versatile and flavourful garlic. The festival showcases local produce, offers a variety of activities, and provides a platform for community engagement and enjoyment.

Took a tumble in Korumburra Streetscapes works



A lady took a tumble last Monday on the corner of Radovick and Victoria Streets where the orange SAFETY mesh was lying in a pile on the footpath.

"I thought my foot had cleared it, but it hadn't and over I went, flat on my face. Luckily not badly hurt, just a cut lip, whip lash and probably some bruising later on.

A work-man come rushing over to see if I was ok, and apart from the shock of going down like a sack of potatoes, I thought I was ok. I should have taken a photo maybe as when I returned an hour later, the orange safety mesh was neatly now vertical and attached to the posts and the entire footpath on that corner was clear. He must have fixed it after I left the scene.

Please be careful with all the works going on in the town; I am not frail or old; I hate to think if I were a frail person what the consequences would have been."

The contractor for these works, Brenton "BJ" Williams, posted on the Korumburra forum that:
"It was vandalised on the weekend it's zip tied up every night someone got to it on the weekend guys fixed it straight away" to which the person who had taken the tumble replied :
"***Hi Brenton, it was nearly 4pm yesterday when I had my fall."***

Police arrest Rami Margus (also inset) after they busted an international meth, cigarette and gun-smuggling operation.

Hey boss, I'm not listening

Australians will be able to ignore after-hours work calls and emails with impunity from Monday as "right to disconnect" laws take effect.

The federal laws, which come into effect on August 26, protect workers from being forced to take non-emergency calls and respond to emails outside of business hours.

The controversial reforms were introduced in response to the "digital leash" on employees that has extended the working day far beyond their paid shifts.

As a result employees of large companies can refuse to respond to "unreasonable" after-hours calls from their employer.

Reasonableness will be determined according to the worker's job responsibility level, how disruptive the contact was and whether the employee was compensated.

Where the contact is required by law, not picking up the phone to your boss will be deemed unreasonable.

Firms breaching the rules face fines of up to $19,800.

The new rules will apply from Monday to all businesses with more than 15 employees.

Smaller companies have another 12 months to sort out their protocols.

Charges piling up for Margus

Bust embroils accused crime figure

EXCLUSIVE
Mark Buttler

Underworld figure Rami Margus has been entangled in a police bust of an international meth, cigarette and gun-smuggling operation.

Mr Margus – previously revealed as an associate of exiled crime kingpin Kazem Hamad – has been charged with drug trafficking after an eight-month investigation.

The 32-year-old from Tullamarine is one of 12 people arrested since May in the sprawling inquiry after 11.8kg of meth, 2.8 million illegal cigarettes and 14 guns were seized.

Police allege methamphetamine was being shipped from Spain and cigarettes out of Dubai in international freight.

The drugs and smokes were allegedly then sent to factories in Epping and Craigieburn and a Flemington storage facility.

Australian Border Force officers detected the shipments allegedly linked to the ring at the border in April and reported their find to Victoria Police.

Detectives from the North West Metro regional crime squad had already been investigating the syndicate for firearms and drug trafficking. Those officers then began probing the import activity.

Mr Margus and a 25-year-old Brunswick East woman were among five people arrested in May.

They were charged with drug trafficking at the time but copped a combined 100 extra counts this week.

Mr Margus faces 70 charges, including trying to import a commercial quantity of a border-controlled substance, and trying to import tobacco products with the intention to defraud revenue.

He is also on 26 counts of breaching parole.

Also detained in the same phase of arrests were a Wollert man, 27, a Tullamarine woman, 27, and a Hadfield woman, 23. They will appear in Melbourne Magistrates Court on September 30.

Others have been charged since last month or are set to be charged soon. They are:

A SUNBURY man, 39, who faces 14 counts of being a prohibited person possessing a firearm, possessing a trafficable quantity of firearms and tobacco and electronic cigarette offences;

A BRUNSWICK West woman, 25, charged with knowingly dealing in the proceeds of crime and dealing with property reasonably suspected of being the proceeds of crime.

A WOLLERT woman, 27, to be charged on summons with the destruction of evidence;

AN ESSENDON man, 18, on counts of possessing methylamphetamine, possessing buprenorphine and failing to comply with an order; and

A HADFIELD man, 24, who is expected to be charged with criminal proceeds offences.

Two others, an 18-year-old Airport West man and 58-year-old Brunswick West woman, have been interviewed and released pending further inquiries.

A stolen car, a boat, luxury jewellery and designer clothes have also been seized as part of the investigation.

Detective Inspector Geoff Owen said police were determined to make Victoria a hostile place for organised crime figures involved in drug and gun trafficking.

About 40-50 people got together at Wattleglen for Daffodil Day.

Wattleglen residents Gerald Zimmer and Glenice Collins. Photo: Stefan Bradley

Respect taking in daffodils

Stefan Bradley

LOCAL staff, residents, and their loved ones from Wattleglen aged care home in Sale stepped out in style last week - donning yellow in support of a very special cause: Daffodil Day and life-saving cancer research.

The fundraising event, which included a memorable morning tea, continued a busy period of fun-filled activities for residents of the Sale home, which is part of not-for-profit aged care provider Respect.

Across each of Respect's homes, including Wattleglen, social care teams curate a wide range of regular events and activities which inspire participation, promote inclusion, and give residents an opportunity to stay connected with each other, as well as the community, in a fun and positive way.

Donna Quine, a social care co-ordinator at Wattleglen, said residents were excited to fundraise for Daffodil Day and welcomed their friends and family from the wider community into the home to join in with all the colourful festivities.

"Our residents were really excited about our Daffodil Day activities because they love giving back to the local community and making a difference to the lives of others. Nearly everyone knows someone who has suffered with a cancer of some sort, but the day was also a great way for our residents to feel like they were being part of a bigger community initiative," Ms Quine said.

"We even had one resident who couldn't be here on the day but who still donated $200 just because it's a cause they wanted to support.

"A lot of our residents, prior to joining Wattleglen, loved to get involved with and support local campaigns. In the past, they would have cooked for stalls, got involved and helped out where they could, so for them to be able to still contribute to local fundraising through Daffodil Day… they are all feeling very privileged.

"This day is very important to them."

Wattleglen resident Glenice Collins said Daffodil Day brought a happy and yellow side to the grim subject of cancer.

"Daffodil Day also reminds me of my dear mum, because we out for lunch every Daffodil Day," she said.

"My dad died of cancer when he was only 40, and that was during the times of 1950 when (healthcare) was nothing like what we've have now."

Ms Collins spoke about her own history with cancer. At age 52, she was told she would only live another six months because of cancer, but medical breakthroughs has ensured she was able to celebrate her 80th birthday recently.

Ms Quine said preparations for the home's much-anticipated Daffodil Day activities began earlier in the week, with residents participating in special arts and craft sessions to make unique decorations and signage ready to welcome visitors.

"All week residents have also been discussing what they could wear on the day. We had one lady who lives with us who went out and bought crepe paper because the male residents don't tend to get involved in dress-ups as much, so she is going to be making them yellow bow ties so they could join in on the festivities also."

Research has long shown being part of a community can have significant health benefits, particularly for mental and emotional wellbeing. As a community-focused organisation, Respect said it recognised how integral a 'sense of belonging' and social connectiveness was to positive ageing.

"We believe that creating a robust calendar of activities and events go hand in hand with providing our residents with engagement, creative outlets, and opportunities to improve their health and wellbeing," Ms Quine said.

"For some people, it isn't always easy to transition to an aged care home and they can sometimes feel a bit isolated as they get used to such a big change. But our Wattleglen community loves supporting them, and we like to think having such an active and popular social calendar helps them fit in, get active and involved with others, and improve their social wellbeing."

Protesting students march into the entrance of Westpac in Wonthaggi.

Students slam bank loans to big polluters

STUDENTS from Newhaven and Bass Coast Colleges marched through Wonthaggi to protest over major banks providing loans to the world's biggest polluters.

Protesting outside three major banks the students, supported by local activists, called for the big banks to save the future by not lending to companies responsible for climate change.

The Commonwealth Bank has already moved to address its climate commitments by not lending to fossil fuel companies without credible plans for transition to clean energy.

Nearly ten years ago all four of the big four banks confirmed their commitment to the global climate goals of the Paris Agreement, yet, the Commonwealth Bank is the first and only one of the big four to confirm that it is formally cutting ties with oil and gas companies without credible intentions to protect Australian communities and the economy by pursuing safe energy production.

The protestors called on ANZ, NAB and Westpac to cease lending to Santos which is seen as a major contributor to climate change.

"Every year Aussies suffer the worsening effects of climate-fuelled disasters, like fires, floods and cyclones and it's high time the banks ended funding for fossil fuel expansion," said Newhaven College student Joey.

Taking a half day from school Joey applauded the Commonwealth Bank for not providing loans to fossil fuel companies.

"We want all banks to stop funding fossil fuels," said Joey.

Taking the protest into the entrance of the Wonthaggi branch of the Westpac Bank the students' shouted slogans and waved placards before quietly moving on.

Newly commissioned war murals by the Leongatha RSL pay respect to the returned services community. ob12_3524

New murals to pay respect

LEONGATHA RSL have begun stage one of what will be a three-stage process in adorning the building with painted murals that pay ode to returned services personnel.

Artist Rob Wood has begun the first mural of poppies, soldiers, an armed forces emblem and the words Lest We Forget on the wall to the entrance of the RSL.

It's his first large-scale mural after having done some smaller ones on the ladies toilet walls at the Koonwarra Cricket Club and a water tank in Foster.

It was only in 2021 that Rob began painting again after suffering from a retinal problem that didn't allow his eyes to properly accommodate and made painting frustrating.

In the intervening decades, he taught physical education and coached cricket for Gippsland and all over the state and while he completed drawings for Cricket Victoria's publications, he was unable to paint.

That was until he was asked to decorate cricket bats for an autism fundraiser – of which he ended up painting five, after not feeling happy with the first ones he created – and they sold for over $250 each.

Having only 40 per cent vision in his right eye, Rob discovered his eyes could accommodate enough for painting to become possible.

"I realised that from doing that – because it was such fine work – I realised that I could actually paint what I wanted to paint," explained Rob.

The new General Manager of Leongatha RSL Greg Nugent was informed of Rob's talents and decided to get him on board for the murals.

"It's something that we thought was appropriate being an RSL to pay our respects to the return service community and it's a great spot for a mural," said Greg.

There are plans for a mural to also go on the wall facing the carpark and around the top section of the club.

ExxonMobil

Esso's oil and gas facilities in Bass Strait

Esso

An ExxonMobil Brand

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

In planning for these activities and in accordance with the regulations, Esso will prepare application documentation e.g. Environment Plans about the risks and impacts these activities may have.

Community Drop-in

If you'd like to know more about activity plans for the following:

- Steel Pile Jacket Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- Gippsland Basin Geophysical and Geotechnical Investigations
- South East Australia Carbon Capture & Storage (SEA CCS) Project
- Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)
- Pipeline Network Decommissioning

The Esso Consultation Team will be hosting community drop-ins between 5pm and 6pm on:

- **Wednesday, 21 August 2024** at The Criterion Hotel, Sale, 90 MacAlister Street
- **Thursday, 22 August 2024** at Off The Wharf café, Bullock Island, Lakes Entrance
- **Tuesday, 27 August 2024** at the Welshpool Memorial Hall, 49 Main Street, Welshpool
- **Wednesday, 28 August 2024** at Manna Gum Community House, 33 Station Street, Foster

To register your attendance, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (Slido) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure *Consultation on offshore petroleum environment plans to understand more about consultation on offshore petroleum environment plans assessed under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023.*

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

HM11881

ExxonMobil

Golden Beach community

Esso activities information session

Topics: Offshore operations, decommissioning, carbon capture and storage

When: Thursday 29th August, 5pm to 6pm

Where: Golden Beach Community Centre
1 Surf Edge Dr, Golden Beach, VIC 3851

Light refreshments will be served.

Mental health unit years overdue, 'unsafe'

EXCLUSIVE

SARAH ELKS
SENIOR REPORTER

Cairns Hospital's new $70m mental health unit is nearly three years overdue and won't have the safety measures that fearful nurses insist are essential for their protection.

In a wide-ranging interview with The Australian, Cairns and Hinterland Hospital and Health Service chief executive Leena Singh also conceded it was "not at all" ideal to treat a 13-year-old autistic girl in the psychiatric intensive care unit (PICU) with two unguarded Lotus Glen prisoners.

Whistleblower nurses revealed they had been repeatedly assaulted and threatened with murder and rape by patients, including prisoners, in the far north Queensland public hospital's mental health ward.

They are pleading for the prisoners – called "classified" mental health patients – to be guarded by corrective services officers, and for at least one permanent hospital-trained security guard to be stationed in the PICU around-the-clock.

Ms Singh told The Australian that many of the nurses' safety concerns would be ameliorated when the hospital's new $70m mental health ward opened doors to patients at the start of next year.

"(It) has a lot more modern spaces that allows people to self-regulate; it's got greater access to outdoor secure areas; people are able to get fresh air (and) sun," Ms Singh said.

"If you feel like you're locked up and you can't go anywhere, your level of tension and aggression increases. By moving to this new place ... that will reduce the level of aggression we're seeing."

Funded by the state government, the new unit was originally due to open in February 2022, but Ms Singh said it had been delayed by cyclones and flooding.

MACKENZIE SCOTT, LYNDON MECHIELSEN

Opposition Leader David Crisafulli in Kedron, Brisbane, above; Steven Miles, centre, with Cameron Dick and Grace Grace

Nurses said their calls for the new building to have fully enclosed nurses' stations, to protect the workers from patients leaping over the counters or throwing projectiles at staff, had been ignored.

Ms Singh said the new build's plans had been drawn up six years ago, before she started in the role, and it was too late, and would be too expensive, to change.

She said the clinicians who designed the building did not feel it was necessary to have high-walled or enclosed nurses' stations.

"(It was designed) trying to create a therapeutic environment, rather than, you know, a Fort Knox-type environment. Fast-forward six years since the planning, there has been some concern around the height of the station."

Ms Singh said there would be a review six months after moving into the new building to make sure it had been appropriately designed and "if not, then we will make the necessary adjustments".

The new facility will have 53 mental health beds, five more than the current psychiatric wards.

In a recent case that shocked nurses, a 13-year-old autistic girl was admitted to the 10-bed PICU with two Lotus Glen prisoners, and was observed repeatedly hugging one of them.

Ms Singh agreed it was "not at all" ideal and said young people were only admitted into the PICU when it was absolutely necessary, and were constantly accompanied by a carer.

"There are times where we do need to, unfortunately, admit a young person into our PICU, and that's because we don't currently have an adolescent mental health ward," she said.

Health Minister Shannon Fentiman announced in May that the government would spend $24m on refurbishing the existing adult mental health ward to deliver an eight-bed youth mental health unit for Cairns, which would accept patients "later in 2025".

Premier Steven Miles, who was in Cairns on Friday, conceded he was concerned that children were being exposed to criminal offenders in the PICU.

However, Mr Miles would not answer a question about whether the Mental Health Act should be changed to allow corrective services officers to guard prisoners when they were in public hospital psychiatric wards.

In other hospital wards, prisoners are constantly escorted by at least one prison guard, and are shackled to their beds.

LNP hits election road as Miles puts in his 50c worth

Queensland's state election has kicked off, with Liberal National Party leader David Crisafulli putting youth crime at the centre of his pitch to voters as he unveiled his new campaign bus and slogan just days after the parliamentary term ended.

With the LNP firmly ahead in every major poll over the past year, Mr Crisafulli declared he was "hungry" to hit the road in the blue bus emblazoned with the slogan "The right plan for Queensland's future" over the six weeks leading up to the October 26 election.

He was flanked by party faithful, holding signs about the LNP's key focuses of crime and housing. "I call it an opposition that's ready to serve and hungry for a better future for this state," Mr Crisafulli said.

"Six weeks to go, six weeks to deliver change for Queensland. This state needs a fresh start. We have the right plan for (the) future, let's go and get it."

Both leaders were on the faux campaign trail on Sunday, holding clashing 10am press conferences on opposite sides of the Brisbane River. The first four-year parliamentary term wrapped up last week, with election writs to be issued in two weeks.

Premier Steven Miles

announced he would lock in 50c transport fares indefinitely if he is re-elected.

The $150m cost-of-living relief was introduced as a six-month "use it or lose it" trial but recent Transport and Main Roads data found total trips were higher than pre-pandemic levels, up 19 per cent year on year after the cheap fares were introduced in August.

"I really want the chance to make them permanent," Mr Miles said. "I care about doing what matters for Queensland, whether that's 50c fares, whether that's all of the other cost-of-living initiatives, whether that's delivering the housing and healthcare that our growing state needs."

Mr Crisafulli said he would also continue the initiative and increase the frequency of public transport services outside of inner Brisbane.

The LNP's bus headed north on Sunday with Deputy Opposition Leader Jarrod Bleijie on board, and is expected to travel through regional Queensland over the next two weeks. The bus is expected to target vulnerable seats, including Bundaberg, which is held by Labor's Tom Smith by a margin of 0.01 per cent.

Internal ALP polling shows Townsville's three marginal seats – Townsville (3.1 per cent), Thuringowa (3.2 per cent) and Mundingburra (3.9 per cent) – are likely to fall to the LNP.

Tourism Minister Micheal Healy's seat of Cairns, held by 5.6 per cent, is also in the sights of the opposition.

Mr Miles acknowledged the upcoming election would be hard for Labor. "If you look at the polls, it's a very challenging election for us," he said.

Fruit and exercise delay dementia

EXCLUSIVE

JAMES DOWLING

World-first research correlating the link between gut and brain health indicates preventing dementia and cognitive issues may be as easy as keeping fruit in your diet and exercising regularly.

The microbiome, a catch-all for the bacteria and genes in the body that determine health and immunity, has seen much research from those charting the gut-brain axis, a nervous system that allows factors like stress, sense and hunger to influence the brain and vice-versa.

Now a Monash University study held in conjunction with researchers in China has found a clear correlation between poor microbiota and cognitive decline. Exercising or eating fruit and probiotic foods was shown to slow cognitive impairment.

Another time-tested dementia treatment is regular social interaction, but research by Dementia Australia has found it to be one of the most fraught elements in the treatment of patients, with community stigma cited by 73 per cent of families and carers surveyed.

Some 63 per cent of those with dementia felt discrimination was common, and 74 per cent said they had lost contact with friends and family because of their diagnosis.

Former executive Scott Cooper believes he is one of the luckier Australians with dementia. His health is in check and his community is behind him after his local Pennant Hills Golf Club was made dementia friendly.

"I think exercising, social interaction and being in a good community are the things that have helped me maintain myself," he said. "It's a progressive disease, and this has helped me along the way. Keeping active doesn't mean you have to go to the gym, it just means you've got to get off your butt. My life is different now. It's not bad, but that's what it is: different.

"I can still have a pretty good life."

Monash professor Lei Zhang said of his research: "Understanding this change in the microbiome will be very important to find key biomarkers for cognitive impairment."

Farmers fight to overturn EU deforestation beef ban

EXCLUSIVE

CHARLIE PEEL
RURAL REPORTER

Australia's cattle industry is pushing back against the EU's moves to lock up Australian farming land and will seek to invalidate environmental activists' claims that threaten to torpedo the nation's $10bn beef exports.

Industry body Cattle Australia will on Monday release definitions around deforestation and agriculture that align with state and federal laws, and the farming methods used on the country's vast grazing properties.

The organisation wants the government to adopt the definitions in its discussions with the EU, which is preparing to introduce a deforestation regulation that will require traders to prove that certain commodities they import – soybeans, cattle, coffee, cocoa, palm oil, rubber and timber – are sustainably sourced.

It would also help the industry push back against claims from environmental non-government organisations of illegal and rampant deforestation in Australia.

NGOs, including Greenpeace, The Australian Conservation Foundation and the Wilderness Society, claim the beef industry is driving a "deforestation crisis" and have been pressuring corporate organisations and the EU to adopt a stricter definition of deforestation that is inconsistent with state and federal laws and could result in cattle farmers, who use traditional vegetation management techniques on their properties, fall afoul of the EU's new regulations.

The issue was raised as a "matter of urgency" in a bipartisan Labor and Coalition motion in the Senate last week.

Agitation from activists had led to Australia being dubbed a deforestation hotspot, including in a social media post by actor Leonardo DiCaprio in February, on par with countries like Brazil, where the clearing of the Amazon Rainforest for cattle farms was a catalyst for the EU deforestation regulation.

Australian farmers say the comparison is unfair because it is inconsistent with what is considered deforestation in internationally recognised frameworks and does not differentiate between legal, permitted vegetation management under local regulations.

Cattle Australia chief executive Chris Parker

While beef exports into the EU are relatively small at $130m, the beef sector is concerned that being cut out of its market would set a precedent for other countries to follow.

It is also feared that organisations such as banks, supermarkets and major players in the supply chain could adopt similar definitions as the supply chain and financial sector comes under pressure to disclose their efforts to be more sustainable.

Cattle Australia chief executive Chris Parker said the definitions and recommendations outlined in its Land Management Commitment Strategy were intended to provide certainty for Australian beef producers, uphold environmental protections and guarantee equitable market opportunities.

"In a modern global context where Australia is a key player in the global beef trade, exporting over $10bn annually, the alignment of Australian definitions with global definitions to ensure equivalency is crucial," Dr Parker said.

"Globally, there is clear recognition of the importance of food production, and Australian definitions enable us to demonstrate the Australian regional context and the land management practices vital to maintaining food production, healthy landscapes and biodiversity.

"The Australian beef industry plays a crucial role in addressing the world's food security and climate challenges by exporting 70 per cent of our product to over 100 countries globally.

"It is vital this role is recognised, and the industry is supported by both the government and the Australian people."

In August, Woolworths committed to a "zero deforestation" policy but expressed support for the creation of a localised definition. Westpac last year became the first major bank in the country to announce a zero-deforestation target, which it said would be consistent with "existing law in most states".

Crucially, both the Woolworths and Westpac definitions would not classify legal clearing of vegetation regrowth, a common practice on Australian farms, as deforestation. Instead, it would apply to illegal clearing of remnant vegetation, which is protected by law in most states. Nor would it apply to land that was used for grazing or agriculture – the definition of agricultural land and forest are sticking points in Canberra's discussions with Brussels.

Under existing international frameworks, including the UN's Food and Agriculture Organisation, deforestation is a change in land use, not in tree cover. It is unclear whether the EU would recognise the vast cattle properties that make up the grass-fed beef industry as agricultural land.

Last week, Labor and the Coalition jointly called for the EU to delay the introduction of the regulation until there was clarity about how it would define deforestation and agricultural land.

Labor senator Raff Ciccone and Nationals senator Matt Canavan introduced a bipartisan motion, declaring the EU's policy was a "matter of urgency".

"The significant impact that the EU deforestation regulation will likely have on Australian beef producers because of the EU's definition of forest and uncertainty about its implementation; and hence the consequent need to delay the implementation of the regulation until these matters can be resolved," the motion said.

Senator Canavan told The Australian it was unusual for both major parties to back such a motion, but it showed the significance of the issue.

"The real concern is whether this forms a precedent," he said.

"There's a strong bipartisanship on this and I applaud the government for doing what it can to support our industry. Life in the Australian bush should not be regulated out of Brussels."

On Friday, Agriculture Minister Julie Collins said the government did not want Australian beef producers caught up in the EU deforestation regulation.

"We have written to the EU with our concerns about how that might be applied," Ms Collins said. "We want to make sure that Australian agriculture products are not impeded."

ExxonMobil

Esso™

Esso's decommissioning of platforms in Bass Strait

An ExxonMobil Brand

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

After delivering energy to Australia for over 50 years, many of the Bass Strait oil fields are now reaching the end of their productive life. As planning for decommissioning progresses, Esso is focused on safely shutting-down non-producing facilities and ensuring they stay safe throughout the entire decommissioning process.

Community Information Session and Drop-in

If you'd like to know more about activity plans for **Decommissioning of platforms and pipelines in Bass Strait,** the Esso Consultation Team will be hosting a community information session and drop-in at the following locations:

Wednesday 25 September 2024 - Welshpool
Welshpool Memorial Hall
49 Main Street, Welshpool
10.00 am – 1.00 pm

Wednesday, 25 September 2024 - Leongatha
South Gippsland Trade Skills Alliance (SGBLLEN)
71 Ogilvy St., Leongatha
3.00 pm – 7.00 pm

Thursday, 26 September 2024 - Foster
Manna Gum Community House
33 Station Street, Foster
3.00 pm – 7.00 pm

A presentation about decommissioning activities will be provided at 11.00 am for the AM sessions and 3.30 pm and 5.30 pm for the PM sessions. We encourage you to come along and ask questions or to raise any concerns you may have.

To **register your attendance**, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

The Esso Consultation Team will also be available to discuss all current activities, including:

- Bass Strait Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Gippsland Basin Geophysical and Geotechnical Investigations
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- South East Australia Carbon Capture & Storage (SEA CCS) Project
- Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)

Poodle Bar and Bistro's Zoe Rubino and Emilio Scalzo are offering an 'elopement day' called Love On The Run. Picture: Mark Stewart

Eloping gets its fizz back

Grace Baldwin

Couples are increasingly choosing to elope or throw "micro-weddings" rather than big events as cost-of-living pressures drain many nuptial budgets.

As many as 79 per cent of couples have had to adjust their wedding budgets as a result of the cost-of-living crisis, according to the Easy Weddings 2024 Australian Wedding Industry Report – but one in five will still overspend.

With the average wedding costing an eye-watering $35,657 – up from about $32,940 in 2019 – eloping is rapidly gaining popularity for its lower-budget appeal.

Poodle Bar and Bistro owners Emilio Scalzo and Zoe Rubino – also a married couple – noticed the exorbitant costs associated with weddings and wanted to offer a cheaper alternative.

They came up with Love On The Run, a two-hour block for a private ceremony and party with 10 guests.

"With the cost-of-living crisis at the moment, couples have had to push back their engagement from 18 months to 24 months to be able to afford a wedding," Ms Rubino said.

"We noticed at Poodle a lot of couples were interested in small weddings and also elopements , so we came up with the idea for Love On The Run."

Their elopement package includes everything from food to florists to celebrants.

"Everything's included, you don't need to worry about anything, it's just you and your loved ones," Ms Rubino said.

"It's perfect for anyone wanting to get married who is struggling in this cost-of-living crisis.

"We've taken the work and stress out of it. It's great for any couple who wants to celebrate their love who don't necessarily have the means or the time to organise a larger wedding."

Mr Scalzo said the package was put together with "some of Australia's best wedding suppliers".

"It really comes down to making something that costs less than a third of the average wedding in Australia," he said.

"We're not compromising on anything."

Greens' gas ban panned

Blackouts, closures and lost contracts

Clare Armstrong

A "reckless" Greens push to ban new gas would result in blackouts across southeast Australia in as little as two years, leading to manufacturing closures and the loss of long-term export contracts, the nation has been warned.

Halting investment in gas supply would "devastate the economy", leading to southern states running out by 2029, industrial manufacturers closing within a decade and Queensland's long-term liquid natural gas export contracts being broken, according to a new Energy Quest report commissioned by Australian Energy Producers.

The Greens' policy to end all investment in new oil and gas projects would exacerbate forecast shortfalls in the "southern region" of Australia, including NSW, Victoria and South Australia, resulting in "major economic disruption" for households and businesses.

The analysis showed Australia's domestic gas supply would be interrupted "within two years", with no supply available in five years.

"Within a decade most industrial demand would go unmet and most industrial gas users would likely cease operations due to a lack of alternative energy sources, and in the longer term there would be significant disruption and potentially shortfalls for residential and commercial gas users," the report said.

An investment ban would also result in the "rapid decline" of Queensland LNG exports, which would be forced to cease entirely within 12 years.

Australian Energy Producers chief executive Samantha McCulloch said the Greens' "no new gas" policy would mean "lights out for Australia" and be "a handbrake on the transition to net zero".

"The Greens don't have a credible plan for Australia's future," she said. "Their three-word slogan is not an energy policy, but a recipe for destroying Australia's economy and energy security. Australians deserve to know what a vote for the Greens really means for jobs and their energy bills."

Earlier this year, the federal government released its Future Gas Strategy, which said the Australian economy would need gas to 2050 and beyond, with investment in new supply required to meet the demand.

Ms McCulloch said the substantial economic benefits from new gas projects would also be lost if new investment stopped.

"Australia's gas industry is a major economic driver – investing hundreds of billions of dollars in recent decades, creating thousands of jobs, delivering up to $17bn annually to governments and spending $40bn with businesses in Australia each year," she said.

Greens leader Adam Bandt has already signalled that gas would be focus of the party's climate attack against Labor at the next election, which would include a push to restrict gas export contracts and force major companies to divert supply to the domestic market.

V1 - MHSE01Z01MA

VLocity trains on all Bairnsdale services

V/LOCITY trains are now running on all rail services between Bairnsdale and Melbourne.

The remaining two locomotive-hauled classic fleet services on the Bairnsdale line have now been retired, making way for new modern and efficient VLocity trains.

Bairnsdale line services stop at Rosedale, Sale and Stratford stations.

The state government invested $31 million to expand the stabling facility at Bairnsdale to house two three-carriage VLocity trains overnight, which has enabled this change.

A new timetable has also been introduced, with the first and last services now stopping in Trafalgar, Yarragon, Longwarry, Bunyip, Tynong and Nar Nar Goon.

Work is underway on the latest order to build 23 VLocity trains, with the first two new trains already hitting the tracks since August.

With the regional fare cap, passengers can now travel between Bairnsdale and Melbourne for $10.60 - a significant saving for travellers who previously paid up to $39.40 for a one-way full fare journey.

Public and Active Transport Minister Gabrielle Williams said the government was investing in more modern and reliable VLocity trains to improve regional journeys and now passengers along the Bairnsdale Line can enjoy them on every service.

"Communities along this corridor will also benefit from more travel options, with more services stopping at stations including Longwarry, Yarragon and Trafalgar," she said.

Member for Eastern Victoria Tom McIntosh said the government was delivering a better train service for Gippsland, with modern and reliable VLocity trains running on all services, and cheaper fares so that passengers can get to where they needed to go.

The Rail Futures Institute, which advocates for sustainable rail solutions for public transport and freight industries, claimed the government was progressively downgrading the quality of Victorian longer distance train services.

"What are claimed as improvements to these services are in reality reductions in the quality of service being offered," the institute stated in a media release.

"The more recent VLocity trains have hard seats which are most uncomfortable for other than short distance trips."

While Albury line trains are an exception, being especially modified VLocity trains with comfortable seats and other facilities for longer distance travel, the last loco hauled inter city train with first class reclining seats and on-board catering has been withdrawn from the evening service to, and morning service from Bairnsdale.

"Pity the poor passengers arriving into Bairnsdale on V/Line long distance coaches from Canberra and the Sapphire Coast who are transferring to Melbourne bound trains at Bairnsdale. Nothing to eat or drink for another four hours," the institute stated.

"VLocity trains have limited space for luggage, the previous luggage check-in service has been abandoned and bicycles are now only allowed on board at the conductor's discretion. Additionally, instead of taking advantage of higher allowable train speeds for VLocity trains west of Traralgon (160 kilometres per hour instead of 115km/h) which would have shaved around 12 minutes off all trips for travellers beyond Traralgon, six extra stops are being added at smaller intermediate stations so that all Bairnsdale trains will now stop at all stations between Pakenham and Bairnsdale.

A new VLocity train at the Stratford station. VLocity trains will now be running all Bairnsdale line services. **Photo: Contributed**

"Longer distance V/Line Inter City services are thus being progressively downgraded, not improved as the Government claims."

"Longer distance intercity travellers to Warrnambool, Swan Hill, Albury and Bairnsdale have a limited number of daily train services to select from and deserve much better."

Lynn sentencing hears from victim's family

Erika Allen

THE Supreme Court heard the gravity of Carol Clay's death as it began sentencing her killer, Gregory Lynn, last Thursday.

Lynn, 58, returned to the Supreme Court for a pre-sentencing hearing last week after a jury in June determined he murdered 73-year-old Ms Clay at a remote campsite in the Victorian High Country.

The prosecution is seeking the maximum sentence for murder – 25 years in Victoria – for Lynn's actions, which Crown prosecutor Daniel Porceddu described as "cold-blooded and callous".

Before sentencing submissions, the court heard three victim impact statements, including from Ms Clay's daughter Emma Davies, who refused to utter Lynn's name, only referring to 'he'.

"He stole my mother from me," Ms Davies said.

"He stole my children's grandmother. He took her life, he took her dignity, and he took her privacy."

In the years following Ms Clay's death, the court heard how he took away Ms Davies' family's privacy, trust in people, and capacity to live to the fullest and work in her community. She told the court she worked full-time for nine weeks in the last four years and turned down job opportunities close to home to retain a sense of privacy.

Ms Davies detailed how he stole her ability to enjoy mountain biking with her family and that she is afraid of comments people might make at work.

"I'm a private person from a private family but I came to realise I needed to honour my mum," she said.

"I refuse to let her legacy be that of a murder victim."

Ms Davies spoke clearly and strongly, describing her mother as a hands-on grandmother and an active volunteer for many organisations, including the Country Women's Association.

Alison Abbott, Ms Clay's friend of 60 years, said the pair share a "special history", beginning when they met at school. She said attending their 60-year reunion without Ms Clay by her side was tragic.

Ms Abbott said when their favourite ABBA song *Waterloo* played, it brought tears to her eyes.

"This crime has been devastating to me because Carol was an inspiration," Ms Abbott said.

She said no family deserved to endure an ordeal as high profile as the trial, which generated extensive media coverage.

The third person to read a statement via video link, Ms Clay's sister Jillian Walker, spoke of how continued media coverage re-traumatised her family throughout the case. She described Lynn's actions as evil and immoral.

Mr Porceddu told the court on Thursday, Lynn's moving and burning of the remains of Ms Clay and fellow camper Russell Hil were aggravating factors that Justice Michael Croucher must consider in his sentencing.

Carol Clay's family and friends read victim impact statements in the Supreme Court last Thursday, describing her as inspiring, a dedicated grandmother and active volunteer.

Carol Clay's murderer, Gregor Lynn will be sentenced by Justice Michael Croucher on October 18. **Photos: File**

After driving for hours from Bucks Camp in the Wonnangatta Valley, where the deaths occurred in March 2020, Lynn disposed of the bodies of Ms Clay and Mr Hill on the Union Spur Track near Dargo, Mr Porceddu said.

Lynn returned to the site twice – first to confirm Ms Clay's and Mr Hill's bodies were still there and later to incinerate their remains, according to Mr Porceddu in court last week.

In the trial, the jury acquitted Lynn of murdering Mr Hill.

Defence lawyer Dermot Dann KC said in the trial and again last week that Lynn himself believed his treatment of Ms Clay and Mr Hill was despicable. Yet, Lynn maintained his innocence of murder.

Justice Croucher said he intends to sentence Lynn on October 18. He will be remanded in custody until this time.

ExxonMobil

Esso

An ExxonMobil Brand

Esso's oil and gas facilities in Bass Strait

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

After delivering energy to Australia for over 50 years, many of the Bass Strait oil fields are now reaching the end of their productive life. As planning for decommissioning progresses, Esso is focused on safely shutting-down non-producing facilities and ensuring they stay safe throughout the entire decommissioning process.

Community Information Session and Drop-in

If you'd like to know more about activity plans for Decommissioning of platforms and pipelines in Bass Strait, the Esso Consultation Team will be hosting a community information session and drop-in at the following locations:

Wednesday 25 September 2024 - Welshpool
Welshpool Memorial Hall
49 Main Street, Welshpool
10.00 am – 1.00 pm

Wednesday, 25 September 2024 - Leongatha
South Gippsland Trade Skills Alliance (SGBLLEN)
71 Ogilvy St., Leongatha
3.00 pm – 7.00 pm

Thursday, 26 September 2024 - Foster
Manna Gum Community House
33 Station Street, Foster
3.00 pm – 7.00 pm

A presentation about decommissioning activities will be provided at 11.00 am for the AM sessions and 3.30 pm and 5.30 pm for the PM sessions. We encourage you to come along and ask questions or to raise any concerns you may have.

To register your attendance, please email us at: consultation@exxonmobil.com

If these dates and times don't suit, please contact us at consultation@exxonmobil.com or by phone on 03 9261 0000.

The Esso Consultation Team will also be available to discuss all current activities, including:

- Bass Strait Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Gippsland Basin Geophysical and Geotechnical Investigations
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- South East Australia Carbon Capture & Storage (SEA CCS) Project

Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (sli.do) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au) to understand more about consultation on offshore petroleum environment plans assessed under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

Please connect us with other interested people

If there is anyone you know who may be interested in our activities, we encourage you to share this information with them.

Free 3D Hands launches revolutionary 'Kinetic Arm'

Two years in the making the kinetic arm joins the kinetic hand on open-source thanks to Free 3D Hands.

FREE 3D Hands proudly announces the open-source release of the Kinetic Arm, a groundbreaking, body-powered assistive device for people with trans-radial arm differences. The Kinetic Arm is the culmination of over 4000 hours of engineering, design and testing over two and a half years, made possible by the generous support of the global community, philanthropists, and corporate partners. The design files were freely shared with the world last Thursday, September 12 at 10am.

Traditionally, assistive devices like this have cost tens of thousands of dollars, putting them out of reach for 90 per cent of people around the world (according to the World Health Organisation). In 2020, Free 3D Hands openly shared the Kinetic Hand, which is now being made by over 10,000 volunteers and organisations all around the world. Free 3D Hands will now offer the Kinetic Arm free of charge, to anyone, anywhere in the world – they even pay the postage.

The Kinetic Arm, which can be manufactured for less than $20 in materials, is an embodiment of what's possible when love, kindness, and generosity fuel innovation. With incredible support of the community, Free 3D Hands has expanded its team of biomedical and mechatronic engineers, dramatically accelerating the pace of open-source development.

"We are an engine that runs on the love, kindness and generosity of others. Together, this is our gift to the world", said Mat Bowtell, Founder and CEO of Free 3D Hands.

The Kinetic Arm is a body-powered device, operated through elbow movement to open and close the fingers, with a wrist that can rotate into multiple grasp positions. This simple, intuitive design is transformative for people with trans-radial arm differences. The device's low manufacturing cost ensures that people across the globe, especially in underserved communities, can access this life-changing technology. Open-sourcing the design allows anyone with access to a 3D printer to download the design files and make their own devices, creating an exponential global impact.

In addition to offering the Kinetic Arm for free, Free 3D Hands is sharing its intellectual property (IP) under an open-source license, ensuring anyone can manufacture it. The design is accompanied by a 247-page assembly manual and a 43-minute video tutorial to share their manufacturing techniques.

"We hope that by sharing our designs, even commercial developers of assistive technology will learn from our low-cost ideas and be inspired to bring down the cost of commercially available devices," Bowtell explained.

"Ultimately, we want to make assistive technology more affordable and accessible for the millions of people globally who are currently unable to access or afford it.

"Our team are driven by the smiles on the faces of our device recipients. If we were to charge even ten dollars for one of our devices, then to us, it would only be worth ten dollars. But when we provide our devices free of charge, with no expectation of reward, they become priceless," Bowtell continued.

Globally recognised the charity relies entirely on donations to fund the design and development of open-source assistive devices without any Government funding. Free 3D Hands became a DGR-1 registered charity in 2019 and has since provided thousands of free assistive devices to people in over 30 countries.

"We are extremely grateful to everyone who has helped us reach this milestone. The expansion of our engineering team has allowed us to significantly accelerate our open-source development, and the Kinetic Arm is a direct result of this generosity. Our work is powered by love, kindness, generosity and a shared vision of a world where assistive devices are accessible to all," Bowtell said.

Those who wish to support by making a tax-deductible donation to Free 3D Hands can donate at free3dhands.org/donate. All donations to Free 3D Hands go directly towards the research, design and development of open-source assistive devices, which are provided for free to those in need.

Landmark for stroke care in Gippsland

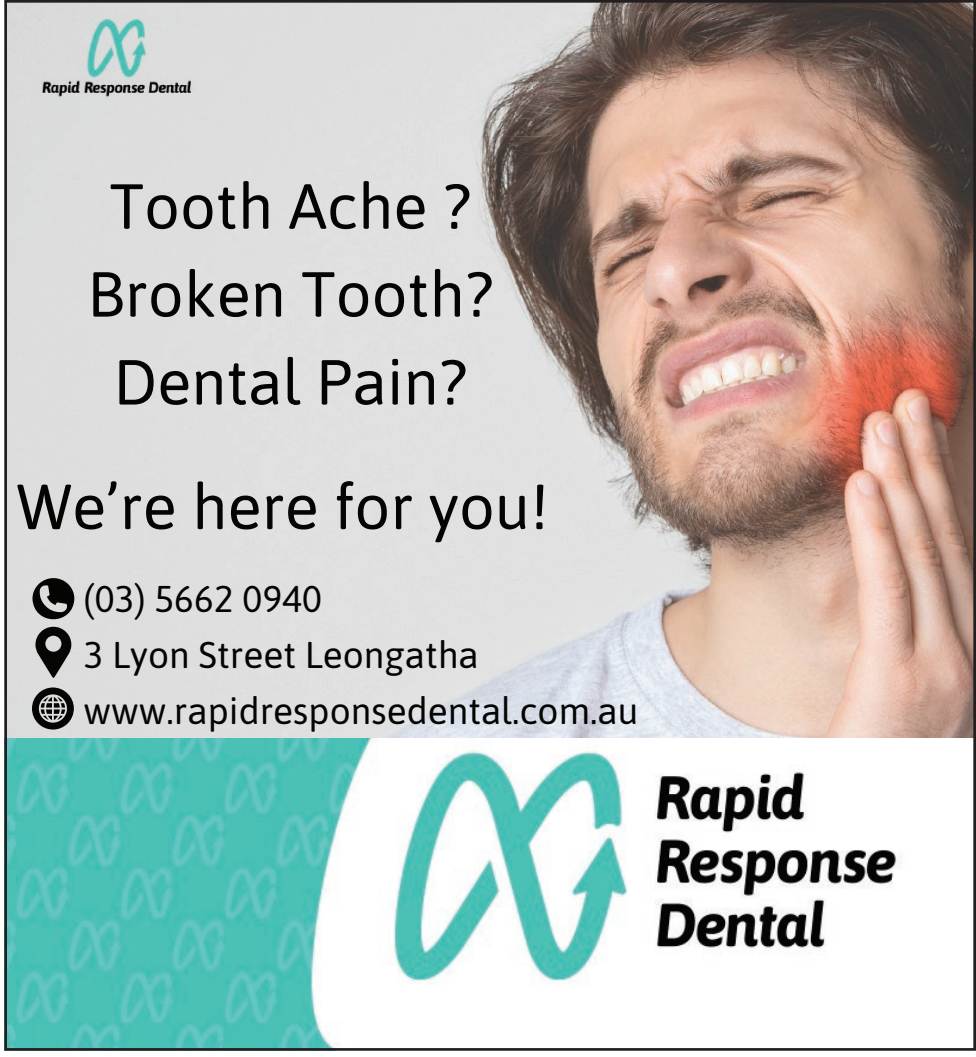
LRH Stroke Coordinator, Janet May, A/Professor Alistair Wright and Avon Nurse Unit Manager Jenna Hooper.

LATROBE Regional Health (LRH) has been recognised for its excellence in delivering care to stroke patients by the Australian Stroke Coalition (ASC) having achieved accreditation as a Primary Stroke Centre.

"This is the first time we've been recognised in this way and reflects the work that the team in Emergency, Intensive Care, the Avon Unit and the Nicholson Unit have been doing to identify, treat and care for patients as they come through LRH," Chief Executive Don McRae said.

LRH treats more than 200 stroke patients each year and Gippsland is overrepresented in figures around cardiovascular disease compared to other areas of the state.

"The assessors looked at the processes we have in place to quickly identify stroke patients who present to our Emergency Department and provide initial treatment such as the prescription of 'clot busting' drugs, known as thrombolysis," LRH Stroke Coordinator, Janet May said.



"They also assessed the treatment in our new Intensive Care Unit, longer term care in the Avon Unit, our designated stroke ward, as well as our Allied Health team's work.

"This accreditation signifies that we meet the highest standards of care, ensuring our patients receive timely, effective treatment while providing the best possible support to both patients and their families."

LRH is the only hospital outside the major settings of Melbourne and Geelong to achieve this level of accreditation in Victoria.

The assessors from the ASC acknowledged: "LRH stroke services are well coordinated…and are delivering timely, highly accessible and integrated care to the Gippsland community."

"We've developed an education hub where the team can examine what's happening with current patients, learn from colleagues and develop new skills. This is vitally important to ensure that the team is working with one goal and that everyone's skills are being elevated constantly," Avon Nurse Unit Manager Jenna Hooper said.

U3A PROM COAST

Our population in the greater Foster area is growing, and there is also significant growth in the number of retirees living in our area. As a service and enjoyment for our retirees, U3A Prom Coast offers a wide range of interesting courses and activities.

These stimulating activities include sports (eg golf, table tennis and Pickleball), Dance (eg Dance for Exercise, Rock and Roll, Circle Dance classes), Tai Chi, Singing for Pleasure, several music groups (such as the Ukulele), French (3 levels), Humorous Literature, History, Science (eg Geology, Oceanography), board games (eg Mah Jong, Scrabble), even Cryptic Crosswords.

Details are on our website www.u3apromcoast.com.au

Membership is just $55 per year and members can participate in as many courses as they wish. People joining late in 2024 still pay the $55 but it covers the remainder of 2024 as well as the whole of 2025.

Our new Sandy Point Community (electric) Bus is now providing safe and comfortable transportation for residents and visitors from Sandy Point, Waratah Bay and surrounding areas.

Planning an event; connecting to the V-line service? Bookings can be made on our website www.sandypointebus.com

This is a volunteer run, not for profit service. The eBus can carry up to 9 passengers, and there is also a wheelchair lifting platform and certified fixing points for safe travel. Donations for a ride help us to sustain the ongoing operational costs.

Think of the environment and travel in "Sandy" the eBus.

Gippsland New Energy Conference drives job growth and investment

WELLINGTON Shire Council have express their pride in partnering with the 2024 Gippsland New Energy Conference for the consecutive year, reinforcing its position as a key partner and leader in the renewable energy sector.

The two-day event attracted more than 800 attendees from across Australia, with 178 guest speakers and 50 exhibitors, making it the most successful energy conference ever held in Gippsland. This year's conference continued to build on the successes of the 2022 and 2023 events, both of which were hosted in Wellington Shire.

A key moment at this year's conference was the launch of the Gippsland Offshore Wind Alliance by Federal Minister for Climate Change and Energy, the Hon Chris Bowen MP. This alliance is set to generate new job opportunities, encourage regional investment, and support Australia's transition to a net-zero future. Minister Bowen emphasised the importance of investment and certainty in his speech, saying, our policies are designed to create certainty—certainty about our destination and certainty about the roadmap to get there.

The conference also welcomed dignitaries MP Lily D'Ambrosio, Victoria's Minister for Climate Action; MP Harriet Shing, Victoria's Minister for Housing; and Senator for Victoria, Dr Jess Walsh.

On the second day of the event, Wellington Shire Council Mayor, Cr Ian Bye welcomed attendees and guest speakers, expressing pride in council's ongoing leadership in renewable energy while reflecting on Wellington Shire's role driving Gippsland's growth.

"I feel a deep sense of pride—not only in what we've achieved but in our continued commitment to leading the renewable energy journey for Gippsland," Mayor Bye said.

Wellington Shire Council Chief Executive Officer, David Morcom further highlighted council's leadership, particularly with the release of the Renewable Energy Impact and Readiness Study last year. "This study reinforces our commitment, with over $40 billion in planned renewable energy investment flowing right into our region," he said.

Mr Morcom reiterated the importance of partnerships to drive the region's future, noting the joint funding application submitted by Wellington and South Gippsland Shire Councils, in collaboration with the Gunaikurnai Land and Waters Aboriginal Corporation (GLaWAC).

"Our Land and Infrastructure Plan for Yarram, especially with the Federal Government's recent offshore wind licenses, is critical. If we don't get this right, now, the industry may struggle to establish itself in time, and our region could miss out on this significant opportunity," Mr Morcom added.

This year's conference placed a strong focus on First Nations partnerships, with powerful insights shared by speakers on collaborations between First Nations, State government, and industry.

Attendees engaged in lively discussions across breakout rooms, viewed an informative screening of the Planet Wind documentary, and enjoyed a sold-out breakfast hosted by Gippsland Women in New Energy, sponsored by Gippsland Skies.

Wellington Shire Council was well-represented at the conference, with pop-up stands from council's Development division and The Middle of Everywhere showcased at Traralgon's Little Theatre.

A highlight of the 2024 conference was the Gippsland Youth Summit held on the Thursday at Kernot Hall, inviting students from across the region to explore career pathways in the new energy sector.

The free community expo gave Wellington Shire the opportunity to highlight The Middle of Everywhere as an exciting place to live, work, and invest, while students engaged with industry professionals about future careers in offshore wind and emerging energy technologies.

Community Information Session and Drop-in

If you'd like to know more about activity plans for **Decommissioning of platforms and pipelines in Bass Strait,** the Esso Consultation Team will be hosting a community information session and drop-in at the following locations:

Wednesday 25 September 2024 - Welshpool
Welshpool Memorial Hall
49 Main Street, Welshpool
10.00 am – 1.00 pm

Wednesday 25 September 2024 - Leongatha
South Gippsland Trade Skills Alliance (SGBLLEN)
71 Ogilvy St., Leongatha
3.00 pm – 7.00 pm

Wednesday 25 September 2024 - Foster
Manna Gum Community House
33 Station Street, Foster
3.00 pm – 7.00 pm

A presentation about decommissioning activities will be provided at 11.00 am for the AM sessions and 3.30 pm and 5.30 pm for the PM sessions. We encourage you to come along and ask questions or to raise any concerns you may have.

To register your attendance, please email us at: **consultation@exxonmobil.com**

If these dates and times don't suit, please contact us at **consultation@exxonmobil.com** or by phone on 03 9261 0000.

The Esso Consultation Team will also be available to discuss all current activities, including:

- Bass Strait Decommissioning
- Jack-Up-Rig Well Plug and Abandonment
- Gippsland Basin Geophysical and Geotechnical Investigations
- Kipper - Sub-Sea Drilling
- Turrum Phase 3 Drilling
- South East Australia Carbon Capture & Storage (SEA CCS) Project
  Bream Greenhouse Gas Appraisal Environment Plan (SEA CCS)

Like to be consulted about these activities?

Esso is working to identify and consult with relevant persons [stakeholders] whose functions, interests, or activities may be affected by one or more of Esso's proposed activities.

Please fill in the Esso Consultation Questionnaire (sli.do) in the Esso Consultation Hub to let us know if you'd like to be consulted or have any questions or feedback.

Please refer to the NOPSEMA brochure Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au) to understand more about consultation on offshore petroleum environment plans assessed under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023.*

Your feedback and our response will be included in the relevant regulatory application documentation and submitted to the regulator.

ECG Secondary College needs you!

Do you love helping students like us grow and reach our full potential?

Our school is expanding, with more classes and better services to help us learn. Join ECG team and make a difference in our lives, supporting us through our learning journey.

The roles are:

Learning Support Officer
(Leongatha campus)
Part-time | Closing Friday 20 September

Learning Support Officer
(Warragul campus)
Full-time | Closing Monday 23 September

Generalist Teachers 2025
(EOIs for multiple campuses)

Casual Relief Teachers 2025
(EOIs for multiple campuses)

APPLY NOW www.ecg.vic.edu.au/jobs

ECG is a Child Safe organisation that has zero tolerance for child abuse.

Transform learning with CCG!

CCG is committed to empowering communities through accessible education and leadership. We're seeking passionate and dynamic individuals to join our team in these exciting roles:

Cadet Board Director/s
Warragul | Closing Friday 20 September

Pre-Accredited Trainer
Casual | Warragul | Closing Monday 23 September

Trainer Cert IV in Business (BSB40120)
Full-time/Part-time| Warragul | Closing Monday 7 October

Trainers 2025
EOIs for Business, Music, Hospitality etc | Warragul

APPLY NOW www.ccg.asn.au/jobs

CCG is a Child Safe organisation that has zero tolerance for child abuse.

Around the traps

September 2024

Saturday 21 Sept
A Jazz Soiree
Featuring the fantastic Dave Dower Trio and internationally renowned vocalist Nina Ferro. Commencing at 7.30 pm Brought to you by the *"Grand Hall Grand Piano"* committee. | Tickets $45pp | Visit: visitsouthgippsland.com.au/event

Sunday 22 Sept 5:15pm
Franklin River Platypus Walk
Help Prom Coast Ecolink celebrate World Rivers Day by surveying platypus populations in the Franklin River as part of Australian Conservation Foundation's Platy-Project. | www.promcoastecolink.org

Sunday 22 Sept
Opera in the Country
Featuring Charlotte Goode, this matinee performance will be followed by afternoon tea with the performers.| Brought to you by the *"Grand Hall Grand Piano"* committee | Visit: visitsouthgippsland.com.au/event/

Exhibiting Sept
Stockyard Creek Art Gallery
Larissa Perkin& Kaaren Pedretti | Birds of a feather flock together … | This is a fresh spring exhibition featuring flowers, landscapes, and painted feathers. Thursday – Monday 11am – 3pm

Wednesday, 27 Sept 5:30 PM.
Foster RSL End of month BBQ
The popular end-of-month barbecue tradition continues at the club rooms. All are welcome, for a 5.30 pm start.
Donation of $5 per person for the meal. Drinks will be available at bar prices.

Exhibiting to 30 Sept
Meeniyan Art Gallery
Gallery one. Destination Landscape - Tracy Lewis | Gallery Two. Unclear the Horizon - Helen Nkansah | Gallery Three. For the love of Horses – Monika Barbian
Free entry | Visit meeniyanartgallery.com.au

October 2024

Wednesday 2 Oct, 7.15pm
Fish Creek Landcare AGM
Oberon Room, Fish Creek Hotel | Guest speaker Susie Milton on the "Tree Project"

Saturday 5 Oct
Harry Hook is Real Supported by Talana Daff
Great night of live music, presented by Sandy Point Music.| Sandy Point Community Centre | Show starts 8:00PM, doors open 7:15PM | BYO drinks and nibbles.
Website: sandypointmusic.com

Saturday 5 Oct
Ride The Wild Goat Sculptural Fire Event: Bringing of the Light.
Following the huge success of the MidWinter Bonfire, Ride the Wild Goat are hosting an event on the eve of daylight savings.| Light up time 7pm. | Please bring food and drinks to share. Entry by donation to assist with ongoing costs of maintaining the Ride the Wild Goat Sculpture Park.

Sunday 6 Oct
South Gippsland Landcare Network Mange Treatment Workshop
Due to rising reports of wombats with mange, and the increase in transfer of this disease to koalas. South Gippsland | Landcare Network is holding a Mange treatment information and training session. Venus Bay Community Centre | Visit: Sgln.net.au

Exhibiting Oct
Stockyard Creek Art Gallery
Lucy Hersey - Earth paintings &
Pat Dales - Fibre Group

Saturday 19 Oct 10:00am
Nature Journalling & Slender Tree Fern Walk - Tarwin River Forest
A guided opportunity to observe, record, and experiment artistically in this spectacular rainforest setting with Prom Coast Ecolink. www.promcoastecolink.org.au

Sunday 20 Oct
Flock Stock and Basil Farm
An afternoon to celebrate the new season. Sharing good food and many laughs with an optional farm tour, where guests can learn about the farm, and meet some of the animals. Followed by a leisurely long-table banquet lunch made with farm produce. | $ 125 per person Visit: flockstockandbasil.com

Wednesday 23 Oct
U3A Seniors' Festival concert
Doors open at 10 am in the Foster War Memorial Art Centre | Free Entry

Friday 25 Oct, 6 -8pm.
Fish Creek Community Pot-luck Dinner
Hosted by the Fish Creek Community Development Group at the Fish Creek Hall. Everyone is welcome. Bring some food to share, tea/coffee provided

Saturday, 26 Oct
Meeniyan Marty Gras
Great night's entertainment at the Meeniyan Town Hall. Entertainment by Xena Ghost + Kat Zowthobag. DJ Golden Fleece.| Doors open 7.30pm | Supper by Meeniyan Red Cross | $55 per person.

Thursday 31 Oct
Manna Gum Halloween Art Cube Opening
Opening program of storytelling, Halloween displays, spooky dancing, witches with cauldrons of horrible things to touch.

Thursday 31 Oct
Manna Gum Halloween event
Foster residents and traders, be prepared for families Trick or Treating in the area. Pop a decoration in your front garden or shop window if you would like to partipate!

Regular Events

Mondays
Co Motion
Free style dance jam | MONDAYS 4.30-5.30PM | Fish Creek Memorial Hall Supper Room | $5 Per Session | Door opens for warm-up from 4pm

Esso's decommissioning of platforms in Bass Strait

An ExxonMobil Brand

Esso Australia Pty Ltd (Esso), a wholly owned subsidiary of ExxonMobil Australia Pty Ltd, is committed to operating and decommissioning its' Gippsland and Bass Strait facilities safely and effectively.

After delivering energy to Australia for over 50 years, many of the Bass Strait oil fields are now reaching the end of their productive life. As planning for decommissioning progresses, Esso is focused on safely shutting-down non-producing facilities and ensuring they stay safe throughout the entire decommissioning process.

Community Information Session and Drop-in

If you'd like to know more about activity plans for **Decommissioning of platforms and pipelines in Bass Strait,** the Esso Consultation Team will be hosting a community information session and drop-in at the following locations:

‘Labor MPs are hiding their true colours’

EXCLUSIVE

CHARLIE PEEL

Labor MPs have distanced themselves from Premier Steven Miles and are hiding their party affiliation on campaign material ahead of next month’s Queensland election in what the opposition describes as an attempt to sneak back into office.

With polls pointing to a bruising defeat for the Miles government and dissatisfaction with the Premier’s performance rising, candidates who in 2020 proudly printed the Labor name, logo and trademark red on their corflutes and flyers have gone to lengths to obscure their allegiance from voters.

Candidates who bore the image of Annastacia Palaszczuk next to their own in 2020 have conspicuously left Mr Miles off the campaign material this time.

The Newspoll published by The Australian on Saturday showed the LNP had jumped 10 points clear of Labor – 55 to 45 per cent after preferences – and was on track to win government for the first time since 2015.

If the predicted 8.2 per cent swing against Labor were replicated across the state on October 26, it would deliver the LNP a comfortable majority of 55 seats in the 93-electorate parliament.

The poll also showed 46 per cent of voters believed Liberal National Party leader David Crisafulli would make a better premier than Mr Miles, who had 39 per cent support despite dishing out $3.7bn in cost-of-living giveaways in recent months.

Election signs of Labor MPs Ali King and Peter Russo

The Australian is aware of at least 10 examples of Labor MPs using campaign material that does not appear to show their affiliation.

While some the flyers are decorated in the purple colour scheme used by Queensland’s Together Union, others show MPs against plain backgrounds with their own colour palette carrying their names and electorates but no mention of Labor.

The LNP has accused government MPs of deliberately trying to mislead voters. “Labor MPs are so embarrassed and ashamed of their decade of failures they’re running Miles from their leader and Labor colours,” deputy LNP leader Jarrod Bleijie said.

“They’re so desperate to sneak back into government they’re trying to con Queenslanders by debranding from Labor.”

Asked whether the Premier believed his colleagues were trying to distance themselves from him and the party, a spokeswoman said Mr Miles was not focused on campaign material.

“The LNP might be focused on the colour on a corflute,” she said.

“The Premier and his Labor team are focused on doing what matters for Queenslanders.”

On Saturday, Environment Minister Meaghan Scanlon, one of five ministers who would lose their seats if the swing identified by Newspoll was replicated across the state on election night, said the government’s cost-of-living policies were garnering support from voters.

“Everyone I speak to knows about the cost-of-living relief our Labor government is delivering,” she said. “I don’t think I’ve spoken to a single person who doesn’t know about 50c fares.”

Primary support for the LNP has surged under Mr Crisafulli’s leadership, growing from 35.9 per cent at the 2020 election to 42 per cent, according to Saturday’s Newspoll.

Support for the ALP remains above the 26.7 per cent primary vote mustered by Anna Bligh’s government at the wipe-out 2012 election when Labor was reduced to seven seats.

Helping hand fulfils this rural volunteer

Aussie Helpers chief executive Natasha Kocks has been nominated for a Shine Award

CHARLIE PEEL
RURAL REPORTER

When Tash Kocks received a phone call from her dad seven years ago asking for help running a rural-focused charity he and his wife founded, she initially was reluctant.

“But when your dad asks for help, you can’t say no,” she said.

She agreed to work for Aussie Helpers a few days a week while continuing to run her beauty business. But she quickly came to understand the deep satisfaction that came from helping others.

“I could never really understand why my parents had such a passion for what they did, because they volunteered their time 24/7 just trying to help others,” Ms Kocks said.

“I got to talk to some of the farmers on the phone and connect with them, and then I really started to understand why they did what they did, because you just wanted to do as much as you could to get them out of such a bad situation.

“So 12 months later, I ended up coming on board full time.”

She’s now the chief executive of Aussie Helpers, which was founded by her parents, Brian and Nerida Egan, in 2002 when their own farm was taken by the bank during the millennium drought.

Their devastation prompted them to start a charity organisation to help other farmers facing similar challenges.

“It was them recognising what they’d been through and that other people might be in need,” Ms Kocks said.

“For them there was no help, there was no one they could go to.

“That was a really tough period for them emotionally, and depression came into it, which gave Dad the basis for his idea because he had been through it and could relate.”

Brian Egan, who died in 2020, started off raffling groceries at a local pub to raise money and gradually the charity grew.

Aussie Helpers provides financial and wellbeing support for farmers and people living in rural Australia.

Ms Kocks and her small team travel the eastern states helping wherever they can, from farmers struggling to feed their stock because of droughts to rural communities devastated by floods.

The organisation also provides thousands of breakfasts, donated by Sanitarium, every year in rural schools to make sure no child goes hungry.

“I was terrified at first because I had big shoes to fill, but now I love what I do,” Ms Kocks said.

“I think the biggest thing is the people that we meet and connect with.

“We meet them when they are going through really bad times, but we also get to see people coming out the other side and get to see them shine.”

Ms Kocks, who lives in Gladstone, is also on the board of the Queensland Rural, Remote and Regional Women’s Network, a not-for-profit organisation that supports women in the bush.

“It’s about connecting,” Ms Kocks said.

“A lot of rural women can often feel very isolated so we do a lot of networking and events bringing rural women together.”

For her work to support rural Australians, Ms Kocks has been nominated for a Shine Award.

Now in their eighth year, the awards – run by rural masthead The Weekly Times and supported by Harvey Norman – recognise the achievements and contributions of women across rural and regional Australia.

NOTICE OF INTENTION

Proposed transfer of the life insurance business of TAL Life Insurance Services Limited ABN 31 003 149 157 (TLISL) to TAL Life Limited ABN 70 050 109 450 (TAL Life).

TLISL and TAL Life give notice of their intention to make an application to the Federal Court of Australia (**Federal Court**) for confirmation of a scheme under Part 9 of the *Life Insurance Act 1995* (Cth) to transfer the life insurance business of TLISL to TAL Life (**Scheme**). The proposed effective time of the transfer is 11:59pm AEDT on 31 March 2025 (**Effective Time**).

The application is scheduled to be heard at 9.30am AEDT on 24 February 2025, or on such other time or date as the Federal Court appoints.

The hearing will be heard at the New South Wales Registry of the Federal Court, located at Law Courts Building, Queens Square, Sydney.

Affected policy owners have the right to attend the hearing and can request to be heard by the Federal Court.

If the Scheme is confirmed by the Federal Court, then it is proposed that with effect from the Effective Time, TAL Life will assume all of TLISL’s rights and liabilities in relation to all life insurance policies issued by TLISL. The contractual benefits and rights of TLISL policy owners will remain unchanged, other than:

- a change to the insurer from TLISL to TAL Life; and
- a change to the statutory fund supporting each person’s policy.

If you are affected by the Scheme

Any policy owner who may be affected by the Scheme is entitled to attend the court hearing and request to be heard on the application. If you wish to be heard at the hearing, please contact the lawyers for TLISL and TAL Life, Herbert Smith Freehills (attention: Michael Vrisakis and Tamanna Islam), 161 Castlereagh Street, Sydney, NSW, 2000 (telephone 02 9225 5000) before the hearing date.

If you wish to obtain further information on your rights as a policy owner or if you have any questions about the Scheme, please contact our Contact Centre on 1300 537 699 or email us at transfersupport@tal.com.au.

A copy of the Scheme document, the actuarial report upon which the Scheme is based, and an independent actuarial report on the Scheme can be viewed online at:

- btlifeinsurance.tal.com.au/transfer; and
- tal.com.au/transfer.

A Scheme summary has been or will be sent to affected TLISL policy owners.

Any TLISL policy owner and any TAL Life policy owner may obtain a copy of the Scheme document and the actuarial reports, free of charge by calling 1300 537 699 or by emailing us at transfersupport@tal.com.au.

It is in the interests of policy owners to examine the Scheme document and the actuarial reports so as to assure themselves that the Scheme, if confirmed, will not adversely affect their interests.

If you have any questions

Please contact our Contact Centre on 1300 537 699 or email us at transfersupport@tal.com.au if you have any questions in relation to the proposed transfer under the Scheme, or if you require further information on your rights as a policy owner.

State's roads to perdition

Government slashes resurfacing budget

EXCLUSIVE
Alex White

Potholes on roads across Victoria are set to get worse, with the debt-riddled Allan government slashing resurfacing and rehabilitation works to a third of what was being fixed three years ago.

Data released in performance reports linked to the May budget reveal the shockingly low amount of rehabilitation work that will be carried out across regional Victoria and metropolitan Melbourne.

It has prompted experts to warn motorists they will see massive deterioration across the road network.

The damning figures show that resurfacing works for the next 12 months had plummeted by more than 65 per cent on regional roads, and 25 per cent in metropolitan Melbourne, in just three years.

This meant that nine million sq m of roads were being treated to fix and protect against rain and potholes in regional Victoria in 2022-23, but that has now dropped by two-thirds to 3.1 million sq m in this year's budget. On Melbourne's suburban roads 729,000sq m of works were done in 2022-23 compared to 542,000sq m budgeted for 2024-25.

Justin Bartlett, managing director of VSA Roads – regional Victoria's largest bitumen provider – said the underspend was resulting in the state's roads deteriorating at an alarming rate.

"It's dramatic," he said. "The whole resurfacing industry in regional Victoria has been decimated.

"There's a life cycle of bitumen and after 10 years it becomes aged and brittle and starts to crack and if you're not resurfacing, water gets in and potholes occur. "The pothole becomes a dig-out, and then it's a full rehabilitation.

"The one thing you don't cut back on is the percentage of roads being resurfaced because otherwise you have an exponential spend down the track."

He warned roads would continue to deteriorate with every rain event because they are "no longer resilient". He also lashed out at the government's new much-hyped 10-year plan.

"It's just nonsense. You take a number and times it over 10 years to make it sound like a big number. They say we are spending $6.6bn, but in reality that's far less than they've spent in the past."

Nationals MP Danny O'Brien blasted the government, saying "Victorian motorists are paying the price" for the government's mismanagement of road maintenance.

"These savage reductions in the resurfacing program in recent years mean we'll likely just see worse roads in future," Mr O'Brien said. "Our cars have to be roadworthy but it seems the government isn't interested in making our roads car-worthy."

A government spokesman blamed floods, not funding, for the significant damage to Victoria's road network.

HEARTFELT MOMENT FOR CATE

Australian actor Cate Blanchett is overwhelmed at receiving the Donostia Lifetime Achievement Award at the 72nd San Sebastian International Film Festival in Spain. The honorary prize also went to Spanish actor Javier Bardem and his fellow countryman and filmmaker Pedro Almodovar.

Flight curfew a risk to 58k jobs

Jade Gailberger

More than 58,000 jobs and $6.5bn worth of activity would be put at risk if a curfew was slapped on Melbourne Airport.

The warning from Australia Pacific Airports comes after federal Transport Minister Catherine King this month approved a long-awaited third runway at the airport.

Greens leader Adam Bandt is among locals calling for a curfew to mitigate the sleepless nights from those in the flight path. But a Senate committee investigating the impact of aircraft noise has heard that restricting travel between 11pm and 6am would also impact trade to Asia.

Sixteen of the 33 flights that operate during those hours are freight, including for time-sensitive products such as seafood.
